SREE VIDYANIKETHAN ENGINEERING COLLEGE

(Autonomous)
(Affiliated to J.N.T. University Anantapur, Anantapuramu)

ACADEMIC REGULATIONS

CHOICE BASED CREDIT SYSTEM

B.Tech. Regular Four Year Degree Program
(for the batches admitted from the academic year 2016–17)
&
B.Tech. (Lateral Entry Scheme)
(for the batches admitted from the academic year 2017–18)

For pursuing four year undergraduate Degree Program of study in Engineering (B.Tech) offered by Sree Vidyanikethan Engineering College under Autonomous status and herein after referred to as SVEC (Autonomous):

1. Applicability : All the rules specified herein, approved by the Academic Council, shall be in force and applicable to students admitted from the academic year 2016-2017 onwards. Any reference to "College" in these rules and regulations stands for SVEC (Autonomous).

2. Extent: All the rules and regulations, specified hereinafter shall be read as a whole for the purpose of interpretation and as and when a doubt arises, the interpretation of the Chairman, Academic Council is final. It shall be ratified by Academic Council in the forth coming meeting. As per the requirements of statutory bodies, Principal, Sree Vidyanikethan Engineering College shall be the Chairman, Academic Council.

3. Admission :

3.1. Admission into First Year of Four Year B.Tech. Degree Program of study in Engineering:

3.1.1. Eligibility: A candidate seeking admission into the First Year of four year B.Tech. Degree Program should have

(i) passed either Intermediate Public Examination (I.P.E.) conducted by the Board of Intermediate Education, Andhra Pradesh, with Mathematics, Physics and Chemistry as optional courses (or any equivalent examination recognized by JNTUA, Anantapuramu) for admission as per the guidelines of Andhra Pradesh State Council of Higher Education (APSCHE).

(ii) secured a rank in the EAMCET examination conducted by APSCHE for allotment of a seat by the Convener, EAMCET for admission.

3.1.2. Admission Procedure: Admissions shall be made into the first year of four year B.Tech. Degree Program as per the stipulations of APSCHE, Government of Andhra Pradesh:

(a) By the Convener, EAMCET, (for Category-A Seats).
(b) By the Management (for Category-B Seats).

3.2. Admission into the Second Year of Four year B.Tech Degree Program in Engineering (Lateral Entry).

3.2.1. Eligibility: A candidate seeking admission into the Second Year of four year B.Tech. Degree Program (Lateral Entry) should have

(i) Diploma in Engineering in the relevant branch conducted by the Board of Technical Education, Andhra Pradesh (or equivalent Diploma recognized by JNTUA, Anantapuramu). (ii) Candidates qualified in ECET and admitted by the Convener, ECET. In all such cases for admission, when needed, permissions from the statutory bodies are to be obtained.

3.2.2. Admission Procedure: 20% of the sanctioned strength in each Program of study as lateral entry students or as stipulated by APSCHE shall be filled by the Convener, ECET.

4. Programs of study offered leading to the award of B.Tech. Degree Following are the four year undergraduate Degree Programs of study offered in various branches in SVEC (Autonomous) leading to the award of B.Tech (Bachelor of Technology) Degree:

1) B.Tech (Civil Engineering)
2) B.Tech (Computer Science & Engineering)
3) B.Tech (Computer Science & Systems Engineering)
4) B.Tech (Electrical & Electronics Engineering)
5) B.Tech (Electronics & Communication Engineering)
6) B.Tech (Electronics & Instrumentation Engineering)
7) B.Tech (Information Technology)
8) B.Tech (Mechanical Engineering)

5. Duration of the Program:

5.1 Minimum Duration: The program will extend over a period of four years leading to the Degree of Bachelor of Technology (B.Tech) of the JNTUA, Ananthapuramu. The four academic years will be divided into eight semesters with two semesters per year. Each semester shall normally consist of 22 weeks (?90 working days) having - Continuous Internal Evaluation (CIE)' and 'Semester End Examination (SEE)'. Choice Based Credit System (CBCS) and Credit Based Semester System

(CBSS) as suggested by UGC and Curriculum/ Course Structure as suggested by AICTE are followed. Provision is made for lateral entry of students in the Second Year of the program in all branches of study and they will be required to satisfy the conditions of admissions thereto prescribed by the JNTUA, Ananthapuramu and Government of Andhra Pradesh.

5.2 Maximum Duration: The student shall complete all the passing requirements of the B.Tech degree program within a maximum duration of 8 years (6 years for lateral entry), these durations reckoned from the commencement of the semester to which the student was first admitted to the program.

First Semester (22 weeks)	Instruction Period: I Spell : 7 weeks II Spell: 9 weeks	16 weeks
	Mid-term Examinations: I Mid : 1 week II Mid : 1 week	2 weeks
	Preparation & Practical Examinations	2 weeks
	Semester-end examinations	2 weeks
	Semester Break	2 weeks
Second Semester (22 weeks)	Instruction Period: I Spell : 7 weeks II Spell: 9 weeks	16 weeks
	Mid-term Examinations: I Mid :1 week II Mid : 1 week	2 weeks
	Preparation & Practical Examinations	2 weeks
	Semester-end examinations	2 weeks
	Summer Vacation	6 weeks

6. Structure of the Program: Each Program of study shall consist of:
(a) Foundation Courses,
(b) Core Courses and Elective Courses.

➢ Foundation Courses are further categorized as :
(i) HS (Humanities and Social Sciences),

(ii) BS (Basic Sciences) and
(iii) ES (Engineering Sciences).

➢ Core Courses and Elective Courses are categorized as PS (Professional Courses), which are further subdivided as:
(i) PC (Professional Core) Courses,
(ii) PE (Professional Electives),
(iii) IDE (Inter Disciplinary Electives),
(iv) OE (Open Electives),
(v) Comprehensive Assessment
(vi) Seminar
(vii) PW (Project Work).

S.No	Broad Course Classification	Course Group/ Category	Course Type	Range of Credits
1.	Foundation Courses	HS – Humanities and Social Sciences	Humanities, Social Sciences and Management.	**5% - 10%**
2.		BS – Basic Sciences	Mathematics, Physics and Chemistry Courses, etc.	**15% - 20%**
3.		ES – Engineering Sciences	Fundamental engineering courses.	**15% - 20%**
4.	Core Courses	PC – Professional Core	Core courses related to the Parent Discipline/ Branch of Engg.	**30% - 40%**
5.	Elective Courses	PE – Professional Electives	Elective courses related to the Parent Discipline/ Branch of Engg.	**10% - 15%**
6.		IDE - Interdisciplinary Electives	Courses in an area outside the Parent Discipline / Branch of Engg.	**5% - 10%**
7.		OE – Open Electives	Common Elective courses offered for all programs / Branches of Engg.	**5% - 10%**
8.	Core Courses	Seminar	A course of study with discussion and report.	**10% - 15%**
9.		Comprehensive Assessment	A comprehensive review of foundations and key concepts of the courses studied.	
10.		Project Work	A course of planned minor research work.	

Contact Periods: Depending on the complexity and volume of the course, the number of contact periods per week shall be assigned.

7. Credit Courses:

All Courses are to be registered by a student in a Semester to earn Credits. Credits shall be assigned to each Course in a L: T: P: C (Lecture Periods: Tutorial Periods: Practical Periods: Credits) Structure, based on the following general pattern.

➢ One Credit - for One Period/ Week/ Semester for Theory/Lecture (L) Courses;
➢ Two Credits - for Three Periods/ Week/ Semester for Laboratory/ Practical (P) Courses.

Tutorials will not carry Credits.

i) Other student activities like NCC, NSS, Sports, Study Tour, Guest Lecture etc. will not carry Credits.

ii) For courses like Project/Seminar/Comprehensive Online Assessment, where formal contact periods are not specified, credits are assigned based on the complexity of the work to be carried out.

The four year curriculum of any B. Tech Program of study shall have total of **180** credits (24 credits in each semester from I B. Tech. I Semester to IV B. Tech I

Semester and 12 credits in IV B. Tech II Semester). However the curriculum for lateral entry students shall have a total of **132** credits (24 credits in each semester from II B. Tech. I Semester to IV B. Tech I Semester and 12 credits in IV B. Tech II Semester).

8. Choice Based Credit System (CBCS):

- Choice Based Credit System (CBCS) is introduced based on UGC guidelines in order to promote:
- Student centered learning
- Cafeteria approach
- Students to learn courses of their choice
- Learning at their own pace
- Interdisciplinary learning
- A student is introduced to "Choice Based Credit System (CBCS)"
- The total credits for the Program is **180** for regular students and **132** for lateral entry students.
- A student has a choice of registering for credits from the theory courses offered in the program ensuring the total credits in a semester are between 21 and 30.
- From the II B.Tech I Semester to IV B.Tech I Semester, the student has the option of registering for additional theory courses from the latter semesters or dropping existing theory courses of the current semester within the course structure of the program. However the number of credits the student can register in a particular semester should not below 21 (minimum) and should not exceed 30 (maximum).
- Grade points, based on percentage of marks awarded for each course will form the basis for calculation of SGPA (Semester Grade Point Average) and CGPA (Cumulative Grade Point Average).

All the registered credits will be considered for the calculation of final CGPA.

9. Course Enrollment and Registration

9.1 Each student, on admission shall be assigned to a Faculty Advisor (Mentor) who shall advice and counsel the student about the details of the academic programme and the choice of courses considering the student's academic background and career objectives.

9.2 Each student on admission shall register for all the courses prescribed in the curriculum in the student's first and second Semesters of study. The student shall enroll for the courses
with the help of the student's Faculty Advisor (Mentor). The enrollment for the courses from II B.Tech I Semester to IV B.Tech I Semester will commence 10 days prior to the last instructional day of the preceding semester for registration process. If the student wishes, the student may drop or add courses (vide clause 8) within Ten days before commencement of the concerned semester and complete the registration process duly authorized by the Chairman, Board of studies of concern department.

9.3 If any student fails to register the courses in a semester, he shall undergo the courses as per the program structure.

9.4 After registering for a course, a student shall attend the classes, satisfy the attendance requirements, earn Continuous Assessment marks and appear for the Semester-end Examinations.

9.5 No course shall be offered by a Department unless a minimum of 40 students register for that course.

10. Massive Open Online Course (MOOC)

A Massive Open Online Course (MOOC) is an online course aimed at unlimited participation and open access via the web. MOOC is a model for delivering learning content online to any person who takes a course, with no limit on attendance.

- A student shall undergo a "Massive Open Online Course (MOOC)" for award of the degree besides other requirements.
- A student is offered this Online Course at the beginning of his III B.Tech I Semester of study and the course has to be completed by the end of III B.Tech II Semester. If the student fails to complete the course by the end of III B.Tech II Semester, it shall be treated as a backlog and needs to be completed before completion of the program for the award of the degree.

- The student shall confirm registration by enrolling the course within 10 days prior to the last instructional day of the II B. Tech. II Semester like other courses.
- The courses will be approved by the Chairman, Academic Council, SVEC based on the recommendations of the Chairman, Board of Studies of concerned program considering current needs.
- A student has a choice of registering for only one MOOC with the recommendation of Chairman, Board of studies of concerned program and duly approved by the Chairman, Academic Council, SVEC.
- The student shall undergo MOOC without disturbing the normal schedule of regular class work.
- One faculty member assigned by the Head of the Department shall be responsible for the periodic monitoring of the course implementation.
- No formal lectures need be delivered by the faculty member assigned to the students.
- If any student wants to change the MOOC course already registered, he will be given choice to register a new MOOC course in III B. Tech. only, with the recommendation of Chairman, Board of studies of concerned program and duly approved by the Chairman, Academic Council, SVEC.
- Finally, the performance of the student in the course will be evaluated as stipulated by the course provider. A certificate will be issued on successful completion of the course by the course provider.
- The performance in the MOOC will not be considered for the calculation of SGPA and CGPA of the student.
- The MOOC course will be listed in the grade sheet of the student.

11. Break of Study from a Program (Gap Year)

11.1 A student is permitted to go on break of study for a maximum period of two years either as two breaks of one year each or a single break of two years.

11.2 The student shall apply for break of study in advance, in any case, not later than the last date of the first assessment period in a semester. The application downloaded from website and duly filled by the student shall be submitted to the Head of the Department. In the case of start-up for incubation of idea only, the application for break of study shall be forwarded by the Head of the Department to the Principal, SVEC. A sub-committee appointed by the principal shall give recommendations for approval.

11.3 The students permitted to rejoin the program after break of study shall be governed by the Curriculum and Regulations in force at the time of rejoining. The students rejoining in new regulations shall apply to the Principal, SVEC in the prescribed format through Head of the Department at the beginning of the readmitted semester itself for prescribing additional/equivalent courses, if any, from any semester of the regulations in-force,
so as to bridge the curriculum in-force and the old curriculum.

11.4 The total period for completion of the programme reckoned from the commencement of the I B.Tech I Semester to which the student was admitted shall not exceed the maximum period specified in clause 5.2 irrespective of the period of break of study in order that the student may be eligible for the award of the degree (vide clause 18).

11.5 In case, if a student applies for break of study for one year and wishes to extend it for one more consecutive year, he shall be permitted with the prior approval of the Principal, SVEC through the concerned Head of the Department before beginning of the semester in which the student has taken break of study.

11.6 If a student has not reported to the department after approved period of break of study without any intimation, the student is treated as detained in that semester. Such students are eligible for readmission for the semester when offered next.

12. Examination System: All components in any Program of study shall be evaluated through internal evaluation and / or an external evaluation conducted as Semester-end examination.

<table>
<tr><th>Sl. No.</th><th>Course</th><th>Marks</th><th colspan="2">Examination and Evaluation</th><th>Scheme of examination</th></tr>
<tr><td rowspan="3">1.</td><td rowspan="3">Theory</td><td>70</td><td colspan="2">Semester-end examination of 3 hours duration (External evaluation)</td><td>The examination question paper in theory courses shall be for a maximum of 70 marks. The question paper shall be of descriptive type with 5 questions, taken one from each unit of syllabus, having internal choice and all 5 questions shall be answered. All questions carry equal marks.</td></tr>
<tr><td rowspan="2">30</td><td colspan="2" rowspan="2">Mid-term Examination of 2 hours duration (Internal evaluation).</td><td>The question paper shall be of descriptive type with 4 essay type questions out of which 3 are to be answered and evaluated for 24 marks and also 6 short answer questions out of which all are to be answered and evaluated for 6 marks.</td></tr>
<tr><td>Two mid-term examinations each for 30 marks are to be conducted. For a total of 30 marks, 75% of better one of the two and 25% of the other one are added and finalized.
Mid-I: After first spell of instruction (I to II Units).
Mid-II: After second spell of instruction (III to V Units).</td></tr>
<tr><td rowspan="3">2</td><td rowspan="3">Laboratory</td><td>50</td><td colspan="2">Semester-end Lab Examination for 3 hours duration (External evaluation)</td><td>50 marks are allotted for laboratory/drawing examination during semester-end.</td></tr>
<tr><td rowspan="2">50</td><td>30</td><td>Day-to-Day evaluation for Performance in laboratory experiments and Record. (Internal evaluation).</td><td rowspan="2">Two laboratory examinations, which includes Day-to-Day evaluation and Practical test, each for 50 marks are to be evaluated. For a total of 50 marks 75% of better one of the two and 25% of the other one are added and finalized.
Laboratory examination-I: Shall be conducted just before I mid-term examinations.
Laboratory examination-II: Shall be conducted just before II mid-term examinations.</td></tr>
<tr><td>20</td><td>Practical test (Internal evaluation).</td></tr>
<tr><td rowspan="2">3</td><td>a) Seminar</td><td>100</td><td colspan="2">Semester-end Examination</td><td>100 marks are allotted for Seminar during semester-end evaluation by the Seminar Evaluation Committees (SECs) as given in 12.2.1.</td></tr>
<tr><td>b)Comprehensive Assessment</td><td>100</td><td colspan="2">Semester-end Examination</td><td>Comprehensive Assessment shall be conducted as given in 12.2.2 as semester-end evaluation for 100 marks.</td></tr>
<tr><td rowspan="2">4</td><td rowspan="2">Project Work</td><td rowspan="2">200</td><td>100</td><td>External evaluation</td><td>Semester-end Project Viva-Voce Examination by Committee as detailed in 12.2.3 for 100 marks.</td></tr>
<tr><td>100</td><td>Internal evaluation</td><td>Continuous evaluation by the Project Evaluation Committees (PECs) as detailed in 12.2.3 for 100 marks.</td></tr>
</table>

12.2 Seminar/Comprehensive Assessment /Project Work Evaluation:

12.2.1 For the seminar, the student shall collect information through literature survey on a specialized topic and prepare a technical report, showing his understanding over the topic, and submit to the Department just before presentation. The report and the presentation shall be evaluated at the end of the semester by the Seminar Evaluation Committees (SECs), each consisting of concerned supervisor and two senior faculty members. The SECs are constituted by the Principal on the recommendations of the Head of the Department.

12.2.2 Comprehensive Assessment shall be conducted by the department through (i) online with 50 objective questions for 50 marks and (ii) viva-voce for the remaining 50 marks, covering all the courses from I B.Tech I Semester to IV B.Tech I Semester. The viva-voce will be conducted by Comprehensive Assessment Committees (CACs), each consisting of three faculty members (out of whom at least two are seniors). The CACs are constituted by the Principal on the recommendations of the Head of the Department. The HODs of the respective departments are given the responsibility of preparing question bank/question paper for conducting the online examination.

12.2.3 The project Viva-Voce examination shall be conducted by a Committee consisting of External examiner (nominated by the Chief Controller of Examinations), HOD and concerned Supervisor. The evaluation of project work shall be conducted at the end of the IV B.Tech II Semester. The Internal Evaluation shall be made by the Project Evaluation Committees (PECs), each consisting of concerned supervisor and two senior faculty members on the basis of two project reviews conducted on the topic of the project. The PECs are constituted by the Principal on the recommendations of the Head of the Department.

12.3. Eligibility to appear for the semester-end examination:

12.3.1 A student shall be eligible to appear for semester-end examinations if he acquires a minimum of 75% of attendance in aggregate of all the courses in a semester.

12.3.2 Condonation of shortage of attendance in aggregate up to 10% (65% and above and below 75%) in each semester may be granted by the College Academic Committee.

12.3.3 Shortage of Attendance below 65% in aggregate shall in no case be condoned.

12.3.4 Students whose shortage of attendance is not condoned in any semester is not eligible to take their end examination of that class and their registration shall stand cancelled.

12.3.5 A student shall not be promoted to the next semester unless he satisfies the attendance requirements of the current semester, as applicable. The student may seek readmission for the semester when offered next. He will not be allowed to register for the courses of the semester while he is in detention. A student detained due to shortage of attendance, will have to repeat that semester when offered next.

12.3.6 A stipulated fee shall be payable to the College towards condonation of shortage of attendance.

12.4. Evaluation: Following procedure governs the evaluation.

12.4.1. Marks for components evaluated internally by the faculty shall be submitted to the Controller of Examinations one week before the commencement of the End examinations. The marks for the internal evaluation components shall be added to the external evaluation marks secured in the Semester-end examinations, to arrive at total marks for any course in that semester.

12.4.2. Performance in all the courses is tabulated course-wise and shall be scrutinized by the Results Committee and moderation is applied if needed and course-wise marks are finalized. Total marks obtained in each course are converted into letter grades.

12.4.3. Student-wise tabulation shall be done and individual grade Sheet shall be generated and issued to the student.

12.5. Personal verification / Revaluation / Recounting:

Students shall be permitted for personal verification/request for recounting/ revaluation of the Semester-end examination answer scripts within a stipulated period after payment of prescribed fee. After recounting or revaluation, records are updated with changes if any and the student shall be issued a revised grade sheet. If there are no changes, the student shall be intimated the same through a notice.

12.6. Supplementary Examination:

In addition to the regular semester-end examinations conducted, the College may also schedule and conduct supplementary examinations for all the courses of other semesters when feasible for the benefit of students. Such of the candidates writing supplementary examinations may have to write more than one examination per day.

13. Academic Requirements for promotion/ completion of regular B.Tech Program of study:

The following academic requirements have to be satisfied in addition to the attendance requirements for promotion/ completion of regular B.Tech Program of study.

For students admitted into B.Tech. (Regular) Program:

13.1 A student shall be deemed to have satisfied the minimum academic requirements for each theory, laboratory course and project work, if he secures not less than 40% of marks in the semester-end examination and a minimum of 40% of marks in the sum total of the internal evaluation and Semester-end examination taken together. For the seminar and comprehensive Viva-Voce, he should secure not less than 40% of marks in the semester-end examination.

13.2 A student shall be promoted from second year to third year of Program of study only if he fulfills the academic requirement of securing 36 credits from

a. Two regular and one supplementary examinations of I B.Tech I Semester.
b. One regular and one supplementary examinations of I B.Tech II Semester.
c. One regular examination of II B.Tech I Semester.

Irrespective of whether or not the candidate appears for the semester-end examination as per the normal course of study.

13.3 A student shall be promoted from third year to fourth year of Program of study only if he fulfills the academic requirements of securing 60 credits from the following examinations,

a. Three regular and two supplementary examinations of I B.Tech I Semester.
b. Two regular and two supplementary examinations of I B.Tech II Semester.
c. Two regular and one supplementary examinations of II B.Tech I Semester.
d. One regular and one supplementary examinations of II B.Tech II Semester.
e. One regular examination of III B.Tech I Semester.

Irrespective of whether or not the candidate appears for the semester-end examination as per the normal course of study and in case of getting detained for want of credits by sections 13.2 and 13.3 above, the student may make up the credits through supplementary examinations.

13.4 A student shall register for all the 180 credits and earn all the 180 credits. Marks obtained in all the 180 credits shall be considered for the calculation of the DIVISION based on CGPA.

13.5 A student who fails to earn 180 credits as indicated in the course structure within eight academic years from the year of their admission shall forfeit his seat in B.Tech. Program and his admission stands cancelled.

For Lateral Entry Students (batches admitted from the academic year 2017-2018):

13.6 A student shall be deemed to have satisfied the minimum academic requirements for each theory, practical course and project, if he secures not less than 40% of marks in the semester-end examination and a minimum of 40% of marks in the sum total of the internal evaluation and semester-end examination taken together. For the seminar and comprehensive Viva-Voce, he should secure not less than 40% of marks in the semester-end examination.

13.7 A student shall be promoted from third year to fourth year only if he fulfills the academic requirements of securing 36 credits from the following examinations.

a. Two regular and one supplementary examinations of II B.Tech I Semester.
b. One regular and one supplementary examinations of II B.Tech II Semester.
c. One regular examination of III B.Tech I Semester.

Irrespective of whether or not the candidate appears for the semester-end examination as per the normal course of study and in case of getting detained for want of credits the student may make up the credits through supplementary examinations.

13.8 A student shall register for all 132 credits and earn all the 132 credits. Marks obtained in all the 132 credits shall be considered for the calculation of the DIVISION based on CGPA.

13.9 A student who fails to earn 132 credits as indicated in the course structure within six academic years from the year of their admission shall forfeit his seat in B.Tech Program and his admission stands cancelled.

14. Transitory Regulations:

Students who got detained for want of attendance (or) who have not fulfilled academic requirements (or) who have failed after having undergone the Program in earlier regulations (or) who have discontinued and wish to continue the Program are eligible for admission into the unfinished semester from the date of commencement of class work with the same (or) equivalent courses as and when courses are offered and they will be in the academic regulations into which they are presently readmitted.

A regular student has to satisfy all the eligibility requirements within the maximum stipulated period of eight years and a lateral entry student within six years for the award of B.Tech Degree.

15. Grades, Semester Grade Point Average and Cumulative Grade Point Average:

15.1. Grade System: After all the components and sub-components of any course (including laboratory courses) are evaluated, the final total marks obtained shall be converted into letter grades on a "10 point scale" as described below.

Grades conversion and Grade points attached

% of Marks obtained	Grade	Description of Grade	Grade Points (GP)
> = 95	O	Outstanding	10
> = 85 to < 95	S	Superior	9
> = 75 to < 85	A	Excellent	8
> = 65 to < 75	B	Very Good	7
> = 55 to < 65	C	Good	6
> = 45 to < 55	D	Fair	5
> = 40 to < 45	E	Pass	4
< 40	F	Fail	0
Not Appeared	N	Absent	0

Pass Marks: A student shall be declared to have passed theory course, laboratory course and project work if he secures minimum of 40% marks in external examination, and a minimum of 40% marks in the sum total of internal evaluation and external examination taken together. For the seminar and comprehensive Assessment, he shall be declared to have passed if he secures minimum of 40% of marks in the semester-end examination. Otherwise he shall be awarded fail grade - **F** in such a course irrespective of internal marks. **F** is considered as a fail grade indicating that the student has to pass the semester-end examination in that course in future and obtain a grade other than **F** and **N** for passing the course.

15.2. Semester Grade Point Average (SGPA): SGPA shall be calculated as given below on a "10 point scale" as an index of the student's performance at the end of each semester:

$$SGPA = \frac{\sum (C \ X \ GP)}{\sum C}$$

where C denotes the credits assigned to the courses undertaken in that semester and GP denotes the grade points earned by the student in the respective courses.

Note: SGPA is calculated only for the candidates who passed all the courses in that Semester.

15.3. Cumulative Grade Point Average (CGPA):

The CGPA for any student is awarded only when he completes the Program i.e., when the student passes in all the courses prescribed in the Program. The CGPA is computed on a 10 point scale as given below:

$$CGPA = \frac{\sum (C \ X \ GP)}{\sum C}$$

where C denotes the credits assigned to courses undertaken up to the end of the Program and GP denotes the grade points earned by the student in the respective courses.

16. **Grade Sheet:** A grade sheet (Marks Memorandum) shall be issued to each student indicating his performance in all courses registered in that semester indicating the **SGPA.**

17. **Consolidated Grade Sheet:** After successful completion of the entire Program of study, a Consolidated Grade Sheet containing performance of all academic years shall be issued as a final record. Duplicate Consolidated Grade Sheet will also be issued, if required, after payment of requisite fee.

18. **Award of Degree**: <u>The Degree shall be conferred and awarded by Jawaharlal Nehru Technological University Anantapur, Ananthapuramu on the recommendations of the Chairman, Academic Council of SVEC (Autonomous).</u>

18.1. **Eligibility:** A student shall be eligible for the award of B.Tech Degree if he fulfills all the following conditions:

- Registered and successfully completed all the components prescribed in the Program of study to which he is admitted.
- Successfully acquired the minimum required credits as specified in the curriculum corresponding to the branch of study within the stipulated time.
- Obtained CGPA greater than or equal to 4.0 (Minimum requirement for declaring as passed).
- Has no dues to the College, Hostel, Library etc. and to any other amenities provided by the College.
- No disciplinary action is pending against him.

18.2. Award of Division: Declaration of Division is based on CGPA.

Awarding of Division

CGPA	Division
> = 7.0	First Class with Distinction
> = 6.0 and < 7.0	First Class
> = 5.0 and < 6.0	Second Class
> = 4.0 and < 5.0	Pass Class

19. Additional academic regulations:

19.1 A student may appear for any number of supplementary examinations within the stipulated time to fulfill regulatory requirements for award of the degree.

19.2 In case of malpractice/improper conduct during the examinations, guidelines shall be followed as given in the Annexure-I.

19.3 Courses such as Project, Seminar and Comprehensive Assessment may be repeated only by registering in supplementary examinations.

19.4 When a student is absent for any examination (Mid-term or Semester-end) he shall be awarded zero marks in that component (course) and grading will be done accordingly.

19.5 When a component is cancelled as a penalty, he shall be awarded zero marks in that component.

20. Withholding of Results:

If the candidate has not paid dues to the College/University (or) if any case of indiscipline is pending against him, the result of the candidate shall be withheld and he will not be allowed/promoted to the next higher semester.

21. Amendments to regulations:

The Academic Council of SVEC (Autonomous) reserves the right to revise, amend, or change the Regulations, Scheme of Examinations, and / or Syllabi or any other policy relevant to the needs of the society or industrial requirements etc., with the recommendations of the concerned Board(s) of Studies.

22. Attendance for student development activity periods indicated in the class time tables shall be considered as in the case of a regular course for calculation of overall percentage of attendance in a semester.

23. General: The words such as "he", "him", "his" and "himself" shall be understood to include all students irrespective of gender connotation.

Note: Failure to read and understand the regulations is not an excuse.

Annexure-I

GUIDELINES FOR DISCIPLINARY ACTION FOR MALPRACTICES / IMPROPER CONDUCT IN EXAMINATIONS

Rule No.	Nature of Malpractices/ Improper conduct	Punishment
	If the candidate:	
1. (a)	Possesses or keeps accessible in examination hall, any paper, note book, programmable calculators, Cell phones, pager, palm computers or any other form of material concerned with or related to the course of the examination (theory or practical) in which he is appearing but has not made use of (material shall include any marks on the body of the candidate which can be used as an aid in the course of the examination)	Expulsion from the examination hall and cancellation of the performance in that course only.
(b)	Gives assistance or guidance or receives it from any other candidate orally or by any other body language methods or communicates through cell phones with any candidate or persons in or outside the exam hall in respect of any matter.	Expulsion from the examination hall and cancellation of the performance in that course only of all the candidates involved. In case of an outsider, he will be handed over to the police and a case is registered against him.
2.	Has copied in the examination hall from any paper, book, programmable calculators, palm computers or any other form of material relevant to the course of the examination (theory or practical) in which the candidate is appearing.	Expulsion from the examination hall and cancellation of the performance in that course and all other courses the candidate has already appeared including practical examinations and project work and shall not be permitted to appear for the remaining examinations of the courses of that Semester. The Hall Ticket of the candidate is to be cancelled.
3.	Impersonates any other candidate in connection with the examination.	The candidate who has impersonated shall be expelled from examination hall. The candidate is also debarred for four consecutive semesters from class work and all Semester-end examinations. The continuation of the course by the candidate is subject to the academic regulations in connection with forfeiture of seat. The performance of the original candidate who has been impersonated, shall be cancelled in all the courses of the examination (including labs and project work) already appeared and shall not be allowed to appear for examinations of the remaining courses of that semester. The candidate is also debarred for four consecutive semesters from class work and all Semester-end examinations, if his involvement is established. Otherwise, The candidate is debarred for two consecutive semesters from class work and all Semester-end examinations. The continuation of the course by the candidate is subject to the academic regulations in connection with forfeiture of seat. If the imposter is an outsider, he will be handed over to the police and a case is registered against him.
4.	Smuggles in the Answer book or additional sheet or	Expulsion from the examination hall and

	takes out or arranges to send out the question paper during the examination or answer book or additional sheet, during or after the examination.	cancellation of performance in that course and all the other courses the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the courses of that semester. The candidate is also debarred for two consecutive semesters from class work and all Semester-end examinations. The continuation of the course by the candidate is subject to the academic regulations in connection with forfeiture of seat.
5.	Uses objectionable, abusive or offensive language in the answer paper or in letters to the examiners or writes to the examiner requesting him to award pass marks.	Cancellation of the performance in that course only.
6.	Refuses to obey the orders of the Chief Controller of Examinations/Controller of Examinations/any officer on duty or misbehaves or creates disturbance of any kind in and around the examination hall or organizes a walk out or instigates others to walk out, or threatens the Controller of Examinations or any person on duty in or outside the examination hall of any injury to his person or to any of his relations whether by words, either spoken or written or by signs or by visible representation, assaults the Controller of Examinations, or any person on duty in or outside the examination hall or any of his relations, or indulges in any other act of misconduct or mischief which result in damage to or destruction of property in the examination hall or any part of the College campus or engages in any other act which in the opinion of the officer on duty amounts to use of unfair means or misconduct or has the tendency to disrupt the orderly conduct of the examination.	In case of students of the college, they shall be expelled from examination halls and cancellation of their performance in that course and all other courses the candidate(s) has (have) already appeared and shall not be permitted to appear for the remaining examinations of the courses of that semester. If the candidate physically assaults the invigilator/Controller of the Examinations, then the candidate is also debarred and forfeits his/her seat. In case of outsiders, they will be handed over to the police and a police case is registered against them.
7.	Leaves the exam hall taking away answer script or intentionally tears of the script or any part thereof inside or outside the examination hall.	Expulsion from the examination hall and cancellation of performance in that course and all the other courses the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the courses of that semester. The candidate is also debarred for two consecutive semesters from class work and all Semester-end examinations. The continuation of the course by the candidate is subject to the academic regulations in connection with forfeiture of seat.
8.	Possess any lethal weapon or firearm in the examination hall.	Expulsion from the examination hall and cancellation of the performance in that course and all other courses the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the courses of that semester. The candidate is also debarred and forfeits the seat.

Note: Whenever the performance of a student is cancelled in any course(s) due to Malpractice, he has to register for Semester- end Examinations in that course(s) consequently and has to fulfill all the norms required for the award of Degree.

I B. Tech. - I Semester

(16BT1HS01) **Technical English**

(Common to CSE, CSSE, IT, CE & ME)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: ***English at Intermediate level***

COURSE DESCRIPTION: Introduction to Communication; Active Listening; Effective Speaking; Reading; and Writing.

COURSE OUTCOMES: On successful completion of this course, the students will be able to

CO1: Demonstrate knowledge in
- Process of communication
- Modes of listening
- Paralinguistic features
- Skimming and Scanning
- Elements of style in writing

CO2: Analyze the possibilities and limitations of language for understanding
- Barriers to Communication
- Barriers to Effective Listening
- Barriers to Speaking
- Formal and metaphorical language

CO3: Design and develop functional skills for professional practice.

CO4: Apply writing skills in preparing and presenting documents

CO5: Function effectively as an individual and as a member in diverse teams.

CO6*:* Communicate effectively with the engineering community and society in formal and informal situations.

DETAILED SYLLABUS:

UNIT I - **INTRODUCTION TO COMMUNICATION:** **(9 periods)**

Introduction –Language as a Tool of Communication – Communicative Skills (Listening, Speaking, Reading and Writing) – Effective Communication – Modes of Communication – Barriers to Communication (classification)

UNIT II - **ACTIVE LISTENING:** **(9 periods)**

Introduction – Reasons for poor Listening – Traits of a Good Listener – Listening Modes – Types of Listening – Barriers to Effective Listening – Listening for General Content and Specific Information

UNIT III - **EFFECTIVE SPEAKING:** **(9 periods)**

Introduction – Achieving Confidence, Clarity and Fluency – Paralinguistic Features – Barriers to Speaking – Types of Speaking – Persuasive Speaking

UNIT IV - **READING**: **(9 periods)**

Introduction and Reading Rates – Reading and Interpretation – Intensive and Extensive Reading – Critical Reading – Reading for Different Purposes – SQ3R Reading Technique –Study Skills

UNIT V – **WRITING**: **(9 periods)**

Introduction – Language – Elements of Style – Techniques for Good Technical Writing – Referencing and Styling – Right Words and Phrases – Sentences

Total Periods: *45*

TEXT BOOK:
1. Meenakshi Raman & Sangeetha Sharma, *Technical Communication*, Oxford University Press, New Delhi, 2012.

REFERENCE BOOKS:

1. Ashraf Rizvi*, Effective Technical Communication*, McGraw-Hill Education (India) Pvt.Ltd., New Delhi, 2015.
2. Sanjay Kumar & Pushp Lata, *Communication Skills*, Oxford University Press, New Delhi, 2013.
3. Teri Kwal Gamble and Michael Gamble, *Communication Works*, Tata Mc Graw-Hill, New Delhi, 2010.
4. Rajendra Pal and J.S. Korlahalli, *Essentials of Business Communication*, Sultan Chand and Sons (P) Ltd., New Delhi, 2010.

I-B. Tech - I Semester

(16BT1BS01) ENGINEERING CHEMISTRY

(Common to CSE,CSSE,IT,CE & ME)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE REQUISITE: Intermediate/Senior Secondary Chemistry

COURSE DESCRIPTION: Water technology, Chemistry of Engineering materials, Nanochemistry, Green Chemistry, Electro chemical cells, Sensors, Corrosion and Lubricants.

COURSE OUTCOMES:

After completion of the course, a successful student is able to:

CO1: Acquire basic knowledge in water technology, engineering plastics, conducting polymers, composites, Electro chemical cells, Nano Chemistry, principles of Green Chemistry, corrosion phenomenon and lubricants.

CO2: Develop analytical skills in:

a. Determination of hardness of water.
b. Determination of viscosity, flame and fire points, cloud and pour points.

CO3: Develop designing skills in:

a. Synthesis of engineering plastics.
b. Chemical methods for the synthesis of Nano materials.

CO4: Develop skills for providing solutions through:

a. Mitigation of hardness of water.
b. Newer Nanomaterials and engineering plastics for specific applications

CO5: Acquire awareness to practice engineering in compliance to modern techniques such as:

a. Nalgonda technique for defluoridation of water
b. Electroplating technique for control of corrosion.

CO6: Acquire awareness to societal issues on:

a. Quality of water.
b. Bio-diesel
c. Chemical materials utility and their impact.

DETAILED SYLLABUS:

UNIT–I: WATER TECHNOLOGY (9 periods)

Introduction: Types of water, impurities in water and their consequences, types of hardness of water, units of hardness of water, disadvantages of hardness of water, estimation of hardness of water by EDTA method, Boiler troubles: Scales and Sludges, Caustic embrittlement, Boiler corrosion and Priming and Foaming.

Softening of water: Zeolite process and Ion exchange process, advantages and disadvantages. Desalination of brackish water by Reverse Osmosis, Numerical problems on estimation of hardness of water.

Fluorides in water: Effects on human health, defluoridation method-Nalgonda method; comparison of merits and demerits of various defluoridation methods (Nalgonda, Bone Charcoal, Activated Alumina, Contact precipitation, Brick, Reverse osmosis).

UNIT – II: CHEMISTRY OF ENGINEERING MATERIALS (9 periods)

Engineering Plastics: Definition, general properties, synthesis, properties and applications of PC, PTFE, and PMMA.

Conducting polymers: Definition, types of conducting polymers: Intrinsic and extrinsic conducting polymers with examples, engineering applications of conducting polymers.

Biodegradable polymers: Definition, properties, classification, mechanism of degradation of biodegradable polymers and their applications.

Composites – Introduction, types of composites: fiber reinforced particulate and layered composites with examples, advantages of composites and applications.

UNIT– III: NANOCHEMISTRY AND GREEN CHEMISTRY (9 periods)

Nanochemistry: Introduction, classification, properties and applications of Nano materials (nano particles, nano tubes, nano wires, nano composites, dendrimers); synthesis of Nano materials – Sol-gel process.

Green Chemistry: Introduction, principles of green chemistry, Tools of Green Chemistry with Examples, Applications of Green Chemistry in science and technology.

Biodiesel: Introduction, Synthesis (Trans esterification method), advantages, disadvantages and applications.

UNIT–IV: ELECTROCHEMICAL CELLS AND SENSORS (9 periods)

Electrochemical cell: Introduction, EMF of an electrochemical cell.

Batteries: Introduction, types of Batteries: primary and secondary batteries with examples, Ni-Cd batteries, Lithium-ion batteries, Lithium- Polymer batteries, Applications of batteries.

Fuel Cells: Definition, examples: $H_2 – O_2$ Fuel cell, solid oxide fuel cell, Bio-fuel cell and applications of fuel cells.

Sensors - Introduction, Types of Sensors, electrochemical sensor: construction and working principle of potentiometric sensor, and applications of electrochemical sensors.

UNIT–V: CORROSION AND LUBRICANTS (9 periods)

Corrosion: Introduction, Definition, types of corrosion (dry and wet corrosion), galvanic corrosion, concentration cell corrosion, Factors influencing corrosion, Corrosion control: cathodic protection; sacrificial anodic protection and impressed current cathodic protection; protective coatings: Galvanizing and Electroplating (Nickel).

Lubricants: Definition, functions of lubricants, mechanism of lubrication, classification of lubricants, properties of lubricants – viscosity, flash and fire points, cloud and pour points, Aniline points, neutralization number and mechanical strength.

Total periods: 45 periods

TEXT BOOKS:

1. P.C.Jain & Monika Jain, **Engineering Chemistry**, Dhanpat Rai Publishing Company (P) Ltd, New Delhi, 16th edition, 2013.
2. K.N. Jayaveera, G.V. Subba Reddy & C. Ramachandraiah **Engineering Chemistry**, Mc. Graw-Hill Higher Education, Hyderabad, 1st edition, 2015.

REFERENCE BOOKS:

1. A.K. Bandyopadhyay, **Nano Materials,** New Age international publishers, 2nd edition, 2014.
2. Paul T. Anastas and John C Warner, **Green Chemistry: Theory and practice,** Oxford University Press, 2000.

I B. Tech. - I Semester
(16BT1BS03) MATRICES AND NUMERICAL METHODS
(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Intermediate /Senior secondary mathematics
COURSE DESCRIPTION: Fundamentals of matrix theory; numerical solutions of equations, curve fitting; interpolation; numerical differentiation and integration; numerical solutions of ordinary differential equations.
COURSE OUTCOMES: After completion of the course a successful student is able to
CO1: Acquire basic **knowledge** in
- (a) Finding the rank of matrices and analyzing them.
- (b) Solving algebraic and transcendental equations by various numerical methods.
- (c) Fitting of various types of curves to the experimental data.
- (d) Estimating the missing data through interpolation methods.
- (e) Identification of errors in the experimental data
- (f) Finding the values of derivatives and integrals through various numerical methods.
- (g) Solving differential equations numerically when analytical methods fail.

CO2: Develop skills in **analyzing** the
- (a) methods of interpolating a given data
- (b) properties of interpolating polynomials and derive conclusions
- (c) properties of curves of best fit to the given data
- (d) algebraic and transcendental equations through their solutions
- (e) properties of functions through numerical differentiation and integration
- (f) properties of numerical solutions of differential equations

CO3: Develop skills in **designing** mathematical models for
- (a) Fitting geometrical curves to the given data
- (b) Solving differential equations
- (c) Constructing polynomials to the given data and drawing inferences.

CO4: Develop numerical skills in **solving the problems** involving
- (a) Systems of linear equations
- (b) Fitting of polynomials and different types of equations to the experimental data
- (c) Derivatives and integrals
- (d) Ordinary differential equations

CO5: Use relevant numerical **techniques** for
- (a) Diagonalising the matrices of quadratic forms
- (b) Interpolation of data and fitting interpolation polynomials
- (c) Fitting of different types of curves to experimental data
- (d) obtaining derivatives of required order for given experimental data
- (e) Expressing the functions as sum of partial fractions

DETAILED SYLLABUS:
UNIT–I : MATRICES (11 periods)
Rank of a matrix, echelon form, normal form, inverse of a matrix by elementary row operations. Solutions of linear system of equations. Eigen values, Eigen vectors and properties (without proof), Diagonalization. Quadratic form (QF), reductions to canonical form using orthogonal transformation and nature of QF.
UNIT-II NUMERICAL SOLUTIONS OF EQUATIONS AND CURVE FITTING (8 periods)
Solutions of Algebraic and Transcendental equations by bisection method, Regula-Falsi method, Newton – Raphson's method. Curve fitting by the principle of least squares, fitting of a straight line, parabola and exponential curves.
UNIT- III INTERPOLATION (8 periods)
Interpolation, difference operators and their relationships, Newton's forward and backward formulae, Lagrange's interpolation formula. Partial fractions using Lagrange's interpolation formula.
UNIT-IV NUMERICAL DIFFERENTIATION AND INTEGRATION (8 periods)
Numerical differentiation using Newton's forward and backward formulae. Numerical integration using Trapezoidal rule, Simpson's $1/3^{rd}$ rule and $3/8^{th}$ rule.
UNIT- V NUMERICAL SOLUTIONS OF ORDINARY DIFFERENTIAL EQUATIONS (10 periods)
Numerical solutions of first order Initial value problems using Taylor series method, Euler's method , modified Euler's method, Runge – Kutta method (4^{th} order only) and Milne's predictor – corrector method.
Total no. of periods: 45

TEXT BOOK:
1. T.K.V. Iyenger, B. Krishna Gandhi, S.Ranganadham and M.V.S.S.N.Prasad, ***Mathematical Methods,*** S.Chand and Company, 8/e, 2013

REFERENCE BOOKS:

1. B.S. Grewal, ***Higher engineering mathematics***, Khanna Publishers, 42nd Edition. 2012
2. S.S.Sastry, ***Introductory methods of Numerical Analysis***, Prentice Hall of India, 5/e, 2013

I B. Tech. - I Semester

(16BT1BS04) MULTI - VARIABLE CALCULUS AND DIFFERENTIAL EQUATIONS

(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Intermediate /Senior secondary mathematics

COURSE DESCRIPTION: First order differential equations; higher order linear differential equations; functions of several variables; applications of integration; multiple integrals; vector calculus.

COURSE OUTCOMES: After completion of the course a successful student is able to

CO1: Acquire knowledge in
- (a) Higher order Differential equations
- (b) Maximum and minimum values for the functions of several variables
- (c) Double and triple integrals
- (d) Differentiation and integration of vector functions.
- (e) Line and surface volume
- (f) transforming integrals from three dimensional surfaces and volumes on to plane surfaces

CO2: Develop skills in analyzing the
- (a) methods for differential equation for obtaining appropriate solutions,
- (b) Properties of oscillatory electrical circuits and heat transfer in engineering systems
- (c) The variations in the properties of functions near their stationary values
- (d) Flow patterns of fluids, electrical and magnetic flux and related aspects

CO3: Develop skills in designing mathematical models for
- (a) R-C and L-R-C oscillatory electrical circuits
- (b) Heat transfer and Newton's law of cooling
- (c) Engineering concepts involving lengths of curves and areas of planes, Flux across surfaces

CO4: Develop analytical skills in solving the problems involving
- (a) Newton's law of cooling
- (b) non homogeneous linear differential equations
- (c) maximum and minimum values for the functions
- (d) lengths of curves, areas of surfaces and volumes of solids in engineering
- (e) transformation of integrals from three dimensional surfaces and volumes on to plane surfaces

CO5: Use relevant mathematical techniques for evaluating
- (a) various types of particular integrals in differential equations
- (b) stationary values for multi variable functions
- (c) multiple integrals in change of variables
- (d) integrations of vector functions.

DETAILED SYLLABUS:

UNIT-I: FIRST ORDER DIFFERENTIAL EQUATIONS (6 periods)

Linear and Bernoulli type, exact equations and reducible to exact. Orthogonal trajectories (Both Cartesian and polar forms). Newton's law of cooling.

UNIT II: HIGHER ORDER LINEAR DIFFERENTIAL EQUATIONS (9 periods)

Method for solution of linear equations- Differential operator *D*, Solution of second order linear homogeneous equations with constant coefficients, Solution of Higher order homogeneous linear equations with constant coefficients, **Solution of Non homogeneous linear equations**-Operator methods for finding particular integrals- for cases – e^{ax}, sin ax, cos ax, x^n, $e^{ax}V(x)$, xV(x). Method of Variation of parameters. Applications to oscillatory electrical circuits.

UNIT-III: FUNCTIONS OF SEVERAL VARIABLES (8 periods)

Functions of Two Variables: Limits, Continuity; **Partial Derivatives**: Total Differential and Derivatives, Jacobian, Functional dependence, Taylor's Theorem, maxima and minima of functions of two variables with and without constraints – Lagrange's method of undetermined multipliers.

UNIT-IV: APPLICATIONS OF INTEGRATION AND MULTIPLE INTEGRALS (10 periods)

Applications of integration to – lengths of curves, areas of surfaces of revolution, Double and Triple integrals – change of order of integration, change of variables in integrals. Area enclosed by plane curves, volumes of solids.

UNIT-V: VECTOR CALCULUS (12 periods)

Vector differentiation: Gradient of a scalar field and Directional Derivative, Divergence and Curl of a Vector field

Line integrals: Line integrals independent of path – work done.

Surface area and Surface Integrals: Surface Area, Surface Integrals, Flux across a surface.

Green's Theorem: Green's Theorem (without proof)-verification- applications

Gauss Divergence Theorem and Stoke's Theorem: Gauss Divergence theorem (without proof), Stokes's Theorem (without proof) –verifications and applications. **Total no. of periods: 45**

TEXT BOOK:

I B. Tech. - I Semester

(16BT10501) PROGRAMMING IN C

(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: NIL

COURSE DESCRIPTION:

Program design; Operators and Expressions; Data Input and Output; Control Statements; Functions; Arrays; Strings; Pointers; Structures & Unions and File handling Techniques;

COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO1: Demonstrate knowledge in:
- o Elements of C Language
- o Selection and Repetition statements.
- o Arrays, Strings and Functional statements.
- o Derived data types, Files and Pointers

CO2: Analyze complex engineering problems to develop suitable solutions

CO3: Design algorithms for specified engineering problems

CO4: Use appropriate 'C' language constructs for solving engineering problems

CO5: Write programs using 'C' language to implement algorithms

DETAILED SYLLABUS:

UNIT I – INTRODUCTION TO C PROGRAMMING, OPERATORS & EXPRESSIONS (08 periods)

Introduction to C Programming: The C Character set, Writing First Program of C, Identifiers and Keywords, Data types, Constants, Variables and Arrays, Declarations, Expressions, Statements and Symbolic Constants.

Operators and Expressions: Arithmetic Operators, Unary Operators, Relational and Logical Operators, Assignment Operators, the Conditional Operators.

UNIT II – DATA INPUT AND OUTPUT & CONTROL STATEMENTS (08 periods)

Data Input and Output: Single Character Input and Output, Input Data & Output data, The gets and puts Function.

Control Statements: Branching: The if-else Statement, Looping: The while Statement, More Looping: The do-while Statement, Still More Looping: The for Statement, Nested Control Statement, The switch Statement, The break & continue Statements, The goto Statement.

UNIT III – FUNCTIONS, PROGRAM STRUCTURES & ARRAYS (11 p*eriods*)

Functions: A Brief Overview, Defining a Function, Accessing a Function, Function Prototypes, Parsing Argument to a Function, Recursion.

Program Structure: Storage Classes, Automatic Variables, External (Global) Variables, Static Variables, Multi file Programs,

Arrays: Defining an Array, Processing an Array, Processing Array to function, Multidimensional Arrays. Linear search, Binary search, Fibonacci search, Bubble sort and Insertion sort

UNIT IV – STRINGS & POINTERS (09 periods)

Strings: Defining a String, NULL Character, Initialization of Strings, Reading and Writing a String, Processing a Strings, Character Arithmetic, Searching and Sorting of Strings, Library Functions for Strings.

Pointers: Pointer Declaration, Passing Pointers to a Function, Pointers and One-dimensional Arrays, Dynamic Memory Allocation, Operations on Pointers, Pointers and Multidimensional Arrays, Arrays of Pointers.

UNIT V – STRUCTURES AND UNIONS & FILE HANDLING (09 periods)

Structures and Unions: Defining a Structure, Processing a Structure, User-Defined Data types (typedef), Structures and Pointers, Passing Structures to Function, Self –Referential Structures, Unions

File Handling: Files introduction, Opening and Closing a Data File, Reading and Writing a Data File, Processing a Data File, Unformatted Data File, Concept of Binary Files, Accessing the File Randomly.

Total Periods: *45*

TEXT BOOK:

1. Byron Gottfried and Jitender Kumar C "*Programming with C*," Third Edition, McGraw Hill Education (India) Pvt, Ltd, New Delhi, 2016.

I B. Tech. - I Semester

(16BT1HS31) **ENGLISH LANGUAGE LAB**

(Common to CSE, CSSE, IT, CE & ME)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: English at intermediate or equivalent level.

COURSE DESCRIPTION: Phonetics; Vocabulary Building; Functional Grammar; Just a Minute; Elocution/Impromptu; Giving Directions/Conversation Starters; Role Play; Public Speaking; Describing People, Places, Objects and Events; Reading Comprehension; Listening Comprehension; Information Transfer.

COURSE OUTCOMES: On successful completion of this course the students will be able to

CO1: Demonstrate knowledge in
- Phonetics
- Information Transfer

CO2: Analyze the situations in professional context by using
- Vocabulary
- Grammar

CO3: Design and develop functional skills for professional practice.

CO4: Apply the techniques of Listening and Reading skills to comprehend Listening and Reading comprehension.

CO5: Function effectively as an individual and as a member in diverse teams through
- Extempore talk and
- Role Play

CO6: Communicate effectively in public speaking in formal and informal situations.

CO7: Recognize the need to engage in lifelong learning to upgrade competence of knowledge and communication.

LIST OF EXERCISES:

1. Phonetics
2. Vocabulary Building
3. Functional Grammar
4. Just a Minute
5. Elocution/Impromptu
6. Giving Directions/Conversation Starters
7. Role Play
8. Public Speaking
9. Describing People, Places, Objects and Events.
10. Reading Comprehension
11. Listening Comprehension
12. Information Transfer

Total Lab Slots: 10

TEXT BOOK:

1. Department Lab Manual

REFERENCE BOOKS:

I-B. Tech - I Semester

16BT1BS31: ENGINEERING CHEMISTRY LAB

(Common to CSE, CSSE, IT, CE & ME)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE REQUISITE: Intermediate/Senior Secondary Chemistry

COURSE DESCRIPTION: Estimation of hardness, alkalinity, dissolved oxygen of water samples and estimation of Iron by volumetric methods, determination of effect of P^H on rate of corrosion, measurement of viscosity of lubricants; Instrumental methods like potentiometer, conductivity meter, P^H meter and colorimeter; synthesis of Polymers and Nano materials.

COURSE OUTCOMES:

After completion of the course, a successful student is able to:

CO1: Acquire basic Knowledge about the volumetric analysis and synthesis of materials used for engineering applications.

CO2: Acquire analytical skills in the estimation of hardness of water, alkalinity of water, dissolved oxygen in water and estimation of Iron through wet laboratory methods.

CO3: Develop designing skills for the synthesis of polymers and Nanomaterials.

CO4: Acquire skills to use instrumental techniques for the determination of Electrical conductance of electrolytes, EMF of a cell, PH of a solution, determination of viscosity of lubricants and estimation of iron in cement.

CO5: Provide solutions for environmental issues through determination of quality of water.

List of Experiments:

A minimum of any **Ten** experiments are to be conducted among the following:.

1. Estimation of Hardness of water by EDTA method.
2. Estimation of alkalinity of Water.
3. Estimation of Dissolved Oxygen in water.
4. Estimation of Ferrous Iron by Dichrometry.
5. Preparation of Novalac Resin.
6. Synthesis of Nano metal-oxide using sol– gel process.
7. Conductometric titration of strong acid Vs strong base
8. Estimation of Ferrous ion by Potentiometry.
9. Determination of amount of corrosion of metals in different medium
10. Measurement of viscosity of lubricants by Ostwald viscometer.
11. Determination of P^H of a given solution by P^H metry.
12. Estimation of Ferric iron in cement by Colorimetric method.

Total Time Slots: 12

I B. Tech. I Semester

16BT10331: **COMPUTER AIDED ENGINEERING DRAWING**

(Common to CSE,CSSE,IT,CE & ME)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	1	6	3

PRE-REQUISITES: *None*

COURSE DESCRIPTION:

Engineering drawing conventions; importance of engineering drawing; fundamental concepts of sketching; computed aided drafting and different types of projections of geometric entities (both 2D and 3D) through computer aided drafting packages.

COURSE OUTCOMES:

After completion of the course, a successful student is able to:

- CO1: Understand, write and read the language of engineering drawing in industry through International System of Standards.
- CO2: Develop the imagination and mental visualization ability for interpreting the geometrical details of engineering objects.
- CO3: Produce different views and projection in drawing.
- CO4: Use modern CAD software for design and drafting of drawings.
- CO5: Create multi-view drawings suitable for presentation to Engineering community.
- CO6: Introduce and communicate universally accepted conventions and symbols for their usage in technical drawing.

DETAILED SYLLABUS:

UNIT : I - BASICS OF ENGINEERING DRAWING PRACTICE, GEOMETRICAL CONSTRUCTIONS, CONICS AND SPECIAL CURVES (18 periods)

Introduction, drawing instruments and its uses, sheet layout, BIS conventions, lines, lettering and dimensioning practices. Geometrical constructions: Construction of regular polygons: Pentagon, Hexagon, Heptagon and Octagon. Conic sections**:** Introduction, construction of ellipse: rectangular method, eccentricity method. Construction of parabola: rectangular method, eccentricity method. Construction of hyperbola: eccentricity method. Special curves***:*** cycloid, involute.

UNIT: II – INTRODUCTION TO COMPUTER AIDED SKETCHING (18 periods)

Computer screen, layout of the software, creation of 2D/3D environment, selection of drawing size and scale, Standard tool bar/menus, Coordinate system, description of most commonly used toolbars, navigational tools: commands and creation of lines, Co-ordinate points, axes, poly-lines, square, rectangle, polygons, splines, circles, ellipse, text, move, copy, off-set, mirror, rotate, trim, extend, break, chamfer, fillet, curves, constraints viz. tangency, parallelism, inclination and perpendicularity.

UNIT: III – PROJECTION OF POINTS, STRAIGHT LINES AND PLANES (21 periods)

Introduction, method of projection, planes of projection, reference line and notations. Projection of points: Points in all the four quadrants. Projection of straight lines**:** lines inclined to HP / VP plane, inclined to both HP and VP planes (straight lines are assumed to be in first quadrant only)**.** Projection of planes**:** projection of triangle, square, rectangle, rhombus, pentagon, hexagon and circular plane for the condition inclined to HP / VP by change of position method.

UNIT IV –PROJECTION OF SOLIDS AND SECTION OF SOLIDS (21 Periods)

Projections of Solids: Introduction, projection of solids: prisms, pyramids, cylinders and cones with axis perpendicular to VP/HP and axis inclined to VP/HP only. Sections of solids**:** Introduction, Cutting plane, sectional views of right regular solids resting with base on HP: prisms, pyramids, cylinder and cone and true shapes of the sections.

UNIT V –ORTHOGRAPHIC AND ISOMETRIC PROJECTIONS AND DEVELOPMENT OF SURFACES (22 periods)

Orthographic projection: simple exercises. Isometric projection: Simple exercises.

Development of surfaces: prisms, pyramids, cylinders, cone and miscellaneous surfaces

Total Periods: *100*

Note: *Student shall practice Unit-I using sketch book only and remaining units using sketch book first and later CAD package.*

I B. Tech. - I Semester
16BT10531: PROGRAMMING IN C LAB
(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES:-
A course on "Programming in C"
COURSE DESCRIPTION:
Hands on practice in developing and executing simple programs using C Programming constructs– Conditional statements, Loops, Arrays, Strings, Functions, Structures, Pointers and Functions.
COURSE OUTCOMES:
After successful completion of the course, students will be able to:
CO1: Demonstrate practical knowledge of using C language constructs:
- Selection and Repetition statements.
- Arrays, Strings and Functional statements.
- Derived data types, Files and Pointers

CO2: Analyze problems to develop suitable algorithmic solutions
***CO3*:** Design Solutions for specified engineering problems
***CO4*:** Use appropriate 'C' language constructs for solving engineering problems
***CO5*:** Implement and execute programs using 'C' language
CO6: Document programs and communicate effectively while conducting Professional transactions.
List of Exercises:
1. a. Let a and b are two integer variables whose values are 10 and 13 respectively. Write a program to evaluate the following arithmetic expressions.
   i) a + b   ii) a–b   iii) a * b   iv) a/b   v) a % b
   b. Write a program to evaluate the following algebraic expressions after reading necessary values from keyword.
   i) $(ax + b)/(ax - b)$ ii) $2.5 \log x + \cos 32^0 + | x^2 + y^2|$
   iii) $x^5 + 10 x^4 + 8$ and $x^3 + 4 x + 2$ iv) ae^{kt}
2. a. Mr. Gupta deposited Rs.1000 in a bank. The bank gives simple interest at the rate of 15% per annum. Write a program to determine the amount in Mr. Gupta's account at the end of 5 years. (Use the formula I = P T R / 100)
   b. A cashier has currency notes of denominations Rs.10, Rs. 50 and Rs. 100. If the amount to be withdrawn is input in hundreds, find the total number of notes of each denomination the cashier will have to give to the withdrawer.
   c. In a town, the percentage of men is 52. The percentage of total literacy is 48.If total percentage of literate men is 35 of the total population; write a program to find the total number of illiterate men and women if the population of the town is 8000.
3. a. Write a program that prints the given 3 integers in ascending order using if - else.
   b. Write a program to calculate commission for the input value of sales amount.
   Commission is calculated as per the following rules:
   i) Commission is NIL for sales amount Rs. 5000.
   ii) Commission is 2% for sales when sales amount is >Rs. 5000 and <= Rs. 10000.
   iii) Commission is 5% for sales amount >Rs. 10000.
   c. A character is entered through keyboard. Write a program to determine whether the character entered is a capital letter, a small case letter, a digit or a special symbol. The following table shows the range of ASCII values for various characters.

Characters	ASCII values
A - Z	65 - 90
a - z	97- 122
0 - 9	48 - 57
Special Symbols	0 - 47, 58 - 64, 91- 96, 123 - 127

4. a. If cost price and selling price of an item is input through the keyboard, write program to determine whether the seller has made profit or incurred loss. Also determine how much profit or loss he incurred in percentage.
   b. An insurance company calculates premium as follows:
   i. If a person's health is excellent and the person is between 25 and 35 years of age and lives in a city and is a male then premium is Rs.4 per thousand and the policy amount cannot exceed Rs.2 lakhs.
   ii. If a person satisfies all the above conditions and is female then the premium is Rs.3 per thousand and the policy amount cannot exceed Rs.1 lakh.
   iii. If a person's health is poor and the person is between 25 and 35 years of age and lives in a village and is a male then premium is Rs.6 per thousand and the policy cannot exceed Rs. 10000.
   iv. In all other cases the person is not insured.

Write a program to determine whether the person should be insured or not, his/her premium rate and maximum amount for which he/she can be insured.

5. a. Write a program, which takes two integer operands and one operator as input from the user, performs the operation and then prints the result. (Consider the operators +,-,*, /, %. Use switch statement)
   b. Write a program to find the grace marks for a student using switch. The user should enter the class obtained by the student and the number of subjects he has failed in. Use the following rules:
   i. If the student gets first class and the number of subjects failed is >3, then no grace marks are awarded. If the number of subjects failed is less than or equal to '3' then the grace is 5 marks per subject.
   ii. If the student gets second class and the number of subjects failed in is >2, then no grace marks are awarded. If the number of subjects failed in less than or equal to '3' then the grace is 4 marks per subject.
   iii. If the student gets third class and the number of subjects failed in is >1, then no grace marks are awarded. If the number of subjects failed in is equal to '1' then the grace is 5 marks per subject.
6. a. Write a program to find the sum of individual digits of a positive integer.
   b. A Fibonacci sequence is defined as follows:
   The first and second terms in the sequence are 0 and 1. Subsequent terms are found by adding the preceding two terms in the sequence. Write a program to generate the first N terms of the sequence.
   Write a program to generate all the prime numbers between 1 and N, where N is a value supplied by the user.
7. a. Write a program to find the largest and smallest number in a given list of integers.
   b. Write a program to perform the following:
   i. Addition of two matrices.
   ii. Multiplication of two matrices.
8. a. Write a program that uses functions to perform the following operations:
   i. To insert a sub-string in main string at a specified position.
   ii. To delete N characters from a given string from a specified position.
   b. Write a program to determine whether the given string is palindrome or not.
   c. Write a program to display the position or index in the main string S where the sub string T begins. Display -1 if S does not contain T.
   d. Write a program to count the number of lines, words and characters in a given text.
9. a. Write a program to read list of student names and perform the following operations using functions.
   i. to print list of names
   ii. to sort them in ascending order
   iii. to print the list after sorting.
   b. Write a menu driven program to read list of student names and perform the following operations using array of character pointers.
   i. to insert a student name
   ii. to delete a name
   iii. to print the name
10. Write a program that uses functions to perform the following operations:
   i. Reading a complex number
   ii. Writing a complex number
   iii. Addition of two complex numbers
   iv. Multiplication of two complex numbers
   (**Note:** Represent complex number using a structure.)
11. a. Write a program to accept the elements of the structure as:
   Employee-name,Basic pay Display the same structure along with the DA, CCA and Gross salary for 5 employees.
   Note: DA=51% of Basic pay, CCA=Rs.100.consolidated.
   b. Define a structure to store employee's data with the following specifications:
   Employee-Number, Employee-Name, Basic pay, Date of Joining
   i. Write a function to store 10 employee details.
   ii. Write a function to implement the following rules while revising the basic pay.
   If Basic pay<=Rs.5000 then increase it by 15%.
   If Basic pay> Rs.5000 and <=Rs.25000 then it increase by 10%.
   If Basic pay>Rs.25000 then there is no change in basic pay.
   Write a function to print the details of employees who have completed 20 years of service from the date of joining.
12. a. Write a program which copies one 'text file' to another 'text file'.
   b. Write a program to reverse the first N characters of a given text file.

Note: The file name and N are specified through command line.

13. Write a program to print the output by giving the Customer_ID as an input.

I B.Tech. - II Semester

16BT1BS02: ENGINEERING PHYSICS

(Common to CSE,CSSE,IT,CE & ME)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Intermediate / senior secondary Physics

COURSE DESCRIPTION:

Lasers; optical fibers; principles of quantum mechanics; band theory of solids; semiconductors; dielectric properties of materials; acoustics of buildings; superconductors; crystallography and nanomaterials.

COURSE OUTCOMES:

After completion of the course, a successful student will be able to:

CO1: Acquire basic knowledge of lasers, optical fibers, quantum mechanics, dielectrics, semiconductors, and superconductors, acoustic of buildings, crystallography and nanomaterials.

CO2: Analyze the construction and working of various laser systems, semiconductor devices, various types of optical fibers and its communication system and nano materials properties.

CO3: Gain skills in designing lasers, optical fiber cable, semiconductor devices, acoustically good halls and nanomaterials.

CO4: Develop problem solving skills in engineering context.

CO5: Use relevant techniques for assessing ball milling, pulsed laser deposition, p-n junction and Laser.

DETAILED SYLLABUS:

UNIT I – LASERS AND FIBER OPTICS (11periods)

Lasers: Introduction, characteristics of lasers, spontaneous and stimulated emission of radiation, Einstein's coefficients – condition for amplification, population inversion, Nd:YAG laser, Helium-Neon laser, semiconductor laser and applications of lasers.

Fiber optics: Introduction, principle of optical fiber, acceptance angle, acceptance cone and numerical aperture, classification of optical fibers, optical fiber communication system and applications of optical fibers.

UNIT II–PRINCIPLES OF QUANTUM MECHANICS AND BAND THEORY OF SOLIDS (07 p*eriods*)

Principles of Quantum Mechanics: Introduction, de-Broglie's hypothesis, Schrödinger's one dimensional wave equation (time independent), significance of wave function, particle in a one dimensional potential box, Fermi-Dirac distribution and effect of temperature (qualitative treatment).

Band Theory of Solids: Electron in a periodic potential, Kronig-Penney model (qualitative treatment), origin of energy bands formation in solids, distinction between conductors, semiconductors and insulators based on band theory.

UNIT III – SEMICONDUCTORS AND DIELECTRIC PROPERTIES OF MATERIALS (13 periods)

Semiconductors: Introduction, types of semiconductors, intrinsic carrier concentration, electrical conductivity in semiconductors, drift and diffusion currents, Einstein's relation, Hall effect and its applications, direct and indirect band gap semiconductors, p-n junction, energy band diagram of p-n diode, LED, photo diode and Solar cell.

Dielectric Properties of Materials: Introduction, dielectric constant, electronic, ionic and orientation polarizations (qualitative treatment), local field, frequency dependence of polarizability (qualitative treatment), ferroelectricity.

UNIT IV – ACOUSTICS OF BUILDINGS AND SUPERCONDUCTIVITY (07 periods)

Acoustics of Buildings: Introduction, basic requirement of acoustically good hall, reverberation and time of reverberation, Sabine's formula for reverberation time (qualitative treatment), absorption coefficient of sound and its measurement, factors affecting the architectural acoustics and their remedies.

Superconductivity: Introduction, General properties - Meissner effect, penetration depth, Type-I and Type-II superconductors, flux quantization, Josephson effects, BCS theory (qualitative treatment), applications of superconductors.

UNIT V – CRYSTALLOGRAPHY AND NANOMATERIALS (07 p*eriods*)

Crystallography: Introduction, crystal planes, crystal directions and Miller indices, separation between successive (hkl) planes, X-ray diffraction by crystal planes, Bragg's law- powder method.

Nanomaterials: Introduction, principles of nanomaterials, properties of nanomaterials, synthesis of nanomaterials by ball milling and pulsed laser deposition and applications of nanomaterials.

Total Periods: 45

16BT2BS01: TRANSFORMATION TECHNIQUES AND PARTIAL DIFFERENTIAL EQUATIONS

(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE REQUISITE: Intermediate /Senior secondary mathematics

COURSE DESCRIPTION: Fourier series; Fourier integrals and transforms; Laplace transforms; z – transforms; partial differential equations.

COURSE OUTCOMES:

After completion of the course a successful student is able to

CO1: Acquire basic knowledge in
- (a) Fourier series and Fourier transforms
- (b) Fourier integrals
- (c) Laplace transforms and their applications
- (d) z- transforms and their applications
- (e) solving partial differential equations

CO2: Develop skills in analyzing the
- (a) Properties of Fourier series for a given function
- (b) Partial differential equations through different evaluation methods
- (c) Difference equations through z – transforms
- (d) Engineering systems and processes involving wave forms and heat transfer

CO3: Develop skills in designing mathematical models for
- (a) Problems involving heat transfer and wave forms
- (b) Engineering concepts involving, Fourier transforms, Fourier integrals, Laplace transforms, z-transforms and difference equations

CO4: Develop analytical skills in solving the problems involving
- (a) Fourier series and Fourier transforms
- (b) Laplace transforms
- (c) Z-transforms and difference equations
- (d) Heat transfer and wave motion

CO5: Use relevant transformation techniques for
- (a) Obtaining Fourier transforms for different types of functions
- (b) Laplace transforms
- (c) Z- transforms
- (d) Partial differential equations

DETAILED SYLLABUS

UNIT- I : FOURIER SERIES (7 periods)

Fourier series: Determination of Fourier coefficients, convergence of Fourier series (Dirichlet's conditions), Fourier series of even and odd functions, Half-range Fourier sine and cosine expansions.

UNIT- II: FOURIER INTEGRALS AND FOURIER TRANSFORMS (8 periods)

Fourier integral theorem (statement only), Fourier sine and cosine integrals, Fourier transform, Fourier sine and cosine transforms –properties, Inverse transform and finite Fourier transforms.

UNIT-III: LAPLACE TRANSFORMS (12 periods)

Laplace transforms of standard functions. Properties of Laplace transforms. First and second shifting Theorems. Laplace transforms of derivatives and integrals. Inverse transforms. Convolution theorem (without proof), inverse Laplace transforms by convolution theorem. Laplace transform of periodic functions, Applications of Laplace transforms to ordinary differential equations of first and second order with constant coefficients.

UNIT-IV: Z- TRANSFORMS (9 periods)

Z – transforms, inverse Z– transforms, damping rule, shifting rule, initial and final value theorems. Convolution theorem (without proof), solution of difference equations by Z– transforms.

UNIT – V: PARTIAL DIFFERENTIAL EQUATIONS (9 periods)

Formation of Partial differential equations – Solutions of first order linear equations by method of grouping. First and second order equations by method of separation of variables – Solutions of one dimensional Wave equation, Heat equation. **Total no. of periods: 45**

I B.Tech. - II Semester

16BT20441: BASIC ELECTRONIC DEVICES AND CIRCUITS

(Common to CSE, CSSE and IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: A course on Engineering Physics.

COURSE DESCRIPTION:

Characteristics of general and special purpose electronic devices; Rectifiers; Biasing of BJT; FET, Feedback Amplifiers, Oscillator.

COURSE OUTCOMES: On successful completion of this course the students will be able to

CO1: Gain in-depth knowledge in

- *p-n* junction diode and its characteristics
- Zener diode and its characteristics
- Rectifiers and Filters
- Characteristics of BJT, FET, MOSFET and special purpose electronic devices.
- FET amplifiers
- Feedback amplifiers and Oscillators

CO2: Analyze numerical and analytical problems in

- Rectifiers using Filters
- Transistor biasing circuits
- FET biasing circuits and amplifiers
- Feedback amplifiers and oscillators

CO3: Design electronic circuits such as

- Rectifiers with and without filters
- BJT and FET biasing circuits
- FET amplifiers
- Feedback amplifiers and oscillators

CO4: Solve engineering problems and arrive at solutions pertaining to electronic circuits.

CO5: Select appropriate technique for transistor biasing.

DETAILED SYLLABUS

UNIT-I: *P-N JUNCTION DIODE AND RECTIFIERS* **(10 Periods)**

P-N JUNCTION DIODE

P-N Junction Diode Equation, Volt-Ampere (V-I) Characteristics, Temperature Dependence of V-I Characteristics, Ideal Versus Practical, Static and Dynamic Resistances, Diode Equivalent circuits, Junction capacitances, Break down mechanisms in semiconductor Diodes, Zener Diode Characteristics.

RECTIFIERS

Halfwave rectifier and Fullwave rectifiers (Qualitative and quantitative analysis), Harmonic components in a rectifier circuit, Inductor filter, Capacitor filter, L - section filter, ð - section filter, Problems on rectifier circuits.

UNIT-II: *BIPOLAR JUNCTION TRANSISTOR AND BIASING* **(11 Periods)**

CHARACTERISTICS:

Transistor construction, BJT Operation, Transistor as an amplifier, Transistor currents and their relations, Input and Output Characteristics of a Transistor in Common Emitter, Common Base and Common Collector Configurations, BJT specifications, transistor hybrid model for CE configuration – analytical expressions for transistor characteristics.

BIASING:

Transistor biasing, Operating Point, DC and AC Load Lines, Importance of Biasing, Fixed Bias, Emitter Feedback Bias, Collector to Emitter Feedback Bias, Voltage Divider Bias.

UNIT-III: *FIELD EFFECT TRANSISTOR* **(10 Periods)**

Construction, Principle of Operation and Characteristics of JFET and MOSFET (Enhancement & Depletion), Biasing of FET, Small Signal Model of JFET & MOSFET. Common Source and Common Drain Amplifiers using FET, Generalized FET Amplifier, FET as Voltage Variable Resistor, Comparison between BJT and FET.

UNIT-IV: *FEEDBACK AMPLIFIERS AND OSCILLATORS* **(8 Periods)**

Feedback Concepts, Types of Feedback Circuits (block diagram representation), General characteristics of negative feedback amplifier, Effect of Feedback on Amplifier characteristics. Barkhausen criterion, Hartley & Colpitts oscillators, Phase Shift Oscillators and Crystal Oscillator.

UNIT-V: *SPECIAL PURPOSE ELECTRONIC DEVICES* **(6 Periods)**

Principle of Operation and Characteristics of Tunnel Diode, Uni-Junction Transistor (UJT), Varactor Diode, Silicon Control Rectifier (SCR). Principle of operation of Schottky Barrier Diode.

Total Periods: 45

I B.Tech. - II Semester

16BT21201: **OBJECT ORIENTED PROGRAMMING THROUGH C++**

(Common to IT, CSE and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	4	1	-	4

PREREQUISITES: A Course on "Programming in C".

COURSE DESCRIPTION:
Introduction to Object Oriented concepts and Fundamental Concepts of C^{++}; Decision Making Statements, Looping Statements and Functions; Arrays, Pointers & References and Strings; Classes & Objects and Overloading Operators; Composition & Inheritance, Templates, Iterators & Generics and File Handling;

COURSE OUTCOMES:
On successful completion of this course, the students will be able to:

- **CO1:** Demonstrate knowledge on object oriented programming concepts - Object, Class, Inheritance, Polymorphism, Encapsulation, Abstraction and Message passing.
- **CO2:** Identify object oriented concepts for code reusability and optimization.
- **CO3:** Design and develop solutions for given specifications.
- **CO4:** Demonstrate problem solving skills to provide software solutions to real world problems.
- **CO5:** Develop C^{++} programming to provide solutions to complex engineering problems using object oriented concepts.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION AND FUNDAMENTAL CONCEPTS (Periods: 10)

An introduction to object technology: Objects and methods, Object: A practical example, Classes, Declaring classes and objects.

Key Object Orientation concepts and Elementary C++ programming: Abstraction, Encapsulation, Aggregation/composition, Inheritance, Some simple programs, The output operator, Characters and literals, Variables and their declarations, Program tokens, Initializing variables, Objects, variables and constants, The input operator.

Fundamental types: Numeric data types, The Boolean types, Enumeration types, Character types, Integer types, Arithmetic operators, The increment and decrement operators, composite Assignment operators, Floating –point types, Type conversions, Numeric overflow, Round-off error, The format for floating –point values, Scope.

UNIT-II: DECISION MAKING STATEMENTS, LOOPING STATEMENTS AND FUNCTIONS (Periods:10)

Decision making statements: The if statement, The if-else statement, Keywords, Comparison operators, Statement blocks, Compound Conditions, Short- circuiting, Boolean expressions, Nested selection statements, The else-if statement, The switch statement, The conditional expression operator.

Looping Statements: The while statements, Terminating a loop, the do-while statement, the for statement, the break statement, the continue statement, the goto statement, Generating pseudo-random numbers

Functions: Introduction, Standard c++ library functions, User-defined functions, Test drivers, function declarations and definitions, Local variables and functions, void functions, Boolean functions, I/O functions, passing by reference, passing by constant reference, Inline functions, Scope, Overloading, The main () function, Default arguments

UNIT-III: ARRAYS, POINTERS & REFERENCES AND STRINGS (Periods: 12)

Arrays: Introduction, processing arrays, initializing an array, Array index out of bounds, passing an array to a function, the linear search algorithm, the bubble sort algorithm, the binary search algorithm, Using arrays with enumeration types, Type definitions, Multidimensional arrays.

Pointers and References: The reference operator, References, Pointers, the dereference operator, Derived types, Objects and lvalues, Returning a reference.

C++ Strings: Introduction, working with strings in C++, String manipulation, Strings and arrays, miscellaneous string functions, String streams

UNIT-IV: CLASSES & OBJECTS AND OVERLOADING OPERATORS (Periods: 12)

Classes and objects: Introduction, Class declarations, Constructors, Constructor initialization lists, Access functions, Private member functions, The copy constructor, The class destructor, Constant Objects, Structures, Pointers to object, Static data members, static function members, predefined classes, Data hiding and encapsulation, Exception handling

Overloading Operators: Introduction, Overloading the assignment operator, The this operator, Overloading Arithmetic operator, Overloading the arithmetic assignment operator, Overloading the relational patterns, Overloading the stream operators, Conversion operators, Overloading the increment and decrement operators, Overloading the subscript operator

UNIT-V: COMPOSITION & INHERITANCE, TEMPLATES, ITERATORS & GENERICS AND FILE HANDLING (Periods: 11)

Composition and inheritance: Introduction, Composition, Inheritance, protected class members, Overriding and dominating inherited members, private access versus protected access, virtual functions and polymorphism, virtual destructors, Virtual functions, pure virtual functions, Abstract classes, object-oriented programming.

Templates, iterators and Generics: Introduction, Function templates, Class templates, Container classes, Subclass templates, passing template classes to template parameters, Iterator classes, Generic programming **C++ File Handling:** File I/O **(Total Periods: 55)**

TEXT BOOKS:

1. John R Hubbard, *Programming with C^{++}*, 3rd Edition, Tata McGraw-Hill, 2010.
2. P. B. Mahapatra, "Thinking in C^{++}", 1st Edition, Galgotia Publications Pvt. Ltd, 2005.

I B.Tech. - II Semester

16BT21501: **DIGITAL LOGIC DESIGN**

(Common to CSE, CSSE and IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: -NIL-

COURSE DESCRIPTION: Introduction to number systems; logic gates; Boolean Algebra; simplification of Boolean functions; Design of combinational circuits; Design of sequential circuits, Memory and Programmable Logic

COURSE OUTCOMES:

On Successful completion of this course student will be able to:

CO1. Demonstrate knowledge on Boolean algebra, Minimization of Boolean functions using Map Reduce method.

CO2. Identify appropriate simplification techniques for Boolean functions.

CO3. Design combinational and sequential logic circuits, memory and programmable logic for digital systems.

CO4. Select and Apply Boolean algebra and gate level minimization techniques for designing combinational and sequential logic circuits.

CO5. Learn independently new concepts, new techniques and advanced subject knowledge in the area of combinational and sequential logic circuits.

DETAILED SYLLABUS:

UNIT I – BINARY SYSTEMS AND BOOLEAN ALGEBRA (10 periods)

Digital Systems, Binary Numbers, Number base conversions, Octal and Hexadecimal Numbers, Signed binary numbers, other binary codes, complements. Boolean Algebra, Boolean functions, Canonical and standard forms, Digital logic gates

UNIT II – GATE LEVEL MINIMIZATION (9 periods)

The K-map method - Four-variable map, Five-Variable map, product of sums and sum of products simplification, Don't-care conditions, NAND and NOR implementations, other Two-level implementations, Exclusive – OR function

UNIT III – COMBINATIONAL LOGIC (9 p*eriods*)

Combinational Circuits, Analysis procedure, Design procedure, Binary Adder-Subtractor, BCD Adder, Carry- Look- ahead adder, Binary multiplier, Magnitude Comparator, Decoders, Encoders, Multiplexers, De-Multiplexers.

UNIT IV – SEQUENTIAL LOGIC (9 periods)

Latches, Flip-Flops, Analysis of clocked sequential circuits, Design of synchronous sequential circuits, registers, shift registers, Ripple counters, Synchronous counters, Ring Counter and Johnson Counter.

UNIT V–MEMORY AND PROGRAMMABLE LOGIC (8 p*eriods*)

Random-Access Memory, Memory Decoding, Error Detection and Correction, Read-only memory, Programmable logic Array, programmable Array logic, Sequential Programmable Devices.

Total Periods: *45*

TEXT BOOK:

1. M. Morris Mano, "Digital Design", Third Edition, Pearson Education/PHI, 1999.

I B. Tech. - II Semester

16BT1BS32: **ENGINEERING PHYSICS LAB**

(Common to CSE, CSSE, IT, CE & ME)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: Intermediate / senior secondary Physics.

COURSE DESCRIPTION:

Characteristics of p-n junction diode, Photodiode, LED, and semiconductor laser diode. Experimental determination of carrier concentration and energy gap of a semiconductor material, wave length of a laser source, size of fine particle, numerical aperture and acceptance angle of optical fiber. Determination of frequency of electrically vibrating tuning fork and A.C source using A.C sonometer, magnetic field along axial line of a current carrying coil and rigidity modulus of material of a wire using torsional pendulum.

COURSE OUTCOMES:

After completion of the course, a successful student will be able to:

CO1: Acquire basic knowledge about semiconductor materials, magnetic materials and lasers.

CO2: Acquire analytical skills in the estimation of carrier concentration of semiconductor materials and characterization of p-n junction.

CO3: Develop skills in designing electronic circuits using semiconductor components.

CO4: Acquire skills to use instrumental techniques in A.C sonometer and Melde's experiment.

CO5: Apply diffraction techniques for determination of size of tiny particles and wave length of lasers.

ENGINEERING PHYSICS LAB

Conduct a minimum of any **Ten** of the following experiments.

1. Determination of wavelength of a laser source using Diffraction Grating.
2. Determination of particle size by using a laser source.
3. Determination of Numerical aperture and acceptance angle of an optical fiber.
4. Melde's experiment - transverse & longitudinal modes.
5. Magnetic field along the axis of a current carrying coil- Stewart and Gee's method.
6. Calculation of A.C frequency using sonometer.
7. I-V Characteristics of a p-n Junction diode.
8. Energy gap of a material of a p-n Junction.
9. Characteristics of LED source.
10. Characteristics of Photo diode.
11. Hall Effect.

12. Determination of rigidity modulus of the material of the wire using torsional pendulum.

I B.Tech. - II Semester
16BT20451: **ANALOG AND DIGITAL ELECTRONICS LAB**

(Common to CSE, CSSE & IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: Courses on "Basic Electronic Devices & Circuits and Digital Logic Design"

COURSE DESCRIPTION: Identification and testing of active and passive components; RPS, DMM, Function Generator, CRO; Diode characteristics; Rectifiers; BJT and FET characteristics; UJT and SCR characteristics; BJT Amplifiers; Realization of FFs, Combinational Circuits, sequential Circuits; Demonstration on VHDL Programme.

COURSE OUTCOMES: On successful completion of this course, the student will be able to:

CO1. Demonstrate knowledge in different electronic devices, analog and digital circuits

CO2. Analyze the characteristics of different electronic devices and circuits like
- Diodes p-n Junction Diodes, Zener Diodes, SCR
- Transistors-BJT,FET,UJT
- Flip Flops-JK FF, D FF
- Combinational Circuits-HA, FA
- Sequential Circuits -Counters

CO3. Design electronic circuits like FET Amplifiers, Feedback amplifiers, Oscillators, Combinational Circuits and Sequential Circuits.

CO4. Solve engineering problems by proposing potential solutions through Design of better electronic circuits.

CO5. Model an electronic circuit which fulfil the needs of the society.

CO6: Function effectively as an individual and as a member in a group

CO7: Communicate effectively in verbal and written form.

DETAILED SYLLABUS:

PART A

ELECTRONIC WORKSHOP PRACTICE (Only for Viva-Voce)

1. Identification, Specifications, Testing of R, L, C Components (Colour Codes), Potentiometers, Switches (SPDT, DPDT, and DIP), Coils, Gang Condensers, Relays, Bread Boards. Identification, Specifications and Testing of Active Devices: Diodes, BJTs, Low-power JFETs, MOSFETs, LEDs, LCDs, SCR, UJT, Linear and Digital ICs.

PART B

ANALOG DEVICES AND CIRCUITS (Minimum seven experiments to be conducted)

1. p-n Junction and Zener diodes characteristics
2. Ripple Factor and Load Regulations of Rectifier with and without filters (Full wave or Half wave)
3. Input and Output characteristics of Transistor in CE configuration
4. Drain and Transfer Characteristics of JFET
5. Gain and Frequency response of FET Amplifier
6. Gain and Frequency response of Feedback Amplifier (Voltage series or current series)
7. Frequency of oscillations of Hartley and Colpitts Oscillator
8. UJT relaxation oscillator
9. SCR characteristics

PART C

DIGITAL CIRCUITS

Realization of

1. Flip Flops using Logic Gates
2. Two Problems on Combinational Circuits
3. Asynchronous Counter
4. Synchronous Counter

Demonstration of

VHDL Programme

I B. Tech. - II Semester

16BT20531: **Workshop in Computer Science**

(Computer Science and Engineering)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: ***NIL***

COURSE DESCRIPTION:

Hands on practice sessions on PC hardware, Internet, World Wide Web, MS-Word, Excel, Power Point, Publisher, MS Access and MS NetMeeting; Demonstration on installation of system software - Linux OS and device drivers; protecting personal computer from viruses and other cyber attacks.

COURSE OUTCOMES:

After the completion of the course the student will be able to:

CO1. Gain Knowledge on:
- Identification of functional parts of PC
- Internet and World Wide Web.
- Computer security issues and preventive measures.

CO2. Design documents and presentations effectively.

CO3. Apply modern tools to develop IT based applications and acquire skills in PC maintenance and Office automation tools.

CO4: Develop effective professional communication through IT Tools.

CO5: Acquire attitude for lifelong learning of advances in computer science.

LIST OF EXERCISES:

a) PC HARDWARE

Week 1: Identify the peripherals of a personal computer, components in a Central Processing Unit (CPU) and its functions, block diagram of CPU along with the configuration of each peripheral.

Week 2: Introduction to LINUX OS, Installation of LINUX OS, Basic DOS commands – mkdir, cd, cls, del, copy, attrib, date, path, type, format, exit. Basic commands in LINUX - cat, ls, pwd, rm, rmdir, cd, cp, mv, who, date, cal, clear, man, wc.

b) MS-OFFICE:

MS Word

Week 3: Introduction to MS-Word, Importance of Word as Word Processor, Overview of toolbars, Saving, Accessing files, Using help and resources. Create a word document using the features: Formatting fonts, Drop cap, Applying text effects, Using character spacing, Borders and shading, Inserting headers and footers, Using date and time option.

Week 4: Create a word document in MS-Word using the features: Inserting tables, Bullets and numbering, changing text direction, Hyperlink, Images from files and Clipart, Drawing toolbar and Word art and create an invitation using Mail Merge in MS-Word

MS POWER POINT:

Week 5: Introduction to MS-Power Point, Utilities, Overview of toolbars, PPT orientation, slide layouts, Types of views. Create a Power Point Presentation using the features: Slide Layouts, Inserting Text, Word Art, Formatting Text, Bullets and Numbering, Auto Shapes, Lines and Arrows.

Week 6: Create a Power Point Presentation using the features: Auto content wizard, Hyperlinks, Inserting images, Clip art, Audio, Video, Custom animation, Slide hiding, Tables and Charts.

MS EXCEL:

Week 7: Introduction to MS-Excel as a Spreadsheet tool, Overview of toolbars, accessing, Saving excel files, Using help and resources. Create a spreadsheet using the features: Gridlines, Format cells, Summation, Auto fill, Formatting text, Formulae in Excel Charts.

Week 8: Create a spreadsheet using the features: Split cells, Sorting, Conditional formatting, Freeze panes, Pivot tables, Data validation.

MS PUBLISHER & WORLD WIDE WEB

Week 9: Introduction to MS-Publisher, Overview of toolbars, Saving files, Templates, Layouts.
Create a website using the features: Home page, About us, Department, Contact page.

MS ACCESS:

Week 10: Introduction to MS Access, Design a Database, Build a Database, Work with Forms, Sort, Retrieve, Analyze Data and Manage an Access Database.

MS NETMEETING:

Week 11: Introduction to MS NetMeeting, Hosting a meeting, Remove a caller from the meeting, Chat Overview, Whiteboard Overview, Sharing Programs Overview, Sending a file, Placing a call, Accept or Reject a call.

INTERNET & COMPUTER SECURITY

Week 12: Search Engines and Cyber Hygiene: Types of search engines and how to use search engines, Awareness of various threats on Internet, Types of attacks and how to overcome, Installation of antivirus software.

TEXT BOOK:

1. Vikas Gupta, "Comdex Information Technology Course Tool Kit," WILEY Dream tech Press, New Delhi, 2012.

REFERENCE BOOKS:

1. Steve Lambert, M.Dow Lambert III and Joan Preppernau "Step by Step Microsoft Office Access 2007" , Microsoft Press, 2007.
2. ITL Education, "Introduction to Information Technology", 2nd Edition, Pearson Education, New Delhi, 2005.

I B.Tech - II semester

16BT21232: OBJECT ORIENTED PROGRAMMING LAB

(Common to IT, CSE and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: A Course on "OOPS through C++".

COURSE DESCRIPTION:

Hands-on experience on creating Virtual machines on Windows and Linux platforms, Development of Service based web applications & their deployment and Mobile app development.

COURSE OUTCOMES:

On successful completion of this course, the students will be able to:

CO1: Demonstrate practical knowledge on Object oriented programming concepts - Object, Class, Inheritance, Polymorphism, encapsulation, Abstraction, message passing.
CO2: Apply object oriented programming concepts to develop real world applications.
CO3: Demonstrate Problem solving skills using basic and advanced concepts of C++.
CO4: Work individually and in teams collaboratively in implementing the applications.
CO5: Demonstrate communication skills both oral and written for preparing and presenting reports

LIST OF EXERCISES:

1) A. Write a C++ program that takes length as input in feet and inches. The program should then convert the lengths in centimeters and display it on screen. Assume that the given lengths in feet and inches are integers.
B. Write a C++ program to find the sum for the given variables using function with default arguments.
2) Implement the Number Guessing Game in C++ with the given instructions. In this game the computer chooses a random number between 1 and 100, and the player tries to guess the number in as few attempts as possible. Each time the player enters a guess, the computer tells him whether the guess is too high, too low, or right. Once the player guesses the number, the game is over.
3) Write a program to perform arithmetic operations on two numbers. The program must be menu driven, allowing to select the operation (+, -, *, or /) and input the numbers. Furthermore, the program must consist of following functions:
    i) Function showChoice: This function shows the options and must explain how to enter data.
    ii) Function add: This function accepts two number as arguments and returns sum.
    iii) Function subtract: This function accepts two number as arguments and returns their difference.
    iv) Function multiply: This function accepts two number as arguments and returns product.
    v) Function divide: This function accepts two number as arguments and returns quotient.
4) Write a menu driven C++ program with following option
    a. Accept elements of an array
    b. Display elements of an array
    c.Sort the array using bubble sort method Write C++ functions for all options. The functions should have two parameters name of the array and number of elements in the array.
5) X. Y, Z are arrays of integers of size M, N, and M + N respectively. The numbers in array X and Y appear in descending order. Write a user-defined function in C++ to produce third array Z by merging arrays X and Y in descending order.
6) A. Write a program to enter any number and find its factorial using constructor.
    B. Write a program to generate a Fibonacci series using copy constructor.
7) Write a program to perform addition of two complex numbers using constructor overloading. The first constructor which takes no argument is used to create objects which are not initialized, second which takes one argument is used to initialize real and imaginary parts to equal values and third which takes two argument is used to initialized real and imaginary to two different values.
8) A. Write a program to overload unary increment (++) operator.
    B. Write a program to overload binary + operator.
9) A. Define a class TEST in C++ with following description:

Private Members
TestCode of type integer
Description of type string
NoCandidate of type integer
CenterReqd (number of centers required) of type integer
A member function CALCNTR() to calculate and return the number of centers as (NoCandidates/100+1)
Public Members
- A function SCHEDULE() to allow user to enter values for TestCode, Description, NoCandidate & call function CALCNTR() to calculate the number of Centres - A function DISPTEST() to allow user to view the content of all the data members
b. Define a class REPORT with the following specification:
Private members :
adno 4 digit admission number
name 20 characters
marks an array of 5 floating point values
average average marks obtained
GETAVG() a function to compute the average obtained n five subject
Public members:
READINFO() function to accept values for adno, name, marks. Invoke the function GETAVG()
DISPLAYINFO() function to display all data members of report on the screen.You should give function definitions.

10) A. Create a base class basic_info with data members name ,rollno, gender and two member functions getdata and display. Derive a class physical fit from basic_info which has data members height and weight and member functions getdata and display. Display all the information using object of derived class.
B. Create a class called LIST with two pure virtual function store() and retrieve().To store a value call store and to retrieve call retrieve function. Derive two classes stack and queue from it and override store and retrieve.
11) A. Write a program to define the function template for swapping two items of the various data types such as integer, float, and characters.
B. Write a program to define the class template for calculating the square of given numbers with different data types.
12) A. Write a C++ program to write number 1 to 100 in a data file NOTES.TXT.
B. Write a program to read a set of lines from the keyboard and to store it on a specified file.

Any one of the following Mini Projects are to be implemented by a group of 4 to 5 students:

1) **Mini Project : Banking System**
Develop an application on BANKING SYSTEM which has account class with data members like account number, name, deposit, withdraw amount and type of account. Customer data is stored in a binary file. A customer can deposit and withdraw amount in his account. Must support the features of creation, modifying and deletion account any time.
2) **Mini Project : Library Management System**
Develop an application on LIBRARY MANAGEMENT SYSTEM which has book and student class with data members like book no, bookname, authorname. Books records is stored in a binary file. A student can issue book and deposit it within 15 days. Student is allowed to issue only one book. Student Records are stored in binary file. Administrator can add, modify or delete record.
3) **Mini Project : Supermarket Billing System**
Develop a simple console application for SUPERMARKET BILLING SYSTEM which has product class with data members like product no, product name, price, quantity, tax, discount. Product details is stored in a binary file. A customer can purchase product and his invoice generated. Administrator can create, modify, view and delete product record.

II B. Tech. I-Semester

(16BT3BS01) PROBABILITY DISTRIBUTIONS AND STATISTICAL METHODS

(Common to CE, ME, CSE, and IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE REQUISITES:
Intermediate/senior secondary mathematics

COURSE DESCRIPTION:
Random variables; mathematical expectations; probability distributions; correlation and regressions; statistical quality control; sampling distributions; tests for small and large samples and their significances.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1: Acquire basic knowledge in
- probability distributions, correlation and regressions
- statistical quality control and testing of hypotheses
- Simple linear regression
- Tests of significance for small and large samples

CO2: Develop skills for analyzing the data with
- mathematical expectations for realistic results
- probability distributions for practical situations.
- control charts of statistical quality control
- correlation and regression concepts
- suitable tests of significance for practical situations.

CO3: Develop skills in designing
- probability distributions
- limitations of statistical quality control
- control charts,
- X, R, np, and c charts

CO4: Develop analytical skills for solving problems involving
- Probability distributions, means, variances and standard deviations
- Statistical techniques employed for quality
- Sampling techniques for decision making
- Tests of significances for small and large samples

CO5: Use relevant probability and statistical techniques for
- Mathematical expectations of desired results
- Fitting probability distributions for experimental data.
- Quality control and testing of hypothesis.

DETAILED SYLLABUS

UNIT-I: RANDOM VARIABLE AND MATHEMATICAL EXPECTATIONS (9 periods)
Random Variables: Discrete and Continuous random variables, Distribution function of random variable, Properties, Probability mass function, Probability density function, Mathematical expectation, Properties of Mathematical expectation, Mean and Variance.

UNIT-II: PROBABILITY DISTRIBUTIONS (9 periods)
Discrete Distributions: Binomial and Poisson Distributions, Mean, variance and standard deviations.
Continuous Distributions: Normal Distribution, Mean, Variance and properties.

UNIT-III: CORRELATION, REGRESSION AND STATISTICAL QUALITY CONTROL (9 periods)
Definition of correlation, correlation coefficient, Rank correlation. Simple linear regression, regression lines and properties. Introduction, advantages and limitations of statistical quality control, Control charts, specification limits, , R, np and c charts.

UNIT-IV: SAMPLING DISTRIBUTIONS AND TEST OF SIGNIFICANCE FOR LARGE SAMPLES (9 periods)
Population and Sample, Parameter and Statistic, Sampling Distribution of Statistic, Standard Error of Statistic, Null and Alternative Hypothesis, Type I and II errors, Level of Significance, Critical region, Degrees of freedom. Tests of significance for proportions and means.

UNIT-V: TEST OF SIGNIFICANCE FOR SMALL SAMPLES (9 periods)
Student's t-test: single mean, difference of means, F-test for equality of population variance, Chi-Square Test for Goodness of fit, contingency table, Chi-Square Test for Independence of Attributes.

Total Periods: 45

TEXT BOOKS:
1. T.K.V. Iyengar, B. Krishna Gandhi ,S.Ranganatham and M.V.S.S.N. Prasad, *Probability and Statistics,* S. Chand & Company, 4/e,2013.
2. S.P.Gupta, *Statistical Methods,* Sultan and Chand, New Delhi, 28/e, 2005

REFERENCE BOOKS:

1. S.C.Gupta and V.K.Kapoor , *Fundamentals of Applied Statistics,* Sultan and Chand,New Delhi.,1 ed, 2004.

II B. Tech. I-Semester

(16BT30501) COMPUTER ORGANIZATION

(Common to CSE, IT, and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES:

A Course on "Digital Logic Design"

COURSE DESCRIPTION:

Basic structure and operation of a digital computer; Organization and functional principles of the arithmetic and logic unit, control unit, memory unit and I/O unit; Concepts of pipelining and parallel processing techniques;

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on:

- Computer Arithmetic units
- Register Transfer and Computer Instructions
- Design of Control Unit
- Input Output Organization and Memory system
- Pipelining and Multiprocessing.

CO2. Analyze the functional units of a digital computer.

CO3. Design the functional modules in a digital computer - Arithmetic Units, Memory and I/O.

CO4. Investigate the performance of memory, I/O, and pipelined processors.

CO5. Select appropriate techniques of I/O, Pipelining and Multiprocessing to solve computing problems.

CO6. Apply contextual knowledge of computer systems development to societal applications.

DETAILED SYLLABUS:

UNIT-I: REGISTER TRANSFER & MICROOPERATIONS AND COMPUTER ARITHMETIC (9 periods)

Register Transfer And Micro operations: Register transfer, Bus and memory transfers, Arithmetic micro operations, Logic micro operations, Shift micro operations, Arithmetic logic shift unit.

Computer Arithmetic: Fixed point representation, Floating point representation, Addition and subtraction, Binary multiplication algorithms, Binary division algorithms.

UNIT-II:BASIC COMPUTER ORGANIZATION & DESIGN AND MICRO PROGRAMMED CONTROL(9periods)

Basic Computer Organization and Design: Instruction codes, Computer registers, Computer instructions, Instruction formats, Addressing modes, Timing and control, Instruction cycle, Memory reference instructions, Input - Output and Interrupt.

Micro Programmed Control: Control memory, Address sequencing, Design of control unit, Hardwired control, Micro programmed control.

UNIT-III: INPUT-OUTPUT ORGANIZATION (8 periods)

Peripheral devices, Input-Output interface, Modes of transfer, Priority interrupt, Direct Memory Access, Input-Output Processor (IOP).

UNIT-IV: THE MEMORY SYSTEM (10 periods)

Semiconductor RAM memories – Internal organization, Static memories, Synchronous and Asynchronous DRAMs, Structure of larger memories; Read-Only memories, Cache memories – Mapping functions; Secondary Storage – Magnetic Disks, Optical Disks.

UNIT-V: PIPELINE & VECTOR PROCESSING AND MULTIPROCESSORS (9 periods)

Pipeline and Vector Processing: Parallel processing, Pipelining, Arithmetic pipeline, Instruction pipeline, Vector processing, Array processors.

Multiprocessors: Characteristics of multiprocessors, Interconnection structures, Inter-processor arbitration, Inter-processor communication and synchronization.

Total Periods: 45

TEXT BOOKS:

1. Morris Mano, *Computer System Architecture,* Pearson Education, Third Edition, 2007.
2. Carl V. Hamacher, Zvonko G. Vranesic and Safwat G. Zaky, *Computer Organization,* McGraw-Hill, Fifth Edition, 2002.

REFERENCE BOOKS:

1. William Stallings, *Computer Organization and Architecture: Designing For Performance,* Pearson Education, Seventh Edition, 2007.
2. John P. Hayes, *Computer Architecture and Organization,* McGraw-Hill. Third Edition.

II B. Tech. – I Semester

(16BT30502) DATA STRUCTURES

(Common to CSE, IT, and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES:
A Course on "Programming in C"

COURSE DESCRIPTION:
Linked Lists; Type of lists; Operations and Applications; Stacks and Queues; Operations and Applications; Trees, Search trees and Heaps; Multiway Trees and Graphs; Searching and Hashing.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on
- Principles of Data Structures.
- Linear and Non-linear Data Structures.
- Sorting and hashing techniques.

CO2. Analyze and Identify suitable data structure for computational problem solving
CO3. Design solutions for complex engineering problems using linear and non-linear data structures.
CO4. Develop solutions for Complex computational problems by conducting explorative analysis.
CO5. Apply appropriate data structure to provide solutions for real time problems by using C Language.
CO6. Apply contextual knowledge of data structures to design applications for societal applications like payroll systems, web applications, banking and financial systems.

DETAILED SYLLABUS:

UNIT-I: LINKED LISTS (8 periods)
Pointers, Operations, Linked List definition, Single Linked Lists, Circular Linked List, Doubly Linked List, Circular Doubly Linked List, Application of Linked Lists.

UNIT-II: STACKS AND QUEUES (8 periods)
Stacks: Stack operations, Stack Linked List, Implementation, Stack applications.
Queues: Queue operations, Queue Linked List design, Queue applications.

UNIT-III: TREES, SEARCH TREES AND HEAPS (10 periods)
Trees: Tree concepts, Binary Trees.
Binary Search Trees (BST): Basic concepts, BST operations, BST applications.
AVL Search Trees: Basic concepts, AVL Tree implementations.
Heaps: Basic concepts, Heap implementation, Heap applications.

UNIT-IV: MULTIWAY TREES AND GRAPHS (10 periods)
Multiway Trees: B-Trees, Simplified B-Trees, B-Tree variations.
Graphs: Basic concepts, Operations, Graph storage structures, Graph algorithms - Create graph, Insert vertex, Delete vertex, Retrieve vertex, Depth-first traversal, Breadth-first traversal**.**

UNIT-V: SORTING AND HASHING (09 periods)
Internal Sorting: Quick Sort, Shell Sort, Merge Sort, Heap Sort.
External Sorting: Introduction, External storage device and sorting with tapes, Balanced Merge.
Hashing: Introduction, Hash Table structure, Hash functions, Linear Open Addressing, Chaining, Applications.

Total Periods: 45

TEXT BOOKS:
1. Richard Gileberg and Behrouz A. Forouzan, *Data Structures: A Pseudocode Approach with C,* Cengage Learning, Second Edition, 2007.
2. G.A.V. Pai, "Data Structures and Algorithms", Tata McGraw Hill, Second Edition, 2009.

REFERENCE BOOKS:

1. Debasis Samanta, *Classic Data Structures,* PHI Learning, Second Edition, 2009.
2. Aaron M. Tenenbaum, Yedidyah Langsam, and Moshe J. Augenstein, *Data Structures Using C,* Pearson Education, 2005.

II B. Tech. - I Semester

(16BT31201) DISCRETE MATHEMATICAL STRUCTURES

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Multivariable Calculus and Differential Equations".

COURSE DESCRIPTION:

Mathematical Logic; Predicates; Functions and Relations; Algebra Structures; Mathematical Reasoning; Recurrence Relations; Graphs; Graph Theory and its Applications.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on mathematical logic, algebraic structures, relations, recurrence relations and mathematical reasoning.

CO2. Analyze and prove given statement by contradiction and automatic theorem.

CO3. Design network applications using Prim's and Kruskal's algorithms.

CO4. Solve tree traversal problems using Graph Theory.

CO5. Apply permutation, combinations, counting principle, Lagrange's theorem and graph theory in solving real-time problems.

DETAILED SYLLABUS:

UNIT–I: MATHEMATICAL LOGIC AND PREDICATES (9 Periods)

Mathematical Logic: Statements and notations, Connectives, Well formed formulae, Truth tables, Tautology, Equivalence of formulae, Normal forms.

Predicates: Predicate calculus, Free and bound variables, Rules of inference, Consistency, Proof of contradiction and automatic theorem proving.

UNIT-II: FUNCTIONS AND RELATIONS (8 Periods)

Relations: Properties of binary relations, Equivalence relations, Compatibility relations, Partial ordering relations, Hasse diagram and related applications.

Functions: Inverse functions, Composition of functions, Recursive functions, Lattice and its properties.

UNIT-III: ALGEBRAIC STRUCTURES (8 Periods)

Algebraic System: Examples and general properties, Semi groups and monoids, Groups, Subgroups, Homomorphism and isomorphism, Lagrange's theorem.

UNIT-IV: MATHEMATICAL REASONING AND RECURRENCE RELATIONS (10 Periods)

Mathematical Reasoning: Methods of proof, Mathematical induction, Basics of counting, The inclusion- exclusion principle, The pigeon hole principle, Permutations and combinations, Generalized permutations and combinations.

Recurrence Relations: Generating functions of sequences, Calculating coefficients of generating function, Recurrence relation, Solving recurrence relations by substitution and Generating functions, Methods of characteristic roots, Solutions of inhomogeneous recurrence relation.

UNIT-V: GRAPH THEORY AND ITS APPLICATIONS (10 Periods)

Graphs: Introduction to graphs, Types of graphs, Graph basic terminology and special types of simple graphs, Representation of graphs and graph isomorphism, Euler paths and circuits, Hamiltonian paths and circuits, Planar graphs, Euler's formula and graph coloring, 4-color theorem.

Trees: Introduction to trees, Properties of trees, Applications of trees, Spanning trees, Counting trees, Depth-first search, Breadth-first search, Minimum spanning trees, Kruskal's algorithm and prim's algorithm.

Total Periods: 45

TEXT BOOKS:

1. J.P. Trembly and R. Manohar, *Discrete Mathematical Structures with Applications to Computer Science,* Tata McGraw Hill, Thirty Seventh Edition, 2008.
2. R. K. Bisht and H. S. Dhami, *Discrete Mathematics,* Oxford Higher Education, 2015.

REFERENCE BOOKS:

1. Joe L.Mott and Abraham Kandel, *Discrete Mathematics for Computer Scientists and Mathematicians,* Prentice Hall of India Private Limited, Second Edition, 2004.

2. Ralph P. Grimaldi and B.V.Ramana, *Discrete and Combinatorial Mathematics- an Applied Introduction*, Pearson Education, Fifth Edition, 2006.
3. Kenneth H. Rosen, *Discrete Mathematics and its Applications*, Tata McGraw Hill, Sixth Edition, 2007.

II B. Tech. – I Semester
(16BT30503) PYTHON PROGRAMMING

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES:
A Course on "Object Oriented Programming through C++"

COURSE DESCRIPTION:
Data types and Expressions; Control Statements; Strings; Text Files; Lists; Dictionaries; Functions; Objects and their use; Exception Handling; Design with Classes; Graphical User Interface;

COURSE OUTCOMES:
On successful completion of the course, students will be able to:
CO1. Demonstrate knowledge in:
- Data Types, Variables, Expressions
- Control statements, Strings and Text files.
- Lists, Dictionaries and Functions.
- Objects and Design with classes
- Exception Handling and GUI

CO2. Analyze complex computational problems.
CO3. Design solutions for real life computational problems
CO4. Solve complex problems using python scripting constructs.
CO5. Implement python scripts using Integrated Development Environment.
CO6. Apply Python programming knowledge to solve problems related to societal applications like Medical and Weather Forecasting.

DETAILED SYLLABUS:
UNIT- I: INTRODUCTION, DATA TYPES AND EXPRESSIONS (8 periods)
Introduction: Computer science, Computer algorithms, Computer software, The Python programming language, First program in Python.
Data Types and Expressions: Literals, Variables and Identifiers, Operators, Expressions and Data types.
UNIT- II: CONTROL STRUCTURES, LISTS, DICTIONARIES AND SETS (8 periods)
Control Structures: Control structures, Boolean expressions, Selection control and Iterative control.
Lists: List structures, Lists in Python, Iterations over lists, Assigning and copying lists, List comprehensions.
Dictionaries, Tuples and Sets: Dictionary types in Python, Implementation of Dictionary, Tuples, Set data type - the Set data type in Python, Implementation of sets.
UNIT-III: DESIGN WITH FUNCTIONS, STRINGS AND TEXT FILES (9 periods)
Program routines, Functions, Recursion-Recursive functions, Recursive problem solving, Iteration Vs Recursion, A case study of Towers of Hanoi using recursion; Using text files, String processing, Exception handling, A Case study on cigarette Use/Lung cancer Correlation program.
UNIT-IV: OBJECTS AND THEIR USE, OBJECT ORIENTED PROGRAMMING (9 periods)
Objects and Their Use: Software objects, Turtle graphics- Creating a turtle graphics window, The default turtle, Fundamental turtle attributes and behavior, Additional turtle attributes, Creating multiple turtles.
Object Oriented Programming: Encapsulation, Inheritance, and Polymorphism.
UNIT-V: GUI PROGRAMMING (11 periods)
Tkinter Overview - tkinter pragmatics, Documentation, Extensions, structure; tkinter coding alternatives, adding buttons and callbacks-lambda, bound method, callable class object, Binding events; adding multiple widgets, Reusable GUI Components with classes, Dialogs, Entry, check buttons and Radio buttons, Scales, Menus.

Total Periods: 45

TEXT BOOKS:
1. Charles Dierbach, *Introduction to Computer Science using Python: A Computational Problem-Solving Focus*, Wiley India Edition, 2016.
2. Mark Lutz, "Programming Python," O'Reilly Publications, Fourth Edition, 2011.

REFERENCE BOOK:
1. Kenneth Lambert and B.L. Juneja, *Fundamentals of Python,* Cengage Learning, Third Edition, 2012.

II B. Tech. - I Semester
(16BT31501) OPERATING SYSTEMS
(Common to CSE, IT, and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION:
Operating systems operations, scheduling; Critical section problem, deadlocks; Paging, segmentation; File Concept, Disk scheduling; I/O interface; concepts of protection.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on Operating system operations, services, file management, disk management, I/O management and protection.
CO2. Identify the functionality involved in process management concepts like scheduling and synchronization.
CO3. Design models for handling deadlock and perform memory management.
CO4. Synthesize and apply programming API's to perform Process management.
CO5. Use appropriate protection tools to provide access control to Operating system users.

DETAILED SYLLABUS:

UNIT-I: OPERATING SYSTEMS OVERVIEW AND PROCESS MANAGEMENT (08 periods)
Operating systems, operations, Distributed systems, Special purpose systems, Operating systems services, Systems calls, Operating system structure.

Process Management: Process scheduling, Process Control Block, Inter process communication, Signals, Forks, Multithreading models, Threading issues, Scheduling criteria, Scheduling algorithms, Multilevel queue, Multilevel feedback queue.

UNIT-II: SYNCHRONIZATION AND DEADLOCKS (10 periods)
Synchronization: The critical-section problem, Peterson's Solution, Synchronization hardware, Semaphores, Classic problems of synchronization, Monitors.

Deadlocks: System model, Deadlock characterization, Methods for handling deadlocks, Deadlock prevention, Deadlock detection, Deadlock avoidance, Deadlock recovery.

UNIT-III: MEMORY MANAGEMENT (09 periods)
Memory-Management Strategies: Swapping, Contiguous memory allocation, Paging, Structure of the page table, Segmentation.

Virtual Memory Management: Demand paging, Copy-on-Write, Page replacement Algorithms, Thrashing.

UNIT-IV: STORAGE MANAGEMENT (10 periods)
File System: File Concept, Access methods, Directory structure, File system structure, i-node, File Descriptors, File system implementation, Directory implementation, Allocation methods.

Secondary Storage Structure: Disk structure, Disk attachment, Disk scheduling, Swap-space management, Stable-storage implementation, Tertiary storage structure.

UNIT-V: I/O SYSTEMS AND PROTECTION (08 periods)
I/O Systems: I/O Hardware, Application I/O interface, Kernel I/O subsystem.

Protection: Goals of protection, Principles of protection, Domain of protection, Access matrix, Implementation of access matrix, Access control, Revocation of access rights.

Total Periods: 45

TEXT BOOK:

1. Abraham Silberschatz, Peter Baer Galvin and Greg Gagne, *Operating System Principles,* Wiley India Edition, 7th edition, 2011.

REFERENCE BOOKS:

1. William Stallings, *Operating Systems, Internals and Design Principles,* Pearson Education, 7th edition, 2013.
2. Andrew S. Tanenbaum, *Modern Operating Systems*, PHI, 3rd edition, 2009.

II B. Tech. – I Semester
(16BT30531) **DATA STRUCTURES LAB**
(Common to CSE, IT, and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES:
A Course on "Data Structures"

COURSE DESCRIPTION:
Hands on practice on Linked Lists; Type of lists; Stacks and Queues; Trees and Search trees; Graphs; Searching and Hashing.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:
CO1. Demonstrate practical knowledge on Stacks, Queues, Linked lists, Trees Sorting and Hashing Techniques.
CO2. Analyze suitable data structure to solve real world computing problems.
CO3. Design solutions for complex computational problems using linear and non-linear data structures.
CO4. Solve for Complex computational problems by conducting explorative analysis.
CO5. Use C language for implementing linear and non-linear data structures.
CO6. Apply contextual knowledge of data structures to design applications for societal requirements.
CO7. Communicate effectively using data structures with engineering community, being able to comprehend and write effective programs and Prepare Reports.

LIST OF EXERCISES:
1. Write program to implement the following data structures:
   (a) Single Linked List
   (b) Double Linked List
   (c) Circular Linked List
2. Write a program to implement Stack and Queue using Linked List.
3. Write a program to evaluate a given postfix expression using Stack.
4. Write a program to convert a given infix expression to postfix form using Stack.
5. Write a program to implement
   (a) Stack using two Queues
   (b) Queue using two Stacks
6. Write a program to implement In-order, pre-order, post-order tree traversal of Binary Trees.
7. Write a program to perform operations on a Binary Search Tree (BST).
8. Write programs for implementation of graph traversals by applying:
   (a) Breadth First Search
   (b) Depth First Search
9. Implement the following sorting algorithms:
   (a) Merge Sort
   (b) Heap Sort
   (c) Quick Sort
10. Write a program to implement hashing with
    (a) Separate Chaining Method
    (b) Open Addressing Method

REFERENCE BOOKS:

1. Richard Gilberg and Behrouz A. Forouzan, *Data Structures: A Pseudocode Approach with C,* Cengage Learning, Second Edition, 2007.

II B. Tech. – I Semester

(16BT30532) **PYTHON PROGRAMMING LAB**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES:
A Course on "Python Programming"

COURSE DESCRIPTION:
Hands on practice – Scripting using Python Programming constructs; Conditional statements; Loops; Text Files; Lists; Dictionaries; Strings; Functions; GUI.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Demonstrate practical knowledge of using python scripting constructs:
- Selection and Repetition statements.
- Lists, Dictionaries, Strings and Functions.
- Text Files and GUI.

CO2. Analyze the complexity of computer hardware.
CO3. Design solutions for specified computational problems using Object Oriented Programming concepts
CO4. Use appropriate python scripts and functions for solving complex problems.
CO5. Create window based applications using tkinter package
CO6. Apply contextual knowledge to computational problems related to societal applications like Medical and Weather Forecasting.
CO7. Work effectively to contribute individually to solve real world problems.
CO8. Communicate effectively in both oral and written to develop Python scripts.

LIST OF EXERCISES:

1. a. Write a python script to display a simple message
   b. Write a python script to perform basic arithmetic operations on two values which are accepted from the user.
2. a. Write a python script to calculate the factorial of a given number.
   b. Write a python script to calculate sum of individual digits of a given number.
   c. Write a python script to display the prime number series up to the given N Value.
3. a. Write a python script to find the largest number among three numbers and display them in ascending order using if-else construct.
   b. Write a python script to create a simple text file, write the contents into the created file and display the same on to the console screen.
4. Write a python script to remove all the occurrences of a given character from a text file, copy the resultant text into another text file. Find the total occurrences of the eliminated characters and display the count along with the contents of the text file on to the console.
5. a. Write a python script to display Fibonacci sequence of numbers using while loop, for loop and do-while loop constructs.
   b. Write a python script to demonstrate string methods.
6. a. Write a python script to create a list and add number of user-defined values to the list and display the same on to the console screen.
   b. Write a python script to perform the following operations on Lists:
   (i) Matrix Addition. (ii) Matrix Multiplication.
7. a. Write a python script to search a key element in the given list of elements.
   b. Write a python script to arrange the given list of elements in ascending or descending order.
8. a. Write a python script to find GCD of two numbers using recursive and non recursive functions.
   b. Write a python script to convert the following using functions:
   (i) Fahrenheit to Celsius temperature. (ii) Celsius to Fahrenheit temperature.
9. a. Write a python script to draw a square using set position method in absolute positioning.
   b. Write a python script to draw a triangle using left, right and Forward methods in relative positioning.
   c. Write a python script using penup and pendown methods to draw "W" character using turtle graphics.
   d. Write a python script to create your own polygon shape and create an interesting design with it.
10. a. Write a GUI Script for creating text label in a window.
   b. Write a Python Script to create a command button. When the button is clicked the event should be handled and the message on the window should change from "Hello" to "Good Bye".
11. a. Write a python script to demonstrate the Exception Handling.
b. Write a Python script to demonstrate the Mouse and Key Event handling.
c. Write a python script to demonstrate menu-driven applications
12. By forming a group of 3 to 4 members develop a mini-project for Horse Race Simulation with the help of GUI programming and tkinter package.

REFERENCE BOOKS:

1 Charles Dierbach, *Introduction to Computer Science using Python: A Computational Problem-Solving Focus,* Wiley India Edition, 2016.
2. Mark Lutz, *Programming Python,* O'Reilly Publications, Fourth Edition, 2011.

II B. Tech. - I Semester

(16BT31531) OPERATING SYSTEMS LAB

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITE: A Course on "Operating Systems"

COURSE DESCRIPTION: Hands on practice in simulating algorithms for CPU Scheduling, Memory Management, I/O Management, Deadlock Handling mechanisms; Implementing Synchronization problems; practice on UNIX commands.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge of the following algorithms to solve problems:

- CPU Scheduling
- Memory Management
- I/O Management

CO2. Formulate and analyze solutions to problems pertaining to Memory and I/O.

CO3. Designing models for deadlock handling mechanisms.

CO4. Develop skills in basic UNIX commands.

CO5. Use appropriate APIs' available in modern operating systems (such as threads, system calls, semaphores, etc…) for software development.

CO6. Communicate effectively on complex operating system problems with implication to User-friendliness.

CO7. Develop and demonstrate user defined libraries to communicate with the kernel for effective implementation of projects across multidisciplinary environments.

LIST OF EXERCISES:

1. Write a program to implement the following system calls:
   a) fork b) exec c) getpid d) wait
2. a. Write a program to demonstrate File Permissions.
   b. Write a program to implement named and unnamed pipes.
3. Implement the following CPU Scheduling Algorithms:
   a) FCFS b) SJF (Preemptive) c) Round Robin d) Priority.
   Use the following set of processes, compare the performance of above scheduling policies

Process Name	Arrival Time	Processing Time	Priorities
A	0	3	2
B	1	5	4
C	3	2	1
D	9	5	5
E	12	5	3

4. Implement the following synchronization problems:
   a) Producer Consumer Problem b) Dining Philosopher's Problem.
5. Implement Banker's Algorithm for Deadlock Avoidance and Detection. Find the safe sequence. If Max. request of any one process is changed, detect whether deadlock is occurred or not. Consider number of resources are three and Jobs are five as shown in the figure:

Process	Allocation			Max			Available		
	A	B	C	A	B	C	A	B	C
P0	0	1	0	7	5	3	3	3	2
P1	2	0	0	3	2	2			
P2	3	0	2	9	0	2			
P3	2	1	1	2	2	2			
P4	0	0	2	4	3	3			

6. Implement the following Algorithms:
   a) First Fit b) Best Fit c) Worst Fit
7. Implement multiprogramming with fixed number of tasks and variable number of tasks. The size of the memory is 1000K. Operating system size is 200K. Number of processes are P1, P2, P3 with sizes 150K, 100K and 70K.
8. Implement the following Page Replacement Algorithms:
   a) FIFO b) LFU c) LRU d) Optimal

Consider number of frames are three and Reference string is: 2 3 2 1 5 2 4 5 3 2 4 2 4 5

9. Develop user-defined libraries to implement input-output functionalities.

`II B. Tech - II semester

(16BT3HS01) ENVIRONMENTAL STUDIES

(Common to CE, ME,CSE, IT, and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	-	-	3

PRE-REQUISITES: A Course on "Engineering Chemistry"

COURSE DESCRIPTION:

Multidisciplinary nature of environment; Natural resources; Ecosystems; Biodiversity; Environment pollution and control; Social issues and environment; Human population and environment; Field studies.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Acquire knowledge on nature of environment, natural resources, ecosystems, biodiversity, environmental pollution and control, social issues and human population.

CO2. Analyze natural resources, ecosystems, biodiversity, environmental pollution and control, social issues and human population.

CO3. Develop strategies for environmental pollution control and natural resource management.

CO4. Solve environmental problems through proper analysis and interpretation of environmental data.

CO5. Choose appropriate techniques in environmental pollution control and natural resource management.

CO6. Understand the impact of social issues and population on environment.

CO7. Provide solutions to individuals, industries and government for environmental sustainable development.

CO8. Follow environmental protection laws for sustainable development.

CO9. Communicate effectively on environmental issues in the form reports.

DETAILED SYLLABUS:

UNIT-I: MULTIDISCIPLINARY NATURE OF ENVIRONMENT AND NATURAL RESOURCES (11 periods)

Multidisciplinary Nature of Environment: Multidisciplinary nature of environment, Segments of environment - Lithosphere, Hydrosphere, Atmosphere, Biosphere; Need for public awareness.

Natural Resources: Renewable and non-renewable resources and associated problems - (a) Forest resources: Use and over exploitation, Deforestation-causes, effects and remedies, Case studies, (b) Water resources: Use and over utilization of surface and groundwater, Conflicts over water, Benefits and problems of large dams, Case studies, (c) Mineral resources: Mining, Adverse effects, Case studies, (d) Food resources: World food problems, Changes caused by agriculture and overgrazing, Effects of modern agriculture, Water logging and salinity, Case studies, (e) Energy resources: Growing needs, Renewable energy resources – Solar, Wind, Hydropower, Hydrogen fuel; Non-renewable energy resources - Coal, Natural gas, Nuclear energy, Role of an individual in conservation of natural resource and equitable use of resources for sustainable lifestyles.

UNIT-II: ECOSYSTEMS AND BIODIVERSITY (10 periods)

Ecosystems: Concept of an ecosystem, Structure and function of an ecosystem - Producers, Consumers, Decomposers; Food chains, Food webs, Ecological pyramids – Types; Characteristic features, Structure and functions of forest ecosystem, Desert ecosystem, Aquatic ecosystem, Energy flow in the ecosystem, Ecological succession.

Biodiversity: Concept and value of biodiversity, Role of biodiversity in addressing new millennium challenges, Hot spots of biodiversity, Threats to biodiversity, Man-wild life conflicts, Endemic, Endangered and extinct species of India, Conservation of biodiversity – In-situ and ex-situ.

UNIT-III: ENVIRONMETAL POLLUTION AND CONTROL (8 periods)

Causes, Adverse effects and control measures of pollution - Air pollution, Water pollution, Soil pollution, Noise pollution, Thermal pollution, Nuclear pollution; Solid waste management – Causes, Effects and control measures of urban and industrial wastes; Hazards and disaster management – Floods, Earthquakes, Tsunamis, Case studies.

UNIT-IV: SOCIAL ISSUES AND THE ENVIRONMENT (8 periods)

Sustainable development, Urban problems related to energy, Environmental ethics – Issues, Solutions; Global warming, Acid rain, Ozone layer depletion, Nuclear accidents and case studies, Wasteland reclamation, Consumerism and waste products, Concept of green technologies, Environment protection act, Air act, Water act, Wildlife protection act, Forest conservation act, Issues involved in enforcement of environmental legislation, Public environmental awareness.

UNIT-V: HUMAN POPULATION AND THE ENVIRONMENT (8 periods)

Population growth, Population characteristics and variation among nations, Population explosion, Family welfare programme, Environment and human health, Human rights, Value education, HIV/AIDS, Women and child welfare, Role of information technology in environment and human health, Case studies,

FieldWork/Assignment/Seminar: Environmental assets Pond / Forest /Grassland / Hill / Mountain / Environment impact assessment procedures for local environmental issues.

TEXT BOOKS: **Total periods: 45**

II B. Tech. – II Semester
(16BT40501) COMPUTER GRAPHICS

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES:
Courses on "Matrices and Numerical Methods" and "Programming in C"

COURSE DESCRIPTION:
Introduction to Computer Graphics; Output Primitives; 2-D Geometric Transformations and Viewing; 3-D Geometric Transformations and Viewing; 3-D Object Representation; Visible Surface Detection Methods and Rendering Methods.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:
CO1. Demonstrate knowledge on
- Graphical interactive devices
- Viewing transformations
- 2-D & 3-D object representations and
- Surface detection methods

CO2. Analyze Transformations and Clipping algorithms for 2-D and 3-D objects.
CO3. Design algorithms to generate points, lines, and polygons for 2-D and 3-D objects.
CO4. Develop innovative methods and techniques for 2-D and 3-D modeling.
CO5. Apply appropriate techniques and tools for surface detection and rendering methods.
CO6. Use contextual knowledge to develop interactive user interfaces and animations related to societal applications.

DETAILED SYLLABUS:
UNIT-I: INTRODUCTION AND OUTPUT PRIMITIVES (10 Periods)
Overview of Graphics Systems: Video display devices, Raster-scan systems, Random-scan systems, Graphics monitors and workstations, Input devices.
Output Primitives: Points and lines, Line-drawing algorithms, Midpoint circle algorithm, Midpoint ellipse algorithm.
UNIT-II: FILLED AREA PRIMITIVES AND 2-D GEOMETRIC TRANSFORMATIONS (9 Periods)
Filled Area Primitives: Scan-line polygon fill algorithm, Boundary-fill algorithm and Flood-fill algorithm.
2-D Geometric Transformations: Transformations – translation, scaling, rotation, reflection and shear; Homogeneous coordinates, Composite transformations, Transformations between coordinate systems.
UNIT - III: 2-D VIEWING AND 3-D OBJECT REPRESENTATIONS (9 Periods)
2-D Viewing: The viewing pipeline, Viewing coordinate reference frame, Window-to-viewport coordinate transformation, Viewing functions, Cohen-Sutherland line clipping algorithm, Sutherland-Hodgeman polygon clipping algorithm.
3-D Object Representations: Polygon surfaces, Quadric surfaces, Spline representations, Hermite curve, Bezier curves and surfaces, B-Spline curves and surfaces.
UNIT-IV: 3-D GEOMETRIC TRANSFORMATIONS AND VIEWING (9 Periods)
3-D Transformations: Translation, Rotation, Scaling, Reflection and Shear.
3-D Viewing: Viewing pipeline, Viewing coordinates, Projections and Clipping.
UNIT-V: VISIBLE-SURFACE DETECTION AND SURFACE-RENDERING METHODS (8 Periods)
Surface Detection Methods: Classification, Back-face detection, Depth-buffer, Scan-line, Depth-sorting, BSP-tree, Area-subdivision and Octree methods.
Surface-Rendering methods: Gouraud shading, Phong shading. **Total Periods: 45**

II B. Tech. – II Semester

(16BT40502) DATABASE MANAGEMENT SYSTEMS

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION:

Database Systems; Database Design; Relational Model; SQL Queries, Constraints and Triggers; Schema Refinement and Normal Forms; Transaction Management; Concurrency Control; Overview of Storage and Indexing.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on
- Data models and Database Languages
- Database design
- Normal forms
- Storage and Indexing

CO2. Analyze databases using normal forms to provide solutions for real time applications.

CO3. Design solutions for database problems using database design, views design and framing queries.

CO4. Use database techniques for designing databases, managing databases and its security.

CO5. Select SQL, Hash based Indexing and Tree based Indexing to manage data in databases.

CO6. Apply contextual knowledge to develop database applications related to societal applications like Information Retrieval Systems, Banking and Financial systems.

DETAILED SYLLABUS:

UNIT- I: INTRODUCTION TO DATABASE SYSTEMS AND DATABASE DESIGN (9 periods)

Database Systems: Database system applications, Purpose of database systems, View of data-Data abstraction, Instances and Schemas, Data models; Database languages - DDL, DML; Database architecture, Database users and administrators.

Database Design: ER diagrams, Beyond ER design, Entities, Attributes and entity sets, Relationships and relationship sets, Additional features of ER model, Conceptual design with ER model.

UNIT-II: THE RELATIONAL MODEL AND RELATIONAL ALGEBRA AND CALCULUS (8 periods)

Relational Model: Integrity constraints over relations, Enforcing integrity constraints, Querying relational data, Logical database design, Introduction to views, Destroying/altering tables and views.

Relational Algebra and Calculus: Preliminaries, Relational Algebra operators; Relational Calculus - Tuple and Domain Relational Calculus; Expressive power of Algebra and calculus.

UNIT-III: SQL AND SCHEMA REFINEMENT (10 periods)

SQL: Form of basic SQL query- Examples of basic SQL queries; Nested queries- Introduction to nested queries, Correlated nested queries, Set-comparison operators; Aggregate operators, NULL values-Comparison using NULL values, Logical connectives AND, OR and NOT, Impact on SQL constructs, Outer joins, Disallowing NULL values; Complex integrity constraints in SQL ,Triggers and active databases.

Schema Refinement: Problems caused by redundancy, Decompositions, Problem related to decomposition, Functional dependencies, Reasoning about FDS, Normal forms – First, second and third normal forms, BCNF; Multi valued dependencies, Fourth normal form, Join dependencies, Fifth normal form.

UNIT-IV: TRANSACTIONS AND CONCURRENCY CONTROL (9 periods)

Transactions: Transaction concept, Transaction state, Implementation of atomicity and durability, Concurrent executions, Serializability, Recoverability, Implementation of isolation, Testing for serializability.

Concurrency Control: Lock based protocols, Timestamp based protocols, Validation based protocols, Multiple granularity, Deadlock handling.

UNIT-V: STORAGE AND INDEXING (9 periods)

Storage and Indexing: Data on external storage, File organization and indexing – Clustered indexes, Primary and secondary indexes; Index data structures – Hash based indexing, Tree based indexing; Comparison of file organizations.

Tree Structured Indexing: Intuition for tree indexes, Indexed Sequential Access Method (ISAM), B+ Trees- A dynamic index structure; Search, Insert, Delete; B-Tree index files. **Total Periods: 45**

TEXT BOOKS:

1. Raghu Ramakrishnan and Johannes Gehrke, *Database Management Systems,* Tata McGraw Hill, Third Edition, 2014.
2. A. Silberschatz, H.F.Korth and S. Sudarshan, "Database System Concepts," Tata McGraw hill, Fifth Edition, 2006.

1. Ramez Elmasri and Shamkant B. Navathe, *Database Systems,* Pearson Education, Sixth Edition, 2013.

2. Peter Rob and Carlos Coronel, *Database Systems Design, Implementation and Management*, Cengage Learing, Seventh Edition, 2009.

II B. Tech. – II Semester

(16BT41201) DESIGN AND ANALYSIS OF ALGORITHMS

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Data Structures".

COURSE DESCRIPTION:

Introduction to Algorithms and Asymptotic Notations; Disjoint Sets and Graphs; Divide and Conquer, Greedy Method; Dynamic Programming, Back Tracking; Branch and Bound.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on:

- Algorithm Complexities and Asymptotic notations.
- Algorithm Design techniques-Divide and Conquer, Greedy Method, dynamic programming, Back tracking, Branch and Bound.

CO2. Analyze the performance of algorithms with respect to Time and Space complexities.

CO3. Design the algorithms for solving real world problems.

CO4. Solve sorting and searching problems using Divide and Conquer method.

CO5. Use dynamic programming and backtracking in finding shortest paths.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO ALGORITHMS (8 Periods)

Algorithm, Algorithm Specifications-Pseudocode conventions; Performance Analysis-Space complexity, Time complexity; Asymptotic Notations - Big Oh, Omega, Theta, Little oh, and Little omega; Recurrences.

UNIT-II: DISJOINT SETS AND GRAPHS (9 Periods)

Disjoint Sets: Operations, union and find algorithms.

Graphs: Breadth first search and Traversal, Depth first search and Traversal, Introduction to spanning trees, connected components and Bi-connected components.

UNIT-III: DIVIDE AND CONQUER AND GREEDY METHOD (10 Periods)

Divide and Conquer: General method, Applications - Analysis of binary search, Quick sort, Merge sort, Strassen's matrix multiplication.

Greedy Method: General method, Applications-Job sequencing with deadlines, knapsack problem, Minimum cost spanning trees, Single source shortest paths.

UNIT-IV: DYNAMIC PROGRAMMING AND BACK TRACKING (10 Periods)

Dynamic Programming: General Method, Applications - Matrix chain multiplication, Optimal binary search trees, 0/1 knapsack problem, All pairs shortest path problem, Travelling sales person problem.

Back Tracking: General Method, Applications – N Queen problem, Sum of subsets problem, Graph coloring, Hamiltonian cycles.

UNIT-V: BRANCH AND BOUND TECHNIQUES (8 Periods)

General method, Applications - Travelling sales person problem, 0/ 1 knapsack problem; LC Branch and Bound solution, FIFO Branch and Bound solution. **Total Periods: 45**

3. Harsh Bhasin, *Algorithms: Design and Analysis,* Oxford University Press, 2015.

II B. Tech. – II Semester

(16BT41202) JAVA PROGRAMMING

(Common to CSE and IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Object Oriented Programming through C++".

COURSE DESCRIPTION: Introduction of Java, Classes and Objects; Inheritance, Packages, Interfaces; Exception handling, Multithreading; Event handling, AWT, Collection Classes; Applets, Servlets.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on:
- Object Oriented Programming concepts - classes, objects, inheritance, polymorphism, encapsulation and abstraction.
- Packages, interfaces, multithreading, exception handling, event handling.

CO2. Analyze complex engineering problems using object oriented concepts.

CO3. Design and develop reusable code to provide effective solutions for real world problems using inheritance and polymorphism.

CO4. Apply AWT and Applets to create interactive Graphical User Interfaces.

CO5. Use advanced programming languages to develop web applications.

CO6. Build Java Applications suitable for societal requirements.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION (10 Periods)

Data types, Variables, Arrays, Operators, Control statements.

Classes and Objects: Concepts of Classes, Objects, Constructors, Methods, this keyword, Garbage collection, Overloading Methods and Constructors, Parameter passing, Access control, Recursion, String Class.

UNIT-II: INHERITANCE, PACKAGES AND INTERFACES (9 Periods)

Inheritance: Inheritance basics, Super keyword, Multi-level hierarchy, Abstract classes, Final keyword with inheritance.

Packages: Definition, Creating and accessing a package, Understanding CLASSPATH, Importing packages.

Interfaces: Definition, Implementing interfaces, Nested interfaces, Applying interfaces, Variables in interface and Extending interfaces.

UNIT-III: EXCEPTION HANDLING AND MULTITHREADING (8 Periods)

Exception Handling: Concepts of exception handling, Exception types, Usage of Try, Catch, Throw, Throws and Finally, Built in exceptions, Creating own exception sub classes.

Multithreading: Java thread model, Creating threads, Thread priority, Synchronizing threads, Inter-thread communication.

UNIT-IV: COLLECTION CLASSES, THE APPLET CLASS AND AWT (10 Periods)

Collection Classes: ArrayList Class, LinkedList Class, Hashset Class, LinkedHashSet Class, TreeSet Class, PriorityQueue Class, EnumSet Class.

The Applet Class: Types of applets, Applet basics, Applet architecture, Applet skeleton, Passing parameters to applets.

AWT Control Fundamentals: User interface components, Layout managers.

UNIT-V: EVENT HANDLING AND SERVLETS (8 Periods)

Delegation event model: Event classes, Event Listener Interfaces – Mouse and Key; Adapter classes.

Servlets: Life cycle of a servlet, Using Tomcat for Servlet development, Create and compile the servlet source code, Servlet API, Javax.Servlet package.

Total Periods: 45

TEXT BOOK:

1. Herbert Schildt, *Java the Complete Reference*, Oracle Press, Ninth Edition, 2014.

REFERENCE BOOK:

II B. Tech. – II Semester

(16BT41203) SOFTWARE ENGINEERING

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Concepts of Software Engineering; Software Process Models; Conventional and Agile Process Models; Software Requirements Engineering Process; System Analysis; Architectural Design; User Interface Design and Re-engineering; Software Testing; Risk and Quality Management.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on:
- Fundamental concepts of software engineering.
- Process models.
- Software development life cycle.

CO2. Analyze software requirements and process models required to develop a software system.

CO3. Design and develop a quality software product using design engineering principles.

CO4. Develop software product as per user and societal requirements.

CO5. Follow standards for software development and quality management.

CO6. Demonstrate skills in applying risk and quality management principles for effective management of software projects.

DETAILED SYLLABUS:

UNIT-I: SOFTWARE ENGINEERING AND SOFTWARE PROCESS (11 Periods)

A Generic View of Process: The nature of software, Software engineering- Software engineering layers; The software process, Software engineering practice, Software myths.

Process Models: A Generic process model, Incremental process models, Evolutionary Process models; The unified process, Agile Development-Agility, Agile process, Scrum, Agile modeling (AM), Agile Unified Process (AUP), The Cleanroom strategy.

UNIT-II: REQUIREMENTS ENGINEERING AND MODELING (7 Periods)

Requirements Engineering: Functional and non-functional requirements, The software requirements document, Requirements specifications, Requirements engineering processes, Requirements elicitation and analysis, Requirements validation, Requirements management.

Requirements Modeling: Data modeling concepts, Flow-oriented modeling, Case study on requirements modeling for WebApps.

UNIT-III: DESIGN ENGINEERING AND METRICS (8 Periods)

Design Engineering: Design within the context of software engineering, The Design process, Design concepts, Software architecture, Architectural styles, Architectural design.

Process and Project Metrics: Metrics in the process and project domains, Software measurement, Metrics for software quality.

UNIT-IV: SOFTWARE TESTING STRATEGIES AND APPLICATIONS (9 Periods)

Testing Strategies: A strategic approach to software testing, Strategic issues, Test strategies for conventional software, Test strategies for object oriented software, Validation testing, System testing, The art of debugging.

Testing Conventional Applications: Software testing fundamentals, Basis path testing, White box and Black box testing, Object oriented testing methods.

UNIT-V: RISK, QUALITY MANAGEMENT AND REENGINEERING (10 Periods)

Risk and Quality Management: Reactive and proactive risk strategies, Software risks, Risk Mitigation Monitoring and Management (RMMM), RMMM plan, Software quality factors, Defect amplification Model, Formal Technical Reviews (FTR), Software Quality Assurance (SQA)-Tasks, Goals and metrics; Software reliability.

Reengineering: Introduction, Business Process Reengineering (BPR), Software reengineering, Restructuring, Reverse engineering, Forward engineering. **Total Periods: 45**

TEXT BOOKS:

1. Roger S. Pressman, *Software Engineering-A Practitioner's Approach,* McGraw-Hill International Edition, Seventh Edition, 2010.
2. Ian Sommerville, *Software Engineering*, Pearson Education, Ninth Edition, 2011.

REFERENCE BOOKS:

1. K. K. Aggarwal and Yogesh Singh, *Software Engineering,* New Age International Publishers, Third Edition, 2007.

2. Shely Cashman Rosenblatt, *Systems Analysis and Design,* Thomson Publications, Sixth Edition, 2006.

II B. Tech. II Semester

(16BT40531) DATABASE MANAGEMENT SYSTEMS LAB

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES:
A course on "Database Management Systems"

COURSE DESCRIPTION:
Hands on experience on - DDL, DML commands; Query processing using operators; Joins, Views, Single Row functions, Group Functions and SET functions; PL/SQL concepts - Basic Programs, Triggers, Functions, Cursors and Stored Procedures.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Demonstrate practical knowledge on creation and alteration of tables, insertion and Querying of data.

CO2. Analyze and evaluate the databases using SQL DML/DDL commands.

CO3. Design database schemas for the sales database, customer database and product database.

CO4. Develop solutions for database problems using stored procedures, stored functions, cursors and triggers.

CO5.Implement DDL and DML commands in SQL and PL/SQL, ORACLE to manage data in databases.

CO6.Apply contextual knowledge to develop database applications related to societal applications like Information Retrieval Systems, Banking and Financial systems.

CO7.Demonstrate communication skills, both oral and written for preparing and presenting reports on databases.

DESCRIPTION OF SALES DATABASE:
ABC is a company operating in the country with a chain of shopping centers in various cities. Everyday large numbers of items are sold in different shopping centers. The Sales database comprises of various tables like CUST, PROD, SALES_DETAIL, STATE_NAME with the following schemas.

CUSTOMERS Name	**Type**	**Remark**
CID	VARCHAR2(6)	PRIMARY KEY
CNAME	VARCHAR2(10)	
CCITY	VARCHAR2(8)	
PRODUCTS		
Name	**Type**	**Remark**
PID	VARCHAR2(6)	PRIMARY KEY
PNAME	VARCHAR2(6)	
PCOST	NUMBER(5,2)	
PROFIT	NUMBER(3)	
SALES DETAILS		
Name	**Type**	**Remark**
CID	VARCHAR2(6)	COMPOSITE PRIMARY KEY
PID	VARCHAR2(6)	COMPOSITE PRIMARY KEY
SALE	NUMBER(3)	
SALEDT	DATE	COMPOSITE PRIMARY KEY
STATES		
Name	**Type**	**Remark**
CCITY	VARCHAR2(8)	PRIMARY KEY
STATE	VARCHAR2(15)	

LIST OF EXERCISES:

1. Execute: Data Definition Language (DDL) commands

I. Create the tables in sales database.

II. View the structure of the each table.

III. Change the structure of the table like add new column, change the width of a data type, change the data type of a column, delete column from the table, rename the column name and table names.

IV. Delete all records stored in a table, but the structure of the table is retained.

V. Remove a table from the database.

2. Execute: Data Manipulation Language (DML) commands

STATES PRODUCTS

CCITY	STATE
Mysore	Karnataka
Kolkata	Westbengal
Pune	Maharashtra
Tirupathi	Andhra Pradesh
Chennai	Tamilnadu

CUSTOMERS SALES DETAILS

PID	PNAME	PCOST	PROFIT
p1	pen	100	10
p2	pencil	15.5	2
p3	pendrive	950	50
p4	DVD	35	5
p5	mouse	500.5	Null

CID	CNAME	CCITY
c1	gopal	mysore
c2	haitvik	kolkata
c3	rohan	pune
c4	rajini	chennai
c5	mohan	tirupathi
c6	sanjay	mysore
c7	samhita	Kolkata

CID	PID	SALE	SALEDT
c1	p1	10	1-Sep-16
c2	p3	20	18-Mar-17
c5	p5	30	20-Dec-16
c3	p2	45	1-Sep-16
c4	p4	15	1-Sep-16
c7	p3	22	18-Mar-17
c1	p2	23	1-Sep-16
c2	p1	33	14-Jul-17
c3	p5	14	18-Mar-17
c6	p4	10	14-Jul-17
c1	p2	5	18-Mar-17
c4	p2	50	18-Mar-17
c5	p1	20	14-Jul-17
c3	p3	9	1-Sep-16
c6	p5	10	18-Mar-17
c3	p4	8	20-Dec-16

c7	p3	6	1-Sep-16
c1	p5	9	14-Jul-17

I. Write a query to display all customers.
II. Write a query to display pname of all products.
III. Write a query to display cname and ccity of all customers.
IV. Write a query to display cname, ccity of all customers who lives in mysore.
V. Write a query to display cname and ccity of all customers who live in Kolkata or Chennai.
VI. Find the cost of pencil.
VII. Display CID as Customer_Id, CNAME as Name for all customers.
VIII. Change the name of the product p3 from 'pendrive' to 'modem'.
IX. Find the product ids in sales detail table (eliminating duplicates).
X. Remove the record from sales detail table whose sale value is 5.

3. Implement table level and Column level constraints like NOT NULL, UNIQUE, PRIMARY KEY, FOREIGN KEY, CHECK, DEFAULT.

4. Operators

I. Display the sum of pcost and profit of all products.
II. Display the column heading as "Selling Price" instead of PCOST+PROFIT.
III. Find out what percent of pcost is profit for all products.
IV. List the cids of customers who purchased products on '14-jul-2017'.
V. List only the products whose cost is more than 50.00.
VI. List all the customers who are not belongs to 'pune'.
VII. Write a query to display the pname and pcost of all the products where pcost lies between 5 and 25.
VIII. Write a query to display distinct customer id where product id is p3 or sale date is '18-mar-2017'.
IX. Write a query to display cname, ccity of those customers whose cid is in c1 or c2 or c4 or c5 (using IN operator).
X. List customers whose name starts with 'h'.
XI. Write a query to display all records of prod table in which first and third character of pname is any character and second character is 'e'.
XII. Write a query to display all cname which includes two 'a' in the name.
XIII. List the products with unknown profit.
XIV. Display the profit of products as zero if unknown.

5. Joins and Views

I. Write a query to display cname, pname, sale, saledt for all customers.
II. Write a query to display cname who have purchased Pen.
III. Write a query to display cname, pname, sale for all customers who sold after '01-sep-2016'.
IV. Write a query to display cname,ccity,state of all customers.
V. Write a query to display cname,ccity of all customers who belongs to Karnataka.
VI. Create a view on product table which includes pid, pname and pcost of products.
VII. Insert a row into the view.
VIII. Update the rows in a view.
IX. Delete the rows from view.

6. Order by, group by and having clauses.

I. Write a query to display pname of all records. Sort all records by pname. (use order by clause)
II. Write a query to display cname and ccity of all records. Sort by ccity in descending order.
III. Write a query to display saledt and total sale on the date.
IV. Write a query to display saledt and total sale on the date labeled as sale of all items.
V. Write a query to display saledt and total sale on the date sold after 01-sep-2016.
VI. Write a query to display saledt and total sale on the date labeled as sale of all items other than DVD.
VII. Write a query to display total number of customers who purchase pen.

7. Single Row Functions: Date Function, Numeric and Character Function

I. Write a query to display system date
II. Write a query to display the system date by rounding it to next month.

III. Write a query to display the system date by rounding it to next year.
IV. Write a query to display the last date of the system date.
V. Write a query to display the next date of system date which is Friday.
VI. Write a query to display sale date and date after 02 months from sale date.
VII. Write a query to display system date, sale date and months between two dates.
VIII. Write a query to display the greatest date between sale date and system date, name it as BIG, also display sale date and SYSDATE.
IX. Write a query to display the least date between sale date and system date name it as SMALL, also display sale date and SYSDATE.
X. Write a query to display the product name along with the rounded value of product cost for product name is "Pencil".
XI. Write a query to display product cost along with MOD value if divided by 5.
XII. Write a query to display cname in uppercase, lowercase, titlecase from cust table where customer name is "rohan".
XIII. Write a query to display all concatenated value of cname, ccity by converting cname into titlecase and ccity into uppercase.
XIV. Write a query to display the first 3 characters of cname.
XV. Write a query to display the position of 'm' in the cname of the customer whose name is "samhita".
XVI. Write a query to display the length of all customer names.
XVII. PAD # character in left of product cost to a total width of 5 character position.

8. Group Functions and Set Functions

I. Write a query to display the total count of customer.
II. Write a query to display the minimum cost of product.
III. Write a query to display average value of product cost rounded to 2nd decimal places.
IV. Write a query to display product name with total sale detail in descending order.
V. Write a query to display product name, sale date and total amount collected for the product.
VI Write a query to display sale date and total sale date wise which was sold after "14-jul-2016".
VII. Write a query to display the customer name who belongs to those places whose name is having 'i' or 'p'.
VIII. Write a query to display customer name who belongs to a city whose name contains characters 'c' and whose name contains character 'a'.
IX. Write a query to display the customer name who does not belong to 'pune'.

9. PL/SQL basic programs

I. Write a PL/SQL program to find largest number among three. (Hint: Use Conditional Statement)
II. Write a PL/SQL program to display the sum of numbers from 1 to N using for loop, loop…end and while…loop.

10. SQL Cursor based programs

I. Write a PL/SQL program to display the costliest and cheapest product in PROD table.
II. Write a PL/SQL program which will accept PID and display PID and its total sale value i.e. sum.

11. Functions

I. Write a function that accepts two numbers A and B and performs the following operations.
   a. Addition b. Subtraction
   c. Multiplication d. Division
II. Write a function that accepts to find the maximum PCOST in PROD table.

12. Procedures

I. Write a procedure that accepts two numbers A and B, add them and print.
II. Write procedures to demonstrate IN, IN OUT and OUT parameter.

13. Triggers

I. Develop a PL/SQL program using BEFORE and AFTER triggers.
II. Create a row level trigger for the PROD table that would fire for INSERT or PDATE or DELETE operations performed on the PROD table. This trigger will display the profit difference between the old values and new values.

II B. Tech. – II Semester

(16BT31231) JAVA PROGRAMMING LAB

(Common to CSE and IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: A course on "Java Programming".

COURSE DESCRIPTION: Hands on experience on Polymorphism; Inheritance and Interfaces; Exception Handling; Multithreading; Event Handling; AWT; Applets; Servlets.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on basic concepts of Java programming.
CO2. Design and develop efficient programs with multitasking ability and handle exceptions.
CO3. Demonstrate independent problem solving skills in developing interactive applications.
CO4. Apply object oriented approach to develop user friendly interface and learn how to communicate with systems over the network.
CO5. Build Java applications suitable for societal requirements.
CO6. Work effectively as an individual and as a member in team for case studies implementation.
CO7. Demonstrate communication skills, both oral and written for preparing and presenting reports.

LIST OF EXERCISES:

1.a. Write a Program to accept two integers through the command line arguments and print the sum of the two numbers.
b. Write a Program to accept a String as a Command line argument and the program should print a Welcome message.

2. Write a program that displays a menu with options 1. Add 2. Sub. Based on the options chosen, read 2 numbers and perform the relevant operation. After performing the operation, the program should ask the user if he wants to continue. If the user presses y or Y, then the program should continue displaying the menu else the program should terminate.[Use Scanner class]

3.a. Write a program to print the element of an array that has occurred highest number of time.
b. Write a program to find greatest number in a 3*3 array. The program is supposed to receive 9 integer numbers as command line arguments.

4.a. Create a class "AmountInWords" to convert the amount into words. (Consider the amount to be not more than 100000.)
b. Write a Program to count tokens- number of words and characters in a string.

5. Implement any one of the case study with the specifications given below:
   a) Create classes, objects and their properties.
   b) Add methods to classes and implement them.
   c) Refine the objects by adding constructors and local variables.
   d) Show communication between the objects by calling instance of one object from another class.
   e) Handle Exceptions and Implement relationships like inheritance.

   Case study 1: Banking Application:
   The banking application consists of five divisions. They are customer details, creating a new account, withdrawing money, loan details and depositing money. The customer details consist of customer name, address, phone number, account number. To withdraw money checks the balance in the account and then get the money. The loan details consist of loan types like home loans, car loans, education loans etc. To deposit money enter the account number and give the account to be deposited.

   Case study 2: Library Application:
   The Library Application consists of Student, faculty and book details, Issue book, and return book. The student and faculty details consist of name, ID, Branch and maximum number of books can be issued to them. The book details consist of ID, Book name and Author name. To Issue a book to members, the librarian checks the availability of book and if the book is not available, then an error message will be displayed. To return the book, the librarian verifies the validity and if the validity is expired then the fine amount message will be displayed. The student and faculty can view the book details issued to them and also can check the count of remaining books that can be taken for issue.

6. a. Write a program that correctly implements producer consumer problem using the concept of inter-thread communication.
   b. Write a program that demonstrates time slicing among equal priority threads, show that a lower priority thread's execution is deferred by the time slicing of higher-priority threads.
7. Develop an Applet that receives an integer in one text field, and computes its factorial value and returns it in another text field, when the button named "Compute" is clicked.
8. Write a Java program that works as a simple calculator. Use a grid layout to arrange buttons for the digits and for the +, -, *, % operations. Add a text field to display the result.
9. Create a Servlet that recognizes first time visitor to web application and responds by saying "Welcome to new user" otherwise "welcome back".

II B. Tech. – II Semester

(16BT4HS31) SOFT SKILLS LAB

(Common to CE, ME, CSE, IT, and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES:

English Language Laboratory in I B.Tech. or English Laboratory at Diploma Level.

COURSE DESCRIPTION:

This course covers Body Language; Assertiveness; Goal Setting; Creative Thinking; Interpersonal Skills; Team Work; Conflict Management; Etiquette; Report Writing; Group Discussions; Interviewing Skills.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1: Acquire knowledge in
- Goal Setting
- Creative Thinking
- Leadership Skills and
- Team Work

CO2: Analyse the situations and develop skills for
- Body Language
- Personality Development and
- Stress Management

CO3: Apply the techniques of soft skills in a problem situation enhanced through multimedia software

CO4: Function effectively as an individual and as a member in diverse teams

CO5: Communicate effectively in public speaking in formal and informal forums.

LIST OF EXERCISES:

1. Body Language
2. Assertiveness
3. Goal Setting
4. Creative Thinking
5. Interpersonal Skills
6. Team Work
7. Conflict Management
8. Etiquette
9. Report Writing
10. Resume Writing
11. Group Discussions
12. Interviewing Skills

REFERENCE BOOKS:

1. R. C. Sharma & Krishna Mohan, *Business Correspondence and Report Writing*, Tata McGraw-Hill Publishing Company Limited, Third Edition, New Delhi, 2012.
2. Gopalswamy Ramesh and Mahadevan Ramesh, *The Ace of Soft Skills*, Pearson, Noida, 2010.
3. Jeff Butterfeild, *Soft Skills for Everyone*, Cengage learning, Delhi, 2011.
4. Barun K. Mitra, *Personality Development and Soft Skills*, Oxford University Press, Noida, 2012.

SUGGESTED SOFTWARE:

1. ETNL Language Lab Software Version 4.0
2. GEMS – Globarena E-Mentoring System
3. Speech Solutions.
4. English Pronunciation Dictionary by Daniel Jones.
5. Learning to Speak English 8.1, The Learning Company –4 CDs.
6. Mastering English: Grammar, Punctuation and Composition.
7. English in Mind, Herbert Puchta and Jeff Stranks with Meredith Levy, Cambridge.
8. Dorling Kindersley Series of Grammar, Punctuation, Composition etc.
9. Language in Use 1, 2 & 3.
10. Cambridge Advanced Learner's Dictionary - 3rd Edition.
11. Centronix – Phonetics.

12. Let’s Talk English, Regional Institute of English South India.
13. Ultimate English Tutor.

III B. Tech. I-Semester

(16BT5HS01) MANAGEMENT SCIENCE

(Common to CSE, and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: –

COURSE DESCRIPTION:

Concepts of Management; Environmental Scanning; Concepts Related to Organization; Operations Management; Work Study; Statistical Quality Control; Inventory Management; Marketing; Human Resource Management; Project Management; Project Crashing; Entrepreneurship; Contemporary Management Practices.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1: Demonstrate the concepts of operations management, human resources management, project management and contemporary management practices in managerial context.

CO2: Identify and analyse management problems in the business organizations reaching substantiated conclusions using principles of management.

CO3: Design appropriate organization structure for meeting the needs of the organization with consideration of the employees of the organization.

CO4: Competently employ broad based analytical tools for decision making, system design, analysis and performance.

CO5: Provide solution to organizations for sustainable development.

CO6: Apply knowledge of engineering and management principles to manage the projects in multidisciplinary environments.

DETAILED SYLLABUS:

UNIT- I: INTRODUCTION TO MANAGEMENT AND ORGANIZATION (09 periods)

Concepts of management and Administration, Nature and Importance of management, Evolution of management thought, Functions of management, Contributions of F.W. Taylor and Henry Fayol to the management, Systems approach to management, Managerial skills, Elements of corporate planning process, Environmental scanning, SWOT Analysis, Social responsibilities of management.

Basic concepts related to organization, Objectives and Principles, Types of organizations- Line Organization, Line and Staff Organization, Functional Organization, Matrix Organization, Network organization.

UNIT- II: OPERATIONS MANAGEMENT (12 periods)

Plant location- Factors and Principles; Plant Layout- Principles and Types; Methods of production, Work study- Basic procedure involved in method study and work measurement; Statistical Quality Control- Factors affecting quality, Control charts for variables and attributes, Acceptance sampling; Materials management- objectives, Inventory- Types of inventory, Classical EOQ model, ABC analysis; Purchase procedure, Stores management, Marketing- Functions, Channels of distribution.

UNIT-III: HUMAN RESOURCE MANAGEMENT (HRM) (06 periods)

Nature and scope of HRM, Functions of HRM, Role of HR Manager in an organization, Job evaluation, Merit rating, Maslow's hierarchy of human needs, McGregor's theory X and theory Y, Herzberg's two-factor theory of motivation.

UNIT-IV: PROJECT MANAGEMENT (PERT/CPM) AND ENTREPRENEURSHIP (09 periods)

Network analysis - Critical path method (CPM), Program evaluation and review technique (PERT); Project cost analysis - Project crashing. Introduction to Entrepreneurship, Entrepreneurial Traits, Entrepreneur vs Manager, Role of Entrepreneurship in Economic Development, Women as an Entrepreneur.

UNIT-V: CONTEMPORARY MANAGEMENT PRACTICES (09 periods)

Basic concepts of Material Requirements Planning, Enterprise resource planning (ERP), Just In Time (JIT) system, Total Quality Management (TQM), Value Chain Analysis, Business Process Outsourcing (BPO), Globalization, Management Challenges, Supply Chain Management (SCM), Role of Information Technology in managerial decision making, Six Sigma Concept, Maintenance Strategies- Preventive, Periodic and Breakdown Maintenance.

Total Periods: 45

TEXT BOOKS:

1. O.P. Khanna, *Industrial Engineering and Management*, Dhanpat Rai and Sons, 2010.
2. Martand T.Telsang, *Industrial Engineering and Production Management*, S. Chand, 2nd Edition, 2006.

REFERENCE BOOKS:

1. Koontz and Weihrich, *Essentials of Management*, TMH, 6th Edition, New Delhi, 2007.
2. N.D. Vohra, *Quantitative Techniques in Management*, TMH, 2nd Edition, New Delhi.

III B. Tech. – I Semester

(16BT50501) COMPUTER NETWORKS

(Common to ECE, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES:

Courses on "Computer Organization" and "Operating Systems"

COURSE DESCRIPTION:

Introduction to Computer Networks; The Physical Layer; The Data Link Layer; The Medium Access Control Sub layer; The Network Layer; The Transport Layer; The Application Layer.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on:

- Functionalities of Various OSI and TCP/IP layers
- 3G Mobile phone networks, 802.11
- TCP,UDP and SMTP

CO2. Analyze the issues related to data link, medium access and transport layers by using channel allocation and connection management schemes.

CO3. Design and compute subnet masks and addresses for networking requirements.

CO4. Solve problems related to Flow control, Error control, congestion control and Network Routing.

CO5. Apply Network Standards - 802.3 and 802.11 for developing computer Networks.

CO6. Assess the impact of wired and wireless Networks in the context of societal applications like VoIP, Multi-user Network Games, Internet of Things.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION AND PHYSICAL LAYER (9 periods)

Introduction: Network hardware, Network software, Reference models - OSI, TCP/IP; Example networks – Internet; Wireless LANs - 802.11.

Physical Layer: Guided transmission media, Wireless transmission.

UNIT-II: DATA LINK LAYER AND MEDIUM ACCESS CONTROL SUBLAYER (10 periods)

Data Link Layer: Data link layer design issues, Error detection and correction-CRC, Hamming codes, Elementary data link protocols, Sliding window protocols.

Medium Access Control Sub layer: ALOHA, Carrier sense multiple access protocols, Collision-free protocols, Ethernet, Data link layer switching-Repeaters, Hubs, Switches, Routers, and Gateways.

UNIT-III: NETWORK LAYER (10 periods)

Network layer design issues, Routing algorithms - Shortest path, Flooding, Distance vector, Link state routing, Hierarchical, Broadcast, Multicast, Anycast; Congestion control algorithms, Network layer in the internet - The IP version 4 protocol, IP addresses, IP version 6, Internet control protocols.

UNIT-IV: TRANSPORT LAYER (9 periods)

UDP – Segment header, Remote procedure call, Real-time transport protocols; TCP**–** service model, Protocol, Segment header, Connection establishment, Connection release, Sliding window, Timer management, Congestion control.

UNIT-V: APPLICATION LAYER (7 periods)

Domain Name System (DNS)-Name space, Domain resource records, Name servers; Electronic mail-Architecture and services, User agent, Message formats, Message transfer, Final delivery; The World Wide Web- Architectural overview, HTTP.

Total Periods: 45

TEXT BOOK:

1. Andrew S. Tanenbaum and David J. Wetherall, *Computer Networks,* Pearson Education, Fifth edition, 2015.

REFERENCE BOOKS:

2. James F. Kurose and Keith W. Ross, *Computer Networking: A Top-Down Approach Featuring the Internet,* Pearson Education, Second Edition, 2012.

III B. Tech. – I Semester
(16BT50502) LINUX PROGRAMMING

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES:
A Course on "Operating Systems"

COURSE DESCRIPTION:
Concepts on Linux Programming; Shell Programming; Process, Signals and File System Structure; Inter process Communications and Socket Programming for Client-Server Interaction.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on
- Shell programming
- File Structure and System Calls
- Processes management and handling signals,
- IPC and Sockets

CO2. Analyze shell scripts and system calls related to Linux Environment.
CO3. Design shell scripts and system calls for specified computational problems
CO4. Use appropriate shell scripts and system calls for solving complex problems.
CO5. Provide appropriate Linux solutions for real time applications
CO6. Apply contextual knowledge to solve problems related to societal issues.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO LINUX AND LINUX ENVIRONMENT (9 Periods)
The GNU project and the Free Software Foundation, Linux distributions, Programming Linux - Linux programs, Text editors, The C Compiler; Program arguments - getopt, getopt_long. Environment variables - Use of environment variables, The environ variable, Time and Date, User information, Host information.

UNIT-II: SHELL PROGRAMMING (9 Periods)
Necessity of shell programming, Pipes and redirection - Redirecting output, Redirecting input, Pipes, The Shell as a programming language - Interactive programs, Creating a script, Making a script executable, Shell syntax – Variables, Conditions, Control structures, Functions, Commands, Command execution.

UNIT-III: FILE SYSTEM STRUCTURE AND SYSTEM CALLS (9 Periods)
Linux File Structure and Commands: File structure - Directories, Files and devices, System calls and Device drivers; Library functions - Low-level file access, write, read and open commands, Initial permissions, Other system calls for managing files; File and directory maintenance commands - chmod, chown, unlink, link, symlink, mkdir, rmdir, chdir, getcwd.
Input-Output Commands: The standard I/O library commands - fopen, fread, fwrite, fclose, fflush, fseek, fgetc, getc, and getchar, fputc, putc and putchar, fgets and gets; Formatted input and output commands - printf, fprintf, sprintf, scanf, fscanf, sscanf.

UNIT-IV: PROCESS AND SIGNALS (8 Periods)
Process structure - Process table, Viewing processes, System processes, Process scheduling; Starting new processes - Waiting for a process, Zombie processes, Input and output redirection, Threads; Signals - Sending signals, Signal sets.

UNIT-V: INTER-PROCESS COMMUNICATION AND SOCKETS (10 Periods)
Inter-Process Communication: Pipe definition, Process pipes, Sending output to popen - Passing more data, popen, implementation, The pipe call; Parent and child processes - Reading closed pipes, pipes used as standard input and output; Named pipes – FIFOs, Accessing a FIFO, Client/Server using FIFOs.
Socket Connections: Socket attributes, Creating a socket, Socket addresses, Naming a socket, Creating a socket queue, Accepting connections, Requesting connections, Closing a socket, Socket communications, Host and network byte Ordering. **Total Periods: 45**

TEXT BOOK:

1. Neil Matthew and Richard Stones*, Beginning Linux Programming,* Wiley Dreamtech, Fourth Edition, 2008.

REFERENCE BOOKS:

1. Richard Petersen, *Linux: The Complete Reference,* Tata McGraw-Hill, Sixth edition, 2007.

2. Sumitabha Das, *Your UNIX: The Ultimate Guide,* Tata McGraw-Hill, 2007.

III B. Tech. – I Semester

(16BT51202) OBJECT ORIENTED ANALYSIS AND DESIGN

(Common to CSE and IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on "Software Engineering" and "Object Oriented Programming through C++".

COURSE DESCRIPTION: Introduction to UML, Basic structural modeling; Advanced structural modeling, Class and object diagrams; Basic behavioral modeling; Advanced behavioral modeling; Architectural modeling.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on principles of object oriented analysis and design through UML Diagrams.

CO2. Analyze user requirements and identify suitable structural and behavioral modeling components.

CO3. Design and develop UML models for real time software applications.

CO4. Solve real world problems by applying structural and behavioral modeling techniques.

CO5. Use unified modeling language in preparing blue prints for software solutions.

CO6. Design and develop UML models to solve societal problems.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO UML AND BASIC STRUCTURAL MODELING (11 Periods)

Introduction to UML: Importance of modeling, Principles of modeling, Object oriented modeling, An overview of UML, Conceptual model of the UML, Architecture, Software development life cycle.

Basic Structural Modeling: Classes-Terms and concepts, Common modeling techniques; Relationships-Modeling simple dependencies, Single inheritance and structural relationships; Common mechanisms, Diagrams.

UNIT-II: ADVANCED STRUCTURAL MODELING, CLASS AND OBJECT DIAGRAMS (7 Periods)

Advanced Structural Modeling: Advanced classes, Advanced relationships, Interfaces, Types and roles, Packages, Instances.

Class and Object Diagrams: Terms and concepts, Modeling techniques for class diagram-Modeling simple collaboration, Logical database schema, Forward and reverse engineering; Introduction to object diagrams.

UNIT-III: BASIC BEHAVIORAL MODELING (9 Periods)

Basic Behavioral Modeling-I: Interactions-Terms and concepts, Modeling a flow of control; Interaction diagrams-Terms and concepts, Modeling flows of control by time ordering and control by organization, Forward and reverse engineering.

Basic Behavioral Modeling-II: Use cases-Terms and concepts, Modeling the behavior of the element; Use case Diagrams-Terms and concepts, Modeling the context of a system, Requirement of a system, Forward and reverse engineering; Activity Diagrams-Terms and concepts, Modeling a workflow, modeling an operation, Forward and reverse engineering.

Unit –IV: ADVANCED BEHAVIORAL MODELING (7 Periods)

Events and signals-Modeling a family of signals, exceptions; State machines-Modeling the lifetime of an object; Introduction to processes and threads, Time and space-Modeling timing constraints, Distribution of objects and objects that migrate; State chart diagrams-Modeling reactive objects, Forward and reverse engineering.

Unit-V: ARCHITECTURAL MODELING (11 Periods)

Component-Terms and concepts, Modeling executables and libraries, Modeling tables, Files and documents, Modeling an API; Deployment-Modeling processors and devices, Modeling the distribution of components; Component diagrams-Modeling source code, Executable release, Physical database, Adaptable systems, Forward and reverse engineering; Deployment diagrams-Modeling an embedded systems, Client/Server system, Fully distributed systems, Forward and reverse engineering.

Case Studies: Online student course registration system for university, Hospital Management.

Total Periods: 45

TEXT BOOK:

1. Grady Booch, James Rumbaugh and Ivar Jacobson, *The Unified Modeling Language User Guide,* Pearson Education, Second Edition, 2009.

REFERENCE BOOKS:

1. Magnus Penker, Brian Lyons, David Fado and Hans-Erik Eriksson, *UML 2 Toolkit,* WILEY-Dreamtech India Pvt. Ltd., 2006.
2. Pascal Roques, *Modeling Software Systems Using UML2,* WILEY-Dreamtech India Pvt. Ltd, 2004.

III B. Tech. - I Semester

(16BT41204) THEORY OF COMPUTATION

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Discrete Mathematical Structures".

COURSE DESCRIPTION: Fundamentals of Computation; Finite State Automaton; Regular Expressions; Grammars; Push Down Automaton; Turing Machine.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on Formal languages and automata.

CO2. Analyze the classification of languages, automata's and their computing power.

CO3. Design grammars and automata (recognizers) for regular expressions and formal languages.

CO4. Solve computational problems using automata.

CO5. Apply theorems to translate automata's and identify the class of languages.

DETAILED SYLLABUS

UNIT-I: FINITE AUTOMATA (10 Periods)

Introduction to Finite automata, The central concepts of automata theory, Deterministic finite automata, Nondeterministic Finite automata, The equivalence of DFA and NDFA, Finite automata with epsilon-transitions, Conversion of epsilon-NFA to NFA and DFA, Mealy and Moore models.

UNIT-II: REGULAR EXPRESSIONS AND LANGUAGES (9 Periods)

Regular expressions, Identity rules, Finite automata and Regular expressions, Applications of regular expressions, Pumping lemma for regular languages, Applications of the pumping lemma, Closure properties of regular languages, Equivalence of two regular expressions, Equivalence of two finite automata and minimization of automata.

UNIT-III: CONTEXT-FREE GRAMMARS (9 Periods)

Context-free grammars, Parse trees, Applications of context-free grammars, Ambiguity in grammars and languages, Normal forms for context-free grammars, The pumping lemma for context-free languages.

UNIT-IV: PUSH DOWN AUTOMATA (7 Periods)

Definition of the pushdown automaton, The languages of a PDA, Equivalence of PDA's and CFG's, Deterministic pushdown automata, Chomsky hierarchy of languages, The model of linear bounded automaton.

UNIT-V: TURING MACHINES (10 Periods)

Turing machine model, Representation of turing machines, Language acceptability by turing machine, Design of turing machines, Programming techniques for turing machines, Turing machines with semi-infinite tapes, Multi stack machines and counter machines, Universal turing machines.

Total Periods: 45

TEXT BOOKS:

1. John E. Hopcroft, Rajeev Motwani and Jeffrey D Ullman, *Introduction to Automata Theory, Languages and Computation,* Pearson Education, Third Edition, 2011.
2. K.L.P. Mishra and N.Chandrasekaran, *Theory of Computer Science: Automata Languages and Computation,* PHI Learning, Third Edition, 2009.

REFERENCE BOOK:

1. John C Martin, *Introduction to Languages and the Theory of Computation,* TMH, Third Edition, 2009.

III B. Tech. – I Semester

(16BT50442) MICROPROCESSORS AND INTERFACING

(Common to CSE, IT and CSSE)
(interdisciplinary Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on 'Digital Logic Design' and 'Computer Organization'.

COURSE DESCRIPTION: INTEL 8086 & 8051- Architectures; Instruction set; Programmable Interfacing Concepts; ADC, DAC, 8255, 8257,8259 ,8279,8251, Advanced peripheral Interfacing; Applications.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1: Demonstrate knowledge in:

- Internal Hardware details of Intel 8086, 8051 & programming devices like 8255, 8257, 8259, 8279 and 8251.
- Interfacing various peripherals to build standalone systems

CO2: Analyze various peripherals and interfacing techniques.

CO3: Design application based Microcomputer system using 8086 and 8051.

CO4: Solve problems by providing microcomputer-based real time solutions.

CO5: Apply programming tools, appropriate techniques and resources to complex engineering activities for microprocessor and microcontroller based systems with understanding of limitations.

C06: Solving societal problems by applying concepts of microprocessors and microcontrollers.

DETAILED SYLLABUS:

UNIT I – INTEL 8086 ARCHITECTURE AND PROGRAMMING (09 periods)

Evolution of Microprocessors, Architecture of 8086 microprocessor, Register organization, Physical Memory Organization, Signal description of 8086, General Bus Operation Minimum and Maximum mode operation of 8086, Timing diagram, Addressing modes.

UNIT II – ASSEMBLY LANGUAGE PROGRAMMING WITH 8086 AND INTERRUPTS (11 periods)

Instruction set of 8086, Assembler directives and Operators; Interrupts and Interrupt service routines, Interrupt Cycle of 8086, Non Maskable interrupt, Maskable interrupt (INTR), Interrupt Programming, Passing Parameters to procedures, MACROS.

UNIT III–BASIC PERIPHERALS AND THEIR INTERFACING WITH 8086 (08 periods)

Semiconductor memory Interfacing, Dynamic RAM interfacing, Interfacing I/O ports, Programmable Input-Output Port (PIO) 8255, Modes of operations of 8255, Interfacing analog to digital and digital to analog converters, stepper motor interfacing.

UNIT IV – SPECIAL PURPOSE PROGRAMMABLE PERIPHERAL DEVICES (09 periods)

Programmable Interrupt Controller 8259A; The keyboard/Display Controller 8279-Architecture, Signal Description, Modes of operations; Programmable Communication Interface 8251 USART; DMA Controller 8257, DMA Transfers and Operations.

UNIT V – INTRODUCTION TO 8051 MICROCONTROLLER (09 periods)

Microprocessors Vs Microcontrollers, The 8051 Architecture: Introduction, 8051 Microcontroller Hardware, input/output pins, Ports and circuits, External Memory, Counters and Timers, Serial Data Input / Output, Interrupts; Addressing Modes, Instruction set of 8051, simple programs on arithmetic operations using 8051.

Total Periods: 46

TEXT BOOKS:

1. A.K. Ray & K.M.Bhurchandi, A*dvanced Microprocessors and Peripherals- Architecture, Programming and Interfacing,* TMH, 2002 reprint.
2. Kenneth J. Ayala, *The 8051 Microcontroller-Architecture, Programming & Applications,* 3rd Edition, Cengage learning, June 2004.

REFERENCE BOOKS:

1. Douglas V.Hall, *Microprocessors and Interfacing: Programming and Hardware*, revised 2nd Edition, TMH.

2. Yu-cheng Liu, Glenn A. Gibson, *Microcomputer systems: The 8086/8088 Family architecture, Programming and Design*, PHI, 2006.
3. Mazidi and Mazidi, *The 8051 Microcontroller and Embedded Systems,* PHI, 2000.

III B. Tech. I-Semester

(16BT50503) COMPUTER VISION

(Interdisciplinary Elective–1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES:
A course on "Computer Graphics"

COURSE DESCRIPTION:
Introduction to Computer Vision; Geometric Camera Models, Light, Color, Texture; Stereopsis; Segmentation by Clustering, Classification; Detection of Objects; Object Recognition and Information Retrieval.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on geometric camera models, light, color, texture, stereopsis, segmentation, and classification, detection of objects, object recognition and information retrieval procedures.
CO2. Analyze the digital image by Texture and Stereopsis methods.
CO3. Design solutions for image analysis problems by segmentation and classification techniques.
CO4. Develop novel techniques and efficient algorithms for image synthesis.
CO5. Apply clustering, classification, object recognition and information retrieval techniques for image analysis.
CO6. Use Contextual knowledge to solve problems related to societal issues.

DETAILED SYLLABUS:

UNIT-I: GEOMETRIC CAMERA MODELS, LIGHT AND COLOR (10 Periods)
Geometric Camera Models: Image formation – Pinhole perspective, Weak perspective, Cameras with lenses, The human eye.
Light: Modelling pixel brightness – Reflection at surfaces, Sources and their effects, the Lambertian with specular model, Area sources.
Color: Human color perception, The physics of color, Representing color, A model of image color, Inference from color – Finding specularities using color, Shadow removal using color.

UNIT-II: TEXTURE AND STEREOPSIS (9 Periods)
Texture: Local texture representations using filters, Pooled texture representations by discovering textons, Synthesizing textures and filling holes in images, Image denoising, Shape from texture.
Stereopsis: Binocular camera geometry and the epipolar constraint, Binocular reconstruction, Human stereopsis.

UNIT-III: SEGMENTATION BY CLUSTERING (9 Periods)
Grouping and Gestalt, Important applications – Background subtraction, Shot boundary detection, Interactive segmentation, Forming imaging regions; Image segmentation by clustering pixels; Segmentation, clustering and graphs – Terminology and facts for graphs, Agglomerative clustering with a graph, Divisive clustering with a graph, Normalized cuts.

UNIT-IV: CLASSIFICATION AND DETECTION OF OBJECTS (9 Periods)
Learning To Classify: Classification, Error and Loss – Using loss to determine decisions, Training error-test error-and-overfitting, Regularization, Error rate and cross-validation, Receiver operating curves.
Classifying Images - Classifying images of single objects.
Detecting Objects in Images – The sliding window method.

UNIT-V: OBJECT RECOGNITION, INFORMATION RETRIEVAL AND APPLICATIONS (8 Periods)
Object Recognition: Categorization, Selection, Feature questions, Geometric questions, Semantic questions.
Basic Technologies from Information Retrieval: Word counts, Smoothing word counts, Approximate nearest neighbors and hashing, Ranking documents.
Applications: Classifying materials and scenes. **Total Periods: 45**

TEXT BOOK:

1. David A. Forsyth and Jean Ponce, *Computer Vision: A Modern Approach,* Pearson Education, Second Edition, 2015.

REFERENCE BOOK:

1. Rafael C. Gonzalez, Richard E. Woods and Steven L. Eddins, *Digital Image Processing using MATLAB,* Tata McGraw Hill Education, Second Edition, 2010.

III B. Tech. – I Semester

(16BT50504) DATA COMMUNICATIONS

(Interdisciplinary Elective – 1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES:
Courses on "Digital Logic Design" and "Basic Electronic Devices and Circuits"

COURSE DESCRIPTION:
Concepts of Data Communication; Transmission Media-metallic and optical fiber, Digitization techniques–PCM; Multiplexing, Wireless Communication Systems; Telephone and Cellular Concepts; Data Communication Equipment

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on
- Data communication and networking
- Digital transmission and multiplexing
- Telephone and cellular concepts
- Data communication codes and equipment

CO2. Analyze various types of modulation and multiplexing techniques.
CO3. Design wireless communication equipment to fulfill networking requirements.
CO4. Solve problems pertaining to analog or digital communication system in terms of complexity of the transmitters and receivers.
CO5. Use Data communication hardware and equipment for data communication.
CO6. Contribute towards societal issues and responsibilities in designing and developing sustainable networks.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO DATA COMMUNICATIONS, NETWORKING, SIGNALS, NOISE, MODULATION AND DEMODULATION (9 periods)

Introduction to Data Communications And Networking: Data communication network architecture, Protocols and standards, Standards organizations for data communications, Layered network architecture, Data communications circuits, Serial and parallel data transmission, Data communications circuit arrangements, Data communication networks.

Signals, Noise, Modulation and Demodulation: Signal analysis, Electrical noise and signal-to-noise ratio, Analog modulation systems, Information capacity, Bits, Bit rate, Baud and M-ary encoding, Digital modulation.

UNIT-II: DIGITAL TRANSMISSION, MULTIPLEXING AND T CARRIERS (9 periods)

Digital Transmission: Pulse modulation, Pulse Code Modulation (PCM), Linear versus nonlinear PCM codes, Companding, PCM line speed.

Multiplexing and T Carriers: Time-division multiplexing, T1 digital carrier system, Digital line encoding, T carrier systems, Frame synchronization, Frequency-division multiplexing, Wavelength-division multiplexing.

UNIT-III: WIRELESS COMMUNICATIONS SYSTEMS, TELEPHONE INSTRUMENTS AND SIGNALS (9 periods)

Wireless Communications Systems: Electromagnetic polarization, Rays and wave fronts, Electromagnetic radiation, Spherical wave front and the inverse square law, Wave attenuation and absorption, Optical properties of radio waves, Terrestrial propagation of electromagnetic waves, Basics of microwave communications systems and satellite communications systems.

Telephone Instruments and Signals: The subscriber loop, Standard telephone set, Basic telephone call procedures, Call progress tones and signals, Cordless telephones, Caller ID, Electronic telephones, Units of powers measurement, Crosstalk.

UNIT-IV: CELLULAR TELEPHONE CONCEPTS AND DATA COMMUNICATIONS CODES(9 periods)

Cellular Telephone Concepts: Mobile telephone service, Cellular telephone, Interference, Cell splitting, Sectoring, Segmentation, Dualization, Topology, Roaming and handoff, Network components, First-generation analog cellular telephone, Second- generation cellular telephone systems, Digital cellular telephone.

Data Communications Codes and Error Control: Data communications character codes, Bar codes.

UNIT-V: DATA COMMUNICATION HARDWARE AND EQUIPMENT (9 periods)

Data Communications Hardware: Data communication hardware, Data communication circuits, Line control unit, Serial interfaces.

Data Communications Equipment: Digital service unit and channel service unit, Voice-band data communication modems, Bell systems-compatible voice-band modems, Voice-band modern block diagram, Voice- band modem classifications, Asynchronous voice-band modems, Synchronous voice-band modems, Modem synchronization, ITU-T voice-band modem specifications, 56K modems, Probability of error and bit error rate.

Total Periods: 45

TEXT BOOK:

1. Wayne Tomasi, *Introduction to Data Communications and Networking,* Pearson Education, First Edition, 2005.

REFERENCE BOOKS:

1. Behrouz A. Forouzan, *Data Communications and Networking,* Mc-Graw Hill, Fifth Edition, 2013.

2. Fred Halsall, *Data Communications, Computer Networks and Open Systems*, Pearson Education, Fourth Edition, 1996.

III B. Tech. - I Semester

(16BT51541) MODELING AND SIMULATION

(Interdisciplinary Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES:

A Course on "Probability Distributions and Statistical Methods"

COURSE DESCRIPTION:

Discrete event simulation; Useful statistical models; Queueing systems; Properties of random numbers, Test for random numbers; Data collection, Types of simulations with respect to output analysis.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on functional modeling of system design.

CO2. Analyze the performance of queueing systems in real world applications.

CO3. Design dynamic system operations using simulation results.

CO4. Apply mathematical foundations and computer science theory in modeling and designing of experiments for real time systems.

CO5. Select suitable simulation software tools for solving problems related to computer based systems.

CO6. Relate appropriate professional principles and norms of engineering practice for designing the simulation models.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION TO DISCRETE EVENT SIMULATION (08 Periods)

Simulation-Advantages and Disadvantages, Areas of application, Steps in a simulation study, Basics of spreadsheet simulation, Queueing simulation in a spread sheet, Concepts in discrete-event simulation, List processing, Selection of simulation software, Simulation environments.

UNIT II: STATISTICAL MODELS (08 Periods)

Terminology and concepts, Useful statistical models, Discrete distributions, Continuous distributions, Poisson process, Empirical distributions.

UNIT III: QUEUEING MODELS (09 Periods)

Characteristics of queueing systems, Queueing notation, Long-run measures of performance of queueing systems, Steady-state behavior of infinite-population Markovian models, Steady-state behavior of finite-population models, Networks of queues.

UNIT IV: RANDOM NUMBERS (09 Periods)

Properties of random numbers, Generation of pseudo-random numbers, Techniques for generating random numbers, Tests for random numbers, Inverse-transform technique, Acceptance-rejection technique, Special properties.

UNIT V: ANALYSIS OF SIMULATION DATA (11 Periods)

Input Modeling-Data Collection, Identifying the distribution with data, Parameter estimation, multivariate and time series input models,Validation of Simulation Models -Model building verification and validation, Verification of simulation models. Estimation of absolute performance -Types of simulations with respect to output analysis, stochastic nature of output data, Absolute measures of performance and their estimation, Output analysis of terminating Simulations.

Total Periods: 45

TEXT BOOK:

1. Jerry Banks, John S. Carson II, Barry L.Nelson and David M.Nicol, *Discrete-Event System Simulation,* Pearson India,5th edition, 2013.

REFERENCE BOOKS:

1. Narsingh Deo, *System Simulation with Digital Computer*, Prentice Hall India 2009.
2. Averill M. Law, *Simulation Modeling and Analysis*, McGraw Hill Education (India) Private Limited, 4th edition, 2007.

III B. Tech. – I Semester

(16BT50531) COMPUTER NETWORKS LAB

(Common to CSE and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES:

A Course on "Computer Networks"

COURSE DESCRIPTION:

Hands on Practice on Data Link Layer Framing Methods; Routing Algorithms; Congestion Control Algorithms; Connection Management in Transport Layer;

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate Knowledge on:

- Framing methods for data link layer,
- Shortest path using Dijkstra's routing algorithms

CO2. Identify suitable algorithm to find shortest path in a given network

CO3. Design and compute subnet masks and addresses for networking Requirements.

CO4. Solve problems related to Flow control, Error control, congestion control and Network Routing.

CO5. Apply Latest software tools and technologies for designing simple to complex applications in computer networks.

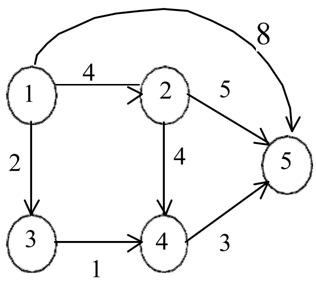
CO6. Assess the impact of wired and wireless Networks in the context of societal applications like VoIP, Multi-user Network Games, Internet of Things.

CO7. Work effectively as an individual to implement mini-project.

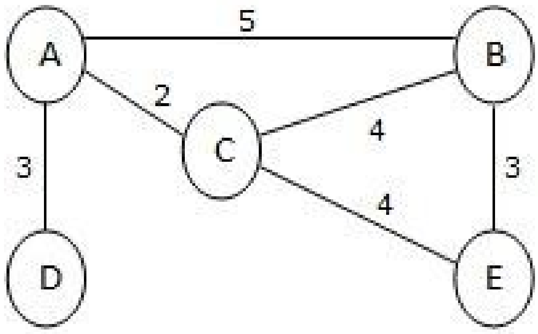
CO8. Demonstrate communication skills both oral and written for preparing and generating reports.

LIST OF EXERCISES:

1. Implement the following data link layer framing methods.
   i. Character count.
   ii. Character stuffing.
   iii. Bit stuffing.
2. Implement the frame sorting technique used in buffers.
3. Design and develop a program to compute checksum for the given frame 1101011011 using CRC-12, CRC-16, and CRC-CCIP. Display the actual bit string transmitted. Suppose any bit is inverted during transmission. Show that this error is detected at the receivers end.
4. Implement Dijkstra's algorithm to compute the Shortest path for the given graph.



5. Develop a program to obtain routing table for each node using Distance Vector Routing Algorithm by considering the given subnet with weights indicating delay between Nodes.



6. Write a program to simulate flow based routing.
7. Write a program to simulate random early detection congestion control algorithm.
8. Using TCP/IP sockets, write a client-server program to open a file available in the server.
9. Write a program for congestion control using leaky bucket algorithm.
10. Write a program for the Mail Client
    i. POP Client: Gives the server name, user name and password retrieve the mails and allow manipulation of mail box using POP commands.
    ii. SMTP Client: Gives the server name, send e-mail to the recipient using SMTP commands
11. Write a program for HTTP server to implement the commands - GET, POST, HEAD and DELETE. The server must handle multiple clients.

REFERENCE BOOK:

1. Andrew S. Tanenbaum and David J. Wetherall, *Computer Networks,* Pearson Education, Fifth edition, 2015.

III B. Tech. – I Semester
(16BT50532) LINUX PROGRAMMING LAB

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES:
A Course on "Linux Programming"
COURSE DESCRIPTION:
Hands on Practice with - Shell Programs; System Calls; Environment Variables; Inter Process Communication; File System and Socket Programming.
COURSE OUTCOMES:
On successful completion of the course, students will be able to:
CO1. Demonstrate practical knowledge on
- Shell programming
- File Structure and System Calls
- Processes management and handling signals,
- IPC and Sockets

CO2. Analyze shell scripts and system calls in Linux operating system.
CO3. Design shell scripts for specified computational problems.
CO4. Use appropriate shell scripts and system calls for solving complex problems
CO5. Create shell scripts and system calls for real time Linux applications.
CO6. Apply contextual knowledge to solve problems related to societal issues.
CO7. Communicate effectively using Linux with engineering community being able to comprehend and write effective programs and prepare reports.

LIST OF EXERCISES:
1 Create two files source.txt and dest.txt using vi editor which contains some text and practice the following commands on those files. cat, tail, head , sort, nl, uniq, grep, egrep, fgrep, cut, paste, join, tee, pg, comm., cmp, diff, cp, mv, ln, rm, unlink, tty, script, clear, date, cal, mkdir, rmdir, du, df, find, umask, ps,who.
2a. Write a shell script that takes a command line argument and reports on whether it is directory, a file, or something else.
b. Write a shell script that accepts one or more file names as arguments and converts all of them to uppercase, provided they exist in the current directory.
3 Write a shell script that accepts a file name, starting and ending line numbers as arguments and displays all the lines between the given line numbers.
a. Write a shell script that deletes all lines containing a specified word in one or more files supplied as arguments to it.
4a. Write a shell script to list all of the directory files in a directory.
b. Write a shell script to find factorial of a given number.
5a. Write an interactive file-handling shell program. Let it offer the user the choice of copying, removing, renaming, or linking files. Once the user has made a choice, have the program ask the user for the necessary information, such as the file name, new name and so on.
b. Write a shell script that takes a login name and reports when a person logs in.
6a. Simulate uniq command using C.
b. Simulate grep command using C.
7 Write a C program that takes one or more file or directory names as input and reports the following information on the file:
a. File type
b. Number of links
c. Read, write and execute permissions
d. Time of last access
(Note: Use stat/fstat system calls)
8 a. Write a C Program to display Environment variables.
b. Write a C Program to implement Different types of exec functions.
9 a. Write a Program to create a Zombie Process.
b. Create a Process using fork() and display Child and Parent Process Id's.
10 Implement the Following IPC Forms a) FIFO b) PIPE
11 Perform client and server socket Programming for exchanging of data Using System calls.
12a. Write a program user.c, which extracts some user information from the password database (Hint: Use gethostname() function to obtain the network name of the host computer)
b. Write a program host.c, which extracts some host computer information (Hint: Use getuid() function to obtain the UID of the current user and use UID to obtain detailed password file information).

III B. Tech. – I Semester

(16BT50533) OBJECT ORIENTED ANALYSIS AND DESIGN LAB

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES:
A Course on "Object Oriented Analysis and Design"
COURSE DESCRIPTION:
Hands on Practice to Design and Implement - Automated Teller Machine, Library Information System, Online Ticket Reservation System, Point of Sales, Airport Simulation, Course Registration System, Home Appliance Control System and Hospital Management System using Object-Oriented Language.
COURSE OUTCOMES:
On successful completion of the course, students will be able to:
CO1. Demonstrate practical knowledge on principles of object oriented analysis and design through UML diagrams.
CO2. Analyze user requirements and identify suitable structural and behavioral modeling components.
CO3. Design and develop UML models for real time applications.
CO4. Solve real world problems by applying structural and behavioral modeling techniques.
CO5. Use UML to design the software system.
CO6. Apply contextual knowledge of UML models to assess societal issues.
CO7. Involve as individual to solve case studies.
CO8. Develop a model for complex computational activities by preparing and presenting reports through effective communication.
LIST OF EXERCISES:
Case studies given below should be Modeled using Visual Modeling tools in different views i.e. Use case view, logical view, component view, Deployment view.
CASE STUDY 1: AUTOMATED TELLER MACHINE (ATM)
Problem Statement:
Software is designed for supporting a computerized ATM banking network. All the process involved in the bank is computerized these days. All the accounts maintained in the bank and also the transactions effected, including ATM transactions are to be processed by the computers in the bank. An ATM accepts a relevant cash card, interacts with user, communicates with the central system to carry out the transaction, dispenses cash, and prints receipts. The system to be designed and implemented must include appropriate record keeping and security provisions. The system must handle concurrent access to the same account.
CASE STUDY 2: LIBRARY INFORMATION SYSTEM
Problem Statement:
A library lends books and magazines to members, who are registered in the system. Also it handles the purchase of new titles for the library. Popular titles are bought in multiple copies. A member can reserve a book or magazine that is not currently available in the library, so that when it is returned back to the library, that person is notified. The library can easily create, update and delete information about the titles, members, loans and reservations in the systems.
CASE STUDY 3: ONLINE TICKET RESERVATION FOR RAILWAYS
Problem Statement:
Computer play an integral part of the day in today's life. It makes the entire job easier and faster, every job is computerized so that the ticket reservation can be done over the online ticket reservation system. During the booking of the ticket reservation, passenger has to select origin, date of journey, destination, class of train etc. The reservation counter keeps track of passenger's information. Thus, the system will have all the details about the trains and facilities provided by them. There are various trains with the different level of convenience for the passengers. The whole database will be maintained by database administrator. There are varieties of trains where the passengers can select the train according to the convenience for their destination journey. The journey could be within the state or across the India. Each train has the three types of classes i.e. Sleeper class, First class and AC compartment. Design the application for the above problem description.
CASE STUDY 4: A POINT OF SALE (POS) SYSTEM
Problem Statement:
A POS System is a computerized application used to record sales and handle payments; it is typically used in a retail store. It includes hardware components such as a computer, bar code scanner and software to run the system. It interfaces to various service applications, such as a third-party tax

calculator and inventory control. These systems must be relatively fault tolerant; that is, even if remote services and temporarily unavailable they must still be of capturing sales and handling at least cash payments. A POS system must support multiple and varied client-side terminals and interfaces such as browser, PDA's and touch-screens.

CASE STUDY 5: A MULTI-THREADED AIRPORT SIMULATION

Problem Statement:

Simulate the operations in an airport. Your application should multiple aircrafts using several runways and gates avoiding collisions/conflicts. Loading: an aircraft uses the runway, lands and then taxis over to the terminal. Take-Off an aircraft taxies to the runway and then takes off.

CASE STUDY 6: ONLINE STUDENT COURSE REGISTRATION SYSTEM FOR UNIVERSITY

Problem Statement:

At the beginning of each semester students may request a course catalogue containing a list of course offerings for the semester. Information about each course, such as professor, department, and prerequisites will be included to help students make informed decisions. The new on-line registration system will allow students to select four course offerings for the coming semester. In addition, each student will indicate two alternative choices in case a course offering becomes filled or cancelled. No course offering will have more than ten students. No course offering will have fewer than three students. A course offering with fewer than three students will be cancelled. Once the registration process is completed for a student, the registration system sends information to the billing system, so the student can be billed for the semester. Professors must be able to access the on-line system to indicate which courses they will be teaching. They will also need to see which students signed up for their course offering. For each semester, there is a period of time that students can change their schedules. Students must be able to access the on-line system during this time to add or drop courses. The billing system will credit all students for courses dropped during this period of time.

CASE STUDY 7: HOME APPLIANCE CONTROL SYSTEM

Problem Statement:

A home appliance control system (HACS) is a system which provides various services to remotely operate on home appliances, such as microwave oven, TV, and garage door etc through remote devices such as mobile phone, desktop and palm-top.A home appliance control system (HACS) is a system which is controlled by a remote system such as a mobile phone or a palm-top, and at the same time controls, monitors and coordinates home appliances such as air conditioner, microwave oven, garage doors, TV set, VCR, audio controller, indoor/outdoor lights, water sprinkler, home security system, bath tub controller, etc. In order to activate home appliances and to allow for different ways of cooking, the HACS needs mechanisms for communication between the different devices in the system, and for coordination among the various processes running on such devices. The system administrator of the HACS system has the ability to add a new appliance or delete an existing one. The system administrator has the ability to add a new remote device and configure it with HACS or delete an existing one when it is not used. Also the system administrator can create an account for a new user or delete existing account if it is no longer used.

CASE STUDY 8: HOSPITAL MANAGEMENT SYSTEM

Problem Statement:

Hospital Management System (HMS) is state-of-the-art software that offers comprehensive solutions to various segments of Healthcare Industry such as Super Specialty, Multi-specialty and General Hospitals of varied capacities, small Nursing Homes, HMOs, Polyclinics and General Practitioners. This HMS solution addresses the issues from multi-discipline angels namely patients, Doctors, Pharmacy, Hospital Management and Services. The software provides both clinical as well as patient care aspects to hospital management. The software is divided into different modules, each addressing a specific activity of the hospital and there by facilitating better patient care. Each module can be used as a standalone solution or can be integrated in a phased manner. Modules are designed so that they meet the present and future requirements of the hospital. HMS offers various sub-systems and a seamless integration. By being modular, each module can be used as a standalone solution or can be integrated in a phased manner. Modules are also so designed to meet the present as well as future requirements of the organization and process a unique ability with the business growth. HMS consists of the Base modules, Add-on modules and Specialty modules. Additional modules both add-on and specialty modules can be seamlessly integrated to the HMS at any time. The Integration Manager takes care of all the data consistency issues.

III B.Tech. – II Semester

(16BT3HS02) MANAGERIAL ECONOMICS AND PRINCIPLES OF ACCOUNTANCY

(Common to ME, CSE,IT, and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

Prerequisite: –

COURSE DESCRIPTION:

Managerial Economics; Demand and Elasticity of Demand; Production Functions; Markets and Pricing Policies; Formation of different types of Business Organizations; Basic concepts of Accounting (Journal, Ledger and Trial balance); Trading Account, Profit and Loss Account and Balance sheet with simple adjustments; Computerized Accounting.

Course outcomes:

On successful completion of the course, students will be able to:

CO1: Acquire Knowledge in

- Tools and concepts of Micro Economics.
- Basic Principles and concepts of Accountancy.
- Provides life skills for effective utilization of scarce resources.
- Financial Accounting.
- Significance of Economics and Accountancy

CO2: Develop skills in managerial decision making of an organization.

CO3: Apply the Economic theories i.e., Demand, Production, Cost, Markets and Price.

CO4: Develop effective communication in Business and Accounting transactions.

CO5: Ascertain the profitability and soundness of an organization.

CO6: Practice Financial Accounting

DETAILED SYLLABUS:

UNIT–I: INTRODUCTION TO MANAGERIAL ECONOMICS, DEMAND ANALYSIS (9 Periods)

Definition, Nature and Scope of Managerial Economics. **Demand:** Determinants of demand – Demand function - Law of demand, assumptions and exceptions - Elasticity of demand – Types of elasticity of demand - Demand forecasting and methods of demand forecasting.

UNIT–II: THEORY OF PRODUCTION AND COST ANALYSIS: (9 Periods)

Production Function: Isoquants and Isocosts – Input-output relationship - Law of returns.

Cost Concepts: Total, Average and Marginal Cost **-** Fixed vs. Variable costs – Opportunity Costs Vs Outlay Costs– Separable Costs Vs Joint Costs, Urgent Costs Vs Postponable Costs- Avoidable Costs Vs Unavoidable Costs - **Break Even Analysis (BEA)** – Assumptions, Merits and demerits - Determination of Break Even Point (Simple problems).

UNIT–III: INTRODUCTION TO MARKETS AND PRICING (9 Periods)

Market Structure: Types of Markets - Features of perfect competition - Monopoly and monopolistic competition - Price and Output determination in perfect competition, monopoly and monopolistic Markets.

Pricing : Objectives and policies of pricing – Sealed bid pricing - Marginal cost pricing - Cost plus pricing - Going rate pricing – penetration Pricing –skimming Pricing - Block pricing – Peak load pricing - Cross subsidization.

UNIT–IV: INTRODUCTION TO PRINCIPLES OF ACCOUNTING AND CAPITAL (9 Periods)

Accountancy: Introduction – Concepts – Conventions – Double Entry Book Keeping – Journal – Ledger - Trial Balance (Simple problems).

Capital : Significance - Types of capital – Sources of Capital.

UNIT–V: FINAL ACCOUNTS - COMPUTERIZATION OF ACCOUNTING SYSTEM (9 Periods)

Introduction to Final Accounts - Trading account - Profit and Loss account and Balance Sheet with simple adjustments (Simple problems).**Computerization of Accounting System :** Manual Accounting Vs Computerized Accounting–Advantages and Disadvantages of Computerized Accounting.

Total Periods: 45

III B. Tech. – II Semester

(16BT61501) DATA WAREHOUSING AND DATA MINING

(Common CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A Course on "Database Management Systems"

COURSE DESCRIPTION: Data Mining Fundamentals; Data Preprocessing; Operational Database Systems and Data Warehouses; Mining Frequent Patterns; Classification and Prediction; Clustering; New Trends and Research Frontiers.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on Concepts of data warehousing and data mining.

CO2. Analyze using data mining techniques to find useful and potential Knowledge.

CO3. Design of Data Warehouse for OLAP applications and deployment.

CO4. Evaluate the usage of association mining techniques on complex data objects.

CO5. Select appropriate techniques to measure the interesting patterns from heterogeneous databases.

CO6. Apply appropriate evolutionary data mining algorithms to find solutions of Real time Applications.

DETAILED SYLLABUS:

UNIT-I: DATA WAREHOUSING AND ONLINE ANALYTICAL PROCESSING (09 Periods)

Data Warehouse, Operational Database Systems versus Data Warehouses, A Multi tired Architecture, A Multidimensional Data Model, Stars, Snowflakes and Fact Constellations: Schemas, Role of Concept hierarchies, Measures, OLAP Operations, From online Analytical processing to Multidimensional Data Mining, Indexing OLAP Data.

UNIT-II: DATA MINING AND DATA PREPROCESSING (08 Periods)

Introduction to Data Mining, kinds of data, kinds of patterns, major issues in Data Mining, Data Pre-processing, Data Cleaning, Data Integration , Data Reduction, Data Transformation and Discretization.

UNIT-III: ASSOCIATIONS AND CLASSIFICATION (10 Periods)

Basic Concepts , Frequent itemset Mining Methods, pattern evaluation methods- From Association Mining to Correlation Analysis ,Classification, Decision Tree Introduction, Bayesian Classification Methods, Rule Based Classification, Prediction: Linear Regression.

UNIT-IV: CLUSTER ANALYSIS (09 Periods)

Cluster Analysis: Types of Data in Cluster Analysis, A Categorization of Major Clustering Methods, Partitioning Methods -k-Means and K-Medoids, Hierarchical methods-Agglomerative and divisive method, Density-Based Method-DBSCAN, Grid-Based Method-STING, Outlier Analysis.

UNIT-V: DATA MINING TRENDS (09 Periods)

Mining Complex Data Types: Mining sequence data, Mining other kinds of data: Spatial, Text, Multimedia and Web data, Data Mining Trends.

Total Periods: 45

TEXT BOOK:

1. Jiawei Han, Micheline Kamber and Jian Pei, *Data Mining: Concepts and Techniques,* Elsevier, 3rd edition, 2013.

REFERENCE BOOKS:

1. K.P. Soman, Shyam Diwakar and V. Ajay, *Insight into Data mining Theory and Practice*, Easter Economy Edition, Prentice Hall of India, 2006.

III B. Tech. – II Semester
(16BT60501) SOFTWARE TESTING

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES:
A course on "Software Engineering"

COURSE DESCRIPTION:
Software Testing Basics: Goals, Defects, Terminology, Methodology, STLC in SDLC, Verification & Validation; Software Testing Techniques: White box testing, Black Box Testing, Regression testing; Test Management: Test Planning, Design & Specifications; Test Automation: Tool selection & Guidelines.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on
- Software Testing Life Cycle.
- Testing Techniques.
- Test Management & Metrics.
- Regression Testing
- Test Automation

CO2. Analyze testing circumstances and their resultants in software development.
CO3. Design and develop the appropriate test cases in accordance to the software development model.
CO4. Use problem solving skills to control and monitor the testing process
CO5. Apply testing tools for testing the software quality.
CO6. Apply contextual knowledge to perform testing on software related to societal applications

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO SOFTWARE TESTING (9 periods)
Evolution of Software Testing, Software Testing—Myths and Facts, Goals of software testing, Psychology for software testing, Software testing definitions, Model for software testing, Effective software testing vs. exhaustive software testing.
Effective testing is hard, Software testing as a process.
Terminology and Methodology: Software testing terminology, Software Testing Life Cycle (STLC), Software testing methodology.

UNIT-II: WHITE BOX TESTING (9 periods)
Need of white-box testing, Logic coverage criteria, Basis path testing, Graph matrices, Loop testing, Data flow testing, Mutation testing.

UNIT-III: BLACK BOX TESTING (8 periods)
Boundary Value Analysis (BVA), Equivalence class testing, State table-based testing, Decision table-based testing, Cause-effect graphing based testing, Error guessing.

UNIT-IV: SOFTWARE TEST MANAGEMENT AND METRICS (10 periods)
Test Management: Test organization, Structure of testing group, Test planning, Detailed test design, Test specifications.
Software Metrics: Definition of software metrics, Classification of software metrics, Size metrics.

UNIT-V: REGRESSION AND AUTOMATION (9 periods)
Regression Testing: Progressive vs. regressive testing, Regression testing produces quality software, Regression testability, Objectives of regression testing, Regression testing types, Defining regression test problem, Regression testing techniques.
Automation and Testing Tools: Need for automation, Categorization of testing tools, Selection of testing tools, Costs incurred in testing tools, Guidelines for automated testing, Overview of some commercial testing tools.

Total Periods: 45

TEXT BOOK:
1. Naresh Chauhan, *Software Testing: Principles and Practices,* Oxford University Press, Second Edition, 2016.

REFERENCE BOOKS:
1. Boris Beizer, *Software Testing Techniques,* Dream Tech Press, Second Edition, 2004.

2. Dr. K. V. K. K. Prasad, *Software Testing Tools,* Dreamtech, First Edition, 2004.

III B. Tech. II Semester
(16BT70402) EMBEDDED SYSTEMS
(Common to CSE, and IT)
(Interdisciplinary Elective-2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on 'Digital Logic Design' and 'Computer Organization'
COURSE DESCRIPTION:
Embedded system design approaches; MSP430 Architecture; Instruction Set; On-Chip Resources; Programming; Communication with peripherals; Internet of Things related Issues.
COURSE OUTCOMES:
On successful completion of the course, students will be able to:
CO1. Apply knowledge in
- MSP430 Architecture, Pin out, Instruction set
- High level programming
- Usage of On-chip resources like ADC, DAC, Timers
- Internet of Things related issues

CO2. Analyze various design issues regarding
- Usage of on chip resources
- Low power modes
- Communication support

CO3. Design embedded systems using MSP430 series microcontrollers to suit market requirements.
CO4. Solve engineering problems and arrive at solutions in designing embedded systems to support interconnectivity.
CO5. Apply techniques, program skills, On-Chip resources to design networked embedded systems with an understanding of limitations.
CO6. Reason out and practice professional engineering to deliver efficient and cost effective embedded based products to society.

DETAILED SYLLABUS:
UNIT-I: INTRODUCTION TO EMBEDDED SYSTEMS (09 periods)
Embedded Systems - Definition, Approaches, Applications, Anatomy of microcontroller, Memory, Software; MSP430 Introduction- Pin out, Functional Block diagram, Memory, CPU, Memory mapped input and output, Clock generator; Exceptions- Interrupts and Resets.
UNIT-II: ARCHITECTURE OF MSP430 (09 periods)
CPU, Addressing Modes, Constant Generator and Emulated Instructions, Instruction Set, Example programs, Reflections on CPU and Instruction set, Resets, Clock System.
UNIT-III: FUNDAMENTALS FOR PROGRAMMING (09 periods)
Development Environment, C Programming Language, Assembly Language, Programming and Debugging, Sample programs- Light LEDs in C, Read input from a switch; Automatic Control-Flashing light by delay, use of subroutines, using Timer_A; Header files and issues, Functions, Interrupts and Low power modes.
UNIT - IV: TIMERS, MIXED SIGNAL SYSTEMS AND COMMUNICATION (09 periods)
Timers-Watchdog Timer, RTC, Measurement in capture mode; Mixed-Signal Systems- Comparator_A, ADC10 Architecture & operation, ADC12, Sigma-Delta ADC Architecture & operation, DAC; Communication- Communication Peripherals in MSP430, SPI, Inter-integrated Circuit Bus, Asynchronous communication with the USCI_A.
UNIT - V: HARDWARE SOFTWARE CO-DESIGN AND INTERNET OF THINGS (09 periods)
CO- Design Issues: Co-design Models, Architectures, Languages, a Generic Co-design Methodology
IOT: Introduction, Origins, Drivers and Applications, IOT Communication Models - Device to Device, Device to Cloud, Device to Gateway, Back end Data Sharing Model; IPV6 and IOTs', IOT Issues, Security Issues-challenges; Privacy Considerations, Interoperability/Standards.

Total Periods: 45

TEXT BOOKS:
1. John H. Davies, *MSP430 Microcontroller Basics*, Newnes Publications, 2008.
2. Karen Rose, Scott Eldridge, Lyman Chapin, *The Internet of Things: An Overview: Understanding the Issues and Challenges of a More Connected World*, Internet Society, Oct. 2015.
3. Jorgen Staunstrup, Wayne Wolf, *Hardware /software co-design Principles and Practice*, Springer, 2009.

REFERENCE BOOK:

1. Chris Nagy, *Embedded Systems Design using the TI MSP30 Series*, Newness Publications, 2003.

III B. Tech. – II Semester

(16BT50341) **OPTIMIZATION TECHNIQUES**

(Common to CE, CSE, and CSSE)
(Interdisciplinary Elective-2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES:
A course on "Multi variable calculus and differential equations"

COURSE DESCRIPTION:
Introduction to optimization; classical optimization techniques; classification of optimization problems; linear programming; transportation and assignment problem; non-linear programming; un-constrained non-linear programming; constrained non-linear programming; dynamic programming.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Demonstrate the knowledge on Optimization techniques for Linear, Non linear and Dynamic programming problems.
CO2. Analyze and quantify a system architecture or product design problem for selecting appropriate objective function, design variables, parameters and constraints.
CO3. Develop mathematical models for real time optimization problems.
CO4. Conduct investigations on complex problems and make recommendations based on solutions, analysis and limitations of models.
CO5. Use optimization techniques for solving complex problems of real time applications.
CO6. Optimize the resources in organizations for sustainable development.

DETAILED SYLLABUS:

UNIT-I: CLASSICAL OPTIMIZATION TECHNIQUES (09 periods)
Introduction, Engineering applications of optimization, Statement of an optimization problem, Design vector, Design constraints, Constraint surface, Objective function, Classification of optimization problems, Single variable optimization, Multi variable optimization without constraints, Multi variable optimization with equality constraints - Lagrange multipliers method; Multi variable optimization with inequality constraint - Kuhn Tucker conditions.

UNIT-II: LINEAR PROGRAMMING (09 periods)
Introduction, Formulation, Graphical solution, Simplex method, Big M-method, Two–phase method, Duality principle, Dual simplex method.

UNIT-III: TRANSPORTATION AND ASSIGNMENT PROBLEMS (09 periods)
Transportation problems: Formulation, Initial basic feasible solution - North–West corner rule, Least cost method, and Vogel's approximation method; Optimal solution using Modified distribution method - Unbalanced transportation problem, Degeneracy.
Assignment problems: Formulation, Solution of assignment problem and its variants, Traveling salesman problem.

UNIT–IV: NON-LINEAR PROGRAMMING (09 periods)
One dimensional minimization methods, classification - Fibonacci method, quadratic interpolation method; classification of unconstrained minimization methods - Powell's method, steepest descent method (Cauchy's method); classification of constrained optimization techniques - interior and exterior penalty function methods.

UNIT–V: DYNAMIC PROGRAMMING (09 periods)
Multistage decision processes, Concept of sub optimization and Principle of optimality, Computational procedure in dynamic programming - calculus method, Tabular method; Linear Programming problem by dynamic programming approach, Applications - reliability problem, shortest path problem, and capital budgeting problem.

Total Periods:45

III B. Tech. II Semester

(16BT60502) SOFT COMPUTING

(Common to CSE and IT)

(Interdisciplinary Elective–2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION:

Concepts on Soft Computing Techniques; Artificial Neural Networks; Supervised Learning; Unsupervised Learning; Fuzzy logic; Genetic Algorithms.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge in
- Artificial Neural Networks
- Supervised Learning Networks
- Unsupervised Learning Networks
- Fuzzy sets, relations and measures
- Genetic Operators

CO2. Analyze neural network architectures, Fuzzy systems and Genetic algorithms.

CO3. Design soft computing solutions for real life computational problems.

CO4. Use soft computing techniques to solve complex computational problems.

CO5. Create algorithms using soft computing techniques.

CO6. Apply contextual knowledge to solve problems related to societal issues like Business Intelligence, Forecasting.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO SOFT COMPUTING AND ARTIFICIAL NEURAL NETWORKS (8 Periods)

Soft Computing: Neural networks, Application scope of neural networks, Hybrid systems, Soft computing, Applications of soft computing.

Artificial Neural Networks: Fundamentals, Evolution, Basic Models, Terminologies, Hebb network.

UNIT-II: SUPERVISED LEARNING NETWORKS (10 Periods)

Perceptron Networks: Theory, Perceptron learning rule, Architecture, Flowchart for training process, Perceptron training algorithm for single and multiple output classes, Perceptron network testing algorithm.

Back-Propagation Networks: Theory, Architecture, Flow chart for training process, Training algorithm, Learning factors of back-propagation networks, Testing algorithm for back-propagation networks.

UNIT-III: UNSUPERVISED LEARNING NETWORKS (9 Periods)

Unsupervised Learning Networks: Fixed weight competitive nets, Kohonen self-organizing feature maps, Learning vector quantization, Counter-propagation networks, Adaptive response theory network.

UNIT-IV: FUZZY LOGIC (10 Periods)

Classical Sets and Fuzzy Sets: Classical sets- Operations, Properties, Function mapping; Fuzzy sets- Operations, Properties.

Classical Relations and Fuzzy Relations: Cartesian product of relation, Classical relations, Fuzzy relations, Tolerance and equivalence relations, Non-interactive fuzzy sets.

UNIT-V: FUZZY SYSTEMS AND GENETIC ALGORITHMS (8 Periods)

Fuzzy Arithmetic and Fuzzy Measures: Fuzzy arithmetic, Extension principle, Fuzzy measures, Measures of fuzziness.

Genetic Algorithms: Genetic operators, Working principle, Fitness function, reproduction.

Total Periods: 45

TEXT BOOK:

1. S. N. Sivanandan and S. N. Deepa, *Principles of Soft Computing*, Wiley India, Second Edition, 2011.

REFERENCE BOOKS:

1. Jyh-Shing Roger Jang, Chuen-Tsai Sun and Eiji Mizutani, Neuro-*Fuzzy and Soft Computing*, Prentice-Hall India, 2003.

2. S. Rajasekaran and G. A. Vijayalakshmi Pai, *Neural Networks, Fuzzy Logic and Genetic Algorithms:* Synthesis and Applications, PHI Learning Private Ltd, 2011.

III B. Tech. – II Semester

(16BT60503) WIRELESS NETWORKS

(Interdisciplinary Elective–2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A Course on "Computer Networks"

COURSE DESCRIPTION:

Generations of Wireless Networks; Voice and Data Processing; Wireless Network Topology; GSM; TDMA; CDMA; Wireless LANs; Wireless WANs; Wireless PAN;

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on
- Wireless Medium Access methods.
- Network Topology
- Wireless LAN, HIPERLAN
- GSM, CDMA, GPRS

CO2. Analyze the network topologies in Wireless Networks

CO3. Design solutions for network communications at physical and transport layers

CO4. Solve complex problems related to network communications and wireless networks

CO5. Apply GSM, CDMA, GPRS and Bluetooth to create Home Access Networks and wireless Personal Area Network.

CO6. Apply contextual knowledge to solve problems using societal applications like health care devices, Internet of Things.

DETAILED SYLLABUS:

UNIT-I: OVERVIEW OF WIRELESS NETWORKS AND WIRELESS MEDIUM ACCESS ALTERNATIVES (9 periods)

Overview of Wireless Networks: Different generations of wireless networks.

Wireless Medium Access Alternatives: Fixed assignment access for voice-oriented networks – Frequency Division Multiple Access (FDMA), Time Division Multiple Access (TDMA), Code Division Multiple Access (CDMA); Random access for data-oriented networks – Access methods for wireless LANs; Integration of voice and data traffic.

UNIT-II: NETWORK PLANNING AND WIRELESS NETWORK OPERATIONS (9 periods)

Network Planning: Wireless network topologies – Infrastructure of network topology, Ad hoc network topology; Cellular topology, Cellular concept, Cellular hierarchy; Cell fundamentals.

Wireless Network Operations: Mobility management – Location management, Handoff management, Mobile IP; Security in wireless networks – Security requirements for wireless networks, Overview of network security, Identification schemes.

UNIT-III: INTRODUCTION TO WIRELESS LANS AND IEEE 802.11 WIRELESS LANS (9 periods)

Introduction to Wireless LANs: Historical overview of the LAN industry, Wireless home networking-Home Access Networks (HAN), Needs of HAN, HAN technologies.

IEEE 802.11 WLANs: IEEE 802.11 – Overview of IEEE 802.11, Reference architecture, Layered protocol architecture; The PHY Layer – FHSS, DSSS, DFIR, IEEE 802.11a, IEEE 802.11b; MAC sublayer – General MAC frame format; MAC management sublayer – Registration, Handoff, Security.

UNIT-IV: GSM TECHNOLOGY, CDMA TECHNOLOGY AND MOBILE DATA NETWORKS (10 periods)

GSM Technology: GSM – Reference architecture; Mechanisms to support a mobile environment – Registration, Call establishment, Handoff, Security.

CDMA Technology: CDMA – IS-95 CDMA forward channel, IS-95 CDMA reverse channel, Packet and frame formats in IS-95.

Mobile Data Networks: GPRS – Reference architecture in GPRS, Mobility support in GPRS, Protocol layers in GPRS; SMS – Overview of SMS Operation; Mobile application protocols – Wireless application protocol, i-Mode.

UNIT-V: WIRELESS ATM, HIPERLAN AND WIRELESS PAN (8 periods)

Wireless ATM and HIPERLAN: Wireless ATM – Reference model, Protocol entities, PHY and MAC layer alternatives, Mobility support; HIPERLAN – HIPERLAN-1, Requirements and architecture, PHY and MAC layers; HIPERLAN-2 – Architecture and reference model, PHY layer, DLC layer, Convergence layer, Security, Overall comparison with 802.11.

Wireless PAN: IEEE 802-15 WPAN, Home RF – Architecture; Bluetooth – Overall architecture, Protocol stack, Physical connection, Security. **Total Periods: 45**

TEXT BOOK:

1. Kaveh Pahlavan and Prashant Krishna Murthy, *Principles of Wireless Networks,* PHI Learning Pvt. Ltd., 2009.

REFERENCE BOOKS:

1. William Stallings, *Wireless Communications and Networks,* Pearson Education, Second Edition, 2012.
2. C. Sivaram Murthy and B.S. Manoj, *Ad-hoc Wireless Networks Architectures and Protocols,* Pearson Education, Second Edition, 2007.

III B. Tech. – II Semester

(16BT71210) HIGH PERFORMANCE COMPUTING

(Program Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Computer Organization"

COURSE DESCRIPTION: Cache-based Microprocessor Architecture; Memory Hierarchies; Multithreaded Processors; Common Sense Optimizations; The Role of Compilers; Data Access Optimization; Shared-memory Computers; Parallel Scalability; Introduction to OpenMP; Parallel Jacobi Algorithm; Introduction to MPI; MPI Performance Tools; MPI Parallelization of Jacobi Solver.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on:
- Modern Processors and code Optimization.
- Parallel computing paradigms.

CO2. Analyze computation problems and identify the suitable parallel processing approaches to achieve optimum computation.

CO3. Design Parallel processing algorithms for achieving high performance computing.

CO4. Solve shared memory problems using Parallel Programming.

CO5. Use OpenMP and MPI tools in Parallel Programming.

DETAILED SYLLABUS:

UNIT-I: MODERN PROCESSORS (08 Periods)

Stored-program computer architecture, General-purpose cache-based microprocessor architecture, Memory hierarchies, Multicore processors, Multi-threaded processors, Vector processors.

UNIT-II: BASIC OPTIMIZATION TECHNIQUES FOR SERIAL CODE (10 Periods)

Scalar profiling, Common sense optimizations, Simple measures, Large impact, The role of compilers, C++ optimizations, Data access optimization-balance analysis and light speed estimates, Storage order.

Case study: The Jacobi algorithm and Dense matrix transpose.

UNIT-III: PARALLEL COMPUTERS (09 Periods)

Taxonomy of parallel computing paradigms, Shared-memory computers, Distributed-memory computers, Hierarchical systems, Networks. Basics of parallelization, Data Parallelism, Function parallelism, Parallel scalability.

UNIT-IV: SHARED-MEMORY PARALLEL PROGRAMMING WITH OpenMP (09 Periods)

Introduction to OpenMP – Parallel execution, Data scoping, OpenMP work sharing for loops, Synchronization, Reductions, Loop scheduling and tasking.

Case study: OpenMP-parallel Jacobi algorithm, Efficient OpenMP programming-profiling OpenMP programs, Performance pitfalls.

Case study: Parallel sparse matrix-vector multiply.

UNIT V: DISTRIBUTED-MEMORY PARALLEL PROGRAMMING WITH MPI (09 Periods)

Message passing, Introduction to MPI, Examples - MPI parallelization of Jacobi solver; Efficient MPI Programming - MPI performance tools, communication parameters, Synchronization, Serialization, Contention, Reducing communication overheads, Understanding intranode point-to-point communication.

Total Periods: 45

TEXT BOOK:

1. Georg Hager and Gerhard Wellein, *Introduction to High Performance Computing for Scientists and Engineers,* Chapman & Hall/CRC Computational Science Series, First Edition, 2012.

REFERNCE BOOKS:

1. Charles Severance and Kevin Dowd, *High Performance Computing,* O'Reilly Media, Second Edition , 1998.
2. Kai Hwang and Faye Alaye Briggs, *Computer Architecture and Parallel Processing,* McGraw Hill, 1984.

III B. Tech. – II Semester

(16BT71202) MOBILE APPLICATION DEVELOPMENT

(Program Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on 'Java Programming' and 'Web Technologies'.

COURSE DESCRIPTION: Mobile platforms; Mobile User Interface and tools; Introduction to Android; Activities; Views; Menus; Database Storage; SMS; e-mail; Displaying Maps; Building a Location Tracker Web Services Using HTTP; Sockets Programming; Communication between a Service and an Activity; Introduction to iOS.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on:
- Mobile platforms and Mobile User Interface
- Android Activities and Intents
- Messaging, Networking, Location based Services, Android Services
- Basics of iOS

CO2. Analyze the context of complex problems and identify user interface design requirements.

CO3. Design and develop solutions for real world problems with android mobile applications.

CO4. Demonstrate problem solving skills to create applications for mobile devices.

CO5. Apply Android studio and iOS tools to develop mobile applications

CO6. Create mobile applications as per societal needs.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION AND MOBILE USER INTERFACE DESIGN (08 Periods)

Mobile web presence, Mobile applications, Marketing, App as a mobile web app; User interface design - Effective use of screen real estate, Mobile application users, Mobile information design, Mobile platforms, Tools of mobile interface design.

Android versions, Features and architecture, Required tools, Android application launching.

UNIT-II: ACTIVITIES, INTENTS AND ANDROID USER INTERFACE (09 Periods)

Activities, Linking activities using intents, Displaying notifications, Components of a screen, Adapting to display orientation, Managing changes to screen orientation, Utilizing the action bar, Listening for UI notifications.

UNIT-III: ADVANCED USER INTERFACE AND DATA PERSISTENCE (10 Periods)

Basic views, Picker views, List view, Image view, Menus with views, Web view, Saving and loading user preferences, Persisting data to files, Creating and using databases.

UNIT-IV: MESSAGING, LOCATION-BASED SERVICES, AND NETWORKING (09 Periods)

SMS messaging, Sending e-mail, Displaying maps, Getting location data, Monitoring a location, Consuming web services using HTTP.

UNIT-V: ANDROID SERVICES AND IOS (09 Periods)

Services, Communication between a service and an activity, Binding activities to services, Threading.

iOS tools, iOS project, Debugging iOS apps, Objective-C basics, Hello world app, Building the derby app in iOS.

Total Periods: 45

TEXT BOOKS:

1. J.F.DiMarzio, *Beginning Android Programming with Android Studio,* Wiley India, Fourth Edition, 2017.
2. Jeff McWherter and Scott Gowell, *Professional Mobile Application Development,* Wiley India, 2012.

REFERENCE BOOKS:

1. Neils Smyth, *Android Stduio Development Essentials,* Creative Space Independent publishing platform, Seventh edition 2016.

2. Paul Deitel, Abbey Deitel and Harvey Deitel, *Android How to Program,* Deitel Associates publishers, 2013.

III B. Tech. – II Semester

(16BT71204) MOBILE COMPUTING

(Common to CSE, and CSSE)

(Program Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Computer Networks"

COURSE DESCRIPTION: Introduction to Mobile Computing, GSM; Medium Access Control, Wireless LAN; Mobile Network and Transport Layers; Data Dissemination; Mobile Ad-Hoc Networks (MANETs), Wireless Application Protocol (WAP).

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on:
- GSM, GPRS, 3G, 4G, Wireless LAN, MANETs.
- Protocols in Data Link, Network, Transport and Application layer.

CO2. Analyze the issues related to database design and data retrieval in mobile applications.

CO3. Apply routing algorithms for finding shortest path in MANETs

CO4. Use protocols of Wireless Technologies for security implementation in mobile computing.

CO5. Follow standards in the usage of mobile communications.

DETAILED SYLLABUS:

UNIT-I: OVERVIEW OF MOBILE COMPUTING AND GSM (09 Periods)

Introduction: Introduction to mobile computing, Novel applications, Limitations, and Mobile computing architecture.

GSM: Mobile services, System architecture, Radio interface, Protocols, Localization and calling, Handover, Security, and New data services, Introduction to 3G and 4G Communications Standards: WCDMA, LTE, WiMAX

UNIT-II: MEDIUM ACCESS CONTROL AND WIRELESS LAN (09 Periods)

Medium Access Control: Motivation for a specialized MAC - Hidden and exposed terminals, Near and far terminals, SDMA, FDMA, TDMA, CDMA.

Wireless LAN: IEEE 802.11 - System architecture, Protocol architecture, Physical layer, Medium access control layer, MAC management; Bluetooth - User scenarios, Architecture, Radio layer, Baseband layer, Link manager protocol, L2CAP, Security.

UNIT-III: MOBILE NETWORK AND TRANSPORT LAYERS (09 Periods)

Mobile IP: Goals, Assumptions, Entities and terminology, IP packet delivery, Tunneling and encapsulation, Optimizations; IPv6; Dynamic Host Configuration Protocol (DHCP).

Mobile Transport Layer: Traditional TCP, Indirect TCP, Snooping TCP, Mobile TCP, Fast retransmit/ fast recovery, Transmission/ time-out freezing, Selective retransmission, Transaction oriented TCP; TCP over 2.5G/3G wireless networks.

UNIT-IV: DATABASE ISSUES AND DATA DISSEMINATION (09 Periods)

Database Issues: Hoarding techniques, Caching invalidation mechanisms, Client server computing with adaptation, Power-aware and context aware computing, Database transactional models, Query processing and recovery.

Data Dissemination: Communications asymmetry, Classification of data delivery mechanisms, Push-based mechanisms, Pull-based mechanisms, Hybrid mechanisms, Selective tuning (indexing) techniques.

UNIT-V: MOBILE AD HOC NETWORKS (MANETs) AND WAP (09 Periods)

Mobile Ad Hoc Networks: Properties of a MANET, Spectrum of MANET, Applications, routing and routing algorithms, Security in MANETs.

Wireless Application Protocol: Architecture, Wireless datagram protocol, Wireless transport layer security, Wireless transaction protocol, Wireless session protocol, Wireless application environment.

Total Periods: 45

TEXT BOOKS:

1. Rajkamal, *Mobile Computing***,** OXFORD University Press, Second Edition, 2012.
2. Jochen Schiller, *Mobile Communications,* Pearson Education, Second Edition, 2009.

REFERENCE BOOKS:

1. Gordon A. Gow and Richard K. Smith, *Mobile and Wireless Communication,* Mc Graw Hill, 2006.

2. Hansmann, Merk, Nicklous and Stober, *Principles of Mobile Computing,* Springer, Second Edition, 2003.

III B. Tech. – II Semester
(16BT60504) PRINCIPLES OF PROGRAMMING LANGUAGES

(Program Elective–1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION:

Concepts of Programming Languages, Paradigms; Different Data Types; Arithmetic and Boolean Expressions, Programming Statements; Fundamental of Subprograms; Data Abstraction; Exception Handlers; Logic and Functional Programming Languages;

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Gain knowledge on
- Data types,
- Expressions, statements,
- Subprograms and abstract data types,
- Exceptional handling in object oriented programming languages

CO2. Analyze the constructs of procedural, object-oriented, functional and logic programming languages.

CO3. Design functional forms, structures, control flow, list and predicate functions for the development of interpreted functional languages.

CO4. Use appropriate programming language to develop software applications.

CO5. Select appropriate technique in logic and functional based programming languages to develop effective programs.

CO6. Apply Contextual knowledge in programming languages for societal issues.

DETAILED SYLLABUS:

UNIT-I: PRELIMINARIES AND DATA TYPES (9 periods)

Preliminaries: Reasons for studying concepts of programming languages, Programming domains, Language evaluation criteria, Influences on language design, Language categories, Language design trade-offs, Implementation methods, Programming environments.

Data Types: Primitive, Character string, User-defined, Ordinal, Array, Associative arrays, Records, Tuple, List, Union, Pointer and reference types, Type checking, Strong typing, Type equivalence.

UNIT-II: EXPRESSIONS AND ASSIGNMENT STATEMENTS AND STATEMENT- LEVEL CONTROL STRUCUTERS (10 periods)

Expressions and Assignment Statements: Arithmetic expressions, Overloaded operators, Type conversions, Relational and boolean expressions, Short-Circuit evaluation, Assignment statements, Mixed-mode assignment.

Statement-Level Control Structures: Selection statements, Iterative statements, Unconditional branching, Guarded commands.

UNIT-III: SUBPROGRAMS AND ABSTRACT DATA TYPES (10 periods)

Subprograms and Blocks: Fundamentals of subprograms, Design issues for subprograms, Local referencing environments, Parameter-passing methods, Parameters that are subprograms, Calling subprograms indirectly, Overloaded subprograms, Co-routines.

Abstract Data Types: Concept of abstraction, Introductions to data abstraction, Design issues, Language examples, Parameterized abstract data types.

UNIT-IV: CONCURRENCY AND EXCEPTION HANDLING (8 periods)

Concurrency: Subprogram-level concurrency, Semaphores, Monitors, Message passing, Java threads, C# Threads.

Exception Handling: Exception handling, Exception handling in Ada, Exception handling in C++, Exception handling in Java.

UNIT-V: LOGIC PROGRAMMING LANGUAGES AND FUNCTIONAL PROGRAMMING LANGUAGES (8 periods)

Logic Programming Languages: Predicate calculus, Overview of logic programming**,** Origins of Prolog, Basic elements of Prolog.

Functional Programming Languages: Mathematical functions, Fundamentals of functional programming languages, LISP, An introduction to scheme, Common LISP, ML. **Total Periods: 45**

TEXT BOOK:

1. Robert. W. Sebesta, *Concepts of Programming Languages*, Pearson Education, Tenth Edition, 2015.

REFERENCE BOOKS:

1. D. A. Watt, *Programming Language Design Concepts,* Wiley Dreamtech, 2007.
2. A. B. Tucker, R. E. Noonan, *Programming Languages,* Tata Mc-Graw Hill, Second Edition.

III B. Tech. II-Semester

(16BT6HS01) BANKING AND INSURANCE

(Common to CE, ME, CSE, IT, and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITE: —

COURSE DESCRIPTION:

Origin of Banking; Functions of Banking; Role & Functions of RBI; Bank-Customer Relationship; Deposit and Loan Services of Banks; Banking Procedures; Electronic Payment Mechanisms; Business Models; Concepts of Risk and Uncertainty; Fundamentals of Insurance; Principles of Insurance; Essentials of Insurance Contracts; Insurance players in India.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1: Demonstrate Knowledge in
- Tools and concepts of Banking and Insurance.
- Basic Principles and concepts of Insurance and Banking.
- e-fund transfers, e-payments and e-business models

CO2: Develop skills in providing solutions for
- Online banking and e–payments...
- Risk Management through insurance benefits the society at large.
- Money management by leveraging on technology, banking and insurance services.

CO3: Exhibit conceptual soundness about banking and insurance, this would contribute to More employment opportunities.

CO4: Provide life skills for effective utilization of Banking and Insurance facilities.

DETAILED SYLLABUS:

UNIT–I: INTRODUCTION TO BANKING: (9 Periods)

origin and growth of banking, meaning and functions of banking, importance of banking, Reserve Bank of India; functions, monetary policy, open market operations.

UNIT–II: BANK-CUSTOMER RELATIONSHIP: (9 Periods)

Debtor-creditor relationship, anti money laundering, deposit products or services, payment and collection of cheques. Accounts – Types of accounts, procedure for opening and closing an account. Loans and Advances- principles of lending, types of loans,

UNIT–III: BUSINESS MODELS AND ELECTRONIC PAYMENT SYSTEM: (9 Periods)

Features, types of e-payment system, e-cash ,NEFT,RTGS, Credit cards, Electronic purses and Debit cards. Business models- B2B, B2C, C2C, and B2G.

UNIT–IV: INTRODUCTION TO RISK AND INSURANCE: (9 Periods)

Concept of risk, risk *Vs* uncertainty. Insurance definition, Insurance as risk mitigation mechanism, elements of insurance.

UNIT–V: INSURANCE OVERVIEW: **(9 Periods)**

Principles of insurance, insurance types, LIC & GIC insurance contract- nature, elements, functions, IRDA, Insurance Players in India. **Total Periods: 45**

TEXT BOOKS:

1. A.V. Ranganadha Chary, R.R. Paul- *Banking and Financial system*, Kalyani Publisher, New Delhi, 2nd Edition.
2. P.K.Gupta- *Insurance and Risk Management*, Himalaya Publishing House, New Delhi,

REFERENCE BOOKS:

1. Diwan, Praq and Sunil Sharma: '*Electronic Commerce- A Manager's Guide to E-Business*', Vanity Books International, Delhi,2002.
2. Kalakota Ravi and Whinston Andrew B: '*Frontiers of Electronic Commerce*', Pearson Education India, 1996 New Delhi.

3. Schneider, Grey P: '*Electronic Commerce, Course Technology*', Cengage Learning, 2008, 8th Edition, New Delhi.

III B. Tech. – II Semester

(16BT6HS02) BUSINESS COMMUNICATION AND CAREER SKILLS

(Common to CE, ME, CSE, IT, and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A Course on Technical English or English at Diploma level

COURSE DESCRIPTION: Nature and scope of Communication; Corporate Communication; Writing business Documents; Careers and Resumes; Interviews

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1: Demonstrate knowledge in
- Corporate Communication
- Main Stages of Writing Messages
- Career Building

CO2: Analyze the possibilities and limitations of language in
- Communication Networks
- Crisis Management/Communication

CO3: Design and develop the functional skills for professional practice in
- Business Presentations & Speeches

CO4: Apply written and oral communication techniques in preparing and presenting various documents in technical writing.

CO5: Function effectively as an individual and as a member in diverse teams.

CO6: Communicate effectively with the engineering community and society in formal and informal situations.

DETAILED SYLLABUS:

UNIT-I - NATURE AND SCOPE OF COMMUNICATION: (9 periods)

Introduction: Functions of Communication – Roles of a Manager – Communication Basics – Communication Networks – Informal Communication – Interpersonal Communication –Communication Barriers

UNIT-II - CORPORATE COMMUNICATION: (9 periods)

Introduction: What is Corporate Communication? – Corporate Citizenship and Social Responsibility – Corporate Communication Strategy – Crisis Management/Communication – Cross-Cultural Communication.

UNIT-III - WRITING BUSINESS DOCUMENTS: (9 periods)

Introduction: Importance of Written Business Communication, Types of Business Messages – Five Main Stages of Writing Business Messages – Business Letter Writing – Effective Business Correspondence – Common Components of Business Letters – Strategies for Writing the Body of a Letter

UNIT-IV – CAREERS AND RESUMES*:* (9 periods)

Introduction – Career Building – Business Presentations and Speeches – Resume Formats – Traditional, Electronic and Video Resumes – Sending Resumes – Follow-up Letters – Online Recruitment Process

UNIT-V – INTERVIEWS: (9 periods)

Introduction – Fundamental Principles of Interviewing – General Preparation for an Interview – Success in an Interview – Types of Interviewing Questions – Important Non-verbal Aspects – Types of Interviews – Styles of Interviewing **Total Periods: 45**

TEXT BOOK:

1. Meenakshi Raman and Prakash Singh *Business Communication*, , Oxford University Press, New Delhi, Second Edition, 2012.

REFERENCE BOOKS:

1. Neera Jain and Sharma Mukherji, *Effective Business Communication*, Tata Mc Graw-Hill Education, Pvt. Ltd., New Delhi, 2012.
2. Courtland L.Bovee et al., *Business Communication Today*, Pearson, New Delhi, 2011.
3. Krizan, *Effective Business Communication*, Cengage Learning, New Delhi, 2010.

4. R.K. Madhukar, *Business Communication*, Vikas Publishing House Pvt. Ltd., New Delhi, 2005.

III B.Tech. II-Semester

(16BT6HS03) COST ACCOUNTING AND FINANCIAL MANAGEMENT

(Common to CE, ME, CSE, IT, and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE REQUISITE: —

COURSE DESCRIPTION: Scope, Objectives and Elements of cost Accounting; Cost Sheet and Tender quotations; Variance Analysis: Material variances, Labor variances; Meaning and Scope, Liquidity, Profitability Ratios: concept of Risk and Return on Investment.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1: Acquire Knowledge in

- Elements of Costing.
- Basic concepts of Financial Management.
- Risk and Return
- Significance of Cost Accountancy
- Behavioral Finance

CO2: Develop skills in

- Material, Labor, Overheads control.
- Excellence and ability to minimize the cost of the organization

C03: Develop effective Communication in Cost control and Financial Management.

CO4: Provide solutions for effective investment decisions.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO COST AND COST ACCOUNTING*:* **(9 Periods)**

Cost and Cost Accounting, Scope, Objectives, Advantages and disadvantages – Cost Accounting *Vs* Management Accounting – Elements of Costing – Installation of costing system – Material Control, Labour Control, Overhead Control

UNIT-II: COST SHEET AND PREPARATION OF COST SHEET: **(9 Periods)**

Analysis of Cost – Preparation of cost sheet, estimate, tender and quotation (Simple problems) – Importance of Costing while pricing the products.

UNIT-III: STANDARD COSTING AND VARIANCE ANALYSIS: **(9 Periods)**

Introduction to Standard Costing & Variances – Variance Analysis: Material variances, Labour variances (Simple Problems).

UNIT-IV: INTRODUCTION TO FINANCIAL MANAGEMENT AND RATIO ANALYSIS **(9 Periods)**

Financial Management-Meaning and Scope, Liquidity, Profitability, Financial Statement Analysis through ratios (Simple Problems)

UNIT-V: INTRODUCTION TO INVESTMENT AND BEHAVIORAL FINANCE **(9 Periods)**

Investment-Meaning and Definition- concept of risk and returns-Investment Alternatives- Introduction to Behavioral Finance – Anomalies –Key Concepts –Anchoring – Mental Anchoring-Confirmation and Hindsight Bias-Gambler's Fallacy-Herd Behavior-Over Confidence-Overreaction and Availability Bias-Prospect Theory. **Total Periods: 45**

TEXT BOOKS:

1. S.P. Jain and K.L. Narang: *Cost Accounting*, Kalyani Publishers, Ludhiana, 6th Edition, 2002
2. James C Van Horne, *Financial Management and Policy*, Prentice-Hall of India/Pearson, 12th Edition, 2001 ISBN- 10: 0130326577

REFERENCE BOOKS:

1. The Institute of Company Secretaries of India, *Cost and Management Study Material*, New Delhi.

2. I.M. Pandey, *Financial Management*, Vikas Publishing House Pvt. Ltd., 10th Edition, 2010

III B. Tech. – II Semester

(16BT6HS04) ENTREPRENEURSHIP FOR MICRO, SMALL AND MEDIUM ENTERPRISES

(Common to CE, ME, CSE, IT, and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE REQUISITE: —

COURSE DESCRIPTION:

Introduction to Entrepreneur Development; Idea generation and formation of Business Plan; Micro and Small Enterprises; Institutional Finance and Support to Entrepreneur; Woman Entrepreneurship.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1: Acquire Knowledge in
- Schemes and institutions encouraging entrepreneurship.
- Basic Principles and concepts of Accountancy.
- Significance of entrepreneurship.

CO2: Develop skills in providing solutions for
- Personal excellence through financial and professional freedom.
- Women entrepreneurship serving as contrivance in societal development

CO3: Develop Critical thinking and evaluation ability.

CO4: Widens knowledge and build up attitude towards trouble shooting.

CO5: Demonstrate business acumen

DETAILED SYLLABUS:

UNIT–I: INTRODUCTION TO ENTREPRENEURSHIP DEVELOPMENT (9 Periods)

Concept of Entrepreneurship – Growth of Entrepreneurship in India **-** Factors affecting entrepreneurship growth - Characteristics of an Entrepreneur – Functions of Entrepreneur – Need for an Entrepreneur – Entrepreneurial Decision Process – Types of Entrepreneurs – Distinction between an Entrepreneur and a manager.

UNIT–II: IDEA GENERATION AND FORMULATION OF BUSINESS PLANS (9 Periods)

Sources of Ideas – Methods of idea generation – Steps in Setting up of a Small Business Enterprise – Formulation of Business Plan – Contents of Business Plan – Significance – Common Errors in Business Plan Formulation, The role of incubation centers for promoting Entrepreneurship, Start-up – New Guidelines.

UNIT–III: MICRO AND SMALL ENTERPRISES (9 Periods)

Meaning and Definition – Micro and Macro units – Essentials – Features – Characteristics – Scope of Micro and Small Enterprises – Objectives of Micro Enterprises – relationship between Micro and Macro Enterprises - Problems of Micro and Small Enterprises

UNIT–IV: INSTITUTIONAL FINANCE (9 Periods)

Institutional Finance **–** Need-Scope-Services - Various Institutions offering Institutional support: – Small Industries Development of Bank of India (SIDBI), State Industrial Development Corporations (SIDCs)– Small Industries Development Organisation (SIDO) – Small Industries Service Institutes (SISIs) – District Industries Centres (DICs) – National Institute of Entrepreneurship and Small Business Development (NIESBUD) – Technical Consultancy Organizations (TCOS). Micro Units Development and Refinance Agency Bank (MUDRA).

UNIT–V: WOMEN AND RURAL ENTREPRENEURSHIP (9 Periods)

Concept of Women entrepreneur - Functions of Women entrepreneurs - Growth of women entrepreneurship in India - Challenges of Women entrepreneurs- Programmes supporting women entrepreneurship – Rural Entrepreneurship – Meaning, Need for Rural entrepreneurship, Problems of rural entrepreneurship, Role of NGOs, Role of Bharatiya Mahila Bank for encouraging Women Entrepreneurs.

Total Periods: 45

TEXT BOOKS:

3. Bholanath Dutta, *Entrepreneurship Management* – Text and Cases, Excel Books, 1st edition 2009.

III B. Tech. – II Semester
(16BT6HS05) FRENCH LANGUAGE
(La Langue Francais)

(Common to CE, ME, CSE, IT, and CSSE)

Open Elective

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Oral communications; Basic grammar; advanced grammar; basic writing; Business French (La Francais Commercial)

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1: Demonstrate knowledge in
- Process of communication
- Modes of listening
- Paralinguistic features
- Skimming and Scanning
- Elements of style in writing

CO2: Analyze the possibilities and limitations of language, understanding
- Barriers to Communication
- Barriers to Effective Listening
- Barriers to Speaking
- Formal and metaphorical language

CO3: Design and develop language skills for professional practice.

CO4: Apply basic writing skills in writing Emails and understanding wide range of technical terminologies.

CO5: Understand French culture and civilization.

CO6*:* Communicate effectively with the native French in day to day situation.

DETAILED SYLLABUS:

UNIT-I: ORAL COMMUNICATION: (9 periods)

Introduction - Language as a Tool of Communication, French alphabets, Phonetics and pronunciation, making contacts, giving information, Arranging things, Expression of feelings.

UNIT-II: BASIC GRAMMAR: (9 periods)

Introduction –Articles, -Er ending Verbs, Nouns, Numbers, Gender, Pronouns, Sentence structure – Case study.

UNIT-III: ADVANCED GRAMMAR: (9 periods)

Introduction -Adjectives, Prepositions, Introduction to tenses – Present tense, past tense and future tense, Active and Passive voice.

UNIT-IV: BASIC WRITING: **(9 periods)**

Introduction -Introduction to written communication, Pre-writing, Creating context for writing and Data collection, fill in forms, Write greeting cards, Invitations and Short personal announcements, Short text to describe photos and pictures.

UNIT-V: BUSINESS FRENCH (La Francais Commercial) (9 periods)

Introduction - E-mail writing, Letter writing, Learning technical vocabulary and its application.

Case study of influential French companies, Learning computer/desktop/new age- media vocabulary, Introduction to how to present a topic, Fixing an Appointment

Total Periods: 45

TEXT BOOK:

1. Annie Berther, *Alter Ego,* Hachette Publications, 2012

REFERENCE BOOKS:

1 RegineMerieux, Yves Loiseau, *Connexions,* Goyall Publishers, 2011
2 DelphineRipaud, *Saison,* French and Euroean Inc., 2015

III B. Tech. – II Semester

(16BT6HS06) GERMAN LANGUAGE (Deutsch alsFremdsprache)

(Common to CE, ME, CSE, IT, and CSSE)

Open-Elective

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION:

Oral communication; Basic grammar; Advanced grammar; Basic writing; Berufsdeutcsch (Business German)

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1: Demonstrate knowledge in
- Process of communication
- Modes of listening
- Paralinguistic features
- Skimming and Scanning
- Elements of style in writing

CO2: Analyze the possibilities and limitations of language, understanding
- Barriers to Communication
- Barriers to Effective Listening
- Barriers to Speaking
- Formal and metaphorical language

CO3: Design and develop language skills for professional practice.

CO4: Apply basic writing skills in writing Emails and understanding wide range of technical terminologies.

CO5: Understand German culture and civilization.

CO6: Communicate effectively with the native German in day to day situation.

DETAILED SYLLABUS:

UNIT-I: ORAL COMMUNICATION: (9 periods)

Introduction - Language as a Tool of Communication, German alphabets, Phonetics and pronunciation, making contacts, giving information, Arranging things, Expression of feelings.

UNIT-II: BASIC GRAMMAR: (9 periods)

Introduction –Articles, Verbs, Nouns, Numbers, Gender, Pronouns, Sentence structure – Case study

UNIT-III: ADVANCED GRAMMAR: (9 periods)

Introduction -Adjectives, Prepositions, Introduction to tenses – Present tense, past tense and future tense, Active and Passive voice, Introduction to Case- Akkusativ, Nominativ, Dativ&Genetiv Case.

UNIT-IV: BASIC WRITING: **(9 periods)**

Introduction -Introduction to written communication, Pre-writing, Creating context for writing and Data collection, fill in forms, Write greeting cards, Invitations and Short personal announcements, Short text to describe photos and pictures.

UNIT-V: BERUFSDEUTCSCH (BUSINESS GERMAN): **(9 periods)**

Introduction - E-mail writing, Letter writing, Learning technical vocabulary and its application.

Case studies of influential German companies, Learning computer/desktop/new age- media vocabulary, Introduction to how to present a topic, Fixing an Appointment.

Total Periods: 45

TEXT BOOK:

1. Heuber, *Tangram Aktuelleins*, Heuber Verlag Publications, 2011.

REFERENCE BOOKS:

1. Anta Kursisa, Gerhard Newner,Sara vicenta, *Fir fuer Deutsch 1 und Deutsch 2,* HeuberVerlag Publications, 2005

III B. Tech. – II Semester
(16BT6HS07) INDIAN CONSTITUTION

(Common to CE, ME, CSE, IT, and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION:

Elements, functions and functionaries according to Indian Constitution, understanding for better professional practice and good citizenry

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1: Gain knowledge in
- parliamentary proceedings, laws, legislature, administration and its philosophy
- federal system and judiciary of India
- socials problems and public services like central civil services and state civil services
- Indian and international political aspects and dynamics

CO2: Develop etiquette and professional behavior in line with the constitution of India for becoming a responsible citizen

DETAILED SYLLABUS :

UNIT-I: PREAMBLE AND ITS PHILOSOPHY (8 periods)

Introduction and Evolution of Indian Constitution, preamble and its Philosophy.

UNIT-II: UNION GOVERNMENT (8 periods)

Powers, Functions and Position of President, Vice-President and Council of Ministers, Composition of parliament, Constitution Amendment Procedure, Financial Legislation in Parliament.

UNIT-III: FEDERAL SYSTEM (14 periods)

Centre-State relations, Directive Principles of State Policy, Fundamental Rights and Duties, Centre-State Relations, Features of Federal System, Administrative Relationship between Union and States, Powers, Functions and Position of Governors, Function of Chief Ministers, Council of Ministers, Composition and powers of the State Legislature.

UNIT-IV: JUDICIARY AND PUBLIC SERVICES (10 periods)

The Union Judiciary - Supreme Court and High Court, All India Services, Central Civil Services, State Services, Local Services and Training of Civil Services.

UNIT-V: INTERNATIONAL POLITICS (5 periods)

Foreign Policy of India, International Institutions like UNO, WTO, SAARC and Environmentalism.

Total periods: 45

TEXT BOOK:

1. Briji Kishore Sharma, *Introduction to the Constitution of India,* Prentice Hall of India, 2005.

REFERENCE BOOKS:

1. Mahendra Pal Singh,V. N. Shukla’s *Constitution of India,* Eastern Book Company, 2011.
2. Pandey J. N., *Constitutional Law of India,* Central Law Agency, 1998.

III B. Tech. – II Semester

(16BT6HS08) **INDIAN ECONOMY**

(Common to CE, ME, CSE, IT, and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION:
Introduction; Time Value of Money; Elementary Economic Analysis; Value Analysis, Value Engineering; Economic Planning.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1: Acquire the knowledge in
- Micro and Macro Economics.
- Traditional and Modern methods of Capital Budgeting.
- Five year plans and NITI Aayog.

CO2: Analyze
- Capital Budgeting.
- Value Analysis and Value Engineering.
- Economic analysis
- Law of supply and demand

CO3: Understand the nuances of project management and finance

DETAILED SYLLABUS:

UNIT–I: INTRODUCTION (9 Periods)
Economics- Flow in an Economy, Law of Supply and Demand; Micro and Macro Economics; Relationship between Science, Engineering, Technology, and Economic Development; Concept of Engineering Economics-Types of Efficiency, Definition and Scope of Engineering Economics.

UNIT–II: TIME VALUE OF MONEY (12 Periods)
Concepts and Application; Capital Budgeting-Traditional and Modern Methods; Simple and Compound Interest, Cash Flow Diagram, Principle of Economic Equivalence; Evaluation of Engineering Projects – Present Worth Method, Future Worth Method, Annual Worth Method, Internal Rate of Return Method, Cost-benefit Analysis in Public Projects; Depreciation Policy-Depreciation of Capital Assets, Causes of Depreciation, Straight Line Method and Declining Balance Method.

UNIT–III: ELEMENTARY ECONOMIC ANALYSIS (9 Periods)
Economic Analysis – Meaning, Significance, Simple Economic Analysis; Material Selection for a Product, Substitution of Raw Material; Design Selection for a Product; Material Selection-Process Planning, Process Modification.

UNIT-IV: VALUE ANALYSIS, VALUE ENGINEERING (6 Periods)
Introduction-Value Analysis, Value Engineering, Functions, Aims; Value Analysis vs. Value Engineering; Value Engineering Procedure- Advantages, Application Areas.

UNIT-V: ECONOMIC PLANNING (9 Periods)
Introduction- Need For Planning in India, Five year plans(1951-2012), NITI Aayog (from 2014 onwards); Inclusive Growth-Meaning, Significance, Need for inclusive growth in India, Strategy for more inclusive growth, Challenges and Prospects; Employment and Inclusive Growth in India, Role of engineers in sustaining inclusive growth.

Total Periods: 45

TEXT BOOKS:
1. PanneerselvamR., *Engineering Economics,* PHI Learning Private Limited, Delhi , 2 ed,2013.
2. Jain T.R., V. K.Ohri, O. P. Khanna, *Economics for Engineers,* VK Publication, 1 ed, 2015.

REFERENCE BOOKS:
1. Dutt Rudar & Sundhram K. P. M, *Indian Economy,* S. Chand, New Delhi, 62 revised edition 2010.

2. Misra, S.K. & V. K. Puri, *Indian Economy: It's Development Experience,* Himalaya Publishing House,Mumbai,32 ed ,2010.

III - B. Tech. II –Semester

(16BT6HS09) **INDIAN HERITAGE AND CULTURE**

(Common to CE, ME, CSE, IT, and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Basic traits of Indian Culture; Humanistic Reforms under Jainism and Buddhism; Culture in the medieval period; Socio Religious reforms in Indian Culture; Reform movements for harmonious relations.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1: Acquaint knowledge in

- human aspirations and values in Vedic culture.
- cultural aspects of Buddhism and Jainism
- unification of our country under Mourya's and Gupta's administrations
- socio Religious aspects of Indian culture
- reform movements and harmonious relations.

CO2: Apply ethical principles and reforms as models for the upliftment of the societal status in the present cultural contexts

DETAILED SYLLABUS:

UNIT I : BASIC TRAITS OF INDIAN CULTURE (9 periods)

Meaning and definition and various interpretations of culture . Culture and its features. The Vedic and Upanishadic culture and society. Human aspirations and values in these societies. Chaturvidha purushardhas, Chaturashrma and Chaturvarna theory.

UNIT II : HUMANISTIC REFORMS UNDER JAINISM AND BUDDHISM (9 periods)

Salient features of Jainism - contributions of Jainism to Indian culture, Contributions of Aachaarya and Mahaapragya, Buddhism as a humanistic culture. The four noble truths of Buddhism, Contributions of Buddhism to Indian culture.

UNIT- III: CULTURE IN THE MEDIEVAL PERIOD (9 periods)

Unifications of India under Mouryas and Guptas and their cultural achievements. Cultural conditions under satavahanas. Contributions to pallavas and cholas to art and cultural achievements of vijayanagara rulers.

UNIT-IV: SOCIO RELIGIOUS REFORMS IN INDIAN CULTURE (9 periods)

Western impact on India, Introductin of western education, social and cultural awakening and social reform movements of Rajaramohan Roy - Dayanandha Saraswathi- Anne Besant. (theosophical society)

UNIT-V: REFORM MOVEMENTS FOR HARMONIOUS RELATIONS (9 periods)

Vivekananda, Eswarchandra vidyasagar and Veeresalingam- emancipation of women and struggle against caste. Rise of Indian nationalism. Mahatma Gandhi- Non violence and satyagraha and eradication of untouchability

Total Periods: 45

TEXT BOOK:

1. Valluru Prabhakaraiah, *Indian Heritage and Culture,* Neelkamal Publications Pvt. Ltd. Delhi, First Edition, 2015.

REFERENCE BOOKS:

1. L. P. Sharma, *History of Ancient India,* Konark Publishers, Pvt. Ltd. New Delhi, 2010.
2. L. P. Sharma, *History of Medieval India,* Konark Publishers, Pvt. Ltd. New Delhi, 2010.
3. L. P. Sharma, *History of Modern India*, Konark Publishers, Pvt. Ltd. New Delhi, 2010.
4. *The Cultural Heritage of India* Vol-I, II, III, IV, V, The Ramakrishna Mission Institute of Culture, Calcutta.

III B. Tech. – II Semester
(16BT6HS10) INDIAN HISTORY
(Common to CE, ME, CSE, IT, and CSSE)
(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION:
Introduction; Ancient India; Classical and Medieval era; Modern India; India after independence.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1: Gain knowledge on evolution and history of India as a nation

CO2: Analyze social and political situations of past and current periods

CO3: Practice in career or at other social institutions morally and ethically

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION (8 periods)

Elements of Indian History; History Sources: Archaeology, Numismatics, Epigraphy and Archival research; Methods used in History; History & historiography; sociological concepts-structure, system, organization, social institutions, Culture and social stratification (caste, class, gender, power), State and Civil Society.

UNIT-II: ANCIENT INDIA (9 periods)

Mohenjo-Daro civilization; Harappa civilization; Mauryan Empire

UNIT -III: CLASSICAL AND MEDIEVAL ERA (12 periods)

Classic Era (200 BC - 1200 AD); Hindu - Islamic Era (1200 - 1800 AD).

UNIT-IV: MODERN INDIA (6 periods)

Age of Colonialism (17th - 19th centuries); First war of Indian Independence; Freedom Struggle (1857-1947).

UNIT-V: INDIA AFTER INDEPENDENCE (1947-) (10 periods)

The Evolution of the Constitution and Main Provisions; Consolidation of India as a Nation; Politics in the States; Indian economy; Modernization and globalization, Secularism and communalism, Nature of development, Processes of social exclusion and inclusion, Changing Nature of work and organization.

Total Periods: 45

TEXT BOOK:
1. K. Krishna Reddy, *Indian History,* Tata McGraw-Hill, 21^{st} reprint, 2017

REFERENCE BOOK:
1. Guha, Ramachandra, *India after Gandhi,* Pan Macmillan,2007, Thapar, Romila, Early India, Penguin, 2002

III B. Tech. – II Semester
(16BT6HS11) **PERSONALITY DEVELOPMENT**
(Common to CE, ME, CSE, IT, and CSSE)
(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Soft Skills Lab"

COURSE DESCRIPTION:
Self-esteem and Self-Management; Developing Positive Attitudes; Self-Motivation and Self-Management; Getting Along with the Supervisor; Workplace Success.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1: Demonstrate knowledge in
- Self-Management
- Planning Career

CO2: Analyze the situations based on
- Attitudes
- Thinking strategies

CO3: Design and develop the functional skills for professional practice in

CO4: Function effectively as an individual and as a member in diverse teams.

CO5: Communicate effectively in public speaking in formal and informal situations.

DETAILED SYLLABUS:

UNIT–I: SELF-ESTEEM AND SELF-IMPROVEMENT **(9 Periods)**
Know Yourself – Accept Yourself; Self-Improvement: Plan to Improve - Actively Working to Improve Yourself.
Case study: 1

UNIT–II: DEVELOPING POSITIVE ATTITUDES **(9 Periods)**
How Attitudes Develop – Attitudes are Catching – Improve Your Attitudes.
Case study: 2

UNIT–III: SELF-MOTIVATION AND SELF-MANAGEMENT **(9 Periods)**
Show Initiative – Be Responsible Self-Management; Efficient Work Habits – Stress Management – Employers Want People Who can Think – Thinking Strategies.
Case study: 3

UNIT–IV: GETTING ALONG WITH THE SUPERVISOR **(9 Periods)**
Know your Supervisor – Communicating with Your Supervisor – Special Communications With Your Supervisor – What Should You Expect of Your Supervisor? – What Your Supervisor Expects of You - Moving Ahead Getting Along with Your Supervisor.
Case study: 4

UNIT-V: WORKPLACE SUCCESS **(9 Periods)**
First Day on the Job – Keeping Your Job – Planning Your Career – Moving ahead.
Case study: 5

Total Periods: 45

TEXT BOOK:
1. Harold R. Wallace and L. Ann Masters, *Personality Development,* Cengage Learning, Delhi, Sixth Indian Reprint 2011.

REFERENCE BOOKS:

1. Barun K. Mitra, *Personality Development and Soft Skills,* Oxford University Press, New Delhi, 2011.
2. Stephen R. Covey, *The 7 Habits of Highly Effective People,* Free Press, New York, 1989
3. K. Alex, *Soft Skills,* S. Chand & Company Ltd, New Delhi, Second Revised Edition 2011.

4. Stephen P. Robbins and Timothy, *A. Judge, Organizational Behaviour,* Prentice Hall, Delhi, 16th Edition 2014.

III B. Tech. II-Semester

(16BT6HS12) PHILOSOPHY OF EDUCATION

(Common to CE, ME, CSE, IT, and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION:

Introduction to Philosophy and Engineering Education; Philosophical methods and their implications in engineering; Philosophical education in India; Values and Engineering education; Outcome based education.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1: Acquire knowledge in

- Philosophy of engineering education.
- Philosophical Methods.
- Knowledge acquiring methods.
- Engineering education and responsibilities.

CO2: Understand the impact of Outcome Based Education for effective educational outcomes

CO3: Apply reasoning to assess societal issues with the contextual knowledge of engineering education and responsibilities.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO PHILOSOPHY AND ENGINNERING EDUCATION (9 Periods)

Concept , Significance, and Scope of Philosophy in Engineering – Aims of Engineering Education – relationship between philosophy and engineering education – speculative, normative and critical approaches of philosophy in engineering.

UNIT-II: PHILOSOPHICAL METHODS AND THEIR IMPLICATIONS ENGINEERING (9 Periods)

Introduction to Philosophical approaches: Idealism, Naturalism, Pragmatism, Realism and Existentialism; Significance and Scope in Engineering Education.

UNIT: III: PHILOSOPHICAL EDUCATION IN INDIA (9 Periods)

Different branches of philosophy- meaning, Epistemology: nature and scope; Knowledge acquiring methods; Kinds and instruments of knowledge; Re-shaping of educational thoughts by Indian thinkers: Rabindranath Tagore, Sri Aurobindo Gosh, Mahatma Gandhi, Jiddu Krishnamurthy and Swamy Vivekananda.

UNIT-IV: VALUES AND ENGINEERING EDUCATION (9 Periods)

Introduction; Engineering education and responsibilities: health, social, moral, ethics aesthetic; Value: crisis and strategies for inculcation;

Case study: Engineering Solutions given by Mokshagundam Visvesvaraya

UNIT-V: OUTCOME-BASED EDUCATION (9 Periods)

Institutional visioning; educational objectives ; programme outcomes , curriculum, stakeholders, infrastructure and learning resources ; governance and management, quality in education.

Total periods: 45

TEXT BOOKS :

1. Ganta Ramesh, *Philosophical Foundations of Education,* Neelkamal Publications, 1/e,2013
2. CarlMicham, *Thinking ThroughTechnology (The Paths between Engineering and Philosophy),* University of Chicago Press, 1/e,1994.
3. Louis L Bucciarelli, *Engineering Philosophy,* Delft University Press,1/e, 2003.
4. NBA/ABET Manuals.

REFERENCE BOOKS:

1. Louis L Bucciarelli, *Philosophy of Technology and Engineering Sciences*, North Holland, 1/e, 2009 (e-book).
2. Samuel Florman, *Existential Pleasures of Education,* Martins's Griffin S.T. publication, 1/e 1992.

III B. Tech. – II Semester

(16BT6HS13) **PUBLIC ADMINISTRATION**

(Common to CE, ME, CSE, IT, and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Introduction; Public Policy; Good Governance; E-Governance; Development Administration.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1: Acquire knowledge in
- Public Policy.
- Good Governance.
- E-governance.
- Development Administration.

CO2: Analyze the possibilities and limitations of existing policies through Good Governance perspective.

CO3: Design and develop solutions in e-governance models to find and provide opportunities in e-governance.

CO4: Adopt principles of e-governance in addressing the existing issues and challenges in e-governance sector.

CO5: Understand the significance of Administrative Development in finding professional engineering solutions by probing
- Bureaucracy.
- Role of civil society.

DETAILED SYLLABUS:

UNIT–I: INTRODUCTION **(9 Periods)**

Public and Private Administration- Differences and Similarities, Meaning, Scope; Importance of Public Administration in Modern Era; Public Administration and its implications in the field of Engineering.

Case Study: Unique Identification Authority of India (UIDAI):Aadhaar Project: Challenges Ahead

UNIT–II: PUBLIC POLICY **(9 Periods)**

Meaning and Scope; Policy Formulation in India; Policy making process; Policy Implementation, Engineering and Public Policy**,** Social, ethical, Monetary and fiscal policies; policy implications of engineering;The engineer’s role in Public Policy.

Case Study: NITI Aayog: Demonetization and Aftermath of Demonetization – Cashless transactions.

UNIT–III: GOOD GOVERNANCE **(9 Periods)**

Significance; Objectives; Concepts; Reforms; Organization and its basic problems Administrative and Governance reforms in India; Sustainable and Inclusive growth in India; Engineering and Sustainable Environment-Role of Engineers; Right to information Act

Case Study: Strategies in Good Governance: A Case Study of Karnataka, Kerala and Orissa.

UNIT–IV: E-GOVERNANCE **(9 Periods)**

Meaning, Significance, Issues in E-governance; E-governance Models, Problems and Opportunities; Application of Data Warehousing and Data Mining in Governance; Engineers role in re-engineering E-governance.

Case Study: e-Housing System for Bhavana Nirman Dhanasahayam Online disbursement of housing assistance in Kerala.

UNIT - V: DEVELOPMENT ADMINISTRATION **(9 Periods)**

Introduction; Development Administration-Administrative Development- Sustainable Development - Significance- Objectives; Bureaucracy - Personnel administration and human resources development; Role of civil society-Citizens and administration; Development and Engineering: Issues Challenges and Opportunities.

Case Study: Neeru-Chettu (Water-Tree) of Andhra Pradesh.

Case Study: TPDDL of Delhi and Odisha. **Total Periods: 45**

TEXT BOOKS:

1. M.P. Sharma, B.L. Sadana, HarpreetKaur, *Public Administration in Theory and Practice,* Kitab Mahal, Mumbai, 1/e,2014.
2. CSR Prabhu, *E. Governance – concepts and case studies*, PHI, New Delhi,2/e 2012.

REFERENCE BOOKS:

1. SurendraMunshi, Bijupaul Abraham, *Good Governance, Democratic societies and Globalization,* Sage publications, New Delhi,1/e ,2004.
2. R.K.Sapru, *Public Policy,* Sterling Publishers Pvt. Ltd., New Delhi, 1/e, 2001.

III B. Tech. – II Semester

(16BT60112) BUILDING MAINTENANCE AND REPAIR

(Common to CE, ME, CSE, IT, and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Durability of buildings, Failure and repair of buildings, Material Techniques for repair, Maintenance of buildings, Conservation and recycling.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Acquire basic knowledge on durability and serviceability, failures, repair and rehabilitation of buildings.
CO2. Analyze failures, repair and rehabilitation techniques.
CO3. Solve complex building maintenance problems through proper investigations and interpretation.
CO4. Use modern tools and techniques for various repairs and rehabilitation of structures.
CO5. Provide solutions for building maintenance and repair problems considering health and safety.
CO6. Consider environmental sustainability in building maintenance and repair.
CO7. Maintain ethical standards for quality in repairs and rehabilitation of structures.
CO8. Evaluate specifications and perform cost analysis of building components while repair and rehabilitation.

DETAILED SYLLABUS:

UNIT–I: DURABILITY AND SERVICEABILITY OF BUILDINGS (10 Periods)

Life expectancy of different types of buildings; Effect of environmental elements such as heat, dampness, frost and precipitation on buildings; Effect of chemical agents on building materials, Effect of pollution on buildings, Effect of fire on building; Damage by biological agents like plants, trees, algae, fungus, moss, insects, etc.; Preventive measures on various aspects, Inspection, Assessment procedure for evaluating for damaged structures, Causes of deterioration, Testing techniques.

UNIT–II*:* FAILURE AND REPAIR OF BUILDINGS (10 Periods)

Building failure – Types, Methodology for investigation; Diagnostic testing methods and equipment, Repair of cracks in concrete and masonry, Materials for Repair, Methods of repair, Repair and strengthening of concrete buildings, Foundation repair and strengthening, Underpinning, Leakage of roofs and repair methods.

UNIT–III: TECHNIQUES FOR REPAIR (08 Periods)

Rust eliminators and polymers coating for rebars during repair, Foamed concrete, Mortar and dry pack, Vacuum concrete, Gunite and shotcrete, Epoxy injection, Mortar repairs for cracks, Shoring and underpinning.

UNIT–IV: MAINTENANCE OF BUILDINGS (09 Periods)

Reliability principles and its applications in selection of systems for building, Routine maintenance of building, Maintenance cost, Specifications for maintenance works, Dampness - Damp proof courses, Construction details for prevention of dampness; Termite proofing, Fire protection, Corrosion protection.

UNIT–V: CONSERVATION AND RECYCLING (08 Periods)

Performance of construction materials and components in service, Rehabilitation of constructed facilities, Conservation movement, Materials and methods for conservation work, Recycling of old buildings and its advantages, Examples.

Total Periods: 45

TEXT BOOKS:

1. Dennison Campbell, Allen and Harold Roper, *Concrete Structures – Materials, Maintenance and Repair*, Longman Scientific and Technical, UK, 1991.
2. Allen, R. T. L., Edwards, S. C. and J. D. N. Shaw, *The Repair of Concrete Structures*, Blackie Academic & Professional, UK, 1993.

REFERENCE BOOKS:

1. Peter H. Emmons, *Concrete Repair and Maintenance*, John Wiley and Sons Publications, 2002.
2. Building Construction under Seismic Conditions in the Balkan Region, UNDP/UNIDO Project Rer/79/015, Volume 5, *Repair and Strengthening of Reinforced Concrete, Stone and Brick Masonry Buildings*, United Nations Industrial Development Organisation, Vienna.
3. Shetty, M. S., *Concrete Technology*, S. Chand and Company.
4. Smith, P. and Julian, W., *Building Services*, Applied Science Publications, London, 1976.
5. SP: 25, BIS; *Causes and Prevention of Cracks in Buildings*.
6. Champion, S., *Failure and Repair of Concrete Structures*, John Wiley and Sons Publications, 1961.

7. Perkins, P. H., Repair, *Protection and Water Proofing of Concrete Structures,* E& FN Spon, UK, 3rd Edition, 1997.

III B. Tech. – II Semester
(16BT60113) CONTRACT LAWS AND REGULATIONS
(Common to CE, ME, CSE, IT, and CSSE)
(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION:

Construction contracts; Tenders; Arbitration; Legal requirements; Labour regulations.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate basic Knowledge on construction contracts, tenders, arbitration, legal requirements and labour regulations.
CO2. Analyze contracts and tenders.
CO3. Address the legal issues in contracts and tenders.
CO4. Follow laws and regulations in the preparation of contracts and tenders.
CO5. Prepare contract and tender documents as per the standards.
CO6. Consider project schedule, cost, quality and risk in the preparation of contracts and tenders.

DETAILED SYLLABUS:

UNIT–I: CONSTRUCTION CONTRACTS (09 Periods)

Indian contracts act, Elements of contracts, Types of contracts, Features, Suitability, Design of contract documents, International contract document and laws, Standard contract document, Law of torts.

UNIT–II: TENDERS (09 Periods)

Prequalification, Bidding, Accepting; Evaluation of tender from technical, contractual and financial points of view; Two cover system, Preparation of the documentation, Contract formation and interpretation, Potential contractual problems, Price variation clause, Comparison of actions and laws, Subject matter, Violations.

UNIT–III: ARBITRATION (09 Periods)

Arbitration, Comparison of actions and laws, Agreements, Appointment of arbitrators, Conditions of arbitration, Powers and duties of arbitrator, Rules of evidence, Enforcement of award, Arbitration disputes, Dispute review board.

UNIT–IV: LEGAL REQUIREMENTS (09 Periods)

Legal requirements for planning, Property law, Agency law, Tax laws – Income tax, Sales tax, Excise and custom duties, Local government approval, Statutory regulations, Insurance and bonding, Laws governing purchase and sale, Use of urban and rural land, Land revenue codes, EMD, Security deposits, Liquidated damages.

UNIT–V: LABOUR REGULATIONS (09 Periods)

Social security, Welfare legislation; Laws relating to wages, bonus and industrial disputes; Labour administration, Insurance and safety regulations, Workmen's compensation act, Maternity benefit act, Child labour act, Other labour laws.

Total Periods: 45

TEXT BOOKS:

1. Subba Rao, G. C. V., *Law of Contracts I & II*, S. Gogia & Co., 11th Edition, 2011.
2. Jimmie Hinze, *Construction Contracts,* McGraw Hill, 3nd Edition, 2011.

III B. Tech. - II Semester

(16BT60114) DISASTER MITIGATION AND MANAGEMENT

(Common to CE, ME, CSE, IT, and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Disasters; Earthquakes; Floods; Cyclones; Droughts; Landslides; Disaster management.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on disasters, their vulnerability and mitigation measures.
CO2. Analyze disasters and their vulnerability.
CO3. Design strategies for effective disaster mitigation.
CO4. Address pre and post disaster issues for better preparedness and mitigation measures, through proper analysis and interpretation.
CO5. Use appropriate methods in disaster mitigation and management.
CO6. Use historical data of disasters to inform the people over preparedness and mitigation measures.
CO7. Solve disaster related issues considering environment.
CO8. Consider economical issues in disaster management.

DETAILED SYLLABUS:

UNIT-I: DISASTERS (09 Periods)

Types of disasters - Natural disasters; Impact of disasters on environment, infrastructure and development; Concepts of hazards and vulnerability analysis, Hazard Assessment, Guidelines for hazard assessment and vulnerability analysis, Basic principles and elements of disaster mitigation.

UNIT-II: EARTHQUAKES (09 Periods)

Introduction to earthquake, Intensity scale (MSK–64), Seismic activity in India, Seismic zones of India, Earthquakes in A.P., Action plan for earthquake disaster preparedness, Elements at risk, Recovery and rehabilitation after earthquake, Earthquake resistant design and construction of buildings; Tsunami – Onset, Types and causes, Warning, Elements at risk, Typical effects, Specific preparedness and mitigation strategies.

UNIT-III: FLOODS, CYCLONES AND DROUGHTS (11 Periods)

Floods and Cyclones: Onset, Types, Warnings; Elements at risk, Typical effects, Indian floods and cyclones, Hazard zones, Potential for reducing hazards, Mitigation strategies and community based mitigation.

Droughts: Onset, Types and warning; Causes, Impact, Early warning and response mechanisms, Mitigation strategies, Droughts in India.

UNIT-IV: LANDSLIDES (08 Periods)

Onset, Types and warning; Causes, Elements at risk, Indian landslides, Hazards zones, Typical effects, Mitigation strategies and community based mitigation.

UNIT-V: DISASTER MANAGEMENT (08 Periods)

Disaster management organization and methodology, Disaster management cycle, Disaster management in India – Typical cases; Cost–benefit analysis with respect to various disaster management programs implemented by NGOs and Government of India.

Total Periods: 45

TEXT BOOKS:

1. V. K. Sharma, *Disaster Management, Medtech Publishing, 2nd Edition, 2013*.
2. Anand S. Arya, Anup Karanth, and Ankush Agarwal, *Hazards, Disasters and Your Community: A Primer for Parliamentarians*, GOI–UNDP Disaster Risk Management Programme, Government of India, National Disaster Management Division, Ministry of Home Affairs, New Delhi, Version 1.0, 2005.

3. Rajendra Kumar Bhandari, *Disaster Education and Management: A Joyride for Students, Teachers, and Disaster Managers*, Springer India, 2014.

4. R. B. Singh, *Natural Hazards and Disaster Management*, Rawat Publications, 2009.

III B. Tech. - II Semester

(16BT60115) ENVIRONMENTAL POLLUTION AND CONTROL

(Common to CE, ME, CSE, IT, and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Fundamentals of air pollution; Dispersion of pollutants; Effects and control of air pollution; Water pollution; Soil pollution and control; Municipal solid waste management.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on air, water, soil pollution and their control and solid waste management.

CO2. Analyze causes and effects of air, water and soil pollution and their remedial measures.

CO3. Recommend suitable solutions to complex environmental pollution problems.

CO4. Use appropriate remedial technique to solve environmental pollution problems.

CO5. Understand the effects of environmental pollution on human health and vegetation.

CO6. Encourage sustainable development through implementation of pollution control measures.

CO7. Maintain IS Codes for environmental quality control.

DETAILED SYLLABUS:

UNIT–I: AIR AND NOISE POLLUTION (08 Periods)

Air Pollution: Scope, Significance, Classification, Sources – Line, Area, Stationary, Mobile; Effects of air pollutants on man, material and vegetation; Global effects of air pollution; Air pollution meteorology - Lapse rate, Inversion, Plume pattern; Dispersion of air pollutants - Dispersion models and applications; Ambient air quality standards.

Noise Pollution: Sound pressure, Power and intensity, Impacts of noise, permissible limits of noise pollution, measurement of noise.

UNIT–II: AIR AND NOISE POLLUTION CONTROL (10 Periods)

Self cleansing properties of the environment, Dilution method, Control at source, Process changes and equipment modifications, Control of particulates – Types of equipment, Design and operation - Settling chambers, Centrifugal separators, Bag house filters, Wet scrubbers, Electrostatic precipitators; Control of gaseous pollutants – Adsorption, Absorption, Condensation, Combustion; Control of air pollution from automobiles, Control of noise pollution.

UNIT–III: WATER POLLUTION AND CONTROL (10 Periods)

Water pollution – Sources, Causes, Effects; Surface and groundwater quality – Physical, Chemical, Biological; Drinking water quality standards, Water purification – Processes, Engineered systems – Aeration, Solids separation, Settling operations, Coagulation, Softening, Filtration, Disinfection; Wastewater – Sources, Causes, Effects, Treatment and disposal – Primary, Secondary, Tertiary; Case studies.

UNIT–IV: SOIL POLLUTION AND CONTROL (08 Periods)

Soil pollutants, Sources of soil pollution, Causes, Effects and control of soil pollution, Diseases caused by soil pollution, Methods to minimize soil pollution, Effective measures to control soil pollution, Case studies.

UNIT–V: MUNICIPAL SOLID WASTE MANAGEMENT (09 Periods)

Types of solid waste, Composition of solid waste, Collection and transportation of solid waste, Methods of disposal – Open dumping, Sanitary landfill, Composting, Incineration, Utilization - Recovery and recycling, Energy Recovery.

Total Periods: 45

TEXT BOOKS:

1. Peavy, H. S, Rowe, D. R., and Tchobanoglous, G., *Environmental Engineering*, McGraw Hill Inc., 1985.
2. C. S. Rao, *Environmental Pollution Control Engineering*, New Age International Pvt. Ltd., 2nd Edition, 2007.
3. Ibrahim A. Mirsa, *Soil Pollution: Origin, Monitoring & Remediation*, Springer, UK, 2nd Edition, 2008.

REFERENCE BOOKS:

2. Daniel Vallero, *Fundamentals of Air Pollution,* Academic Press (Elsevier), 5th Edition, 2014.

3. S. M. Khopkar, *Environmental Pollution Monitoring and Control,* New Age International Pvt. Ltd., 2nd Edition, 2007.
4. V. M. Domkundwar, *Environmental Engineering,* Dhanpat Rai & Co. Pvt. Ltd., New Delhi, 2014.

III B. Tech. - II Semester
(16BT60116) PLANNING FOR SUSTAINABLE DEVELOPMENT

(Common to CE, ME, CSE, IT, and CSSE)
(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Sustainable development; Environmental impact; Sustainable Policies; Governance; Theories and strategies; Media and education for sustainability.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate the knowledge on sustainable development, environmental impact, sustainable policies, governance, systems and strategies, media and education for sustainability.
CO2. Analyze theories, environmental impact, policies, systems and strategies for sustainable development.
CO3. Develop suitable methods and systems for sustainable development.
CO4. Use appropriate techniques in solving issues related to sustainable development.
CO5. Provide solutions to problems associated with sustainable development considering society.
CO6. Consider environment while planning sustainable development.
CO7. Communicate effectively on sustainable development issues through media and education.
CO8. Consider economical issues while planning for sustainable development.

DETAILED SYLLABUS:

UNIT–I: SUSTAINABLE DEVELOPMENT (09 Periods)

Definition and concepts of sustainable development, Capitalization of sustainability - National and global context; Millennium development goals, Emergence and evolution of sustainability and sustainable development, Theories of sustainability, Case studies.

UNIT–II: ENVIRONMENTAL IMPACT (09 Periods)

Climate change – Science, Knowledge and sustainability; Unforeseen environmental impacts on development, Challenges of sustainable development, Centrality of resources in sustainable development, Case studies.

UNIT–III: SUSTAINABLE POLICIES AND GOVERNANCE (09 Periods)

Governance - Democracy and Eco–welfare; Global civil society and world civil politics, Civic environmentalism, Policy responses to sustainable development, Economics of sustainability, Social responsibility in sustainability, National action, ISO 14001: Environmental management system.

UNIT–IV: SUSTAINABLE SYSTEMS AND STRATAGIES (09 Periods)

Need for system innovation, Transition and co–evolution, Theories and methods for sustainable development, Strategies for eco–innovation, Ecological foot print analysis, Socio ecological indicators – Eco labels; Policy programmes for system innovation, Case studies.

UNIT–V: MEDIA AND EDUCATION FOR SUSTAINABILITY (09 Periods)

Role of emerging media, Remarkable design and communication art, Activism and the public interest, Education for sustainability, Participation in decision making, Critical thinking and reflection, Case studies.

Total Periods: 45

TEXT BOOKS:

1. John Blewitt, *Understanding Sustainable Development*, Earth Scan Publications Ltd., 2nd Edition, 2008.
2. Jennifer A. Elliot, *An Introduction to Sustainable Development*, Earth Scan Publications Ltd., 4th Edition, 2006.

REFERENCE BOOKS:

1. Peter Rogers, Kazi F Jalal and John A Boyd, *An Introduction to Sustainable Development*, Earth Scan Publications Ltd., 2006.
2. Simon Dresner, *The Principles of Sustainability*, Earth Scan Publications Ltd., 2nd Edition, 2008.

3. Peter Bartelmus, *Environment Growth and Development: The Concepts and Strategies of Sustainability*, Routledge, 3rd Edition, 2003.
4. Gabriel Moser, Enric Pol, Yvonne Bernard, Mirilia Bonnes, Jose Antonio Corraliza and Maria Vittoria Giuliani, *People Places and Sustainability*, Hogrefe & Huber Publishers, 2nd Edition, 2003.

III B. Tech. – II Semester

(16BT60117) PROFESSIONAL ETHICS

(Common to CE, ME, CSE, IT, and CSSE)
(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION:

Engineering ethics; Professional ideals and virtues; Engineering as social experimentation; Responsibilities and rights; Global issues.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate the principles of ethics, importance of professional values and social responsibility.
CO2. Analyze the problems in the implementation of moral autonomy and use ethical theories in resolving moral dilemmas.
CO3. Develop suitable strategies to resolve problems arise in practicing professional ethics.
CO4. Provide solutions to complex problems associated with professional ethics by proper analysis and interpretation.
CO5. Use appropriate theories in resolving issues pertain to professional ethics.
CO6. Understand the impact of professional ethics on society and address the limitations of codes of ethics.
CO7. Practice engineering with professionalism, accountability and ethics.
CO8. Function as a member, consultant, manager, advisor and leader in multi-disciplinary teams.
CO9. Write reports without bias and give instructions to follow ethics.

DETAILED SYLLABUS:

UNIT-I: ENGINEERING ETHICS (09 periods)

Scope and aim of engineering ethics, Senses of engineering ethics, Variety of moral issues, Types of inquiry, Moral dilemmas, Moral autonomy-Kohlberg's theory, Gilligan's theory, Consensus and controversy.

UNIT-II: PROFESSIONAL IDEALS AND VIRTUES (08 periods)

Theories about virtues, Professions, Professionalism, Characteristics, Expectations, Professional responsibility, Integrity, Self-respect, Sense of responsibility, Self-interest, Customs and religion, Self-interest and ethical egoism, Customs and ethical relativism, Religion and divine command ethics, Use of ethical theories, Resolving moral dilemmas and moral leadership.

UNIT-III: ENGINEERING AS SOCIAL EXPERIMENTATION (10 periods)

Engineering as experimentation, Similarities to standard experiments, learning from the past and knowledge gained, Engineers as responsible experimenters, Conscientiousness, Moral autonomy and accountability, The challenger case, Codes of ethics and limitations, Industrial standards, Problems with the law of engineering.

UNIT-IV: RESPONSIBILITIES AND RIGHTS (09 periods)

Collegiality and loyalty, Respect for authority, Collective bargaining, Confidentiality, Conflict of interests, Occupational crime, Rights of engineers, Professional rights, Whistle-blowing, The BART case, Employee rights and discrimination.

UNIT-V: GLOBAL ISSUES (09 periods)

Multinational corporations, Professional ethics, Environmental ethics, Computer ethics, Engineers as consultants, Witnesses, Advisors and Leaders, Engineers as Managers, Managerial ethics applied to Engineering Profession, moral leadership. **Total Periods: 45**

TEXT BOOKS:

1. Mike W. Martin and Roland Schinzinger, *Ethics in Engineering*, Tata McGraw-Hill, 3rd Edition, 2007.
2. Govindarajan, M., Nata Govindarajan, M., Natarajan, S. and Senthilkumar, V. S., *Engineering Ethics*, Prentice Hall of India, 2004.

REFERENCE BOOKS:

1. S. Kannan and K. Srilakshmi, *Human Values and Professional Ethics*, Taxmann Allied Services Pvt Ltd., 2009.

2. Edmund G. Seebauer and Robert L. Barry, *Fundamental of Ethics for Scientists and Engineers*, Oxford University Press, 2001.
3. Charles F. Fledderman, *Engineering Ethics*, Pearson Education, 2nd Edition, 2004.
4. R. Subramanaian, *Professional Ethics*, Oxford Higher Education, 2013.

III B. Tech. - II Semester

(16BT60118) **RURAL TECHNOLOGY**

(Common to CE, ME, CSE, IT, and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Rural technology; Non conventional energy; Community development; IT in rural development.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate the knowledge on technologies for rural development.

CO2. Analyze various technologies available which are appropriate for rural development.

CO3. Carryout feasibility study on the public and private partnership for rural development.

CO4. Develop and use latest technologies for rural development.

CO5. Address health and safety issues while choosing technologies for rural development.

CO6. Educate the rural populace on the positive impacts of bio-fertilizers and usage of agro-machinery in agriculture.

DETAILED SYLLABUS

UNIT – I: RURAL TECHNOLOGY (09 Periods)

India - Technology and rural development, Pre and post independence period, Rural India Life, Indian farmer, Role of science and technology in rural development, Rural technology and poverty eradication, Rural business hubs, Technology in improving rural infrastructure, Various organizations related to innovation, Issues of technology transfer - CAPART, NABARD, CSIR, NIF.

UNIT – II: NON CONVENTIONAL ENERGY (09 Periods)

Definition of energy, Types of alternative sources of energy, Sources of non conventional energy – Solar energy: Solar cooker, Solar heater; Biogas, Recycling and management, Wastes conservation, Assessment and production of biomass products and their utilization.

UNIT – III: TECHNOLOGIES FOR RURAL DEVELOPMENT (09 Periods)

Food and agro based technologies, Tissue culture, Nursery, Building and construction technologies, Cultivation and processing of economic plants, Cottage and social industries.

UNIT – IV: COMMUNITY DEVELOPMENT (09 Periods)

Water conservation, Rain water Harvesting, Drinking water, Environment and Sanitation, Bio fertilizers, Medical and aromatic plants, Employment generating technologies – Apiculture, Pisciculture, Aquaculture.

UNIT – V: IT IN RURAL DEVELOPMENT (09 Periods)

Role of information technology (IT) in rural areas, Impact of IT in rural development, Need and necessity of technology, Corporate social responsibilities, Private sector participation (Activities in different spheres: Employment, Education, Health, Agriculture and service sectors) and Saansad Adarsh Gram Yojana (SAGY), Village adoption schemes.

Total Periods:45

TEXT BOOKS:

1. M. S. Virdi, *Sustainable Rural Technologies*, Daya Publishing House, 2009.
2. S. V. Prabhath and P. Ch. Sita Devi, *Technology and Rural India*, Serials Publications, 2012.

REFERENCE BOOKS:

1. R. Chakravarthy and P. R. S. Murthy, *Information Technology and Rural Development,* Pacific Book International, 2012.
2. Shivakanth Singh, *Rural Development Policies and Programmes,* Northern Book Centre, 2002.
3. L. M. Prasad, *Principles and Practice of Management*, S. Chand & Sons, 8th Edition, 2014.

4. Venkata Reddy, K., *Agriculture and Rural Development -Gandhian Perspective*, Himalaya Publishing House, 2001.

III B. Tech. - II Semester
(16BT60308) GLOBAL STRATEGY AND TECHNOLOGY

(Common to CE, ME, CSE, IT, and CSSE)
(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: –

COURSE DESCRIPTION:

Introduction to strategic management; Strategic management process; Principles of good strategy; Globalization strategies; Research and Development strategies; Technology Management and Transfer; Elements of Transfer Process; Corporate Governance in the Indian scenario.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1: Demonstrate the knowledge on Strategic management, Research & development strategies, Technology management and transfer, Globalization and Corporate governance.

CO2: Indentify and analyze crucial problems in strategic management to improve performance of the organizations.

CO3: Develop the products and production process by using research and development strategies.

CO4: Conduct investigations on the impact of globalization in current scenario in the context of corporate governance.

CO5: Appraise the resources and capabilities of the firm in terms of their ability to confer sustainable development.

CO6: Apply ethics in strategic decision making.

DETAILED SYLLABUS

UNIT-I: STRATEGIC MANAGEMENT (09 Periods)

Introduction, Classes of decisions, Levels of strategy, Core competence, Strategic intent and stretch, Approaches to strategy making, Roles of different strategists, Strategic management- Process, Benefits, Limitations; Ethics in strategic decision making, Principles of good strategy, Strategic Management in India.

UNIT-II: RESEARCH AND DEVELOPMENT STRATEGIES (09 Periods)

Concept, Evolution of R&D Management, R&D as a business, R&D as competitive advantage, Elements of R & D strategies, Integration of R & D, Selection and implementation of R & D strategies, R & D trends.

UNIT-III: TECHNOLOGY MANAGEMENT AND TRANSFER (09 Periods)

Technology Management: Introduction, Technology - Definition, Components, Classification Features; Technology Management- Concept, Nature; Drivers of Management of Technology- Significance, Scope, Responding to technology challenges.

Technology Transfer: Introduction, Definition, Classification, Significance, Elements of process, Types of Technology Transfer, Package, Modes of Transfer, Routes, Channels and Effectiveness of Technology Transfer.

UNIT-IV: GLOBALISATION (09 Periods)

Definition, Stages, Essential conditions for globalization, Globalization strategies, Competitive advantage of Nations, Factors affecting Globalization, Globalization of Indian business.

UNIT–V: CORPORATE GOVERNANCE: THE INDIAN SCENARIO (09 Periods)

Emergence of corporate governance in India- Landmarks, Models, Codes and status in India, Role and Responsibilities of Regulators, The Board of Directors; Corporate Governance- Specific issues in India, Family owned Business, Corporate Governance and the Indian ethos.

Total Periods: 45

TEXT BOOKS:

1. Francis Cherunilam, *Strategic Management,* Himalaya Publishing House, 3rd Edition, 2002.
2. C.S.G.Krishnamacharyulu and Lalitha Ramakrishnan, *Management of Technology,* Himalaya Publishing House, Second Edition, 2012.

REFERENCE BOOKS:

1. White and Bruton, *The Management of Technology and Innovation: A Strategic Approach*, Cengage Learning, 1st Edition, 2007.
2. S.K.Mandak, *Ethics in Business and Corporate Governance,* TMH, 2nd Edition, 2012.

III B. Tech. - II Semester

(16BT60309) INTELLECTUAL PROPERTY RIGHTS AND MANAGEMENT

(Common to CE, ME, CSE, IT, and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Protection of ideas; innovation and artistic endeavors; Acts and procedure related to patents, trademarks, copy right, design registration, trade secrets and cyber laws; Infringement; Commercialization of intellectual property rights; Case studies in each.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1: Demonstrate knowledge on intellectual property rights, patents, trademarks, copyrights, trade secrets and commercialization of intellectual property.

CO2: Analyze the commercial significance of discoveries and developments and to assist in bringing these into public use.

CO3: Investigate and ensure smooth transition from concept to final product by following National & International Laws of Intellectual Property.

CO4: Utilize the various policies and procedures related to patents, trademarks and copyrights relating to IPR.

CO5: Safeguard, review and manage the intellectual property so that it may receive adequate and appropriate legal protection against unauthorized use.

CO6: Follow ethical standards in capacity building and work as a platform for development, promotion, protection, compliance, and enforcement of intellectual property and knowledge.

CO7: Prepare documents and fill applications needed for filing a patent, design, copyright and trade mark.

DETAILED SYLLABUS

UNIT-I: OVERVIEW OF INTELLECTUAL PROPERTY RIGHTS (09 Periods)

Introduction, Intellectual Property vs Conventional Property, and importance of intellectual property rights (IPRs), types of intellectual property, International Treaties for protection of IPR-Paris Convention, World Intellectual Property Organization (WIPO), World Trade Organization (WTO), Trade Related Aspects of Intellectual Property Rights (TRIP) Agreement, General Agreement on Tariffs and Trade(GATT).

UNIT–II: TRADEMARKS (09 Periods)

Introduction, Functions and kinds of trademarks, Trade Mark Registration Process, Post registration procedures, Trade Mark maintenance, Transfer of rights, Inter parties Proceedings, Infringement and Dilution of Ownership of Trade Mark, Trade Mark claims, International Trade Mark Law.

UNIT–III: PATENTS (09 Periods)

Introduction, Rights under Patent Law, Patent Application Process, Terms and Maintenance of Patents Requirements, Patent Ownership and Transfer, Licensing of Patent Rights, Sole and Joint Inventors, Disputes over Inventorship, Patent Infringement, International Patent Law, Patent Cooperation Treaty (PCT), Patent Law Treaty (PLT), Substantive Patent Law Treaty (SPLT).

UNIT-IV: COPY RIGHTS, TRADE SECRETS, CYBER LAWS (09 Periods)

Copy Rights: Introduction, nature and scope, subject matter, Rights afforded by copyright law, Copyrights ownership, transfers and duration, Copyright registration process.

Trade Secrets: Introduction, Determination of Trade Secret Status, Emploer-Employee Relationships, Protection of submissions.

Cyber laws: E-commerce and cyber laws, cyber crime and legislation- need, objective and scope; IT Act 2000, Information Technology and Information Security.

UNIT-V: INDUSTRIAL DESIGN AND COMMERCIALIZATION OF INTELLECTUAL PROPERTY RIGHTS (09 Periods)

Industrial Design: Introduction, Indian Law related to registration of Industrial Designs, Essential requirements for registration of a design in India, International Agreements – Hague System; Conflicts related to registration of design.

Commercialization of Intellectual Property Rights: Competition and Confidentiality Issues, Antitrust Laws, Assignment of Intellectual Property Rights, Technology, Transfer Agreements, Intellectual Property Issues in the Sale of Business, Legal Auditing of Intellectual Property, Due Diligence of Intellectual Property Rights in a Corporate Transaction. **Total Periods: 45**

TEXT BOOKS:

1. Deborah E. Bouchoux, *Intellectual Property: The Law of Trademarks, Copyrights, Patents and Trade Secrets,* Cengage Learning, 4th edition, 2016.
2. Kompal Bansal and Parikshit Bansal, *Fundamentals of Intellectual Property for Engineers,* BS Publications, 1st Edition, 2013.

REFERENCE BOOKS:

1. Prabuddha Ganguli, *Intellectual Property Rights-Unleashing the Knowledge Economy,* McGraw Hill Education, 6th reprint, 2015.
2. P. Narayanan, Intellectual Property Law, Eastern Book Company, 3rd Edition, 2013.
3. R. Radha Krishnan, S. Balasubramanian, *Intellectual Property Rights: Text and Cases,* Excel Books, 1st Edition, 2008

III B. Tech. – II Semester

(16BT60310) MANAGING INNOVATION AND ENTREPRENEURSHIP

(Common to CE, ME, CSE, IT, and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on Industrial Engineering and Management, Management Science, Managerial Economics and Principles of Accountancy.

COURSE DESCRIPTION: Evolution of entrepreneurship from economic theory Managerial and entrepreneurial competencies; Concepts of Shifting Composition of the Economy Purposeful Innovation & Sources of Innovative Opportunity; The Innovation Process; Innovative Strategies; Entrepreneurial Motivation; Entrepreneurs versus inventors; Ethics and International Entrepreneurship; Strategic Issues in International Entrepreneurship; Problem solving Innovation and Diversification.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1: Demonstrate the principles of business innovation and entrepreneurship for establishing industrial ventures.

CO2: Analyze business plans for potential investors and stakeholders and effectively answer probabilistic questions on the substance of plan.

CO3: Develop a comprehensive and well planned business structure for a new venture.

CO4: Conduct investigation on complex problems, towards the development of Project.

CO5: Apply modern statistical and mathematical tools to design projects and subsequent work procedures.

CO6: Apply ethics in constructive innovation framework.

CO7: Exhibit professionalism by employing modern project management and financial tools.

DETAILED SYLLABUS

UNIT-I: CREATIVITY AND INNOVATION (07 Periods)

Introduction, Levels of innovation, Purposeful innovation and the sources of innovative opportunity, The innovation process, Innovative strategies, Strategies that aim at introducing and innovation, Dynamics of ideation and creativity – Inbound, Outbound; Context and process of new product development, Theories of outsourcing.

UNIT-II: PARADIGMS OF INNOVATION (11Periods)

Systems approach to innovation, Innovation in the context of developed economies and Emerging economies, Examining reverse innovation and its application, Performance gap, Infrastructure gap, Sustainability gap, Regulatory gap, Preference gap, organizational factors effecting innovation at firm level.

UNIT-III: SOURCES OF FINANCE AND VENTURE CAPITAL (07 Periods)

Importance of finance, Comparison of venture capital with conventional development capital, Strategies of venture funding, Investment phases, Investment process, Advantages and disadvantages of venture capital, Venture capital developments in India.

UNIT-IV: INTELLECTUAL PROPERTY INNOVATION AND ENTREPRENEURSHIP (11 Periods)

Introduction to Entrepreneurship, Evolution of entrepreneurship from economic theory, Managerial and entrepreneurial competencies, Entrepreneurial growth and development, Concepts, Ethics and Nature of International Entrepreneurship, Intellectual property – forms of IP, Patents, Trademarks, Design registration, Copy rights, Geographical indications, Patent process in India.

UNIT-V: OPEN INNOVATION FRAMEWORK AND PROBLEM SOLVING (09 Periods)

Concept of open innovation approach, Difference between open innovations and Cloud innovation approaches, Limitations and Opportunities of open innovation framework, Global context of strategic alliance, Role of strategic alliance, Problem Identification and Problem Solving, Innovation and Diversification.

Total Periods: 45

TEXT BOOKS:

1. Vinnie Jauhari, Sudhanshu Bhushan, *Innovation Management,* Oxford University Press, 1st Edition, 2014.

2. Drucker, P. F., *Innovation and Entrepreneurship,* Taylor & Francis, 2nd Edition, 2007.

REFERENCE BOOKS:

1. Robert D Hisrich, Claudine Kearney, *Managing Innovation and Entrepreneurship,* Sage Publications, 1st Edition, 2014.
2. V.K.Narayanan, *Managing Technology and Innovation for Competitive Advantage,* Pearson India, 1st Edition, 2002.

III B. Tech. – II Semester

(16BT60311) **MATERIALS SCIENCE**

(Common to CE, ME, CSE, IT, and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Structure and Bonding in metals; Steels, Cast Irons and Non Ferrous alloys; Material Selection for conductors, Insulators and semi conductors; Strengthening mechanisms of metals; Plastics and Ceramics as Insulators; AC and DC properties of Insulators; Semiconductors and Magnetic materials; Composite materials in Electrical and Electronics engineering; Material Selection and manufacturing of Optical fibers.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate the knowledge on concepts of fundamental science and engineering principles relevant to materials.

CO2. Analyze the structures of various types of Ferrous, Non ferrous alloys influencing various engineering applications.

CO3. Conduct investigations to select suitable materials with desired properties for engineering applications.

CO4. Use phase diagrams to interpret the data regarding microstructure of materials.

CO5. Consider health and safety issues while providing materials to real time applications.

CO6. Use composite materials that reduce material waste in design and manufacturing for sustainability.

DETAILED SYLLABUS

UNIT-I: INTRODUCTION TO MATERIAL SCIENCE (7 Periods)

Structure of Metals: Bonds in Solids, Crystallization of metals, Grain and grain boundaries, Effect of grain boundaries on the properties of metals /alloys, Determination of grain size measurement.

Constitution of Alloys: Necessity of alloying, Types of solid solutions, Hume rothery rules, Intermediate alloy phases.

UNIT-II: CAST IRONS, STEELS AND NON-FERROUS METALS (12 Periods)

Structure and properties of Grey cast iron, Spheroidal cast iron, White Cast iron, Malleable Cast iron, Alloy cast irons, Classification of steels, structure and properties of plain carbon steels, Structure and properties of Copper and its alloys, Aluminum and its alloys.

UNIT-III: ELECTRIC CONDUCTORS AND INSULATORS (12 Periods)

Type of materials selected for conductors, Insulators and semi conductors, Introduction to ceramics - Bonding and microstructure, DC properties of ceramic materials, AC properties of ceramic materials, mechanical properties, Ceramics as Conductors, Insulators and capacitors; Introduction to Plastics - DC properties, AC properties, Mechanical properties.

UNIT-IV: SEMICONDUCTORS AND MAGNETIC MATERIALS (09 Periods)

Fabrication of Semiconductors, Producing a silicon wafer-Lithography and Deposition packaging of semiconductors materials; Types of magnetic materials, Measuring magnetic properties, Application of soft magnetic materials in Electromagnets and relays, AC transformers, Generators and motors.

UNIT-V: ADVANCED MATERIALS AND APPLICATIONS (05 periods)

Composites - Fiber reinforced metal matrix, Ceramic matrix, Polymer matrix, Properties and applications of composites; Ceramics - Alumina, Zirconia, Silicon Carbide, SiAlONs, Reaction Bonded Silicon Nitride (RBSN); Glasses- properties and applications, manufacturing of optical fibers.

Total Periods: 45

TEXT BOOKS:

1. Kodgire V D, *Material Science and Metallurgy,* Everest Publishing House, Pune, 31st edition, 2011.
2. Ian. P.Jones, *Material Science for Electrical and Electronic Engineers,* Oxford University Press, 1st Edition, 2000

REFERENCE BOOKS:

1. V. Raghavan, *Physical Metallurgy: Principles and Practices,* PHI, New Delhi, 2nd edition, 2006.
2. William. D. Callister, *Materials Science & Engineering-An Introduction*, John Wiley and Sons, New Delhi, 6th edition, 2002.

III B. Tech. - II Semester
(16BT70412) **GREEN TECHNOLOGIES**
(Common to CE, ME, CSE, IT, and CSSE)
(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: –
COURSE DESCRIPTION:
Principles of green engineering; Green communications; Green energy; Green computing; Green construction; Green manufacturing.
COURSE OUTCOMES:
On successful completion of the course, students will be able to:
CO1. Deploy conceptual knowledge in green technologies pertaining to Engineering practice.
CO2. Analyze various green technologies for engineering practice.
CO3. Provide green solutions to engineering problems.
CO4. Apply various green techniques in the engineering practice.
CO5. Consider health and safety issues while providing green solutions to the society.
CO6. Understand issues related to environment sustainability.
CO7. Apply ethical standards for environmental sustainability in the engineering practice.
DETAILED SYLLABUS:
UNIT-I: PRINCIPLES OF GREEN ENGINEERING AND GREEN COMMUNICATIONS (11 Periods)
Principles of Green Engineering:
Introduction, Definition of green engineering, Principles of green engineering.
Green Communications:
Introduction, Origin of Green Communications, Energy Efficiency in Telecommunication systems, Telecommunication system model and energy Efficiency, Energy saving concepts, Quantifying energy efficiency in ICT, Energy efficiency metrics of green wireless networks, Embodied energy of communication devices- Introduction, The extended energy model, Embodied/Operating Energy of a BS in Cellular network- A Case study; Energy efficient standards for wireline communications.
UNIT-II: GREEN ENERGY (09 Periods)
Introduction, adverse impacts of carbon emission, control of carbon emission– methods, greenhouse gas reduction – methods, Energy sources and their availability, Green energy for sustainable development. Green energy sources – Solar energy, Wind energy, Fuel cells, Biofuels, Wave and Geothermal energy (Principle of generation only).
UNIT-III: GREEN IT (09 Periods)
The importance of Green Information technologies, Strategizing Green Initiatives, Implementation of Green IT, Information Assurance, Communication and Social Media, Regulating Green IT- Laws, Standards and Protocols; RoHS, REACh, WEEE, Legislating for GHG Emissions and Energy Use of IT Equipment, Non-regulatory Government Initiatives, Industry Associations and Standard Bodies, Green Building Standards, Green Data Centres, Social Movements and Greenpeace, Conclusions.
UNIT-IV: GREEN CONSTRUCTION (09 Periods)
Green Building: Definition, Typical features, Benefits, Requisites for green building construction, Sustainability, Concept of REDUCE, REUSE, RECYCLE, RETHINK, REPLENISH AND REFUSE (6 R's), Sustainable construction focus point – Site selection, Planning, Water, Energy, Material, Indoor air quality, Construction procedures.
Indian Green Building Council: Introduction to IGBC green homes, Benefits of IGBC, IGBC green home rating system, Introduction to USGBC, LEED rating system, Procedure to get IGBC certification, GRIHA Rating.
UNIT-V: GREEN MANUFACTURING (09 Periods)
Introduction, background, definition, motivation and barriers to green manufacturing, Impact of manufacturing in environmental ecology, Need for green manufacturing, Advantages and Limitations, green manufacturing strategies, Green manufacturing and sustainability, Sustainability tools; Waste stream mapping and application, Green manufacturing through clean energy supply, green lean manufacturing, green packaging and supply chain. **Total Periods: 47**

III B. Tech. – II Semester

(16BT70413) INTRODUCTION TO NANOSCIENCE AND NANOTECHNOLOGY

(Common to CE, ME, CSE, IT, and CSSE)
(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION:

Introduction to the concept of nano; Description of nanomaterial; Nanostructure characterization tools; Classification of nanomaterials; Fabrication of nanomaterial; Different applications of nanostructures and nanomaterials.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge in
- Nanoscale technology.
- Difference between micro and nanotechnology
- Classification of Nanostructure and Nanomaterial
- Fabrication of various nanomaterials and nanostructures.

CO2. Analyze numerical and analytical problems in
- Nanomaterial size by using Scanning Electron Microscope and X-Ray diffraction

CO3. Design and fabricate devices based on nanostructures like
- Nano solar cell
- Nano cantilever
- Nano bio-sensor

CO4. Synthesize nano particle of different materials to solve the problems related to fabrication of nanostructures.

CO5. Select appropriate technique for fabrication of nanostructures and nanocomposites.

CO6. Apply ethical standards and legal issues while using chemical substances in fabrication of new nanostructures.

DETAILED SYLLABUS:

UNIT-I: FUNDAMENTALS OF NANOTECHNOLOGY (08 Periods)

Introduction – Scientific revolutions, Time and length scale in structures, Definition of a nanosystem; Dimensionality and size dependent phenomena - Surface to volume ratio Fraction of surface atoms, Surface energy and surface stress, surface defects, Properties at nanoscale (optical, mechanical, electronic, and magnetic).

UNIT-II: IDENTIFICATION AND CHARACTERIZATION TOOLS FOR NANOMATERIALS AND NANOSTRUCTURE (10 Periods)

Field Emission Scanning Electron Microscopy (FESEM), Environmental Scanning Electron Microscopy (ESEM) High Resolution, Transmission Electron Microscope (HRTEM), Scanning Tunneling Microscope(STM), Surface enhanced Raman spectroscopy (SERS), Secondary Ion Mass Spectroscopy, Focused Ion Beam Photoelectron Spectroscopy, X-ray Photoelectron Spectroscopy (XPS), Auger electron spectroscopy (AES), Rutherford backscattering spectroscopy (RBS), X-Ray Diffraction, Intensities in X-Ray Scattering Particle Size Effect.

UNIT-III: CLASSIFICATION OF NANOMATERIALS (10 Periods)

Classification based on dimensionality, Quantum Dots, Wells and Wires-III-V Nanoparticles, Electronic Structure of Nanosemiconductor, Carbon based nanomaterials (buckyballs, nanotubes, graphene), Metal based nano materials (nanogold, nanosilver and metal oxides), Nanocomposites, Nanopolymers, Nanoglasses, Nano ceramics, Biological nanomaterials, Fulrene-discovery and early years,.

UNIT-IV: SOME FABRICATION TECHNIQUES OF NANOMATERIALS AND NANOSTRUCTURES (09 Periods)

Chemical Methods: Metal Nanocrystals by Reduction, Solvothermal Synthesis, Photochemical Synthesis, Sonochemical Routes, Chemical Vapor Deposition (CVD), Metal Oxide Chemical Vapor Deposition (MOCVD), Plasma Enhanced Chemical Vapour Deposition Technique (PECVD), Hydrothermal Method, Sol-Gel.

Physical Methods: Ball Milling, Electrodeposition, Spray Pyrolysis, Flame Pyrolysis, DC/RF Magnetron Sputtering, Molecular Beam Epitaxy (MBE) Thermal Evaporation Method.

UNIT-V: APPLICATIONS (08 Periods)

Solar energy harvesting, Catalysis, Molecular electronics and printed electronics Nanoelectronics, Polymers with a special architecture, Liquid crystalline systems, Linear and nonlinear optical and electro-optical properties, Applications in displays and other devices, Nanomaterials for data storage, Photonics, Plasmonics, Chemical and biosensors, Nanomedicine and Nanobiotechnology, MESFET.

Total Periods: 45

TEXT BOOKS:

1. Pradeep T., *A Textbook of Nanoscience and Nanotechnology*, Tata McGraw Hill Education Pvt. Ltd., 2012.
2. Hari Singh Nalwa, *Nanostructured Materials and Nanotechnology*, Academic Press, 2002.

REFERENCE BOOKS:

1. Nabok A., *Organic and Inorganic Nanostructures*, Artech House, 2005.

3. S.M. Sze, *Physics of Semiconductor Devices,* 2nd Edition 2001.

III B. Tech. – II Semester

(16BT60505) ENGINEERING SYSTEM ANALYSIS AND DESIGN

(Common to CE, ME, CSE, IT, and CSSE)
(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION:

Systems Process; Technologies for Systems; System Development Life Cycle; System Analysis and Modeling; Levels of Management; Project Management; Systems Implementation and Importance of UML Prototyping; Maintaining and Managing the Systems Output Process

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge in
- Systems Process and System Design
- Systems Analysis and Modeling
- System Development Life Cycle
- Design Management and Maintenance Tools.

CO2. Analyze System Process and estimate the given models by using case tools.

CO3. Design and Develop a model to the organizational systems.

CO4. Solve complex problems related to engineering systems and produce accurate results.

CO5. Apply object oriented techniques for modeling dynamic systems.

CO6. Contribute towards societal issues and responsibilities in designing, modeling and developing of organizational systems.

DETAILED SYLLABUS:

UNIT–I: INTRODUCTION (9 periods)

Systems, Types of systems, integrating technologies for systems, Need for system analysis and design, Role of the systems analyst, System development life cycle, CASE tools for analysis and design.

UNIT–II: ANALYSIS AND MODELING ORGANIZATIONAL SYSTEM (9 periods)

Organization as system, System analysis, Depicting systems graphically, Use case modeling, Levels of management, Organizational culture.

UNIT–III: PROJECT MANAGEMENT (10 periods)

Project initiation, Problem in organization, Determining feasibilities, Ascertaining hardware and software needs, Identifying, Forecasting, Comparing costs and benefits, Activity planning and control, Managing the project.

UNIT-IV: OBJECT ORIENTED ANALYSIS AND DESIGN USING UML (8 periods)

Introduction, Object modeling, Dynamic modeling, functional modeling, packages and other UML artifacts, the importance of using UML for modeling.

UNIT-V: DESIGNING EFFECTIVE OUTPUT (9 periods)

Output design objectives, Relating output content to output method, Realizing how output bias affects users, Designing output for display, Case studies-Designing a web site management, Online exam management, Online portal design.

Total Periods: 45

TEXT BOOK:

1. Kenneth E. Kendall and Julie E. Kendall, *System Analysis and Design,* Pearson Education, Ninth Edition, 2011.

REFERENCE BOOKS:

1. Dennis, Wixom and Roth, *Systems Analysis and Design,* John Wiley, Fifth Edition, 2012.
2. Shelly and Rosenblatt, *Systems Analysis and Design,* Cengage Learning, Ninth Edition, 2012.

III B. Tech. – II Semester

(16BT71011) MICRO-ELECTRO-MECHANICAL SYSTEMS

(Common to CE, ME, CSE, IT, and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Overview of Micro Electro Mechanical Systems (MEMS); scaling laws; working principles of microsensors and microactuators; materials; microfabrication processes; packaging of Microsystems.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1: Demonstrate knowledge on MEMS devices, scaling laws, microsensors and microactuators

CO2: Analyze the properties of materials and identify its suitability for MEMS devices.

CO3: Design MEMS devices that meet desired specifications and requirements.

CO4: Analyze and synthesize the information to provide effective solution to engineering problems with MEMS devices.

CO5: Use modern techniques in micro manufacturing process.

CO6: Develop efficient and cost effective MEMS based products for society.

DETAILED SYLLABUS:

UNIT-I: OVERVIEW OF MEMS AND SCALING LAWS (9 periods)

MEMS and Microsystems, Microsystems and microelectronics, miniaturization, applications of MEMS in the automotive industry and in other industries.

Scaling laws of miniaturization: Introduction to scaling, scaling in: geometry, rigid- body dynamics, electrostatic forces, electromagnetic forces, Electricity, Fluid mechanics, Heat transfer.

UNIT -II: WORKING PRINCIPLES OF MICROSYSTEMS (9 periods)

Microsensors, acoustic wave sensors, biomedical and biosensors, chemical sensors, pressure sensors, thermal sensors. Microactuation: actuation using thermal forces, shape-memory alloys, piezoelectric crystals, electrostatic forces. MEMS with microactuators, microgrippers, micromotors, microvalves, micropumps. Microaccelerometers, microfludics.

UNIT-III: MATERIALS FOR MEMS AND MICROSYSTEMS (9 periods)

Substrate and wafers, silicon as a substrate material, silicon compounds, silicon piezoresistors, gallium arsenide, quartz, piezoelectric crystals, polymers, carbon nano tube (CNT), development of CNTs, application of CNTs.

UNIT-IV: MEMS FABRICATION PROCESS AND MICROMANUFACTURING (9 periods)

Photolithography, ion implantation, diffusion, oxidation, chemical vapor deposition, physical vapor deposition, deposition by epitaxy, etching, bulk micromanufacturing, surface micromanufacturing, LIGA process.

UNIT-V: MEMS PACKAGING (9 periods)

Introduction to microsystem packaging, objectives and general considerations in packaging design, three levels of microsystem packaging, interfaces in microsystem packaging, packaging technologies, three-dimensional packaging, selection of packaging materials, signal mapping and transduction, Design case: Pressure sensor packaging.

Total Periods: 45

TEXT BOOK:

1. Tai-Ran Hsu, *MEMS & Microsystems, Design and Manufacture*, McGraw Hill Education (India) Pvt. Ltd., 2002.

REFERENCE BOOKS:

1. G.K.Ananthasuresh, K.J.Vinoy, *Micro and Smart Systems*, Wiley India, 2010.
2. Nitaigour Premchand Mahalik, *MEMS*, McGraw Hill Education (India) Pvt. Ltd., 2007.

III B. Tech. II-Semester
(16BT61205) CYBER SECURITY AND LAWS
(Common to CE, ME, CSE, IT, and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: –

COURSE DESCRIPTION: Cyber Crimes and Indian IT Act; Cyber Offenses; Tools and Methods used in Cyber Crime; Phishing ad Identity Theft; Indian and Global Perspective on Cyber Crimes and Cyber Security; Organizational Implications on Cyber Security; IPR Issues; Cyber Crime and Terrorism; Cyber Crime Illustrations.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge in Cyber security, Cyber crimes and its related laws in Indian and Global Act.
CO2. Analyze the legal perspectives and laws related to cyber crimes in Indian context.
CO3. Apply security and privacy methods in development of modern applications and in organizations to protect people and to prevent cyber crimes.
CO4. Solve Cyber security issues using privacy policies.
CO5. Use antivirus tools to minimize the impact of cyber threats.
CO6. Follow security standards for the implementation of Cyber Security and laws.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO CYBER CRIMES AND OFFENSES (9 Periods)

Cyber Crimes: Introduction, Definition, Origin, Cyber crime and information security, Cyber criminals, Classifications of cyber crimes, The legal perspectives and Indian perspective, Cyber crime and Indian ITA 2000, Global perspective on cyber crimes.

Cyber Offenses: Introduction, Criminals planning on attacks, Social engineering, Cyber stalking, Cyber cafe and crimes, Botnets.

UNIT-II: TOOLS AND METHODS USED IN CYBER CRIME & PHISHING AND IDENTITY THEFT (9 Periods)

Introduction, Proxy servers and Anonymizers, Phishing, Password cracking, Key loggers and Spywares, Virus, Worms and Ransomware, Trojan horses and Backdoors, Steganography, DoS and DDoS attacks.

Phishing and Identity Theft: Introduction, Phishing, Identity Theft (ID Theft).

UNIT-III: CYBER CRIMES AND CYBER SECURITY-LEGAL PERSPECTIVES (8 Periods)

Introduction, Cyber laws in Indian context, The Indian IT act, Challenges to Indian law and Cyber crime scenario in India, Consequences of not addressing the weakness in IT act, Digital signatures and the Indian IT Act, Cyber Crime and Punishment, Cyberlaw, Technology and Students in India scenario.

UNIT-IV: CYBER SECURITY-ORGANIZATIONAL IMPLICATIONS (10 Periods)

Introduction, Web threats for organizations – evils and perils, Security and privacy implications from cloud computing, Social Media Marketing-Security risks and Perils for organizations, Social computing and associated challenges for organizations, Protecting people's privacy in organization, Organizational guidelines for internet usage, Safe computing and Usage policy, Incident handling and Best practices.

UNIT-V: CYBER CRIME, TERRORISM AND ILLUSTRATIONS (9 Periods)

Cyber Crime & Terrorism: Introduction, Intellectual property in the cyber space, The ethical dimension of cyber crimes, The psychology, Mindset and skills of hackers and cyber criminals, Sociology of cyber criminals, Information warfare.

Cyber Crime Illustrations: Indian banks lose millions of rupees, Justice vs. Justice, Parliament attack, The Indian case of online gambling, Bank and credit card related frauds, Purchasing goods and services scam, Nigerian 419 scam.

Total Periods: 45

TEXT BOOK:

1. Nina Gobole and Sunit Belapure, *"Cyber Security: Understanding Cyber Crimes, Computer Forensics and Legal Perspectives,"* Wiley India, 2011.

REFERENCE BOOK:

1. Prashant Mali, *"Cyber Law and Cyber Crimes,"* Snow White Publications Pvt. Ltd., 2013.

III B. Tech. – II Semester
(16BT61505) **BIOINFORMATICS**
(Common to CE, ME, CSE, IT, and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION:

Introduction to Bioinformatics; Biology and Information; Sequence alignment and dynamic programming; Biological Database; Homology Modeling; Structure Prediction; Molecular Dynamics

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on concepts of biological databases, Genome and proteome.

CO2. Analyze biological sequences for Homology Modeling.

CO3. Apply clustering methods for Phylogenetic trees.

CO4. Solve bio sequencing problems using dynamic programming.

CO5. Select and apply appropriate techniques and tools to structure Prediction

DETAILED SYLLABUS:

UNIT-I: NUCLEIC ACIDS, PROTEINS, AND AMINO ACIDS (08 periods)

Bioinformatics-Definition, Nucleic acid structure, Protein structure, the central dogma, Physico-chemical properties of the amino acids and their importance in protein folding, Polymerase chain reaction (PCR)

UNIT-II: INFORMATION RESOURCES FOR GENES AND PROTEIN (10 periods)

Database file formats, Nucleic acid sequence databases, Protein sequence databases

Sequence Alignment Algorithm

Pair wise sequence alignment – The problem, Pair wise sequence alignment – Dynamic programming methods, The effect of scoring parameters on the alignment, Multiple sequence alignment

UNIT-III: PREDICTION OF THE THREE-DIMENSIONAL STRUCTURE OF A PROTEIN AND HOMOLOGY MODELING (09 Periods)

Secondary Structure Prediction, Basic Principles, The Steps of Comparative Modeling, Accuracy of Homology Models, Manual versus Automatic Models, SNPs, Motifs**.**

UNIT-IV: PHYLOGENETIC METHODS (10 periods)

Phylogenetic trees, choosing sequences, Distance matrices and clustering methods, Calculation of distances in the neighbor-joining method, Bootstrapping, Tree optimization criteria and tree search methods, The maximum-likelihood criterion, Calculating the likelihood of the data on a given tree, The parsimony criterion.

UNIT-V: NEW FOLD MODELING (08 periods)

Estimating the Energy of a Protein Conformation, Energy Minimization, Molecular Dynamics, The "Omics" Universe**-**Transcriptomics, Proteomics, Interactomics, Structural Genomics, Pharmacogenomics**.**

Total No. of Periods: 45

TEXT BOOKS:

1. Paul G. Higgs and Teresa K. Attwood, *Bioinformatics and Molecular Evolution* Blackwell Publishing 2005.
2. Anna Tramontano, *Introduction to Bioinformatics,* Chapman and Hall/CRC, 2006.

REFERENCE BOOKS:

1. Hooman H. Rashidi and Lukas K. Buehler, *Bioinformatics Basics, Applications in Biological Science and Medicine***,** CRC Press, Taylor & Francis Group, 2nd Edition, 2005.

2. Rastogi S. C., Namita Mendiratta and Parag Rastogi, *Bioinformatics: Methods and Applications: Genomics, Proteomics and Drug Discovery*, PHI Learning Pvt. Ltd., Third Edition, 2011.

III B. Tech. - II Semester
(16BT61531) DATA WAREHOUSING AND DATA MINING LAB
(Common CSE, and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: A Course "Data Warehousing and Data Mining"

COURSE DESCRIPTION:

Hands on practical experience on Warehouse design; OLAP operation; Data pre-processing techniques; Association rule mining; classification of data; Naïve Bayes classifier; Decision tree; Clustering technique using WEKA-Open source machine learning tool.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on the creation and usage of data warehouses.

CO2. Analyze and interpret the results using data mining techniques.

CO3. Design and develop transformations such as filter, join and rank on data warehouses.

CO4. Use classification and clustering techniques to find interesting patterns in large databases.

CO5. Choose and deploy modern tools to handle large, missing and noisy data in datasets.

CO6. Use appropriate data mining algorithms to find solutions for real time societal applications.

CO7. Function effectively as an individual to perform operations on different databases using *Informatica.*

CO8. Communicate effectively using report generation tools on business data.

LIST OF EXERSICES:

Exercises on Informatica

To create Employee data warehouse using Employee database system using following tables. **For the given data tables,**

Employee table / **Dept table**

Name	**Data type**	**Size**	**Name**	**Data type**	**Size**
Eno	Number	20	Eno	Number	20
Ename	Varchar2	25	Ename	Varchar2	25
Deptno	Number	10	Deptno	Number	10
DepName	Varchar2	12	DepName	Varchar2	12
Salary	Number	20	Salary	Number	20
Job	Varchar2	20	Job	Varchar2	20

a. Implement mapping of warehouse server on Employee table.
b. Display the list of employees whose salary is greater than 5000 by designing filter transformation.
c. Find the maximum and minimum salaried employee using aggregate transformation.
d. Join Employee and Dept table using joiner transformation.
e. Rank transformation on employee table.
f. Router transformation on employee and department table.

II. *Exercises* on Weka:

Credit Risk Assessment:

The business of banks is making loans. Assessing the credit worthiness of an applicant is of crucial importance. You have to develop a system to help a loan officer decide whether the credit of a customer is good, or bad. A bank's business rules regarding loans must consider two opposing factors. On the one hand, a bank wants to make as many loans as possible. Interest on these loans is the banks profit source. On the other hand, a bank cannot afford to make too many bad loans. Too many bad loans could lead to the collapse of the bank. The bank's loan policy must involve a compromise: not too strict, and not too lenient.

To do the assignment, you first and foremost need some knowledge about the world of credit. You can acquire such knowledge in a number of ways.

a. Knowledge Engineering. Find a loan officer who is willing to talk. Interview her and try to represent her knowledge in the form of production rules.

b. Books. Find some training manuals for loan officers or perhaps a suitable textbook on finance. Translate this knowledge from text form to production rule form.

c. Common Sense. Imagine yourself as a loan officer and make up reasonable rules which can be used to judge the credit worthiness of a loan applicant.

d. Case Histories. Find records of actual cases where competent loan officers correctly judged when, and when not to, approve a loan application.

The German Credit Data: Actual historical credit data is not always easy to come by because of confidentiality rules. Here is one such dataset, consisting of 1000 actual cases collected in Germany. credit dataset (original) Excel spreadsheet version of the German credit data (Down load from web).In spite of the fact that the data is German, you should probably make use of it for this assignment. (Unless you really can consult a real loan officer!)

A few notes on the German dataset:

‟ **DM** stands for Deutsche Mark, the unit of currency, worth about 90 cents Canadian (but looks and acts like a quarter).

Owns_telephone. German phone rates are much higher than in Canada so fewer people own telephones.

‟ **Foreign_worker**. There are millions of these in Germany (many from Turkey). It is very hard to get German citizenship if you were not born of German parents.

There are **20 attributes** used in judging a loan applicant. The goal is the classify the applicant into one of two categories, good or bad.

i. Preprocess the data in weka with a simple experiments

a) Handling missing data(both nomial and numerical)

b) All types normalization(min-max,z-score,decimal scaling)

c) sampling

ii. Implement Decision tree classification of German data set.

iii.. Implement Naïve Bayes classifier on German data set.

iv. Implement K-means clustering technique for German data.

v. Implement Apriori algorithm, calculate all frequent itemsets(L's) for the following transactional data and display the 10 most significant rules you get using the default values of support and confidence.

Transactional Data:

TID	List of item_ids
T100	I1,I2,I5
T200	I2,I4
T300	I2,I3
T400	I1,I2,I4
T500	I1,I3
T600	I2,I3
T700	I1,I3
T800	I1,I2,I3,I5
T900	I1,I2,I3

III B. Tech. – II Semester
(16BT60531) **SOFTWARE TESTING LAB**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES:
A course on "Software Testing"
COURSE DESCRIPTION:
Hands on Practice to Develop Functional, System, Regression and Acceptance tests; White Box Testing & Black Box Testing; Test Automation.
COURSE OUTCOMES:
On successful completion of the course, students will be able to:
CO1. Demonstrate practical knowledge of
- White Box Testing
- Black Box Testing
- Regression Testing
- Test Automation

CO2. Analyze the software requirements and report the bugs.
CO3. Design test cases using relevant testing techniques for an application.
CO4. Demonstrate decision making skills for testing desktop applications.
CO5. Use software testing tools and technologies for testing desktop applications.
CO6. Apply contextual knowledge to perform testing on software related to societal applications.
CO7. Work effectively as an individual and member of a team for testing software applications.

LIST OF EXERCISES:
1. Generate Functional Test Scenarios & Test Cases for the Income Tax Calculator application. (Hint: Use the Application's SRS document supplied by the instructor).
2. Generate System Test Scenarios & Test Cases for the Income Tax Calculator application. (Hint: Use the Application's SRS document supplied by the instructor & Functional Test Scenarios).
3. Generate Regression & User Acceptance test cases for the Income Tax Calculator application. (Hint: Use the Application's SRS document supplied by the instructor & System Test Scenarios).
4. Conduct Basis Path Testing & Data Flow Testing for below listed modules of Income Tax Calculator application:
   a. Salary Income Details
   b. Tax Deduction
   (Hint: Basis Path Testing: Compute dd path & Cyclomatic Complexity; Data Flow Testing: Arrive on du & dc Paths).
5. Conduct Basis Path Testing & Data Flow Testing for below listed modules of Income Tax Calculator application:
   a. Male Taxation
   b. Female Taxation
   (Hint: Basis Path Testing: Compute dd path & Cyclomatic Complexity; Data Flow Testing: Arrive on du & dc Paths).
6. Validate the inputs for the below listed modules of Income Tax Calculator application and arrive on a detailed report about valid inputs and invalid inputs:
   a. Accept Personal Details (APD)
   b. Accept Income Details (AID)
   (Hint: Use equivalence class partitioning methods & BVA techniques appropriately).
7. Validate the inputs for the below listed modules of Income Tax Calculator application and arrive on a detailed report about valid inputs and invalid inputs:
   a. Accept Savings & Donation Details (ASD)
   b. Accept Tax Deduction (ATD)
   (Hint: Use equivalence class partitioning methods & BVA techniques appropriately).
8. Conduct a System Test on the given Desktop application with any Functional Testing Tool.

TEXT BOOK:
1. Naresh Chauhan, *Software Testing: Principles and Practices,* Oxford University Press, Second Edition, 2016.

REFERENCE BOOK:

1. Dr. K. V. K. K. Prasad, *Software Testing Tools,* Dreamtech, First Edition, 2004

III B. Tech. – II Semester

(16BT60532) **SEMINAR**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
	100	100	-	-	-	2

PREREQUISITES:

All the courses of the program up to III B. Tech. I-Semester

COURSE DESCRIPTION:

Identification of topic for the seminar; Literature survey; Performing critical study and analysis of the topic identified; Preparation of report and presentation

COURSE OUTCOMES:

On successful completion of the seminar work, the student will be able to demonstrate:

CO1. Knowledge on the seminar topic

CO2. Analytical ability exercised during the seminar work.

CO3. Ability to investigate and solve complex engineering problems faced during the Seminar work

CO4. Ability to apply techniques to complex engineering activities with an Understanding of limitations as applied in the seminar work.

CO5. Ability to function effectively as an individual as experienced during the Seminar Work

CO6. Ability to present views cogently and precisely on the seminar topic

CO7. Ability to engage in life-long leaning as experience during the seminar work.

IV B. Tech. – I Semester
(16BT61201) CLOUD COMPUTING

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on "Computer Networks" and "Operating Systems".

COURSE DESCRIPTION: Virtualization, Virtualization Technologies; Cloud Computing Fundamentals, Deployment Models; Cloud Computing Architecture; Cloud Computing Mechanisms; Cloud Security, Cloud Disaster Recovery; Working with Clouds; and Case Studies.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on services, architecture, types of infrastructural models, disaster recovery and virtualization.

CO2. Analyze the issues in cloud computing Data, Network and Host security.

CO3. Apply API development skills in web applications for Cloud deployment.

CO4. Use research based knowledge to build cloud applications.

CO5. Use advanced programming languages to access cloud services.

CO6. Build cloud environment suitable for societal requirements.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO VIRTUALIZATION AND TECHNOLOGIES (9 periods)

Introduction to Virtualization: Definition, Objectives, Characteristics, Benefits of virtualization, Taxonomy of virtualization technologies, Pros and cons of virtualization.

Virtualization Technologies: VMware, Hyper-V, Zen and virtual iron.

UNIT-II: FUNDAMENTAL CLOUD COMPUTING AND MODELS (9 Periods)

Cloud Computing: Origin and influences, Basic concepts and terminology, Goals and benefits, Risks and challenges.

Cloud Models: Roles and boundaries, Cloud characteristics, Cloud delivery models, Cloud deployment models.

UNIT III: CLOUD COMPUTING MECHANISMS AND ARCHITECTURE (9 Periods)

Cloud-Enabling Technology: Broadband networks and internet architecture, Data center technology, Virtualization technology, Web technology, Multitenant technology, Service technology.

Cloud Architectures: Architecture - Workload distribution, Resource pooling, Dynamic scalability, Elastic resource capacity, Service load balancing, Cloud bursting, Elastic disk provisioning, Redundant storage.

UNIT-IV: CLOUD SECURITY AND DISASTER RECOVERY (9 Periods)

Cloud Security: Data, Network and host security, Cloud security services and cloud security possible solutions.

Cloud Disaster Recovery: Disaster recovery planning, Disasters in the cloud, Disaster management, Capacity planning and cloud scale.

UNIT-V: CLOUD CASE STUDIES (9 Periods)

Case Studies: Software-as-a-Service (SaaS) - Salesforce.com, Facebook; Platform–as-a-Service (PaaS) - Google App Engine, MS-Azure and IBM Bluemix; Infrastructure-as-a- Service (IaaS) - Amazon EC2, Amazon S3 and Netflix.

Total Periods: 45

TEXT BOOKS:

1. Thomas Erl and RicardoPuttini *Cloud Computing- Concepts, Technology and Architecture,* Pearson, 2013.
2. Ivanka Menken and Gerard Blokdijk, *Cloud Computing Virtualization Specialist Complete Certification Kit-Study Guide Book,* Lightning Source, 2009

REFERENCE BOOKS:

1. Barrie Sosinsky, *Cloud Computing Bible,* Wiley India Pvt Ltd, 2011.
2. Rajkumar Buyya, James Broberg and Andrzej Goscinski, *Cloud Computing Principles and Paradigms***,** John Wiley and Sons, 2011.

3. John W. Rittinghouse and James F. Ransome, *Cloud Computing Implementation, Management and Security*, CRC Press, Taylor & Francis Group, 2010.

IV B. Tech. - I Semester

(16BT51501) COMPILER DESIGN

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on "Theory of Computation"

COURSE DESCRIPTION:

Lexical analysis; Parsers; Run Time Environments; Syntax Directed Translation; Type checking; Code Optimization; Code Generation and Compiler tools.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on the phases involved in design of compilers.

CO2. Analyze code optimization Techniques.

CO3: Design experiments for implementing parsing techniques.

CO4. Synthesize rules in compiler to demonstrate semantic attribution during Parsing.

CO5: Use compiler construction tools such as LEX and YACC for designing a Parser.

CO6: Apply Ethical principles for usage of stack and other storage memory.

DETAILED SYLLABUS:

UNIT I– INTRODUCTION TO COMPILER AND LEXICAL ANALYSIS (09 Periods)

Structure of a compiler, Interpretation- Interpreters, Recursive interpreters, Iterative interpreters.

Lexical Analysis: The Role of the Lexical Analyzer, Input Buffering, Specification of Tokens, The Lexical-Analyzer Generator LEX.

UNIT II – SYNTAX ANALYSIS (09 Periods)

The Role of the Parser, Eliminating Ambiguity, Eliminating of Left Recursion and Left Factoring.

Top-Down Parsing: Recursive descent parsing, Non Recursive Predictive parsing, LL (1) Grammars, A traditional top-down parser generator—YACC

Bottom-Up Parsing: Shift reduce parsing, LR parsers – Simple LR parser, Canonical LR parser, LALR parser, Using Ambiguous Grammars.

UNIT III – SYNTAX DIRECTED TRANSLATION AND TYPE CHECKING (09 Periods)

Syntax directed definition, S-attributed and L-attributed definitions, Construction of syntax trees.

Type Checking: Type Expressions, Type Equivalence, Rules for Type Checking, Type Conversions, Overloading of Functions and Operators.

UNIT IV – INTERMEDIATE CODE GENERATOR AND RUN TIME ENVIRONMENTS (09 Periods)

Preprocessing the intermediate code,Preprocessing of expressions, Preprocessing of if-statements and goto statements, Preprocessing of routines**,**Variants of Syntax Trees, Three Address Code, Boolean expressions, Flow-of-Control Statements, Control- Flow Translation of Boolean Expressions.

Run time Environments:

Storage organization, Stack Allocation of Space, Access to Nonlocal Data on the Stack.

UNIT V – CODE OPTIMIZATION AND CODE GENERATION (09 Periods)

Basic Blocks and Flow Graphs, Optimization of Basic Blocks, The principal sources of optimization, Introduction to data flow analysis.

Code Generation:

Issues in the Design of a Code Generator, The Target Language, Simple Code Generator, Peephole optimization, Register allocation and assignment.

Total Periods: 45

TEXT BOOK:

1. Alfred V. Aho, Monica S.Lam, Ravi Sethi, Jeffrey D. Ullman, *Compilers–Principles, Techniques and Tools*, Pearson Education, 2nd edition, 2012.

REFERENCE BOOKS:

1. Dick GruneKees van Reeuwijk Henri, *Modern Compiler Design,* Springer,2nd edition, 2012.
2. David Galles, *Modern Compiler Design,* Pearson Education Asia, 2007.

IV B. Tech. – I Semester

(16BT51203) **WEB TECHNOLOGIES**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Java Programming".

COURSE DESCRIPTION:

Hyper Text Markup Language (HTML); Features of HTML5; Cascading Style Sheets (CSS); JavaScript; JQuery; Bootstrap; Hypertext Preprocessor (PHP); MySQL.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on web page design elements, dynamic content and database interaction.
CO2. Analyze user requirements to develop web applications.
CO3. Design client-server applications using web technologies.
CO4. Demonstrate problem solving skills to develop enterprise web applications.
CO5. Use HTML, CSS, JavaScript, JQuery, Bootstrap and PHP technologies for device independent web application development.
CO6. Apply Web Technologies to develop interactive, dynamic and scalable web applications for societal needs.

DETAILED SYLLABUS:

UNIT-I: HTML **(11 Periods)**

Introduction: Fundamentals of HTML, Working with text, Organizing text in HTML, Working with links and URLs, Creating tables, Working with images, Canvas, Forms, Frames and Multimedia.

HTML5: Introduction, HTML5 document structure, Creating editable content, Checking spelling mistakes, Exploring custom data attributes, Client-Side storage, Drag and drop feature, Offline web applications, Web communications, Cross-Document messaging and desktop notifications.

UNIT-II: CSS AND JAVASCRIPT **(8 Periods)**

CSS: Introduction, CSS selectors, Inserting CSS in an HTML document, Backgrounds, Fonts, and Text styles, Creating boxes, Displaying, Positioning and floating elements, Features of CSS3, Media queries.

Javascript: Overview of JavaScript, JavaScript functions, Events, Image maps and animations, JavaScript objects, Working with browser and document objects.

UNIT-III: JQUERY and BOOTSTRAP **(9 Periods)**

JQuery: Introduction, JQuery selectors, Events, Methods to access HTML elements and attributes, Introduction to AJAX.

Bootstrap: Getting started with Bootstrap, Creating responsive layouts using Bootstrap CSS - Basic HTML structure for Bootstrap, Responsive classes, Rendering images, the grid system, Constructing data entry forms.

UNIT-IV: INTRODUCTION TO PHP **(9 Periods)**

Introduction, Data types, Variables, Constants, Expressions, String interpolation, Control structures, Functions, Arrays, Embedding PHP code in web pages, Object Oriented PHP.

UNIT-V: PHP WEB FORMS AND MYSQL **(8 Periods)**

PHP Web forms: PHP and web forms, Sending form data to a server, Working with cookies and session handlers

PHP with MySQL: Interacting with the database, Prepared statement, Database transactions.

Total Periods: 45

TEXT BOOKS:

1. Kogent Learning Solutions Inc, *HTML 5 Black Book: Covers CSS3, JavaScript, XML, XHTML, AJAX, PHP and JQuery,* Dreamtech Press, Second Edition, 2016.
2. W. Jason Gilmore, *Beginning PHP and MySQL,* APress, Fourth Edition, 2011.

REFERENCE BOOKS:

1. Snig Bahumik, *Bootstrap Essentials,* PACKT Publishing, 2015 (e-book).

2. Thomas A. Powell, *The Complete Reference: HTML and CSS,* Tata McGraw Hill, Fifth Edition, 2010.
3. Andrea Tarr, *PHP and MySQL,* Willy India, 2012.

IV B. Tech. – I Semester

(16BT70501) BIG DATA ANALYTICS

(Program Elective-2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course "Data Warehousing and Data Mining"

COURSE DESCRIPTION:
Big Data; Types of Data Elements; Introduction to Hadoop; MapReduce; Building Blocks of Hadoop; Big Data Analytics Applications; Predictive and Descriptive Analytics**.**

COURSE OUTCOMES:
On successful completion of the course, students will be able to:
CO1. Demonstrate knowledge in
- Big Data Characteristics,
- Hadoop & Hadoop Distributed File System
- Hadoop Framework & Hadoop Release
- Map Reduce work flow
- Hive and Hive Services.

CO2. Analyze large data sets by using Hadoop, Map Reduce, Hive, Pig tools.
CO3. Design and develop Map Reduce models for data sets.
CO4. Solve complex problems and store the results of the large data sets.
CO5. Select Hive and Hive services techniques for effective database models.
CO6. Contribute towards societal issues and responsibilities in designing, modeling and developing Big Data systems.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO BIG DATA (10 periods)
Big data characteristics: Volume–Variety–Velocity-Veracity; Analytics, Basic nomenclature, Analytics process model, Analytical model requirements, Types of data sources, Sampling, Types of data elements, Missing values, Standardizing data, Outlier detection and treatment, Categorization.

UNIT-II: HADOOP AND HADOOP DISTRIBUTED FILE SYSTEMS (8 periods)
A brief history of Hadoop, The Hadoop ecosystem, Hadoop release, The building blocks of Hadoop, Name node-data node-secondary name node, Job tracker, Task tracker.
The Hadoop Distributed File System: The design of HDFS, HDFS concepts, Hadoop file systems.

UNIT-III: MAPREDUCE (10 periods)
MapReduce workflows, How MapReduce works, Anatomy of MapReduce: MapReduce1, MapReduce2, Failures in classic MapReduce; YARN, Failure in YARN, Job scheduling - The fair scheduler, The capacity scheduler; Shuffle and sort in MapReduce.

UNIT-IV: HIVE AND PIG (9 periods)
Hive: The Hive shell, Hive services, Comparison with traditional databases, HiveQL, Tables, Querying data, User-defined functions.
Pig: Introduction to Pig, Pig Latin.

UNIT-V: CASE STUDIES (8 periods)
Hadoop usage at Last.fm, Hadoop and Hive at Facebook, Nutch Search Engine, Log Processing at Rackspace, Mahout, Sqoop, Crunch, Spark.

Total Periods: 45

TEXT BOOKS:
1. Bart Baesens, *Analytics in a Big Data World: The Essential Guide to Data Science and its Applications,* Wiley Publications, 2014.
2. Tom White, *Hadoop: The Definitive Guide,* O'Reilly Publications, Fourth Edition, 2016.

REFERENCE BOOKS:

1. Paul Zikopoulos, Chris Eaton, and Paul, *Understanding Big Data: Analytics for Enterprise Class Hadoop and streaming Data,* The McGraw-Hill Companies, 2012.
2. Chuck Lam, *Hadoop in Action,* Manning Publications, 2011.

IV B. Tech. – I Semester

(16BT71205) CRYPTOGRAPHY AND NETWORK SECURITY

(Common to CSE, and IT)

(Program Elective–3)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Computer Networks".

COURSE DESCRIPTION: Principles and Practice of Cryptography and Network Security; Classical Systems; Symmetric Block Ciphers; Public-key Cryptography; Hash Functions; Authentication; Key Management; Key Exchange; Signature Schemes; E-mail; Web Security; Malicious Software; Intrusion Detection; Phishing and Identity Theft.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on:
- Cryptographic algorithms and their mathematical models
- Message Authentication
- Digital Signatures
- Malicious Software
- Intrusion Detection
- Phishing and Identity Theft

CO2. Analyze vulnerabilities and threats on information systems based on various security parameters.

CO3. Apply security and privacy methods to protect and prevent cyber crimes.

CO4. Solve information privacy issues using encryption and digital signatures.

CO5. Use firewall and PGP to protect network and e-mail respectively.

CO6. Follow standards in implementation of network security.

DETAILED SYLLABUS:

UNIT-I: CLASSICAL ENCRYPTION TECHNIQUES (6 Periods)

Introduction: Services, Mechanisms, and Attacks concepts, The OSI security Architecture, Model for network security.

Classical Encryption Techniques: Symmetric cipher model, Substitution techniques- Ceaser cipher, Hill cipher, Poly and mono alphabetic cipher, Transposition techniques.

UNIT-II: BLOCK CIPHERS AND PUBLIC-KEY CRYPTOGRAPHY (8 Periods)

Block Ciphers: Block cipher principles, The data encryption standard (DES), The Strength of DES, Block cipher design principles, Block cipher modes of operation.

Public-Key Cryptography: Principles of public-Key cryptosystems, the RSA algorithm, Diffie-Hellman key exchange.

UNIT-III: MESSAGE AUTHENTICATION CODES, HASH FUNCTIONS, AND DIGITAL SIGNATURES (10 Periods)

Message Authentication Codes: Message authentication requirements, Message authentication functions, Message authentication codes.

Hash Functions: Security of hash functions and MACs, Hash algorithms-SHA, HMAC.

Digital Signatures: Digital Signatures and The Indian IT Act, Digital signature standard (DSS), Authentication applications- Kerberos.

UNIT-IV: ELECTRONIC MAIL SECURITY, IP SECURITY AND WEB SECURITY (11 Periods)

Electronic Mail Security: Pretty good privacy (PGP).

IP Security: IP security overview, Architecture, Authentication header, Encapsulating security payload, Combining security associations.

Web Security: Web security Considerations**,** Secure sockets layer (SSL), Transport layer security (TLS), Secure electronic transaction.

UNIT-V: MALICIOUS SOFTWARE, INTRUSION DETECTION, PHISHING AND IDENTITY THEFT (10 Periods)

Malicious Software: Spywares, Viruses and worms, DoS and DDoS attacks.

Intrusion Detection: Key loggers, Intrusion detection, Password management-Password protection, Password selection; Firewall design principles, Trusted systems.

Phishing and Identity Theft: Proxy servers, Anonymizers, Phishing and identity theft (ID Theft).

Total Periods: 45

TEXT BOOKS:

1. William Stallings, *Cryptography and Network Security Principles and Practice,* Pearson Education, Fourth Edition, 2010.
2. Nina Gobole and Sunit Belapure, *Cyber Security: Understanding Cyber Crimes, Computer Forensics and Legal Perspectives,* Wiley India, 2011.

REFERENCE BOOK:

1. Behrouz A Forouzan and Debdeed Mukhopadhyay, *Cryptography and Network Security*, McGraw Hill Education, Second Edition, 2010

IV B. Tech. – I Semester

(16BT70502) ETHICAL HACKING

(Program Elective-2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A Course on "Computer networks"

COURSE DESCRIPTION:

Network and Computer Attacks; Foot Printing and Social Engineering; Port Scanning; Enumeration; Desktop and Server Operating System vulnerabilities; Hacking Web Servers; Cryptography; Network Protection System; Hacking Wireless Network.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate Knowledge on
- Network and Computer attacks
- OS Vulnerabilities
- Hacking web servers, Hacking wireless network

CO2. Analyze system and network vulnerabilities.

CO3. Design security solutions for risks that arise from hacking.

CO4. Use appropriate ethical hacking technique to solve security problems.

CO5. Apply contextual knowledge to assess safety and legal issues in applications like cyber crime, social engineering.

CO6. Inculcate use of ethical hacking practices while maintaining professional ethics.

DETAILED SYLLABUS:

UNIT-I: ETHICAL HACKING OVERVIEW, NETWORK AND COMPUTER ATTACKS (9 periods)

Ethical Hacking Overview: Ethical hacking, Certification programs for network security personnel. **Network and Computer Attacks:** Malicious software, Protection against malware, Intruder attacks on networks and computers, Addressing physical security.

UNIT-II: FOOTPRINTING AND SOCIAL ENGINEERING, PORT SCANNING (9 periods)

Footprinting and Social Engineering: Using web tools for foot printing, Conducting competitive intelligence, Using domain name system zone transfers, Introduction to social engineering. **Port Scanning:** Port scanning, Using port scanning tools, Conducting ping sweeps, Understanding scripting.

UNIT-III: ENUMERATION, OS VULNERABILITIES (9 periods)

Enumeration: Enumeration, Enumerating windows operating systems, Netware operating system and Unix operating system.

Desktop and Server OS Vulnerabilities: Windows OS vulnerabilities, Tools for identifying vulnerabilities in windows, Best practices for hardening windows systems, Linux OS vulnerabilities.

UNIT-IV: HACKING WEB SERVERS, HACKING WIRELESS NETWORK (9 periods)

Hacking Web Servers: Understanding web applications, Web application vulnerabilities, Tools for web attackers and Security testers. **Hacking Wireless Network:** Understanding wireless technology, Wireless network standards, Authentication, Wardriving, Wireless hacking.

UNIT-V: CRYPTOGRAPHY, NETWORK PROTECTION SYSTEM (9 periods)

Cryptography: Understanding cryptography basics, Cryptography attacks.

Network Protection System: Understanding routers, Firewalls, Intrusion detection and prevention systems, Honeypots.

Total Periods: 45

TEXT BOOK:

1. Michael T. Simpson, Kent Backman and James E. Corley, *Hands-On Ethical Hacking and Network Defense,* Cengage Learning, First edition, 2013.

REFERENCE BOOKS:

1. Kimberly graves, *CEH Official Certified Ethical Hacker Review Guide,* Wiley Publications, 2007.
2. Michael Gregg, *Certified ethical hacker (CEH) Cert guide,* Pearson Education, 2014.

IV B. Tech. - I Semester

(16BT61503) SOFTWARE PROJECT MANAGEMENT

(Program Elective–2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A Course on "Software Engineering".

COURSE DESCRIPTION:

Conventional Software Management; Evolution of Software Economics; Improving Software Economics; Lifecycle Phases; Artifacts of the Process; Workflow of the Process; Checkpoints of the Process; Software Economics; Iterative Process Planning; Project Organization and Responsibilities; Project Control and Project Instrumentation; Agile Overview.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on software effort estimation techniques, Agile life cycle, project control and instrumentation.

CO2. Analyze the major and minor milestones, artifacts, metrics from management and technical perspectives.

CO3. Design and develop software products using conventional and modern principles of software project management. CO4. Effectively implement project management through appropriate planning of Work flows and Work Breakdown Structures of the process.

CO5. Select appropriate techniques to evaluate progress of software project in terms of milestones and check points.

CO6. Apply appropriate ethical principles to be followed in management of software economics.

DETAILED SYLLABUS:

UNIT – I: SOFTWARE MANAGEMENT (**09 periods**)

Software management:

The Waterfall Model, Conventional Software Management Performance, Evolution of Software Economics**:** Software Economics, Pragmatic Software Cost Estimation.

Improving Software Economics:

Reducing Software Product Size, Improving Software Processes, Improving Team Effectiveness, Improving Automation, Achieving Required Quality.

UNIT – II: LIFE CYCLE PHASES (09 periods)

Conventional and Modern Software Management:

Principles of Modern Software Engineering, Principles of Modern Software Management, Transitioning to an Iterative Process.

Life Cycle Phases:

Engineering and Production Stages, Inception, Elaboration, Construction, Transition Phases.

UNIT – III: ARTIFACTS, ARCHITECTURES AND WORKFLOWS (09 periods)

Artifacts of The Process: The Artifact Sets, Management Artifacts, Engineering Artifacts.

Model Based Software Architectures: Architecture- Management Perspective, Technical Perspective.

Workflows of the Process: Software Process Workflows, Iteration Workflows.

UNIT – IV: CHECKPOINTS, PROCESS PLANNING AND PROJECT ORGANIZATION (09 periods)

Checkpoints of a process: Major Milestones, Minor Milestones, Periodic Status Assessments.

Iterative Process Planning: Work Breakdown Structures, Planning Guidelines, The Cost and Schedule Estimating Process

Project Organizations and Responsibilities: Line of Business Organizations, Project organizations, Evolution of Organizations.

UNIT – V: PROJECT CONTROL AND AGILE MANAGEMENT (09 periods)

Project control and process Instrumentation: The Seven Core Metrics, Management Indicators, Quality Indicators.

Agile Management: An Agile Overview, Role of a project manager, Benefits of Agile.

Total Periods: 45

TEXT BOOK:

1. Walker Royce, *Software Project Management,* Pearson Education, 3rd Edition, 1998.

REFERENCE BOOKS:

1. Michele Sliger and Stacia Broderick, *The Software Project Manager's Bridge to Agility,* Addison-Wesley, 2008.
2. Bob Hughes and Mike Cotterell, *Software Project Management,* Tata McGraw- Hill, 2006.

IV B. Tech. – I Semester

(16BT70503) COMPUTER FORENSICS

(Program Elective–3)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A Course on "Computer Networks"

COURSE DESCRIPTION:

Computer Forensic Technologies; Evidence Collection and Data Seizure; Duplication and Preservation of Digital Evidence; E-mail Investigations; Data Analysis and Validation; Processing Crime and Incident Scenes; Mobile Device and Network Forensics; Computer Forensic Tools; Report Writing for Investigations

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on
- Occurrence of Cyber Crime, Cyber Detectives.
- Evidence and Data Capture and Computer Forensic Analysis.
- Law Enforcement crime and incident scenes.

CO2. Analyze and present computer forensic evidence.

CO3. Design solutions for a wide range of computer forensic problems - attack on routers and e-mail crimes.

CO4. Conduct investigations on forensic data.

CO5. Utilize appropriate forensic tools to collect digital evidence.

CO6. Apply contextual knowledge to assess the computer crimes relevant to cyber crime detection.

DETAILED SYLLABUS:

UNIT–I: OVERVIEW OF COMPUTER FORENSICS TECHNOLOGY AND SERVICES (9 Periods)

Computer Forensics Fundamentals: Computer forensics, Use of computer forensics in law enforcement, Benefits of professional forensics methodology, Steps taken by computer forensics specialists.

Types of Computer Forensics Technologies: Types of military computer forensic technology, Types of law enforcement, Computer forensic technology, Types of business computer forensic technology.

Computer Forensics Services: Occurrence of cyber crime, Cyber detectives, Computer forensics investigative services.

UNIT–II: COMPUTER FORENSICS EVIDENCE CAPTURE AND INVESTIGATIONS (9 Periods)

Evidence Collection and Data Seizure: Collect evidence, Collection options, Types of evidence, The rules of evidence, Volatile evidence, General procedure – Collection and archiving, Methods of collection, Collection steps; Controlling contamination- The chain of custody; Duplication and preservation of digital evidence- Preserving the digital crime scene; Computer evidence processing steps.

E–Mail Investigations: Exploring the role of e-mail in investigations, Investigating e-mail crimes and violations.

UNIT-III: COMPUTER FORENSIC ANALYSIS (10 Periods)

Data Analysis and Validation: Determining data to collect and analyze, Validating forensic data, Addressing data, Hiding techniques, Performing remote acquisitions.

Processing Crime and Incident Scenes: Identifying digital evidence, collecting evidence in private-sector incident scenes, Processing law enforcement crime, Preparing for a search, Seizing digital evidence at the scene, Storing digital evidence.

UNIT–IV: FORENSICS IN VARIOUS AREAS AND FORENSICS TOOLS (10 Periods)

Mobile Device Forensics: Understanding mobile device forensics, Acquisition procedures for Mobile devices.

Network Forensics and Live Acquisitions: Network Forensic Overview, Performing live acquisitions, Developing standard procedure for network forensics.

Computer Forensic Tools: Types of computer forensic tools, Computer forensic hardware and software tools.

UNIT–V: REPORT WRITING FOR INVESTIGATIONS (7 Periods)

Types of reports, Report structure, Writing reports clearly, Designing the layout and presentation of reports, Generating report findings with forensic software tools, Using access data FTK to generate reports.

Total Periods: 45

TEXT BOOKS:

1. John R. Vacca, *Computer Forensics, Computer Crime Scene Investigation,* Firewall Media, First Edition, 2009.
2. Bill Nelson, Amelia Phillips and Christopher Steuart, *Guide to Computer Forensics and Investigations,* Cengage Learning, Fourth Edition, 2010.

REFERENCE BOOKS:

1. Nina Godbole and Sunit Belapure, *Cyber Security: Understanding Cyber Crimes, Computer Forensics and Legal Perspectives,* Wiley India Pvt Ltd, First Edition, 2011.

2. Kevin Mandia, Chris Prosise and Matt Pepe, *Incident Response & Computer Forensics,* Tata McGraw-Hill, Second Edition, 2006.

IV B. Tech. – I Semester

(16BT70504) DESIGN PATTERNS

(Program Elective–3)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A Course on "Object Oriented Analysis and Design"

COURSE DESCRIPTION:
Introduction to Design Patterns; Creational Patterns; Structural Patterns; Behavioral Patterns.

COURSE OUTCOMES:
After successful completion of the course, the student will be able to:

CO1. Demonstrate knowledge on
- Creational patterns
- Structural Patterns
- Behavioral Patterns

CO2. Analyze various object oriented concepts using Design Patterns.
CO3. Implement Design Pattern in C++ or Java.
CO4. Use Appropriate design Pattern to solve computational problems.
CO5. Create Design Pattern to enhance software quality of a system.
CO6. Apply contextual knowledge of design patterns to address human computer interaction in societal applications.

DETAILED SYLLABUS:

UNIT-I: DESIGN PATTERNS (9 periods)
Design patterns in Smalltalk Model/View/Controller, Describing design patterns, The catalog of design patterns, Organizing the catalog, Design patterns to solve design problems, Select a design pattern, Use a design pattern.

UNIT-II: DOCUMENT EDITOR (9 periods)
Designing a document editor, Design problems, Document structure, Formatting, Embellishing the user interface, Supporting multiple look-and-feel standards, Supporting multiple window systems, User operations spelling checking and hyphenation.

UNIT-III: CREATIONAL PATTERNS (8 periods)
Abstract Factory, Builder, Factory method, Prototype, Singleton, Discussion of creational patterns.

UNIT-IV: STRUCTURAL PATTERNS (9 periods)
Adapter, Bridge, Composite, Decorator, Façade, Flyweight, Proxy, Discussion of structural patterns.

UNIT-V: BEHAVIORAL PATTERNS (10 periods)
Chain of responsibility, Command, Interpreter, Iterator, Mediator, Memento, Observer, State, Strategy, Template method, Visitor.

Total Periods: 45

TEXT BOOK:
1. Gamma, Vlissides, Helm and Johnson, *Design Patterns: Elements of Reusable Object Oriented Software,* Pearson Education, 1995.

REFERENCE BOOK:
1. James W. Cooper, *Java Design Patterns - A Tutorial,* Addison Wesley, 2000.

IV B. Tech. I-Semester
(16BT71508) INTERNET OF THINGS

(Common to CSE, IT, and CSSE)
(Program Elective–3)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A Course on Computer Networks

COURSE DESCRIPTION:
Internet of Things Components; Communication models; Prototyping; Hardware; Design models; Analytics for IoT.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on Protocols, functional blocks and communication models of Internet of things.
CO2. Identify appropriate sensors and communication modes used in IoT based systems.
CO3. Design appropriate solutions for IoT applications using Raspberry Pi and Arduino kits.
CO4. Appropriately synthesize the models and applications for usage in Home automation and cities.
CO5. Apply evolutionary techniques to perform analytics on the data integrated from IoT based systems.
CO6. Use advances in IoT technology to design and develop applications.

DETAILED SYLLABUS:

UNIT- I: INTRODUCTION TO INTERNET OF THINGS (08 periods)
Definition, Characteristics, Things, Protocols, Logical Design, Functional Blocks, Communication models, APIs, Enabling Technologies, Levels & Deployment templates.

UNIT- II: DEVICES AND END POINTS (10 periods)
IoT Devices-Examples-Raspberry PI interfaces, Arduino interfaces, Programming Raspberry PI with Python, Other IOT devices, Domain Specific IoTs.

UNIT-III: SENSORS AND CONNECTIVITY (08 periods)
Sensors-Types of Sensor Nodes; Internet Communications, IP Addresses, MAC Address, TCP & UDP ports, Application Layer Protocols.

UNIT-IV: DESIGN METHODOLOGY AND CASE STUDIES (10 periods)

Design Methodology:
Purpose and Requirements specifications, Process Specifications, Domain Model specifications, Information Model specifications, Service specification, Level Specifications, Functional View specifications, Operational View specifications, Device and Component integration, Application development.

Case Studies: Home Automation, Cities.

UNIT-V: DATA ANALYTICS FOR IOT (09 periods)
Analytics, Apache Hadoop, Hadoop MapReduce for Batch Data Analysis, Apache Oozie, Chef and Case studies.

Total Periods: 45

TEXT BOOK:

1. Arshdeep Bahga, Vijay Madisetti, *Internet of Things–A hands-on approach,* University Press, 2015.

REFERENCE BOOKS:

1. Adrian McEwen and Hakim Cassimally, *Designing the Internet of Things,* Wiley Publishing, 2013.
2. CharlesBell, *Beginning Sensor Networks with Arduino and Raspberry Pi,* Apress, 2013.
3. Marco Schwartz, *Internet of Things with the Arduino Yun,* Packt Publishing, 2014.
4. Matt Richardson, Shawn Wallace, *Getting Started with Raspberry Pi,* Maker Media, Inc, 2012.

IV B. Tech. – I Semester

(16BT71208) SERVICE ORIENTED ARCHITECTURE

(Common to CSE and IT)
(Program Elective-3)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Software Engineering".
COURSE DESCRIPTION: Web Services; Principles of SOA; Service Layers; Simple Object Access Protocol (SOAP); Web Services Description Language (WSDL).
COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on:
- Principles, services and policies of service orientation.
- Fundamentals of web services.
- XML, WSDL related to SOA.

CO2. Analyze complex business process critically in identifying appropriate service model logic.
CO3. Design service oriented architecture suitable for different environments.
CO4. Use XML, SOAP and service interface design tools for building service oriented architecture.

DETAILED SYLLABUS:

UNIT-I: SOA AND EVOLUTION (10 Periods)
Introducing SOA: Fundamental SOA, Common characteristics of contemporary SOA, Common pitfalls of adopting SOA. **The Evolution of SOA:** An SOA timeline, The continuing evolution of SOA, The roots of SOA.
Web Services and Primitive SOA: The web services framework, Services, Service descriptions, Messaging.

UNIT-II: SOA AND WS-* EXTENSIONS (8 Periods)
WS-* and Contemporary SOA (Part I): Message Exchange Patterns (MEP), Service activity, Coordination, Atomic transactions, Business activities.
WS-* and Contemporary SOA (Part-II): Addressing, Reliable messaging, Correlation, Policies, Metadata exchange.

UNIT-III: PRINCIPLES, SERVICE LAYERS AND PLANNING (9 Periods)
Principles of Service-Orientation: Service-orientation and the enterprise, Anatomy of SOA, Common principles of service orientation, Inter relationship of service orientation principles, Service orientation and Object orientation.
Service Layers: Service-orientation and contemporary SOA, Service layer abstraction, Application service layer, Business service layer, Orchestration service layer, Agnostic services, Service layer configuration scenarios.
SOA Delivery Strategies: SOA delivery lifecycle phases, The Top-down strategy, the bottom-up strategy, the agile strategy.

UNIT - IV: SERVICE ORIENTED ANALYSIS AND SERVICE MODELING (8 Periods)
Service Oriented Analysis: Objectives and service oriented analysis process, Benefits of a business centric SOA and Deriving business services.
Service Modeling: Service modeling, Service modeling guidelines, Classifying service model logic, Contrasting service modeling approaches.

UNIT - V: SERVICE ORIENTED DESIGN AND SERVICE DESIGN (10 Periods)
Service-Oriented Design: Objectives and Service oriented design process, WSDL related XML schema language basics, WSDL language basics, SOAP language basics, Service interface design tools.
Service Design: Service design overview, Entity-centric business service design, Application service design, Task-centric business service design, Service design guidelines.

Total Periods: 45

TEXT BOOK:
1. Thomas Erl, *Service-Oriented Architecture - Concepts, Technology, and Design,* Pearson Education, 2011.

REFERENCE BOOKS:
1. Eric Newcomer, *Understanding SOA with Web Services,* Pearson Education, Second Edition, 2005.

2. Shankar Kambhampaty, *Service Oriented Architecture for Enterprise and Cloud Applications,* Wiley-India, Second Edition, 2010.

IV B. Tech. – I Semester

(16BT70505) **HUMAN COMPUTER INTERACTION**

(Common to CSE and IT)

(Program Elective-4)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Computer Graphics".

COURSE DESCRIPTION:

Graphical User Interface; Design Process; Screen Designing; Windows; Components; Software Tools; Interaction Devices.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on principles, characteristics, tools and devices of Human Computer Interaction.

CO2. Analyze the user requirements, technological and physical characteristics of users for better interface design.

CO3. Design appropriate user interface for desktop and web applications.

C04. Conduct investigations on User requirements to provide an effective user interface.

CO5. Utilize user interface mockup tools and input, output and pointing devices for designing user interfaces.

CO6. Apply Contextual knowledge to develop interfaces for differently abled people.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION (9 periods)

Importance of User Interface: Definition, Importance of good design, Benefits of good design, A brief history of screen design.

Characteristics of Graphical and Web User Interfaces: The graphical user interface - popularity of graphics, The concept of direct manipulation, Graphical systems, Characteristics; Web user Interface - Popularity, Characteristics; Principles of user interface design.

UNIT-II: CONTROL DESIGN PROCESS (8 periods)

Design Process: Human interaction with computers, Importance of human characteristics, human considerations in design, Human interaction speeds, and understanding business functions.

UNIT-III: SCREEN DESIGN (10 periods)

Design Goals: Screen meaning and purpose, Organizing screen elements, Ordering of screen data and content, Screen navigation and flow, Visually pleasing composition, Amount of information, Focus and emphasis, Presenting information simply and meaningfully, Information retrieval on web, Statistical graphics, Technological considerations in interface design.

UNIT-IV: WINDOWS AND MULTIMEDIA (8 periods)

Windows Menus and Navigation Schemes: Selection of window, Selection of device based and screen based controls.

Components: text and messages, Icons and images, Multimedia, Color uses, Problems with colors, choosing colors.

UNIT-V: SOFTWARE TOOLS AND DEVICES (10 periods)

Software Tools: Specification methods, Interface building tools, Interaction devices - Keyboards and keypads, Pointing devices, Speech and auditory interfaces; Image and video displays, drivers.

Total Periods: 45

TEXT BOOKS:

1. Wilbert O. Galitz, *The Essential Guide to User Interface Design*, Wiley India Education, Second Edition, 2008.
2. Ben Schneiderman and Catherine Plaisant, *Designing theUser Interface,* Pearson Education, Fourth Edition, 2009.

REFERENCE BOOKS:

1. A Dix, Janet Finlay, G. D. Abowd and R. Beale, *Human-Computer Interaction,* Pearson Publishers, Third Edition, 2008.
2. Jonathan Wolpaw and Elizabeth Winter Wolpaw, *Brain-Computer Interfaces: Principles and Practice,* Oxford Publishers, First Edition, 2012.

IV B. Tech. – I Semester
(16BT71203) **INFORMATION RETRIEVAL SYSTEMS**
(Program Elective - 4)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on "Data Structures" and "Database Management Systems".

COURSE DESCRIPTION: Architecture of Information Retrieval Systems; Functional Capabilities; Data Structures; Mathematical Algorithms; Indexing; Similarity and Clustering; Human Perception and Presentation; Text Search Techniques and Evaluation Measures.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1: Demonstrate knowledge on:
- Information Retrieval System Architecture
- Functional capabilities
- Indexing and data presentation methods.
- Evaluation measures of Information Retrieval Systems.

CO2: Analyze indexing methods and clustering algorithms to group similar data items for efficient search.

CO3: Design and develop data structures used to store and retrieve data items.

CO4: Demonstrate problem solving skills in the usage of mathematical algorithms for information retrieval.

CO5: Use text search algorithms and collaborative filtering techniques for information retrieval and visualization methods for information presentation.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION (9 Periods)

Primary information retrieval problems, Objectives of information retrieval system, Functional overview, Understanding the search functions, Relationship to DBMS, Digital libraries and data warehouses, Data structures and mathematical algorithms.

UNIT II: INGEST AND INDEXING (9 Periods)

Ingest: Introduction, Item receipt, Duplicate detection, Item normalization, Zoning and creation of processing tokens, Stemming, Entity processing, Categorization, Citational metadata.

Indexing: Manual indexing process, Automatic indexing of text and multimedia.

UNIT III: SEARCH AND CLUSTERING (12 Periods)

Search: Similarity measures and ranking, Hidden markov models, Ranking algorithms, Relevance feedback, Selective dissemination of information search, Weighted searches for boolean systems, Multimedia searching.

Clustering: Introduction to clustering, Thesaurus generation, Item clustering, Hierarchy of clusters.

UNIT IV: INFORMATION PRESENTATION (7 Periods)

Introduction, Presentation of the hits, Display of the item, Collaborative filtering, Multimedia presentation, Human perception and presentation.

UNIT V: SEARCH ARCHITECTURE AND EVALUATION (8 Periods)

Search Architecture: Index search optimization, Text search optimization, GOOGLE Scalable multiprocessor architecture.

Evaluation: Information system evaluation, Measures used in system evaluation

Total Periods: 45

TEXT BOOK:

1. Gerald Kowalski, *Information Retrieval Architecture and Algorithms,* Springer, 2013.

REFERENCE BOOKS:

1. Christopher D. Manning, Prabhakar Raghavan and Hinrich Schütze, *An Introduction to Information Retrieval,* Cambridge University Press, 2012.
2. Ricardo Baeza-Yates and Berthier Ribiero-Neto, *Modern Information Retrieval the concepts and technology behind search,* Addison Wesley, Second Edition, 2010.

IV B. Tech. – I Semester

(16BT70506) MULTIMEDIA APPLICATION DEVELOPMENT

(Program Elective-4)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES:

Courses on "Object Oriented Programming through C++" and "Computer Graphics"

COURSE DESCRIPTION:

Multimedia; Fundamental Concepts in Audio and Video; Action Script 3.0; Multimedia Data Compression; Multimedia Network Communications and Applications.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on
- Multimedia and Hypermedia
- Action Script 3.0
- Video representations and standards
- Multimedia Network Communications.

CO2. Analyze Action Script 3.0 principles, functions and components for developing multimedia authoring applications.

CO3. Design multimedia software for developing Internet applications and flash animations.

CO4. Develop solutions for simple to complex real life multimedia applications.

CO5. Use compression techniques and Action script 3.0 for development of multimedia applications.

CO6. Apply contextual knowledge to address issues like data compression, network communications in societal applications.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO MULTIMEDIA (8 periods)

Definition of Multimedia, Multimedia and Hypermedia, World Wide Web, Overview of multimedia software tools, Graphics and image data representations - Graphics/Image data types, popular file formats.

UNIT-II: ACTION SCRIPT-I (10 Periods)

Action Script 3.0 core concepts - Tools for writing action script code, Flash client runtime environments, Compilation, Just In Time compilation, Classes and objects, Creating a program, Packages, Defining a class, Variable and values, Constructor parameters and arguments; Action Script 3.0 conditionals, Loops and functions - Conditionals, Loops; Functions - Package-level functions, Nested functions, Source-file-level functions.

UNIT-III: ACTION SCRIPT-II (10 Periods)

Action Script 3.0 data types and type checking - Data types and type annotations, Untyped variables, parameters, Return values, Strict modes three special cases, Warnings for missing type annotations, Detecting reference errors at compile time, Casting, Conversion to primitive types, Default variable values, Null and undefined; Action Script 3.0 events and event handling - Action script event basics, Accessing the target object, Accessing the object that registered the listener.

UNIT-IV: MULTIMEDIA DATA COMPRESSION (10 Periods)

Lossless compression algorithms - Basics of information theory, Run-length coding, Variable length coding, and Dictionary based coding; Lossy compression algorithms - Quantization, Transform coding; Image compression standards - JPEG standard, JPEG 2000.

UNIT-V: MULTIMEDIA NETWORKS COMMUNICATIONS (7 Periods)

Multimedia Networks - Basics of multimedia networks, Multiplexing technologies, LAN and WAN; Multimedia network communications and applications - Quality of multimedia data transmission, Multimedia over IP, Media-on-demand.

Total Periods: 45

TEXT BOOK:

1. Ze-Nian Li and Mark S. Drew, *Fundamentals of Multimedia,* Pearson Education, Second Edition, 2008.
2. Colin Moock, *Essential Action Script 3.0,* SPD O'Reilly, First Edition, 2007.

REFERENCE BOOKS:

1. Nigel Chapman and Jenny Chapman, *Digital Multimedia,* Wiley Dreamtech, Second Edition, 2004.
2. Fred Halsall, *Multimedia Communications,* Pearson, First Edition, 2004.

IV B. Tech. – I Semester

(16BT61204) SEMANTIC WEB

(Program Elective - 4)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Web Technologies".

COURSE DESCRIPTION: Semantic web fundamentals; Semantic web technology; Ontology web language; Swoogle; Semantic web services.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on:

- Semantic web search
- RDF and SWOOGLE
- Semantic web services
- RDFS and OWL

CO2. Analyze layers of web architecture for describing web content.

CO3. Design semantic web search engine for capturing information on the current web.

CO4. Select RDF and SWOOGLE for search engine usage.

DETIALED SYLLABUS:

UNIT-I: INTRODUCTION TO SEMANTIC WEB (9 Periods)

The world of the semantic web: WWW, Internet usage, Meta data, Search engine for traditional web and semantic web.

UNIT-II: SEMANTIC WEB TECHNOLOGY (9 Periods)

Resource Description Framework (RDF), Rules of RDF, Aggregation-Distributed information, core elements of RDFS, Ontology and taxonomy, Inferencing based on RDF schema, RDF tools.

UNIT-III: WEB ONTOLOGY LANGUAGE –OWL (8 Periods)

Web ontology language (OWL), Define Classes: Localize global properties, Set operators and enumeration, Define properties; Ontology matching and distributed information, OWL ontology Header, Camera ontology in OWL, Three faces of OWL.

UNIT-IV: SWOOGLE (10 Periods)

Swoogle Architecture, FOAF, Semantic markup, Issues, Prototype system, Design of semantic web search engine, Discovery and indexation strategy, Need for Semantic Web services.

UNIT-V: SEMANTIC WEB SERVICES (9 Periods)

Semantic web services and applications, OWL-S: Upper ontology, WSDL-S, OWL-S to UDDI mapping, Design of the search engine and implementations.

Total Periods: 45

TEXT BOOK:

1. Liyang Yu, *Introduction to the Semantic Web and Semantic web services,* Chapman & Hall/CRC, Taylor & Francis group, 2007.

REFERENCE BOOKS:

1. Johan Hjelm, *Creating the Semantic Web with RDF,* Wiley, 2001
2. Grigoris Antoniou and Frank van Harmelen, *A Semantic Web Primer,* MIT Press, 2004.

IV B. Tech. - I Semester

(16BT61231) **CLOUD COMPUTING LAB**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: A course on "Cloud Computing".

COURSE DESCRIPTION: Hands-on experience on creating virtual machines on Windows and Linux platforms; Development of service based web applications and their deployment.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate hands-on experience on Virtualization models and Cloud Environment.
CO2. Analyze the given experiment and relate to existing cloud architectures.
CO3. Apply API development skills in web applications for cloud deployment.
CO4. Demonstrate independent problem solving skills in developing dynamic web applications.
CO5. Use advanced programming languages to access cloud services.
CO6. Build suitable cloud environment for societal requirements.
CO7. Work effectively as an individual and as a member in team for mini-project implementation.
CO8. Demonstrate communication skills, both oral and written for preparing and presenting reports.

LIST OF EXERCISES:

1. Create VM's with given set of configuration on Hyper-V Ubuntu 14LTs files with 2GB RAM & 200GB Hard Disk through Infrastructure Services (IaaS).
2. Create Virtualization on VMware Windows 7 OS with 4GB RAM & 500GB Hard Disk" through Infrastructure as a Service (IaaS).
3. Develop a simple web application for student details & operative using Salesforce.com in Cloud Platform under Software as Service (SaaS).
4. Develop a simple web application for personal Homepage, Attributes, Controllers, GUI, Visual Page, Forms, and Templates under Software as Service (SaaS).
5. Develop a web application for performing calculator operations. Deploy this application on Salesforce.com Cloud Platform under Software as Service (SaaS).
6. Develop a web application on IBM Bluemix Cloud Platform for executing application using Eclipse under Platform as a Service.
7. Create virtual machine instance with given set of configuration on Amazon web Services (AWS) under Infrastructure as a Service (IaaS).
8. Create virtual machine instance with set of configuration on Amazon S3 (Simple Storage Service) in Amazon Web Service (AWS) under Infrastructure as a Service (IaaS).
9. Develop a web application on IBM Bluemix Cloud Platform for implementing IoT application.
10. Develop a calculator web based application on MS-Azure Platform i.e. Platform as a Service (PaaS).
11. Develop a student home page web based application on MS-Azure Platform i.e. Platform as a Service (PaaS) Cloud.
12. Develop a mobile app on Google App Engine for uploading a resume into a website, collaborated with Drop box. The resume should be encrypted. (PaaS)
13. Develop a service call to run on Drop box resumes for picking the resumes of given skill set. (PaaS)
    i. 6+ years of Exp in Java Development.
    ii. 10 years of experience in Automation Testing.
    iii. 15+ years of Managerial experience with technical background.
    iv. 5-7 years of on-site experience in .NET support and programming.

REFERENCE BOOKS:

1. Barrie Sosinsky, *Cloud Computing Bible,* Wiley India Pvt Ltd, 2011.
2. Rajkumar Buyya, James Broberg and Andrzej Goscinski, *Cloud computing principles and paradigms,* John Wiley and Sons, 2011.
3. Thomas Erl and RicardoPuttini, *Cloud Computing- Concepts, Technology & Architecture***,** Pearson, 2013.
4. John W. Rittinghouse and James F. Ransome, *Cloud Computing implementation, Management and Security,* CRC Press, ISBN: 9788120341609, Taylor & Francis group, 2010.

IV B. Tech. – I Semester

(16BT51233) WEB TECHNOLOGIES LAB

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: A course on "Web Technologies".

COURSE DESCRIPTION: Hands-on experience on HTML, HTML5, CSS, JavaScript, JQuery, Bootstrap, PHP and MySQL.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on web page design elements, dynamic content and database Interaction.

CO2. Analyze user requirements to develop web applications.

CO3. Design client-server applications using web technologies.

CO4. Demonstrate problem solving skills to develop enterprise web applications.

CO5. Use HTML, CSS, JavaScript, JQuery, Bootstrap and PHP technologies for device independent web application development.

CO6. Apply web technologies to develop interactive, dynamic and scalable web applications for societal needs.

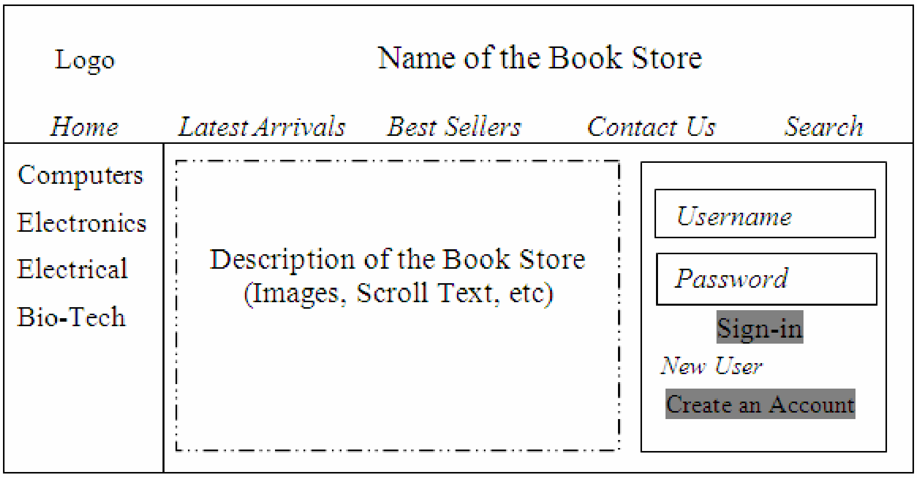
CO7. Work effectively as an individual and as a member in team for mini-project implementation.

CO8. Demonstrate communication skills, both oral and written for preparing and presenting reports.

LIST OF EXERCISES:

1. Design the following static web pages of an online book store web application.

a. Home Page:



b. Catalogue Page:

The catalogue page should display the following details of available books.

i. Snap shot of cover page
ii. Title of the text book
iii. Author name
iv. Publisher
v. Price
vi. More details link.

Logo	Name of the Book Store			
Home	*Latest Arrivals*	*Best Sellers*	*Contact Us*	*Search*

c. Registration Page:

Design the Registration page with the following fields and navigate it with create an account link.

i. First Name ii. Last Name iii. Gender iv. Date of Birth
v. Username vi. Password vii. Confirm Password
viii. Address ix. Postal Code x. Mobile No. xi. Email-Id

2. a. Design a web page to store username and password information using the local storage concept.
   b. Design a web page to store employee information including Name, Emp. Id, Department, Salary and Address on a client's machine using a real SQL database.
3. Apply the following styles to all web pages of online book store web application.
   a. Fonts and Styles: font-family, font-style, font-weight and font-size
   b. Backgrounds and colors: color, background-color, background-image and background-repeat
   c. Text: text-decoration, text-transformation, text-align and text-indentation, text-align
   d. Borders: border, border-width, border-color and border-style
   e. Styles for links: A: link, A: visited, A:active, A:hover
   f. Selectors, Classes, Layers and Positioning elements.
4. Write a JavaScript/JQuery code to validate the following fields of the Registration web page.
   a. First Name/Last Name - should contain only alphabets and the length should not be less than 8 characters.
   b. Username - It should contain combination of alphabets, numbers and underscore. It should not allow spaces and special symbols.
   c. Password - It should not less than 8 characters in length and it contains one uppercase letter and one special symbol.
   d. Date of Birth - It should allow only valid date; otherwise display a message stating that entered date is invalid. Ex. 29 Feb. 2009 is an invalid date.
   e. Postal Code: It must allow only 6 digit valid number.
   f. Mobile No. - It should allow only numbers and total number of digits should be equal to 10.
   g. e-mail id - It should allow the mail id with the following format:
      Ex. mailid@domainname.com
5. Design a web page with the following features using HTML5,JavaScript and JQuery
   a. Displaying of images with Custom animated effects

b. Playing of selected video from the list of videos

c. Showing the animated text in increasing and decreasing font size

d. Changing the size of the area in a web page using DIV tag

e. Hiding and Showing elements in a web page.

6. Design a web page with the following features using Bootstrap and Media Query.
   a. Components
   b. Responsive tables
   c. Responsive images and videos

7. a. Deploy and navigate web pages of online book store using WAMP/XAMPP web server.

   b. Write a PHP program to read user name and favorite color from the HTML form. Display the name of the user in green color and sets user favorite color as a background for the web page.

8. Write a PHP code to read the username and password entered in the Login form of the online book store and authenticate with the values available in cookies. If user enters a valid username and password, welcome the user by username otherwise display a message stating that, entered details are invalid.

9. Write a PHP code to read user details entered through the registration web page and store the same into MySQL database.

10. Write a PHP code for storing books details like Name of the book, author, publisher, edition, price, etc into MySQL database. Embed a PHP code in catalogue page of the online book store to extract books details from the database.

11. Mini Project - 1: Design a web application for selling products online with the following features.

    Mobile website option - The online store should be built on a responsive design template and its features need to be available to all users, at any time, from anywhere and in any device.

    Image options - The photos should also be taken from different points of view to give you a clearer idea of the product. Image options should include viewing angles, zoom, multiple images, and more. Detailed product description - The description should often include the important details, such as the expiration date, size dimensions, weight, manufacturers date, and practical uses must be included in a good product description.

    Order Tracking - The customers should be able to track their ordered products by logging into an account created upon registration. Payment Options - An online website should allow credit card/debit card/net banking for payment.

12. Mini Project – 2: Design a social website with the following features Build Profile - Members allow to build their profiles.

    Upload content - The Social Networking Sites allow members to upload text messages, photographs, audio and video files. All posts are arranged in descending order with the ast post coming first.

    Build conversations - Content posted by members can be browsed and commented upon by all members who form part of the community. Content can also be tagged from third party sites on subjects that interest the group.

REFERENCE BOOKS:

3. Snig Bahumik, *Bootstrap Essentials,* PACKT Publishing, 2015. (e-book).

IV B. Tech. – I Semester

(16BT70531) COMPREHENSIVE ASSESSMENT

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
	100	100	-	-	-	2

PREREQUISITES: All the courses of the program

COURSE DESCRIPTION:
Assessment of student learning outcomes in all the courses of the program

COURSE OUTCOMES:

On successful completion of Comprehensive Assessment, the student will be able to demonstrate:

CO1. Knowledge in the courses of the program.

CO2. Analytical ability in the courses of the program.

CO3. Design skills in the courses of the program.

CO4. Ability to investigate and solve complex engineering problems in the courses of the program.

CO5. Ability to apply tools and techniques to complex engineering activities with an understanding of limitations in the courses of the program.

CO6. Ability to provide solutions as per societal needs with consideration to health, safety, legal and cultural issues in the courses of the program.

CO7. Understanding of the impact of the professional engineering solutions in environmental context and need for sustainable development in the courses of the program.

CO8. Ability to apply ethics and norms of the engineering practice in the courses of the program.

CO9. Ability to function effectively as an individual in the courses of the program.

CO10. Ability to present views cogently and precisely in the courses of the program.

CO11. Ability to engage in life-long in the courses of the program.

IV B. Tech. – II Semester
(16BT80531) **PROJECT WORK**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
100	100	200	-	-	-	12

PREREQUISITES: All the courses of the program

COURSE DESCRIPTION:

Identification of topic for the project work; Literature survey; Collection of preliminary data; Identification of implementation tools and methodologies; Performing critical study and analysis of the topic identified; Time and cost analysis; Implementation of the project work; Preparation of thesis and presentation.

COURSE OUTCOMES:

On successful completion of the project work, the student will be able to demonstrate:

CO1. Knowledge on the project topic

CO2. Analytical ability exercised in the project work.

CO3. Design skills applied on the project topic.

CO4. Ability to investigate and solve complex engineering problems faced during the project work.

CO5. Ability to apply tools and techniques to complex engineering activities with an understanding of limitations in the project work.

CO6. Ability to provide solutions as per societal needs with consideration to health, safety, legal and cultural issues considered in the project work.

CO7. Understanding of the impact of the professional engineering solutions in environmental context and need for sustainable development experienced during the project work.

CO8. Ability to apply ethics and norms of the engineering practice as applied in the project work.

CO9. Ability to function effectively as an individual as experienced during the project work.

CO10. Ability to present views cogently and precisely on the project work.

CO11. Project management skills as applied in the project work.

CO12. Ability to engage in life-long leaning as experience during the project work.

I B.Tech. - I Semester

(16BT1HS01) TECHNICAL ENGLISH

(Common to CSE, CSSE, IT, CE & ME)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: English at Intermediate level

COURSE DESCRIPTION:

Introduction to Communication; Active Listening; Effective Speaking; Reading; and Writing.

COURSE OUTCOMES:

On successful completion of this course, the students will be able to:

1. Demonstrate knowledge in:
   - Process of communication
   - Modes of listening
   - Paralinguistic features
   - Skimming and Scanning
   - Elements of style in writing
2. Analyze the possibilities and limitations of language for understanding.
   - Barriers to Communication
   - Barriers to Effective Listening
   - Barriers to Speaking
   - Formal and metaphorical language
3. Design and develop functional skills for professional practice.
4. Apply writing skills in preparing and presenting documents.
5. Function effectively as an individual and as a member in diverse teams.
6. Communicate effectively with the engineering community and society in formal and informal situations.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO COMMUNICATION

Introduction –Language as a Tool of Communication – Communicative Skills (Listening, Speaking, Reading and Writing) – Effective Communication – Modes of Communication – Barriers to Communication (classification)

UNIT-II: ACTIVE LISTENING

Introduction – Reasons for poor Listening – Traits of a Good Listener – Listening Modes – Types of Listening – Barriers to Effective Listening – Listening for General Content and Specific Information

UNIT-III: EFFECTIVE SPEAKING Introduction – Achieving Confidence, Clarity and Fluency – Paralinguistic Features – Barriers to Speaking – Types of Speaking – Persuasive Speaking.

UNIT-IV - READING

Introduction and Reading Rates – Reading and Interpretation – Intensive and Extensive Reading – Critical Reading – Reading for Different Purposes – SQ3R Reading Technique –Study Skills.

UNIT-V: WRITING

Introduction – Language – Elements of Style – Techniques for Good Technical Writing – Referencing and Styling – Right Words and Phrases – Sentences.

TEXT BOOK:

I B.Tech. - I Semester
(16BT1BS01) ENGINEERING CHEMISTRY

(Common to CSE, CSSE, IT, CE & ME)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE REQUISITE: Intermediate/Senior Secondary Chemistry

COURSE DESCRIPTION: Water technology, Chemistry of Engineering materials, Nanochemistry, Green Chemistry, Electro chemical cells, Sensors, Corrosion and Lubricants.

COURSE OUTCOMES:

After completion of the course, a successful student is able to:

CO1: Acquire basic knowledge in water technology, engineering plastics, conducting polymers, composites, Electro chemical cells, Nano Chemistry, principles of Green Chemistry, corrosion phenomenon and lubricants.

CO2: Develop analytical skills in:

a. Determination of hardness of water.
b. Determination of viscosity, flame and fire points, cloud and pour points.

CO3: Develop designing skills in:

a. Synthesis of engineering plastics.
b. Chemical methods for the synthesis of Nano materials.

CO4: Develop skills for providing solutions through:

a. Mitigation of hardness of water.
b. Newer Nanomaterials and engineering plastics for specific applications

CO5: Acquire awareness to practice engineering in compliance to modern techniques such as:

a. Nalgonda technique for defluoridation of water
b. Electroplating technique for control of corrosion.

CO6: Acquire awareness to societal issues on:

a. Quality of water.
b. Bio-diesel
c. Chemical materials utility and their impact.

DETAILED SYLLABUS:

UNIT–I: WATER TECHNOLOGY (9 periods)

Introduction: Types of water, impurities in water and their consequences, types of hardness of water, units of hardness of water, disadvantages of hardness of water, estimation of hardness of water by EDTA method, Boiler troubles: Scales and Sludges, Caustic embrittlement, Boiler corrosion and Priming and Foaming.

Softening of water: Zeolite process and Ion exchange process, advantages and disadvantages. Desalination of brackish water by Reverse Osmosis, Numerical problems on estimation of hardness of water.

Fluorides in water: Effects on human health, defluoridation method-Nalgonda method; comparison of merits and demerits of various defluoridation methods (Nalgonda, Bone Charcoal, Activated Alumina, Contact precipitation, Brick, Reverse osmosis).

UNIT – II: CHEMISTRY OF ENGINEERING MATERIALS (9 periods)

Engineering Plastics: Definition, general properties, synthesis, properties and applications of PC, PTFE, and PMMA.

Conducting polymers: Definition, types of conducting polymers: Intrinsic and extrinsic conducting polymers with examples, engineering applications of conducting polymers.

Biodegradable polymers: Definition, properties, classification, mechanism of degradation of biodegradable polymers and their applications.

Composites – Introduction, types of composites: fiber reinforced particulate and layered composites with examples, advantages of composites and applications.

UNIT– III: NANOCHEMISTRY AND GREEN CHEMISTRY (9 periods)

Nanochemistry: Introduction, classification, properties and applications of Nano materials (nano particles, nano tubes, nano wires, nano composites, dendrimers); synthesis of Nano materials – Sol-gel process.

Green Chemistry: Introduction, principles of green chemistry, Tools of Green Chemistry with Examples, Applications of Green Chemistry in science and technology.

Biodiesel: Introduction, Synthesis (Trans esterification method), advantages, disadvantages and applications.

UNIT–IV: ELECTROCHEMICAL CELLS AND SENSORS (9 periods)

Electrochemical cell: Introduction, EMF of an electrochemical cell.

Batteries: Introduction, types of Batteries: primary and secondary batteries with examples, Ni-Cd batteries, Lithium-ion batteries, Lithium- Polymer batteries, Applications of batteries.

Fuel Cells: Definition, examples: H_2 – O_2 Fuel cell, solid oxide fuel cell, Bio-fuel cell and applications of fuel cells.

Sensors - Introduction, Types of Sensors, electrochemical sensor: construction and working principle of potentiometric sensor, and applications of electrochemical sensors.

UNIT–V: CORROSION AND LUBRICANTS (9 periods)

Corrosion: Introduction, Definition, types of corrosion (dry and wet corrosion), galvanic corrosion, concentration cell corrosion, Factors influencing corrosion, Corrosion control: cathodic protection; sacrificial anodic protection and impressed current cathodic protection; protective coatings: Galvanizing and Electroplating (Nickel).

Lubricants: Definition, functions of lubricants, mechanism of lubrication, classification of lubricants, properties of lubricants – viscosity, flash and fire points, cloud and pour points, Aniline points, neutralization number and mechanical strength.

Total periods: 45 periods

TEXT BOOKS:

1. P.C.Jain & Monika Jain, **Engineering Chemistry**, Dhanpat Rai Publishing Company (P) Ltd, New Delhi, 16th edition, 2013.
2. K.N. Jayaveera, G.V. Subba Reddy & C. Ramachandraiah **Engineering Chemistry**, Mc. Graw-Hill Higher Education, Hyderabad, 1st edition, 2015.

I B.Tech. - I Semester

(16BT1BS03) MATRICES AND NUMERICAL METHODS

(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Intermediate /Senior secondary mathematics

COURSE DESCRIPTION: Fundamentals of matrix theory; numerical solutions of equations, curve fitting; interpolation; numerical differentiation and integration; numerical solutions of ordinary differential equations.

COURSE OUTCOMES: After completion of the course a successful student is able to

CO1: Acquire basic **knowledge** in
- (a) Finding the rank of matrices and analyzing them.
- (b) Solving algebraic and transcendental equations by various numerical methods.
- (c) Fitting of various types of curves to the experimental data.
- (d) Estimating the missing data through interpolation methods.
- (e) Identification of errors in the experimental data
- (f) Finding the values of derivatives and integrals through various numerical methods.
- (g) Solving differential equations numerically when analytical methods fail.

CO2: Develop skills in **analyzing** the
- (a) methods of interpolating a given data
- (b) properties of interpolating polynomials and derive conclusions
- (c) properties of curves of best fit to the given data
- (d) algebraic and transcendental equations through their solutions
- (e) properties of functions through numerical differentiation and integration
- (f) properties of numerical solutions of differential equations

CO3: Develop skills in **designing** mathematical models for
- (a) Fitting geometrical curves to the given data
- (b) Solving differential equations
- (c) Constructing polynomials to the given data and drawing inferences.

CO4: Develop numerical skills in **solving the problems** involving
- (a) Systems of linear equations
- (b) Fitting of polynomials and different types of equations to the experimental data
- (c) Derivatives and integrals
- (d) Ordinary differential equations

CO5: Use relevant numerical **techniques** for
- (a) Diagonalising the matrices of quadratic forms
- (b) Interpolation of data and fitting interpolation polynomials
- (c) Fitting of different types of curves to experimental data
- (d) obtaining derivatives of required order for given experimental data
- (e) Expressing the functions as sum of partial fractions

DETAILED SYLLABUS:

UNIT–I : MATRICES (11 periods)

Rank of a matrix, echelon form, normal form, inverse of a matrix by elementary row operations. Solutions of linear system of equations. Eigen values, Eigen vectors and properties (without proof), Diagonalization. Quadratic form (QF), reductions to canonical form using orthogonal transformation and nature of QF.

UNIT-II NUMERICAL SOLUTIONS OF EQUATIONS AND CURVE FITTING (8 periods)

Solutions of Algebraic and Transcendental equations by bisection method, Regula-Falsi method, Newton – Raphson's method. Curve fitting by the principle of least squares, fitting of a straight line, parabola and exponential curves.

UNIT- III INTERPOLATION (8 periods)

Interpolation, difference operators and their relationships, Newton's forward and backward formulae, Lagrange's interpolation formula. Partial fractions using Lagrange's interpolation formula.

UNIT-IV NUMERICAL DIFFERENTIATION AND INTEGRATION (8 periods)

Numerical differentiation using Newton's forward and backward formulae. Numerical integration using Trapezoidal rule, Simpson's $1/3^{rd}$ rule and $3/8^{th}$ rule.

UNIT- V NUMERICAL SOLUTIONS OF ORDINARY DIFFERENTIAL EQUATIONS (10 periods)

Numerical solutions of first order Initial value problems using Taylor series method, Euler's method , modified Euler's method, Runge – Kutta method (4^{th}order only) and Milne's predictor – corrector method.

Total no. of periods: 45

TEXT BOOK:

1. T.K.V. Iyenger, B. Krishna Gandhi, S.Ranganadham and M.V.S.S.N.Prasad, ***Mathematical Methods,*** S.Chand and Company, 8/e, 2013

I B.Tech. - I Semester

(16BT1BS04) MULTI-VARIABLE CALCULUS AND DIFFERENTIAL EQUATIONS

(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Intermediate /Senior secondary mathematics

COURSE DESCRIPTION: First order differential equations; higher order linear differential equations; functions of several variables; applications of integration; multiple integrals; vector calculus.

COURSE OUTCOMES: After completion of the course a successful student is able to

CO1: Acquire knowledge in
- (a) Higher order Differential equations
- (b) Maximum and minimum values for the functions of several variables
- (c) Double and triple integrals
- (d) Differentiation and integration of vector functions.
- (e) Line and surface volume
- (f) transforming integrals from three dimensional surfaces and volumes on to plane surfaces

CO2: Develop skills in analyzing the
- (a) methods for differential equation for obtaining appropriate solutions,
- (b) Properties of oscillatory electrical circuits and heat transfer in engineering systems
- (c) The variations in the properties of functions near their stationary values
- (d) Flow patterns of fluids, electrical and magnetic flux and related aspects

CO3: Develop skills in designing mathematical models for
- (a) R-C and L-R-C oscillatory electrical circuits
- (b) Heat transfer and Newton's law of cooling
- (c) Engineering concepts involving lengths of curves and areas of planes, Flux across surfaces

CO4: Develop analytical skills in solving the problems involving
- (a) Newton's law of cooling
- (b) non homogeneous linear differential equations
- (c) maximum and minimum values for the functions
- (d) lengths of curves, areas of surfaces and volumes of solids in engineering
- (e) transformation of integrals from three dimensional surfaces and volumes on to plane surfaces

CO5: Use relevant mathematical techniques for evaluating
- (a) various types of particular integrals in differential equations
- (b) stationary values for multi variable functions
- (c) multiple integrals in change of variables
- (d) integrations of vector functions.

DETAILED SYLLABUS:

UNIT-I: FIRST ORDER DIFFERENTIAL EQUATIONS (6 periods)

Linear and Bernoulli type, exact equations and reducible to exact. Orthogonal trajectories (Both Cartesian and polar forms). Newton's law of cooling.

UNIT II: HIGHER ORDER LINEAR DIFFERENTIAL EQUATIONS (9 periods)

Method for solution of linear equations- Differential operator *D*, Solution of second order linear homogeneous equations with constant coefficients, Solution of Higher order homogeneous linear equations with constant coefficients, **Solution of Non homogeneous linear equations**-Operator methods for finding particular integrals- for cases – e^{ax}, sin ax, cos ax, x^n, $e^{ax}V(x)$, xV(x). Method of Variation of parameters. Applications to oscillatory electrical circuits.

UNIT-III: FUNCTIONS OF SEVERAL VARIABLES (8 periods)

Functions of Two Variables: Limits, Continuity; **Partial Derivatives**: Total Differential and Derivatives, Jacobian, Functional dependence, Taylor's Theorem, maxima and minima of functions of two variables with and without constraints – Lagrange's method of undetermined multipliers.

UNIT-IV: APPLICATIONS OF INTEGRATION AND MULTIPLE INTEGRALS (10 periods)

Applications of integration to – lengths of curves, areas of surfaces of revolution, Double and Triple integrals – change of order of integration, change of variables in integrals. Area enclosed by plane curves, volumes of solids.

UNIT-V: VECTOR CALCULUS (12 periods)

Vector differentiation: Gradient of a scalar field and Directional Derivative, Divergence and Curl of a Vector field

Line integrals: Line integrals independent of path – work done.

Surface area and Surface Integrals: Surface Area, Surface Integrals, Flux across a surface.

Green's Theorem: Green's Theorem (without proof)-verification- applications

Gauss Divergence Theorem and Stoke's Theorem: Gauss Divergence theorem (without proof), Stokes's Theorem (without proof) –verifications and applications. **Total no. of periods: 45**

TEXT BOOK:

I B.Tech. - I Semester
(16BT10501) **PROGRAMMING IN C**
(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: NIL

COURSE DESCRIPTION:

Program design; Operators and Expressions; Data Input and Output; Control Statements; Functions; Arrays; Strings; Pointers; Structures & Unions and File handling Techniques;

COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO1: Demonstrate knowledge in:
- o Elements of C Language
- o Selection and Repetition statements.
- o Arrays, Strings and Functional statements.
- o Derived data types, Files and Pointers

CO2: Analyze complex engineering problems to develop suitable solutions

CO3: Design algorithms for specified engineering problems

CO4: Use appropriate 'C' language constructs for solving engineering problems

CO5: Write programs using 'C' language to implement algorithms

DETAILED SYLLABUS:

UNIT I – INTRODUCTION TO C PROGRAMMING, OPERATORS & EXPRESSIONS (08 periods)

Introduction to C Programming: The C Character set, Writing First Program of C, Identifiers and Keywords, Data types, Constants, Variables and Arrays, Declarations, Expressions, Statements and Symbolic Constants.

Operators and Expressions: Arithmetic Operators, Unary Operators, Relational and Logical Operators, Assignment Operators, the Conditional Operators.

UNIT II – DATA INPUT AND OUTPUT & CONTROL STATEMENTS (08 periods)

Data Input and Output: Single Character Input and Output, Input Data & Output data, The gets and puts Function.

Control Statements: Branching: The if-else Statement, Looping: The while Statement, More Looping: The do-while Statement, Still More Looping: The for Statement, Nested Control Statement, The switch Statement, The break & continue Statements, The goto Statement.

UNIT III – FUNCTIONS, PROGRAM STRUCTURES & ARRAYS (11 p*eriods*)

Functions: A Brief Overview, Defining a Function, Accessing a Function, Function Prototypes, Parsing Argument to a Function, Recursion.

Program Structure: Storage Classes, Automatic Variables, External (Global) Variables, Static Variables, Multi file Programs,

Arrays: Defining an Array, Processing an Array, Processing Array to function, Multidimensional Arrays. Linear search, Binary search, Fibonacci search, Bubble sort and Insertion sort

UNIT IV – STRINGS & POINTERS (09 periods)

Strings: Defining a String, NULL Character, Initialization of Strings, Reading and Writing a String, Processing a Strings, Character Arithmetic, Searching and Sorting of Strings, Library Functions for Strings.

Pointers: Pointer Declaration, Passing Pointers to a Function, Pointers and One-dimensional Arrays, Dynamic Memory Allocation, Operations on Pointers, Pointers and Multidimensional Arrays, Arrays of Pointers.

UNIT V – STRUCTURES AND UNIONS & FILE HANDLING (09 periods)

Structures and Unions: Defining a Structure, Processing a Structure, User-Defined Data types (typedef), Structures and Pointers, Passing Structures to Function, Self –Referential Structures, Unions

File Handling: Files introduction, Opening and Closing a Data File, Reading and Writing a Data File, Processing a Data File, Unformatted Data File, Concept of Binary Files, Accessing the File Randomly.

Total Periods: *45*

TEXT BOOK:

I B.Tech. - I Semester
(16BT1HS31) **ENGLISH LANGUAGE LAB**
(Common to CSE, CSSE, IT, CE & ME)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: English at intermediate or equivalent level.
COURSE DESCRIPTION: Phonetics Vocabulary Building; Functional Grammar; Just a Minute; Elocution/Impromptu; Giving Directions/Conversation Starters; Role Play; Public Speaking; Describing People, Places, Objects and Events; Reading Comprehension; Listening Comprehension; Information Transfer.
COURSE OUTCOMES:
On successful completion of this course, the students will be able to:
1. Demonstrate knowledge in
   - Phonetics
   - Information Transfer
2. Analyze the functional knowledge in
   - Vocabulary
   - Grammar
3. Design and develop functional skills for professional practice.
4. Apply the techniques of Listening and Reading skills to comprehend Listening and Reading comprehension.
5. Function effectively as an individual and as a member in diverse teams to demonstrate
   - Extempore talk and
   - Role Play
6. Communicate effectively in public speaking in formal and informal situations.
7. Recognize the need to engage in lifelong learning to upgrade competence of knowledge and communication.

LIST OF EXERCISES:
1. Phonetics
2. Vocabulary Building
3. Functional Grammar
4. Just a Minute
5. Elocution/Impromptu
6. Giving Directions/Conversation Starters
7. Role Play
8. Public Speaking
9. Describing People, Places, Objects and Events.
10. Reading Comprehension
11. Listening Comprehension
12. Information Transfer

10. Cambridge Advanced Learner's Dictionary - 3rd Edition.
11. Centronix - Phonetics.
12. Let's Talk English, Regional Institute of English South India.
13. The Ultimate English Tutor.

I B.Tech. - I Semester
(16BT1BS31) **ENGINEERING CHEMISTRY LAB**
(Common to CSE, CSSE, IT, CE & ME)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE REQUISITE: Intermediate/Senior Secondary Chemistry

COURSE DESCRIPTION: Estimation of hardness, alkalinity, dissolved oxygen of water samples and estimation of Iron by volumetric methods, determination of effect of P^H on rate of corrosion, measurement of viscosity of lubricants; Instrumental methods like potentiometer, conductivity meter, P^H meter and colorimeter; synthesis of Polymers and Nano materials.

COURSE OUTCOMES:

After completion of the course, a successful student is able to:

CO1: Acquire basic Knowledge about the volumetric analysis and synthesis of materials used for engineering applications.

CO2: Acquire analytical skills in the estimation of hardness of water, alkalinity of water, dissolved oxygen in water and estimation of Iron through wet laboratory methods.

CO3: Develop designing skills for the synthesis of polymers and Nanomaterials.

CO4: Acquire skills to use instrumental techniques for the determination of Electrical conductance of electrolytes, EMF of a cell, PH of a solution, determination of viscosity of lubricants and estimation of iron in cement.

CO5: Provide solutions for environmental issues through determination of quality of water.

List of Experiments:

A minimum of any **Ten** experiments are to be conducted among the following:.

1. Estimation of Hardness of water by EDTA method.
2. Estimation of alkalinity of Water.
3. Estimation of Dissolved Oxygen in water.
4. Estimation of Ferrous Iron by Dichrometry.
5. Preparation of Novalac Resin.
6. Synthesis of Nano metal-oxide using sol– gel process.
7. Conductometric titration of strong acid Vs strong base
8. Estimation of Ferrous ion by Potentiometry.
9. Determination of amount of corrosion of metals in different medium
10. Measurement of viscosity of lubricants by Ostwald viscometer.
11. Determination of P^H of a given solution by P^H metry.
12. Estimation of Ferric iron in cement by Colorimetric method.

Total Time Slots: 12

I B.Tech. - I Semester

(16BT10331) COMPUTER AIDED ENGINEERING DRAWING

(Common to CSE, CSSE, IT, CE & ME)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	1	6	3

PRE-REQUISITES: *None*

COURSE DESCRIPTION:

Engineering drawing conventions; importance of engineering drawing; fundamental concepts of sketching; computed aided drafting and different types of projections of geometric entities (both 2D and 3D) through computer aided drafting packages.

COURSE OUTCOMES:

After completion of the course, a successful student is able to:

- CO1: Understand, write and read the language of engineering drawing in industry through International System of Standards.
- CO2: Develop the imagination and mental visualization ability for interpreting the geometrical details of engineering objects.
- CO3: Produce different views and projection in drawing.
- CO4: Use modern CAD software for design and drafting of drawings.
- CO5: Create multi-view drawings suitable for presentation to Engineering community.
- CO6: Introduce and communicate universally accepted conventions and symbols for their usage in technical drawing.

DETAILED SYLLABUS:

UNIT : I - BASICS OF ENGINEERING DRAWING PRACTICE, GEOMETRICAL CONSTRUCTIONS, CONICS AND SPECIAL CURVES (18 periods)

Introduction, drawing instruments and its uses, sheet layout, BIS conventions, lines, lettering and dimensioning practices. Geometrical constructions: Construction of regular polygons: Pentagon, Hexagon, Heptagon and Octagon. Conic sections**:** Introduction, construction of ellipse: rectangular method, eccentricity method. Construction of parabola: rectangular method, eccentricity method. Construction of hyperbola: eccentricity method. Special curves***:*** cycloid, involute.

UNIT: II – INTRODUCTION TO COMPUTER AIDED SKETCHING (18 periods)

Computer screen, layout of the software, creation of 2D/3D environment, selection of drawing size and scale, Standard tool bar/menus, Coordinate system, description of most commonly used toolbars, navigational tools: commands and creation of lines, Co-ordinate points, axes, poly-lines, square, rectangle, polygons, splines, circles, ellipse, text, move, copy, off-set, mirror, rotate, trim, extend, break, chamfer, fillet, curves, constraints viz. tangency, parallelism, inclination and perpendicularity.

UNIT: III – PROJECTION OF POINTS, STRAIGHT LINES AND PLANES (21 periods)

Introduction, method of projection, planes of projection, reference line and notations. Projection of points: Points in all the four quadrants. Projection of straight lines**:** lines inclined to HP / VP plane, inclined to both HP and VP planes (straight lines are assumed to be in first quadrant only)**.** Projection of planes**:** projection of triangle, square, rectangle, rhombus, pentagon, hexagon and circular plane for the condition inclined to HP / VP by change of position method.

UNIT IV –PROJECTION OF SOLIDS AND SECTION OF SOLIDS (21 Periods)

Projections of Solids: Introduction, projection of solids: prisms, pyramids, cylinders and cones with axis perpendicular to VP/HP and axis inclined to VP/HP only. Sections of solids**:** Introduction, Cutting plane, sectional views of right regular solids resting with base on HP: prisms, pyramids, cylinder and cone and true shapes of the sections.

UNIT V –ORTHOGRAPHIC AND ISOMETRIC PROJECTIONS AND DEVELOPMENT OF SURFACES (22 periods)

Orthographic projection: simple exercises. Isometric projection: Simple exercises.
Development of surfaces: prisms, pyramids, cylinders, cone and miscellaneous surfaces

Total Periods: *100*

Note: *Student shall practice Unit-I using sketch book only and remaining units using sketch book first and later CAD package.*

I B.Tech - I Semester
(16BT10531) **PROGRAMMING IN C LAB**
(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: A course on "Programming in C"

COURSE DESCRIPTION: Hands on practice in developing and executing simple programs using C Programming constructs– Conditional statements, Loops, Arrays, Strings, Functions, Structures, Pointers and Functions.

COURSE OUTCOMES:

On successful completion of this course the students will be able to:

1. Demonstrate practical knowledge of using C language constructs:
   - Selection and Repetition statements.
   - Arrays, Strings and Functional statements.
   - Derived data types, Files and Pointers
2. Analyze problems to develop suitable algorithmic solutions
3. Design Solutions for specified engineering problems
4. Use appropriate 'C' language constructs for solving engineering problems
5. Implement and execute programs using 'C' language
6. Document programs and communicate effectively while conducting Professional transactions.

List of Exercises:

1. a. Let a and b are two integer variables whose values are 10 and 13 respectively. Write a program to evaluate the following arithmetic expressions.

   i) a + b   ii) a–b   iii) a * b   iv) a/b   v) a % b

   b. Write a program to evaluate the following algebraic expressions after reading necessary values from keyword.

   i) $(ax + b)/(ax - b)$

   ii) $2.5 \log x + \cos 32^0 + | x^2 + y^2 |$

   iii) $x^5 + 10 x^4 + 8$ and $x^3 + 4 x + 2$

   iv) ae^{kt}

2. a. Mr. Gupta deposited Rs.1000 in a bank. The bank gives simple interest at the rate of 15% per annum. Write a program to determine the amount in Mr. Gupta's account at the end of 5 years. (Use the formula I = P T R / 100)

   b. A cashier has currency notes of denominations Rs.10, Rs. 50 and Rs. 100. If the amount to be withdrawn is input in hundreds, find the total number of notes of each denomination the cashier will have to give to the withdrawer.

   c. In a town, the percentage of men is 52. The percentage of total literacy is 48.If total percentage of literate men is 35 of the total population; write a program to find the total number of illiterate men and women if the population of the town is 8000.

3. a. Write a program that prints the given 3 integers in ascending order using if - else.

   b. Write a program to calculate commission for the input value of sales amount.

   Commission is calculated as per the following rules:

   i) Commission is NIL for sales amount Rs. 5000.

   ii) Commission is 2% for sales when sales amount is >Rs. 5000 and <= Rs. 10000.

   iii) Commission is 5% for sales amount >Rs. 10000.

   c. A character is entered through keyboard. Write a program to determine whether the character entered is a capital letter, a small case letter, a digit or a special symbol. The following table shows the range of ASCII values for various characters.

Characters ASCII values

Characters	ASCII values
A - Z	65 - 90
a - z	97- 122
0 - 9	48 - 57
Special Symbols	0 - 47, 58 - 64, 91- 96, 123 - 127

4. a. If cost price and selling price of an item is input through the keyboard, write program to determine whether the seller has made profit or incurred loss. Also determine how much profit or loss he incurred in percentage.

b. An insurance company calculates premium as follows:

i. If a person's health is excellent and the person is between 25 and 35 years of age and lives in a city and is a male then premium is Rs.4 per thousand and the policy amount cannot exceed Rs.2 lakhs.

ii. If a person satisfies all the above conditions and is female then the premium is Rs.3 per thousand and the policy amount cannot exceed Rs.1 lakh.

iii. If a person's health is poor and the person is between 25 and 35 years of age and lives in a village and is a male then premium is Rs.6 per thousand and the policy cannot exceed Rs. 10000.

iv. In all other cases the person is not insured.

Write a program to determine whether the person should be insured or not, his/her premium rate and maximum amount for which he/she can be insured.

5. a. Write a program, which takes two integer operands and one operator as input from the user, performs the operation and then prints the result. (Consider the operators +,-,*, /, %. Use switch statement)

b. Write a program to find the grace marks for a student using switch. The user should enter the class obtained by the student and the number of subjects he has failed in. Use the following rules:

i. If the student gets first class and the number of subjects failed is >3, then no grace marks are awarded. If the number of subjects failed is less than or equal to '3' then the grace is 5 marks per subject.

ii. If the student gets second class and the number of subjects failed in is >2, then no grace marks are awarded. If the number of subjects failed in less than or equal to '3' then the grace is 4 marks per subject.

iii. If the student gets third class and the number of subjects failed in is >1, then no grace marks are awarded. If the number of subjects failed in is equal to '1' then the grace is 5 marks per subject.

6. a. Write a program to find the sum of individual digits of a positive integer.

b. A Fibonacci sequence is defined as follows:

The first and second terms in the sequence are 0 and 1. Subsequent terms are found by adding the preceding two terms in the sequence. Write a program to generate the first N terms of the sequence.

Write a program to generate all the prime numbers between 1 and N, where N is a value supplied by the user.

7. a. Write a program to find the largest and smallest number in a given list of integers.

b. Write a program to perform the following:

i. Addition of two matrices.

ii. Multiplication of two matrices.

8. a. Write a program that uses functions to perform the following operations:

i. To insert a sub-string in main string at a specified position.

ii. To delete N characters from a given string from a specified position.

b. Write a program to determine whether the given string is palindrome or not.

c. Write a program to display the position or index in the main string S where the sub string T begins. Display -1 if S does not contain T.

d. Write a program to count the number of lines, words and characters in a given text.

9. a. Write a program to read list of student names and perform the following operations using functions.
   i. to print list of names
   ii. to sort them in ascending order
   iii. to print the list after sorting.
   b. Write a menu driven program to read list of student names and perform the following operations using array of character pointers.
   i. to insert a student name
   ii. to delete a name
   iii. to print the name
10. Write a program that uses functions to perform the following operations:
   i. Reading a complex number
   ii. Writing a complex number
   iii. Addition of two complex numbers
   iv. Multiplication of two complex numbers
   (**Note:** Represent complex number using a structure.)
11. a. Write a program to accept the elements of the structure as:
   Employee-name,Basic pay
   Display the same structure along with the DA, CCA and Gross salary for 5 employees.
   Note: DA=51% of Basic pay, CCA=Rs.100.consolidated.
   b. Define a structure to store employee's data with the following specifications:
   Employee-Number, Employee-Name, Basic pay, Date of Joining
   i. Write a function to store 10 employee details.
   ii. Write a function to implement the following rules while revising the basic pay.
   If Basic pay<=Rs.5000 then increase it by 15%.
   If Basic pay> Rs.5000 and <=Rs.25000 then it increase by 10%.
   If Basic pay>Rs.25000 then there is no change in basic pay.
   Write a function to print the details of employees who have completed 20 years of service from the date of joining.
12. a. Write a program which copies one 'text file' to another 'text file'.
   b.Write a program to reverse the first N characters of a given text file.
   Note: The file name and N are specified through command line.
13. Write a program to print the output by giving the Customer_ID as an input.

I B.Tech. - II Semester
(16BT1BS02) **ENGINEERING PHYSICS**
(Common to CSE, CSSE, IT, CE & ME)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Intermediate / senior secondary Physics
COURSE DESCRIPTION: Lasers; optical fibers; principles of quantum mechanics; band theory of solids; semiconductors; dielectric properties of materials; acoustics of buildings; superconductors; crystallography and nanomaterials.
COURSE OUTCOMES:
On successful completion of this course, the students will be able to:
1. Acquire basic knowledge of lasers, optical fibers, quantum mechanics, dielectrics, semiconductors, and superconductors, acoustic of buildings, crystallography and nanomaterials.
2. Analyze the construction and working of various laser systems, semiconductor devices, various types of optical fibers and its communication system and nano materials properties.
3. Gain skills in designing lasers, optical fiber cable, semiconductor devices, acoustically good halls and nanomaterials.
4. Develop problem solving skills in engineering context.
5. Use relevant techniques for assessing ball milling, pulsed laser deposition, p-n junction and Laser.

DETAILED SYLLABUS:
UNIT-I: LASERS AND FIBER OPTICS
Lasers: Introduction, characteristics of lasers, spontaneous and stimulated emission of radiation, Einstein's coefficients – condition for amplification, population inversion, Nd: YAG laser, Helium-Neon laser, semiconductor laser and applications of lasers.
Fiber optics: Introduction, principle of optical fiber, acceptance angle, acceptance cone and numerical aperture, classification of optical fibers, optical fiber communication system and applications of optical fibers.
UNIT-II:PRINCIPLES OF QUANTUM MECHANICS AND BAND THEORY OF SOLIDS
Principles of Quantum Mechanics: Introduction, de-Broglie's hypothesis, Schrödinger's one dimensional wave equation (time independent), significance of wave function, particle in a one dimensional potential box, Fermi-Dirac distribution and effect of temperature (qualitative treatment).
Band Theory of Solids: Electron in a periodic potential, Kronig-Penney model (qualitative treatment), origin of energy bands formation in solids, distinction between conductors, semiconductors and insulators based on band theory.
UNIT-III: SEMICONDUCTORS AND DIELECTRIC PROPERTIES OF MATERIALS
Semiconductors: Introduction, types of semiconductors, intrinsic carrier concentration, electrical conductivity in semiconductors, drift and diffusion currents, Einstein's relation, Hall effect and its applications, direct and indirect band gap semiconductors, p-n junction, energy band diagram of p-n diode, LED, photo diode and Solar cell.
Dielectric Properties of Materials: Introduction, dielectric constant, electronic, ionic and orientation polarizations (qualitative treatment), local field, frequency dependence of polarizability (qualitative treatment), ferroelectricity.
UNIT-IV: ACOUSTICS OF BUILDINGS AND SUPERCONDUCTIVITY
Acoustics of Buildings: Introduction, basic requirement of acoustically good hall, reverberation and time of reverberation, Sabine's formula for reverberation time (qualitative treatment), absorption coefficient of sound and its measurement, factors affecting the architectural acoustics and their remedies.
Superconductivity: Introduction, General properties - Meissner effect, penetration depth, Type-I and Type-II superconductors, flux quantization, Josephson effects, BCS theory (qualitative treatment), applications of superconductors.
UNIT-V: CRYSTALLOGRAPHY AND NANOMATERIALS
Crystallography: Introduction, crystal planes, crystal directions and Miller indices, separation between successive (hkl) planes, X-ray diffraction by crystal planes, Bragg's law- powder method.
Nanomaterials: Introduction, principles of nanomaterials, properties of nanomaterials, synthesis of nanomaterials by ball milling and pulsed laser deposition and applications of nanomaterials.

(16BT2BS01) TRANSFORMATION TECHNIQUES AND PARTIAL DIFFERENTIAL EQUATIONS

(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE REQUISITE: Intermediate /Senior secondary mathematics

COURSE DESCRIPTION: Fourier series; Fourier integrals and transforms; Laplace transforms; z – transforms; partial differential equations.

COURSE OUTCOMES:

After completion of the course a successful student is able to

CO1: Acquire basic knowledge in
- (a) Fourier series and Fourier transforms
- (b) Fourier integrals
- (c) Laplace transforms and their applications
- (d) z- transforms and their applications
- (e) solving partial differential equations

CO2: Develop skills in analyzing the
- (a) Properties of Fourier series for a given function
- (b) Partial differential equations through different evaluation methods
- (c) Difference equations through z – transforms
- (d) Engineering systems and processes involving wave forms and heat transfer

CO3: Develop skills in designing mathematical models for
- (a) Problems involving heat transfer and wave forms
- (b) Engineering concepts involving, Fourier transforms, Fourier integrals, Laplace transforms, z-transforms and difference equations

CO4: Develop analytical skills in solving the problems involving
- (a) Fourier series and Fourier transforms
- (b) Laplace transforms
- (c) Z-transforms and difference equations
- (d) Heat transfer and wave motion

CO5: Use relevant transformation techniques for
- (a) Obtaining Fourier transforms for different types of functions
- (b) Laplace transforms
- (c) Z- transforms
- (d) Partial differential equations

DETAILED SYLLABUS

UNIT- I : FOURIER SERIES **(7 periods)**

Fourier series: Determination of Fourier coefficients, convergence of Fourier series (Dirichlet's conditions), Fourier series of even and odd functions, Half-range Fourier sine and cosine expansions.

UNIT- II: FOURIER INTEGRALS AND FOURIER TRANSFORMS **(8 periods)**

Fourier integral theorem (statement only), Fourier sine and cosine integrals, Fourier transform, Fourier sine and cosine transforms –properties, Inverse transform and finite Fourier transforms.

UNIT-III: LAPLACE TRANSFORMS **(12 periods)**

Laplace transforms of standard functions. Properties of Laplace transforms. First and second shifting Theorems. Laplace transforms of derivatives and integrals. Inverse transforms. Convolution theorem (without proof), inverse Laplace transforms by convolution theorem. Laplace transform of periodic functions, Applications of Laplace transforms to ordinary differential equations of first and second order with constant coefficients.

UNIT-IV: Z- TRANSFORMS **(9 periods)**

Z – transforms, inverse Z– transforms, damping rule, shifting rule, initial and final value theorems. Convolution theorem (without proof), solution of difference equations by Z– transforms.

UNIT – V: PARTIAL DIFFERENTIAL EQUATIONS **(9 periods)**

Formation of Partial differential equations – Solutions of first order linear equations by method of grouping. First and second order equations by method of separation of variables – Solutions of one dimensional Wave equation, Heat equation. **Total no. of periods: 45**

I B.Tech. - II Semester

(16BT20441) BASIC ELECTRONIC DEVICES AND CIRCUITS

(Common to CSE, CSSE & IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: A course on Engineering Physics.

COURSE DESCRIPTION:
Characteristics of general and special purpose electronic devices; Rectifiers; Biasing of BJT; FET, Feedback Amplifiers, Oscillator.

COURSE OUTCOMES: On successful completion of this course the students will be able to

CO1: Gain in-depth knowledge in
- *p-n* junction diode and its characteristics
- Zener diode and its characteristics
- Rectifiers and Filters
- Characteristics of BJT, FET, MOSFET and special purpose electronic devices.
- FET amplifiers
- Feedback amplifiers and Oscillators

CO2: Analyze numerical and analytical problems in
- Rectifiers using Filters
- Transistor biasing circuits
- FET biasing circuits and amplifiers
- Feedback amplifiers and oscillators

CO3: Design electronic circuits such as
- Rectifiers with and without filters
- BJT and FET biasing circuits
- FET amplifiers
- Feedback amplifiers and oscillators

CO4: Solve engineering problems and arrive at solutions pertaining to electronic circuits.

CO5: Select appropriate technique for transistor biasing.

DETAILED SYLLABUS

UNIT-I: *P-N JUNCTION DIODE AND RECTIFIERS* **(10 Periods)**

P-N JUNCTION DIODE

P-N Junction Diode Equation, Volt-Ampere (V-I) Characteristics, Temperature Dependence of V-I Characteristics, Ideal Versus Practical, Static and Dynamic Resistances, Diode Equivalent circuits, Junction capacitances, Break down mechanisms in semiconductor Diodes, Zener Diode Characteristics.

RECTIFIERS

Halfwave rectifier and Fullwave rectifiers (Qualitative and quantitative analysis), Harmonic components in a rectifier circuit, Inductor filter, Capacitor filter, L - section filter, ð - section filter, Problems on rectifier circuits.

UNIT-II: *BIPOLAR JUNCTION TRANSISTOR AND BIASING* **(11 Periods)**

CHARACTERISTICS:

Transistor construction, BJT Operation, Transistor as an amplifier, Transistor currents and their relations, Input and Output Characteristics of a Transistor in Common Emitter, Common Base and Common Collector Configurations, BJT specifications, transistor hybrid model for CE configuration – analytical expressions for transistor characteristics.

BIASING:

Transistor biasing, Operating Point, DC and AC Load Lines, Importance of Biasing, Fixed Bias, Emitter Feedback Bias, Collector to Emitter Feedback Bias, Voltage Divider Bias.

UNIT-III: *FIELD EFFECT TRANSISTOR* **(10 Periods)**

Construction, Principle of Operation and Characteristics of JFET and MOSFET (Enhancement & Depletion), Biasing of FET, Small Signal Model of JFET & MOSFET. Common Source and Common Drain Amplifiers using FET, Generalized FET Amplifier, FET as Voltage Variable Resistor, Comparison between BJT and FET.

UNIT-IV: *FEEDBACK AMPLIFIERS AND OSCILLATORS* **(8 Periods)**

Feedback Concepts, Types of Feedback Circuits (block diagram representation), General characteristics of negative feedback amplifier, Effect of Feedback on Amplifier characteristics. Barkhausen criterion, Hartley & Colpitts oscillators, Phase Shift Oscillators and Crystal Oscillator.

UNIT-V: *SPECIAL PURPOSE ELECTRONIC DEVICES* **(6 Periods)**

Principle of Operation and Characteristics of Tunnel Diode, Uni-Junction Transistor (UJT), Varactor Diode, Silicon Control Rectifier (SCR). Principle of operation of Schottky Barrier Diode.

Total Periods: 45

(16BT21201) OBJECT ORIENTED PROGRAMMING THROUGH C++

(Common to CSE, CSSE & IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	4	1	-	4

PREREQUISITES: A Course on "Programming in C".

COURSE DESCRIPTION:

Introduction to Object Oriented concepts and Fundamental Concepts of C^{++}; Decision Making Statements, Looping Statements and Functions; Arrays, Pointers & References and Strings; Classes & Objects and Overloading Operators; Composition & Inheritance, Templates, Iterators & Generics and File Handling;

COURSE OUTCOMES:

On successful completion of this course, the students will be able to:

- **CO1:** Demonstrate knowledge on object oriented programming concepts - Object, Class, Inheritance, Polymorphism, Encapsulation, Abstraction and Message passing.
- **CO2:** Identify object oriented concepts for code reusability and optimization.
- **CO3:** Design and develop solutions for given specifications.
- **CO4:** Demonstrate problem solving skills to provide software solutions to real world problems.
- **CO5:** Develop C^{++} programming to provide solutions to complex engineering problems using object oriented concepts.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION AND FUNDAMENTAL CONCEPTS (Periods: 10)

An introduction to object technology: Objects and methods, Object: A practical example, Classes, Declaring classes and objects.

Key Object Orientation concepts and Elementary C++ programming: Abstraction, Encapsulation, Aggregation/composition, Inheritance, Some simple programs, The output operator, Characters and literals, Variables and their declarations, Program tokens, Initializing variables, Objects, variables and constants, The input operator.

Fundamental types: Numeric data types, The Boolean types, Enumeration types, Character types, Integer types, Arithmetic operators, The increment and decrement operators, composite Assignment operators, Floating –point types, Type conversions, Numeric overflow, Round-off error, The format for floating –point values, Scope.

UNIT-II:DECISION MAKING STATEMENTS, LOOPING STATEMENTS AND FUNCTIONS (Periods:10)

Decision making statements: The if statement, The if-else statement, Keywords, Comparison operators, Statement blocks, Compound Conditions, Short- circuiting, Boolean expressions, Nested selection statements, The else-if statement, The switch statement, The conditional expression operator.

Looping Statements: The while statements, Terminating a loop, the do-while statement, the for statement, the break statement, the continue statement, the goto statement, Generating pseudo-random numbers

Functions: Introduction, Standard c++ library functions, User-defined functions, Test drivers, function declarations and definitions, Local variables and functions, void functions, Boolean functions, I/O functions, passing by reference, passing by constant reference, Inline functions, Scope, Overloading, The main () function, Default arguments

UNIT-III: ARRAYS, POINTERS & REFERENCES AND STRINGS (Periods: 12)

Arrays: Introduction, processing arrays, initializing an array, Array index out of bounds, passing an array to a function, the linear search algorithm, the bubble sort algorithm, the binary search algorithm, Using arrays with enumeration types, Type definitions, Multidimensional arrays.

Pointers and References: The reference operator, References, Pointers, the dereference operator, Derived types, Objects and lvalues, Returning a reference.

C++ Strings: Introduction, working with strings in C++, String manipulation, Strings and arrays, miscellaneous string functions, String streams

UNIT-IV: CLASSES & OBJECTS AND OVERLOADING OPERATORS (Periods: 12)

Classes and objects: Introduction, Class declarations, Constructors, Constructor initialization lists, Access functions, Private member functions, The copy constructor, The class destructor, Constant Objects, Structures, Pointers to object, Static data members, static function members, predefined classes, Data hiding and encapsulation, Exception handling

Overloading Operators: Introduction, Overloading the assignment operator, The this operator, Overloading Arithmetic operator, Overloading the arithmetic assignment operator, Overloading the relational patterns, Overloading the stream operators, Conversion operators, Overloading the increment and decrement operators, Overloading the subscript operator

UNIT-V: COMPOSITION & INHERITANCE, TEMPLATES, ITERATORS & GENERICS AND FILE HANDLING (Periods: 11)

Composition and inheritance: Introduction, Composition, Inheritance, protected class members, Overriding and dominating inherited members, private access versus protected access, virtual functions and polymorphism, virtual destructors, Virtual functions, pure virtual functions, Abstract classes, object-oriented programming.

Templates, iterators and Generics: Introduction, Function templates, Class templates, Container classes, Subclass templates, passing template classes to template parameters, Iterator classes, Generic programming **C++ File Handling:** File I/O **(Total Periods: 55)**

TEXT BOOKS:

1. John R Hubbard, *Programming with C^{++}*, 3rd Edition, Tata McGraw-Hill, 2010.

2. P. B. Mahapatra, "Thinking in C++", 1st Edition, Galgotia Publications Pvt. Ltd, 2005.

(16BT21501) DIGITAL LOGIC DESIGN

(Common to CSE, CSSE & IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: -NIL-

COURSE DESCRIPTION: Introduction to number systems; logic gates; Boolean Algebra; simplification of Boolean functions; Design of combinational circuits; Design of sequential circuits, Memory and Programmable Logic

COURSE OUTCOMES:

On Successful completion of this course student will be able to:

CO1. Demonstrate knowledge on Boolean algebra, Minimization of Boolean functions using Map Reduce method.

CO2. Identify appropriate simplification techniques for Boolean functions.

CO3. Design combinational and sequential logic circuits, memory and programmable logic for digital systems.

CO4. Select and Apply Boolean algebra and gate level minimization techniques for designing combinational and sequential logic circuits.

CO5. Learn independently new concepts, new techniques and advanced subject knowledge in the area of combinational and sequential logic circuits.

DETAILED SYLLABUS:

UNIT I – BINARY SYSTEMS AND BOOLEAN ALGEBRA (10 periods)

Digital Systems, Binary Numbers, Number base conversions, Octal and Hexadecimal Numbers, Signed binary numbers, other binary codes, complements. Boolean Algebra, Boolean functions, Canonical and standard forms, Digital logic gates

UNIT II – GATE LEVEL MINIMIZATION (9 periods)

The K-map method - Four-variable map, Five-Variable map, product of sums and sum of products simplification, Don't-care conditions, NAND and NOR implementations, other Two-level implementations, Exclusive – OR function

UNIT III – COMBINATIONAL LOGIC (9 p*eriods*)

Combinational Circuits, Analysis procedure, Design procedure, Binary Adder-Subtractor, BCD Adder, Carry- Look- ahead adder, Binary multiplier, Magnitude Comparator, Decoders, Encoders, Multiplexers, De-Multiplexers.

UNIT IV – SEQUENTIAL LOGIC (9 periods)

Latches, Flip-Flops, Analysis of clocked sequential circuits, Design of synchronous sequential circuits, registers, shift registers, Ripple counters, Synchronous counters, Ring Counter and Johnson Counter.

UNIT V–MEMORY AND PROGRAMMABLE LOGIC (8 p*eriods*)

Random-Access Memory, Memory Decoding, Error Detection and Correction, Read-only memory, Programmable logic Array, programmable Array logic, Sequential Programmable Devices.

Total Periods: *45*

TEXT BOOK:

I B.Tech. - II Semester
(16BT1BS32) ENGINEERING PHYSICS LAB
(Common to CSE, CSSE, IT, CE & ME)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: Intermediate / senior secondary Physics.

COURSE DESCRIPTION:

Characteristics of p-n junction diode, Photodiode, LED, and semiconductor laser diode. Experimental determination of carrier concentration and energy gap of a semiconductor material, wave length of a laser source, size of fine particle, numerical aperture and acceptance angle of optical fiber. Determination of frequency of electrically vibrating tuning fork and A.C source using A.C sonometer, magnetic field along axial line of a current carrying coil and rigidity modulus of material of a wire using torsional pendulum.

COURSE OUTCOMES:

After completion of the course, a successful student will be able to:

CO1: Acquire basic knowledge about semiconductor materials, magnetic materials and lasers.

CO2: Acquire analytical skills in the estimation of carrier concentration of semiconductor materials and characterization of p-n junction.

CO3: Develop skills in designing electronic circuits using semiconductor components.

CO4: Acquire skills to use instrumental techniques in A.C sonometer and Melde’s experiment.

CO5: Apply diffraction techniques for determination of size of tiny particles and wave length of lasers.

ENGINEERING PHYSICS LAB

Conduct a minimum of any **Ten** of the following experiments.

1. Determination of wavelength of a laser source using Diffraction Grating.
2. Determination of particle size by using a laser source.
3. Determination of Numerical aperture and acceptance angle of an optical fiber.
4. Melde’s experiment - transverse & longitudinal modes.
5. Magnetic field along the axis of a current carrying coil- Stewart and Gee’s method.
6. Calculation of A.C frequency using sonometer.
7. I-V Characteristics of a p-n Junction diode.
8. Energy gap of a material of a p-n Junction.
9. Characteristics of LED source.
10. Characteristics of Photo diode.
11. Hall Effect.
12. Determination of rigidity modulus of the material of the wire using torsional pendulum.

I B.Tech II semester

(16BT20451) ANALOG AND DIGITAL ELECTRONICS LAB

(Common to CSE, CSSE & IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: Courses on "Basic Electronic Devices & Circuits and Digital Logic Design"

COURSE DESCRIPTION: Identification and testing of active and passive components; RPS, DMM, Function Generator, CRO; Diode characteristics; Rectifiers; BJT and FET characteristics; UJT and SCR characteristics; BJT Amplifiers; Realization of FFs, Combinational Circuits, sequential Circuits; Demonstration on VHDL Programme.

COURSE OUTCOMES: On successful completion of this course, the student will be able to:

CO1. Demonstrate knowledge in different electronic devices, analog and digital circuits

CO2. Analyze the characteristics of different electronic devices and circuits like

- Diodes p-n Junction Diodes, Zener Diodes, SCR
- Transistors-BJT,FET,UJT
- Flip Flops-JK FF, D FF
- Combinational Circuits-HA, FA
- Sequential Circuits -Counters

CO3. Design electronic circuits like FET Amplifiers, Feedback amplifiers, Oscillators, Combinational Circuits and Sequential Circuits.

CO4. Solve engineering problems by proposing potential solutions through Design of better electronic circuits.

CO5. Model an electronic circuit which fulfil the needs of the society.

CO6: Function effectively as an individual and as a member in a group

CO7: Communicate effectively in verbal and written form.

DETAILED SYLLABUS:

PART A

ELECTRONIC WORKSHOP PRACTICE (Only for Viva-Voce)

1. Identification, Specifications, Testing of R, L, C Components (Colour Codes), Potentiometers, Switches (SPDT, DPDT, and DIP), Coils, Gang Condensers, Relays, Bread Boards. Identification, Specifications and Testing of Active Devices: Diodes, BJTs, Low-power JFETs, MOSFETs, LEDs, LCDs, SCR, UJT, Linear and Digital ICs.

PART B

ANALOG DEVICES AND CIRCUITS (Minimum seven experiments to be conducted)

1. p-n Junction and Zener diodes characteristics
2. Ripple Factor and Load Regulations of Rectifier with and without filters (Full wave or Half wave)
3. Input and Output characteristics of Transistor in CE configuration
4. Drain and Transfer Characteristics of JFET
5. Gain and Frequency response of FET Amplifier
6. Gain and Frequency response of Feedback Amplifier (Voltage series or current series)
7. Frequency of oscillations of Hartley and Colpitts Oscillator
8. UJT relaxation oscillator
9. SCR characteristics

PART C

DIGITAL CIRCUITS

Realization of

1. Flip Flops using Logic Gates
2. Two Problems on Combinational Circuits
3. Asynchronous Counter
4. Synchronous Counter

Demonstration of

I B.Tech. - II Semester
(16BT21231) IT Workshop

(Common to IT & CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: —Nil—

COURSE DESCRIPTION:

Practice sessions on PC hardware, Internet, World Wide Web, LibreOffice Suite. Demonstrations on installations of system software such as MS-Windows, Linux and device drivers, hardware and software troubleshooting, and protecting the personal computer from viruses and other cyber attacks are include.

COURSE OUTCOMES:

On successful completion of this course, the students will be able to:

1. Demonstrate analytical skills in:
   - Identification of functional parts of PC
   - Internet and World Wide Web.
   - Computer security issues and preventive measures.
   - Operating Systems.
2. Design document and presentations effectively.
3. Apply modern tools to develop IT based applications.
4. Demonstrate effective communication skills through IT tools.
5. Update knowledge and skills in PC maintenance and usage of latest Operating Systems and Office automation tools.

LIST OF EXERCISES:

1. PC Hardware

a. Identify the peripherals of a personal computer, components in a Central Processing Unit (CPU) and its functions, block diagram of CPU along with the configuration of each peripheral.

b. Demonstrating assembling and disassembling of the Personal Computer.

c. Introduction to Operating Systems, components of OS, installation of Microsoft Windows-XP Operating System.

2. Operating System

a. Introduction to LINUX OS, installation of LINUX OS, Basic commands in LINUX - cat, ls, pwd, rm, rmdir, cd, cp, mv, who, date, cal, clear, man, wc

b. Introduction to DOS, Basic DOS commands – mkdir, cd, cls, del, copy, attrib, date, path, type, format, exit.

3. Hardware & Software Troubleshooting: Diagnosis of PC malfunction, types of faults, common issues and how to fix them. Basic Hardware & Software troubleshooting steps, PC diagnostic tools.

4. Libre Office:

a. Libre Writer

Introduction to Writer, importance of Writer as Word Processor, overview of toolbars , saving, accessing files, using help and resources.

i). Create a document using the features: Formatting fonts, drop cap, bullets and numbering, text effects, character spacing, borders and shading, tables, text direction, hyperlink, headers and footers, date and time.

ii). Create a document in using the features: picture effects, clipart, auto shapes & grouping, page setup, paragraph indentation, wrap text, footnote and equations.

5. Libre Calc

a. Introduction to Calc as a spreadsheet tool, overview of toolbars, accessing, saving Calc files, using help and resources.

i). Create a spreadsheet using the features: gridlines, format cells, auto fill, formatting text, formulae, table and charts.

ii). Create a spreadsheet using the features: split cells, text to columns, sorting,filter, conditional formatting, freeze panes, pivot tables, data validation.

6. Libre Impress:

a. Demonstration on Impress, utilities, overview of toolbars, PPT orientation, slide layouts, types of views.

i). Create a Presentation using the features: slide layouts, inserting text, formatting text, bullets and numbering, auto shapes, hyperlinks, pictures, clip art, audio, video, tables and charts.

ii). Create a Presentation using the features: slide design, slide hiding, slide transition, animation, rehearse timings and custom slideshow.

7. Libre Draw: Draw vector graphics and flowcharts using Libre draw tools.

8. LibreBase: Create a sample database using Libre Base(Ex: Student database).

9. Introduction LaTeX Tool. Create a document using the features: formatting fonts, applying text effects, insert pictures and images, using date and time option.

10. Internet & Computer Security

    Introduction to computer networking, demonstration on network components, drivers loading and configuration settings, mapping of IP addresses, configuration of Internet and Wi-Fi.

11. Search Engines and Cyber Hygiene:

    Working of search engine, Awareness of various threats on Internet, types of attacks and how to overcome. Installation of antivirus software, configuration of personal firewall and Windows update on computers.

12. Students should implement exercises 6 to 9 using MS- Office tool.

I B.Tech. - II Semester
(16BT21232) **OBJECT ORIENTED PROGRAMMING LAB**

(Common to CSE, CSSE & IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: A Course on "OOPS through C++".

COURSE DESCRIPTION:
Hands-on experience on creating Virtual machines on Windows and Linux platforms, Development of Service based web applications & their deployment and Mobile app development.

COURSE OUTCOMES:
On successful completion of this course, the students will be able to:
1. Demonstrate practical knowledge on Object oriented programming concepts - Object, Class, Inheritance, Polymorphism, encapsulation, Abstraction, message passing.
2. Apply object oriented programming concepts to develop real world applications.
3. Demonstrate Problem solving skills using basic and advanced concepts of C++.
4. Work individually and in teams collaboratively in implementing the applications.
5. Demonstrate communication skills both oral and written for preparing and presenting reports.

LIST OF EXERCISES:
1. a. Write a C++ program that takes length as input in feet and inches. The program should then convert the lengths in centimeters and display it on screen. Assume that the given lengths in feet and inches are integers.
   b. Write a C++ program to find the sum for the given variables using function with default arguments.
2. Implement the Number Guessing Game in C++ with the given instructions. In this game the computer chooses a random number between 1 and 100, and the player tries to guess the number in as few attempts as possible. Each time the player enters a guess, the computer tells him whether the guess is too high, too low, or right. Once the player guesses the number, the game is over.
3. Write a program to perform arithmetic operations on two numbers. The program must be menu driven, allowing to select the operation (+, -, *, or /) and input the numbers. Furthermore, the program must consist of following functions:
   i) Function showChoice: This function shows the options and must explain how to enter data.
   ii) Function add: This function accepts two number as arguments and returns sum.
   iii) Function subtract: This function accepts two number as arguments and returns their difference.
   iv) Function multiply: This function accepts two number as arguments and returns product.
   v) Function divide: This function accepts two number as arguments and returns quotient.
4. Write a menu driven C++ program with following option
   a. Accept elements of an array
   b. Display elements of an array
   c. Sort the array using bubble sort method
   Write C++ functions for all options. The functions should have two parameters name of the array and number of elements in the array.
5. X. Y, Z are arrays of integers of size M, N, and M + N respectively. The numbers in array X and Y appear in descending order. Write a user-defined function in C++ to produce third array Z by merging arrays X and Y in descending order.
6. a. Write a program to enter any number and find its factorial using constructor.
   b. Write a program to generate a Fibonacci series using copy constructor.
7. Write a program to perform addition of two complex numbers using constructor overloading. The first constructor which takes no argument is used to create objects which are not initialized, second which takes one argument is used to initialize real and imaginary parts to equal values and third which takes two argument is used to initialized real and imaginary to two different values.
8. a. Write a program to overload unary increment (++) operator.
   b. Write a program to overload binary + operator.
9. a. Define a class TEST in C++ with following description:

Private Members

TestCode of type integer
Description of type string
NoCandidate of type integer
CenterReqd (number of centers required) of type integer
A member function CALCNTR() to calculate and return the number of centers as (NoCandidates/100+1)

Public Members

- A function SCHEDULE() to allow user to enter values for TestCode, Description, NoCandidate & call function CALCNTR() to calculate the number of Centres
- A function DISPTEST() to allow user to view the content of all the data members

b. Define a class REPORT with the following specification:

Private members :

adno	4 digit admission number
name	20 characters
marks	an array of 5 floating point values
average	average marks obtained
GETAVG()	a function to compute the average obtained in five subject

Public members:

READINFO()	function to accept values for adno, name, marks. Invoke the function GETAVG()
DISPLAYINFO()	function to display all data members of report on the screen.

You should give function definitions.

10. a.Create a base class basic_info with data members name ,rollno, gender and two member functions getdata and display. Derive a class physical fit from basic_info which has data members height and weight and member functions getdata and display. Display all the information using object of derived class.
    b. Create a class called LIST with two pure virtual function store() and retrieve().To store a value call store and to retrieve call retrieve function. Derive two classes stack and queue from it and override store and retrieve.
11. a. Write a program to define the function template for swapping two items of the various data types such as integer, float, and characters.
    b. Write a program to define the class template for calculating the square of given numbers with different data types.
12. a. Write a C++ program to write number 1 to 100 in a data file NOTES.TXT.
    b. Write a program to read a set of lines from the keyboard and to store it on a specified file.
    Any one of the following mini projects are to be implemented by a group of 4-5 students.

1. Mini Project : Banking System
   Develop an application on BANKING SYSTEM which has account class with data members like account number, name, deposit, withdraw amount and type of account. Customer data is stored in a binary file. A customer can deposit and withdraw amount in his account. Must support the features of creation, modifying and deletion account any time.
2. Mini Project : Library Management System
   Develop an application on LIBRARY MANAGEMENT SYSTEM which has book and student class with data members like book no, bookname, authorname. Books records is stored in a binary file. A student can issue book and deposit it within 15 days. Student is allowed to issue only one book. Student Records are stored in binary file. Administrator can add, modify or delete record.
3. Mini Project : Supermarket Billing System
   Develop a simple console application for SUPERMARKET BILLING SYSTEM which has product class with data members like product no, product name, price, quantity, tax, discount. Product details is stored in a binary file. A customer can purchase product and his invoice generated. Administrator can create, modify, view and delete product record.

II B.Tech. - I Semester

(16BT3BS01) PROBABILITY DISTRIBUTIONS AND STATISTICAL METHODS

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Intermediate/senior secondary mathematics.

COURSE DESCRIPTION: Random variables; Mathematical expectations; Probability distributions; Correlation and regressions; Statistical quality control; Sampling distributions; Tests for small and large samples and their significances.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Acquire basic knowledge on:
- Probability distributions, correlation and regressions.
- Statistical quality control and testing of hypotheses.
- Simple linear regression.
- Tests of significance for small and large samples.

C02 Develop skills for analyzing the data with:
- Mathematical expectations for realistic results.
- Probability distributions for practical situations.
- Control charts of statistical quality control. Correlation and regression concepts.
- Suitable tests of significance for practical situations.

C03 Develop skills in designing:
- Probability distributions.
- Limitations of statistical quality control.
- Control charts.
- X, R, np, and c charts

CO4. Develop analytical skills for solving problems involving:
- Probability distributions, means, variances and standard deviations.
- Statistical techniques employed for quality.
- Sampling techniques for decision making.
- Tests of significances for small and large samples.

CO5. Use relevant probability and statistical techniques for:
- Mathematical expectations of desired results.
- Fitting probability distributions for experimental data.
- Quality control and testing of hypothesis.

DETAILED SYLLABUS:

UNIT I – RANDOM VARIABLE AND MATHEMATICAL EXPECTATIONS (10 periods)

Random Variables: Discrete and Continuous random variables, Distribution function of random variable, Properties, Probability mass function, Probability density function, Mathematical expectation, Properties of Mathematical expectation, Mean and Variance.

UNIT II – PROBABILITY DISTRIBUTIONS (9 periods)

Discrete Distributions: Binomial and Poisson Distributions, Mean, variance and standard deviations.

Continuous Distributions: Normal Distribution, Mean, Variance and properties.

UNIT III – CORRELATION, REGRESSION AND STATISTICAL QUALITY CONTROL (9 periods)

Definition of correlation, correlation coefficient, Rank correlation. Simple linear regression, regression lines and properties.

Introduction, advantages and limitations of statistical quality control, Control charts, specification limits,, R, np and c charts.

UNIT IV – SAMPLING DISTRIBUTIONS AND TEST OF SIGNIFICANCE FOR LARGE SAMPLES (9 periods)

Population and Sample, Parameter and Statistic, Sampling Distribution of Statistic, Standard Error of Statistic, Null and Alternative Hypothesis, Type I and II errors, Level of Significance, Critical region, Degrees of freedom. Tests of significance for proportions and means.

UNIT V–TEST OF SIGNIFICANCE FOR SMALL SAMPLES (9 periods)

Student's t-test: single mean, difference of means, F-test for equality of population variance, Chi-Square Test for Goodness of fit, contingency table, Chi-Square Test for Independence of Attributes.

Total Periods: 45

TEXT BOOKS:

1. T. K. V. Iyengar, B. Krishna Gandhi, S. Ranganatham and M. V. S. S. N. Prasad, Probability and Statistics, S. Chand and Company, Fourth Edition,2013.

II B.Tech. - I Semester

(16BT30501) COMPUTER ORGANIZATION

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Digital Logic Design".

COURSE DESCRIPTION: Basic structure and operation of a digital computer; Organization and functional principles of the arithmetic and logic unit, control unit, memory unit and I/O unit; Concepts of pipelining and parallel processing techniques.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Computer Arithmetic units
- Register Transfer and Computer Instructions
- Design of Control Unit
- Input Output Organization and Memory system
- Pipelining and Multiprocessing.

CO2. Analyze the functional units of a digital computer.

CO3. Design the functional modules in a digital computer - Arithmetic Units, Memory and I/O.

CO4. Investigate the performance of memory, I/O, and pipelined processors.

CO5. Select appropriate techniques of I/O, Pipelining and Multiprocessing to solve computing problems.

CO6. Apply contextual knowledge of computer systems development to societal applications.

DETAILED SYLLABUS:

UNIT-I: REGISTER TRANSFER and MICROOPERATIONS AND COMPUTER ARITHMETIC (9 Periods)

Register Transfer and Microoperations: Register transfer, Bus and memory transfers, Arithmetic microoperations, Logic microoperations, Shift microoperations, Arithmetic logic shift unit.

Computer Arithmetic: Fixed point representation, Floating point representation, Addition and subtraction, Binary multiplication algorithms, Binary division algorithms.

UNIT-II: BASIC COMPUTER ORGANIZATION AND DESIGN AND MICRO PROGRAMMED CONTROL (9 Periods)

Basic Computer Organization and Design: Instruction codes, Computer registers, Computer instructions, Instruction formats, Addressing modes, Timing and control, Instruction cycle, Memory reference instructions, Input - Output and Interrupt.

Micro Programmed Control: Control memory, Address sequencing, Design of control unit, Hardwired control, Microprogrammed control.

UNIT-III: INPUT-OUTPUT ORGANIZATION (8 Periods)

Peripheral devices, Input-Output interface, Modes of transfer, Priority interrupt, Direct Memory Access, Input-Output Processor (IOP).

UNIT-IV: THE MEMORY SYSTEM (10 Periods)

Semiconductor RAM memories - Internal organization, Static memories, Synchronous and Asynchronous DRAMs, Structure of larger memories; Read-Only memories, Cache memories - Mapping functions; Secondary Storage - Magnetic Disks, Optical Disks.

UNIT-V: PIPELINE and VECTOR PROCESSING AND MULTIPROCESSORS (9 Periods)

Pipeline and Vector Processing: Parallel processing, Pipelining, Arithmetic pipeline, Instruction pipeline, Vector processing, Array processors.

Multiprocessors: Characteristics of multiprocessors, Interconnection structures, Inter-processor arbitration, Inter-processor communication and synchronization. **Total Periods: 45**

TEXT BOOKS:

1. Morris Mano, *Computer System Architecture,* Pearson Education, Third Edition, 2007.
2. Carl V. Hamacher, Zvonko G. Vranesic and Safwat G. Zaky, *Computer Organization,* McGraw-Hill, Fifth Edition, 2002.

REFERENCE BOOKS:

1. William Stallings, *Computer Organization and Architecture: Designing For Performance,* Pearson Education, Seventh Edition, 2007.
2. John P. Hayes, *Computer Architecture and Organization,* McGraw-Hill. Third Edition.

II B.Tech. - I Semester

(16BT30502) DATA STRUCTURES

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Programming in C".

COURSE DESCRIPTION: Linked Lists; Type of lists; Operations and Applications; Stacks and Queues; Operations and Applications; Trees, Search trees and Heaps; Multiway Trees and Graphs; Searching and Hashing.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Principles of Data Structures.
- Linear and Non-linear Data Structures.
- Sorting and hashing techniques.

CO2. Analyze and Identify suitable data structure for computational problem solving.

CO3. Design solutions for complex engineering problems using linear and non-linear data structures.

CO4. Develop solutions for Complex computational problems by conducting explorative analysis.

CO5. Apply appropriate data structure to provide solutions for real time problems by using C Language.

CO6. Apply contextual knowledge of data structures to design applications for societal applications like payroll systems, web applications, banking and financial systems.

DETAILED SYLLABUS:

UNIT-I: LINKED LISTS **(8 Periods)**

Pointers, Operations, Linked List definition, Single Linked Lists, Circular Linked List, Doubly Linked List, Circular Doubly Linked List, Application of Linked Lists.

UNIT-II: STACKS AND QUEUES **(8 Periods)**

Stacks: Stack operations, Stack Linked List, Implementation, Stack applications.

Queues: Queue operations, Queue Linked List design, Queue applications.

UNIT-III: TREES, SEARCH TREES AND HEAPS **(10 Periods)**

Trees: Tree concepts, Binary Trees.

Binary Search Trees (BST): Basic concepts, BST operations, BST applications.

AVL Search Trees: Basic concepts, AVL Tree implementations.

Heaps: Basic concepts, Heap implementation, Heap applications.

UNIT-IV: MULTIWAY TREES AND GRAPHS **(10 Periods)**

Multiway Trees: B-Trees, Simplified B-Trees, B-Tree variations.

Graphs: Basic concepts, Operations, Graph storage structures, Graph algorithms - Create graph, Insert vertex, Delete vertex, Retrieve vertex, Depth-first traversal, Breadth-first traversal.

UNIT-V: SORTING AND HASHING **(9 Periods)**

Internal Sorting: Quick Sort, Shell Sort, Merge Sort, Heap Sort.

External Sorting: Introduction, External storage device and sorting with tapes, Balanced Merge.

Hashing: Introduction, Hash Table structure, Hash functions, Linear Open Addressing, Chaining, Applications.

Total Periods: 45

II B.Tech. - I Semester

(16BT31201) DISCRETE MATHEMATICAL STRUCTURES

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Multivariable Calculus and Differential Equations".

COURSE DESCRIPTION: Mathematical Logic; Predicates; Functions and Relations; Algebra Structures; Mathematical Reasoning; Recurrence Relations; Graphs; Graph Theory and its Applications.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on mathematical logic, algebraic structures, relations, recurrence relations and mathema-tical reasoning.

CO2. Analyze and prove given statement by contradiction and automatic theorem.

CO3. Design network applications using Prim's and Kruskal's algorithms.

CO4. Solve tree traversal problems using Graph Theory.

CO5. Apply permutation, combinations, counting principle, Lagrange's theorem and graph theory in solving real-time problems.

DETAILED SYLLABUS:

UNIT-I: MATHEMATICAL LOGIC AND PREDICATES (9 Periods)

Mathematical Logic: Statements and notations, Connectives, Well formed formulae, Truth tables, Tautology, Equivalence of formulae, Normal forms.

P**redicates:** Predicate calculus, Free and bound variables, Rules of inference, Consistency, Proof of contradiction and automatic theorem proving.

UNIT-II: FUNCTIONS AND RELATIONS (8 Periods)

Relations: Properties of binary relations, Equivalence relations, Compatibility relations, Partial ordering relations, Hasse diagram and related applications.

Functions: Inverse functions, Composition of functions, Recursive functions, Lattice and its properties.

UNIT-III: ALGEBRAIC STRUCTURES (8 Periods)

Algebraic System: Examples and general properties, Semi groups and monoids, Groups, Subgroups, Homomorphism and isomorphism, Lagrange's theorem.

UNIT-IV: MATHEMATICAL REASONING AND RECURRENCE RELATIONS (10 Periods)

Mathematical Reasoning: Methods of proof, Mathematical induction, Basics of counting, The inclusion- exclusion principle, The pigeon hole principle, Permutations and combinations, Generalized permutations and combinations.

Recurrence Relations: Generating functions of sequences, Calculating coefficients of generating function, Recurrence relation, Solving recurrence relations by substitution and Generating functions, Methods of characteristic roots, Solutions of inhomogeneous recurrence relation.

UNIT-V: GRAPH THEORY AND ITS APPLICATIONS (10 Periods)

Graphs: Introduction to graphs, Types of graphs, Graph basic terminology and special types of simple graphs, Representation of graphs and graph isomorphism, Euler paths and circuits, Hamiltonian paths and circuits, Planar graphs, Euler's formula and graph coloring, 4-color theorem.

Trees: Introduction to trees, Properties of trees, Applications of trees, Spanning trees, Counting trees, Depth-first search, Breadth-first search, Minimum spanning trees, Kruskal's algorithm and prim's algorithm.

Total Periods: 45

TEXT BOOKS:

1. J.P. Trembly and R. Manohar, *Discrete Mathematical Structures with Applications to Computer Science,* Tata McGraw Hill, Thirty Seventh Edition, 2008.

II B.Tech. - I Semester

(16BT50502) **LINUX PROGRAMMING**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Operating Systems".

COURSE DESCRIPTION: Concepts on Linux Programming; Shell Programming; Process, Signals and File System Structure; Inter process Communications and Socket Programming for Client-Server Interaction.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Shell programming
- File Structure and System Calls
- Processes management and handling signals,
- IPC and Sockets

CO2. Analyze shell scripts and system calls related to Linux Environment.

CO3. Design shell scripts and system calls for specified computational problems.

CO4. Use appropriate shell scripts and system calls for solving complex problems.

CO5. Provide appropriate Linux solutions for real time applications.

CO6. Apply contextual knowledge to solve problems related to societal issues.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO LINUX AND LINUX ENVIRONMENT (9 Periods)

The GNU Project and the Free Software Foundation, Linux Distributions, Programming Linux - Linux Programs, Text Editors, The C Compiler; Program Arguments - getopt, getopt_long. Environment Variables - Use of Environment Variables, The environ Variable, Time and Date, User Information, Host Information.

UNIT-II: SHELL PROGRAMMING (9 Periods)

Necessity of Shell Programming, Pipes and Redirection - Redirecting Output, Redirecting Input, Pipes, The Shell as a Programming Language - Interactive Programs, Creating a Script, Making a Script Executable, Shell Syntax - Variables, Conditions, Control Structures, Functions, Commands, Command execution.

UNIT-III: FILE SYSTEM STRUCTURE AND SYSTEM CALLS (9 Periods)

Linux File Structure and Commands: File Structure - Directories, Files and Devices, System Calls and Device Drivers; Library Functions - Low-Level File Access, write, read and open commands, Initial Permissions, Other System Calls for Managing Files; File and Directory Maintenance Commands - chmod, chown, unlink, link, symlink, mkdir, rmdir, chdir, getcwd.

Input-Output Commands: The Standard I/O Library Commands - fopen, fread, fwrite, fclose, fflush, fseek, fgetc, getc, and getchar, fputc, putc and putchar, fgets and gets; Formatted Input and Output Commands - printf, fprintf, sprintf, scanf, fscanf, sscanf.

UNIT-IV: PROCESS AND SIGNALS (8 Periods)

Process Structure - The Process Table, Viewing Processes, System Processes, Process Scheduling; Starting New Processes - Waiting for a Process, Zombie Processes, Input and Output Redirection, Threads; Signals - Sending Signals, Signal Sets.

UNIT-V: INTER-PROCESS COMMUNICATION AND SOCKETS (10 Periods)

Inter-Process Communication: Pipe definition, Process pipes, Sending output to popen - Passing more data, popen, implementation, The pipe call; Parent and child processes - Reading closed pipes, pipes used as standard input and output; Named pipes - FIFOs, Accessing a FIFO, Client/Server using FIFOs.

Socket Connections: Socket attributes, Creating a socket, Socket addresses, Naming a socket, Creating a socket queue, Accepting connections, Requesting connections, Closing a socket, Socket communications, Host and network byte Ordering. **Total Periods: 45**

II B.Tech. - I Semester

(16BT31501) OPERATING SYSTEMS

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: --

COURSE DESCRIPTION: Operating systems operations, scheduling; Critical section problem, deadlocks; Paging, segmentation; File Concept, Disk scheduling; I/O interface; concepts of protection.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on Operating system operations, services, file management, disk management, I/O management and protection.

CO2. Identify the functionality involved in process management concepts like scheduling and synchronization.

CO3. Design models for handling deadlock and perform memory management.

CO4. Synthesize and apply programming API's to perform Process management.

CO5. Use appropriate protection tools to provide access control to Operating system users.

DETAILED SYLLABUS:

UNIT-I: OPERATING SYSTEMS OVERVIEW AND PROCESS MANAGEMENT (8 Periods)

Operating systems, operations, Distributed systems, Special purpose systems, Operating systems services, Systems calls, Operating system structure.

Process Management: Process scheduling, Process Control Block, Inter process communication, Signals, Forks, Multithreading models, Threading issues, Scheduling criteria, Scheduling algorithms, Multilevel queue, Multilevel feedback queue.

UNIT-II: SYNCHRONIZATION AND DEADLOCKS (10 Periods)

Synchronization: The critical-section problem, Peterson's Solution, Synchronization hardware, Semaphores, Classic problems of synchronization, Monitors.

Deadlocks: System model, Deadlock characterization, Methods for handling deadlocks, Deadlock prevention, Deadlock detection, Deadlock avoidance, Deadlock recovery.

UNIT-III: MEMORY MANAGEMENT (9 Periods)

Memory-Management Strategies: Swapping, Contiguous memory allocation, Paging, Structure of the page table, Segmentation.

Virtual Memory Management: Demand paging, Copy-on-Write, Page replacement Algorithms, Thrashing.

UNIT-IV: STORAGE MANAGEMENT (10 Periods)

File System: File Concept, Access methods, Directory structure, File system structure, i-node, File Descriptors, File system implementation, Directory implementation, Allocation methods.

Secondary Storage Structure: Disk structure, Disk attachment, Disk scheduling, Swap-space management, Stable-storage implementation, Tertiary storage structure.

UNIT-V: I/O SYSTEMS AND PROTECTION (8 Periods)

I/O Systems: I/O Hardware, Application I/O interface, Kernel I/O subsystem.

Protection: Goals of protection, Principles of protection, Domain of protection, Access matrix, Implementation of access matrix, Access control, Revocation of access rights.

Total Periods: 45

TEXT BOOK:

1. Abraham Silberschatz, Peter Baer Galvin and Greg Gagne, *Operating System Principles,* Wiley India Edition, Seventh Edition, 2011.

REFERENCE BOOKS:

1. William Stallings, *Operating Systems, Internals and Design Principles,* Pearson Education, Seventh Edition, 2013.

2. Andrew S. Tanenbaum, *Modern Operating Systems,* PHI, Third Edition, 2009.

II B.Tech. - I Semester
(16BT30531) DATA STRUCTURES LAB

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: A course on "Data Structures".

COURSE DESCRIPTION: Hands on practice on Linked Lists; Type of lists; Stacks and Queues; Trees and Search trees; Graphs; Searching and Hashing.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate practical knowledge on Stacks, Queues, Linked lists, Trees Sorting and Hashing Techniques.
CO2. Analyze suitable data structure to solve real world computing problems.
CO3. Design solutions for complex computational problems using linear and non-linear data structures.
CO4. Solve for Complex computational problems by conducting explorative analysis.
CO5. Use C language for implementing linear and non-linear data structures.
CO6. Apply contextual knowledge of data structures to design applications for societal requirements.
CO7. Communicate effectively using data structures with engineering community, being able to comprehend and write effective programs and Prepare Reports.

LIST OF EXERCISES:

1. Write program to implement the following data structures:
   (a) Single Linked List
   (b) Double Linked List
   (c) Circular Linked List
2. Write a program to implement Stack and Queue using Linked List.
3. Write a program to evaluate a given postfix expression using Stack.
4. Write a program to convert a given infix expression to postfix form using Stack.
5. Write a program to implement
   (a) Stack using two Queues
   (b) Queue using two Stacks
6. Write a program to implement In-order, pre-order, post-order tree traversal of Binary Trees.
7. Write a program to perform operations on a Binary Search Tree (BST).
8. Write programs for implementation of graph traversals by applying:
   (a) Breadth First Search
   (b) Depth First Search
9. Implement the following sorting algorithms:
   (a) Merge Sort
   (b) Heap Sort
   (c) Quick Sort
10. Write a program to implement hashing with
    (a) Separate Chaining Method
    (b) Open Addressing Method

REFERENCE BOOKS:

1. Richard Gilberg and Behrouz A. Forouzan, Data Structures: A Pseudocode Approach with C, Cengage Learning, Second Edition, 2007.
2. G.A.V. Pai, Data Structures and Algorithms, Tata McGraw Hill, Second Edition, 2009.

II B.Tech. - I Semester

(16BT50532) LINUX PROGRAMMING LAB

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: A course on "Linux Programming".

COURSE DESCRIPTION: Hands on Practice with - Shell Programs; System Calls; Environment Variables; Inter Process Communication; File System and Socket Programming.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate practical knowledge on
- Shell programming
- File Structure and System Calls
- Processes management and handling signals,
- IPC and Sockets

CO2. Analyze shell scripts and system calls in Linux operating system.
CO3. Design shell scripts for specified computational problems.
CO4. Use appropriate shell scripts and system calls for solving complex problems.
CO5. Create shell scripts and system calls for real time Linux applications.
CO6. Apply contextual knowledge to solve problems related to societal issues.
CO7. Communicate effectively using Linux with engineering community being able to comprehend and write effective programs and prepare reports.

LIST OF EXERCISES:

1. Create two files source.txt and dest.txt using vi editor which contains some text and practice the following commands on that files. cat, tail, head , sort, nl, uniq, grep, egrep, fgrep, cut, paste, join, tee, pg, comm., cmp, diff, cp, mv, ln, rm, unlink, tty, script, clear, date, cal, mkdir, rmdir, du, df, find, umask, ps,who.

1. a) Write a shell script that takes a command line argument and reports on whether it is directory, a file, or something else.
   b) Write a shell script that accepts one or more file names as arguments and converts all of them to uppercase, provided they exist in the current directory.

2. a)Write a shell script that accepts a file name, starting and ending line numbers as arguments and displays all the lines between the given line numbers.
b) Write a shell script that deletes all lines containing a specified word in one or more files supplied as arguments to it.

4. a)Write a shell script to list all of the directory files in a directory.
   b) Write a shell script to find factorial of a given number.

5. a) Write an interactive file-handling shell program. Let it offer the user the choice of copying, removing, renaming, or linking files. Once the user has made a choice, have the program ask the user for the necessary information, such as the file name, new name and so on.
   b) Write a shell script that takes a login name and reports when that person logs in.

6. a) Simulate uniq command using C.
   b) Simulate grep command using C.

7. Write a C program that takes one or more file or directory names as input and reports the following information on the file:
   i) File type
   ii) Number of links
   iii) Read, write and execute permissions
   iv) Time of last access
   (Note: Use stat/fstat system calls)

8. a) Write a C Program to display Environment variables.
b) Write a C Program to implement Different types of exec functions.

9. a) Write a Program to create a Zombie Process.
b) Create a Process using fork() and display Child and Parent Process Id's.

10. Implement the Following IPC Forms a) FIFO b) PIPE

11. Perform client and server socket Programming for exchanging of data Using System calls.

12. a) Write a program user.c, which extracts some user information from the password database (Hint: Use getuid() function to obtain the UID of the current user and use UID to obtain detailed password file information).
    b) Write a program host.c, which extracts some host computer information (Hint: Use gethostname() function to obtain the network name of the host computer).

REFERENCE BOOK:

1. Neil Matthew and Richard Stones, *Beginning Linux Programming,* Wiley Dreamtech, Fourth Edition, 2008.

II B.Tech. - I Semester
(16BT31531) OPERATING SYSTEMS LAB

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: A course on "Operating Systems".

COURSE DESCRIPTION: Hands on practice in simulating algorithms for CPU Scheduling, Memory Management, I/O Management, Deadlock Handling mechanisms; Implementing Synchronization problems; practice on UNIX commands.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate of the following algorithms to solve problems:
- CPU Scheduling
- Memory Management
- I/O Management

CO2. Formulate and analyze solutions to problems pertaining to Memory and I/O.

CO3. Designing models for deadlock handling mechanisms.

CO4. Develop skills in basic UNIX commands.

CO5. Use appropriate APIs' available in modern operating systems (such as threads, system calls, semaphores, etc.) for software development.

CO6. Communicate effectively on complex operating system problems with implication to User-friendliness.

CO7. Develop and demonstrate user defined libraries to communicate with the kernel for effective implementation of projects across multidisciplinary environments.

LIST OF EXERCISES:

1. Write a program to implement the following system calls:
   a) fork b) exec c) getpid d) wait
2. a) Write a program to demonstrate File Permissions.
   b) Write a program to implement named and unnamed pipes.
3. Implement the following CPU Scheduling Algorithms:
   a) FCFS b) SJF (Preemptive) c) Round Robin d) Priority.
   Use the following set of processes, compare the performance of above scheduling policies

Process Name	Arrival Time	Processing Time	Priorities
A	0	3	2
B	1	5	4
C	3	2	1
D	9	5	5
E	12	5	3

4. Implement the following synchronization problems:
   a) Producer Consumer Problem
   b) Dining Philosopher's Problem.
5. Implement Banker's Algorithm for Deadlock Avoidance and Detection. Find the safe sequence. If Max. request of any one process is changed, detect whether deadlock is occurred or not. Consider number of resources are three and Jobs are five as shown in the table:

Process	Allocation			Max			Available		
	A	B	C	A	B	C	A	B	C
P0	0	1	0	7	5	3	3	3	2
P1	2	0	0	3	2	2			
P2	3	0	2	9	0	2			
P3	2	1	1	2	2	2			
P4	0	0	2	4	3	3			

6. Implement the following Algorithms:
   a) First Fit b) Best Fit c) Worst Fit
7. Implement multiprogramming with fixed number of tasks and variable number of tasks. The size of the memory is 1000K. Operating system size is 200K. Number of processes are P1, P2, P3 with sizes 150K, 100K and 70K.
8. Implement the following Page Replacement Algorithms:
   a) FIFO b) LFU c) LRU d) Optimal
   Consider number of frames are three and Reference string is 2 3 2 1 5 2 4 5 3 2 4 2 4 5
9. Develop user-defined libraries to implement input-output functionalities.

II B.Tech. - II Semester

(16BT3HS01) ENVIRONMENTAL STUDIES

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	3	-	-	3

PRE-REQUISITES: A course on "Engineering Chemistry".

COURSE DESCRIPTION: Multidisciplinary nature of environment; Natural resources; Ecosystems; Biodiversity; Environment pollution and control; Social issues and environment; Human population and environment; Field studies.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Acquire knowledge on nature of environment, natural resources, ecosystems, biodiversity, environmental pollution and control, social issues and human population.

CO2. Analyze natural resources, ecosystems, biodiversity, environmental pollution and control, social issues and human population.

CO3. Develop strategies for environmental pollution control and natural resource management.

CO4. Solve environmental problems through proper analysis and interpretation of environmental data.

CO5. Choose appropriate techniques in environmental pollution control and natural resource management.

CO6. Understand the impact of social issues and population on environment.

CO7. Provide solutions to individuals, industries and government for environmental sustainable development.

CO8. Follow environmental protection laws for sustainable development.

CO9. Communicate effectively on environmental issues in the form of reports.

DETAILED SYLLABUS:

UNIT-I:MULTIDISCIPLINARY NATURE OF ENVIRONMENTAND NATURAL RESOURCES (11 Periods)

Multidisciplinary Nature of Environment: Multidisciplinary nature of environment, Segments of environment - Lithosphere, Hydrosphere, Atmosphere, Biosphere; Need for public awareness.

Natural Resources: Renewable and non-renewable resources and associated problems - (a) Forest resources: Use and over exploitation, Deforestation-causes, effects and remedies, Case studies, (b) Water resources: Use and over utilization of surface and groundwater, Conflicts over water, Benefits and problems of large dams, Case studies, (c) Mineral resources: Mining, Adverse effects, Case studies, (d) Food resources: World food problems, Changes caused by agriculture and overgrazing, Effects of modern agriculture, Water logging and salinity, Case studies, (e) Energy resources: Growing needs, Renewable energy resources - Solar, Wind, Hydropower, Hydrogen fuel; Non-renewable energy resources - Coal, Natural gas, Nuclear energy, Role of an individual in conservation of natural resource and equitable use of resources for sustainable lifestyles.

UNIT-II: ECOSYSTEMS AND BIODIVERSITY (10 Periods)

Ecosystems: Concept of an ecosystem, Structure and function of an ecosystem - Producers, Consumers, Decomposers; Food chains, Food webs, Ecological pyramids - Types; Characteristic features, Structure and functions of forest ecosystem, Desert ecosystem, Aquatic ecosystem, Energy flow in the ecosystem, Ecological succession.

Biodiversity: Concept and value of biodiversity, Role of biodiversity in addressing new millennium challenges, Hot spots of biodiversity, Threats to biodiversity, Man-wild life conflicts, Endemic, Endangered and extinct species of India, Conservation of biodiversity - In-situ and ex-situ.

UNIT - III: ENVIRONMETAL POLLUTION AND CONT (8 Periods)

Causes, Adverse effects and control measures of pollution - Air pollution, Water pollution, Soil pollution, Noise pollution, Thermal pollution, Nuclear pollution; Solid waste management - Causes, Effects and control measures of urban and industrial wastes; Hazards and disaster management - Floods, Earthquakes, Tsunamis, Case studies.

UNIT - IV: SOCIAL ISSUES AND THE ENVIRONME (8 Periods)

Sustainable development, Urba n problems related to energy, Environmental ethics -Issues, Solutions; Global warming, Acid rain, Ozone layer depletion, Nuclear accidents and case studies, Wasteland reclamation, Consumerism and waste products, Concept of green technologies, Environment protection act, Air act, Water act, Wildlife protection act, Forest conservation act, Issues involved in enforcement of environmental legislation, Public environmental awareness.

UNIT - V: HUMAN POPULATION AND THE ENVIRONMENT (8 Periods)

Population growth, Population characteristics and variation among nations, Population explosion, Family welfare programme, Environment and human health, Human rights, Value education, HIV/AIDS, Women and child welfare, Role of information technology in environment and human health, Case studies, Field Work/Assignment/Seminar: Environmental assets - Pond/Forest/Grassland/Hill/ Mountain/Environment impact assessment procedures for local environmental issues.

Total Periods: 45

TEXT BOOKS:

1. A. Kaushik and C. P. Kaushik, *Environmental Studies,* New Age International (P) Ltd Publications, Fourth Edition, 2014.
2. Erach Barucha, *Environmental Studies,* Orient Blackswan, Second Edition, 2013.

REFERENCE BOOKS:

1. R. Rajagopalan, *Environmental Studies,* Oxford University Press, Second Edition, 2011.

2. Benny Joseph, *Environmental Studies,* Tata McGraw-Hill, Second Edition, 2009.

4. M. Anji Reddy, *Text Book of Environmental Sciences and Technology,* BS Publications, 2007.

II B.Tech. - II Semester

(16BT41204) THEORY OF COMPUTATION

(Common to IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Discrete Mathematical Structures".

COURSE DESCRIPTION: Fundamentals of Computation; Finite State Automaton; Regular Expressions; Grammars; Push Down Automaton; Turing Machine.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on Formal languages and automata.

CO2. Analyze the classification of languages, automata's and their computing power.

CO3. Design grammars and automata (recognizers) for regular expressions and formal languages.

CO4. Solve computational problems using automata.

CO5. Apply theorems to translate automata's and identify the class of languages.

DETAILED SYLLABUS:

UNIT-I: FINITE AUTOMATA (10 Periods)

Introduction to Finite automata, The central concepts of automata theory, Deterministic finite automata, Nondeterministic Finite automata, The equivalence of DFA and NDFA, Finite automata with epsilon-transitions, Conversion of epsilon-NFA to NFA and DFA, Mealy and Moore models.

UNIT-II: REGULAR EXPRESSIONS AND LANGUAGE (9 Periods)

Regular expressions, Identity rules, Finite automata and Regular expressions, Applications of regular expressions, Pumping lemma for regular languages, Applications of the pumping lemma, Closure properties of regular languages, Equivalence of two regular expressions, Equivalence of two finite automata and minimization of automata.

UNIT-III: CONTEXT-FREE GRAMMARS (9 Periods)

Context-free grammars, Parse trees, Applications of context-free grammars, Ambiguity in grammars and languages, Normal forms for context-free grammars, The pumping lemma for context-free languages.

UNIT-IV: PUSH DOWN AUTOMATA (7 Periods)

Definition of the pushdown automaton, The languages of a PDA, Equivalence of PDA's and CFG's, Deterministic pushdown automata, Chomsky hierarchy of languages, The model of linear bounded automaton.

UNIT-V: TURING MACHINES (10 Periods)

Turing machine model, Representation of turing machines, Language acceptability by turing machine, Design of turing machines, Programming techniques for turing machines, Turing machines with semi-infinite tapes, Multi stack machines and counter machines, Universal turing machines.

Total Periods: 45

TEXT BOOKS:

1. John E. Hopcroft, Rajeev Motwani and Jeffrey D Ullman, *Introduction to Automata Theory, Languages and Computation,* Pearson Education, Third Edition, 2011.
2. K.L.P. Mishra and N.Chandrasekaran, *Theory of Computer Science: Automata Languages and Computation,* PHI Learning, Third Edition, 2009.

REFERENCE BOOK:

1. John C Martin, *Introduction to Languages and the Theory of Computation,* TMH, Third Edition, 2009.

II B.Tech. - II Semester
(16BT40502) DATABASE MANAGEMENT SYSTEMS

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: --

COURSE DESCRIPTION: Database Systems; Database Design; Relational Model; SQL Queries, Constraints and Triggers; Schema Refinement and Normal Forms; Transaction Management; Concurrency Control; Overview of Storage and Indexing.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Data models and Database Languages
- Database design
- Normal forms
- Storage and Indexing

CO2. Analyze databases using normal forms to provide solutions for real time applications.

CO3. Design solutions for database problems using database design, view design and framing queries.

CO4. Use database techniques for designing databases, managing databases and its security.

CO5. Select SQL, Hash based Indexing and Tree based Indexing to manage data in databases.

CO6. Apply contextual knowledge to develop database applications related to societal applications like Information Retrieval Systems, Banking and Financial systems.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO DATABASE SYSTEMS AND DATABASE DESIGN (9 Periods)

Database Systems: Database system applications, Purpose of database systems, View of data-Data abstraction, Instances and Schemas, Data models; Database languages - DDL, DML; Database architecture, Database users and administrators.

Database Design: ER diagrams, Beyond ER design, Entities, Attributes and entity sets, Relationships and relationship sets, Additional features of ER model, Conceptual design with ER model.

UNIT-II: THE RELATIONAL MODEL and RELATIONAL ALGEBRA AND CALCULUS (8 Periods)

Relational Model : Integrity constraints over relations, Enforcing integrity constraints, Querying relational data, Logical database design, Introduction to views, Destroying/altering tables and views.

Relational Algebra and Calculus: Preliminaries, Relational Algebra operators; Relational Calculus - Tuple and Domain Relational Calculus; Expressive power of Algebra and calculus.

UNIT-III: SQL AND SCHEMA REFINEMENT (10 Periods)

SQL: Form of basic SQL query- Examples of basic SQL queries; Nested queries- Introduction to nested queries, Correlated nested queries, Set-comparison operators; Aggregate operators, NULL values-Comparison using NULL values, Logical connectives AND, OR and NOT, Impact on SQL constructs, Outer joins, Disallowing NULL values; Complex integrity constraints in SQL ,Triggers and active databases.

Schema Refinement: Problems caused by redundancy, Decompositions, Problem related to decomposition, Functional dependencies, Reasoning about FDS, Normal forms - First, second and third normal forms, BCNF; Multi valued dependencies, Fourth normal form, Join dependencies, Fifth normal form.

UNIT-IV: TRANSACTIONS AND CONCURRENCY CONTROL (9 Periods)

Transactions: Transaction concept, Transaction state, Implementation of atomicity and durability, Concurrent executions, Serializability, Recoverability, Implementation of isolation, Testing for serializability.

Concurrency Control: Lock based protocols, Timestamp based protocols, Validation based protocols, Multiple granularity, Deadlock handling.

UNIT-V: STORAGE AND INDEXING (9 Periods)

Storage and Indexing: Data on external storage, File organization and indexing - Clustered indexes, Primary and secondary indexes; Index data structures - Hash based indexing, Tree based indexing; Comparison of file organizations.

Tree Structured Indexing: Intuition for tree indexes, Indexed Sequential Access Method (ISAM), B+ Trees- A dynamic index structure; Search, Insert, Delete; B-Tree index files. **Total Periods: 45**

TEXT BOOKS:

1. Raghu Ramakrishnan and Johannes Gehrke, *Database Management Systems,* Tata McGraw Hill, Third Edition, 2014.
2. A. Silberschatz, H.F.Korth and S. Sudarshan, *Database System Concepts,* Tata McGraw Hill, Fifth Edition, 2006.

REFERENCE BOOKS:

1. Ramez Elmasri and Shamkant B. Navathe, *Database Systems,* Pearson Education, Sixth Edition, 2013.

2. Peter Rob and Carlos Coronel, *Database Systems Design, Implementation and Management,* Cengage Learing, Seventh Edition, 2009.

II B.Tech. - II Semester

(16BT41201) DESIGN AND ANALYSIS OF ALGORITHMS

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Data Structures".

COURSE DESCRIPTION: Introduction to Algorithms and Asymptotic Notations; Disjoint Sets and Graphs; Divide and Conquer, Greedy Method; Dynamic Programming, Back Tracking; Branch and Bound.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Algorithm Complexities and Asymptotic notations.
- Algorithm Design techniques-Divide and Conquer, Greedy Method, dynamic programming, Back tracking, Branch and Bound.

CO2. Analyze the performance of algorithms with respect to Time and Space complexities.

CO3. Design the algorithms for solving real world problems.

CO4. Solve sorting and searching problems using Divide and Conquer method.

CO5. Use dynamic programming and backtracking in finding shortest paths.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO ALGORITHMS (8 Periods)

Algorithm, Algorithm Specifications-Pseudocode conventions; Performance Analysis-Space complexity, Time complexity; Asymptotic Notations - Big Oh, Omega, Theta, Little oh, and Little omega; Recurrences.

UNIT-II: DISJOINT SETS AND GRAPHS (9 Periods)

Disjoint Sets: Operations, union and find algorithms.

Graphs: Breadth first search and Traversal, Depth first search and Traversal, Introduction to spanning trees, connected components and Bi-connected components.

UNIT-III: DIVIDE AND CONQUER AND GREEDY METHOD (10 Periods)

Divide and Conquer: General method, Applications - Analysis of binary search, Quick sort, Merge sort, Strassen's matrix multiplication.

Greedy Method: General method, Applications-Job sequencing with deadlines, knapsack problem, Minimum cost spanning trees, Single source shortest paths.

UNIT-IV: DYNAMIC PROGRAMMING AND BACK TRACKING (10 Periods)

Dynamic Programming: General Method, Applications - Matrix chain multiplication, Optimal binary search trees, 0/1 knapsack problem, All pairs shortest path problem, Travelling sales person problem.

Back Tracking: General Method, Applications - N Queen problem, Sum of subsets problem, Graph coloring, Hamiltonian cycles.

UNIT-V: BRANCH AND BOUND TECHNIQUES (8 Periods)

General method, Applications - Travelling sales person problem, 0/ 1 knapsack problem; LC Branch and Bound solution, FIFO Branch and Bound solution.

Total Periods: 45

TEXT BOOK:

1. Ellis Horowitz, Satraj Sahni and Rajasekharam, *Fundamentals of Computer Algorithms,* Galgotia Publications Pvt. Ltd, New Delhi, Second Edition, 2007.

REFERENCE BOOKS:

1. M. T. Goodrich and R. Tomassia, Algorithm Design: Foundations, *Analysis and Internet Examples,* John Wiley and Sons, 2002.

3. Harsh Bhasin, *Algorithms: Design and Analysis,* Oxford University Press, 2015.

II B.Tech. - II Semester
(16BT41202) JAVA PROGRAMMING

(Common to CSE and IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Object Oriented Programming through C++".

COURSE DESCRIPTION: Introduction of Java, Classes and Objects; Inheritance, Packages, Interfaces; Exception handling, Multithreading; Event handling, AWT, Collection Classes; Applets, Servlets.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Object Oriented Programming concepts - classes, objects, inheritance, polymorphism, encapsulation and abstraction.
- Packages, interfaces, multithreading, exception handling, event handling.

CO2. Analyze complex engineering problems using object oriented concepts.

CO3. Design and develop reusable code to provide effective solutions for real world problems using inheritance and polymorphism.

CO4. Apply AWT and Applets to create interactive Graphical User Interfaces.

CO5. Use advanced programming languages to develop web applications.

CO6. Build Java Applications suitable for societal requirements.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION (10 Periods)

Data types, Variables, Arrays, Operators, Control statements.

Classes and Objects: Concepts of Classes, Objects, Constructors, Methods, this keyword, Garbage collection, Overloading Methods and Constructors, Parameter passing, Access control, Recursion, String Class.

UNIT-II: INHERITANCE, PACKAGES AND INTERFACES (9 Periods)

Inheritance: Inheritance basics, Super keyword, Multi-level hierarchy, Abstract classes, final keyword with inheritance.

Packages: Definition, Creating and accessing a package, Understanding CLASSPATH, Importing packages.

Interfaces: Definition, Implementing interfaces, Nested interfaces, Applying interfaces, Variables in interface and Extending interfaces.

UNIT-III: EXCEPTION HANDLING AND MULTITHREADING (8 Periods)

Exception Handling: Concepts of exception handling, Exception types, Usage of Try, Catch, Throw, Throws and Finally, Built in exceptions, Creating own exception sub classes.

Multithreading: Java thread model, Creating threads, Thread priority, Synchronizing threads, Inter-thread communication.

UNIT-IV: COLLECTION CLASSES, THE APPLET CLASS AND AWT (10 Periods)

Collection Classes: ArrayList Class, LinkedList Class, Hashset Class, LinkedHashSet Class, TreeSet Class, PriorityQueue Class, EnumSet Class.

The Applet Class: Types of applets, Applet basics, Applet architecture, Applet skeleton, Passing parameters to applets.

AWT Control Fundamentals: User interface components, Layout managers.

UNIT-V: EVENT HANDLING AND SERVLETS (8 Periods)

Delegation event model: Event classes, Event Listener Interfaces - Mouse and Key; Adapter classes.

Servlets: Life cycle of a servlet, Using Tomcat for Servlet development, Create and compile the servlet source code, Servlet API, Javax.Servlet package. **Total Periods: 45**

TEXT BOOK:

1. Herbert Schildt, *Java the Complete Reference,* Oracle Press, Ninth Edition, 2014.

REFERENCE BOOK:

1. Sachin Malhotra and Saurab Choudhary, *Programming in Java,* Oxford University Press, Second Edition, 2014.

(16BT41203) SOFTWARE ENGINEERING

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: --

COURSE DESCRIPTION: Concepts of Software Engineering; Software Process Models; Conventional and Agile Process Models; Software Requirements Engineering Process; System Analysis; Architectural Design; User Interface Design and Re-engineering; Software Testing; Risk and Quality Management.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Fundamental concepts of software engineering.
- Process models.
- Software development life cycle.

CO2. Analyze software requirements and process models required to develop a software system.

CO3. Design and develop a quality software product using design engineering principles.

CO4. Develop software product as per user and societal requirements.

CO5. Follow standards for software development and quality management.

CO6. Demonstrate skills in applying risk and quality management principles for effective management of software projects.

DETAILED SYLLABUS:

UNIT I: SOFTWARE ENGINEERING AND SOFTWARE PROCESS (11 Periods)

A Generic View of Process: The nature of software, Software engineering- Software engineering layers; The software process, Software engineering practice, Software myths.

Process Models: A Generic process model, Incremental process models, Evolutionary Process models; The unified process, Agile Development-Agility, Agile process, Scrum, Agile modeling (AM), Agile Unified Process (AUP), The Cleanroom strategy.

UNIT II: REQUIREMENTS ENGINEERING AND MODELING (7 Periods)

Requirements Engineering: Functional and non-functional requirements, The software requirements document, Requirements specifications, Requirements engineering processes, Requirements elicitation and analysis, Requirements validation, Requirements management.

Requirements Modeling: Data modeling concepts, Flow-oriented modeling, Case study on requirements modeling for WebApps.

UNIT III: DESIGN ENGINEERING AND METRICS (8 Periods)

Design Engineering: Design within the context of software engineering, The Design process, Design concepts, Software architecture, Architectural styles, Architectural design.

Process and Project Metrics: Metrics in the process and project domains, Software measurement, Metrics for software quality.

UNIT IV: SOFTWARE TESTING STRATEGIES AND APPLICATIONS (9 Periods)

Testing Strategies: A strategic approach to software testing, Strategic issues, Test strategies for conventional software, Test strategies for object oriented software, Validation testing, System testing, The art of debugging.

Testing Conventional Applications: Software testing fundamentals, Basis path testing, White box and Black box testing, Object oriented testing methods.

UNIT V: RISK, QUALITY MANAGEMENT AND REENGINEERING (10 Periods)

Risk and Quality Management: Reactive and proactive risk strategies, Software risks, Risk Mitigation Monitoring and Management (RMMM), RMMM plan, Software quality factors, Defect amplification Model, Formal Technical Reviews (FTR), Software Quality Assurance (SQA)-Tasks, Goals and metrics; Software reliability.

Reengineering: Introduction, Business Process Reengineering (BPR), Software reengineering, Restructuring, Reverse engineering, Forward engineering. **Total Periods: 45**

TEXT BOOKS:

1. Roger S. Pressman, *Software Engineering-A Practitioner's Approach,* McGraw-Hill International Edition, Seventh Edition, 2010.
2. Ian Sommerville, *Software Engineering,* Pearson Education, Ninth Edition, 2011.

REFERENCE BOOKS:

1. K. K. Aggarwal and Yogesh Singh, *Software Engineering, New Age International Publishers,* Third Edition, 2007.
2. Shely Cashman Rosenblatt, *Systems Analysis and Design, Thomson Publications,* Sixth Edition, 2006.

II B.Tech. - II Semester

(16BT40531) DATABASE MANAGEMENT SYSTEMS LAB

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: A course on "Database Management Systems".

COURSE DESCRIPTION: Hands on experience on - DDL, DML commands; Query processing using operators; Joins, Views, Single Row functions, Group Functions and SET functions; PL/SQL concepts - Basic Programs, Triggers, Functions, Cursors and Stored Procedures.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate practical knowledge on creation and alteration of tables, insertion and Querying of data.

CO2. Analyze and evaluate the databases using SQL DML/DDL commands.

CO3. Design database schemas for the sales database, customer database and product database.

CO4. Develop solutions for database problems using stored procedures, stored functions, cursors and triggers.

CO5. Implement DDL and DML commands in SQL and PL/SQL, ORACLE to manage data in databases.

CO6. Apply contextual knowledge to develop database applications related to societal issues.

CO7. Demonstrate communication skills, both oral and written for preparing and presenting reports on databases.

DESCRIPTION OF SALES DATABASE:

ABC is a company operating in the country with a chain of shopping centers in various cities. Everyday large numbers of items are sold in different shopping centers. The Sales database comprises of various tables like CUST, PROD, SALES_DETAIL, STATE_NAME with the following schemas.

CUSTOMERS

Name	**Type**	**Remark**
CID	VARCHAR2(6)	PRIMARY KEY
CNAME	VARCHAR2(10)	
CCITY	VARCHAR2(8)	

PRODUCTS

Name	**Type**	**Remark**
PID	VARCHAR2(6)	PRIMARY KEY
PNAME	VARCHAR2(6)	
PCOST	NUMBER(5,2)	
PROFIT	NUMBER(3)	

SALES DETAILS

Name	**Type**	**Remark**
CID	VARCHAR2(6)	COMPOSITE PRIMARY KEY
PID	VARCHAR2(6)	COMPOSITE PRIMARY KEY
SALE	NUMBER(3)	
SALEDT	DATE	COMPOSITE PRIMARY KEY

STATES

Name	**Type**	**Remark**
CCITY	VARCHAR2(8)	PRIMARY KEY
STATE	VARCHAR2(15)	

LIST OF EXERCISES:

1. **Execute: Data Definition Language (DDL) commands**

a. Create the tables in sales database.

b. View the structure of the each table.

c. Change the structure of the table like add new column, change the width of a data type, change the data type of a column, delete column from the table, rename the column name and table names.

d. Delete all records stored in a table, but the structure of the table is retained.

e. Remove a table from the database.

2. Execute: Data Manipulation Language (DML) commands

STATES

CCITY	STATE
Mysore	Karnataka
Kolkata	Westbengal
Pune	Maharashtra
Tirupathi	Andhrapradesh
Chennai	Tamilnadu

CUSTOMERS

CID	CNAME	CCITY
c1	Gopal	Mysore
c2	Haitvik	Kolkata
c3	Rohan	Pune
c4	Rajini	Chennai
c5	Mohan	Tirupathi
c6	Sanjay	Mysore
c7	samhita	Kolkata

SALES DETAILS

PID	PNAME	PCOST	PROFIT
p1	Pen	100.00	10
p2	Pencil	15.50	2
p3	pendrive	950.00	50
p4	DVD	35.00	5
p5	Mouse	500.50	Null

PRODUCTS

a) Write a query to display all customers.

b) Write a query to display pname of all products.

c) Write a query to display cname and ccity of all customers.

d) Write a query to display cname, ccity of all customers who lives in mysore.

e) Write a query to display cname and ccity of all customers who live in Kolkata or Chennai.

f) Find the cost of pencil.

g) Display CID as Customer_Id, CNAME as Name for all customers.

h) Change the name of the product p3 from 'pendrive' to 'modem'.

i) Find the product ids in sales detail table (eliminating duplicates).

j) Remove the record from sales detail table whose sale value is 5.

3. Implement table level and Column level constraints like NOT NULL, UNIQUE, PRIMARY KEY, FOREIGN KEY, CHECK, DEFAULT.

4. Operators

a) Display the sum of pcost and profit of all products.

b) Display the column heading as "Selling Price" instead of PCOST+PROFIT.

c) Find out what percent of pcost is profit for all products.

d) List the cids of customers who purchased products on '14-jul-2017'.

e) List only the products whose cost is more than 50.00.

f) List all the customers who are not belongs to 'pune'.

g) Write a query to display the pname and pcost of all the products where pcost lies between 5 and 25.

h) Write a query to display distinct customer id where product id is p3 or sale date is '18-mar-2017'.

i) Write a query to display cname, ccity of those customers whose cid is in c1 or c2 or c4 or c5 (using IN operator).

j) List customers whose name starts with 'h'.

k) Write a query to display all records of prod table in which first and third character of pname is any character and second character is 'e'.

l) Write a query to display all cname which includes two 'a' in the name.

m) List the products with unknown profit.

n) Display the profit of products as zero if unknown.

5. Joins and Views

a) Write a query to display cname, pname, sale, saledt for all customers.

b) Write a query to display cname who have purchased Pen.

c) Write a query to display cname, pname, sale for all customers who sold after '01-sep-2016'.

d) Write a query to display cname,ccity,state of all customers.

e) Write a query to display cname,ccity of all customers who belongs to Karnataka.

f) Create a view on product table which includes pid, pname and pcost of products.

g) Insert a row into the view.

h) Update the rows in a view.

i) Delete the rows from view.

6. Order by, group by and having clauses.

a) Write a query to display pname of all records. Sort all records by pname. (use order by clause)

b) Write a query to display cname and ccity of all records. Sort by ccity in descending order.

c) Write a query to display saledt and total sale on the date.

d) Write a query to display saledt and total sale on the date labeled as sale of all items.

e) Write a query to display saledt and total sale on the date sold after 01-sep-2016.

f) Write a query to display saledt and total sale on the date labeled as sale of all items other than DVD.

g) Write a query to display total number of customers who purchase pen.

7. **Single Row Functions:** Date Function, Numeric and Character Function

a) Write a query to display system date

b) Write a query to display the system date by rounding it to next month.

c) Write a query to display the system date by rounding it to next year.

d) Write a query to display the last date of the system date.

e) Write a query to display the next date of system date which is Friday.

f) Write a query to display sale date and date after 02 months from sale date.

g) Write a query to display system date, sale date and months between two dates.

h) Write a query to display the greatest date between sale date and system date, name it as BIG, also display sale date and SYSDATE.

i) Write a query to display the least date between sale date and system date name it as SMALL, also display sale date and SYSDATE.

j) Write a query to display the product name along with the rounded value of product cost for product name is "Pencil".

k) Write a query to display product cost along with MOD value if divided by 5.

l) Write a query to display cname in uppercase, lowercase, titlecase from cust table where customer name is "rohan".

m) Write a query to display all concatenated value of cname, ccity by converting cname into titlecase and ccity into uppercase.

n) Write a query to display the first 3 characters of cname.

o) Write a query to display the position of 'm' in the cname of the customer whose name is "samhita".

p) Write a query to display the length of all customer names.

q) PAD # character in left of product cost to a total width of 5 character position.

8. Group Functions and Set Functions

a) Write a query to display the total count of customer.

b) Write a query to display the minimum cost of product.

c) Write a query to display average value of product cost rounded to 2nd decimal places.

d) Write a query to display product name with total sale detail in descending order.

e) Write a query to display product name, sale date and total amount collected for the product.

f) Write a query to display sale date and total sale date wise which was sold after "14-jul-2016".

g) Write a query to display the customer name who belongs to those places whose name is having 'i' or 'p'.

h) Write a query to display customer name who belongs to a city whose name contains characters 'c' and whose name contains character 'a'.

i) Write a query to display the customer name who does not belong to 'pune'.

9. PL/SQL basic programs

a) Write a PL/SQL program to find largest number among three. (Hint: Use Conditional Statement)

b) Write a PL/SQL program to display the sum of numbers from 1 to N using for loop, loop…end and while…loop.

10. SQL Cursor based programs

a) Write a PL/SQL program to display the costliest and cheapest product in PROD table.

b) Write a PL/SQL program which will accept PID and display PID and its total sale value i.e. sum.

11. Functions

a) Write a function that accepts two numbers A and B and performs the following operations.

i. Addition

ii. Subtraction

iii. Multiplication

iv. Division

b) Write a function that accepts to find the maximum PCOST in PROD table.

12. Procedures

a) Write a procedure that accepts two numbers A and B, add them and print.

b) Write procedures to demonstrate IN, IN OUT and OUT parameter.

13. Triggers

a) Develop a PL/SQL program using BEFORE and AFTER triggers.

b) Create a row level trigger for the PROD table that would fire for INSERT or PDATE or DELETE operations performed on the PROD table. This trigger will display the profit difference between the old values and new values.

REFERENCE BOOKS:

1. Satish Asnani, *Oracle Database 11g: Hands-on SQL and PL/SQL,* PHI Publishers, 2010.

II B.Tech. - II Semester

(16BT31231) **JAVA PROGRAMMING LAB**

(Common to CSE and IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: A course on "Java Programming".

COURSE DESCRIPTION: Hands-on experience on Polymorphism; Inheritance and Interfaces; Exception Handling; Multithreading; Event Handling; AWT; Applets; Servlets.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on basic concepts of Java programming.

CO2. Design and develop efficient programs with multitasking ability and handle exceptions.

CO3. Demonstrate independent problem solving skills in developing interactive applications.

CO4. Apply object oriented approach to develop user friendly interface and learn how to communicate with systems over the network.

CO5. Build Java applications suitable for societal requirements.

CO6. Work effectively as an individual and as a member in team for case studies implementation.

CO7. Demonstrate communication skills, both oral and written for preparing and presenting reports.

LIST OF EXERCISES:

1. a. Write a Program to accept two integers through the command line arguments and print the sum of the two numbers.
   b. Write a Program to accept a String as a Command line argument and the program should print a Welcome message.
2. Write a program that displays a menu with options (i) Add (ii) Sub. Based on the options chosen, read 2 numbers and perform the relevant operation. After performing the operation, the program should ask the user if he wants to continue. If the user presses y or Y, then the program should continue displaying the menu else the program should terminate.[Use Scanner class]
3. a. Write a program to print the element of an array that has occurred highest number of time.
   b. Write a program to find greatest number in a 3*3 array. The program is supposed to receive 9 integer numbers as command line arguments.
4. a. Create a class "AmountInWords" to convert the amount into words. (Consider the amount to be not more than 100000.)
   b. Write a Program to count tokens- number of words and characters in a string.
5. Implement any one of the case study with the specifications given below:
   a) Create classes, objects and their properties.
   b) Add methods to classes and implement them.
   c) Refine the objects by adding constructors and local variables.
   d) Show communication between the objects by calling instance of one object from another class.
   e) Handle Exceptions and Implement relationships like inheritance.

Case study 1: Banking Application:

The banking application consists of five divisions. They are customer details, creating a new account, withdrawing money, loan details and depositing money. The customer details consist of customer name, address, phone number, account number. To withdraw money checks the balance in the account and then get the money. The loan details consist of loan types like home loans, car loans, education loans etc. To deposit money enter the account number and give the account to be deposited.

Case study 2: Library Application:

The Library Application consists of Student, faculty and book details, Issue book, and return book. The student and faculty details consist of name, ID, Branch and maximum number of books can be issued to them. The book details consist of ID, Book name and Author name. To Issue a book to members, the librarian checks the availability of book and if the book is not available, then an error message will be displayed. To return the book, the librarian verifies the validity and if the validity is expired then the fine amount message will be displayed. The student and faculty can view the book details issued to them and also can check the count of remaining books that can be taken for issue.

6. a. Write a program that correctly implements producer consumer problem using the concept of inter-thread communication.
   b. Write a program that demonstrates time slicing among equal priority threads, show that a lower priority thread's execution is deferred by the time slicing of higher-priority threads.
7. Develop an Applet that receives an integer in one text field, and computes its factorial value and returns it in another text field, when the button named "Compute" is clicked.
8. Write a Java program that works as a simple calculator. Use a grid layout to arrange buttons for the digits and for the +, -, *, % operations. Add a text field to display the result.
9. Create a Servlet that recognizes first time visitor to web application and responds by saying "Welcome to new user" otherwise "welcome back".

II B.Tech. - II Semester

(16BT4HS31) SOFT SKILLS LAB

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: English Language Laboratory in I B.Tech.

COURSE DESCRIPTION: This course covers Body Language; Assertiveness; Goal Setting; Creative Thinking; Interpersonal Skills; Team Work; Conflict Management; Etiquette; Report Writing; Group Discussions; Interviewing Skills.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Acquire knowledge on
- Goal Setting
- Creative Thinking
- Leadership Skills and
- Team Work

CO2. Analyze the situations and develop skills for
- Body Language
- Personality Development and
- Stress Management

CO3. Apply the techniques of soft skills in a problem situation enhanced through multimedia software.

CO4. Function effectively as an individual and as a member in diverse teams.

CO5. Communicate effectively in public speaking in formal and informal forums.

LIST OF EXERCISES:

1. Body Language
2. Assertiveness
3. Goal Setting
4. Creative Thinking
5. Interpersonal Skills
6. Team Work
7. Conflict Management
8. Etiquette
9. Report Writing
10. Resume Writing
11. Group Discussions
12. Interviewing Skills

Total Lab Slots: 10

REFERENCE BOOKS:

SUGGESTED SOFTWARES:

1. ETNL Language Lab Software Version 4.0
2. GEMS - Globarena E- Mentoring System
3. Speech Solutions.
4. English Pronunciation Dictionary by Daniel Jones.
5. Learning to Speak English 8.1, The Learning Company - 4 CDs.
6. Mastering English: Grammar, Punctuation and Composition.
7. English in Mind, Herbert Puchta and Jeff Stranks with Meredith Levy, Cambridge.
8. Dorling Kindersley Series of Grammar, Punctuation, Composition etc.
9. Language in Use 1, 2 and 3.
10. Cambridge Advanced Learner's Dictionary - 3rd Edition.
11. Centronix - Phonetics.
12. Let's Talk English, Regional Institute of English South India.
13. Ultimate English Tutor.

III B.Tech. - I Semester

(16BT51201) COMPUTER GRAPHICS AND MULTIMEDIA

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Matrices and Numerical Methods".

COURSE DESCRIPTION: Introduction to Computer Graphics, Output Primitives; 2D Geometric Transformations and Viewing; 3D object representation and Visible Surface Detection Methods; Introduction to Multimedia, Audio and Video; Multimedia Data Compression.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Graphical interactive devices
- Viewing transformations
- 3-D object representations
- Surface detection methods
- Image, audio, video representations and standards.

CO2. Analyze multimedia compression issues using image, audio and video compression techniques.

CO3. Design algorithms to generate points, lines, polygons for 2-D, 3-D objects.

CO4. Apply Transformations and Clipping algorithms for 2-D and 3-D objects, various lossy / lossless coding techniques on text and images for compression and decompression.

CO5. Build multimedia applications for societal requirements.

UNIT -I: INTRODUCTION TO GRAPHICS AND OUTPUT PRIMITIVES (9 Periods)

Introduction: Raster-Scan systems, Random Scan systems, Graphics monitors, Work stations and Input devices.

Output Primitives: Points and Lines, Line Drawing algorithms, Mid-point Circle and Ellipse algorithms.

Filled area primitives: Scan Line Polygon Fill algorithm, Boundary-fill algorithms and Flood-Fill algorithms.

UNIT -II: 2-D GEOMETRICAL TRANSFORMS AND 2-D VIEWING (9 Periods)

2-D Transforms: Translation, Scaling, Rotation, Reflection and Shear transformations, Homogeneous coordinates, Composite Transforms, Transformations between coordinate systems.

2-D Viewing: The Viewing Pipeline, Viewing coordinate reference frame, Window to View-Port coordinate Transformation, Cohen-Sutherland line clipping algorithms.

UNIT -III: 3-D OBJECT REPRESENTATION AND VISIBLE SURFACE DETECTION METHODS (9 Periods)

3-D Object representation: Polygon Surfaces, Quadric surfaces, Spline Representation, Hermite Curve, Bezier Curve and B-Spline Curves, Bezier and B-Spline Surfaces.

Visible Surface Detection Methods: Classification, Back-Face detection, Depth-Buffer, Scan-Line, Depth Sorting, BSP-Tree methods, Area Sub-Division and Octree methods.

UNIT-IV: INTRODUCTION TO MULTIMEDIA, AUDIO AND VIDEO (9 Periods)

Introduction: Definition of Multimedia, Multimedia and Hypermedia, Multimedia Software tools, Graphics and Image Data representations-Graphics and Image Data types, File Formats, Color models in images, Color models in video.

Audio and Video: Definition of sound, Digitization, Nyquist Theorem, Signal to Noise ratio, Signal to Quantization-Noise ratio; Types of video signals, Analog video, Digital video.

UNIT-V: MULTIMEDIA DATA COMPRESSION (9 Periods)

Lossless compression algorithms- Introduction, Basics of Information Theory, Run Length Coding, Variable Length coding, Dictionary Based coding, Arithmetic coding; Lossy Compression algorithms-Quantization; Introduction to Transform Coding-DCT, DFT; Image compression techniques-JPEG standard, JPEG 2000; Introduction to video compression- Video compression based on Motion Compensation, MPEG-1, MPEG-2.

Total Periods: 45

TEXT BOOKS:

1. Donald Hearn and M. Pauline Baker, Computer *Graphics C version,* Pearson Education, Second Edition, 2006.
2. Ze-Nian Li and Mark S. Drew, *Fundamentals of Multimedia,* Pearson Education, Second Edition, 2008.

REFERENCE BOOKS:

1. James D. Foley, Andries van Dam, Steven K. Feiner and John F. Hughes, *Computer Graphics: Principles and Practice in C,* Addison Wesley Professional, Second Edition, 2013.

2. Nigel Chapman and Jenny Chapman, *Digital Multimedia,* Wiley Dreamtech, Second Edition, 2004.

III B.Tech. - I Semester
(16BT50501) COMPUTER NETWORKS

(Common to ECE, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A Course on "Operating Systems".

COURSE DESCRIPTION: Introduction to Computer Networks; The Physical Layer; The Data Link Layer; The Medium Access Control Sublayer; The Network Layer; The Transport Layer; The Application Layer.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Functionalities of Various OSI and TCP/IP layers
- 3G Mobile phone networks, 802.11
- TCP,UDP and SMTP

CO2. Analyze the issues related to data link, medium access and transport layers by using channel allocation and connection management schemes.

CO3. Design and compute subnet masks and addresses for networking requirements.

CO4. Solve problems related to Flow control, Error control, congestion control and Network Routing.

CO5. Apply Network Standards - 802.3 and 802.11 for developing computer Networks.

CO6. Assess the impact of wired and wireless Networks in the context of societal applications like VoIP, Multi-user Network Games, Internet of Things.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION AND PHYSICAL LAYER (9 Periods)

Introduction: Network hardware, Network software, Reference models - OSI, TCP/IP; Example networks - Internet; Wireless LANs - 802.11.

Physical Layer: Guided transmission media, Wireless transmission.

UNIT-II: DATA LINK LAYER AND MEDIUM ACCESS CONTROL SUBLAYER (10 Periods)

Data Link Layer: Data link layer design issues, Error detection and correction-CRC, Hamming codes, Elementary data link protocols, Sliding window protocols.

Medium Access Control Sublayer: ALOHA, Carrier sense multiple access protocols, Collision-free protocols, Ethernet, Data link layer switching-Repeaters, Hubs, Switches, Routers, and Gateways.

UNIT-III: NETWORK LAYER (10 Periods)

Network layer design issues, Routing algorithms - Shortest path, Flooding, Distance vector, Link state routing, Hierarchical, Broadcast, Multicast, Anycast; Congestion control algorithms, Network layer in the internet - The IP version 4 protocol, IP addresses, IP version 6, Internet control protocols.

UNIT-IV: TRANSPORT LAYER (9 Periods)

UDP - Segment header, Remote procedure call, Real-time transport protocols; TCP - service model, Protocol, Segment header, Connection establishment, Connection release, Sliding window, Timer management, Congestion control.

UNIT-V: APPLICATION LAYER (7 Periods)

Domain Name System (DNS)-Name space, Domain resource records, Name servers; Electronic mail-Architecture and services, User agent, Message formats, Message transfer, Final delivery; The World Wide Web- Architectural overview, HTTP.

Total Periods: 45

III B.Tech. - I Semester

(16BT51501) COMPILER DESIGN

(Common to IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Theory of Computation".

COURSE DESCRIPTION: Lexical analysis; Parsers; Run Time Environments; Syntax Directed Translation; Type checking; Code Optimization; Code Generation and Compiler tools.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on the phases involved in design of compilers.

CO2. Analyze code optimization Techniques.

CO3. Design experiments for implementing parsing techniques.

CO4. Synthesize rules in compiler to demonstrate semantic attribution during Parsing.

CO5. Use compiler construction tools such as LEX and YACC for designing a Parser.

CO6. Apply ethical principles for usage of stack and other storage memory.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO COMPILER AND LEXICAL ANALYSIS (9 Periods)

Structure of a compiler, Interpretation- Interpreters, Recursive interpreters, Iterative interpreters**.**

Lexical Analysis: The Role of the Lexical Analyzer, Input Buffering, Specification of Tokens, The Lexical-Analyzer Generator LEX.

UNIT-II: SYNTAX ANALYSIS (9 Periods)

The Role of the Parser, Eliminating Ambiguity, Eliminating of Left Recursion and Left Factoring.

Top-Down Parsing: Recursive descent parsing, Non Recursive Predictive parsing, LL (1) Grammars, A traditional top-down parser generator-YACC

Bottom-Up Parsing: Shift reduce parsing, LR parsers - Simple LR parser, Canonical LR parser, LALR parser, Using Ambiguous Grammars.

UNIT-III: SYNTAX DIRECTED TRANSLATION AND TYPE CHECKING (9 Periods)

Syntax directed definition, S-attributed and L-attributed definitions, Construction of syntax trees.

Type Checking: Type Expressions, Type Equivalence, Rules for Type Checking, Type Conversions, Overloading of Functions and Operators.

UNIT-IV: INTERMEDIATE CODE GENERATOR AND RUN TIME ENVIRONMENTS (9 Periods)

Preprocessing the intermediate code, Preprocessing of expressions, Preprocessing of if-statements and goto statements, Preprocessing of routines, Variants of Syntax Trees, Three Address Code, Boolean expressions, Flow-of-Control Statements, Control- Flow Translation of Boolean Expressions.

Run time Environments: Storage organization, Stack Allocation of Space, Access to Nonlocal Data on the Stack.

UNIT-V: CODE OPTIMIZATION AND CODE GENERATION (9 Periods)

Basic Blocks and Flow Graphs, Optimization of Basic Blocks, The principal sources of optimization, Introduction to data flow analysis.

Code Generation: Issues in the Design of a Code Generator, The Target Language, Simple Code Generator, Peephole optimization, Register allocation and assignment.

Total Periods: 45

TEXT BOOK:

III B.Tech. - I Semester
(16BT51202) OBJECT ORIENTED ANALYSIS AND DESIGN

(Common to CSE and IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on "Software Engineering" and "Object Oriented Programming through C++".

COURSE DESCRIPTION: Introduction to UML, Basic structural modeling; Advanced structural modeling, Class and object diagrams; Basic behavioral modeling; Advanced behavioral modeling; Architectural modeling.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on principles of object oriented analysis and design through UML Diagrams.
CO2. Analyze user requirements and identify suitable structural and behavioral modeling components.
CO3. Design and develop UML models for real time software applications.
CO4. Solve real world problems by applying structural and behavioral modeling techniques.
CO5. Use unified modeling language in preparing blue prints for software solutions.
CO6. Design and develop UML models to solve societal problems.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO UML AND BASIC STRUCTURAL MODELING (11 Periods)

Introduction to UML: Importance of modeling, Principles of modeling, Object oriented modeling, An overview of UML, Conceptual model of the UML, Architecture, Software development life cycle.

Basic Structural Modeling: Classes-Terms and concepts, Common modeling techniques; Relationships-Modeling simple dependencies, Single inheritance and structural relationships; Common mechanisms, Diagrams.

UNIT-II: ADVANCED STRUCTURAL MODELING, CLASS AND OBJECT DIAGRAMS (7 Periods)

Advanced Structural Modeling: Advanced classes, Advanced relationships, Interfaces, Types and roles, Packages, Instances.

Class and Object Diagrams: Terms and concepts, Modeling techniques for class diagram-Modeling simple collaboration, Logical database schema, Forward and reverse engineering; Introduction to object diagrams.

UNIT-III: BASIC BEHAVIORAL MODELING (9 Periods)

Basic Behavioral Modeling-I: Interactions-Terms and concepts, Modeling a flow of control; Interaction diagrams-Terms and concepts, Modeling flows of control by time ordering and control by organization, Forward and reverse engineering.

Basic Behavioral Modeling-II: Use cases-Terms and concepts, Modeling the behavior of the element; Use case Diagrams-Terms and concepts, Modeling the context of a system, Requirement of a system, Forward and reverse engineering; Activity Diagrams-Terms and concepts, Modeling a workflow, modeling an operation, Forward and reverse engineering.

UNIT -IV: ADVANCED BEHAVIORAL MODELING (7 Periods)

Events and signals-Modeling a family of signals, exceptions; State machines-Modeling the lifetime of an object; Introduction to processes and threads, Time and space-Modeling timing constraints, Distribution of objects and objects that migrate; State chart diagrams-Modeling reactive objects, Forward and reverse engineering.

Unit-V: ARCHITECTURAL MODELING (11 Periods)

Component-Terms and concepts, Modeling executables and libraries, Modeling tables, Files and documents, Modeling an API; Deployment-Modeling processors and devices, Modeling the distribution of components; Component diagrams-Modeling source code, Executable release, Physical database, Adaptable systems, Forward and reverse engineering; Deployment diagrams-Modeling an embedded systems, Client/Server system, Fully distributed systems, Forward and reverse engineering.

Case Studies: Online student course registration system for university, Hospital Management.

Total Periods: 45

III B.Tech. - I Semester

(16BT51203) WEB TECHNOLOGIES

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Java Programming".

COURSE DESCRIPTION: Hyper Text Markup Language (HTML); Features of HTML5; Cascading Style Sheets (CSS); JavaScript; JQuery; Bootstrap; Hypertext Preprocessor (PHP); MySQL.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on web page design elements, dynamic content and database interaction.

CO2. Analyze user requirements to develop web applications.

CO3. Design client-server applications using web technologies.

CO4. Demonstrate problem solving skills to develop enterprise web applications.

CO5. Use HTML, CSS, JavaScript, JQuery, Bootstrap and PHP technologies for device independent web application development.

CO6. Apply Web Technologies to develop interactive, dynamic and scalable web applications for societal needs.

DETAILED SYLLABUS:

UNIT-I: HTML (11 Periods)

Introduction: Fundamentals of HTML, Working with text, Organizing text in HTML, Working with links and URLs, Creating tables, Working with images, Canvas, Forms, Frames and Multimedia.

HTML5: Introduction, HTML5 document structure, Creating editable content, Checking spelling mistakes, Exploring custom data attributes, Client-Side storage, Drag and drop feature, Offline web applications, Web communications, Cross-Document messaging and desktop notifications.

UNIT-II: CSS AND JAVASCRIPT (8 Periods)

CSS: Introduction, CSS selectors, Inserting CSS in an HTML document, Backgrounds, Fonts, and Text styles, Creating boxes, Displaying, Positioning and floating elements, Features of CSS3, Media queries.

Javascript: Overview of JavaScript, JavaScript functions, Events, Image maps and animations, JavaScript objects, Working with browser and document objects.

UNIT-III: JQUERY and BOOTSTRAP (9 Peirods)

JQuery: Introduction, JQuery selectors, Events, Methods to access HTML elements and attributes, Introduction to AJAX.

Bootstrap: Getting started with Bootstrap, Creating responsive layouts using Bootstrap CSS - Basic HTML structure for Bootstrap, Responsive classes, Rendering images, the grid system, Constructing data entry forms.

UNIT-IV: INTRODUCTION TO PHP (9 Periods)

Introduction, Data types, Variables, Constants, Expressions, String interpolation, Control structures, Functions, Arrays, Embedding PHP code in web pages, Object Oriented PHP.

UNIT-V: PHP WEB FORMS AND MYSQL (8 Periods)

PHP Web forms: PHP and web forms, Sending form data to a server, Working with cookies and session handlers

PHP with MySQL: Interacting with the database, Prepared statement, Database transactions.

Total Periods: 45

TEXT BOOKS:

1. Kogent Learning Solutions Inc, *HTML 5 Black Book: Covers CSS3, JavaScript, XML, XHTML, AJAX, PHP and JQuery,* Dreamtech Press, Second Edition, 2016.
2. W. Jason Gilmore, B*eginning PHP and MySQL,* APress, Fourth Edition, 2011.

REFERENCE BOOKS:

1. Snig Bahumik, *Bootstrap Essentials,* PACKT Publishing, 2015 (e-book).
2. Thomas A. Powell, T*he Complete Reference: HTML and CSS,* Tata McGraw Hill, Fifth Edition, 2010.

3. Andrea Tarr, *PHP and MySQL,* Willy India, 2012.

III B.Tech. - I Semester
(16BT50341) OPTIMIZATION TECHNIQUES

(Interdisciplinary Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Multi Variable Calculus and Differential Equations".

COURSE DESCRIPTION: Introduction to optimization; classical optimization techniques; classification of optimization problems; linear programming; transportation and assignment problem; non-linear programming; un-constrained non-linear programming; constrained non-linear programming; dynamic programming.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate the knowledge on Optimization techniques for Linear, Non linear and Dynamic programming problems.

CO2. Analyze and quantify a system architecture or product design problem for selecting appropriate objective function, design variables, parameters and constraints.

CO3. Develop mathematical models for real time optimization problems.

CO4. Conduct investigations on complex problems and make recommendations based on solutions, analysis and limitations of models.

CO5. Use optimization techniques for solving complex problems of real time applications.

CO6. Optimize the resources in organizations for sustainable development.

DETAILED SYLLABUS:

UNIT -I: CLASSICAL OPTIMIZATION TECHNIQUES (9 Periods)

Introduction, Engineering applications of optimization, tatement of an optimization problem, Design vector, Design constraints, Constraint surface, Objective function, lassification of optimization problems, Single variable optimization, Multi variable optimization without constraints, Multi variable optimization with equality constraints - Lagrange multipliers method; Multi variable optimization with inequality constraint - Kuhn Tucker conditions.

UNIT -II: LINEAR PROGRAMMING (9 Periods)

Introduction, Formulation, Graphical solution, Simplex method, Big M-method, Two-phase method, Duality principle, Dual simplex method.

UNIT -III: TRANSPORTATION AND ASSIGNMENT PROBLEMS (9 Periods)

Transportation problems: Formulation, Initial basic feasible solution - North-West corner rule, Least cost method, and Vogel's approximation method; Optimal solution using Modified distribution method - Unbalanced transportation problem, Degeneracy.

Assignment problems: Formulation, Solution of assignment problem and its variants, Traveling salesman problem.

UNIT -IV: NON-LINEAR PROGRAMMING (9 Periods)

One dimensional minimization methods, classification - Fibonacci method, quadratic interpolation method; classification of unconstrained minimization methods - Powell's method, steepest descent method (Cauchy's method); classification of constrained optimization techniques - interior and exterior penalty function methods.

UNIT -V: DYNAMIC PROGRAMMING (9 Periods)

Multistage decision processes, Concept of sub optimization and Principle of optimality, Computational procedure in dynamic programming - calculus method, Tabular method; Linear Programming problem by dynamic programming approach, Applications - reliability problem, shortest path problem, and capital budgeting problem. **Total Periods: 45**

TEXT BOOKS:

1. Singiresu S Rao, *Engineering Optimization: Theory and Practice,* New Age International, Third Edition, 2010.
2. A.Ravindran, K.M.Ragsdell, G.V.Reklaitis, *Engineering Optimization: Methods and applications,* Wiley India Pvt. Ltd., Second Edition2006.

REFERENCE BOOKS:

1. C Mohan and Kusum Deep, *Optimization Techniques,* New Age International Publishers, 2010.
2. Hamdy A. Taha, *Introduction to Operations Research,* PHI, Ninth Edition, 2013.

III B.Tech. - I Semester

(16BT50442) MICROPROCESSORS AND INTERFACING

(Interdisciplinary Elective-1)
(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on "Digital Logic Design" and "Computer Organization".

COURSE DESCRIPTION: INTEL 8086 and 8051- Architectures; Instruction set; Programmable Interfacing Concepts; ADC, DAC, 8255, 8257,8259 ,8279,8251, Advanced peripheral Interfacing; Applications.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on
- Internal Hardware details of Intel 8086, 8051 and programming devices like 8255, 8257, 8259, 8279 and 8251.
- Interfacing various peripherals to build standalone systems.

CO2: Analyze various peripherals and interfacing techniques.

CO3: Design application based Microcomputer system using 8086 and 8051.

CO4: Solve problems by providing microcomputer-based real time solutions.

CO5: Apply programming tools, appropriate techniques and resources to complex engineering activities for microprocessor and microcontroller based systems with understanding of limitations.

C06: Solving societal problems by applying concepts of microprocessors and microcontrollers.

DETAILED SYLLABUS:

UNIT I - INTEL 8086 ARCHITECTURE AND PROGRAMMING (9 Periods)

Evolution of Microprocessors, Architecture of 8086 microprocessor, Register organization, Physical Memory Organization, Signal description of 8086, General Bus Operation Minimum and Maximum mode operation of 8086, Timing diagram, Addressing modes.

UNIT II - ASSEMBLY LANGUAGE PROGRAMMING WITH 8086 AND INTERRUPTS (10 Periods)

Instruction set of 8086, Assembler directives and Operators; Interrupts and Interrupt service routines, Interrupt Cycle of 8086, Non Maskable interrupt, Maskable interrupt (INTR), Interrupt Programming, Passing Parameters to procedures, MACROS.

UNIT III-BASIC PERIPHERALS AND THEIR INTERFACING WITH 8086 (8 Periods)

Semiconductor memory Interfacing, Dynamic RAM interfacing, Interfacing I/O ports, Programmable Input-Output Port (PIO) 8255, Modes of operations of 8255, Interfacing analog to digital and digital to analog converters, stepper motor interfacing.

UNIT IV - SPECIAL PURPOSE PROGRAMMABLE PERIPHERAL DEVICES (9 Periods)

Programmable Interrupt Controller 8259A; The keyboard/Display Controller 8279-Architecture, Signal Description, Modes of operations; Programmable Communication Interface 8251 USART; DMA Controller 8257, DMA Transfers and Operations.

UNIT V - INTRODUCTION TO 8051 MICROCONTROLLER (9 Periods)

Microprocessors Vs Microcontrollers, The 8051 Architecture: Introduction, 8051 Microcontroller Hardware, input/output pins, Ports and circuits, External Memory, Counters and Timers, Serial Data Input / Output, Interrupts; Addressing Modes, Instruction set of 8051, simple programs on arithmetic operations using 8051.

Total Periods: 45

TEXT BOOKS:

1. A.K. Ray and K.M.Bhurchandi, *Advanced Microprocessors and Peripherals- Architecture, Programming and Interfacing,* TMH, 2002.
2. Kenneth J. Ayala, *The 8051 Microcontroller-Architecture, Programming and Applications,* Third Edition, Cengage learning, 2004.

REFERENCE BOOKS:

1. Douglas V.Hall, *Microprocessors and Interfacing: Programming and Hardware,* Revised Second Edition, TMH.
2. Yu-cheng Liu, Glenn A. Gibson, *Microcomputer systems: The 8086/8088 Family Architecture, Programming and Design,* PHI, 2006.

3. Mazidi and Mazidi, *The 8051 Microcontroller and Embedded Systems,* PHI, 2000.

III B.Tech. - I Semester

(16BT60404) IMAGE PROCESSING

(Interdisciplinary Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: --

COURSE DESCRIPTION: Fundamentals of image processing; Image transforms; Image enhancement techniques in spatial and frequency domains; Restoration techniques; Image segmentation techniques; Image compression techniques.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on
- Image Fundamentals
- Image Enhancement and Restoration Techniques
- Image Segmentation and Compression Techniques
- Color image processing

CO2. Analyze different images using various processing techniques.

CO3. Design and Develop various image processing algorithms to process the images in various Real Time Applications.

CO4. Solve problems related to images for feasible and optimal solutions in the core area of Image Processing.

CO5. Apply appropriate techniques to complex engineering activities in the field of image processing.

CO6. Understand the impact of the image processing for societal needs.

DETAILED SYLLABUS:

UNIT-I: IMAGE FUNDAMENTALS (10 Periods)

Fundamental steps in Image Processing, Image sampling and quantization, some basic relationships between pixels, Arithmetic operations, Logical operations, Spatial operations.

IMAGE TRANSFORMS: 2D-DFT and properties, Walsh Transform, Hadamard Transform, Discrete Cosine Transform, Haar-Transform, Slant Transform, Hotelling Transform.

UNIT-II: IMAGE ENHANCEMENT (11 Periods)

Basic Intensity transformation functions, Histogram processing, Fundamentals of Spatial Filtering, Smoothing spatial filters, Sharpening spatial filters, Combining spatial Enhancement methods.

Basics of filtering in frequency domain, Correspondence between filtering in the spatial and frequency domains, Image smoothing using frequency domain filters, Image sharpening using frequency domain filters, Homomorphic filtering.

UNIT-III: IMAGE RESTORATION (7 Periods)

Image degradation/Restoration model, Noise models, Restoration in the presence of Noise only-spatial filtering - mean, order- statistic and adaptive filters. Estimating the degradation function, Inverse filtering, Weiner filtering, Constrained least squares filtering.

UNIT-IV: IMAGE COMPRESSION (8 Periods)

Classification of redundancy in Images, Image Compression models, Run length coding, Arithmetic coding, Dictionary based compression, bit-plane coding, Transform based coding, Fidelity Criteria, Image compression standards.

UNIT-V: IMAGE SEGMENTATION AND COLOR IMAGE PROCESSING (9 Periods)

Detection of discontinuities- Point, line and edge Detection. Thresholding- global thresholding, adaptive thresholding. Region based Segmentation. Color image fundamentals - RGB, HSI models, conversions, Pseudo Color Image Processing, Color transformations.

Total Periods: 45

TEXT BOOKS:

1. Rafael C. Gonzalez and Richard E. Woods, *Digital Image Processing,* Pearson Education, Third Edition, 2008
2. S.Sridhar, *Digital Image Processing,* Oxford University, Second Edition, 2016

REFERENCE BOOKS:

1. William K. Pratt, *Digital Image Processing,* John Wiley and Sons, Third Edition, 2002.

2. Anil K.Jain, *Fundamentals of Digital Image processing,* Prentice Hall, 2007.

III B.Tech. - I Semester

(16BT60503) **WIRELESS NETWORKS**

(Interdisciplinary Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Computer Networks".

COURSE DESCRIPTION: Generations of Wireless Networks; Voice and Data Processing; Wireless Network Topology; GSM; TDMA; CDMA; Wireless LANs; Wireless WANs; Wireless PAN.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on
- Wireless Medium Access methods.
- Network Topology
- Wireless LAN, HIPERLAN
- GSM, CDMA, GPRS

CO2. Analyze the network topologies in Wireless Networks.

CO3. Design solutions for network communications at physical and transport layers.

CO4. Solve complex problems related to network communications and wireless networks.

CO5. Apply GSM, CDMA, GPRS and Bluetooth to create Home Access Networks and wireless Personal Area Network.

CO6. Apply contextual knowledge to solve problems using societal applications like health care devices, Internet of Things.

DETAILED SYLLABUS:

UNIT-I: OVERVIEW OF WIRELESS NETWORKS AND WIRELESS MEDIUM ACCESS ALTERNATIVES (9 Periods)

Overview of Wireless Networks: Different generations of wireless networks.

Wireless Medium Access Alternatives: Fixed assignment access for voice-oriented networks - Frequency Division Multiple Access (FDMA), Time Division Multiple Access (TDMA), Code Division Multiple Access (CDMA); Random access for data-oriented networks - Access methods for wireless LANs; Integration of voice and data traffic.

UNIT-II: NETWORK PLANNING AND WIRELESS NETWORK OPERATIONS (9 Periods)

Network Planning: Wireless network topologies - Infrastructure of network topology, Ad hoc network topology; Cellular topology, Cellular concept, Cellular hierarchy; Cell fundamentals.

Wireless Network Operations: Mobility management - Location management, Handoff management, Mobile IP; Security in wireless networks - Security requirements for wireless networks, Overview of network security, Identification schemes.

UNIT-III: INTRODUCTION TO WIRELESS LANS AND IEEE 802.11 Wireless LANS (9 Periods)

Introduction to Wireless LANs: Historical overview of the LAN industry, Wireless home networking-Home Access Networks (HAN), Needs of HAN, HAN technologies**.**

IEEE 802.11 WLANs: IEEE 802.11 - Overview of IEEE 802.11, Reference architecture, Layered protocol architecture; The PHY Layer - FHSS, DSSS, DFIR, IEEE 802.11a, IEEE 802.11b; MAC sublayer - General MAC frame format; MAC management sublayer - Registration, Handoff, Security.

UNIT-IV: GSM TECHNOLOGY, CDMA TECHNOLOGY AND MOBILE DATA NETWORKS (10 Periods)

GSM Technology: GSM - Reference architecture; Mechanisms to support a mobile environment - Registration, Call establishment, Handoff, Security.

CDMA Technology: CDMA - IS-95 CDMA forward channel, IS-95 CDMA reverse channel, Packet and frame formats in IS-95.

Mobile Data Networks: GPRS - Reference architecture in GPRS, Mobility support in GPRS, Protocol layers in GPRS; SMS - Overview of SMS Operation; Mobile application protocols - Wireless application protocol, i-Mode.

UNIT-V: WIRELESS ATM, HIPERLAN AND WIRELESS PAN (8 Periods)

Wireless ATM and HIPERLAN: Wireless ATM - Reference model, Protocol entities, PHY and MAC layer alternatives, Mobility support; HIPERLAN - HIPERLAN-1, Requirements and architecture, PHY and MAC layers; HIPERLAN-2 - Architecture and reference model, PHY layer, DLC layer, Convergence layer, Security, Overall comparison with 802.11.

Wireless PAN: IEEE 802-15 WPAN, Home RF - Architecture; Bluetooth - Overall architecture, Protocol stack, Physical connection, Security. **Total Periods: 45**

TEXT BOOK:

1. Kaveh Pahlavan and Prashant Krishna Murthy, *Principles of Wireless Networks,* PHI Learning Pvt. Ltd., 2009.

REFERENCE BOOKS:

1. William Stallings, *Wireless Communications and Networks,* Pearson Education, Second Edition, 2012.
2. C. Sivaram Murthy and B.S. Manoj, A*d-hoc Wireless Networks Architectures and Protocols,* Pearson Education, Second Edition, 2007.

III B.Tech. - I Semester

(16BT51231) CASE TOOLS AND COMPUTER NETWORKS LAB

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: Courses on "Object Oriented Analysis and Design", "Computer Networks" and "Java Programming".

COURSE DESCRIPTION: Modeling case studies -Online Ticket Reservation system; Point of sales; Hands-on Experience on data link Framing methods; CRC; Routing algorithms; Congestion Control Algorithms; Substitution Techniques and Network Simulation using NS-2.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- UML architecture
- Routing algorithms
- Error detection and correction techniques.

CO2. Analyze real world problems and study the applicability of UML design.

CO3. Apply Unified Modeling Language to design software and design routing algorithms Shortest path using Dijkstra's, and Distance vector.

CO4. Demonstrate independent problem solving skills in designing and developing software solutions.

CO5. Use NS-2 tool for simulating computer network processes.

CO6. Build network models and UML models suitable for societal needs.

CO7. Work effectively as an individual and as a member in team for mini-project implementation.

CO8. Demonstrate communication skills, both oral and written for preparing and presenting reports.

LIST OF EXERCISES:

Case studies given below should be Modeled using Visual Modeling tools in different views i.e. Use case view, logical view, component view, Deployment view.

1. Case Study : Online Ticket Reservation for Railways

Problem Statement:

Computer play an integral part of the day in today's life. It makes the entire job easier and faster, every job is computerized so as the ticket reservation we can book over the online ticket reservation system. During the booking of the ticket reservation passenger has to select origin, date of journey, destination, class of train etc. The reservation counter keeps track of passenger's information. Thus the system will have all the details about the trains and facilities provided by them. There are various trains with the different level of convenience for the passengers. The whole database will be maintained by database administrator. There are varieties of trains where the passengers can select the train according to the convenience for their destination journey. The journey could be within the state or across the India. Each train has the three types of classes i.e. Sleeper class, First class and the AC compartment. Design the application for the above problem description.

2. Case Study : A Point of Sale (PoS) System

Problem Statement:

A POS System is a computerized application used to record sales and handle payments; it is typically used in a retail store. It includes hardware components such as a computer and bar code scanner, and software to run the system. It interfaces to various service applications, such as a third-party tax calculator and inventory control. These systems must be relatively fault tolerant; that is, even if remote services and temporarily unavailable they must still be of capturing sales and handling at least cash payments. A POS system must support multiple and varied client - side terminals and interfaces such as browser, PDA's, touch - screens.

3. Case Study : Recruitment Procedure for Software Industry

Problem Statement:

In the software industry the recruitment procedure is the basic thing that goes in the hand with the requirement as specified by the technical management team. HR first gives an advertisement in leading Newspapers, Journals, Weeklies and Websites. The job seekers can apply for it through by Post or by e-mail to the company. The technical skill and the experience of the candidates are reviewed and the short listed candidates are called for the interview. There may be different rounds for interview like the written test, technical interview, and HR interview. After the successful completion of all rounds of interview, the selected candidates' names are displayed. Meanwhile HR gives all the details about the salary, working hours, terms and conditions and the retirement benefit to the candidate.

4. Case Study : Online Auction Sales

Problem Statement:

The online auction system is a design about a website where sellers collect and prepare a list of items they want to sell and place it on the website for visualizing. To accomplish this purpose the user has to access the site. Incase it's a new user he has to register. Purchaser's login and select items they want to buy and keep bidding for it. Interacting with the purchasers and sellers through messages does this. There is no need for customer to interact with the sellers because every time the purchasers bid, the details will be updated in the database. The purchaser making the highest bid for an item before the close of the auction is declared as the owner of the item. If the auctioneer or the purchaser doesn't want to bid for the product then there is fixed cutoff price mentioned for every product. He can pay that amount directly and own the product. The purchaser gets a confirmation of his purchase as an acknowledgement from the website. After the transition by going back to the main menu where he can view other items.

5. Case Study : Two Floor Elevator Simulator

Problem Statement:

The elevator has the basic function that all elevator systems have, such as moving up and down, open and close doors, and of course, pick up passengers. The elevator is supposed to be used in a building having floors numbered from 1 to MaxFloor, where the first floor is the lobby. There are car call buttons in the car corresponding to each floor. For every floor except for the top floor and the lobby, there are two hall call buttons for the passengers to call for going up and down. There is only one down hall call button at the top floor and one up hall call button in the lobby. When the car stops at a floor, the doors are opened and the car lantern indicating the current direction the car is going is illuminated so that the passengers can get to know the current moving direction of the car. The car moves fast between floors, but it should be able to slow down early enough to stop at a desired floor. When an elevator has no requests, it remains at its current floor with its doors closed.

In order to certificate system safety, emergency brake will be triggered and the car will be forced to stop under any unsafe conditions.

6. Case Study : Home Appliance Control System

Problem Statement:

A home appliance control system (HACS) is a system which provides various services to remotely operate on home appliances, such as microwave oven, TV, and garage door etc through remote devices such as mobile phone, desktop and palm-top. A home appliance control system (HACS) is a system which is controlled by a remote system such as a mobile phone or a palm-top, and at the same time controls, monitors and coordinates home appliances such as air conditioner, microwave oven, garage doors, TV set, VCR, audio controller, indoor/outdoor lights, water sprinkler, home security system, bath tub controller, etc. In order to activate home appliances and to allow for different ways of cooking, the HACS needs mechanisms for communication between the different devices in the system, and for coordination among the various processes running on such devices. The system administrator of the HACS system has the ability to add a new appliance or delete an existing one. The system administrator has the ability to add a new remote device and configure it with HACS or delete an existing one when it is not used. Also the system administrator can create an account for a new user or delete existing account if it is no longer used.

7. Implement the following data link layer framing methods:

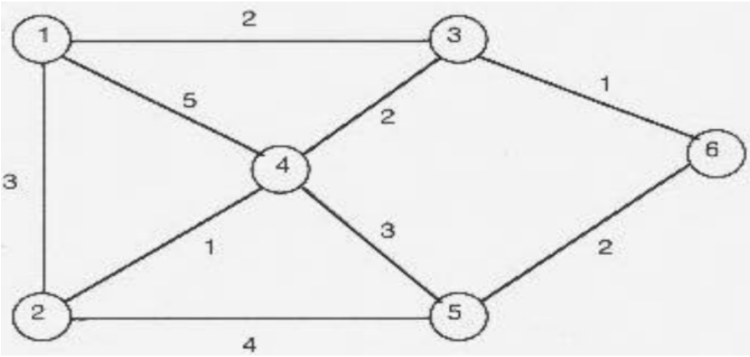
a. Character Count.

b. Character stuffing.

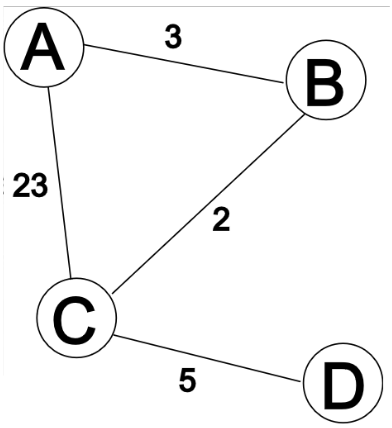
c. Bit stuffing.

8. Design a program to compute checksum for the given frame 1101011011 with the generator Polynomial of CRC 12, CRC 16 and CRC CCIP. Display the actual bit string transmitted. Suppose the third bit from the left is inverted during transmission. Show that this error is detected at the receivers end.

9. Implement Dijkstra's algorithm to compute the Shortest path through the following graph.



10. Design a program to obtain routing table for each node using distance vector routing algorithm by considering the given subnet with weights indicating delay between nodes.



11. Write a java program to implement RPC (remote procedure call).
12. a. Explain the Installation procedure of NS-2 on Windows using VMware.
    b. Creation of Link between nodes and transmission of data between nodes using NS-2.
13. Mini project-1:Implement Dijkstra's algorithm to compute the Shortest path using NS-2.
14. Mini project-2: A program to obtain Routing table for each node using Distance vector routing Algorithm using NS-2.

III B.Tech. - I Semester

(16BT51232) COMPUTER GRAPHICS AND MULTIMEDIA LAB

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: Courses on "Computer Graphics and Multimedia" and "Java Programming".

COURSE DESCRIPTION: Hands on experience in developing graphics, Animating Flash Movies and Developing Applications using a Flash Tool.

COURSE OUTCOMES:
On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on creation of 2D, 3D objects and compression techniques.
CO2. Analyze real world problems and identify solutions based on computer graphics and multimedia concepts.
CO3. Design and develop various algorithms for graphics, user authoring applications and animation movies.
CO4. Demonstrate independent problem solving in developing multimedia applications.
CO5. Apply various programming principles to implement graphics and to animate interactive flash movies for presenting multimedia content.
CO6. Build multimedia applications suitable for societal requirements.
CO7. Work effectively as an individual and as a member in team for mini-project implementation.
CO8. Demonstrate communication skills, both oral and written for preparing and presenting reports.

LIST OF EXERCISES:

1. Write a program for the implementation of Bresenham's line drawing algorithm.
2. Write a program to implement Bresenham's circle drawing algorithm.
3. Write a program to implement Bresenham's ellipse drawing algorithm.
4. Write a program to implement DDA line drawing algorithm.
5. Write a program to implement 2D Transformation.
6. Write a program to implement Window Viewport Mapping.
7. Write a program to implement Cohen-Sutherland 2D Clipping.
8. Write a program to convert between color models.
9. Write a program to implement text compression algorithm
10. Write a program to implement image compression algorithm
11. Case study1: Create an animation using flash tool.
12. Case study2: Apply basic operations on image using Adobe Photoshop.

Note: 1 to 10 programs can be implemented using C

III B.Tech. - I Semester

(16BT51233) WEB TECHNOLOGIES LAB

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: A course on "Web Technologies".

COURSE DESCRIPTION: Hands-on experience on HTML, HTML5, CSS, JavaScript, JQuery, Bootstrap, PHP and MySQL.

COURSE OUTCOMES:

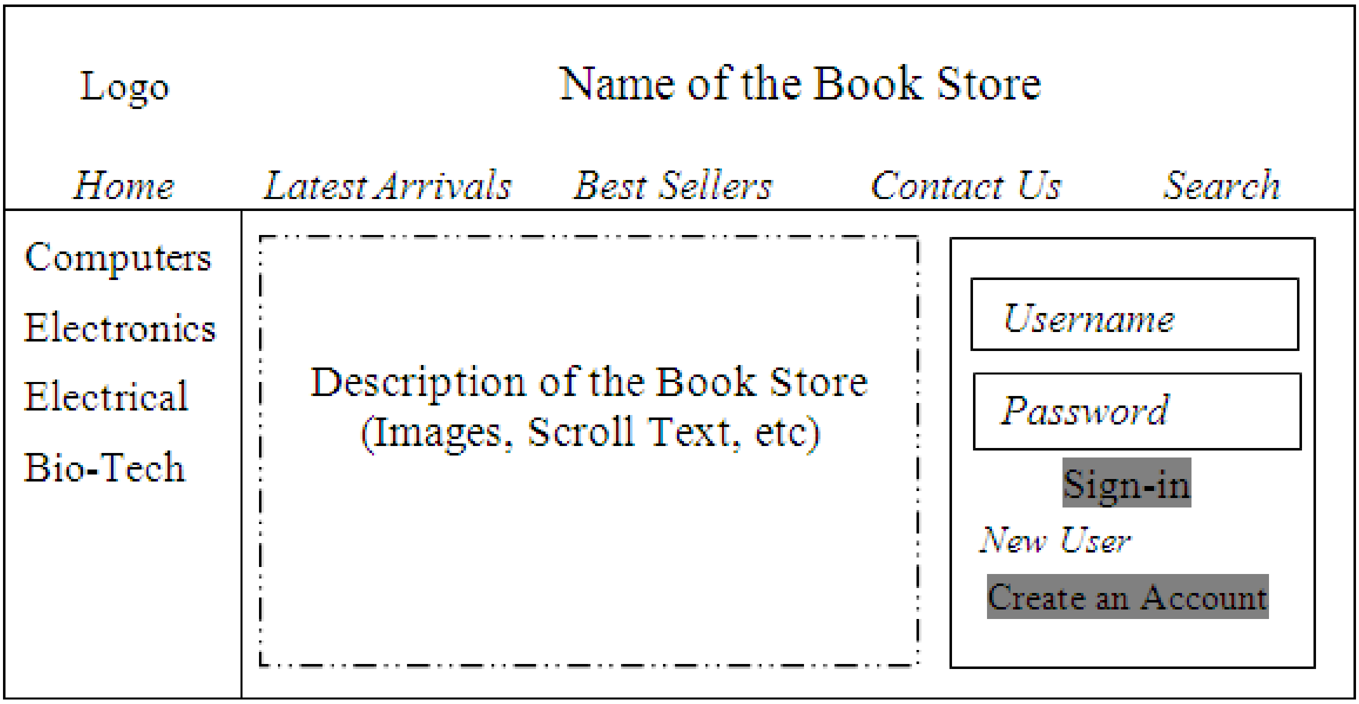
On Successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on web page design elements, dynamic content and database Interaction.
CO2. Analyze user requirements to develop web applications.
CO3. Design client-server applications using web technologies.
CO4. Demonstrate problem solving skills to develop enterprise web applications.
CO5. Use HTML, CSS, JavaScript, JQuery, Bootstrap and PHP technologies for device independent web application development.
CO6. Apply web technologies to develop interactive, dynamic and scalable web applications for societal needs.
CO7. Work effectively as an individual and as a member in team for mini-project implementation.
CO8. Demonstrate communication skills, both oral and written for preparing and presenting reports.

LIST OF EXERCISES:

1. Design the following static web pages of an online book store web application.

a. Home Page:



b. Catalogue Page:

The catalogue page should display the following details of available books.

i. Snap shot of cover page   ii. Title of the text book   iii. Author name
iv. Publisher   v. Price   vi. More details link.

		**Beginning PHP and MySQL** 4th Edition W Jason Gilmore Apress Rs. 520/-	More Details	

c. Registration Page:

Design the Registration page with the following fields and navigate it with create an account link.

i. First Name   ii. Last Name
iii. Gender   iv. Date of Birth
v. Username   vi. Password
vii. Confirm Password   viii. Address
ix. Postal Code   x. Mobile No.
xi. Email-Id

2. a. Design a web page to store username and password information using the local storage concept.

   b. Design a web page to store employee information including Name, Emp. Id, Department, Salary and Address on a client's machine using a real SQL database.

3. Apply the following styles to all web pages of online book store web application.

   a. Fonts and Styles: font-family, font-style, font-weight and font-size.

   b. Backgrounds and colors: color, background-color, background-image and background-repeat.

   c. Text: text-decoration, text-transformation, text-align and text-indentation, text-align

   d. Borders: border, border-width, border-color and border-style

   e. Styles for links: A: link, A: visited, A:active, A:hover

   f. Selectors, Classes, Layers and Positioning elements.

4. Write a JavaScript/JQuery code to validate the following fields of the Registration web page.

   a. First Name/Last Name - should contain only alphabets and the length should not be less than 8 characters.

   b. Username - It should contain combination of alphabets, numbers and underscore. It should not allow spaces and special symbols.

   c. Password - It should not less than 8 characters in length and it contains one uppercase letter and one special symbol.

   d. Date of Birth - It should allow only valid date; otherwise display a message stating that entered date is invalid. Ex. 29 Feb. 2009 is an invalid date.

   e. Postal Code: It must allow only 6 digit valid number.

   f. Mobile No. - It should allow only numbers and total number of digits should be equal to 10.

   g. e-mail id - It should allow the mail id with the following format: Ex. mailid@domainname.com

5. Design a web page with the following features using HTML5, JavaScript and JQuery
    a. Displaying of images with Custom animated effects
    b. Playing of selected video from the list of videos
    c. Showing the animated text in increasing and decreasing font size
    d. Changing the size of the area in a web page using DIV tag
    e. Hiding and Showing elements in a web page.
6. Design a web page with the following features using Bootstrap and Media Query.
    a. Components
    b. Responsive tables

c. Responsive images and videos

7. a. Deploy and navigate web pages of online book store using WAMP/XAMPP web server.

b. Write a PHP program to read user name and favorite color from the HTML form. Display the name of the user in green color and sets user favorite color as a background for the web page.

8. Write a PHP code to read the username and password entered in the Login form of the online book store and authenticate with the values available in cookies. If user enters a valid username and password, welcome the user by username otherwise display a message stating that, entered details are invalid.
9. Write a PHP code to read user details entered through the registration web page and store the same into MySQL database.
10. Write a PHP code for storing books details like Name of the book, author, publisher, edition, price, etc into MySQL database. Embed a PHP code in catalogue page of the online book store to extract books details from the database.
11. a. Mini Project - 1: Design a web application for selling products online with the following features.

Mobile website option - The online store should be built on a responsive design template and its features need to be available to all users, at any time, from anywhere and in any device.

Image options - The photos should also be taken from different points of view to give you a clearer idea of the product. Image options should include viewing angles, zoom, multiple images, and more.

Detailed product description - The description should often include the important details, such as the expiration date, size dimensions, weight, manufacturers date, and practical uses must be included in a good product description.

Order Tracking - The customers should be able to track their ordered products by logging into an account created upon registration.

Payment Options - An online website should allow credit card/debit card/net banking for payment.

b. Mini Project - 2: Design a social website with the following features

Build Profile - Members allow to build their profiles.

Upload content - The Social Networking Sites allow members to upload text messages, photographs, audio and video files. All posts are arranged in descending order with the last post coming first.

Build conversations - Content posted by members can be browsed and commented upon by all members who form part of the community. Content can also be tagged from third party sites on subjects that interest the group.

III B.Tech. - II Semester

(16BT3HS02) MANAGERIAL ECONOMICS AND PRINCIPLES OF ACCOUNTANCY

(Common to ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: --

COURSE DESCRIPTION: Managerial Economics; Demand and Elasticity of Demand; Production Functions; Markets and Pricing Policies; Basic concepts of Accounting (Journal, Ledger and Trial balance); Trading Account, Profit and Loss Account and Balance sheet with simple adjustments; Computerized Accounting.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Acquire knowledge on:
- Tools and concepts of Micro Economics.
- Basic Principles and concepts of Accountancy.
- Provides life skills for effective utilization of scarce resources.
- Financial Accounting.
- Significance of Economics and Accountancy

CO2. Develop skills in managerial decision making of an organization.

CO3. Apply the Economic theories i.e., Demand, Production, Cost, Markets and Price.

CO4. Develop effective communication in Business and Accounting transactions.

CO5. Ascertain the profitability and soundness of an organization.

CO6. Practice Financial Accounting.

DETAILED SYLLABUS:

UNIT - I: INTRODUCTION TO MANAGERIAL ECONOMICS, DEMAND ANALYSIS (9 Periods)

Definition, Nature and Scope of Managerial Economics. Demand: Determinants of demand - Demand function - Law of demand, assumptions and exceptions - Elasticity of demand - Types of elasticity of demand - Demand forecasting and methods of demand forecasting.

UNIT - II: THEORY OF PRODUCTION AND COST ANALYSIS (9 Periods)

Production Function: Isoquants and Isocosts - Input-output relationship - Law of returns. Cost Concepts: Total, Average and Marginal Cost - Fixed vs. Variable costs - Opportunity Costs Vs Outlay Costs- Separable Costs Vs Joint Costs, Urgent Costs Vs Postponable Costs- Avoidable Costs Vs Unavoidable Costs - Break Even Analysis (BEA) - Assumptions, Merits and demerits - Determination of Break Even Point (Simple problems).

UNIT - III: INTRODUCTION TO MARKETS AND PRICING (9 Periods)

Market Structure: Types of Markets - Features of perfect competition - Monopoly and monopolistic competition - Price and Output determination in perfect competition, monopoly and monopolistic Markets.

Pricing : Objectives and policies of pricing - Sealed bid pricing - Marginal cost pricing - Cost plus pricing - Going rate pricing - penetration Pricing -skimming Pricing - Block pricing - Peak load pricing - Cross subsidization.

UNIT - IV: INTRODUCTION TO PRINCIPLES OF ACCOUNTING AND CAPITAL (9 Periods)

Accountancy: Introduction - Concepts - Conventions - Double Entry Book Keeping - Journal - Ledger - Trial Balance (Simple problems).

Capital : Significance - Types of capital - Sources of Capital.

UNIT - V: FINAL ACCOUNTS - COMPUTERIZATION OF ACCOUNTING SYSTEM (9 Periods)

Introduction to Final Accounts - Trading account - Profit and Loss account and Balance Sheet with simple adjustments (Simple problems).

Computerization of Accounting System: Manual Accounting Vs Computerized Accounting - Advantages and Disadvantages of Computerized Accounting. **Total Periods: 45**

TEXT BOOKS:

1. A.R. Aryasri, *Managerial Economics and Financial Analysis,* Tata Mc- Graw Hill, New Delhi, Third Edition, 2007.

2. Ms. Samba Lalita, *Computer Accounting Lab Work,* Kalyani Publishers, Ludhiana, 2009.

3. S.P. Jain and K.L. Narang, *Financial Accounting,* Kalyani Publishers, Ludhiana, Sixth Edition, 2002.

III B.Tech. - II Semester

(16BT61501) DATA WAREHOUSING AND DATA MINING

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Database Management Systems".

COURSE DESCRIPTION: Data Mining Fundamentals; Data Preprocessing; Operational Database Systems and Data Warehouses; Mining Frequent Patterns; Classification and Prediction; Clustering; New Trends and Research Frontiers.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate Concepts of knowledge in data warehousing and data mining.

CO2. Analyze using data mining techniques to find useful and potential Knowledge.

CO3. Design Data Warehouse for OLAP applications for deployment.

CO4. Evaluate the usage of association mining techniques on complex data objects.

CO5. Select appropriate techniques to measure the interesting patterns from heterogeneous databases.

CO6. Apply appropriate evolutionary data mining algorithms to find solutions of Real time Applications.

DETAILED SYLLABUS:

UNIT I: DATA WAREHOUSING AND ONLINE ANALYTICAL PROCESSING (9 Periods)

Data Warehouse, Operational Database Systems versus Data Warehouses, A Multi tired Architecture, A Multidimensional Data Model, Stars, Snowflakes and Fact Constellations: Schemas, Role of Concept hierarchies, Measures, OLAP Operations, From online Analytical processing to Multidimensional Data Mining, Indexing OLAP Data.

UNIT II: DATA MINING AND DATA PREPROCESSING (8 Periods)

Introduction to Data Mining, kinds of data, kinds of patterns, major issues in Data Mining, Data Pre-processing, Data Cleaning, Data Integration , Data Reduction, Data Transformation and Discretization.

UNIT III: ASSOCIATIONS AND CLASSIFICATION (10 Periods)

Basic Concepts , Frequent itemset Mining Methods, pattern evaluation methods- From Association Mining to Correlation Analysis ,Classification, Decision Tree Introduction, Bayesian Classification Methods, Rule Based Classification, Prediction: Linear Regression.

UNIT IV: CLUSTER ANALYSIS (9 Periods)

Cluster Analysis: Types of Data in Cluster Analysis, A Categorization of Major Clustering Methods, Partitioning Methods -k-Means and K-Medoids , Hierarchical methods-Agglomerative and divisive method, Density-Based Method-DBSCAN, Grid-Based Method-STING, Outlier Analysis.

UNIT V: DATA MINING TRENDS (9 Periods)

Mining Complex Data Types: Mining sequence data, Mining other kinds of data: Spatial, Text, Multimedia and Web data, Data Mining Trends.

Total Periods: 45

TEXT BOOK:

1. Jiawei Han, Micheline Kamber and Jian Pei, *Data Mining: Concepts and Techniques,* Elsevier, Third Edition, 2013.

REFERENCE BOOKS:

1. K.P. Soman, Shyam Diwakar and V. Ajay, *Insight into Data mining Theory and Practice,* Easter Economy Edition, Prentice Hall of India, 2006.
2. G. K. Gupta, *Introduction to Data Mining with Case Studies,* Easter Economy Edition, Prentice Hall of India, 2006.
3. Tan P.N, Steinbach M.and Kumar V., I*ntroduction to Data Mining,* Addision-Weseley, 2006.

III B.Tech. - II Semester

(16BT61201) CLOUD COMPUTING

(Common to IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on "Computer Networks" and "Operating Systems".

COURSE DESCRIPTION: Virtualization, Virtualization Technologies; Cloud Computing Fundamentals, Deployment Models; Cloud Computing Architecture; Cloud Computing Mechanisms; Cloud Security, Cloud Disaster Recovery; Working with Clouds; and Case Studies.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on services, architecture, types of infrastructural models, disaster recovery and virtualization.

CO2. Analyze the issues in cloud computing Data, Network and Host security.

CO3. Apply API development skills in web applications for Cloud deployment.

CO4. Use research based knowledge to build cloud applications.

CO5. Use advanced programming languages to access cloud services.

CO6. Build cloud environment suitable for societal requirements.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION TO VIRTUALIZATION AND TECHNOLOGIES (9 periods)

Introduction to Virtualization: Definition, Objectives, Characteristics, Benefits of virtualization, Taxonomy of virtualization technologies, Pros and cons of virtualization.

Virtualization Technologies: VMware, Hyper-V, Zen and virtual iron.

UNIT II: FUNDAMENTAL CLOUD COMPUTING AND MODELS (9 Periods)

Cloud Computing: Origin and influences, Basic concepts and terminology, Goals and benefits, Risks and challenges.

Cloud Models: Roles and boundaries, Cloud characteristics, Cloud delivery models, Cloud deployment models.

UNIT III: CLOUD COMPUTING MECHANISMS AND ARCHITECTURE (9 Periods)

Cloud-Enabling Technology: Broadband networks and internet architecture, Data center technology, Virtualization technology, Web technology, Multitenant technology, Service technology.

Cloud Architectures: Architecture - Workload distribution, Resource pooling, Dynamic scalability, Elastic resource capacity, Service load balancing, Cloud bursting, Elastic disk provisioning, Redundant storage.

UNIT IV: CLOUD SECURITY AND DISASTER RECOVERY (9 Periods)

Cloud Security: Data, Network and host security, Cloud security services and cloud security possible solutions.

Cloud Disaster Recovery: Disaster recovery planning, Disasters in the cloud, Disaster management, Capacity planning and cloud scale.

UNIT V: CLOUD CASE STUDIES (9 Periods)

Case Studies: Software-as-a-Service (SaaS) - Salesforce.com, Facebook; Platform-as-a-Service (PaaS) - Google App Engine, MS-Azure and IBM Bluemix; Infrastructure-as-a- Service (IaaS) - Amazon EC2, Amazon S3 and Netflix.

Total Periods: 45

TEXT BOOKS:

1. Thomas Erl and RicardoPuttini, *Cloud Computing- Concepts, Technology and Architecture,* Pearson, 2013.
2. Ivanka Menken and Gerard Blokdijk, *Cloud Computing Virtualization Specialist Complete Certification Kit - Study Guide Book,* Lightning Source, 2009.

REFERENCE BOOKS:

2. Rajkumar Buyya, James Broberg and Andrzej Goscinski, *Cloud Computing Principles and Paradigms,* John Wiley and Sons, 2011.

3. John W. Rittinghouse and James F. Ransome, *Cloud Computing Implementation, Management and Security,* CRC Press, Taylor and Francis Group, 2010.

III B.Tech. - II Semester
(16BT60441) **PATTERN RECOGNITION**
(Interdisciplinary Elective-2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: --

COURSE DESCRIPTION: Importance of pattern recognition; Baye's Decision Theory; Linear and non linear classifiers; Feature selection based on statistical hypothesis testing; Feature Generation; KL Transform; SVD; ICA; Clustering of features and clustering algorithms.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Apply the knowledge of engineering fundamentals on:
- Classifying the features and patterns.
- Feature selection and generation.
- Clustering patterns of objects.

CO2. Analyze numerical and analytical problems of features and patterns of object using pattern recognition algorithms.

CO3. Design and develop algorithms to optimize classification of patterns, feature selection and generation and clustering of objects.

CO4. Interpretation and synthesis the features of objects to validate the performances of pattern recognition algorithms.

CO5. Apply appropriate techniques and algorithms to identify patters of objects with an understanding of limitations.

CO6. Use pattern recognition techniques for societal needs.

DETAILED SYLLABUS:

UNIT - I: INTRODUCTION TO PATTERN RECOGNITION (10 Periods)

Importance of pattern recognition, Features, Feature Vectors and Classifiers, Supervised, Unsupervised and Semi Supervised Learning, Classifiers based on Baye's Decision Theory - Baye's decision theory, Discriminant Functions and decision surfaces, Bayesian classification for Normal Distributions, Estimation of Unknown probability density functions, The Nearest Neighbor Rule.

UNIT - II: LINEAR CLASSIFIERS (9 Periods)

Linear Discriminant functions and Decision Hyperplanes, The perceptron Algorithm, Least Squares Method- Mean Square Error Estimation, Stochastic Approximation and the LMS Algorithm, Sum of Error Squares Estimation Least Squares Method; Mean Square Estimation Revisited- Mean Square Error Regression; Support Vector Machine- Separable classes, Nonseparable classes.

UNIT - III: NON LINEAR CLASSIFIERS (9 Periods)

The XOR problem, The two layer perceptron, Three layer perceptrons, The Back propagation Algorithm, The cost function choice, choice of the network size, A simulation example, Networks with weight sharing, generalized linear classifiers, polynomial classifiers, Radial basis Function Networks.

UNIT - IV: FEATURE SELECTION AND GENERATION (9 Periods)

Feature Selection- Pre processing, The peaking phenomenon, Feature selection based on statistical hypothesis testing, ROC curve, class separability measures, feature subset selection; Feature Generation - Basis Vectors and Images, The KL Transform, The Singular Value Decomposition, Independent Component Analysis, Non negative Matrix Factorization, Regional features, Features for shape and size characterization.

UNIT-V: CLUSTERING (8 Periods)

Introduction, Types of Features, Definitions of Clustering, Proximity Measures-Proximity Measures between Two Points, Proximity Functions between a Point and a Set, Proximity Functions between Two Sets; Categories of Clustering Algorithms, Sequential Clustering Algorithms, A Modification of BSAS, A Two-Threshold Sequential Scheme Refinement Stages

Total Periods: 45

TEXT BOOK:

1. Sergios Theodoridis, Konstantinos Koutroumbas, *Pattern Recognition,* Academic Press, Second Edition, 2009.

REFERENCE BOOKS:

1. Richard Duda, Peter E Hart, David G Stork, *Pattern Classifi-cation,* John Wiley and Sons, Second Edition, 2001.
2. Christopher M.Bishop, *Pattern Recognition and Machine Learning,* Springer Publications 2006.

III B.Tech. - II Semester
(16BT70402) EMBEDDED SYSTEMS
(Interdisciplinary Elective - 2)
(Common to CSE and IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on "Digital Logic Design" and "Computer Organization".
COURSE DESCRIPTION: Embedded system design approaches; MSP430 Architecture; Instruction Set; On-Chip Resources; Programming; Communication with peripherals; Internet of Things related Issues.
COURSE OUTCOMES:
On successful completion of this course, students will be able to:
CO1. Apply knowledge on:
- MSP430 Architecture, Pin out, Instruction set
- High level programming
- Usage of On-chip resources like ADC, DAC, Timers
- Internet of Things related issues

CO2. Analyze various designing issues regarding:
- Usage of on chip resources
- Low power modes
- Communication support

CO3. Design embedded systems using MSP430 series microcontrollers to suit market requirements.
CO4. Solve engineering problems and arrive at solutions in designing embedded systems to support interconnectivity.
CO5. Apply techniques, program skills, On-Chip resources to design networked embedded systems with an understanding of limitations.
CO6. Reason out and practice professional engineering to deliver efficient and cost effective embedded based products to society.

DETAILED SYLLABUS:
UNIT - I: INTRODUCTION TO EMBEDDED SYSTEMS (9 Periods)
Embedded Systems - Definition, Approaches, Applications, Anatomy of microcontroller, Memory, Software; MSP430 Introduction- Pin out, Functional Block diagram, Memory, CPU, Memory mapped input and output, Clock generator; Exceptions- Interrupts and Resets.
UNIT - II: ARCHITECTURE OF MSP430 (9 Periods)
CPU, Addressing Modes, Constant Generator and Emulated Instructions, Instruction Set, Example programs, Reflections on CPU and Instruction set, Resets, Clock System.
UNIT - III: FUNDAMENTALS FOR PROGRAMMING (9 Periods)
Development Environment, C Programming Language, Assembly Language, Programming and Debugging, Sample programs- Light LEDs in C, Read input from a switch; Automatic Control-Flashing light by delay, use of subroutines, using Timer_A; Header files and issues, Functions, Interrupts and Low power modes.
UNIT - IV: TIMERS, MIXED SIGNAL SYSTEMS AND COMMUNICATION (9 Periods)
Timers - Watchdog Timer, RTC, Measurement in capture mode; Mixed-Signal Systems- Comparator_A, ADC10 Architecture and operation, ADC12, Sigma-Delta ADC Architecture and operation, DAC; Communication- Communication Peripherals in MSP430, SPI, Inter-integrated Circuit Bus, Asynchronous communication with the USCI_A.
UNIT - V: HARDWARE SOFTWARE CO-DESIGN AND INTERNET OF THINGS (9 Periods)
CO- Design Issues: Co-design Models, Architectures, Languages, a Generic Co-design Methodology**.**
IOT: Introduction, Origins, Drivers and Applications, IOT Communication Models - Device to Device, Device to Cloud, Device to Gateway, Back end Data Sharing Model; IPV6 and IOTs', IOT Issues, Security Issues-challenges; Privacy Considerations, Interoperability/Standards.

Total Periods: 45

TEXT BOOKS:

1. John H. Davies, *MSP430 Microcontroller Basics,* Newnes Publications, 2008.
2. Karen Rose, Scott Eldridge, Lyman Chapin, T*he Internet of Things: An Overview: Understanding the Issues and Challenges of a More Connected World,* Internet Society, Oct. 2015.
3. Jorgen Staunstrup, Wayne Wolf, *Hardware / Software co- design Principles and Practice,* Springer, 2009.

REFERENCE BOOKS:

1. Chris Nagy, *Embedded Systems Design using the TI MSP30 Series,* Newnes Publications, 2003.

III B.Tech. - II Semester
(16BT60502) SOFT COMPUTING
(Interdisciplinary Elective - 2)
(Common to CSE and IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: --

COURSE DESCRIPTION: Concepts on Soft Computing Techniques; Artificial Neural Networks; Supervised Learning; Unsupervised Learning; Fuzzy logic; Genetic Algorithms.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Artificial Neural Networks
- Supervised Learning Networks
- Unsupervised Learning Networks
- Fuzzy sets, relations and measures
- Genetic Operators

CO2. Analyze neural network architectures, Fuzzy systems and Genetic algorithms.
CO3. Design soft computing solutions for real life computational problems.
CO4. Use soft computing techniques to solve complex computational problems.
CO5. Create algorithms using soft computing techniques.
CO6. Apply contextual knowledge to solve problems related to societal issues like Business Intelligence, Forecasting.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO SOFT COMPUTING AND ARTIFICIAL NEURAL NETWORKS (8 Periods)

Soft Computing: Neural Networks, Application Scope of Neural Networks, Hybrid Systems, Soft Computing, Applications of Soft Computing.

Artificial Neural Networks: Fundamentals, Evolution, Basic Models, Terminologies, Hebb Network.

UNIT-II: SUPERVISED LERANING NETWORKS (10 Periods)

Perceptron Networks: Theory, Perceptron Learning Rule, Architecture, Flowchart for Training Process, Perceptron Training Algorithm for Single and Multiple Output Classes, Perceptron Network Testing Algorithm.

Back-Propagation Networks: Theory, Architecture, Flowchart for Training Process, Training Algorithm, Learning Factors of Back-Propagation Networks, Testing Algorithm for Back-Propagation Networks.

UNIT-III: UNSUPERVISED LEARNING NETWORKS (9 Periods)

Unsupervised Learning Networks: Fixed Weight Competitive Nets, Kohonen Self-Organizing Feature Maps, Learning Vector Quantization, Counter-propagation Networks, Adaptive Response Theory Network.

UNIT-IV: FUZZY LOGIC (10 Periods)

Classical Sets and Fuzzy Sets: Classical Sets- Operations, Properties, Function Mapping; Fuzzy Sets- Operations, Properties.

Classical Relations and Fuzzy Relations: Cartesian Product of Relation, Classical Relations, Fuzzy Relations, Tolerance and Equivalence Relations, Non-interactive Fuzzy Sets.

UNIT-V: FUZZY SYSTEMS AND GENETIC ALGORITHMS (8 Periods)

Fuzzy Arithmetic and Fuzzy Measures: Fuzzy Arithmetic, Extension Principle, Fuzzy Measures, Measures of Fuzziness.

Genetic Algorithms: Genetic Operators, Working Principle, Fitness Function, Reproduction.

Total Periods: 45

TEXT BOOK:

1. S. N. Sivanandan and S. N. Deepa, *Principles of Soft Computing,* Wiley India, Second Edition, 2011.

REFERENCE BOOKS:

1. Jyh-Shing Roger Jang, Chuen-Tsai Sun and Eiji Mizutani, *Neuro-Fuzzy and Soft Computing,* Prentice-Hall India, 2003.
2. S. Rajasekaran and G. A. Vijayalakshmi Pai, *Neural Networks, Fuzzy Logic and Genetic Algorithms: Synthesis and Applications,* PHI Learning Private Ltd, 2011.

III B.Tech. - II Semester
(16BT61202) AD-HOC AND WIRELESS SENSOR NETWORKS

(Interdisciplinary Elective - 2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Computer Networks".

COURSE DESCRIPTION: Ad-hoc Wireless Networks, MAC Protocols; Routing Protocols; Transport Layer Protocols; Quality of Service and Energy Management; Wireless Sensor Networks.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Ad-hoc and sensor networks
- MAC Protocols and Routing Protocols
- TCP over Ad-hoc wireless networks
- QoS in Ad-hoc wireless networks.
- Sensor networks.

CO2. Analyze the issues in MAC, Routing and Transport Layer in Ad-hoc and wireless sensor networks.

CO3. Apply routing and energy management techniques in Ad-hoc wireless networks.

CO4. Demonstrate problem solving skills in the implementation of secured and optimum QoS wireless networks.

CO5. Use routing algorithms in ad-hoc wireless networks.

DETAILED SYLLABUS:

UNIT I- AD-HOC WIRELESS NETWORKS AND MAC PROTOCOLS (9 Periods)

Ad-hoc Wireless Networks: Introduction to ad-hoc wireless networks, Issues in ad-hoc wireless networks, ad-hoc wireless Internet.

MAC Protocols for Ad-hoc Wireless Networks: Introduction, Design issues, Design goals, Classification of MAC protocols, Contention-based protocols-MACAW (A Media Access Protocol for Wireless LANs), Busy tone multiple access protocols, Distributed packet reservation multiple access protocol, Distributed priority scheduling and medium access in ad-hoc Networks.

UNIT II - ROUTING PROTOCOLS FOR AD-HOC WIRELESS NETWORKS (10 Periods)

Routing in Ad-hoc Wireless Networks: Introduction, Design issues, Classification of routing protocols, Table driven routing Protocols-DSDV; On-Demand routing protocols-DSR, AODV; Hybrid routing protocols-ZRP; Hierarchical routing protocols-Hierarchical state routing protocol; Power-Aware routing protocols.

Multicast Routing in Ad-hoc Wireless Networks: Introduction, Design issues, Operation, Classification of multicast routing protocols, Tree-Based multicast routing Protocols-Bandwidth-efficient multicast routing protocol, Multicast routing protocol based on Zone routing; Mesh-Based multicast routing protocols-On-demand multicast routing protocol.

UNIT III -TRANSPORT LAYER PROTOCOLS FOR AD-HOC WIRELESS NETWORKS (8 Periods)

Introduction, Design issues, Design goals of a transport layer protocol for ad-hoc wireless networks, TCP over ad-hoc wireless networks- Traditional TCP, Feedback-based TCP; Security in ad-hoc wireless networks, network security requirements, Issues and challenges in security provisioning, Network security attacks, Key management, Secure routing in Ad hoc wireless networks.

UNIT IV - QUALITY OF SERVICE AND ENERGY MANAGEMENT IN AD-HOC WIRELESS NETWORKS (10 Periods)

Quality of Service in Ad-hoc Wireless Networks: Introduction, Issues and challenges in providing QoS in ad-hoc wireless networks, classification of QoS solutions.

Energy Management in Ad-hoc Wireless Networks: Introduction, Need for energy Management in ad-hoc **wir**eless networks, Classification of energy management Schemes, Battery management schemes, Transmission power management schemes, System power management schemes.

UNIT V - WIRELESS SENSOR NETWORKS (8 Periods)

Introduction, Sensor network architecture, Data dissemination, Data gathering, MAC protocols for sensor networks, Location discovery, Quality of a sensor network.

Total Periods: 45

TEXT BOOK:

1. C. Siva Ram Murthy and B.S.Manoj, *Ad-hoc Wireless Networks - Architectures and Protocols,* Pearson Education, 2011.

REFERENCE BOOKS:

1. C. K. Toh, *Ad-hoc Mobile Wireless Networks: Protocols and Systems,* Pearson Education, 2007.
2. Charles E. Perkins, *Ad-hoc Networking,* Pearson Education, 2008.

III B.Tech. - II Semester

(16BT30503) **PYTHON PROGRAMMING**

(Program Elective - 1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Object Oriented Programming through C++"

COURSE DESCRIPTION: Data types and Expressions; Control Statements; Strings; Text Files; Lists; Dictionaries; Functions; Objects and their use; Exception Handling; Design with Classes; Graphical User Interface.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Data Types, Variables, Expressions
- Control statements, Strings and Text files.
- Lists, Dictionaries and Functions.
- Objects and Design with classes
- Exception Handling and GUI

CO2. Analyze complex computational problems.
CO3. Design solutions for real life computational problems.
CO4. Solve complex problems using python scripting constructs.
CO5. Implement python scripts using Integrated Development Environment.
CO6. Apply Python programming knowledge to solve problems related to societal applications like Medical and Weather Forecasting.

DETAILED SYLLABUS:

UNIT- I: INTRODUCTION, DATA TYPES AND EXPRESSIONS (8 Periods)

Introduction: Computer science, Computer algorithms, Computer software, The Python programming language, First program in Python.

Data Types and Expressions: Literals, Variables and Identifiers, Operators, Expressions and Data types.

UNIT- II: CONTROL STRUCTURES, LISTS, DICTIONARIES AND SETS (8 Periods)

Control Structures: Control structures, Boolean expressions, Selection control and Iterative control.

Lists: List structures, Lists in Python, Iterations over lists, Assigning and copying lists, List comprehensions.

Dictionaries, Tuples and Sets: Dictionary types in Python, Implementation of Dictionary, Tuples, Set data type - the Set data type in Python, Implementation of sets.

UNIT-III: DESIGN WITH FUNCTIONS, STRINGS AND TEXT FILES (9 Periods)

Program routines, Functions, Recursion-Recursive functions, Recursive problem solving, Iteration Vs Recursion, A case study of Towers of Hanoi using recursion; Using text files, String processing, Exception handling, A Case study on cigarette Use/Lung cancer Correlation program.

UNIT-IV: OBJECTS AND THEIR USE, OBJECT ORIENTED PROGRAMMING (9 Periods)

Objects and Their Use: Software objects, Turtle graphics- Creating a turtle graphics window, The default turtle, Fundamental turtle attributes and behavior, Additional turtle attributes, Creating multiple turtles.

Object Oriented Programming: Encapsulation, Inheritance, and Polymorphism.

UNIT-V: GUI PROGRAMMING (11 Periods)

Tkinter Overview - tkinter pragmatics, Documentation, Extensions, structure; tkinter coding alternatives, adding buttons and callbacks-lambda, bound method, callable class object, Binding events; adding multiple widgets, Reusable GUI Components with classes, Dialogs, Entry, check buttons and Radio buttons, Scales, Menus.

Total Periods: 45

TEXT BOOKS:

1. Charles Dierbach, *Introduction to Computer Science using Python: A Computational Problem-Solving Focus,* Wiley India Edition, 2016.
2. Mark Lutz, *Programming Python,* O'Reilly Publications, Fourth Edition, 2011.

REFERENCE BOOK:

1. Kenneth Lambert and B.L. Juneja, *Fundamentals of Python,* Cengage Learning, Third Edition, 2012.

III B.Tech. - II Semester

(16BT61203) ADVANCED DATABASES

(Program Elective - 1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on "Database Management Systems" and "Computer Networks".

COURSE DESCRIPTION: Parallel Databases; Object based Databases; Distributed Databases; Distributed Transaction Management; Emerging Database Technologies and Applications.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Parallel databases.
- Object based and Object Relational databases.
- Distributed databases, horizontal and vertical data fragmentations.
- Mobile databases, Geographic Information Systems, Genome Data Management, Multimedia Database and NoSQL.

CO2. Demonstrate skills in Query optimization, Data Fragmentation, Transaction Management and Con-currency Control for Distributed Transactions.

CO3. Design Parallel, Object-Oriented, Object-Relational and NoSQL databases.

CO4. Solve Concurrency Problems in Distributed Transactions.

CO5. Use database techniques for Mobile, Geographic Information Systems, Genome Data Management, and Multimedia Data.

CO6. Create databases as per societal needs.

DETAILED SYLLABUS:

UNIT-I: PARALLEL DATABASES (9 Periods)

Introduction, I/O Parallelism, Inter query parallelism, Intra query parallelism, Intra operation parallelism, Interoperation parallelism, Query optimization, Design of parallel systems, Parallelism on multi-core processors.

UNIT-II: OBJECT-BASED DATABASES (9 Periods)

Overview, Complex data types, Structured types and inheritance in SQL, Table inheritance, Array and multi set types in SQL, Object-identity and reference types in SQL, Implementing O-R features, Persistent programming languages, Object-Relational mapping, Object-Oriented versus Object-Relational.

UNIT-III: DISTRIBUTED DATABASES (9 Periods)

Features of distributed versus centralized databases, Reference architecture for distributed databases, Types of data fragmentation, Integrity constraints in distributed databases, Distributed database design.

UNIT-IV: DISTRIBUTED TRANSACTION MANAGEMENT AND CONCURRENCY CONTROL (9 Periods)

Distributed Transaction Management: Framework for transaction management, Supporting atomicity of distributed transactions, Concurrency control for distributed transactions, Architectural aspects of distributed transactions; Concurrency Control: Foundation of distributed concurrency control, Distributed deadlocks, Concurrency control Based on timestamps.

UNIT-V: EMERGING DATABASE TECHNOLOGIES AND APPLICATION (9 Periods)

Mobile database, Geographic information systems, Genome data management, Multimedia database; NoSQL-An overview of NoSQL, Characteristics of NoSQL, NoSQL storage types. **Total Periods: 45**

TEXT BOOKS:

1. A. Silberschatz, H. F. Korth and S. Sudarshan, *Database System Concepts,* Tata McGraw hill, Sixth Edition, 2010.
2. Stefand Ceri and Giuseppe Pelagatti, *Distributed Databases Principles and Systems,* McGraw hill, 2008.

REFERENCE BOOKS:

1. Ramea Elmasri and Shamkant B.Navathe, *Fundamentals of Database Systems,* Pearson Education, Fifth Edition, 2007.

2. Gaurav Vaish, *Getting Started with NoSQL,* Packt Publishing, 2013 (e-book).

III B.Tech. - II Semester
(16BT61204) SEMANTIC WEB

(Program Elective - 1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Web Technologies"**.**

COURSE DESCRIPTION: Semantic web fundamentals; Semantic web technology; Ontology web language; Swoogle; Semantic web services.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Semantic web search
- RDF and SWOOGLE
- Semantic web services
- RDFS and OWL

CO2. Analyze layers of web architecture for describing web content.

CO3. Design semantic web search engine for capturing information on the current web.

CO4. Select RDF and SWOOGLE for search engine usage.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO SEMANTIC WEB (9 Periods)

The world of the semantic web: WWW, Internet usage, Meta data, Search engine for traditional web and semantic web.

UNIT-II: SEMANTIC WEB TECHNOLOGY (9 Periods)

Resource Description Framework (RDF), Rules of RDF, Aggregation-Distributed information, core elements of RDFS, Ontology and taxonomy, Inferencing based on RDF schema, RDF tools.

UNIT-III: WEB ONTOLOGY LANGUAGE -OWL (8 Periods)

Web ontology language (OWL), Define Classes: Localize global properties, Set operators and enumeration, Define properties; Ontology matching and distributed information, OWL ontology Header, Camera ontology in OWL, Three faces of OWL.

UNIT-IV: SWOOGLE (10 Periods)

Swoogle Architecture, FOAF, Semantic markup, Issues, Prototype system, Design of semantic web search engine, Discovery and indexation strategy, Need for Semantic Web services.

UNIT-V: SEMANTIC WEB SERVICES (9 Periods)

Semantic web services and applications, OWL-S: Upper ontology, WSDL-S, OWL-S to UDDI mapping, Design of the search engine and implementations.

Total Periods: 45

TEXT BOOK:

1. Liyang Yu, I*ntroduction to the Semantic Web and Semantic web services,* Chapman and Hall/CRC, Taylor and Francis group, 2007.

REFERENCE BOOKS:

1. Johan Hjelm, *Creating the Semantic Web with RDF,* Wiley, 2001
2. Grigoris Antoniou and Frank van Harmelen, *A Semantic Web Primer,* MIT Press, 2004.

III B.Tech. - II Semester

(16BT61503) SOFTWARE PROJECT MANAGEMENT

(Program Elective - 1)

(Common to IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Software Engineering".

COURSE DESCRIPTION: Conventional Software Management;Evolution of Software Economics; Improving Software Economics; Lifecycle Phases; Artifacts of the Process; Workflow of the Process; Checkpoints of the Process; Software Economics; Iterative Process Planning; Project Organization and Responsibilities; Project Control and Project Instrumentation; Agile Overview.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on software effort estimation techniques, Agile life cycle, project control and instru-mentation.

CO2. Analyze the major and minor milestones, artifacts, metrics from management and technical perspectives.

CO3. Design and develop software products using conventional and modern principles of software project management.

CO4. Effectively implement project management through appropriate planning of Work flows and Work Breakdown Structures of the process.

CO5. Select appropriate techniques to evaluate progress of software project in terms of milestones and check points.

CO6. Apply appropriate ethical principles to be followed in management of software economics.

DETAILED SYLLABUS:

UNIT - I: SOFTWARE MANAGEMENT (9 Periods)

Software management: The Waterfall Model, Conventional Software Management Performance. Evolution of Software **Economics:** Software Economics, Pragmatic Software Cost Estimation.

Improving Software Economics: Reducing Software Product Size, Improving Software Processes, Improving Team Effectiveness, Improving Automation, Achieving Required Quality.

UNIT - II: LIFE CYCLE PHASES (9 Periods)

Conventional and Modern Software Management: Principles of Modern Software Engineering, Principles of Modern Software Management, Transitioning to an Iterative Process.

Life Cycle Phases: Engineering and Production Stages, Inception, Elaboration, Construction, Transition Phases.

UNIT - III: ARTIFACTS, ARCHITECTURES AND WORKFLOWS (9 Periods)

Artifacts of The Process: The Artifact Sets, Management Artifacts, Engineering Artifacts.

Model Based Software Architectures: Architecture- Management Perspective, Technical Perspective.

Workflows of the Process: Software Process Workflows, Iteration Workflows.

UNIT - IV: CHECKPOINTS, PROCESS PLANNING AND PROJECT ORGANIZATION (9 Periods)

Checkpoints of a process: Major Milestones, Minor Milestones, Periodic Status Assessments.

Iterative Process Planning: Work Breakdown Structures, Planning Guidelines, The Cost and Schedule Estimating Process

Project Organizations and Responsibilities: Line of Business Organizations, Project organizations, Evolution of Organizations.

UNIT - V: PROJECT CONTROL AND AGILE MANAGEMENT (9 Periods)

Project control and process Instrumentation: The Seven Core Metrics, Management Indicators, Quality Indicators.

Agile Management: An Agile Overview, Role of a project manager, Benefits of Agile.

Total Periods: 45

TEXT BOOK:

1. Walker Royce, *Software Project Management,* Pearson Education, Third Edition, 1998.

REFERENCE BOOKS:

1. Michele Sliger and Stacia Broderick, *The Software Project Manager's Bridge to Agility,* Addison-Wesley, 2008.
2. Bob Hughes and Mike Cotterell, *Software Project Management,* Tata McGraw- Hill Edition, 2006.

III B.Tech. - II Semester

(16BT6HS01) **BANKING AND INSURANCE**

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: --

COURSE DESCRIPTION: Origin of Banking; Functions of Banking; Role & Functions of RBI; Bank-Customer Relationship; Deposit and Loan Services of Banks; Banking Procedures; Electronic Payment Mechanisms; Business Models; Concepts of Risk and Uncertainty; Fundamentals of Insurance; Principles of Insurance; Essentials of Insurance Contracts; Insurance players in India.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate Knowledge in
- Tools and concepts of Banking and Insurance.
- Basic Principles and concepts of Insurance and Banking.
- e-fund transfers, e-payments and e-business models.

CO2. Develop skills in providing solutions for
- Online banking and e – payments.
- Risk Management through insurance benefits the society at large.
- Money management by leveraging on technology, banking and insurance services.

CO3. Exhibit conceptual soundness about banking and insurance, this would contribute to More employment opportunities.

CO4. Provide life skills for effective utilization of Banking and Insurance facilities.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO BANKING (9 Periods)

Origin and growth of banking, meaning and functions of banking, importance of banking, Reserve Bank of India; functions, monetary policy, open market operations.

UNIT-II:BANK-CUSTOMER RELATIONSHIP (9 Periods)

Debtor-creditor relationship, anti-money laundering, deposit products or services, payment and collection of cheques. Accounts – Types of accounts, procedure for opening and closing an account. Loans and Advances- principles of lending, types of loans.

UNIT-III:BUSINESS MODELS AND ELECTRONIC PAYMENT SYSTEM (9 Periods)

Features, types of e-payment system, e-cash,NEFT, RTGS, Credit cards, Electronic purses and Debit cards.Business models- B2B, B2C, C2C, and B2G.

UNIT-IV:INTRODUCTION TO RISK AND INSURANCE (9 Periods)

Concept of risk, risk *Vs* uncertainty. Insurance definition, Insurance as risk mitigation mechanism, elements of insurance.

UNIT-V:INSURANCE OVERVIEW (9 periods)

Principles of insurance, insurance types, LIC & GIC insurance contract- nature, elements, functions, IRDA, Insurance Players in India.

Total Periods: 45

TEXT BOOKS:

1. A.V. Ranganadha Chary, R.R. Paul,*Banking and Financial system*, Kalyani Publisher, New Delhi, 2ndedition.
2. P.K.Gupta,*Insurance and Risk Management*, Himalaya Publishing House, New Delhi.

REFERENCE BOOKS:

1. Diwan, Praq and Sunil Sharma, *Electronic Commerce-A Manager's Guide to E-Business*, Vanity Books International, Delhi,2002.
2. Kalakota Ravi and Whinston Andrew B, *Frontiers of Electronic Commerce*, Pearson Education India, New Delhi, 1996.
3. Schneider, Grey P, *Electronic Commerce, Course Technology*, Cengage Learning, 8th edition, New Delhi, 2008.

III B.Tech. - II Semester

(16BT6HS02) **BUSINESS COMMUNICATION AND CAREER SKILLS**

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Nature and scope of communication; Corporate communication; Writing business documents; Careers and resumes; Interviews.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge in
- Corporate Communication
- Main Stages of Writing Messages
- Career Building

CO2. Analyze the possibilities and limitations of language in
- Communication Networks
- Crisis Management/Communication

CO3. Design and develop the functional skills for professional practice inBusiness Presentations & Speeches

CO4. Applywritten and oral communicationtechniques in preparing and presenting various documents in technical writing.

CO5. Function effectively as an individual and as a member in diverse teams.

CO6. Communicate effectively with the engineering community and society in formal and informal situations.

DETAILED SYLLABUS:

UNIT-I: NATURE AND SCOPE OF COMMUNICATION (9 Periods)

Introduction: Functions of Communication – Roles of a Manager – Communication Basics – Communication Networks – Informal Communication – Interpersonal Communication –Communication Barriers.

UNIT-II: CORPORATE COMMUNICATION (9 Periods)

Introduction: What is Corporate Communication? – Corporate Citizenship and Social Responsibility – Corporate Communication Strategy – Crisis Management/Communication – Cross-Cultural Communication.

UNIT-III: WRITING BUSINESS DOCUMENTS (9 Periods)

Introduction: Importance of Written Business Communication, Types of Business Messages – Five Main Stages of Writing Business Messages – Business Letter Writing – Effective Business Correspondence – Common Components of Business Letters – Strategies for Writing the Body of a Letter.

UNIT-IV: CAREERS AND RESUMES (9 Periods)

Introduction – Career Building – Business Presentations and Speeches – Resume Formats – Traditional, Electronic and Video Resumes – Sending Resumes – Follow-up Letters – Online Recruitment Process.

UNIT-V: INTERVIEWS (9 Periods)

Introduction – Fundamental Principles of Interviewing – General Preparation for an Interview – Success in an Interview – Types of Interviewing Questions – Important Non-verbal Aspects – Types of Interviews – Styles of Interviewing.

Total Periods: 45

TEXT BOOK:

1. Meenakshi Raman and Prakash Singh, *Business Communication*, Oxford University Press, New Delhi, Second Edition, 2012.

REFERENCE BOOKS:

1. Neera Jain and Sharma Mukherji, *Effective Business Communication*, Tata Mc Graw-Hill Education, Pvt. Ltd., New Delhi, 2012.
2. Courtland L.Bovee et al., *Business Communication Today*, Pearson, New Delhi, 2011.

3. Krizan, *Effective Business Communication*, Cengage Learning, New Delhi, 2010.
4. R.K. Madhukar, *Business Communication*, Vikas Publishing House Pvt. Ltd., New Delhi, 2005.

III B.Tech. – II Semester

(16BT6HS03) COST ACCOUNTING AND FINANCIAL MANAGEMENT

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Scope, Objectives and Elements ofcost Accounting; Cost Sheet and Tender quotations; Variance Analysis: Material variances, Labor variances; Meaning and Scope, Liquidity, Profitability Ratios: concept of Risk and Return on Investment.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Acquire Knowledge in
- Elements of Costing.
- Basic concepts of Financial Management.
- Risk and Return
- Significance of Cost Accountancy
- Behavioral Finance

CO2. Develop skills in
- Material, Labor, Overheads control.
- Excellence and ability to minimize the cost of the organization

CO3. Develop effective Communication in Cost control and Financial Management.

CO4. Providesolutions for effective investment decisions.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO COST AND COST ACCOUNTING (9 Periods)
Cost and Cost Accounting, Scope, Objectives, Advantages and disadvantages – Cost Accounting vs. Management Accounting – Elements of Costing – Installation of costing system – Material Control, Labour Control, Overhead Control.

UNIT-II: COST SHEET AND PREPARATION OF COST SHEET (9 Periods)
Analysis of Cost – Preparation of cost sheet, estimate, tender and quotation (Simple problems) – Importance of Costing while pricing the products.

UNIT-III: STANDARD COSTING AND VARIANCE ANALYSIS (9 Periods)
Introduction to Standard Costing & Variances – Variance Analysis: Material variances, Labour variances (Simple Problems).

UNIT-IV: INTRODUCTION TO FINANCIAL MANAGEMENT AND RATIO ANALYSIS (9 Periods)
Financial Management-Meaning and Scope, Liquidity, Profitability, Financial Statement Analysis through ratios (Simple Problems).

UNIT-V: INTRODUCTION TO INVESTMENT AND BEHAVIORAL FINANCE (9 Periods)
Investment-Meaning and Definition- concept of risk and returns-Investment Alternatives- Introduction to Behavioral Finance – Anomalies –Key Concepts –Anchoring – Mental Anchoring-Confirmation and Hindsight Bias-Gambler's Fallacy-Herd Behavior-Over Confidence-Overreaction and Availability Bias-Prospect Theory.

Total Periods: 45

TEXT BOOKS:

1. S.P. Jain and K.L. Narang,*Cost Accounting*, Kalyani Publishers, Ludhiana, Sixth Edition, 2002.
2. I.M. Pandey, *Financial Management*, Vikas Publishing House Pvt. Ltd., Tenth Edition, 2010.

REFERENCE BOOKS:

1. The Institute of Company Secretaries of India, *Cost and Management Study Material*, New Delhi.
2. James C Van Horne, *Financial Management and Policy*, Prentice-Hall of India/Pearson, Twelveth Edition, 2001.

III B.Tech. – II Semester

(16BT6HS04) ENTREPRENEURSHIP FOR MICRO, SMALL AND MEDIUM ENTERPRISES

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Introduction to Entrepreneur Development; Idea generation and formation of Business Plan; Micro and Small Enterprises; Institutional Finance and Support to Entrepreneur; Woman Entrepreneurship.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Acquire Knowledge in
- Schemes and institutions encouraging entrepreneurship.
- Basic Principles and concepts of Accountancy.
- Significance of entrepreneurship.

CO2. Develop skills in providing solutions for
- Personal excellence through financial and professional freedom.
- Women entrepreneurship serving as contrivance in societal development

CO3. Develop critical thinking and evaluation ability.

CO4. Widens knowledge and build up attitude towards trouble shooting.

CO5. Demonstrate business acumen.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO ENTREPRENEURSHIP DEVELOPMENT (9 Periods)

Concept ofEntrepreneurship – Growth of Entrepreneurship in India **-** Factors affecting entrepreneurship growth - Characteristics of an Entrepreneur – Functions of Entrepreneur – Need for an Entrepreneur Entrepreneurial Decision Process – Types of Entrepreneurs – Distinction between an Entrepreneur and a manager.

UNIT-II: IDEA GENERATION AND FORMULATION OF BUSINESS PLANS (9 Periods)

Sources of Ideas – Methods of idea generation – Steps in Setting up of a Small Business Enterprise – Formulation of Business Plan – Contents of Business Plan – Significance – Common Errors in Business Plan Formulation, The role of incubation centers for promoting Entrepreneurship, Start-up – New Guidelines.

UNIT-III: MICRO AND SMALL ENTERPRISES (9 Periods)

Meaning and Definition – Micro and Macro units – Essentials – Features – Characteristics– Scope of Micro and Small Enterprises – Objectives of Micro Enterprises – relationship between Micro and Macro Enterprises- Problems of Micro and Small Enterprises.

UNIT-IV: INSTITUTIONAL FINANCE (9 Periods)

Institutional Finance **–** Need-Scope-Services - Various Institutions offering Institutional support: – Small Industries Development of Bank of India (SIDBI), State Industrial Development Corporations (SIDCs)– Small Industries Development Organisation (SIDO) – Small Industries Service Institutes (SISIs) – District Industries Centres (DICs) – National Institute of Entrepreneurship and Small Business Development (NIESBUD) – Technical Consultancy Organizations (TCOS). Micro Units Development and Refinance Agency Bank (MUDRA).

UNIT-V:WOMEN AND RURAL ENTREPRENEURSHIP (9 Periods)

Concept of Women entrepreneur - Functions of Women entrepreneurs - Growth of women entrepreneurship in India - Challenges of Women entrepreneurs- Programmes supporting women entrepreneurship – Rural Entrepreneurship – Meaning, Need for Rural entrepreneurship, Problems of rural entrepreneurship, Role of NGOs, Role of BharatiyaMahila Bank for encouraging Women Entrepreneurs.

Total Periods: 45

TEXT BOOKS:

1. Dr.S.S.Khanka*, Entrepreneurial Development*, S. Chand and Company Ltd, Revised edition, 2012.
2. MadhurimaLall&ShikhaSahai, *Entrepreneurship*, Excel Books India, 2ndedition 2008.

REFERENCE BOOKS:

1. Nandan, H., *Fundamentals of Entrepreneurship*, PHI Learning Pvt. Ltd., 2013, New Delhi, Third Edition 2013.
2. Vasanth Desai, *The Dynamics of Entrepreneurial Development and Management*, Himalaya Publishing House, Fourth Edition, 2009.

3. BholanathDutta, *Entrepreneurship Management* –Text and Cases, Excel Books, First Edition 2009.

III B. Tech. – II Semester

(16BT6HS05) FRENCH LANGUAGE (La Langue Francais)

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES:—

COURSE DESCRIPTION: Oral communications; Basic grammar; advancedgrammar;basic writing; Business French (La Francais Commercial)

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge in
- · Process of communication
- · Modes of listening
- · Paralinguistic features
- · Skimming and Scanning
- · Elements of style in writing

CO2. Analyze the possibilities and limitations of language, understanding
- · Barriers to Communication
- · Barriers to Effective Listening
- · Barriers to Speaking
- · Formal and metaphorical language

CO3. Design and develop language skills for professional practice**.**

CO4. Apply basic writing skills in writing Emails and understanding wide range of technical terminologies.

CO5. Understand French culture and civilization.

CO6. Communicate effectively with the native French in day to day situation**.**

DETAILED SYLLABUS:

UNIT-I: ORAL COMMUNICATION (9 Periods)

Introduction - Language as a Tool of Communication, French alphabets, Phonetics and pronunciation, making contacts, giving information, Arranging things, Expression of feelings.

UNIT-II: BASIC GRAMMAR (9 Periods)

Introduction –Articles, -Er ending Verbs, Nouns, Numbers, Gender, Pronouns, Sentence structure – Case study.

UNIT-III: ADVANCED GRAMMAR (9 Periods)

Introduction -Adjectives, Prepositions, Introduction to tenses – Present tense, past tense and future tense, Active and Passive voice.

UNIT-IV: BASIC WRITING (9 Periods)

Introduction -Introduction to written communication, Pre-writing, Creating context for writing and Data collection, fill in forms, Write greeting cards, Invitations and Short personal announcements, Short text to describe photos and pictures.

UNIT-V: BUSINESS FRENCH (La Francais Commercial) (9 Periods)

Introduction - E-mail writing, Letter writing, Learning technical vocabulary and its application.

Case study of influential French companies, Learning computer/desktop/new age- media vocabulary, Introduction to how to present a topic, Fixing an Appointment.

Total Periods: 45

TEXT BOOK:

1. Annie Berther, *Alter Ego*, Hachette Publications, 2012.

REFERENCE BOOKS:

1. RegineMerieux, Yves Loiseau, *Connexions*, Goyall Publishers, 2011.
2. DelphineRipaud, *Saison*, French and Euroean Inc., 2015.

(16BT6HS06) **GERMAN LANGUAGE (Deutsch alsFremdsprache)**

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES:—

COURSE DESCRIPTION: Oral communication;Basic grammar; Advanced grammar; Basic writing; Berufsdeutcsch (Business German)

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge in
- · Process of communication
- · Modes of listening
- · Paralinguistic features
- · Skimming and Scanning
- · Elements of style in writing

CO2. Analyze the possibilities and limitations of language, understanding
- · Barriers to Communication
- · Barriers to Effective Listening
- · Barriers to Speaking
- · Formal and metaphorical language

CO3. Design and develop language skills for professional practice.

CO4. Apply basic writing skills in writing Emails and understanding wide range of technical terminologies.

CO5. UnderstandGerman culture and civilization.

CO6. Communicate effectively with the native German in day to day situation.

DETAILED SYLLABUS:

UNIT-I: ORAL COMMUNICATION **(9 Periods)**

Introduction - Language as a Tool of Communication, German alphabets, Phonetics and pronunciation, making contacts, giving information, Arranging things, Expression of feelings.

UNIT-II: BASIC GRAMMAR **(9 Periods)**

Introduction –Articles, Verbs, Nouns, Numbers, Gender, Pronouns, Sentence structure – Case study.

UNIT-III: ADVANCED GRAMMAR **(9 Periods)**

Introduction -Adjectives, Prepositions, Introduction to tenses – Present tense, past tense and future tense, Active and Passive voice, Introduction to Case- Akkusativ, Nominativ, Dativ&Genetiv Case.

UNIT-IV: BASIC WRITING **(9 Periods)**

Introduction -Introduction to written communication, Pre-writing, Creating context for writing and Data collection, fill in forms, Write greeting cards, Invitations and Short personal announcements, Short text to describe photos and pictures.

UNIT-V: BERUFSDEUTCSCH (BUSINESS GERMAN) **(9 Periods)**

Introduction - E-mail writing, Letter writing, Learning technical vocabulary and its application.
Case studies of influential German companies, Learning computer/desktop/new age- media vocabulary, Introduction to how to present a topic, Fixing an Appointment.

Total Periods: 45

TEXT BOOK:

1. Heuber,*Tangram Aktuelleins*, HeuberVerlagPublications, 2011.

III B.Tech. - II Semester

(16BT6HS07) INDIAN CONSTITUTION

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Elements, functions and functionaries according to Indian Constitution, understanding forbetter professional practice and good citizenry.

COURSE OUTCOMES:
On successful completion of this course, students will be able to:

CO1. Gain knowledge in
- Parliamentary proceedings, laws, legislature, administration and its philosophy Federal system and judiciary of India.
- Socials problems and public services like central civil services and state civil services
- Indian and international political aspects and dynamics.

CO2. Develop etiquette and professional behavior in line with the constitution of India for becoming a responsible citizen.

DETAILED SYLLABUS:

UNIT-I: PREAMBLE AND ITS PHILOSOPHY **(8 Periods)**
Introduction and Evolution of Indian Constitution, preamble and its Philosophy.

UNIT-II: UNION GOVERNMENT **(8 Periods)**
Powers, Functions and Position of President, Vice-President and Council of Ministers, Composition of parliament, Constitution Amendment Procedure, Financial Legislation in Parliament.

UNIT-III:FEDERAL SYSTEM **(14 Periods)**
Centre-State relations, Directive Principles of State Policy, Fundamental Rights and Duties, Centre State Relations, Features of Federal System, Administrative Relationship between Union and States, Powers, Functions and Position of Governors, Function of Chief Ministers, Council of Ministers, Composition and powers of the State Legislature.

UNIT-IV:JUDICIARY AND PUBLIC SERVICES **(10 Periods)**
The Union Judiciary - Supreme Court and High Court, All India Services, Central Civil Services, State Services, Local Services and Training of Civil Services.

UNIT-V: INTERNATIONAL POLITICS **(5 Periods)**
Foreign Policy of India, International Institutions like UNO, WTO, SAARC and Environmentalism.

Total Periods: 45

TEXT BOOK:
1. Briji Kishore Sharma, *Introduction to the Constitution of India*, Prentice Hall of India, 2005.

REFERENCE BOOKS:
1. Mahendra Pal Singh,V. N. Shukla's, *Constitution of India*, Eastern Book Company, 2011.
2. Pandey J. N, *Constitutional Law of India* - Central Law Agency, 1998.

III B.Tech. - II Semester

(16BT6HS08) INDIAN ECONOMY

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Introduction; Time Value of Money; Elementary Economic Analysis; Value analysis, Value Engineering; Economic Planning.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Acquire the knowledge in
- Micro and Macro Economics.
- Traditional and Modern methods of Capital Budgeting.
- Five year plans and NITI Aayog.

CO2. Analyze
- Capital Budgeting.
- Value Analysis and Value Engineering.
- Economic analysis
- Law of supply and demand

CO3. Understand the nuances of project management and finance

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION (9 Periods)

Economics- Flow in an Economy, Law of Supply and Demand; Micro and Macro Economics; Relationship between Science, Engineering, Technology, and Economic Development;Concept of Engineering Economics-Types of Efficiency, Definition and Scope of Engineering Economics.

UNIT-II: TIME VALUE OF MONEY (12 Periods)

Concepts and Application; Capital Budgeting-Traditional and Modern Methods; Simple and Compound Interest, Cash Flow Diagram, Principle of Economic Equivalence; Evaluation of Engineering Projects – Present Worth Method, Future Worth Method, Annual Worth Method, Internal Rate of Return Method, Cost-benefit Analysis in Public Projects; Depreciation Policy-Depreciation of Capital Assets, Causes of Depreciation, Straight Line Method and Declining Balance Method.

UNIT-III: ELEMENTARY ECONOMIC ANALYSIS (9 Periods)

Economic Analysis – Meaning, Significance, Simple Economic Analysis; Material Selection for a Product, Substitution of Raw Material; Design Selection for a Product;Material Selection-Process Planning, Process Modification.

UNIT-IV: VALUE ENGINEERING (6 Periods)

Introduction- Value Analysis, Value Engineering,Functions, Aims; Value Analysis vs. Value Engineering; Value Engineering Procedure- Advantages, Application Areas.

UNIT-V: ECONOMICPLANNING (9 Periods)

Introduction- Need For Planningin India,Five year plans(1951-2012), NITI Aayog(from 2014 onwards); Inclusive Growth-Meaning, Significance, Need for inclusive growth in India, Strategy for more inclusive growth, Challenges and Prospects; Employment and Inclusive Growth in India, Role of engineers in sustaining inclusive growth.

Total Periods: 45

TEXT BOOKS:

1. PanneerselvamR ,*Engineering Economics*, PHI Learning Private Limited, Delhi, Second Edition,2013.
2. Jain T.R., V. K.Ohri, O. P. Khanna. *Economics for Engineers*, VK Publication, First Edition, 2015.

REFERENCE BOOKS:

III B.Tech. - II Semester

(16BT6HS09) INDIAN HERITAGE AND CULTURE

(Open Elective)
(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION:
Basic traits of Indian Culture; Humanistic Reforms under Jainism and Buddhism; Culture in the medieval period; Socio Religious reforms in Indian Culture; Reform movements for harmonious relations.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Acquaint knowledge in
- · Human aspirations and values in Vedic culture.
- · Cultural aspects of Buddhism and Jainism
- · Unification of our country under Mourya's and Gupta's administrations
- · Socio Religious aspects of Indian culture
- · Reform movements and harmonious relations.

CO2. Apply ethical principles and reforms as models for the upliftment of the societal status in the present cultural contexts

DETAILED SYLLABUS:

UNIT-I: BASIC TRAITS OF INDIAN CULTURE (9 Periods)
Meaning and definition and various interpretations of culture.Culture and its features.The Vedic and Upanishadic culture and society.Human aspirations and values in these societies.Chaturvidhapurushardhas, Chaturashrma and Chaturvarna theory.

UNIT-II: HUMANISTIC REFORMS UNDER JAINISM AND BUDDHISM (9 Periods)
Salient features of Jainism - contributions of Jainism to Indian culture. Contributions of Aachaarya and Mahaapragya.Buddhism as a humanistic culture.The four noble truths of Buddhism.Contributions of Buddhism to Indian culture.

UNIT-III: CULTURE IN THE MEDIEVAL PERIOD (9 Periods)
Unifications of India under Mouryas and Guptas and their cultural achievements. Cultural conditions under satavahanas. Contributions to pallavas and cholas to art and cultural achievements of vijayanagara rulers.

UNIT-IV: SOCIO RELIGIOUS REFORMS IN INDIAN CULTURE (9 Periods)
Western impact on India, Introduction of western education, social and cultural awakening and social reform movements of Rajaramohan Roy – DayanandhaSaraswathi- Anne Besant. (theosophical society)

UNIT-V: REFORM MOVEMENTS FOR HARMONIOUS RELATIONS (9 Periods)
Vivekananda, Eswar Chandra vidyasagar and Veeresalingam- emancipation of women and struggle against caste. Rise of Indian nationalism. Mahatma Gandhi- Nonviolence and satyagraha and eradication of untouchability.

Total Periods: *45*

TEXT BOOK:

1. ValluruPrabhakaraiah, *Indian Heritage and Culture*, Neelkamal Publications Pvt. Ltd. Delhi, First Edition, 2015.

REFERENCE BOOKS:

1. L. P. Sharma, *History of Ancient India*, Konark Publishers, Pvt. Ltd., New Delhi, 2010.
2. L. P. Sharma, *History of Medieval India*, Konark Publisher, Pvt. Ltd., New Delhi, 2010.
3. L. P. Sharma, *History of Modern India*, Konark Publishers, Pvt. Ltd., New Delhi, 2010.

4. The Cultural Heritage of India Vol-I, II, III, IV, V, *The Ramakrishna Mission Institute of Culture*, Calcutta.

III B.Tech. - II Semester

(16BT6HS10) **INDIAN HISTORY**

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Introduction; Ancient India; Classical and Medieval era; Modern India; India after independence.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Gain knowledge on evolution and history of India as a nation

CO2. Analyze social and political situations of past and current periods

CO3. Practice in career or at other social institutions morally and ethically

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION (8 Periods)

Elements of Indian History; History Sources: Archaeology, Numismatics, Epigraphy & Archival research; Methods used in History; History & historiography; sociological concepts-structure, system, organization, social institutions, Culture and social stratification (caste, class, gender, power), State& Civil Society.

UNIT-II: ANCIENT INDIA (9 Periods)

Mohenjo-Daro civilization; Harappa civilization; Mauryan Empire.

UNIT-III: CLASSICAL AND MEDIEVAL ERA (12 Periods)

Classic Era (200 BC - 1200 AD); Hindu - Islamic Era (1200 - 1800 AD).

UNIT-IV: MODERN INDIA (6 Periods)

Age of Colonialism (17th - 19th centuries); First war of Indian Independence;Freedom Struggle (1857-1947).

UNIT-V:INDIA AFTER INDEPENDENCE (1947-) (10 Periods)

The Evolution of the Constitution and Main Provisions; Consolidation of India as a Nation; Politics in the States; Indian economy; Modernization and globalization, Secularism and communalism, Nature of development, Processes of social exclusion and inclusion, Changing, Nature of work and organization.

Total Periods: 45

TEXT BOOK:

1. K. Krishna Reddy, *Indian History*, Tata McGraw-Hill, Twenty First reprint,2017.

REFERENCE BOOKS:

1. Guha, Ramachandra, *India after Gandhi*, Pan Macmillan,2007.
2. Thapar, Romila, *Early India*, Penguin, 2002.

III B.Tech. - II Semester

(16BT6HS11) **PERSONALITY DEVELOPMENT**

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Self-esteem & Self-Management; Developing Positive Attitudes; Self-Motivation & Self-Management; Getting Along with the Supervisor; Workplace Success.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge in
- Self-Management
- Planning Career

CO2. Analyze the situations based on
- Attitudes
- Thinking strategies

CO3. Design and develop the functional skills for professional practice in

CO4. Function effectively as an individual and as a member in diverse teams.

CO5. Communicate effectively in public speaking in formal and informal situations.

DETAILED SYLLABUS:

UNIT-I: SELF-ESTEEM AND SELF-IMPROVEMENT (9 Periods)
Know Yourself – Accept Yourself; Self-Improvement: Plan to Improve - Actively Working to Improve Yourself.
Case study: 1

UNIT-II: DEVELOPING POSITIVE ATTITUDES (9 Periods)
How Attitudes Develop – Attitudes are Catching – Improve Your Attitudes.
Case study: 2

UNIT-III: SELF-MOTIVATION AND SELF-MANAGEMENT (9 Periods)
Show Initiative – Be Responsible Self-Management; Efficient Work Habits – Stress Management – Employers Want People Who can Think – Thinking Strategies.
Case study: 3

UNIT-IV: GETTING ALONG WITH THE SUPERVISOR (9 Periods)
Know your Supervisor – Communicating with Your Supervisor – Special Communications With Your Supervisor – What Should You Expect of Your Supervisor? – What Your Supervisor Expects of You - Moving Ahead Getting Along with Your Supervisor.
Case study: 4

UNIT-V: WORKPLACE SUCCESS (9 Periods)
First Day on the Job – Keeping Your Job – Planning Your Career – Moving ahead.
Case study: 5

Total Periods: 45

TEXT BOOK:

1. Harold R. Wallace and L. Ann Masters, *Personality Development*, Cengage Learning, Delhi, Sixth Indian Reprint 2011.

REFERENCE BOOKS:

1. Barun K. Mitra, *Personality Development and Soft Skills,* Oxford University Press, New Delhi, 2011.
2. Stephen R. Covey, *The 7 Habits of Highly Effective People*, Free Press, New York, 1989.
3. K. Alex, *Soft Skills*, S. Chand & Company Ltd, New Delhi, Second Revised Edition 2011.
4. Stephen P. Robbins and Timothy A. Judge*, Organizational Behaviour*, Prentice Hall, Delhi, Sixteenth Edition 2014.

III B.Tech. - II Semester

(16BT6HS12) PHILOSOPHY OF EDUCATION

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Introduction to Philosophy and Engineering Education; Philosophical methods and their implications in engineering; Philosophical education in India; Values and Engineering education; Outcome based education.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Acquire knowledge in
- Philosophy of Engineering education.
- Philosophical Methods.
- Knowledge acquiring methods.
- Engineering education and responsibilities.

CO2. Understand the impact of Outcome Based Education for effective educational outcomes

CO3. Apply reasoning to assess societal issues with the contextual knowledge of engineering education and responsibilities.

DETAILED SYLLABUS:

UNIT-I:INTRODUCTION TOPHILOSOPHY AND ENGINNERING EDUCATION (9Periods)

Concept , Significance, and Scope of Philosophy in Engineering – Aims of Engineering Education – relationship between philosophy and engineering education – speculative, normative and critical approaches of philosophy in engineering.

UNIT-II:PHILOSOPHICAL METHODS AND THEIR IMPLICATIONS INENGINEERING (9Periods)

Introduction to Philosophical approaches: Idealism, Naturalism, Pragmatism, Realism and Existentialism; Significance and Scope in Engineering Education.

UNIT-III: PHILOSOPHICAL EDUCATION IN INDIA (9 Periods)

Different branches of philosophy- meaning, Epistemology: nature and scope; Knowledge acquiring methods;Kinds and instruments of knowledge; Re-shapingof educational thoughts by Indian thinkers: Rabindranath Tagore, Sri Aurobindo Gosh, Mahatma Gandhi,Jiddu Krishnamurthy and Swamy Vivekananda.

UNIT-IV:VALUES AND ENGINEERING EDUCATION (9 Periods)

Introduction; Engineering educationand responsibilities: health,social, moral, ethics aesthetic;Value: crisis and strategies forinculcation;

Case study: Engineering Solutions given by Mokshagundam Visvesvaraya.

UNIT-V:OUTCOME-BASED EDUCATION (9 Periods)

Institutional visioning;educational objectives; programme outcomes, curriculum,stakeholders, infrastructure and learning resources; governance and management, quality in education.

Total periods: 45

TEXT BOOKS:

1. Ganta Ramesh, *Philosophical Foundations of Education*, Neelkamal Publications, First Edition,2013.
2. CarlMicham,*Thinking through technology(The Paths between Engineering and Philosophy)*, University of Chicago Press, First Edition,1994.
3. Louis L Bucciarelli,*Engineering Philosophy,*Delft University Press,First Edition, 2003.
4. NBA/ABET Manuals.

REFERENCE BOOKS:

1. Louis L Bucciarelli, *Philosophy of Technology and Engineering Sciences*, North Holland, First Edition, 2009 (e-book).
2. Samuel Florman, *Existential pleasures of education*, Martins's Griffin S.T. publication, First Edition,

1992.

III B.Tech. - II Semester

(16BT6HS13) PUBLIC ADMINISTRATION

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Introduction; Public Policy; Good Governance; E-Governance; Development Administration.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Acquireknowledge in
- Public Policy.
- Good Governance.
- E-governance.
- Development Administration.

CO2. Analyze the possibilities and limitations ofexisting policies through Good Governance perspective.

CO3. Design and develop solutions in e-governance modelsto find and provide opportunities in e-governance.

CO4. Adopt principles ofe-governance in addressing the existing issues and challenges in e-governance sector.

CO5. Understand the significance of Administrative Development in finding professional engineering solutions by probing
- Bureaucracy.
- Role of civil society.

DETAILEDSYLLABUS:

UNIT-I: INTRODUCTION (9 Periods)

Public and Private Administration- Differences and Similarities, Meaning, Scope; Importance of Public Administration in Modern Era; Public Administration and its implications in the field of Engineering.

Case Study: Unique Identification Authority of India (UIDAI):Aadhaar Project: Challenges Ahead.

UNIT-II: PUBLIC POLICY (9 Periods)

Meaning and Scope; Policy Formulation in India; Policy making process; Policy Implementation.
Engineering and Public Policy**,**Social, ethical, Monetary and fiscal policies; policy implications of engineering;The engineer's role in Public Policy.

Case Study:NITI Aayog: Demonetization and Aftermath of Demonetization – Cashless transactions.

UNIT-III: GOOD GOVERNANCE (9 Periods)

Significance; Objectives;Concepts;Reforms;Organization and its basic problemsAdministrative and Governance reforms in India; Sustainable and Inclusive growth in India;Engineering and Sustainable Environment-Role of Engineers; Right to information Act.

Case Study: Strategies in Good Governance: A Case Study of Karnataka, Kerala and Orissa.

UNIT-IV: E-GOVERNANCE (9 Periods)

Meaning, Significance, Issues in E-governance; E-governance Models, Problems and Opportunities; Application of DataWarehousing and Data Mining in Governance; Engineers role in re-engineering E-governance.

Case Study: e-Housing System for Bhavana Nirman Dhanasahayam Online disbursement of housing assistance in Kerala.

UNIT-V: DEVELOPMENT ADMINISTRATION (9 Periods)

Introduction; Development Administration-Administrative Development- Sustainable Development -Significance- Objectives; Bureaucracy - Personnel administration and human resources development; Role of civil society-Citizens and administration;Development and Engineering: Issues Challenges and Opportunities.

Case Study: Neeru-Chettu (Water-Tree) of Andhra Pradesh.

Case Study: TPDDL of Delhi and Odisha. **Total Periods: 45**

TEXT BOOKS:

1. M.P. Sharma, B.L. Sadana, HarpreetKaur,*Public Administration in Theory and Practice,* KitabMahal, Mumbai, First Edition,2014.
2. CSR Prabhu, *E., Governance – concepts and case studies*, PHI, New Delhi, Second Edition, 2012.

REFERENCE BOOKS:

1. SurendraMunshi, Bijupaul Abraham, *Good Governance, Democratic societies and Globalization,* Sage publications, New Delhi, First Edition, 2004.

2. R.K.Sapru, *Public Policy,*Sterling Publishers Pvt. Ltd., New Delhi, First Edition, 2001.

III B.Tech. - II Semester

(16BT60112) BUILDING MAINTENANCE AND REPAIR

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Durability of buildings, Failure and repair of buildings, Material Techniques for repair, Maintenance of buildings, Conservation and recycling.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Acquire basic knowledge on durability and serviceability, failures, repair and rehabilitation of buildings.
CO2. Analyzefailures, repair and rehabilitation techniques.
CO3. Solve complex building maintenance problems through proper investigations and interpretation.
CO4. Use modern tools and techniques for various repairs and rehabilitation of structures.
CO5. Provide solutions for building maintenance and repair problems considering health and safety.
CO6. Consider environmental sustainability in building maintenance and repair.
CO7. Maintain ethical standards for quality in repairs and rehabilitation of structures.
CO8. Evaluate specifications and perform cost analysis of building components while repair and rehabilitation.

DETAILED SYLLABUS:

UNIT-I: DURABILITY AND SERVICEABILITY OF BUILDINGS (10 Periods)

Life expectancy of different types of buildings; Effect of environmental elements such as heat, dampness, frost and precipitation on buildings; Effect ofchemical agents on building materials, Effect of pollution on buildings, Effect of fire onbuilding; Damage by biological agents like plants, trees, algae, fungus, moss, insects, etc.; Preventive measures on various aspects, Inspection, Assessment procedure for evaluating for damaged structures, Causes of deterioration, Testing techniques.

UNIT-II:FAILURE AND REPAIR OF BUILDINGS (10 Periods)

Building failure – Types, Methodology for investigation; Diagnostictesting methodsandequipment, Repair of cracks inconcrete and masonry, Materials for Repair,Methods of repair, Repair and strengthening of concrete buildings, Foundationrepair and strengthening, Underpinning, Leakage of roofs and repair methods.

UNIT-III: TECHNIQUES FOR REPAIR (8 Periods)

Rust eliminators and polymers coating for rebars during repair, Foamed concrete, Mortar and dry pack, Vacuum concrete, Gunite and shotcrete, Epoxy injection, Mortar repairs for cracks, Shoring and underpinning.

UNIT-IV: MAINTENANCE OF BUILDINGS (9 Periods)

Reliability principles and its applications in selection of systemsfor building, Routine maintenance of building, Maintenance cost, Specifications formaintenance works, Dampness-Damp proof courses, Construction details for prevention ofdampness; Termite proofing, Fire protection, Corrosion protection.

UNIT-V: CONSERVATION AND RECYCLING (8 Periods)

Performance of construction materials and components in service, Rehabilitation of constructed facilities, Conservation movement, Materials and methodsfor conservation work, Recycling of old buildings and its advantages, Examples. **Total Periods: 45**

TEXT BOOKS:

1. Dennison Campbell, Allen and Harold Roper, *Concrete Structures – Materials, Maintenance and Repair*, Longman Scientific and Technical, UK, 1991.
2. Allen, R.T. L., Edwards, S.C. and J. D. N. Shaw,*TheRepair of Concrete Structures*, Blackie Academic & Professional, UK, 1993.

REFERENCE BOOKS:

1. Peter H. Emmons, *Concrete Repair and Maintenance*, John Wiley and Sons Publications, 2002.
2. Building Constructionunder Seismic Conditions in the Balkan Region, UNDP/UNIDO Project Rer/79/015,Volume 5, *Repair and Strengthening of Reinforced Concrete, Stone and Brick Masonry Buildings*, United Nations Industrial Development Organisation, Vienna.
3. Shetty, M. S., *Concrete Technology*, S. Chand and Company.
4. Smith, P. and Julian, W., *Building Services*, Applied Science Publications, London, 1976.
5. SP: 25, BIS;*Causes and Prevention of Cracks in Buildings*.
6. Champion, S., *Failure and Repair of Concrete Structures*, John Wiley and Sons Publications, 1961.
7. Perkins, P. H., Repair, Protection and Water Proofing of Concrete Structures, E& FN Spon, UK, 3rdEdition, 1997.

III B.Tech. - II Semester

(16BT60113) CONTRACT LAWS AND REGULATIONS

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: –

COURSE DESCRIPTION: Construction contracts; Tenders; Arbitration; Legal requirements; Labour regulations.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate basic Knowledge on construction contracts, tenders, arbitration, legalrequirements and labour regulations.

CO2. Analyze contracts and tenders.

CO3. Address the legal issues in contracts and tenders.

CO4. Follow laws and regulations in the preparation of contracts and tenders.

CO5. Prepare contract and tender documents as per the standards.

CO6. Consider project schedule, cost, quality and risk in the preparation of contracts and tenders.

DETAILED SYLLABUS:

UNIT-I:CONSTRUCTION CONTRACTS (9 Periods)

Indian contracts act, Elements of contracts, Types of contracts, Features, Suitability, Design of contract documents, International contract document and laws, Standard contract document, Law of torts.

UNIT-II: TENDERS (9 Periods)

Prequalification, Bidding, Accepting; Evaluation of tender from technical, contractual and financial points of view; Two cover system, Preparation of the documentation, Contract formation and interpretation, Potential contractual problems, Price variation clause, Comparison of actions and laws, Subject matter, Violations.

UNIT-III: ARBITRATION (9 Periods)

Arbitration, Comparison of actions and laws, Agreements, Appointment of arbitrators, Conditions of arbitration, Powers and duties of arbitrator, Rules of evidence, Enforcement of award, Arbitration disputes, Dispute review board.

UNIT-IV: LEGAL REQUIREMENTS (9 Periods)

Legal requirements for planning, Property law, Agency law, Tax laws – Income tax, Sales tax, Excise and custom duties, Local government approval, Statutory regulations, Insurance and bonding, Laws governing purchase and sale, Use of urban and rural land, Land revenue codes, EMD, Security deposits, Liquidated damages.

UNIT-V:LABOUR REGULATIONS (9 Periods)

Social security, Welfare legislation; Laws relating to wages, bonus and industrial disputes; Labour administration, Insurance and safety regulations, Workmen's compensation act, Maternity benefit act, Child labour act, Other labour laws.

Total Periods: 45

TEXT BOOKS:

1. SubbaRao,G.C.V., *Law of Contracts I & II*, S. Gogia& Co., Eleventh Edition, 2011.
2. Jimmie Hinze, *Construction Contracts,*McGraw Hill, Third Edition, 2011.

REFERENCE BOOKS:

1. Kishore Gajaria, *GT Gajaria's Law Relating to Building and Engineering Contracts in India*, Lexis Nexis Butterworths India, Fourth Edition, 2000.
2. Patil, B. S,*Civil Engineering Contracts and Estimates*, University Press (India) Private Ltd., Fourth Edition, 2015.
3. Joseph T. Bockrath, *Contracts and the Legal Environment for Engineers and Architects*, McGraw Hill Education, Seventh Edition, 2010.
4. AkhileshwarPathak, *Contract Law*, Oxford University Press, 2011.

III B.Tech. - II Semester

(16BT60114) DISASTER MITIGATION AND MANAGEMENT

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: –

COURSE DESCRIPTION: Disasters; Earthquakes; Floods; Cyclones; Droughts; Landslides; Disaster management.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrateknowledge on disasters, their vulnerability and mitigation measures.

CO2. Analyze disasters and their vulnerability.

CO3. Design strategies for effective disaster mitigation.

CO4. Address pre and post disaster issues for better preparedness and mitigation measures, through proper analysis and interpretation.

CO5. Use appropriate methods in disaster mitigation and management.

CO6. Use historical data of disasters to inform the people over preparedness and mitigation measures.

CO7. Solve disaster related issues considering environment.

CO8. Consider economical issues in disaster management.

DETAILED SYLLABUS:

UNIT-I: DISASTERS (09 Periods)

Types of disasters - Natural disasters; Impact of disasters on environment, infrastructure and development; Concepts of hazards and vulnerability analysis, Hazard Assessment, Guidelines for hazard assessment and vulnerability analysis, Basic principles and elements of disaster mitigation.

UNIT-II: EARTHQUAKES (09 Periods)

Introduction to earthquake, Intensity scale (MSK–64), Seismic activity in India, Seismic zones of India, Earthquakes in A.P., Action plan for earthquake disaster preparedness, Elements at risk, Recovery and rehabilitation after earthquake, Earthquake resistant design and construction of buildings; Tsunami – Onset, Types and causes,Warning, Elements at risk, Typical effects, Specific preparedness and mitigation strategies.

UNIT-III: FLOODS, CYCLONES AND DROUGHTS (11 Periods)

Floods and Cyclones: Onset, Types, Warnings; Elements at risk, Typical effects, Indian floods and cyclones, Hazard zones, Potential for reducing hazards, Mitigation strategies and community based mitigation.

Droughts: Onset, Types and warning; Causes, Impact, Early warning and response mechanisms, Mitigation strategies, Droughts in India.

UNIT-IV: LANDSLIDES (08 Periods)

Onset, Types and warning; Causes, Elements at risk, Indian landslides, Hazards zones, Typical effects, Mitigation strategies and community based mitigation.

UNIT-V: DISASTER MANAGEMENT (08 Periods)

Disaster management organization and methodology, Disaster management cycle, Disaster management in India – Typical cases; Cost–benefit analysis with respect to

various disaster management programs implemented by NGOs and Government of India.

Total Periods: 45

TEXT BOOKS:

1. V. K. Sharma, *Disaster Management, Medtech Publishing,* Second Edition, 2013.
2. Anand S. Arya, AnupKaranth, and AnkushAgarwal, *Hazards, Disasters and Your Community: A Primer for Parliamentarians*, GOI–UNDP Disaster Risk Management Programme, Government of India, National Disaster Management Division, Ministry of Home Affairs, New Delhi, Version 1.0, 2005.

REFERENCE BOOKS:

1. Donald Hyndman and David Hyndman, *Natural Hazardsand Disasters*, Cengage Learning, Third Edition, 2011.
2. *Disaster Management in India,*AStatus Report, Ministry of Home Affairs, Govt. of India, May, 2011.
3. Rajendra Kumar Bhandari, *Disaster Education and Management: A Joyride for Students, Teachers, and Disaster Managers*, Springer India, 2014.
4. R. B. Singh, *Natural Hazards and Disaster Management*, Rawat Publications, 2009.

III B.Tech - II Semester

(16BT60115) ENVIRONMENTAL POLLUTION AND CONTROL

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Fundamentals ofair pollution;Dispersion of pollutants; Effects and control of air pollution; Water pollution;Soil pollution and control; Municipal solid waste management.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrateknowledge on air, water, soil pollution and their control and solid waste management.
CO2. Analyze causes and effects of air, water and soilpollution and their remedial measures.
CO3. Recommend suitable solutionsto complex environmental pollution problems.
CO4. Use appropriate remedial technique to solve environmental pollution problems.
CO5. Understand the effects of environmental pollutionon human health and vegetation.
CO6. Encourage sustainable development through implementation of pollution control measures.
CO7. Maintain IS Codes for environmental quality control.

DETAILED SYLLABUS:

UNIT-I: AIR AND NOISE POLLUTION (8 Periods)

Air Pollution: Scope, Significance, Classification, Sources – Line, Area, Stationary, Mobile; Effects of air pollutants on man, material and vegetation; Global effects of air pollution; Air pollution meteorology - Lapse rate, Inversion, Plume pattern;Dispersion of air pollutants - Dispersion models and applications; Ambient air quality standards.

Noise Pollution: Sound pressure, Power and intensity,Impacts of noise, permissible limits of noise pollution, measurement of noise.

UNIT-II: AIR AND NOISE POLLUTIONCONTROL (10 Periods)

Self-cleansing properties of the environment,Dilution method, Control at source, Process changes and equipment modifications, Control of particulates–Types of equipment, Design and operation – Settlingchambers,Centrifugal separators, Bag house filters, Wet scrubbers, Electrostatic precipitators; Control of gaseouspollutants – Adsorption, Absorption, Condensation, Combustion; Control of air pollution from automobiles, Control of noise pollution.

UNIT-III: WATER POLLUTIONAND CONTROL (10 Periods)

Water pollution – Sources, Causes, Effects; Surface and groundwater quality – Physical, Chemical, Biological; Drinking water quality standards, Water purification – Processes, Engineered systems – Aeration, Solids separation, Settling operations, Coagulation, Softening, Filtration, Disinfection; Wastewater – Sources, Causes, Effects, Treatment and disposal – Primary, Secondary, Tertiary; Case studies.

UNIT-IV: SOIL POLLUTION AND CONTROL (8 Periods)

Soil pollutants, Sources of soil pollution, Causes, Effectsand control of soil pollution, Diseases caused by soil pollution, Methods to minimize soil pollution, Effective measures to control soil pollution, Case studies.

UNIT-V: MUNICIPAL SOLID WASTE MANAGEMENT (9 Periods)

Types of solid waste, Composition of solid waste, Collection and transportation of solid waste, Methods of disposal – Opendumping, Sanitary landfill, Composting, Incineration, Utilization - Recovery and recycling, Energy Recovery. **Total Periods: 45**

TEXT BOOKS:

1. Peavy, H. S, Rowe, D. R., and Tchobanoglous, G., *Environmental Engineering*, McGraw Hill Inc., 1985.
2. C.S.Rao, *Environmental Pollution Control Engineering*, New Age International Pvt. Ltd., Second Edition, 2007.
3. Ibrahim A. Mirsa, *Soil Pollution: Origin, Monitoring & Remediation*, Springer, UK, Second Edition, 2008.

REFERENCE BOOKS:

1. M.N. Rao and H.V.N. Rao, *Air Pollution,* Tata McGraw–Hill Education Pvt. Ltd., Ninteenth Edition, 2010.
2. Daniel Vallero, *Fundamentals of Air Pollution,* Academic Press (Elsevier), Fifth Edition, 2014.
3. S.M.Khopkar,*Environmental Pollution Monitoring and Control,* New Age International Pvt. Ltd., Second Edition, 2007.
4. V. M. Domkundwar, Environmental Engineering, DhanpatRai & Co. Pvt. Ltd., New Delhi, 2014.

III B.Tech - II Semester

(16BT60116) PLANNING FOR SUSTAINABLE DEVELOPMENT

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Sustainable development; Environmental impact;Sustainable Policies; Governance; Theories and strategies; Media and education for sustainability.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate the knowledge on sustainable development, environmental impact, sustainable policies, governance, systems and strategies, media and education for sustainability.

CO2. Analyze theories, environmental impact, policies, systems and strategies for sustainable development.

CO3. Develop suitable methods and systems for sustainable development.

CO4. Use appropriate techniquesin solving issues related to sustainable development.

CO5. Provide solutions to problems associated with sustainable development considering society.

CO6. Consider environment while planning sustainable development.

CO7. Communicate effectively on sustainable development issues through media and education.

CO8. Consider economical issues while planning for sustainable development.

DETAILED SYLLABUS:

UNIT-I: SUSTAINABLE DEVELOPMENT (9 Periods)

Definition and concepts of sustainable development, Capitalization of sustainability - National and global context;Millennium development goals, Emergence and evolution of sustainability and sustainable development, Theories of sustainability, Case studies.

UNIT-II: ENVIRONMENTAL IMPACT (9 Periods)

Climate change – Science, Knowledge and sustainability; Unforeseen environmental impacts on development, Challenges of sustainable development, Centrality of resources in sustainable development, Case studies.

UNIT-III: SUSTAINABLE POLICIES AND GOVERNANCE (9 Periods)

Governance - Democracy and Eco–welfare; Global civil society and world civil politics, Civic environmentalism, Policy responses to sustainable development, Economics of sustainability, Social responsibility in sustainability, National action, ISO 14001: Environmental management system.

UNIT-IV: SUSTAINABLE SYSTEMS AND STRATAGIES (9 Periods)

Need for system innovation, Transition and co–evolution, Theories and methods for sustainable development, Strategies for eco–innovation, Ecological foot print analysis, Socio ecological indicators – Eco labels; Policy programmes for system innovation, Case studies.

UNIT-V: MEDIA AND EDUCATION FOR SUSTAINABILITY (9 Periods)

Role of emerging media, Remarkable design and communication art, Activism and the public interest, Education for sustainability, Participation in decision making, Critical thinking and reflection, Case studies.

Total Periods: 45

TEXT BOOKS:

1. John Blewitt, *Understanding Sustainable Development*, Earth Scan Publications Ltd., 2ndEdition, 2008.
2. Jennifer A. Elliot, *An Introduction to Sustainable Development*, Earth Scan Publications Ltd., 4thEdition, 2006.

REFERENCE BOOKS:

1. Peter Rogers, Kazi F Jalal and John A Boyd, *An Introduction to Sustainable Development*, Earth Scan Publications Ltd., 2006.
2. Simon Dresner, *The Principles of Sustainability*, Earth Scan Publications Ltd., Second Edition, 2008.
3. Peter Bartelmus, *Environment Growth and Development: The Concepts and Strategies of Sustainability*, Routledge, Third Edition, 2003.
4. Gabriel Moser, Enric Pol, Yvonne Bernard, MiriliaBonnes, Jose Antonio Corraliza and Maria Vittoria Giuliani, *People Places and Sustainability*, Hogrefe& Huber Publishers, Second Edition, 2003.

III B.Tech. - II Semester

(16BT60117) **PROFESSIONAL ETHICS**

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Engineering ethics; Professional ideals and virtues; Engineering as social experimentation; Responsibilities and rights; Global issues.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate the principles of ethics, importance of professional values and social responsibility.
CO2. Analyze the problems in the implementation of moral autonomy and use ethical theories in resolving moral dilemmas.
CO3. Develop suitable strategies to resolve problems arise in practicing professional ethics.
CO4. Provide solutions to complex problems associated with professional ethics by proper analysis and interpretation.
CO5. Use appropriate theories in resolving issues pertain to professional ethics.
CO6. Understand the impact of professional ethics on society and address the limitations of codes of ethics.
CO7. Practice engineering with professionalism, accountability and ethics.
CO8. Function as a member, consultant, manager, advisor and leader in multi-disciplinary teams.
CO9. Write reports without bias and give instructions to follow ethics.

DETAILED SYLLABUS:

UNIT-I: ENGINEERING ETHICS (9 Periods)

Scope and aim of engineering ethics, Senses of engineering ethics, Variety of moral issues, Types of inquiry, Moral dilemmas, Moral autonomy-Kohlberg's theory, Gilligan's theory, Consensus and controversy.

UNIT-II:PROFESSIONAL IDEALS AND VIRTUES (8 Periods)

Theories about virtues, Professions, Professionalism, Characteristics, Expectations, Professional responsibility, Integrity, Self-respect, Sense of responsibility, Self-interest, Customs and religion, Self-interest and ethical egoism, Customs and ethical relativism, Religion and divine command ethics, Use of ethical theories, Resolving moral dilemmas and moral leadership.

UNIT-III:ENGINEERING AS SOCIAL EXPERIMENTATION (10 Periods)

Engineering as experimentation, Similarities to standard experiments, Learning from the past and knowledge gained, Engineers as responsible experimenters, Conscientiousness, Moral autonomy and accountability, The challenger case, Codes of ethics and limitations, Industrial standards, Problems with the law of engineering.

UNIT-IV: RESPONSIBILITIES AND RIGHTS (9 Periods)

Collegiality and loyalty, Respect for authority, Collective bargaining, Confidentiality, Conflict of interests, Occupational crime, Rights of engineers, Professional rights, Whistle-blowing, The BART case, Employee rights and discrimination.

UNIT-V: GLOBAL ISSUES (9 Periods)

Multinational corporations, Professional ethics, Environmental ethics, Computer ethics, Engineers as consultants, Witnesses, Advisors and Leaders, Engineers as Managers, Managerial ethics applied to Engineering Profession, moral leadership.

Total Periods: 45

TEXT BOOKS:

1. Mike W. Martin and Roland Schinzinger, *Ethics in Engineering*, Tata McGraw-Hill, Third Edition, 2007.

III B.Tech. - II Semester

(16BT60118) RURAL TECHNOLOGY

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION:

Rural technology; Non conventionalenergy; Community development; IT in rural development.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate the knowledge on technologies for rural development.

CO2. Analyze various technologies available which are appropriate for rural development.

CO3. Carryout feasibility study on the public and private partnership for rural development.

CO4. Develop and use latest technologies for rural development.

CO5. Address health and safety issues while choosing technologies for rural development.

CO6. Educate the rural populace on the positive impacts of bio-fertilisers and usage of agro machinery in agriculture.

DETAILED SYLLABUS:

UNIT-I:RURAL TECHNOLOGY (9 Periods)

India - Technology and rural development, Pre and post-independence period,Rural India Life, Indian farmer, Role of science and technology in rural development, Rural technology and poverty eradication, Rural business hubs, Technology in improving rural infrastructure,Various organizations related to innovation, Issues of technology transfer - CAPART, NABARD, CSIR, NIF.

UNIT-II: NON CONVENTIONAL ENERGY (9 Periods)

Definition of energy, Types of alternative sources of energy, Sources of non-conventional energy – Solar energy: Solar cooker,Solar heater; Biogas, Recycling and management,Wastes conservation, Assessment and production of biomass products and their utilization.

UNIT-III: TECHNOLOGIES FOR RURAL DEVELOPMENT (9 Periods)

Food and agro based technologies, Tissue culture, Nursery,Building and construction technologies, Cultivation and processing of economic plants, Cottage and social industries.

UNIT-IV: COMMUNITY DEVELOPMENT (9 Periods)

Water conservation, Rain water Harvesting, Drinking water, Environment and Sanitation, Bio fertilizers, Medical and aromatic plants, Employment generating technologies–Apiculture, Pisciculture and Aquaculture.

UNIT-V:IT IN RURAL DEVELOPMENT (9 Periods)

Role of information technology (IT) in rural areas, Impact of IT in rural development, Need and necessity of technology, Corporate social responsibilities, Private sector participation (Activities in different spheres: Employment, Education, Health, Agriculture and service sectors) and SaansadAdarsh Gram Yojana (SAGY), Village adoptionschemes.

Total Periods: 45

TEXT BOOKS:

1. M.S.Virdi, *Sustainable Rural Technologies*, Daya Publishing House, 2009.
2. S.V. Prabhathand, P. Ch. Sita Devi, *Technology and Rural India*, Serials Publications, 2012.

REFERENCE BOOKS:

1. R. Chakravarthy and P.R.S. Murthy, *Information Technology and Rural Development,* Pacific Book International, 2012.
2. Shivakanth Singh, *Rural Development Policies and Programmes,* Northern Book Centre, 2002.
3. L.M.Prasad, *Principles and Practice of Management*, S. Chand & Sons, Eighth edition, 2014.
4. Venkata Reddy, K., *Agriculture and Rural Development -Gandhian Perspective*, Himalaya Publishing House, 2001.

III B.Tech - II Semester

(16BT60308) GLOBAL STRATEGY AND TECHNOLOGY

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Introduction to strategic management; Strategic management process; Principles of good strategy; Globalization strategies; Research and Development strategies; Technology Management and Transfer; Elements of Transfer Process; Corporate Governance in the Indian scenario.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate the knowledge on Strategic management, Research & development strategies, Technology management and transfer, Globalization and Corporate governance.

CO2. Identify and analyze crucial problems in strategic management to improve performance of the organizations.

CO3. Develop the products and production process by using research and development strategies.

CO4. Conduct investigations on the impact of globalization in current scenario in the context of corporate governance.

CO5. Appraise the resources and capabilities of the firm in terms of their ability to confer sustainable development.

CO6. Apply ethics in strategic decision making.

DETAILED SYLLABUS:

UNIT-I: STRATEGIC MANAGEMENT (9 Periods)

Introduction, Classes of decisions, Levels of strategy, Core competence, Strategic intent and stretch, Approaches to strategy making, Roles of different strategists, Strategic management- Process, Benefits, Limitations; Ethics in strategic decision making, Principles of good strategy, Strategic Management in India.

UNIT-II: RESEARCH & DEVELOPMENT STRATEGIES (9 Periods)

Concept, Evolution of R&D Management, R&D as a business, R&D as competitive advantage, Elements of R & D strategies, Integration of R & D, Selection and implementation of R & D strategies, R & D trends.

UNIT-III: TECHNOLOGY MANAGEMENT AND TRANSFER (9 Periods)

Technology Management: Introduction, Technology - Definition, Components, Classification Features; Technology Management- Concept, Nature; Drivers of Management of Technology-Significance, Scope, Responding to technology challenges.

Technology Transfer: Introduction, Definition, Classification, Significance, Elements of process, Types of Technology Transfer, Package, Modes of Transfer, Routes, Channels and Effectiveness of Technology Transfer.

UNIT-IV: GLOBALISATION (9 Periods)

Definition, Stages, Essential conditions for globalization, Globalization strategies, Competitive advantage of Nations, Factors affecting Globalization, Globalization of Indian business.

UNIT-V: CORPORATE GOVERNANCE: THE INDIAN SCENARIO (9 Periods)

Emergence of corporate governance in India- Landmarks, Models, Codes and status in India, Role and Responsibilities of Regulators, The Board of Directors; Corporate Governance- Specific issues in India, Family owned Business, Corporate Governance and the Indian ethos.

Total periods: 45

TEXT BOOKS:

1. Francis Cherunilam, *Strategic Management*, Himalaya Publishing House, Third Edition, 2002.
2. C.S.G.Krishnamacharyulu and Lalitha Ramakrishnan, *Management of Technology*, Himalaya Publishing House, Second Edition, 2012.

REFERENCE BOOKS:

1. White and Bruton, *The Management of Technology and Innovation: A Strategic Approach*, Cengage Learning, First Edition, 2007.
2. S.K.Mandak, *Ethics in Business and Corporate Governance*, TMH, Second Edition, 2012.

III B.Tech - II Semester

(16BT60309) INTELLECTUAL PROPERTY RIGHTS AND MANAGEMENT

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Protection of ideas; innovation and artistic endeavors; Acts and procedure related to patents, trademarks, copy right, design registration, trade secrets and cyber laws; Infringement; Commercialization of intellectual property rights; Case studies in each.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on intellectual property rights, patents, trademarks, copyrights, trade secrets and commercialization of intellectual property.

CO2. Analyse the commercial significance of discoveries and developments and to assist in bringing these into public use.

CO3. Investigate and ensure smooth transition from concept to final product by following National & International Laws of Intellectual Property.

CO4. Utilize the various policies and procedures related to patents, trademarks and copyrights relating to IPR.

CO5. Safeguard, review and manage the intellectual property so that it may receive adequate and appropriate legal protection against unauthorized use.

CO6. Follow ethical standards in capacity building and work as a platform for development, promotion, protection, compliance, and enforcement of intellectual property and knowledge.

CO7. Prepare documents and fill applications needed for filing a patent, design, copyright and trade mark.

DETAILED SYLLABUS:

UNIT-I: OVERVIEW OF INTELLECTUALPROPERTY RIGHTS (9 Periods)

Introduction, Intellectual Property vs. Conventional Property, and importance of intellectual property rights (IPRs), types of intellectual property, International Treaties for protection of IPR-Paris Convention, World Intellectual Property Organization (WIPO), World Trade Organization (WTO), Trade Related Aspects of Intellectual Property Rights (TRIP) Agreement, General Agreement on Tariffs and Trade(GATT).

UNIT-II: TRADEMARKS (9 Periods)

Introduction, Functions and kinds of trademarks, Trade Mark Registration Process, Post registration procedures, Trade Mark maintenance, Transfer of rights, Inter parties Proceedings, Infringement and Dilution of Ownership of Trade Mark, Trade Mark claims, International Trade Mark Law.

UNIT-III: PATENTS (9 Periods)

Introduction, Rights under Patent Law, Patent Application Process, Terms and Maintenance of Patents Requirements, Patent Ownership and Transfer, Licensing of Patent Rights, Sole and Joint Inventors, Disputes over Inventorship, Patent Infringement, International Patent Law, Patent Cooperation Treaty (PCT), Patent Law Treaty (PLT), Substantive Patent Law Treaty (SPLT).

UNIT-IV: COPY RIGHTS, TRADE SECRETS, CYBER LAWS (9 Periods)

Copy Rights: Introduction, nature and scope, subject matter, Rights afforded by copyright law, Copyrights ownership, transfers and duration, Copyright registration process.

Trade Secrets: Introduction, Determination of Trade Secret Status, Employer-Employee Relationships, Protection of submissions.

Cyber laws: E-commerce and cyber laws, cybercrime and legislation- need, objective and scope; IT Act 2000, Information Technology and Information Security.

UNIT-V: INDUSTRIAL DESIGN AND COMMERCIALIZATION OF INTELLECTUAL PROPERTY RIGHTS (9 Periods)

Industrial Design: Introduction, Indian Law related to registration of Industrial Designs, Essential requirements for registration of a design in India, International Agreements – Hague System; Conflicts related to registration of design.

Commercialization of Intellectual Property Rights: Competition and Confidentiality Issues, Antitrust Laws, Assignment of Intellectual Property Rights, Technology, Transfer Agreements, Intellectual Property Issues in the Sale of Business, Legal Auditing of Intellectual Property, Due Diligence of Intellectual Property Rights in a Corporate Transaction. **Total Periods: 45**

TEXT BOOKS:

1. Deborah E. Bouchoux, *Intellectual Property: The Law of Trademarks, Copyrights, Patents and Trade Secrets*, Cengage Learning, Fourth Edition, 2016.
2. KompalBansal and ParikshitBansal, *Fundamentals of Intellectual Property for Engineers*, BS Publications, First Edition, 2013.

REFERENCE BOOKS:

1. Prabuddha Ganguli, *Intellectual Property Rights-Unleashing the Knowledge Economy*, McGraw Hill Education, Sisth reprint, 2015.
2. P. Narayanan, *Intellectual Property Law*, Eastern Book Company, Third Edition, 2013.

3. R.Radha Krishnan, S. Balasubramanian, *Intellectual Property Rights: Text and Cases*, Excel Books, First Edition, 2008.

III B.Tech. - II Semester

(16BT60310) MANAGING INNOVATION AND ENTREPRENEURSHIP

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES:—

COURSE DESCRIPTION: Evolution of entrepreneurship from economic theory Managerial and entrepreneurial competencies; Concepts of Shifting Composition of the Economy Purposeful Innovation & Sources of Innovative Opportunity; The Innovation Process; Innovative Strategies; Entrepreneurial Motivation; Entrepreneurs versus inventors; Ethics and International Entrepreneurship; Strategic Issues in International Entrepreneurship; Problem solving Innovation and Diversification.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate the principles of business innovation and entrepreneurship for establishing industrial ventures.

CO2. Analyze business plans for potential investors and stakeholders and effectively answer probabilistic questions on the substance of plan.

CO3. Develop a comprehensive and well planned business structure for a new venture.

CO4. Conduct investigation on complex problems, towards the development of Project.

CO5. Apply modern statistical and mathematical tools to design projects and subsequent work procedures.

CO6. Apply ethics in constructive innovation framework.

CO7. Exhibit professionalism by employing modern project management and financial tools.

DETAILED SYLLABUS:

UNIT-I: CREATIVITY AND INNOVATION (7 Periods)

Introduction, Levels of innovation, Purposeful innovation and the sources of innovative opportunity, The innovation process, Innovative strategies, Strategies that aim at introducing and innovation, Dynamics of ideation and creativity – Inbound, Outbound; Context and process of new product development, Theories of outsourcing.

UNIT-II: PARADIGMS OF INNOVATION (11Periods)

Systems approach to innovation, Innovation in the context of developed economies and Emerging economies, Examining reverse innovation and its application, Performance gap, Infrastructure gap, Sustainability gap, Regulatory gap, Preference gap, organizational factors effecting innovation at firm level.

UNIT-III: SOURCES OF FINANCE AND VENTURE CAPITAL (7 Periods)

Importance of finance, Comparison of venture capital with conventional development capital, Strategies of venture funding, Investment phases, Investment process, Advantages and disadvantages of venture capital, Venture capital developments in India.

UNIT-IV: INTELLECTUAL PROPERTY INNOVATION AND ENTREPRENEURSHIP (11 Periods)

Introduction to Entrepreneurship, Evolution of entrepreneurship from economic theory, Managerial and entrepreneurial competencies, Entrepreneurial growth and development, Concepts, Ethics and Nature of International Entrepreneurship, Intellectual property – forms of IP, Patents, Trademarks, Design registration, Copy rights, Geographical indications, Patent process in India.

UNIT-V: OPEN INNOVATION FRAMEWORK AND PROBLEM SOLVING (9 Periods)

Concept of open innovation approach, Difference between open innovations and Cloud innovation approaches, Limitations and Opportunities of open innovation framework, Global context of strategic alliance, Role of strategic alliance, Problem Identification and Problem Solving, Innovation and Diversification.

Total Periods: 45

TEXT BOOKS:

1. Vinnie Jauhari, SudhanshuBhushan, *Innovation Management*, Oxford University Press, First Edition, 2014.
2. Drucker, P. F., *Innovation and Entrepreneurship*, Taylor & Francis, Second Edition, 2007.

REFERENCE BOOKS:

1. Robert D Hisrich, Claudine Kearney, *Managing Innovation and Entrepreneurship,* Sage Publications, First Edition, 2014.
2. V.K.Narayanan, *Managing Technology and Innovation for Competitive Advantage*, Pearson India, First Edition, 2002.

III B.Tech. - II Semester

(16BT60311) MATERIALS SCIENCE

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:—

COURSE DESCRIPTION: Structure and Bonding in metals; Steels, Cast Irons and Non Ferrous alloys; Material Selection for conductors, Insulators and semiconductors; Strengthening mechanisms of metals; Plastics and Ceramics as Insulators; AC and DC properties of Insulators; Semiconductors and Magnetic materials; Composite materials in Electrical and Electronics engineering; Material Selection and manufacturing of Optical fibers.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate the knowledge on concepts of fundamental science and engineering principles relevant to materials.

CO2. Analyze the structures of various types of Ferrous, Non-ferrous alloys influencing various engineering applications.

CO3. Conduct investigations to select suitable materials with desired properties for engineering applications.

CO4. Use phase diagrams to interpret the data regarding microstructure of materials.

CO5. Consider health and safety issues while providing materials to real time applications.

CO6. Use composite materials that reduce material waste in design and manufacturing for sustainability.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO MATERIAL SCIENCE (07 Periods)

Structure of metals: Bonds in Solids, Crystallization of metals, Grain and grain boundaries, Effect of grain boundaries on the properties of metals / alloys, Determination of grain size measurement.

Constitution of alloys: Necessity of alloying, Types of solid solutions, Hume rothery rules, Intermediate alloy phases.

UNIT-II: CAST IRONS, STEELS AND NON-FERROUS METALS (12 Periods)

Structure and properties of Grey cast iron, Spheroidal cast iron, White Cast iron, Malleable Cast iron, Alloy cast irons, Classification of steels, structure and properties of plain carbon steels, Structure and properties of Copper and its alloys, Aluminum and its alloys.

UNIT-III: ELECTRIC CONDUCTORS AND INSULATORS (12 Periods)

Type of materials selected for conductors, Insulators and semiconductors, Introduction to ceramics - Bonding and microstructure, DC properties of ceramic materials, AC properties of ceramic materials, mechanical properties, Ceramics as Conductors, Insulators and capacitors; Introduction to Plastics - DC properties, AC properties, Mechanical properties.

UNIT-IV: SEMICONDUCTORS AND MAGNETIC MATERIALS (09 Periods)

Fabrication of Semiconductors, Producing a silicon wafer-Lithography and Deposition packaging of semiconductors materials; Types of magnetic materials, Measuring magnetic properties, Application of soft magnetic materials in Electromagnets and relays, AC transformers, Generators and motors.

UNIT-V: ADVANCED MATERIALS AND APPLICATIONS (05 Periods)

Composites - Fiber reinforced metal matrix, Ceramic matrix, Polymer matrix, Properties and applications of composites; Ceramics - Alumina, Zirconia, Silicon Carbide, SiAlONs, Reaction Bonded Silicon Nitride (RBSN); Glasses- properties and applications, manufacturing of optical fibers.

Total Periods: 45

TEXT BOOKS:

1. Kodgire V D, *Material Science and Metallurgy*, Everest Publishing House, Pune, Thirty First Edition, 2011.
2. Ian. P.Jones, *Material Science for Electrical and Electronic Engineers*, Oxford University Press, First Edition, 2000.

REFERENCE BOOKS:

1. V. Raghavan, *Physical Metallurgy: Principles and Practices*, PHI, New Delhi, Second Edition, 2006.
2. William. D. Callister, *Materials Science & Engineering-An Introduction*, John Wiley and Sons, New Delhi, Sixth Edition, 2002.

III B.Tech. - II Semester
(16BT70412) GREEN TECHNOLOGIES
(Open Elective)
(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION: Principles of green engineering; Green communications; Green energy; Green computing; Green construction; Green manufacturing.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Deploy conceptual knowledge in green technologies pertaining toengineering practice.
CO2. Analyze various green technologies for engineering practice.
CO3. Provide green solutions to engineering problems.
CO4. Apply various green techniques in the engineering practice.
CO5. Consider health and safety issues while providing green solutions to the society.
CO6. Understand issues related to environment sustainability.
CO7. Apply ethical standards for environmental sustainability in the engineering practice.

DETAILED SYLLABUS:

UNIT-I: PRINCIPLES OF GREEN ENGINEERING AND GREEN COMMUNICATIONS (9 Periods)

Principles of Green Engineering:
Introduction, Definition of green engineering, Principles of green engineering.

Green Communications:
Introduction, Origin of Green Communications, Energy Efficiency in Telecommunication systems, Telecommunication system model and energy Efficiency, Energy saving concepts, Quantifying energy efficiency in ICT, Energy efficiency metrics of green wireless networks, Embodied energy of communication devices- Introduction, The extended energy model, Embodied/Operating Energy of a BS in Cellular network- A Case study; Energy efficient standards for wireline communications.

UNIT-II: GREEN ENERGY (9 Periods)

Introduction, adverse impacts of carbon emission, control of carbon emission– methods, greenhouse gas reduction – methods, Energy sources and their availability, Green energy for sustainable development. Green energy sources – Solar energy, Wind energy, Fuel cells, Biofuels, Wave and Geothermal energy (Principle of generation only).

UNIT-III: GREEN IT (9 Periods)

The importance of Green Information technologies, Strategizing Green Initiatives, Implementation of Green IT, Information Assurance, Communication and Social Media, Regulating Green IT- Laws, Standards and Protocols; RoHS, REACh, WEEE, Legislating for GHG Emissions and Energy Use of IT Equipment, Non-regulatory Government Initiatives, Industry Associations and Standard Bodies, Green Building Standards, Green Data Centres, Social Movements and Greenpeace, Conclusions.

UNIT-IV: GREEN CONSTRUCTION (9 Periods)

Green Building: Definition, Typical features, Benefits, Requisites for green building construction, Sustainability, Concept of REDUCE, REUSE, RECYCLE, RETHINK, REPLENISH AND REFUSE (6 R's), Sustainable construction focus point – Site selection, Planning, Water, Energy, Material, Indoor air quality, Construction procedures.

Indian Green Building Council: Introduction to IGBC green homes, Benefits of IGBC, IGBC green home rating system, Introduction to USGBC, LEED rating system, Procedure to get IGBC certification, GRIHA Rating.

UNIT-V: GREEN MANUFACTURING (9 Periods)

Introduction, background, definition, motivation and barriers to green manufacturing, Impact of manufacturing in environmental ecology, Need for green manufacturing, Advantages and Limitations, green manufacturing strategies, Green manufacturing and sustainability, Sustainability tools; Waste stream mapping and application, Green manufacturing through clean energy supply, green lean manufacturing, green packaging and supply chain. **Total Periods: 45**

TEXT BOOKS:

1. KonstantinosSamdanis, Peter Rost, Andreas Maeder, MichelaMeo, Christos Verikoukis, *Green Communications: Principles, Concepts and Practice,*John Wiley & Sons, 2015.
2. Soli J. Arceivala, *Green Technologies for a better future,* McGraw Hill Education (India) Pvt. Ltd, 2014.
3. San Murugesan, G.R. Gangadharan, *Harnessing Green IT – Principles and Practices,* John Wiley & Sons Ltd., 2008.
4. Tom Woolley, Sam Kimmins, Paul Harrison and Rob Harrison, *Green Building Handbook*, *Volume 1*, E & FN Spon, an imprint of Thomson Science & Professional.
5. *IGBC Green Homes Rating System Version 1.0* – A bridged reference guide.
6. J Paulo Davim, Green Manufacturing: Processes and Systems, Springer, 2012.
7. David A Dornfeld, Green Manufacturing: Fundamentals and Applications, Springer, 2013.

REFERENCE BOOKS:

1. Athanasios V Alavanidis, ThomaisVlachogianni, *Green Chemistry and Green Engineering*, SynchronaThemata, 2012.
2. G.D. Rai, *Non-conventional Energy Sources*, Khanna Publishers, Delhi, Fifth Edition,2011.

3. Marty Poniatowski, *Foundation of Green Information Technology, Prentice Hall, 2009.*
4. R. K. Gautham, *Green Homes*, BS publications, 2009.

III B.Tech. - II Semester

(16BT70413) INTRODUCTION TO NANOSCIENCE AND NANOTECHNOLOGY

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES:—

COURSE DESCRIPTION: Introduction to the concept ofnano;Description of nanomaterial;Nanostructure characterization tools;Classification of nanomaterials;Fabrication of nanomaterial;Different applications of nanostructures and nanomaterials.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge in
- Nanoscale technology.
- Difference between micro and nanotechnology
- Classification of Nanostructure and Nanomaterial
- Fabrication of various nanomaterials and nanostructures.

CO2. Analyze numerical and analytical problems in
- Nanomaterial size by using Scanning Electron Microscope and X-Ray diffraction

CO3. Design and fabricate devices based on nanostructures like
- Nano solar cell
- Nano cantilever
- Nano bio-sensor

CO4. Synthesize nano particle of different materials to solve the problems related to fabrication of nanostructures.

CO5. Select appropriate technique for fabrication ofnanostructures and Nano composites.

CO6. Apply ethical standards and legal issues while using chemical substances infabrication of new nanostructures.

DETAILED SYLLABUS:

UNIT-I: FUNDAMENTALS OF NANOTECHNOLOGY (8 Periods)

Introduction – Scientific revolutions, Time and length scale in structures, Definition of a nanosystem; Dimensionality and size dependent phenomena - Surface to volume ratio Fraction of surface atoms, Surface energy and surface stress, surface defects, Properties at nanoscale (optical, mechanical, electronic, and magnetic).

UNIT-II:IDENTIFICATION AND CHARACTERIZATION TOOLS FOR NANOMATERIALS AND NANOSTRUCTURE (10 Periods)

Field Emission Scanning Electron Microscopy (FESEM), Environmental Scanning ElectronMicroscopy (ESEM) High Resolution, Transmission Electron Microscope (HRTEM), Scanning Tunneling Microscope(STM), Surface enhanced Raman spectroscopy (SERS), Secondary Ion Mass Spectroscopy, Focused Ion Beam Photoelectron Spectroscopy, X-ray Photoelectron Spectroscopy (XPS), Auger electron spectroscopy (AES), Rutherford backscattering spectroscopy (RBS), X-Ray Diffraction, Intensities in X-Ray Scattering Particle Size Effect.

UNIT-III:CLASSIFICATION OF NANOMATERIALS (10 Periods)

Classification based on dimensionality, Quantum Dots,Wells and Wires-III-V Nanoparticles, Electronic Structure of Nanosemiconductor, Carbon based nanomaterials (buckyballs, nanotubes, graphene), Metal based nano materials (nanogold, nanosilver and metal oxides), Nanocomposites, Nanopolymers, Nanoglasses, Nano ceramics, Biological nanomaterials, Fulrene-discovery and early years,.

UNIT-IV: SOME FABRICATION TECHNIQUES OF NANOMATERIALS AND NANOSTRUCTURES (9 Periods)

Chemical Methods: Metal Nanocrystals by Reduction, Solvothermal Synthesis, Photochemical Synthesis,Sonochemical Routes, Chemical Vapor Deposition (CVD), Metal Oxide Chemical Vapor Deposition (MOCVD), Plasma Enhanced Chemical Vapour Deposition Technique(PECVD), Hydrothermal Method, Sol-Gel.

PhysicalMethods: Ball Milling, Electrodeposition, Spray Pyrolysis, Flame Pyrolysis, DC/RF Magnetron Sputtering, Molecular Beam Epitaxy (MBE) Thermal Evaporation Method.

UNIT-V:APPLICATIONS (8 Periods)

Solar energy harvesting, Catalysis,Molecular electronics and printed electronics Nanoelectronics, Polymers with aspecial architecture, Liquid crystalline systems, Linear and nonlinear optical and electro-optical properties, Applications in displays and other devices, Nanomaterials for data storage, Photonics, Plasmonics, Chemical and biosensors, Nanomedicine and Nanobiotechnology, MESFET.

Total Periods: 45

TEXT BOOKS:

1. Pradeep T., *A Textbook of Nanoscience and Nanotechnology*, Tata McGraw Hill Education Pvt. Ltd., 2012.
2. Hari Singh Nalwa, *Nanostructured Materials and Nanotechnology*, Academic Press, 2002.

REFERENCE BOOKS:

1. Nabok A., *Organic and Inorganic Nanostructures*, Artech House, 2005.
2. Dupas C., Houdy P., Lahmani M*, Nanoscience: Nanotechnologies and Nanophysics*, Springer - Verlag Berlin Heidelberg, 2007.

3. S.M. Sze, Physics of Semiconductor Devices, Second Edition, 2001.

III B.Tech. - II Semester

(16BT60505) ENGINEERING SYSTEM ANALYSIS AND DESIGN

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES:—

COURSE DESCRIPTION: Systems Process; Technologies for Systems; System Development Life Cycle; System Analysis and Modeling; Levels of Management; Project Management; Systems Implementation and Importance of UML Prototyping; Maintaining and Managing the Systems Output Process.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge in
- Systems Process and System Design
- Systems Analysis and Modeling
- System Development Life Cycle
- Design Management and Maintenance Tools.

CO2. Analyzesystem Process and estimate the given models by using case tools.

CO3. Design and develop a model to the organizational systems.

CO4. Solve complex problems related to engineering systems and produce accurate results

CO5. Apply object oriented techniques for modeling dynamic systems.

CO6. Contribute towards societal issues and responsibilities in designing, modeling and developing of organizational systems.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION (9 Periods)

Systems, Types of systems, Integrating technologies for systems, Need for system analysis and design, Role of the systems analyst, System development life cycle, CASE tools for analysis and design.

UNIT-II: ANALYSIS AND MODELING ORGANIZATIONAL SYSTEM (9 Periods)

Organization as system, System analysis, Depicting systems graphically, Use case modeling, Levels of management, Organizational culture.

UNIT-III: PROJECT MANAGEMENT (10 periods)

Project initiation, Problem in organization, Determining feasibilities, Ascertaining hardware and software needs, Identifying, Forecasting, Comparing costs and benefits, Activity planning and control, Managing the project.

UNIT-IV: OBJECT ORIENTED ANALYSIS AND DESIGN USING UML (8 Periods)

Introduction, Object modeling, Dynamic modeling, functional modeling, packages and other UML artifacts, the importance of using UML for modeling.

UNIT-V: DESIGNING EFFECTIVE OUTPUT (9 Periods)

Output design objectives, Relating output content to output method, Realizing how output bias affects users, Designing output for display, Case studies-Designing a web site management, Online exam management, Online portal design.

Total Periods:45

TEXT BOOK:

1. Kenneth E. Kendall and Julie E. Kendall,*System Analysis and Design*, Pearson Education, Ninth Edition, 2011.

REFERENCE BOOKS:

1. Dennis, Wixom and Roth,*Systems Analysis and Design*, John Wiley, Fifth Edition, 2012.
2. Shelly and Rosenblatt,*Systems Analysis and Design*, Cengage Learning, Ninth Edition, 2012.

III B.Tech.- II Semester

(16BT71011) **MICRO-ELECTRO-MECHANICAL SYSTEMS**

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES:—

COURSE DESCRIPTION: Overview of Micro Electro Mechanical Systems (MEMS); scaling laws; working principles of microsensors and microactuators; materials; microfabrication processes; packaging of Microsystems.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on MEMS devices, scaling laws, microsensors and microactuators

CO2. Analyze the properties of materials and identify its suitability for MEMS devices.

CO3. Design MEMS devices that meet desired specifications and requirements.

CO4. Analyze and synthesize the information to provide effective solution to engineering problems with MEMS devices.

CO5. Use modern techniques in micro manufacturing process.

CO6. Develop efficient and cost effective MEMS based products for society.

DETAILED SYLLABUS:

UNIT-I: OVERVIEW OF MEMS AND SCALING LAWS **(9 periods)**

MEMS and Microsystems, Microsystems and microelectronics, miniaturization, applications of MEMS in the automotive industry and in other industries.

Scaling laws of miniaturization: Introduction to scaling, scaling in: geometry, rigid- body dynamics, electrostatic forces, electromagnetic forces, Electricity, Fluid mechanics, Heat transfer.

UNIT-II: **WORKING PRINCIPLES OF MICROSYSTEMS** **(9 periods)**

Microsensors,acoustic wave sensors, biomedical and biosensors, chemical sensors, pressure sensors, thermal sensors. Microactuation: actuation using thermal forces, shape-memory alloys, piezoelectric crystals, electrostatic forces. MEMS with microactuators, microgrippers, micromotors, microvalves, micropumps.Microaccelerometers, microfludics.

UNIT-III:MATERIALS FOR MEMS AND MICROSYSTEMS **(9 periods)**

Substrate and wafers, silicon as a substrate material, silicon compounds, silicon piezoresistors, gallium arsenide, quartz, piezoelectric crystals, polymers, carbon nano tube (CNT), development of CNTs, application of CNTs.

UNIT-IV: MEMS FABRICATION PROCESS AND MICROMANUFACTURING **(9 periods)**

Photolithography, ion implantation, diffusion, oxidation, chemical vapor deposition, physical vapor deposition, deposition by epitaxy, etching, bulk micromanufacturing, surface micromanufacturing, LIGA process.

UNIT-V: MEMS PACKAGING **(9 periods)**

Introduction to microsystem packaging, objectives and general considerations in packaging design, three levels of microsystem packaging, interfaces in microsystem packaging, packaging technologies, three-dimensional packaging, selection of packaging materials, signal mapping and transduction, Design case: Pressure sensor packaging.

Total Periods: 45

TEXT BOOK:

1. Tai-Ran Hsu, *MEMS & Microsystems, Design and Manufacture*, McGraw Hill Education (India) Pvt. Ltd., 2002.

REFERENCES BOOKS:

1. G.K.Ananthasuresh, K.J.Vinoy,*Micro and Smart Systems*, Wiley India, 2010.

2. NitaigourPremchand Mahalik, *MEMS*, McGraw Hill Education (India) Pvt. Ltd., 2007.

III B.Tech. – II Semester

(16BT61205) CYBER SECURITY AND LAWS

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES:—

COURSE DESCRIPTION:

Cyber Crimes and Indian IT Act; Cyber Offenses; Tools and Methods used in Cyber Crime; Phishing ad Identity Theft; Indian and Global Perspective on Cyber Crimes and Cyber Security; Organizational Implications on Cyber Security; IPR Issues; Cyber Crime and Terrorism; Cyber Crime Illustrations

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge in Cyber security, Cybercrimes and its related laws in Indian and Global Act.

CO2. Analyze the legal perspectives and laws related to cybercrimes in Indian context.

CO3. Apply security and privacy methods in development of modern applications and in organizations to protect people and to prevent cybercrimes.

CO4. Solve Cyber security issues using privacy policies.

CO5. Use antivirus tools to minimize the impact of cyber threats.

CO6. Follow security standards for the implementation of Cyber Security and laws.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO CYBER CRIMES AND OFFENSES (9 Periods)

Cyber Crimes: Introduction, Definition, Origin, Cybercrime and information security, Cyber criminals, Classifications of cybercrimes, The legal perspectives and Indian perspective, Cybercrime and Indian ITA 2000, Global perspective on cybercrimes.

Cyber Offenses: Introduction, Criminals planning on attacks, Social engineering, Cyber stalking, Cyber cafe and crimes, Botnets.

UNIT-II: TOOLS AND METHODS USED IN CYBER CRIME AND PHISHING AND IDENTITY THEFT (9 Periods)

Introduction, Proxy servers and Anonymizers, Phishing, Password cracking, Key loggers and Spywares, Virus, Worms and Ransomware, Trojan horses and Backdoors, Steganography, DoS and DDoS attacks.

Phishing and Identity Theft: Introduction, Phishing, Identity Theft (ID Theft).

UNIT-III: CYBER CRIMES AND CYBER SECURITY-LEGAL PERSPECTIVES (8 Periods)

Introduction, Cyber laws in Indian context, The Indian IT act, Challenges to Indian law and Cybercrime scenario in India, Consequences of not addressing the weakness in IT act, Digital signatures and the Indian IT Act, Cyber Crime and Punishment, Cyber law, Technology and Students in India scenario.

UNIT-IV: CYBER SECURITY-ORGANIZATIONAL IMPLICATIONS (10 Periods)

Introduction, Web threats for organizations – evils and perils, Security and privacy implications from cloud computing, Social Media Marketing-Security risks and Perils for organizations, Social computing and associated challenges for organizations, Protecting people's privacy in organization, Organizational guidelines for internet usage, Safe computing and Usage policy, Incident handling and Best practices.

UNIT-V: CYBER CRIME AND TERRORISMAND ILLUSTRATIONS (9 Periods)

Cyber Crime & Terrorism: Introduction, Intellectual property in the cyber space, The ethical dimension of cybercrimes, The psychology, Mindset and skills of hackers and cyber criminals, Sociology of cyber criminals, Information warfare.

Cyber Crime Illustrations: Indian banks lose millions of rupees, Justice vs. Justice, Parliament attack, The Indian case of online gambling, Bank and credit card related frauds, Purchasing goods and services scam, Nigerian 419 scam.

Total Periods: 45

TEXT BOOK:

1. Nina Gobole and SunitBelapure, *Cyber Security: Understanding Cyber Crimes, Computer Forensics and Legal Perspectives,* Wiley India, 2011.

REFERENCE BOOK:

1. Prashant Mali, *Cyber Law and Cyber Crimes,* Snow White Publications Pvt. Ltd., 2013.

III B.Tech. - II Semester

(16BT61505) BIO-INFORMATICS

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: —

COURSE DESCRIPTION:
Introduction to Bioinformatics; Biology and Information; Sequence alignment and dynamic programming; Biological Database; Homology Modeling; Structure Prediction; Molecular Dynamics.

COURSE OUTCOMES: On successful completion of this course, students will be able to:
CO1. Demonstrate knowledge on concepts of biological databases, Genome and proteome.
CO2. Analyze biological sequences for Homology Modeling.
CO3. Apply clustering methods for Phylogenetic trees.
CO4. Solve bio sequencing problems using dynamic programming.
CO5. Select and apply appropriate techniques and tools to structure Prediction.

DETAILED SYLLABUS:
UNIT-I: NUCLEIC ACIDS, PROTEINS AND AMINO ACIDS (8 periods)
Bioinformatics - Definition, Nucleic acid structure, Protein structure, the central dogma, Physico-chemical properties of the amino acids and their importance in protein folding, Polymerase chain reaction (PCR)

UNIT-II: INFORMATION RESOURCES FOR GENES AND PROTEIN (10 periods)
Database file formats, Nucleic acid sequence databases, Protein sequence databases.
Sequence Alignment Algorithm
Pair wise sequence alignment – The problem, Pair wise sequence alignment – Dynamic programming methods, The effect of scoring parameters on the alignment, Multiple sequence alignment.

UNIT-III: PREDICTION OF THE THREE-DIMENSIONAL STRUCTURE OF A PROTEIN AND HOMOLOGY MODELING (9 Periods)
Secondary Structure Prediction, Basic Principles, The Steps of Comparative Modeling, Accuracy of Homology Models, Manual versus Automatic Models, SNPs, Motifs**.**

UNIT-IV: PHYLOGENETIC METHODS (10 periods)
Phylogenetic trees, choosing sequences, Distance matrices and clustering methods, Calculation of distances in the neighbor-joining method, Bootstrapping, Tree optimization criteria and tree search methods, The maximum-likelihood criterion, Calculating the likelihood of the data on a given tree, The parsimony criterion.

UNIT-V: NEW FOLD MODELING (8 periods)
Estimating the Energy of a Protein Conformation, Energy Minimization, Molecular Dynamics, The "Omics" Universe-Transcriptomics, Proteomics, Interactomics, Structural Genomics, Pharmacogenomics.

Total Periods:45

TEXTBOOKS:

1. Paul G. Higgs and Teresa K. Attwood, *Bioinformatics and Molecular Evolution* Blackwell Publishing, 2005.
2. Anna Tramontano, *Introduction to Bioinformatics* Chapman and Hall/CRC, 2006.

REFERENCE BOOKS:

III B.Tech. - II semester

(16BT61231) CLOUD COMPUTING LAB

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: A course on "Cloud Computing".

COURSE DESCRIPTION: Hands-on experience on creating virtual machines on Windows and Linux platforms; Development of service based web applications and their deployment.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate hands-on experience on Virtualization models and Cloud Environment.
CO2. Analyze the given experiment and relate to existing cloud architectures.
CO3. Apply API development skills in web applications for cloud deployment.
CO4. Demonstrate independent problem solving skills in developing dynamic web applications.
CO5. Use advanced programming languages to access cloud services.
CO6. Build suitable cloud environment for societal requirements.
CO7. Work effectively as an individual and as a member in team for mini-project implementation.
CO8. Demonstrate communication skills, both oral and written for preparing and presenting reports.

LIST OF EXPERIMENTS:

1. Create VM's with given set of configuration on Hyper-V Ubuntu 14LTs files with 2GB RAM and 200GB Hard Disk through Infrastructure Services (IaaS).
2. Create Virtualization on VMware Windows 7 OS with 4GB RAM and 500GB Hard Disk" through Infrastructure as a Service (IaaS).
3. Develop a simple web application for student details and operative using Salesforce.com in Cloud Platform under Software as Service (SaaS).
4. Develop a simple web application for personal Homepage, Attributes, Controllers, GUI, Visual Page, Forms, and Templates under Software as Service (SaaS).
5. Develop a web application for performing calculator operations. Deploy this application on Salesforce.com Cloud Platform under Software as Service (SaaS).
6. Develop a web application on IBM Bluemix Cloud Platform for executing application using Eclipse under Platform as a Service.
7. Create virtual machine instance with given set of configuration on Amazon web Services (AWS) under Infrastructure as a Service (IaaS).
8. Create virtual machine instance with set of configuration on Amazon S3 (Simple Storage Service) in Amazon Web Service (AWS) under Infrastructure as a Service (IaaS).
9. Develop a web application on IBM Bluemix Cloud Platform for implementing IoT application.
10. Develop a calculator web based application on MS-Azure Platform i.e. Platform as a Service (PaaS).
11. Develop a student home page web based application on MS-Azure Platform i.e. Platform as a Service (PaaS) Cloud.
12. Develop a mobile app on Google App Engine for uploading a resume into a website, collaborated with Drop box. The resume should be encrypted. (PaaS)
13. Develop a service call to run on Drop box resumes for picking the resumes of given skill set. (PaaS)

i. 6+ years of Exp in Java Development.
ii. 10 years of experience in Automation Testing.
iii. 15+ years of Managerial experience with technical background.
iv. 5-7 years of on-site experience in .NET support and programming.

REFERENCE BOOKS:

1. Barrie Sosinsky, *Cloud Computing Bible,* Wiley India Pvt Ltd, 2011.
2. Rajkumar Buyya, James Broberg and Andrzej Goscinski, *Cloud computing principles and paradigms,* John Wiley and Sons, 2011.

4. John W. Rittinghouse and James F. Ransome, Cloud *Computing implementation, Management and Security,* CRC Press, Taylor and Francis group, 2010.

III B.Tech. - II semester

(16BT61232) KNOWLEDGE ENGINEERING LAB

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: A course on "Data Warehousing and Data Mining".

COURSE DESCRIPTION: Hands-on experience on Data preprocessing techniques; Mining frequent patterns; classification and clustering techniques using Weka and R Studio tools.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on: preprocessing techniques, Descriptive and predictive mining tasks.
CO2. Identify suitable algorithms to mine knowledge from real-time databases.
CO3. Classify and predict the information for forecasting applications.
CO4. Demonstrate independent decision making skills for business analysis applications.
CO5. Apply Weka and R tools to extract interesting patterns from large databases.
CO6. Prepare analytical reports suitable for societal requirements.
CO7. Work effectively as an individual and member of a team to implement mini-project.
CO8. Demonstrate communication skills, both oral and written for preparing and presenting reports.

LIST OF EXPERIMENTS:

I. Experiments on Weka:

1. Create a dataset using ARFF and CSV formats and load into the Weka Explorer.
2. Perform the following preprocessing filters on 'Weather' dataset.
   (i) Add (ii) Remove (iii) Discretize
   (iv) Replace Missing values (v) Normalize
3. List all the categorical attributes and the real-valued attributes separately in 'German credit' data set.
4. Generate strong Association rules by using Apriori algorithm on 'German_credit' dataset with Min_Sup=60% and Min_Conf=80%.
5. (i) Implement the Classification using Decision Tree algorithm on 'Weather' dataset. Draw the confusion matrix and report the model with accuracy.
   (ii) Implement Bayesian Classification and analyze the results on 'iris' Dataset.
6. (i) Implement Simple Linear Regression on an 'Employee' dataset.
   (ii) Demonstrate the simple k-Means clustering algorithm on 'iris' dataset.
7. (i) Rank the performance of j48, PART and oneR Algorithms on 'Weather' dataset using Experimenter.
   (ii) Perform an experiment using 'Knowledge Flow' in Weka 3.8.1 tool.

II. Experiments using R Studio

8. Create an EMP Dataset in R studio and perform the following functions
   (i) Display the EMP dataset with all rows and columns
   (ii) Perform few manipulations and display the updated dataset
9. Perform an exploratory data analysis using R Studio.
10. (i) Perform Association rule mining by using Apriori Algorithm on Sales Dataset.
    (ii) Train the Decision Tree on 'Weather' Dataset and report the Decision Tree and cross-validation results. Convert the Decision Trees into "if-then-else rules".
11. Implement simple linear regression using R Studio.
12. Mini-project: Implement all data mining functionalities on the following real datasets after performing data preprocessing filters.
    (i) Supermarket (ii) Weather (iii) Airlines (iv) Breast Cancer (v) Forest fires

REFERENCE BOOKS:

1. Ian. H. Witten and Eibe Frank, *Data Mining: Practical Machine Learning Tools and Techniques,* Elsevier Publication, Second Edition, 2005.

3. Pang-Ning Tan, Vipin Kumar and Michael Steinbach, *Introduction to Data Mining,* Pearson Education, 2006.

4. Jiawei Han and Micheline Kamber, *Data Mining: Concepts and Techniques,* Morgan Kaufmann Publishers, Second Edition, 2006.

III B.Tech. - II semester
(16BT61233) **SEMINAR**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
	100	100	-	-	-	2

PRE-REQUISITES: All the courses of the program up to III B. Tech. – I Semester.

COURSE DESCRIPTION: Identification of topic for the seminar; Literature survey; Performing critical study and analysis of the topic identified; Preparation of report and presentation.

COURSE OUTCOMES:

Completion of the seminar work enables a successful student to demonstrate:

CO1. Demonstrate in-depth knowledge on the seminar topic.

CO2. Analyze critically, the concepts relevant to the seminar topic.

CO3. Understand methodology relevant to seminar topic.

CO4. Undertake investigation of issues related to seminar topic providing valid conclusions.

CO5. Use techniques and tools to consolidate the solutions relevant to the seminar topic.

CO6. Comprehend societal issues in the context of seminar topic.

CO7. Understand ethical issues in the context of seminar topic.

CO8. Function effectively as individual on the chosen seminar topic.

CO9. Develop communication skills, both in oral and written form, for preparing and presenting seminar report.

CO10. Engage in lifelong learning to improve knowledge and competence in the chosen area of seminar.

IV B.Tech. - I semester

(16BT5HS01) MANAGEMENT SCIENCE

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: --

COURSE DESCRIPTION: Concepts of Management; Environmental Scanning; Concepts Related to Organization; Operations Management; Work Study; Statistical Quality Control; Inventory Management; Marketing; Human Resource Management; Project Management; Project Crashing; Entrepreneurship; Contemporary Management Practices.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1: Demonstrate the concepts of operations management, human resources management, project management and contemporary management practices in managerial context.

CO2: Identify and analyse management problems in the business organizations reaching substantiated conclusions using principles of management.

CO3: Design appropriate organization structure for meeting the needs of the organization with consideration of the employees of the organization.

CO4: Competently employ broad based analytical tools for decision making, system design, analysis and performance.

CO5: Provide solution to organizations for sustainable development.

CO6: Apply knowledge of engineering and management principles to manage the projects in multidisciplinary environments.

DETAILED SYLLABUS:

UNIT- I: INTRODUCTION TO MANAGEMENT AND ORGANIZATION (9 Periods)

Concepts of management and Administration, Nature and Importance of management, Evolution of management thought, Functions of management, Contributions of F.W. Taylor and Henry Fayol to the management, Systems approach to management, Managerial skills, Elements of corporate planning process, Environmental scanning, SWOT Analysis, Social responsibilities of management.

Basic concepts related to organization, Objectives and Principles, Types of organizations- Line Organization, Line and Staff Organization, Functional Organization, Matrix Organization, Network organization.

UNIT- II: OPERATIONS MANAGEMENT (12 Periods)

Plant location- Factors and Principles; Plant Layout- Principles and Types; Methods of production, Work study- Basic procedure involved in method study and work measurement; Statistical Quality Control- Factors affecting quality, Control charts for variables and attributes, Acceptance sampling; Materials management- objectives, Inventory- Types of inventory, Classical EOQ model, ABC analysis; Purchase procedure, Stores management, Marketing- Functions, Channels of distribution.

UNIT-III: HUMAN RESOURCE MANAGEMENT (HRM) (6 Periods)

Nature and scope of HRM, Functions of HRM, Role of HR Manager in an organization, Job evaluation, Merit rating, Maslow's hierarchy of human needs, McGregor's theory X and theory Y, Herzberg's two-factor theory of motivation.

UNIT-IV: PROJECT MANAGEMENT (PERT/CPM) AND ENTREPRENEURSHIP (9 Periods)

Network analysis - Critical path method (CPM), Program evaluation and review technique (PERT); Project cost analysis - Project crashing.

Introduction to Entrepreneurship, Entrepreneurial Traits, Entrepreneur vs Manager, Role of Entrepreneurship in Economic Development, Women as an Entrepreneur.

UNIT-V: CONTEMPORARY MANAGEMENT PRACTICES (9 Periods)

Basic concepts of Material Requirements Planning, Enterprise resource planning (ERP), Just In Time (JIT) system, Total Quality Management (TQM), Value Chain Analysis, Business Process Outsourcing (BPO), Globalization, Management Challenges, Supply Chain Management (SCM), Role of Information Technology in managerial decision making, Six Sigma Concept, Maintenance Strategies- Preventive, Periodic and Breakdown Maintenance.

Total Periods: 45

TEXT BOOK:

1. O.P. Khanna, Industrial Engineering and Management, Dhanpat Rai and Sons, 2010.
2. Martand T.Telsang, Industrial Engineering and Production Management, S. Chand, Second Edition, 2006.

REFERENCE BOOKS:

1. Koontz and Weihrich, Essentials of Management, TMH, Sixth Edition, New Delhi, 2007.
2. N.D. Vohra, Quantitative Techniques in Management, TMH, Second Edition, New Delhi.

IV B.Tech. - I semester

(16BT71201) BIG DATA TECHNOLOGIES

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Data Warehousing and Data Mining".

COURSE DESCRIPTION: Introduction to Big Data, Hadoop; Hadoop Distributed File Systems; Hadoop I/O; MapReduce; Hive; Pig; HBase; Zookeeper; Sqoop and Case studies.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on Big Data characteristics, storage, processing, querying and reporting.

CO2. Analyze large dataset issues and solve using data analytic techniques.

CO3. Design and Develop classification and clustering models for dataset analysis.

CO4. Use research knowledge to manage large datasets.

CO5. Apply MapReduce, Hive, Pig, Sqoop, HBase, and Zookeeper tools for data analytics.

CO6. Use data analytics tools to solve societal problems.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO BIG DATA AND HADOOP (9 Periods)

Introduction to Big Data: Evolution and definition of Big Data, Structure of Big Data, Characteristics, Advantages, Applications and Tools.

Hadoop: Data storage and analysis, Comparison with other systems, History of Hadoop, Apache Hadoop and the Hadoop ecosystem, Hadoop releases.

UNIT-II: HADOOP DISTRIBUTED FILE SYSTEM AND HADOOP I/O (9 Periods)

Hadoop Distributed File system: HDFS concepts, Command-Line Interface, Hadoop file systems, Java interface, Data flow, Hadoop archives.

Hadoop I/O: Data integrity, Compression, Serialization, File-based data structures.

UNIT-III: MAPREDUCE, TYPES and FORMATS AND FEATURES (9 Periods)

MapReduce: Analyzing the data with Hadoop, Scaling out, Hadoop streaming, Hadoop pipes.

Types and Formats: MapReduce types, Input formats, Output formats.

Features: Counters, Sorting, Joins, Side data distribution and MapReduce library classes.

UNIT-IV: HIVE, PIG AND HBASE (9 Periods)

Hive: Comparison with traditional databases, HiveQL, Tables, Querying data, and User-defined functions.

Pig: Comparison with databases, Pig latin, User-defined functions, Data processing operators.

HBase: HBasics, Concepts, Clients, HBase vs. RDBMS, Praxis.

UNIT-V: ZOOKEEPER, SQOOP AND CASE STUDIES (9 Periods)

Zookeeper: Zookeeper service, Building applications with Zookeeper, Zookeeper in production.

Sqoop: Database imports, Working with imported data, Importing large objects, Performing an export.

Case Studies: Mahout, Healthcare, Facebook and Twitter.

Total Periods: 45

TEXT BOOK:

1. Tom White, *Hadoop: The Definitive Guide,* O'REILLY Publications, Third Edition, 2012.
2. Anil Maheswari, *Big Data,* Tata McGraw Hill, 2017.

REFERENCE BOOKS:

2. Paul Zikopoulos, IBM, *Chris Eaton and Paul Zikopoulos, Understanding Big Data: Analytics for Enterprise Class Hadoop and streaming Data,* The McGraw-Hill Companies, 2012.
3. Chuck Lam, *Hadoop in action,* Manning Publications, 2011.

IV B.Tech. - I semester

(16BT71202) MOBILE APPLICATION DEVELOPMENT

(Common to IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on "Java Programming" and "Web Technologies".

COURSE DESCRIPTION: Mobile platforms; Mobile User Interface and tools; Introduction to Android; Activities; Views; Menus; Database Storage; SMS; e-mail; Displaying Maps; Building a Location Tracker Web Services Using HTTP; Sockets Programming; Communication between a Service and an Activity; Introduction to iOS.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Mobile platforms and Mobile User Interface
- Android Activities and Intents
- Messaging, Networking, Location based Services, Android Services
- Basics of iOS

CO2. Analyze the context of complex problems and identify user interface design requirements.
CO3. Design and develop solutions for real world problems with android mobile applications.
CO4. Demonstrate problem solving skills to create applications for mobile devices.
CO5. Apply Android studio and iOS tools to develop mobile applications.
CO6. Create mobile applications as per societal needs.

DETAILED SYLLABUS:

UNIT - I: INTRODUCTION AND MOBILE USER INTERFACE DESIGN (8 Periods)

Mobile web presence, Mobile applications, Marketing, App as a mobile web app; User interface design - Effective use of screen real estate, Mobile application users, Mobile information design, Mobile platforms, Tools of mobile interface design.

Android versions, Features and architecture, Required tools, Android application launching.

UNIT - II: ACTIVITIES, INTENTS AND ANDROID USER INTERFACE (9 Periods)

Activities, Linking activities using intents, Displaying notifications, Components of a screen, Adapting to display orientation, Managing changes to screen orientation, Utilizing the action bar, Listening for UI notifications.

UNIT - III: ADVANCED USER INTERFACE AND DATA PERSISTENCE (10 Periods)

Basic views, Picker views, List view, Image view, Menus with views, Web view, Saving and loading user preferences, Persisting data to files, Creating and using databases.

UNIT - IV: MESSAGING, LOCATION-BASED SERVICES, AND NETWORKING (9 Periods)

SMS messaging, Sending e-mail, Displaying maps, Getting location data, Monitoring a location, Consuming web services using HTTP.

UNIT - V: ANDROID SERVICES AND IOS (9 Periods)

Services, Communication between a service and an activity, Binding activities to services, Threading.

iOS tools, iOS project, Debugging iOS apps, Objective-C basics, Hello world app, Building the derby app in iOS.

Total Periods: 45

TEXT BOOKS:

1. J. F. DiMarzio, Beginning Android Programming with Android Studio, Wiley India, Fourth Edition, 2017.
2. Jeff McWherter and Scott Gowell, Professional Mobile Application Development, Wiley India, 2012.

REFERENCE BOOKS:

1. Neils Smyth, Android Studio Development Essentials, Creative Space Independent publishing platform, Seventh Edition, 2016.
2. Paul Deital and Harvey Deital, Android How to Program, Detial associates publishers, 2013.

IV B.Tech. - I semester

(16BT71203) INFORMATION RETRIEVAL SYSTEMS

(Program Elective - 2)

(Common to CSE and IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on "Data Structures" and "Database Management Systems".

COURSE DESCRIPTION: Architecture of Information Retrieval Systems; Functional Capabilities; Data Structures; Mathematical Algorithms; Indexing; Similarity and Clustering; Human Perception and Presentation; Text Search Techniques and Evaluation Measures.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Information Retrieval System Architecture
- Functional capabilities
- Indexing and data presentation methods.
- Evaluation measures of Information Retrieval Systems.

CO2. Analyze indexing methods and clustering algorithms to group similar data items for efficient search.

CO3. Design and develop data structures used to store and retrieve data items.

CO4. Demonstrate problem solving skills in the usage of mathematical algorithms for information retrieval.

CO5. Use text search algorithms and collaborative filtering techniques for information retrieval and visualization methods for information presentation.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION (9 Periods)

Primary information retrieval problems, Objectives of information retrieval system, Functional overview, Understanding the search functions, Relationship to DBMS, Digital libraries and data warehouses, Data structures and mathematical algorithms.

UNIT II: INGEST AND INDEXING (9 Periods)

Ingest: Introduction, Item receipt, Duplicate detection, Item normalization, Zoning and creation of processing tokens, Stemming, Entity processing, Categorization, Citational metadata.

Indexing: Manual indexing process, Automatic indexing of text and multimedia.

UNIT III: SEARCH AND CLUSTERING (12 Periods)

Search: Similarity measures and ranking, Hidden markov models, Ranking algorithms, Relevance feedback, Selective dissemination of information search, Weighted searches for boolean systems, Multimedia searching.

Clustering: Introduction to clustering, Thesaurus generation, Item clustering, Hierarchy of clusters.

UNIT IV: INFORMATION PRESENTATION (7 Periods)

Introduction, Presentation of the hits, Display of the item, Collaborative filtering, Multimedia presentation, Human perception and presentation.

UNIT V: SEARCH ARCHITECTURE AND EVALUATION (8 Periods)

Search Architecture: Index search optimization, Text search optimization, GOOGLE Scalable multiprocessor architecture.

Evaluation: Information system evaluation, Measures used in system evaluation.

Total Periods: 45

TEXT BOOK:

1. Gerald Kowalski, *Information Retrieval Architecture and Algorithms,* Springer, 2013.

REFERENCE BOOKS:

1. Christopher D. Manning, Prabhakar Raghavan and Hinrich Schütze, *An Introduction to Information Retrieval,* Cambridge University Press, 2012.
2. Ricardo Baeza-Yates and Berthier Ribiero-Neto, *Modern Information Retrieval the Concepts and Technology behind Search,* Addison Wesley, Second Edition, 2010.

IV B.Tech. - I semester

(16BT71204) MOBILE COMPUTING

(Program Elective - 2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Computer Networks".

COURSE DESCRIPTION: Introduction to Mobile Computing, GSM; Medium Access Control, Wireless LAN; Mobile Network and Transport Layers; Data Dissemination; Mobile Ad-Hoc Networks (MANETs), Wireless Application Protocol (WAP).

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- GSM, GPRS, 3G, 4G, Wireless LAN, MANETs.
- Protocols in Data Link, Network, Transport and Application layer.

CO2. Analyze the issues related to database design and data retrieval in mobile applications.

CO3. Apply routing algorithms for finding shortest path in MANETs.

CO4. Use protocols of Wireless Technologies for security implementation in mobile computing.

CO5. Follow standards in the usage of mobile communications.

DETAILED SYLLABUS:

UNIT-I: OVERVIEW OF MOBILE COMPUTING AND GSM (9 Periods)

Introduction: Introduction to mobile computing, Novel applications, Limitations, and Mobile computing architecture.

GSM: Mobile services, System architecture, Radio interface, Protocols, Localization and calling, Handover, Security, and New data services, Introduction to 3G and 4G Communications Standards: WCDMA, LTE, WiMAX

UNIT-II: MEDIUM ACCESS CONTROL AND WIRELESS LAN (9 Periods)

Medium Access Control: Motivation for a specialized MAC - Hidden and exposed terminals, Near and far terminals, SDMA, FDMA, TDMA, CDMA.

Wireless LAN: IEEE 802.11 - System architecture, Protocol architecture, Physical layer, Medium access control layer, MAC management; Bluetooth - User scenarios, Architecture, Radio layer, Baseband layer, Link manager protocol, L2CAP, Security.

UNIT-III: MOBILE NETWORK AND TRANSPORT LAYERS (9 Periods)

Mobile IP: Goals, Assumptions, Entities and terminology, IP packet delivery, Tunneling and encapsulation, Optimizations; IPv6; Dynamic Host Configuration Protocol (DHCP).

Mobile Transport Layer: Traditional TCP, Indirect TCP, Snooping TCP, Mobile TCP, Fast retransmit/ fast recovery, Transmission/ time-out freezing, Selective retransmission, Transaction oriented TCP; TCP over 2.5G/3G wireless networks.

UNIT-IV: DATABASE ISSUES AND DATA DISSEMINATION (9 Periods)

Database Issues: Hoarding techniques, Caching invalidation mechanisms, Client server computing with adaptation, Power-aware and context aware computing, Database transactional models, Query processing and recovery.

Data Dissemination: Communications asymmetry, Classification of data delivery mechanisms, Push-based mechanisms, Pull-based mechanisms, Hybrid mechanisms, Selective tuning (indexing) techniques.

UNIT-V: MOBILE AD HOC NETWORKS (MANETs) AND WAP (9 Periods)

Mobile Ad Hoc Networks: Properties of a MANET, Spectrum of MANET, Applications, routing and routing algorithms, Security in MANETs.

Wireless Application Protocol: Architecture, Wireless datagram protocol, Wireless transport layer security, Wireless transaction protocol, Wireless session protocol, Wireless application environment.

Total Periods: 45

TEXT BOOKS:

1. Rajkamal, *Mobile Computing,* OXFORD University Press, Second Edition, 2012.
2. Jochen Schiller, *Mobile Communications,* Pearson Education, Second Edition, 2009.

REFERENCE BOOKS:

1. Gordon A. Gow and Richard K. Smith, *Mobile and Wireless Communication,* Mc Graw Hill, 2006.
2. Hansmann, Merk, Nicklous and Stober, *Principles of Mobile Computing,* Springer, Second Edition, 2003.

IV B.Tech. - I semester

(16BT71505) NETWORK PROGRAMMING

(Program Elective - 2)

(Common to IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Computer Networks".

COURSE DESCRIPTION: OSI model, Unix standards; Normal startup, terminate and signal handling server process termination; lost datagram, summary of UDP example, Lack of flow control with UDP; Function and IPV6 support, uname function ,IPv4 Client- IPv6 Server ;FIFO's, streams and messages, RPC.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on concepts of sockets, inter process communication and remote login.

CO2. Identify appropriate TCP Echo server functions and Socket options used in Network based systems.

CO3. Analyze networking protocols such as TCP and UDP for connection establishment between client and server.

CO4. Design appropriate solutions for network applications based on UNIX.

CO5. Apply modern tools to create cooperating processes in network based Systems.

CO6. Relate suitable ethical principles to design and develop applications related to Network Traffic Monitoring.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO NETWORK PROGRAMMING AND SOCKETS (9 Periods)

OSI model, Unix standards, TCP and UDP and TCP connection establishment and Format, Buffer sizes and limitation, standard internet services, Protocol usage by common internet application, Address structures, Value Result Arguments, Byte ordering and manipulation function and related functions.

Elementary TCP sockets: Socket, connect, bind, listen, accept, fork and exec function, concurrent servers, Close function.

UNIT-II: TCP CLIENT SERVER AND SOCKET OPTIONS (9 Periods)

TCP Echo server functions, Normal startup, terminate and signal handling, Server process termination, Crashing and Rebooting of server host, Shutdown of server host.

Socket Options:I/O Models, select function, Batch input, shutdown function, poll function, getsockopt and setsockopt functions, Socket states, Generic socket option, IPV6 socket options.

UNIT-III: ELEMENTARY UDP SOCKETS (8 Periods)

Introduction, UDP Echo server functions, UDP Echo client functions, lost datagram, summary of UDP example, Lack of flow control with UDP, Determining outgoing interface with UDP.

UNIT IV: DOMAIN NAME SERVER AND IPv4 AND IPv6 INTEROPERABILITY (9 Periods)

DNS, gethostbyName function, gethostbyAddr Function, Resolver option, Function and IPv6 support, uname function and other networking Information.

IPv4 and IPv6 Interoperability: Introduction, IPv4 Client- IPv6 Server, IPv6 Client-IPv4 Server, IPv6 Address-Testing Macros, Source Code Portability.

UNIT-V: INTERPROCESS COMMUNICATION AND REMOTE LOGIN (11 Periods)

Introduction, Pipes, popen and pclose functions, FIFO's, streams and messages, System V IPC: IPC_Perm Structure, IPC Permissions, Creating and Opening IPC Channels, Message queues (msgget, msgsnd, msgrcv, msgctl Functions), Shared Memory (shmget, shmat, shmdt, shmctlFunctions).

Remote Login: rlogin Overview, RPC.

2. W.Richard Stevens, *UNIX Network Programming IPC,* Vol. II, Pearson Education, Second Edition , 2015.

REFERENCE BOOKS:

1. T Chan, *UNIX SYSTEMS PROGRAMMING USING C++,* PHI, Third Edition, 2012.

2. Graham Glass, King Ables, *UNIX for programmers and Users,* Pearson Education, Third Edition, 2003.

IV B.Tech. - I semester

(16BT60501) SOFTWARE TESTING

(Program Elective - 2)

(Common to IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Software Engineering".

COURSE DESCRIPTION: Software Testing Basics: Goals, Defects, Terminology, Methodology, STLC in SDLC, Verification and Validation; Software Testing Techniques: White box testing, Black Box Testing, Regression testing; Test Management: Test Planning, Design and Specifications; Test Automation: Tool selection and Guidelines.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Software Testing Life Cycle.
- Testing Techniques.
- Test Management and Metrics.
- Regression Testing
- Test Automation

CO2. Analyze testing circumstances and their resultants in software development.

CO3. Design and develop the appropriate test cases in accordance to the software development model.

CO4. Use problem solving skills to control and monitor the testing process.

CO5. Apply testing tools for testing the software quality.

CO6. Apply contextual knowledge to perform testing on software related to societal applications.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO SOFTWARE TESTING (9 Periods)

Evolution of Software Testing, Software Testing-Myths and Facts, Goals of Software Testing, Psychology for Software Testing, Software Testing Definitions, Model for Software Testing, Effective Software Testing vs. Exhaustive Software Testing. Effective Testing is Hard, Software Testing as a Process.

Terminology and Methodology: Software Testing Terminology, Software Testing Life Cycle (STLC), Software Testing Methodology.

UNIT-II: WHITE BOX TESTING (9 Periods)

Need of White-Box Testing, Logic Coverage Criteria, Basis Path Testing, Graph Matrices, Loop Testing, Data Flow Testing, Mutation Testing.

UNIT-III: BLACK BOX TESTING (8 Periods)

Boundary Value Analysis (BVA), Equivalence Class Testing, State Table-Based Testing, Decision Table-Based Testing, Cause-Effect Graphing Based Testing, Error Guessing.

UNIT-IV: SOFTWARE TEST MANAGEMENT AND METRICS (10 Periods)

Test Management: Test Organization, Structure of Testing Group, Test Planning, Detailed Test Design, Test Specifications.

Software Metrics: Definition of Software Metrics, Classification of Software Metrics, Size Metrics.

UNIT-V: REGRESSION AND AUTOMATION (9 Periods)

Regression Testing: Progressive vs. Regressive Testing, Regression Testing Produces Quality Software, Regression Testability, Objectives of Regression Testing, Regression Testing Types, Defining Regression Test Problem, Regression Testing Techniques.

Automation and Testing Tools: Need for Automation, Categorization of Testing Tools, Selection of Testing Tools, Costs Incurred in Testing Tools, Guidelines for Automated Testing, Overview of Some Commercial Testing Tools. **Total Periods: 45**

TEXT BOOK:

1. Naresh Chauhan, *Software Testing: Principles and Practices,* Oxford University Press, Second Edition, 2016.

REFERENCE BOOKS:

1. Boris Beizer, *Software Testing Techniques,* Dream Tech Press, Second Edition, 2004.
2. Dr. K. V. K. K. Prasad, *Software Testing Tools,* Dreamtech, 2004.

IV B.Tech. - I semester

(16BT71205) CRYPTOGRAPHY AND NETWORK SECURITY

(Program Elective - 3)
(Common to CSE and IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Computer Networks".
COURSE DESCRIPTION: Principles and Practice of Cryptography and Network Security; Classical Systems; Symmetric Block Ciphers; Public-key Cryptography; Hash Functions; Authentication; Key Management; Key Exchange; Signature Schemes; E-mail; Web Security; Malicious Software; Intrusion Detection; Phishing and Identity Theft.
COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Cryptographic algorithms and their mathematical models
- Message Authentication
- Digital Signatures
- Malicious Software
- Intrusion Detection
- Phishing and Identity Theft

CO2. Analyze vulnerabilities and threats on information systems based on various security parameters.
CO3. Apply security and privacy methods to protect and prevent cyber crimes.
CO4. Solve information privacy issues using encryption and digital signatures.
CO5. Use firewall and PGP to protect network and e-mail respectively.
CO6. Follow standards in implementation of network security.

DETAILED SYLLABUS:
UNIT-I: CLASSICAL ENCRYPTION TECHNIQUES (6 Periods)
Introduction: Services, Mechanisms, and Attacks concepts, The OSI security Architecture, Model for network security.
Classical Encryption Techniques: Symmetric cipher model, Substitution techniques- Ceaser cipher, Hill cipher, Poly and mono alphabetic cipher, Transposition techniques.
UNIT-II: BLOCK CIPHERS AND PUBLIC-KEY CRYPTOGRAPHY (8 Periods)
Block Ciphers: Block cipher principles, The data encryption standard (DES), The Strength of DES, Block cipher design principles, Block cipher modes of operation.
Public-Key Cryptography: Principles of public-Key cryptosystems, the RSA algorithm, Diffie-Hellman key exchange.
UNIT-III: MESSAGE AUTHENTICATION CODES, HASH FUNCTIONS, AND DIGITAL SIGNATURES (10 Periods)
Message Authentication Codes: Message authentication requirements, Message authentication functions, Message authentication codes.
Hash Functions: Security of hash functions and MACs, Hash algorithms-SHA, HMAC.
Digital Signatures: Digital Signatures and The Indian IT Act, Digital signature standard (DSS), Authentication applications- Kerberos.
UNIT-IV: ELECTRONIC MAIL SECURITY, IP SECURITY AND WEB SECURITY (11 Periods)
Electronic Mail Security: Pretty good privacy (PGP).
IP Security: IP security overview, Architecture, Authentication header, Encapsulating security payload, Combining security associations.
Web Security: Web security Considerations, Secure sockets layer (SSL), Transport layer security (TLS), Secure electronic transaction.
UNIT-V: MALICIOUS SOFTWARE, INTRUSION DETECTION, PHISHING AND IDENTITY THEFT (10 Periods)
Malicious Software: Spywares, Viruses and worms, DoS and DDoS attacks.
Intrusion Detection: Key loggers, Intrusion detection, Password management-Password protection, Password selection; Firewall design principles, Trusted systems.
Phishing and Identity Theft: Proxy servers, Anonymizers, Phishing and identity theft (ID Theft).

Total Periods: 45

TEXT BOOKS:
1. William Stallings, *Cryptography and Network Security Principles and Practice,* Pearson Education, Fourth Edition, 2010.
2. Nina Gobole and Sunit Belapure, *Cyber Security: Understanding Cyber Crimes, Computer Forensics and Legal Perspectives,* Wiley India, 2011.

REFERENCE BOOK:

1. Behrouz A Forouzan and Debdeed Mukhopadhyay, *Cryptography and Network Security,* McGraw Hill Education, Second Edition, 2010.

IV B.Tech. - I semester

(16BT71206) .NET TECHNOLOGIES

(Program Elective - 3)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Web Technologies".

COURSE DESCRIPTION: Introduction to .NET Framework and C# Programming;Object-oriented concepts with C#, Exception handling; Interfaces, Generics, Delegates and Events in C#; Database access with ADO.NET; Web application development using ASP.NET Web forms and Web controls.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Basics of .NET platform.
- Building C# applications, designing ASP.NET websites, perform Data access, building ASP.NET applications.

CO2. Analyze complex problems and identify .NET components for client-server environment.

CO3. Design and develop Graphical User Interface and Web applications using .NET technologies.

CO4. Demonstrate problem solving skills for developing interactive web applications.

CO5. Use C#, ADO.NET and ASP.NET technologies for website design.

CO6. Create websites as per societal needs.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO C# AND .NET PLATFORM (9 Periods)

The Philosophy of .NET: Benefits of .NET platform, Building blocks of .NET platform, Overview of .NET assemblies, Common type system, Common language specification, Common language runtime, Platform-independent nature of .NET.

Building C# Applications: Building C# applications on windows OS, Building .NET applications Beyond windows OS, Anatomy of a simple c# program, System. Console class, System data types and corresponding C# keywords, Working with string data, C# iteration constructs; Decision constructs and Relational/equality operators, Understanding C# arrays.

UNIT-II: OBJECT ORIENTED PROGRAMMING WITH C# AND EXCEPTION HANDLING (11 Periods)

Object Oriented Programming with C#: Introduction to C# class type, Constructors, The role of the this keyword, The static keyword, Pillars of OOP, C# access modifiers, C# encapsulation services, Understanding automatic properties, The basic mechanics of inheritance, The details of inheritance, C#'s polymorphic support.

Understanding Structured Exception Handling: The role of .NET exception handling, The simplest possible example, System-level exceptions, Application level exceptions, Processing multiple exceptions.

UNIT-III: INTERFACES, GENERICS, DELEGATES AND EVENTS (7 Periods)

Interfaces: Understanding interface types, Defining custom interfaces, Implementing an interface, Implementing interfaces using visual studio.

Generics: Role of generic type parameters, Creating custom generic methods, Creating custom generic structures and classes.

Delegates: Understanding the .NET delegate type, Delegate example, Generic delegate.

Events: C# events, Understanding operator overloading.

UNIT-IV: ADO.NET (9 Periods)

Definition of ADO.NET, ADO.NET data provider, ADO.NET namespaces, Connected layer of ADO.NET, Data readers, Database transactions, Disconnected layer of ADO.NET, Role of the dataset, Working with DataColumns, DataRows, DataTable, DataAdapters, Binding DataTable objects to windows forms GUIs.

UNIT-V: ASP.NET WEB FORMS, WEB CONTROLS AND STATE MANAGEMENT TECHNIQUES (9 Periods)

ASP.NET Web Forms: The role of HTTP, Web Applications and Web Servers, Role of client side scripting, Posting back to the web server, Overview of ASP.NET API, Building a single file ASP.NET web page, Building an ASP.NET webpage using code files, ASP.NET web sites vs. ASP.NET web applications, ASP.NET web site directory structure, The life cycle of an ASP.NET web page, Role of the web.config file.

ASP.NET Web Controls: Understanding the nature of web controls, Major categories of ASP.NET web control, The Role of validation controls, Application cache, The control and WebControl Base Classes

ASP.NET State Management Techniques: Maintaining session data, Understanding Cookies.

Total Periods: 45

TEXT BOOK:

1. Andrew Troelsen and Philip Japikse, *Pro C# 5.0 and the .NET 4.5 Framework,* Apress, Sixth Edition, 2012.

REFERENCE BOOKS:

1. Christian Nagel, Jay Glynn and Morgan Skinner, *Professional C# 5.0 and .NET 4.5.1,* WROX Publications, 2014.
2. Mathew Mac Donald, *The Complete Reference ASP.NET,* Tata McGraw Hill, 2010.

IV B.Tech. - I semester

(16BT71207) E - COMMERCES

(Program Elective - 3)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Computer Networks".

COURSE DESCRIPTION: Electronic Commerce Framework; Consumer Oriented Electronic Commerce; Electronic Payment Systems; Inter and Intra Organizational Commerce; Corporate Digital Library; Advertising and Marketing on Internet; Consumer Search and Resource Discovery; Multimedia and Digital Video.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- The basic concepts and technologies used in the field of E-Commerce.
- E-Payment systems
- Inter and Intra Organizational E-Commerce
- Advertising and Marketing on Internet
- Key Multimedia Concepts

CO2. Analyze the Mercantile Process Models in different views.
CO3. Apply compression and decompression techniques and codec required for Video Conferencing.
CO4. Solve security issues in E-Commerce using encryption mechanisms.
CO5. Follow ethics in the usage of E-Commerce.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION AND NETWORK SECURITY (9 Periods)

Introduction: Electronic commerce frame work, Electronic commerce and media convergence, The anatomy of E-commerce applications, E-Commerce consumer applications, E-Commerce organization applications.

Network Security: Client-Server network security, Emerging client-server security threats, Firewalls and network security, Data and message security, Encrypted documents and electronic mail - Security and the web.

UNIT-II: CONSUMER ORIENTED ELECTRONIC COMMERCE AND ELECTRONIC PAYMENT SYSTEMS (10 Periods)

Consumer Oriented Electronic Commerce: Consumer oriented applications, Mercantile process models from the consumer's perspective, Mercantile process models from the merchant's perspective.

Electronic Payment Systems: Types of electronic payment systems, Digital token-based, Smart cards, Credit cards, Risks in electronic payment systems.

UNIT-III: INTER ORGANIZATIONAL COMMERCE AND INTRA ORGANIZATIONAL COMMERCE (9 Periods)

Inter Organizational Commerce: EDI, EDI implementation, MIME and value added networks.

Intra Organizational Commerce: Work flow automation and coordination, Customization and internal commerce, Supply chain management.

UNIT-IV: CORPORATE DIGITAL LIBRARY and ADVERTISING AND MARKETING ON THE INTERNET (9 Periods)

Corporate Digital Library: Making a business case for a document library, Types of digital documents, Issues behind document infrastructure, Corporate data warehouses.

Advertising and Marketing on the Internet: Advertising and marketing - Information based marketing, Advertising on internet, On-line marketing process, Market research.

UNIT-V: CONSUMER SEARCH and RESOURCE DISCOVERY AND MULTIMEDIA AND DIGITAL VIDEO (8 Periods)

Consumer Search and Resource Discovery: Information search and retrieval, Electronic commerce catalogs or directories, Information filtering.

Multimedia and Digital Video: Key multimedia concepts, Digital video and electronic commerce, Desktop video processing, Desktop video conferencing. **Total Periods: 45**

TEXT BOOK:

1. Ravi Kalakota and Andrew B. Whinston, *Frontiers of Electronic Commerce,* Pearson Education, Seventh Edition, 2009.

REFERENCE BOOKS:

1. Hendry Chan, Raymond Lee, Tharam Dillon and Ellizabeth Chang, *E-Commerce Fundamentals and Applications,* John Wiley, Third Edition, 2007.
2. S.Jaiswal, *E-Commerce,* Galgotia, 2008

3. Efrain Turbon, Jae Lee, David King and H.Michael Chang, *E-Commerce,* Pearson Education Asia, 2001.
4. Gary P. Schneider and James T. Perry, *Electronic Commerce,* Thomson Learning, 2001.

IV B.Tech. - I semester

(16BT71207) SERVICE ORIENTED ARCHITECTURE

(Program Elective-3)

(Common to CSE and IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Software Engineering".

COURSE DESCRIPTION: Web Services; Principles of SOA; Service Layers; Simple Object Access Protocol (SOAP); Web Services Description Language (WSDL).

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Principles, services and policies of service orientation.
- Fundamentals of web services.
- XML, WSDL related to SOA.

CO2. Analyze complex business process critically in identifying appropriate service model logic.

CO3. Design service oriented architecture suitable for different environments.

CO4. Use XML, SOAP and service interface design tools for building service oriented architecture.

DETAILED SYLLABUS:

UNIT - I: SOA AND EVOLUTION (10 Periods)

Introducing SOA: Fundamental SOA, Common characteristics of contemporary SOA, Common pitfalls of adopting SOA.

The Evolution of SOA: An SOA timeline, The continuing evolution of SOA, The roots of SOA.

Web Services and Primitive SOA: The web services framework, Services, Service descriptions, Messaging.

UNIT - II: SOA AND WS-* EXTENSIONS (8 Periods)

WS-* and Contemporary SOA (Part I): Message Exchange Patterns (MEP), Service activity, Coordination, Atomic transactions, Business activities.

WS-* and Contemporary SOA (Part-II): Addressing, Reliable messaging, Correlation, Policies, Metadata exchange.

UNIT - III: PRINCIPLES, SERVICE LAYERS AND PLANNING (9 Periods)

Principles of Service-Orientation: Service-orientation and the enterprise, Anatomy of SOA, Common principles of service orientation, Inter relationship of service orientation principles, Service orientation and Object orientation.

Service Layers: Service-orientation and contemporary SOA, Service layer abstraction, Application service layer, Business service layer, Orchestration service layer, Agnostic services, Service layer configuration scenarios.

SOA Delivery Strategies: SOA delivery lifecycle phases, The Top-down strategy, the bottom-up strategy, the agile strategy.

UNIT - IV: SERVICE ORIENTED ANALYSIS AND SERVICE MODELING (8 Periods)

Service Oriented Analysis: Objectives and service oriented analysis process, Benefits of a business centric SOA and Deriving business services.

Service Modeling: Service modeling, Service modeling guidelines, Classifying service model logic, Contrasting service modeling approaches.

UNIT - V: SERVICE ORIENTED DESIGN AND SERVICE DESIGN (10 Periods)

Service-Oriented Design: Objectives and Service oriented design process, WSDL related XML schema language basics, WSDL language basics, SOAP language basics, Service interface design tools.

Service Design: Service design overview, Entity-centric business service design, Application service design, Task-centric business service design, Service design guidelines. **Total Periods: 45**

TEXT BOOK:

1. Thomas Erl, *Service-Oriented Architecture - Concepts, Technology, and Design,* Pearson Education, 2011.

REFERENCE BOOKS:

1. Eric Newcomer, *Understanding SOA with Web Services,* Pearson Education, Second Edition, 2005.
2. Shankar Kambhampaty, *Service Oriented Architecture for Enterprise and Cloud Applications,* Wiley-India, Second Edition, 2010.

IV B.Tech. - I semester

(16BT71209) MACHINE LEARNING

(Program Elective - 4)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on "Probability and Statistics" and "Data Warehousing and Data Mining".

COURSE DESCRIPTION: Introduction to Machine Learning; Planning for Machine Learning; Bayesian Techniques; Decision Trees; Bayesian Networks; Artificial Neural Networks; Association Rules Learning; Support Vector Machines; Clustering; Machine Learning as a Batch Process; Case Studies, Data Science Fundamentals.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Decision Trees and Bayesian Networks
- Artificial Neural Networks and Association Rules
- Support Vector Machines, Data Science fundamentals.

CO2. Analyze complex datasets and identify suitable machine learning algorithms.

CO3. Design decision making algorithms using supervised and unsupervised approaches.

CO4. Solve complex data analytical problems using machine learning and data science techniques.

CO5. Use Apache Spark and R tools for real-time and batch processing applications.

CO6. Develop machine learning based solutions as per societal needs.

DETAILED SYLLABUS:

UNIT - I: INTRODUCTION AND PLANNING FOR MACHINE LEARNING (9 Periods)

Introduction to Machine Learning: History of machine learning, Algorithm types for machine learning, Uses for machine learning, Languages for machine learning, Software used for machine learning, Data repositories.

Planning for Machine Learning: Machine learning cycle, Defining the process, Building a data team, Data processing, Data storage, Data privacy, Data quality and cleaning, Thinking about input data and output data.

UNIT - II: DECISION TREES, BAYESIAN NETWORKS AND ARTIFICIAL NEURAL NETWORKS (9 Periods)

Decision trees, Bayesian networks, Association rule mining concepts and algorithms

Artificial Neural Networks: Usage and breaking down the artificial neural network, Artificial neural networks with weka, Implementing a neural network in java.

UNIT-III: SUPPORT VECTOR MACHINES AND CLUSTERING (9 Periods)

Support Vector Machines using Weka: Usage of support vector machines, Basic classification principles, Support vector machines approach classification.

Clustering using Weka: Usage of clustering, Clustering models, k-means clustering.

UNIT-IV: MACHINE LEARNING AS A BATCH PROCESS AND CASE STUDIES (9 Periods)

Machine Learning as a Batch Process: Considerations for batch processing data, Practical examples of batch processes, Using the hadoop framework, Mining the hashtags mining sales data, Scheduling batch jobs.

Case Studies: Apache Spark and R.

UNIT-V: DATA SCIENCE FUNDAMENTALS (9 Periods)

Deep learning, Semi-supervised learning, Active learning, Multi-task learning, k-nearest neighbors, Recommender systems, SimFple and multiple linear regression. **Total Periods: 45**

TEXT BOOKS:

1. Jason Bell, *Machine Learning for Big Data,* Wiley Big Data Series, 2016.
2. Avrim Blum, John Hopcroft and Ravindran Kannan, *Foundations of Data Science,* 2016.

REFERENCE BOOKS:

1. Tom M. Mitchell, *Machine Learning,* McGraw-Hill, 2013

2. Ethem Alpaydin, *Introduction to Machine Learning,* MIT Press, Second Edition, 2009.
3. Joel Grus, *Data Science from scratch,* O'Reilly Publication, 2015.

IV B.Tech. - I semester
(16BT71508) INTERNET OF THINGS

(Program Elective - 4)

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Computer Networks".

COURSE DESCRIPTION: Internet of Things Components; Communication models; Prototyping; Hardware; Design models; Analytics for IoT.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on Protocols, functional blocks and communication models of Internet of things.

CO2. Identify appropriate sensors and communication modes used in IoT based systems.

CO3. Design appropriate solutions for IoT applications using Raspberry Pi and Arduino kits.

CO4. Appropriately synthesize the models and applications for usage in Home automation and cities.

CO5. Apply evolutionary techniques to perform analytics on the data integrated from IoT based systems.

CO6. Use advances in IoT technology to design and develop applications.

DETAILED SYLLABUS:

UNIT- I: INTRODUCTION TO INTERNET OF THINGS (8 Periods)

Definition, Characteristics, Things, Protocols, Logical Design, Functional Blocks, Communication models, APIs, Enabling Technologies, Levels and Deployment templates.

UNIT- II: DEVICES AND END POINTS (10 Periods)

IoT Devices-Examples-Raspbe rry PI interfaces, Arduino interfaces, Programming Raspberry PI with Python, Other IOT devices, Domain Specific IoTs.

UNIT-III: SENSORS and CONNECTIVITY (8 Periods)

Sensors-Types of Sensor Nodes; Internet Communications, IP Addresses, MAC Address, TCP and UDP ports, Application Layer Protocols.

UNIT-IV: DESIGN METHODOLOGY AND CASE STUDIES (10 Periods)

Design Methodology: Purpose and Requirements specifications, Process Specifications, Domain Model specifications, Information Model specifications, Service specification, Level Specifications, Functional View specifications, Operational View specifications, Device and Component integration, Application development.

Case Studies: Home Automation, Cities.

UNIT-V: DATA ANALYTICS FOR IoT (9 Periods)

Analytics, Apache Hadoop, Hadoop MapReduce for Batch Data Analysis, Apache Oozie, Chef and Case studies.

Total Periods: 45

TEXT BOOK:

1. Arshdeep Bahga, Vijay Madisetti, *Internet of Things - A Hands-on Approach,* University Press, 2015.

REFERENCE BOOKS:

1. Adrian McEwen and Hakim Cassimally, *Designing the Internet of Things,* Wiley Publishing, 2013.
2. CharlesBell, *Beginning Sensor Networks with Arduino and Raspberry Pi*, Apress, 2013.
3. Marco Schwartz, *Internet of Things with the Arduino Yun,* Packt Publishing, 2014.
4. Matt Richardson, Shawn Wallace, *Getting Started with Raspberry Pi,* Maker Media, Inc, 2012.

IV B.Tech. - I semester

(16BT71210) HIGH PERFORMANCE COMPUTING

(Program Elective - 4)

(Common to IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Computer Organization".

COURSE DESCRIPTION: Cache-based Microprocessor Architecture; Memory Hierarchies; Multithreaded Processors; Common Sense Optimizations; The Role of Compilers; Data Access Optimization; Shared-memory Computers; Parallel Scalability; Introduction to OpenMP; Parallel Jacobi Algorithm; Introduction to MPI; MPI Performance Tools; MPI Parallelization of Jacobi Solver.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Modern Processors and code Optimization.
- Parallel computing paradigms.

CO2. Analyze computation problems and identify the suitable parallel processing approaches to achieve optimum computation.

CO3. Design Parallel processing algorithms for achieving high performance computing.

CO4. Solve shared memory problems using Parallel Programming.

CO5. Use OpenMP and MPI tools in Parallel Programming.

DETAILED SYLLABUS:

UNIT-I: MODERN PROCESSORS (8 Periods)

Stored-program computer architecture, General-purpose cache-based microprocessor architecture, Memory hierarchies, Multicore processors, Multi-threaded processors, Vector processors.

UNIT-II: BASIC OPTIMIZATION TECHNIQUES FOR SERIAL CODE (10 Periods)

Scalar profiling, Common sense optimizations, Simple measures, Large impact, The role of compilers, C++ optimizations, Data access optimization-balance analysis and light speed estimates, Storage order.

Case study: The Jacobi algorithm and Dense matrix transpose.

UNIT-III: PARALLEL COMPUTERS (9 Periods)

Taxonomy of parallel computing paradigms, Shared-memory computers, Distributed-memory computers, Hierarchical systems, Networks. Basics of parallelization, Data Parallelism, Function parallelism, Parallel scalability.

UNIT-IV: SHARED-MEMORY PARALLEL PROGRAMMING WITH OpenMP (9 Periods)

Introduction to OpenMP - Parallel execution, Data scoping, OpenMP work sharing for loops, Synchronization, Reductions, Loop scheduling and tasking.

Case study: OpenMP-parallel Jacobi algorithm, Efficient OpenMP programming-profiling OpenMP programs, Performance pitfalls.

Case study: Parallel sparse matrix-vector multiply.

UNIT- V:DISTRIBUTED-MEMORY PARALLEL PROGRAMMING WITH MPI (9 Periods)

Message passing, Introduction to MPI, Examples - MPI parallelization of Jacobi solver; Efficient MPI Programming - MPI performance tools, communication parameters, Synchronization, Serialization, Contention, Reducing communication overheads, Understanding intranode point-to-point communication.

Total Periods: 45

TEXT BOOK:

1. Georg Hager and Gerhard Wellein, *Introduction to High Performance Computing for Scientists and Engineers,* Chapman and Hall / CRC Computational Science Series, 2012.

REFERNCE BOOKS:

1. Charles Severance and Kevin Dowd, H*igh Performance Computing,* O'Reilly Media, Second Edition, 1998.
2. Kai Hwang and Faye Alaye Briggs, *Computer Architecture and Parallel Processing,* McGraw Hill, 1984.

IV B.Tech. - I semester

(16BT70505) HUMAN COMPUTER INTERACTION

(Program Elective - 4)

(Common to CSE and IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on "Computer Graphics".

COURSE DESCRIPTION: Graphical User Interface; Design Process; Screen Designing; Windows; Components; Software Tools; Interaction Devices.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on principles, characteristics, tools and devices of Human Computer Interaction.

CO2. Analyze the user requirements, technological and physical characteristics of users for better interface design.

CO3. Design appropriate user interface for desktop and web applications.

CO4. Conduct investigations on User requirements to provide an effective user interface.

CO5. Utilize user interface mockup tools and input, output and pointing devices for designing user interfaces.

CO6. Apply Contextual knowledge to develop interfaces for differently abled people.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION (9 Periods)

Importance of user Interface: Definition, Importance of good design, Benefits of good design, A brief history of screen design.

Characteristics of Graphical and Web User Interfaces: The graphical user interface - popularity of graphics, The concept of direct manipulation, Graphical systems, Characteristics; Web user Interface - Popularity, Characteristics; Principles of user interface design.

UNIT-II: CONTROL DESIGN PROCESS (8 Periods)

Design Process: Human interaction with computers, Importance of human characteristics, human considerations in design, Human interaction speeds, and understanding business functions.

UNIT-III: SCREEN DESIGN (10 Periods)

Design goals: Screen meaning and purpose, Organizing screen elements, Ordering of screen data and content, Screen navigation and flow, Visually pleasing composition, Amount of information, Focus and emphasis, Presenting information simply and meaningfully, Information retrieval on web, Statistical graphics, Technological considerations in interface design.

UNIT-IV: WINDOWS AND MULTIMEDIA (8 Periods)

Windows Menus and Navigation schemes: Selection of window, selection of device based and screen based controls.

Components: Text and messages, Icons and images, Multimedia, Color uses, Problems with colors, choosing colors.

UNIT-V: SOFTWARE TOOLS AND DEVICES (10 Periods)

Software tools: Specification methods, Interface building tools, Interaction devices - Keyboards and keypads,Pointing devices,Speech and auditory interfaces; Image and video displays, drivers.

Total Periods: 45

TEXT BOOKS:

1. Wilbert O. Galitz, *The Essential Guide to User Interface Design,* Wiley India Education, Second Edition, 2008.
2. Ben Schneiderman and Catherine Plaisant, *Designing the User Interface,* Pearson Education, Fourth Edition, 2009.

REFERENCE BOOKS:

1. A Dix, Janet Finlay, G. D. Abowd and R. Beale, *Human-Computer Interaction,* Pearson Publishers, Third Edition, 2008.
2. Jonathan Wolpaw and Elizabeth Winter Wolpaw, *Brain-Computer Interfaces: Principles and Practice,* Oxford Publishers, 2012.

IV B.Tech. - I semester

(16BT71231) BIG DATA TECHNOLOGIES LAB

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: Courses on "Big Data Technologies" and "Java Programming".

COURSE DESCRIPTION: Hands-on experience in Big data storage, processing, querying, reporting, predictive analytics, classification, clustering, recommendation system using Data-parallel programming model of Hadoop, MapReduce, HDFS, Hive, Pig, HBase, Zookeeper and Sqoop Big Data Tools.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on Big Data characteristics, storage, processing, querying and reporting.
CO2. Analyze large dataset issues and solve using data analytic techniques.
CO3. Design and Develop classification and clustering models for dataset analysis.
CO4. Solve large data analysis problems using Big data techniques.
CO5. Apply Big Data Tools: Sqoop, HBase, Hive, Pig, MapReduce and Zookeeper for large data management and knowledge extraction.
CO6. Build Hadoop environment suitable for societal requirements.
CO7. Work effectively as an individual and as a member in team for mini-project implementation.
CO8. Demonstrate communication skills, both oral and written for preparing and presenting reports.

LIST OF EXPERIMENTS:

1. Practice on Hadoop:
   i. Hadoop installation and Cluster Configuration.
   ii. Create Name node, Secondary Name node in Safe mode.
   iii. Create Hadoop File system Shell and Read and write Data.
2. Practice on MapReduce:
   i. Create file to count the number of words and display the same.
   ii. Apply MapReduce for Video Streaming file.
3. Count number of Objects in a given video file using Pig programming Tool.
4. Practice on Hive:
   i. Table Creation and Deletion.
   ii. Querying and reporting.
5. Import and Export data from RDBMS database using Sqoop tool.
6. Practice on HBase:
   i. Table Creation and Deletion.
   ii. Querying and reporting.
7. Create Workflow, Deploy and Run using Oozie Tool.
8. Perform data storage and management using Zookeeper tool.
9. Case study 1: Insurance Domain
   i) Perform Classification Technique on Insurance Dataset
   ii) Perform Clustering Technique on Insurance Dataset
10. Case study 2: Healthcare Domain
    i) Perform Classification Technique on Healthcare Dataset
    ii) Perform Clustering Technique on Healthcare Dataset
11. Case study 3: Retail Store data
    i) Perform Recommendation Engine on Retail Store Dataset
    ii. Perform Association rule mining on Retail Store Dataset.

IV B.Tech. - I semester

(16BT71232) MOBILE APPLICATION DEVELOPMENT LAB

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: A Course on "Mobile Application Development".

COURSE DESCRIPTION: Hands-on experience on development of Android Mobile applications with Submenus; Context menus; Layouts; Buttons; Date Picker and database access with Android SQLite.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Mobile platforms and Mobile User Interface
- Android Activities and Intents
- Messaging, Networking, Location based Services, Android Services
- Basics of iOS

CO2. Analyze the context of complex problems and identify user interface design requirements.

CO3. Design and develop solutions for real world problems with android mobile applications.

CO4. Demonstrate problem solving skills to create applications for mobile devices.

CO5. Apply Android studio and iOS tools to develop mobile applications.

CO6. Create mobile applications as per societal needs.

CO7. Work effectively as an individual and as a member in team for mini-project implementation.

CO8. Demonstrate communication skills, both oral and written for preparing and presenting reports.

LIST OF EXPERIMENTS:

1. Test the android development environment by performing the following operations.
a. Add the sample application to a project in Android studio.
b. Create an Android Virtual Device (AVD) for sample project.
c. Create a launch configuration for sample project.
d. Run a sample application in Android Emulator.
2. Develop a program which will implement Sub menu in android application.
3. Develop a program to implement Context menu (Floating List of Menu Items) in android application.
4. Develop a program to demonstrate the use of Relative Layout Views with different attributes.
5. Develop a program to demonstrate the use of Linear Layout Views with different attributes.
6. Develop a program to implement a Custom Button and handle the displayed message on button press.
7. Develop a program to implement the Table layout in View Group that displays child View elements in rows and columns.
8. Develop a program to implement the List View in android application.
9. Develop a program to show how to use Date picker control of ADK in android applications.
10. Develop a program to insert, delete, display, and update the employee details using Android SQLite.
11. Design and develop a program to create sign-up and sign-in pages and maintain the user details with SQLite
12. Mini project:-Develop the following applications using Android.
a. Alarm b. Audio player c. Audio Recorder d.Vedio Player

IV B.Tech. - I semester
(16BT71233) COMPREHENSIVE ASSESSMENT

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
	100	100	-	-	-	2

PRE-REQUISITES: All the technical courses of the program upto IV B. Tech. - I Semester.

COURSE DESCRIPTION: Assessment of student learning outcomes in the courses of the program.

COURSE OUTCOMES: Comprehensive Assessment enables successful students to demonstrate:

CO1. Knowledge in the courses of the program.

CO2. Analytical ability in the courses of the program.

CO3. Design skills in the courses of the program.

CO4. Ability to investigate and solve complex engineering problems in the courses of the program.

CO5. Ability to apply tools and techniques to complex engineering activities with an understanding of limitations in the courses of the program.

CO6. Ability to provide solutions as per societal needs with consideration to health, safety, legal and cultural issues in the courses of the program.

CO7. Understanding of the impact of the professional engineering solutions in environmental context and need for sustainable development in the courses of the program.

CO8. Ability to apply ethics and norms of the engineering practice in the courses of the program.

CO9. Ability to function effectively as an individual in the courses of the program.

CO10. Ability to present views cogently and precisely in the courses of the program.

CO11. Ability to engage in life-long leaning in the courses of the program.

IV B.Tech. - II semester
(16BT81231) **PROJECT WORK**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
100	100	200	-	-	-	12

PRE-REQUISITES: All technical courses of the program up to IV B. Tech. - I Semester.

COURSE DESCRIPTION: Identification of topic for the project work; Literature survey; Collection of preliminary data; Identification of implementation tools and methodologies; Performing critical study and analysis of the topic identified; Time and cost analysis; Implementation of the project work; Preparation of thesis and presentation.

COURSE OUTCOMES: Completion of the project work enables successful students to:

CO1. Demonstrate knowledge on the topic of project work.

CO2. Demonstrate analytical ability exercised in the project work.

CO3. Apply design skills for the project implementation.

CO4. Investigate and solve chosen project problem with optimum solution.

CO5. Use techniques and modern engineering tools for the development of project work.

CO6. Provide solutions as per societal needs with consideration to health, safety, legal and cultural issues in the project work.

CO7. Understand environmental issues while executing the project work

CO8. Understand professional and ethical responsibilities while executing the project work.

CO9. Function effectively as an individual and a member in the project team.

CO10. Present views cogently and precisely on the project work.

CO11. Demonstrate project management skills and estimate time and cost required for carrying out the project work.

CO12. Engage lifelong learning to improve knowledge and competence in the chosen area of the project work.

I B.Tech. - I Semester

16BT1HS01: **TECHNICAL ENGLISH**

(Common to CSE, CSSE, IT, CE and ME)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: English at Intermediate level

COURSE DESCRIPTION: Introduction to Communication; Active Listening; Effective Speaking; Reading; and Writing.

COURSE OUTCOMES:

On successful completion of this course the students will be able to:

1. Demonstrate knowledge in
   a) Process of communication
   b) Modes of listening
   c) Paralinguistic features
   d) Skimming and Scanning
   e) Elements of style in writing
2. Analyze the possibilities and limitations of language for understanding
   a) Barriers to Communication
   b) Barriers to Effective Listening
   c) Barriers to Speaking
   d) Formal and metaphorical language
3. Design and develop functional skills for professional practice.
4. Apply writing skills in preparing and presenting documents
5. Function effectively as an individual and as a member in diverse teams.
6. Communicate effectively with the engineering community and society in formal and informal situations**.**

DETAILED SYLLABUS:

UNIT I - INTRODUCTION TO COMMUNICATION (9 periods)

Introduction –Language as a Tool of Communication – Communicative Skills (Listening, Speaking, Reading and Writing)– Effective Communication – Modes of Communication – Barriers to Communication (classification).

UNIT II - ACTIVE LISTENING (9 periods)

Introduction – Reasons for poor Listening – Traits of a Good Listener – Listening Modes – Types of Listening – Barriers to Effective Listening – Listening for General Content and Specific Information.

UNIT III - EFFECTIVE SPEAKING (9 periods)

Introduction – Achieving Confidence, Clarity and Fluency – Paralinguistic Features – Barriers to Speaking – Types of Speaking– Persuasive Speaking.

UNIT IV - READING (9 periods)

Introduction and Reading Rates – Reading and Interpretation – Intensive and Extensive Reading – Critical Reading – Reading for Different Purposes – SQ3R Reading Technique –Study Skills.

UNIT V – WRITING (9 periods)

Introduction – Language – Elements of Style – Techniques for Good Technical Writing – Referencing and Styling – Right Words and Phrases – Sentences.

Total Periods: 45

TEXT BOOK:

1. Meenakshi Raman & Sangeetha Sharma, *Technical Communication*, Oxford University Press, New Delhi, 2012.

I B.Tech. - I Semester

16BT1BS01: ENGINEERING CHEMISTRY

(Common to CSE, CSSE, IT, CE & ME)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE REQUISITE: Intermediate/Senior Secondary Chemistry

COURSE DESCRIPTION: Water technology, Chemistry of Engineering materials, Nanochemistry, Green Chemistry, Electro chemical cells, Sensors, Corrosion and Lubricants.

COURSE OUTCOMES:

After completion of the course, a successful student is able to:

CO1: Acquire basic knowledge in water technology, engineering plastics, conducting polymers, composites, Electro chemical cells, Nano Chemistry, principles of Green Chemistry, corrosion phenomenon and lubricants.

CO2: Develop analytical skills in:
- a. Determination of hardness of water.
- b. Determination of viscosity, flame and fire points, cloud and pour points.

CO3: Develop designing skills in:
- a. Synthesis of engineering plastics.
- b. Chemical methods for the synthesis of Nano materials.

CO4: Develop skills for providing solutions through:
- a. Mitigation of hardness of water.
- b. Newer Nanomaterials and engineering plastics for specific applications

CO5: Acquire awareness to practice engineering in compliance to modern techniques such as:
- a. Nalgonda technique for defluoridation of water
- b. Electroplating technique for control of corrosion.

CO6: Acquire awareness to societal issues on:
- a. Quality of water.
- b. Bio-diesel
- c. Chemical materials utility and their impact.

DETAILED SYLLABUS:

UNIT–I: WATER TECHNOLOGY (9 periods)

Introduction: Types of water, impurities in water and their consequences, types of hardness of water, units of hardness of water, disadvantages of hardness of water, estimation of hardness of water by EDTA method, Boiler troubles: Scales and Sludges, Caustic embrittlement, Boiler corrosion and Priming and Foaming.

Softening of water: Zeolite process and Ion exchange process, advantages and disadvantages. Desalination of brackish water by Reverse Osmosis, Numerical problems on estimation of hardness of water.

Fluorides in water: Effects on human health, defluoridation method-Nalgonda method; comparison of merits and demerits of various defluoridation methods (Nalgonda, Bone Charcoal, Activated Alumina, Contact precipitation, Brick, Reverse osmosis).

UNIT – II: CHEMISTRY OF ENGINEERING MATERIALS (9 periods)

Engineering Plastics: Definition, general properties, synthesis, properties and applications of PC, PTFE, and PMMA.

Conducting polymers: Definition, types of conducting polymers: Intrinsic and extrinsic conducting polymers with examples, engineering applications of conducting polymers.

Biodegradable polymers: Definition, properties, classification, mechanism of degradation of biodegradable polymers and their applications.

Composites – Introduction, types of composites: fiber reinforced particulate and layered composites with examples, advantages of composites and applications.

UNIT– III: NANOCHEMISTRY AND GREEN CHEMISTRY (9 periods)

Nanochemistry: Introduction, classification, properties and applications of Nano materials (nano particles, nano tubes, nano wires, nano composites, dendrimers); synthesis of Nano materials – Sol-gel process.

Green Chemistry: Introduction, principles of green chemistry, Tools of Green Chemistry with Examples, Applications of Green Chemistry in science and technology.

Biodiesel: Introduction, Synthesis (Trans esterification method), advantages, disadvantages and applications.

UNIT–IV: ELECTROCHEMICAL CELLS AND SENSORS (9 periods)

Electrochemical cell: Introduction, EMF of an electrochemical cell.

Batteries: Introduction, types of Batteries: primary and secondary batteries with examples, Ni-Cd batteries, Lithium-ion batteries, Lithium- Polymer batteries, Applications of batteries.

Fuel Cells: Definition, examples: $H_2 – O_2$ Fuel cell, solid oxide fuel cell, Bio-fuel cell and applications of fuel cells.

Sensors - Introduction, Types of Sensors, electrochemical sensor: construction and working principle of potentiometric sensor, and applications of electrochemical sensors.

UNIT–V: CORROSION AND LUBRICANTS (9 periods)

Corrosion: Introduction, Definition, types of corrosion (dry and wet corrosion), galvanic corrosion, concentration cell corrosion, Factors influencing corrosion, Corrosion control: cathodic protection; sacrificial anodic protection and impressed current cathodic protection; protective coatings: Galvanizing and Electroplating (Nickel).

Lubricants: Definition, functions of lubricants, mechanism of lubrication, classification of lubricants, properties of lubricants – viscosity, flash and fire points, cloud and pour points, Aniline points, neutralization number and mechanical strength. **Total periods: 45 periods**

TEXT BOOKS:

1. P.C.Jain & Monika Jain, **Engineering Chemistry**, Dhanpat Rai Publishing Company (P) Ltd, New Delhi, 16th edition, 2013.
2. K.N. Jayaveera, G.V. Subba Reddy & C. Ramachandraiah **Engineering Chemistry**, Mc. Graw-Hill Higher Education, Hyderabad, 1st edition, 2015.

REFERENCE BOOKS:

1. A.K. Bandyopadhyay, **Nano Materials,** New Age international publishers, 2nd edition, 2014.
2. Paul T. Anastas and John C Warner, **Green Chemistry: Theory and practice,** Oxford University Press, 2000.

I B.Tech. - I Semester
16BT1BS03: MATRICES AND NUMERICAL METHODS
(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Intermediate /Senior secondary mathematics
COURSE DESCRIPTION: Fundamentals of matrix theory; numerical solutions of equations, curve fitting; interpolation; numerical differentiation and integration; numerical solutions of ordinary differential equations.

COURSE OUTCOMES: After completion of the course a successful student is able to

CO1: Acquire basic **knowledge** in
- (a) Finding the rank of matrices and analyzing them.
- (b) Solving algebraic and transcendental equations by various numerical methods.
- (c) Fitting of various types of curves to the experimental data.
- (d) Estimating the missing data through interpolation methods.
- (e) Identification of errors in the experimental data
- (f) Finding the values of derivatives and integrals through various numerical methods.
- (g) Solving differential equations numerically when analytical methods fail.

CO2: Develop skills in **analyzing** the
- (a) methods of interpolating a given data
- (b) properties of interpolating polynomials and derive conclusions
- (c) properties of curves of best fit to the given data
- (d) algebraic and transcendental equations through their solutions
- (e) properties of functions through numerical differentiation and integration
- (f) properties of numerical solutions of differential equations

CO3: Develop skills in **designing** mathematical models for
- (a) Fitting geometrical curves to the given data
- (b) Solving differential equations
- (c) Constructing polynomials to the given data and drawing inferences.

CO4: Develop numerical skills in **solving the problems** involving
- (a) Systems of linear equations
- (b) Fitting of polynomials and different types of equations to the experimental data
- (c) Derivatives and integrals
- (d) Ordinary differential equations

CO5: Use relevant numerical **techniques** for
- (a) Diagonalising the matrices of quadratic forms
- (b) Interpolation of data and fitting interpolation polynomials
- (c) Fitting of different types of curves to experimental data
- (d) obtaining derivatives of required order for given experimental data
- (e) Expressing the functions as sum of partial fractions

DETAILED SYLLABUS:

UNIT–I : MATRICES **(11 periods)**
Rank of a matrix, echelon form, normal form, inverse of a matrix by elementary row operations. Solutions of linear system of equations. Eigen values, Eigen vectors and properties (without proof), Diagonalization. Quadratic form (QF), reductions to canonical form using orthogonal transformation and nature of QF.

UNIT-II NUMERICAL SOLUTIONS OF EQUATIONS AND CURVE FITTING **(8 periods)**
Solutions of Algebraic and Transcendental equations by bisection method, Regula-Falsi method, Newton – Raphson's method. Curve fitting by the principle of least squares, fitting of a straight line, parabola and exponential curves.

UNIT- III INTERPOLATION **(8 periods)**
Interpolation, difference operators and their relationships, Newton's forward and backward formulae, Lagrange's interpolation formula. Partial fractions using Lagrange's interpolation formula.

UNIT-IV NUMERICAL DIFFERENTIATION AND INTEGRATION **(8 periods)**
Numerical differentiation using Newton's forward and backward formulae. Numerical integration using Trapezoidal rule, Simpson's $1/3^{rd}$ rule and $3/8^{th}$ rule.

UNIT- V NUMERICAL SOLUTIONS OF ORDINARY DIFFERENTIAL EQUATIONS **(10 periods)**
Numerical solutions of first order Initial value problems using Taylor series method, Euler's method , modified Euler's method, Runge – Kutta method (4^{th}order only) and Milne's predictor – corrector method.
Total no. of periods: 45

TEXT BOOK:
1. T.K.V. Iyenger, B. Krishna Gandhi, S.Ranganadham and M.V.S.S.N.Prasad, ***Mathematical Methods,*** S.Chand and Company, 8/e, 2013

REFERENCE BOOKS:
1. B.S. Grewal, ***Higher engineering mathematics***, Khanna Publishers, 42^{nd} Edition. 2012

2. S.S.Sastry, ***Introductory methods of Numerical Analysis***, Prentice Hall of India, 5/e, 2013

I B. Tech. - I Semester

16BT1BS04: MULTI - VARIABLE CALCULUS AND DIFFERENTIAL EQUATIONS

(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Intermediate /Senior secondary mathematics

COURSE DESCRIPTION: First order differential equations; higher order linear differential equations; functions of several variables; applications of integration; multiple integrals; vector calculus.

COURSE OUTCOMES: After completion of the course a successful student is able to

CO1: Acquire knowledge in
- (a) Higher order Differential equations
- (b) Maximum and minimum values for the functions of several variables
- (c) Double and triple integrals
- (d) Differentiation and integration of vector functions.
- (e) Line and surface volume
- (f) transforming integrals from three dimensional surfaces and volumes on to plane surfaces

CO2: Develop skills in analyzing the
- (a) methods for differential equation for obtaining appropriate solutions,
- (b) Properties of oscillatory electrical circuits and heat transfer in engineering systems
- (c) The variations in the properties of functions near their stationary values
- (d) Flow patterns of fluids, electrical and magnetic flux and related aspects

CO3: Develop skills in designing mathematical models for
- (a) R-C and L-R-C oscillatory electrical circuits
- (b) Heat transfer and Newton's law of cooling
- (c) Engineering concepts involving lengths of curves and areas of planes, Flux across surfaces

CO4: Develop analytical skills in solving the problems involving
- (a) Newton's law of cooling
- (b) non homogeneous linear differential equations
- (c) maximum and minimum values for the functions
- (d) lengths of curves, areas of surfaces and volumes of solids in engineering
- (e) transformation of integrals from three dimensional surfaces and volumes on to plane surfaces

CO5: Use relevant mathematical techniques for evaluating
- (a) various types of particular integrals in differential equations
- (b) stationary values for multi variable functions
- (c) multiple integrals in change of variables
- (d) integrations of vector functions.

DETAILED SYLLABUS:

UNIT-I: FIRST ORDER DIFFERENTIAL EQUATIONS (6 periods)

Linear and Bernoulli type, exact equations and reducible to exact. Orthogonal trajectories (Both Cartesian and polar forms). Newton's law of cooling.

UNIT II: HIGHER ORDER LINEAR DIFFERENTIAL EQUATIONS (9 periods)

Method for solution of linear equations- Differential operator *D*, Solution of second order linear homogeneous equations with constant coefficients, Solution of Higher order homogeneous linear equations with constant coefficients, **Solution of Non homogeneous linear equations**-Operator methods for finding particular integrals- for cases – e^{ax}, sin ax, cos ax, x^n, $e^{ax}V(x)$, xV(x). Method of Variation of parameters. Applications to oscillatory electrical circuits.

UNIT-III: FUNCTIONS OF SEVERAL VARIABLES (8 periods)

Functions of Two Variables: Limits, Continuity; **Partial Derivatives**: Total Differential and Derivatives, Jacobian, Functional dependence, Taylor's Theorem, maxima and minima of functions of two variables with and without constraints – Lagrange's method of undetermined multipliers.

UNIT-IV: APPLICATIONS OF INTEGRATION AND MULTIPLE INTEGRALS (10 periods)

Applications of integration to – lengths of curves, areas of surfaces of revolution, Double and Triple integrals – change of order of integration, change of variables in integrals. Area enclosed by plane curves, volumes of solids.

UNIT-V: VECTOR CALCULUS (12 periods)

Vector differentiation: Gradient of a scalar field and Directional Derivative, Divergence and Curl of a Vector field

Line integrals: Line integrals independent of path – work done.

Surface area and Surface Integrals: Surface Area, Surface Integrals, Flux across a surface.

Green's Theorem: Green's Theorem (without proof)-verification- applications

Gauss Divergence Theorem and Stoke's Theorem: Gauss Divergence theorem (without proof), Stokes's Theorem (without proof) –verifications and applications. **Total no. of periods: 45**

I B. Tech. - I Semester

(16BT10501) **PROGRAMMING IN C**

(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: NIL

COURSE DESCRIPTION:

Program design; Operators and Expressions; Data Input and Output; Control Statements; Functions; Arrays; Strings; Pointers; Structures & Unions and File handling Techniques;

COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO1: Demonstrate knowledge in:
- o Elements of C Language
- o Selection and Repetition statements.
- o Arrays, Strings and Functional statements.
- o Derived data types, Files and Pointers

CO2: Analyze complex engineering problems to develop suitable solutions
CO3: Design algorithms for specified engineering problems
CO4: Use appropriate 'C' language constructs for solving engineering problems
CO5: Write programs using 'C' language to implement algorithms

DETAILED SYLLABUS:

UNIT I – INTRODUCTION TO C PROGRAMMING, OPERATORS & EXPRESSIONS (08 periods)

Introduction to C Programming: The C Character set, Writing First Program of C, Identifiers and Keywords, Data types, Constants, Variables and Arrays, Declarations, Expressions, Statements and Symbolic Constants.

Operators and Expressions: Arithmetic Operators, Unary Operators, Relational and Logical Operators, Assignment Operators, the Conditional Operators.

UNIT II – DATA INPUT AND OUTPUT & CONTROL STATEMENTS (08 periods)

Data Input and Output: Single Character Input and Output, Input Data & Output data, The gets and puts Function.

Control Statements: Branching: The if-else Statement, Looping: The while Statement, More Looping: The do-while Statement, Still More Looping: The for Statement, Nested Control Statement, The switch Statement, The break & continue Statements, The goto Statement.

UNIT III – FUNCTIONS, PROGRAM STRUCTURES & ARRAYS (11 p*eriods*)

Functions: A Brief Overview, Defining a Function, Accessing a Function, Function Prototypes, Parsing Argument to a Function, Recursion.

Program Structure: Storage Classes, Automatic Variables, External (Global) Variables, Static Variables, Multi file Programs,

Arrays: Defining an Array, Processing an Array, Processing Array to function, Multidimensional Arrays. Linear search, Binary search, Fibonacci search, Bubble sort and Insertion sort

UNIT IV – STRINGS & POINTERS (09 periods)

Strings: Defining a String, NULL Character, Initialization of Strings, Reading and Writing a String, Processing a Strings, Character Arithmetic, Searching and Sorting of Strings, Library Functions for Strings.

Pointers: Pointer Declaration, Passing Pointers to a Function, Pointers and One-dimensional Arrays, Dynamic Memory Allocation, Operations on Pointers, Pointers and Multidimensional Arrays, Arrays of Pointers.

UNIT V – STRUCTURES AND UNIONS & FILE HANDLING (09 periods)

Structures and Unions: Defining a Structure, Processing a Structure, User-Defined Data types (typedef), Structures and Pointers, Passing Structures to Function, Self –Referential Structures, Unions

File Handling: Files introduction, Opening and Closing a Data File, Reading and Writing a Data File, Processing a Data File, Unformatted Data File, Concept of Binary Files, Accessing the File Randomly.

Total Periods: *45*

16BT1HS31: **ENGLISH LANGUAGE LAB**

(Common to CSE, CSSE, IT, CE & ME)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: English at intermediate or equivalent level.

COURSE DESCRIPTION: Phonetics; Vocabulary Building; Functional Grammar; Just a Minute; Elocution/Impromptu; Giving Directions/Conversation Starters; Role Play; Public Speaking; Describing People, Places, Objects and Events; Reading Comprehension; Listening Comprehension; Information Transfer.

COURSE OUTCOMES:

On successful completion of this course the students will be able to:

1. Demonstrate knowledge in
   a) Phonetics
   b) Information Transfer
2. Analyze the situations in professional context by using
   a) Vocabulary
   b) Grammar
3. Design and develop functional skills for professional practice.
4. Apply the techniques of Listening and Reading skills to comprehend Listening and Reading comprehension.
5. Function effectively as an individual and as a member in diverse teams through
   a) Extempore talk and b) Role Play
6. Communicate effectively in public speaking in formal and informal situations.
7. Recognize the need to engage in lifelong learning to upgrade competence of knowledge and communication.

LIST OF EXERCISES:

1. Phonetics
2. Vocabulary Building
3. Functional Grammar
4. Just a Minute
5. Elocution/Impromptu
6. Giving Directions/Conversation Starters
7. Role Play
8. Public Speaking
9. Describing People, Places, Objects and Events.
10. Reading Comprehension
11. Listening Comprehension
12. Information Transfer

Total Lab Slots: 10

TEXT BOOK:

I B.Tech. - I Semester

16BT1BS31: ENGINEERING CHEMISTRY LAB

(Common to CSE, CSSE, IT, CE & ME)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE REQUISITE: Intermediate/Senior Secondary Chemistry

COURSE DESCRIPTION: Estimation of hardness, alkalinity, dissolved oxygen of water samples and estimation of Iron by volumetric methods, determination of effect of P^H on rate of corrosion, measurement of viscosity of lubricants; Instrumental methods like potentiometer, conductivity meter, P^H meter and colorimeter; synthesis of Polymers and Nano materials.

COURSE OUTCOMES:

After completion of the course, a successful student is able to:

CO1: Acquire basic Knowledge about the volumetric analysis and synthesis of materials used for engineering applications.

CO2: Acquire analytical skills in the estimation of hardness of water, alkalinity of water, dissolved oxygen in water and estimation of Iron through wet laboratory methods.

CO3: Develop designing skills for the synthesis of polymers and Nanomaterials.

CO4: Acquire skills to use instrumental techniques for the determination of Electrical conductance of electrolytes, EMF of a cell, PH of a solution, determination of viscosity of lubricants and estimation of iron in cement.

CO5: Provide solutions for environmental issues through determination of quality of water.

List of Experiments:

A minimum of any **Ten** experiments are to be conducted among the following:.

1. Estimation of Hardness of water by EDTA method.
2. Estimation of alkalinity of Water.
3. Estimation of Dissolved Oxygen in water.
4. Estimation of Ferrous Iron by Dichrometry.
5. Preparation of Novalac Resin.
6. Synthesis of Nano metal-oxide using sol– gel process.
7. Conductometric titration of strong acid Vs strong base
8. Estimation of Ferrous ion by Potentiometry.
9. Determination of amount of corrosion of metals in different medium
10. Measurement of viscosity of lubricants by Ostwald viscometer.
11. Determination of P^H of a given solution by P^H metry.
12. Estimation of Ferric iron in cement by Colorimetric method.

Total Time Slots: 12

I B.Tech. - I Semester

16BT10331: **COMPUTER AIDED ENGINEERING DRAWING**

(Common to CSE, CSSE, IT, CE & ME)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	1	6	3

PRE-REQUISITES: *None*

COURSE DESCRIPTION:

Engineering drawing conventions; importance of engineering drawing; fundamental concepts of sketching; computed aided drafting and different types of projections of geometric entities (both 2D and 3D) through computer aided drafting packages.

COURSE OUTCOMES:

After completion of the course, a successful student is able to:

- CO1: Understand, write and read the language of engineering drawing in industry through International System of Standards.
- CO2: Develop the imagination and mental visualization ability for interpreting the geometrical details of engineering objects.
- CO3: Produce different views and projection in drawing.
- CO4: Use modern CAD software for design and drafting of drawings.
- CO5: Create multi-view drawings suitable for presentation to Engineering community.
- CO6: Introduce and communicate universally accepted conventions and symbols for their usage in technical drawing.

DETAILED SYLLABUS:

UNIT : I - BASICS OF ENGINEERING DRAWING PRACTICE, GEOMETRICAL CONSTRUCTIONS, CONICS AND SPECIAL CURVES (18 periods)

Introduction, drawing instruments and its uses, sheet layout, BIS conventions, lines, lettering and dimensioning practices. Geometrical constructions: Construction of regular polygons: Pentagon, Hexagon, Heptagon and Octagon. Conic sections**:** Introduction, construction of ellipse: rectangular method, eccentricity method. Construction of parabola: rectangular method, eccentricity method. Construction of hyperbola: eccentricity method. Special curves***:*** cycloid, involute.

UNIT: II – INTRODUCTION TO COMPUTER AIDED SKETCHING (18 periods)

Computer screen, layout of the software, creation of 2D/3D environment, selection of drawing size and scale, Standard tool bar/menus, Coordinate system, description of most commonly used toolbars, navigational tools: commands and creation of lines, Co-ordinate points, axes, poly-lines, square, rectangle, polygons, splines, circles, ellipse, text, move, copy, off-set, mirror, rotate, trim, extend, break, chamfer, fillet, curves, constraints viz. tangency, parallelism, inclination and perpendicularity.

UNIT: III – PROJECTION OF POINTS, STRAIGHT LINES AND PLANES (21 periods)

Introduction, method of projection, planes of projection, reference line and notations. Projection of points: Points in all the four quadrants. Projection of straight lines**:** lines inclined to HP / VP plane, inclined to both HP and VP planes (straight lines are assumed to be in first quadrant only)**.** Projection of planes**:** projection of triangle, square, rectangle, rhombus, pentagon, hexagon and circular plane for the condition inclined to HP / VP by change of position method.

UNIT IV –PROJECTION OF SOLIDS AND SECTION OF SOLIDS (21 Periods)

Projections of Solids: Introduction, projection of solids: prisms, pyramids, cylinders and cones with axis perpendicular to VP/HP and axis inclined to VP/HP only. Sections of solids**:** Introduction, Cutting plane, sectional views of right regular solids resting with base on HP: prisms, pyramids, cylinder and cone and true shapes of the sections.

UNIT V –ORTHOGRAPHIC AND ISOMETRIC PROJECTIONS AND DEVELOPMENT OF SURFACES (22 periods)

Orthographic projection: simple exercises. Isometric projection: Simple exercises.
Development of surfaces: prisms, pyramids, cylinders, cone and miscellaneous surfaces

Total Periods: *100*

Note: *Student shall practice Unit-I using sketch book only and remaining units using sketch book first and later CAD package.*

I B.Tech. - I Semester

16BT10531: PROGRAMMING IN C LAB

(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: A course on "Programming in C"

COURSE DESCRIPTION: Hands on practice in developing and executing simple programs using C Programming constructs– Conditional statements, Loops, Arrays, Strings, Functions, Structures, Pointers and Functions.

COURSE OUTCOMES:

On successful completion of this course the students will be able to:

1. Demonstrate practical knowledge of using C language constructs:
   a) Selection and Repetition statements.
   b) Arrays, Strings and Functional statements.
   c) Derived data types, Files and Pointers
2. Analyze problems to develop suitable algorithmic solutions
3. Design Solutions for specified engineering problems
4. Use appropriate 'C' language constructs for solving engineering problems
5. Implement and execute programs using 'C' language
6. Document programs and communicate effectively while conducting Professional transactions.

List of Exercises:

1. a. Let a and b are two integer variables whose values are 10 and 13 respectively. Write a program to evaluate the following arithmetic expressions.
   i) a + b ii) a–b iii) a * b iv) a/b v) a % b
   b. Write a program to evaluate the following algebraic expressions after reading necessary values from keyword.
      i) $(ax + b)/(ax - b)$
      ii) $2.5 \log x + \cos 32^0 + | x^2 + y^2|$
      iii) $x^5 + 10 x^4 + 8$ and $x^3 + 4 x + 2$
      iv) ae^{kt}
2. a. Mr. Gupta deposited Rs.1000 in a bank. The bank gives simple interest at the rate of 15% per annum. Write a program to determine the amount in Mr. Gupta's account at the end of 5 years. (Use the formula I = P T R / 100)
   b. A cashier has currency notes of denominations Rs.10, Rs. 50 and Rs. 100. If the amount to be withdrawn is input in hundreds, find the total number of notes of each denomination the cashier will have to give to the withdrawer.
   c. In a town, the percentage of men is 52. The percentage of total literacy is 48.If total percentage of literate men is 35 of the total population; write a program to find the total number of illiterate men and women if the population of the town is 8000.
3. a. Write a program that prints the given 3 integers in ascending order using if - else.
   b. Write a program to calculate commission for the input value of sales amount.
      Commission is calculated as per the following rules:
      i) Commission is NIL for sales amount Rs. 5000.
      ii) Commission is 2% for sales when sales amount is >Rs. 5000 and <= Rs. 10000.
      iii) Commission is 5% for sales amount >Rs. 10000.
   c. A character is entered through keyboard. Write a program to determine whether the character entered is a capital letter, a small case letter, a digit or a special symbol. The following table shows the range of ASCII values for various characters.

Characters	ASCII values
A - Z	65 - 90
a - z	97- 122

	0 - 9	48 - 57
Special Symbols	0 - 47, 58 - 64, 91- 96, 123 - 127	

4. a. If cost price and selling price of an item is input through the keyboard, write program to determine whether the seller has made profit or incurred loss. Also determine how much profit or loss he incurred in percentage.

   b. An insurance company calculates premium as follows:

   i. If a person's health is excellent and the person is between 25 and 35 years of age and lives in a city and is a male then premium is Rs.4 per thousand and the policy amount cannot exceed Rs.2 lakhs.

   ii. If a person satisfies all the above conditions and is female then the premium is Rs.3 per thousand and the policy amount cannot exceed Rs.1 lakh.

   iii. If a person's health is poor and the person is between 25 and 35 years of age and lives in a village and is a male then premium is Rs.6 per thousand and the policy cannot exceed Rs. 10000.

   iv. In all other cases the person is not insured.

   Write a program to determine whether the person should be insured or not, his/her premium rate and maximum amount for which he/she can be insured.

5. a. Write a program, which takes two integer operands and one operator as input from the user, performs the operation and then prints the result. (Consider the operators +,-,*, /, %. Use switch statement)

   b. Write a program to find the grace marks for a student using switch. The user should enter the class obtained by the student and the number of subjects he has failed in. Use the following rules:

   i. If the student gets first class and the number of subjects failed is >3, then no grace marks are awarded. If the number of subjects failed is less than or equal to '3' then the grace is 5 marks per subject.

   ii. If the student gets second class and the number of subjects failed in is >2, then no grace marks are awarded. If the number of subjects failed in less than or equal to '3' then the grace is 4 marks per subject.

   iii. If the student gets third class and the number of subjects failed in is >1, then no grace marks are awarded. If the number of subjects failed in is equal to '1' then the grace is 5 marks per subject.

6. a. Write a program to find the sum of individual digits of a positive integer.

   b. A Fibonacci sequence is defined as follows:

   The first and second terms in the sequence are 0 and 1. Subsequent terms are found by adding the preceding two terms in the sequence. Write a program to generate the first N terms of the sequence.

   Write a program to generate all the prime numbers between 1 and N, where N is a value supplied by the user.

7. a. Write a program to find the largest and smallest number in a given list of integers.

   b. Write a program to perform the following:

   i. Addition of two matrices.

   ii. Multiplication of two matrices.

8. a. Write a program that uses functions to perform the following operations:

   i. To insert a sub-string in main string at a specified position.

   ii. To delete N characters from a given string from a specified position.

   b. Write a program to determine whether the given string is palindrome or not.

   c. Write a program to display the position or index in the main string S where the sub string T begins. Display -1 if S does not contain T.

   d. Write a program to count the number of lines, words and characters in a given text.

9. a. Write a program to read list of student names and perform the following operations using functions.

   i. to print list of names

   ii. to sort them in ascending order

   iii. to print the list after sorting.

   b. Write a menu driven program to read list of student names and perform the following operations using array of character pointers.

i. to insert a student name
ii. to delete a name
iii. to print the name

10. Write a program that uses functions to perform the following operations:
    i. Reading a complex number
    ii. Writing a complex number
    iii. Addition of two complex numbers
    iv. Multiplication of two complex numbers

    (**Note:** Represent complex number using a structure.)

11. a. Write a program to accept the elements of the structure as:

    Employee-name,Basic pay

    Display the same structure along with the DA, CCA and Gross salary for 5 employees.

    Note: DA=51% of Basic pay, CCA=Rs.100.consolidated.

    b. Define a structure to store employee's data with the following specifications:

    Employee-Number, Employee-Name, Basic pay, Date of Joining

    i. Write a function to store 10 employee details.
    ii. Write a function to implement the following rules while revising the basic pay.

    If Basic pay<=Rs.5000 then increase it by 15%.

    If Basic pay> Rs.5000 and <=Rs.25000 then it increase by 10%.

    If Basic pay>Rs.25000 then there is no change in basic pay.

    Write a function to print the details of employees who have completed 20 years of service from the date of joining.

12. a. Write a program which copies one 'text file' to another 'text file'.

    b. Write a program to reverse the first N characters of a given text file.

Note: The file name and N are specified through command line.

13. Write a program to print the output by giving the Customer_ID as an input.

I B.Tech. - II Semester

16BT1BS02: ENGINEERING PHYSICS

(Common to CSE, CSSE, IT, CE & ME)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Intermediate/senior secondary Physics

COURSE DESCRIPTION: Lasers; optical fibers; principles of quantum mechanics; band theory of solids; semiconductors; dielectric properties of materials; acoustics of buildings; superconductors; crystallography and nanomaterials.

COURSE OUTCOMES:

On successful completion of this course the students will be able to:

1. Acquire basic knowledge of lasers, optical fibers, quantum mechanics, dielectrics, semiconductors, and superconductors, acoustic of buildings, crystallography and anomaterials.
2. Analyze the construction and working of various laser systems, semiconductor devices, various types of optical fibers and its communication system and nano materials properties.
3. Gain skills in designing lasers, optical fiber cable, semiconductor devices, acoustically good halls and nanomaterials.
4. Develop problem solving skills in engineering context.
5. Use relevant techniques for assessing ball milling, pulsed laser deposition, p-n junction and Laser.

DETAILED SYLLABUS:

UNIT-I: LASERS AND FIBER OPTICS (11 periods)

Lasers: Introduction, characteristics of lasers, spontaneous and stimulated emission of radiation, Einstein's coefficients – condition for amplification, population inversion, Nd:YAG laser, Helium-Neon laser, semiconductor laser and applications of lasers.

Fiber optics: Introduction, principle of optical fiber, acceptance angle, acceptance cone and numerical aperture, classification of optical fibers, optical fiber communication system and applications of optical fibers.

UNIT-II: PRINCIPLES OF QUANTUM MECHANICS AND BAND THEORY OF SOLIDS (7 p*eriods*)

Principles of Quantum Mechanics: Introduction, de-Broglie's hypothesis, Schrödinger's one dimensional wave equation (time independent), significance of wave function, particle in a one dimensional potential box, Fermi-Dirac distribution and effect of temperature (qualitative treatment).

Band Theory of Solids: Electron in a periodic potential, Kronig-Penney model (qualitative treatment), origin of energy bands formation in solids, distinction between conductors, semiconductors and insulators based on band theory.

UNIT-III: SEMICONDUCTORS AND DIELECTRIC PROPERTIES OF MATERIALS (13 periods)

Semiconductors: Introduction, types of semiconductors, intrinsic carrier concentration, electrical conductivity in semiconductors, drift and diffusion currents, Einstein's relation, Hall effect and its applications, direct and indirect band gap semiconductors, p-n junction, energy band diagram of p-n diode, LED, photo diode and Solar cell.

Dielectric Properties of Materials: Introduction, dielectric constant, electronic, ionic and orientation polarizations (qualitative treatment), local field, frequency dependence of polarizability (qualitative treatment), ferroelectricity.

UNIT-IV: ACOUSTICS OF BUILDINGS AND SUPERCONDUCTIVITY (7 periods)

Acoustics of Buildings: Introduction, basic requirement of acoustically good hall, reverberation and time of reverberation, Sabine's formula for reverberation time (qualitative treatment), absorption coefficient of sound and its measurement, factors affecting the architectural acoustics and their remedies.

Superconductivity: Introduction, General properties - Meissner effect, penetration depth, Type-I and Type-II superconductors, flux quantization, Josephson effects, BCS theory (qualitative treatment), applications of superconductors.

UNIT-V: CRYSTALLOGRAPHY AND NANOMATERIALS (7 p*eriods*)

Crystallography: Introduction, crystal planes, crystal directions and Miller indices, separation between successive (hkl) planes, X-ray diffraction by crystal planes, Bragg's law- powder method.

Nanomaterials: Introduction, principles of nanomaterials, properties of nanomaterials, synthesis of nanomaterials by ball milling and pulsed laser deposition and applications of nanomaterials.

Total Periods: 45

I B.Tech. - II Semester

16BT2BS01: TRANSFORMATION TECHNIQUES AND PARTIAL DIFFERENTIAL EQUATIONS

(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE REQUISITE: Intermediate /Senior secondary mathematics

COURSE DESCRIPTION: Fourier series; Fourier integrals and transforms; Laplace transforms; z – transforms; partial differential equations.

COURSE OUTCOMES:

After completion of the course a successful student is able to

CO1: Acquire basic knowledge in
- (a) Fourier series and Fourier transforms
- (b) Fourier integrals
- (c) Laplace transforms and their applications
- (d) z- transforms and their applications
- (e) solving partial differential equations

CO2: Develop skills in analyzing the
- (a) Properties of Fourier series for a given function
- (b) Partial differential equations through different evaluation methods
- (c) Difference equations through z – transforms
- (d) Engineering systems and processes involving wave forms and heat transfer

CO3: Develop skills in designing mathematical models for
- (a) Problems involving heat transfer and wave forms
- (b) Engineering concepts involving, Fourier transforms, Fourier integrals, Laplace transforms, z-transforms and difference equations

CO4: Develop analytical skills in solving the problems involving
- (a) Fourier series and Fourier transforms
- (b) Laplace transforms
- (c) Z-transforms and difference equations
- (d) Heat transfer and wave motion

CO5: Use relevant transformation techniques for
- (a) Obtaining Fourier transforms for different types of functions
- (b) Laplace transforms
- (c) Z- transforms
- (d) Partial differential equations

DETAILED SYLLABUS

UNIT- I : FOURIER SERIES **(7 periods)**

Fourier series: Determination of Fourier coefficients, convergence of Fourier series (Dirichlet's conditions), Fourier series of even and odd functions, Half-range Fourier sine and cosine expansions.

UNIT- II: FOURIER INTEGRALS AND FOURIER TRANSFORMS **(8 periods)**

Fourier integral theorem (statement only), Fourier sine and cosine integrals, Fourier transform, Fourier sine and cosine transforms –properties, Inverse transform and finite Fourier transforms.

UNIT-III: LAPLACE TRANSFORMS **(12 periods)**

Laplace transforms of standard functions. Properties of Laplace transforms. First and second shifting Theorems. Laplace transforms of derivatives and integrals. Inverse transforms. Convolution theorem (without proof), inverse Laplace transforms by convolution theorem. Laplace transform of periodic functions, Applications of Laplace transforms to ordinary differential equations of first and second order with constant coefficients.

UNIT-IV: Z- TRANSFORMS **(9 periods)**

Z – transforms, inverse Z– transforms, damping rule, shifting rule, initial and final value theorems. Convolution theorem (without proof), solution of difference equations by Z– transforms.

UNIT – V: PARTIAL DIFFERENTIAL EQUATIONS **(9 periods)**

Formation of Partial differential equations – Solutions of first order linear equations by method of grouping. First and second order equations by method of separation of variables – Solutions of one dimensional Wave equation, Heat equation. **Total no. of periods: 45**

I B.Tech. - II Semester
16BT20441: BASIC ELECTRONIC DEVICES AND CIRCUITS
(Common to CSE, CSSE & IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: A course on Engineering Physics.
COURSE DESCRIPTION:
Characteristics of general and special purpose electronic devices; Rectifiers; Biasing of BJT; FET, Feedback Amplifiers, Oscillator.
COURSE OUTCOMES: On successful completion of this course the students will be able to
CO1: Gain in-depth knowledge in
- *p-n* junction diode and its characteristics
- Zener diode and its characteristics
- Rectifiers and Filters
- Characteristics of BJT, FET, MOSFET and special purpose electronic devices.
- FET amplifiers
- Feedback amplifiers and Oscillators

CO2: Analyze numerical and analytical problems in
- Rectifiers using Filters
- Transistor biasing circuits
- FET biasing circuits and amplifiers
- Feedback amplifiers and oscillators

CO3: Design electronic circuits such as
- Rectifiers with and without filters
- BJT and FET biasing circuits
- FET amplifiers
- Feedback amplifiers and oscillators

CO4: Solve engineering problems and arrive at solutions pertaining to electronic circuits.
CO5: Select appropriate technique for transistor biasing.

DETAILED SYLLABUS
UNIT-I: *P-N JUNCTION DIODE AND RECTIFIERS* **(10 Periods)**
P-N JUNCTION DIODE
P-N Junction Diode Equation, Volt-Ampere (V-I) Characteristics, Temperature Dependence of V-I Characteristics, Ideal Versus Practical, Static and Dynamic Resistances, Diode Equivalent circuits, Junction capacitances, Break down mechanisms in semiconductor Diodes, Zener Diode Characteristics.
RECTIFIERS
Halfwave rectifier and Fullwave rectifiers (Qualitative and quantitative analysis), Harmonic components in a rectifier circuit, Inductor filter, Capacitor filter, L - section filter, ð - section filter, Problems on rectifier circuits.
UNIT-II: *BIPOLAR JUNCTION TRANSISTOR AND BIASING* **(11 Periods)**
CHARACTERISTICS:
Transistor construction, BJT Operation, Transistor as an amplifier, Transistor currents and their relations, Input and Output Characteristics of a Transistor in Common Emitter, Common Base and Common Collector Configurations, BJT specifications, transistor hybrid model for CE configuration – analytical expressions for transistor characteristics.
BIASING:
Transistor biasing, Operating Point, DC and AC Load Lines, Importance of Biasing, Fixed Bias, Emitter Feedback Bias, Collector to Emitter Feedback Bias, Voltage Divider Bias.
UNIT-III: *FIELD EFFECT TRANSISTOR* **(10 Periods)**
Construction, Principle of Operation and Characteristics of JFET and MOSFET (Enhancement & Depletion), Biasing of FET, Small Signal Model of JFET & MOSFET. Common Source and Common Drain Amplifiers using FET, Generalized FET Amplifier, FET as Voltage Variable Resistor, Comparison between BJT and FET.
UNIT-IV: *FEEDBACK AMPLIFIERS AND OSCILLATORS* **(8 Periods)**
Feedback Concepts, Types of Feedback Circuits (block diagram representation), General characteristics of negative feedback amplifier, Effect of Feedback on Amplifier characteristics. Barkhausen criterion, Hartley & Colpitts oscillators, Phase Shift Oscillators and Crystal Oscillator.
UNIT-V: *SPECIAL PURPOSE ELECTRONIC DEVICES* **(6 Periods)**
Principle of Operation and Characteristics of Tunnel Diode, Uni-Junction Transistor (UJT), Varactor Diode, Silicon Control Rectifier (SCR). Principle of operation of Schottky Barrier Diode.
Total Periods: 45

I B.Tech. - II Semester

16BT21201: OBJECT ORIENTED PROGRAMMING THROUGH C++

(Common to CSE, CSSE & IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	4	1	-	4

PREREQUISITES: A Course on "Programming in C".

COURSE DESCRIPTION:

Introduction to Object Oriented concepts and Fundamental Concepts of C++; Decision Making Statements, Looping Statements and Functions; Arrays, Pointers & References and Strings; Classes & Objects and Overloading Operators; Composition & Inheritance, Templates, Iterators & Generics and File Handling;

COURSE OUTCOMES:

On successful completion of this course, the students will be able to:

CO1: Demonstrate knowledge on object oriented programming concepts - Object, Class, Inheritance, Polymorphism, Encapsulation, Abstraction and Message passing.

CO2: Identify object oriented concepts for code reusability and optimization.

CO3: Design and develop solutions for given specifications.

CO4: Demonstrate problem solving skills to provide software solutions to real world problems.

CO5: Develop C++ programming to provide solutions to complex engineering problems using object oriented concepts.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION AND FUNDAMENTAL CONCEPTS (Periods: 10)

An introduction to object technology: Objects and methods, Object: A practical example, Classes, Declaring classes and objects.

Key Object Orientation concepts and Elementary C++ programming: Abstraction, Encapsulation, Aggregation/composition, Inheritance, Some simple programs, The output operator, Characters and literals, Variables and their declarations, Program tokens, Initializing variables, Objects, variables and constants, The input operator.

Fundamental types: Numeric data types, The Boolean types, Enumeration types, Character types, Integer types, Arithmetic operators, The increment and decrement operators, composite Assignment operators, Floating –point types, Type conversions, Numeric overflow, Round-off error, The format for floating –point values, Scope.

UNIT-II: DECISION MAKING STATEMENTS, LOOPING STATEMENTS AND FUNCTIONS (Periods:10)

Decision making statements: The if statement, The if-else statement, Keywords, Comparison operators, Statement blocks, Compound Conditions, Short- circuiting, Boolean expressions, Nested selection statements, The else-if statement, The switch statement, The conditional expression operator.

Looping Statements: The while statements, Terminating a loop, the do-while statement, the for statement, the break statement, the continue statement, the goto statement, Generating pseudo-random numbers

Functions: Introduction, Standard c++ library functions, User-defined functions, Test drivers, function declarations and definitions, Local variables and functions, void functions, Boolean functions, I/O functions, passing by reference, passing by constant reference, Inline functions, Scope, Overloading, The main () function, Default arguments

UNIT-III: ARRAYS, POINTERS & REFERENCES AND STRINGS (Periods: 12)

Arrays: Introduction, processing arrays, initializing an array, Array index out of bounds, passing an array to a function, the linear search algorithm, the bubble sort algorithm, the binary search algorithm, Using arrays with enumeration types, Type definitions, Multidimensional arrays.

Pointers and References: The reference operator, References, Pointers, the dereference operator, Derived types, Objects and lvalues, Returning a reference.

C++ Strings: Introduction, working with strings in C++, String manipulation, Strings and arrays, miscellaneous string functions, String streams

UNIT-IV: CLASSES & OBJECTS AND OVERLOADING OPERATORS (Periods: 12)

Classes and objects: Introduction, Class declarations, Constructors, Constructor initialization lists, Access functions, Private member functions, The copy constructor, The class destructor, Constant Objects, Structures, Pointers to object, Static data members, static function members, predefined classes, Data hiding and encapsulation, Exception handling

Overloading Operators: Introduction, Overloading the assignment operator, The this operator, Overloading Arithmetic operator, Overloading the arithmetic assignment operator, Overloading the relational patterns, Overloading the stream operators, Conversion operators, Overloading the increment and decrement operators, Overloading the subscript operator

UNIT-V: COMPOSITION & INHERITANCE, TEMPLATES, ITERATORS & GENERICS AND FILE HANDLING (Periods: 11)

Composition and inheritance: Introduction, Composition, Inheritance, protected class members, Overriding and dominating inherited members, private access versus protected access, virtual functions and polymorphism, virtual destructors, Virtual functions, pure virtual functions, Abstract classes, object-oriented programming.

Templates, iterators and Generics: Introduction, Function templates, Class templates, Container classes, Subclass templates, passing template classes to template parameters, Iterator classes, Generic programming

C++ File Handling: File I/O **(Total Periods: 55)**

TEXT BOOKS:

1. John R Hubbard, *Programming with C^{++}*, 3rd Edition, Tata McGraw-Hill, 2010.
2. P. B. Mahapatra, "Thinking in C^{++}", 1st Edition, Galgotia Publications Pvt. Ltd, 2005.

I B.Tech. - II Semester

16BT21501: **DIGITAL LOGIC DESIGN**

(Common to CSE, CSSE & IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: -NIL-

COURSE DESCRIPTION: Introduction to number systems; logic gates; Boolean Algebra; simplification of Boolean functions; Design of combinational circuits; Design of sequential circuits, Memory and Programmable Logic

COURSE OUTCOMES:

On Successful completion of this course student will be able to:

CO1. Demonstrate knowledge on Boolean algebra, Minimization of Boolean functions using Map Reduce method.

CO2. Identify appropriate simplification techniques for Boolean functions.

CO3. Design combinational and sequential logic circuits, memory and programmable logic for digital systems.

CO4. Select and Apply Boolean algebra and gate level minimization techniques for designing combinational and sequential logic circuits.

CO5. Learn independently new concepts, new techniques and advanced subject knowledge in the area of combinational and sequential logic circuits.

DETAILED SYLLABUS:

UNIT I – BINARY SYSTEMS AND BOOLEAN ALGEBRA (10 periods)

Digital Systems, Binary Numbers, Number base conversions, Octal and Hexadecimal Numbers, Signed binary numbers, other binary codes, complements. Boolean Algebra, Boolean functions, Canonical and standard forms, Digital logic gates

UNIT II – GATE LEVEL MINIMIZATION (9 periods)

The K-map method - Four-variable map, Five-Variable map, product of sums and sum of products simplification, Don't-care conditions, NAND and NOR implementations, other Two-level implementations, Exclusive – OR function

UNIT III – COMBINATIONAL LOGIC (9 p*eriods*)

Combinational Circuits, Analysis procedure, Design procedure, Binary Adder-Subtractor, BCD Adder, Carry- Look- ahead adder, Binary multiplier, Magnitude Comparator, Decoders, Encoders, Multiplexers, De-Multiplexers.

UNIT IV – SEQUENTIAL LOGIC (9 periods)

Latches, Flip-Flops, Analysis of clocked sequential circuits, Design of synchronous sequential circuits, registers, shift registers, Ripple counters, Synchronous counters, Ring Counter and Johnson Counter.

UNIT V–MEMORY AND PROGRAMMABLE LOGIC (8 p*eriods*)

Random-Access Memory, Memory Decoding, Error Detection and Correction, Read-only memory, Programmable logic Array, programmable Array logic, Sequential Programmable Devices.

Total Periods: *45*

TEXT BOOK:

I B.Tech. - II Semester

16BT1BS32: ENGINEERING PHYSICS LAB

(Common to CSE, CSSE, IT, CE & ME)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: Intermediate / senior secondary Physics.

COURSE DESCRIPTION:

Characteristics of p-n junction diode, Photodiode, LED, and semiconductor laser diode. Experimental determination of carrier concentration and energy gap of a semiconductor material, wave length of a laser source, size of fine particle, numerical aperture and acceptance angle of optical fiber. Determination of frequency of electrically vibrating tuning fork and A.C source using A.C sonometer, magnetic field along axial line of a current carrying coil and rigidity modulus of material of a wire using torsional pendulum.

COURSE OUTCOMES:

After completion of the course, a successful student will be able to:

CO1: Acquire basic knowledge about semiconductor materials, magnetic materials and lasers.

CO2: Acquire analytical skills in the estimation of carrier concentration of semiconductor materials and characterization of p-n junction.

CO3: Develop skills in designing electronic circuits using semiconductor components.

CO4: Acquire skills to use instrumental techniques in A.C sonometer and Melde's experiment.

CO5: Apply diffraction techniques for determination of size of tiny particles and wave length of lasers.

ENGINEERING PHYSICS LAB

Conduct a minimum of any **Ten** of the following experiments.

1. Determination of wavelength of a laser source using Diffraction Grating.
2. Determination of particle size by using a laser source.
3. Determination of Numerical aperture and acceptance angle of an optical fiber.
4. Melde's experiment - transverse & longitudinal modes.
5. Magnetic field along the axis of a current carrying coil- Stewart and Gee's method.
6. Calculation of A.C frequency using sonometer.
7. I-V Characteristics of a p-n Junction diode.
8. Energy gap of a material of a p-n Junction.
9. Characteristics of LED source.
10. Characteristics of Photo diode.
11. Hall Effect.
12. Determination of rigidity modulus of the material of the wire using torsional pendulum.

I B.Tech. - II Semester

16BT20451: **ANALOG AND DIGITAL ELECTRONICS LAB**

(Common to CSE, CSSE & IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: Courses on "Basic Electronic Devices & Circuits and Digital Logic Design"

COURSE DESCRIPTION: Identification and testing of active and passive components; RPS, DMM, Function Generator, CRO; Diode characteristics; Rectifiers; BJT and FET characteristics; UJT and SCR characteristics; BJT Amplifiers; Realization of FFs, Combinational Circuits, sequential Circuits; Demonstration on VHDL Programme.

COURSE OUTCOMES: On successful completion of this course, the student will be able to:

CO1. Demonstrate knowledge in different electronic devices, analog and digital circuits

CO2. Analyze the characteristics of different electronic devices and circuits like
- Diodes p-n Junction Diodes, Zener Diodes, SCR
- Transistors-BJT,FET,UJT
- Flip Flops-JK FF, D FF
- Combinational Circuits-HA, FA
- Sequential Circuits -Counters

CO3. Design electronic circuits like FET Amplifiers, Feedback amplifiers, Oscillators, Combinational Circuits and Sequential Circuits.

CO4. Solve engineering problems by proposing potential solutions through Design of better electronic circuits.

CO5. Model an electronic circuit which fulfil the needs of the society.

CO6: Function effectively as an individual and as a member in a group

CO7: Communicate effectively in verbal and written form.

DETAILED SYLLABUS:

PART A

ELECTRONIC WORKSHOP PRACTICE (Only for Viva-Voce)

1. Identification, Specifications, Testing of R, L, C Components (Colour Codes), Potentiometers, Switches (SPDT, DPDT, and DIP), Coils, Gang Condensers, Relays, Bread Boards. Identification, Specifications and Testing of Active Devices: Diodes, BJTs, Low-power JFETs, MOSFETs, LEDs, LCDs, SCR, UJT, Linear and Digital ICs.

PART B

ANALOG DEVICES AND CIRCUITS (Minimum seven experiments to be conducted)

1. p-n Junction and Zener diodes characteristics
2. Ripple Factor and Load Regulations of Rectifier with and without filters (Full wave or Half wave)
3. Input and Output characteristics of Transistor in CE configuration
4. Drain and Transfer Characteristics of JFET
5. Gain and Frequency response of FET Amplifier
6. Gain and Frequency response of Feedback Amplifier (Voltage series or current series)
7. Frequency of oscillations of Hartley and Colpitts Oscillator
8. UJT relaxation oscillator
9. SCR characteristics

PART C

DIGITAL CIRCUITS

Realization of

1. Flip Flops using Logic Gates
2. Two Problems on Combinational Circuits
3. Asynchronous Counter
4. Synchronous Counter

Demonstration of
VHDL Programme

I B.Tech. - II Semester

16BT21231: **IT WORKSHOP**

(Common to CSE, CSSE & IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: -

COURSE DESCRIPTION:

Practice sessions on PC hardware, Internet, World Wide Web, LibreOffice Suite. Demonstrations on installations of system software such as MS-Windows, Linux and device drivers, hardware and software troubleshooting, and protecting the personal computer from viruses and other cyber attacks are include.

COURSE OUTCOMES:

On successful completion of this course the students will be able to:

1. Demonstrate analytical skills in:
   a) Identification of functional parts of PC
   b) Internet and World Wide Web.
   c) Computer security issues and preventive measures.
   d) Operating Systems.
2. Design document and presentations effectively.
3. Apply modern tools to develop IT based applications.
4. Demonstrate effective communication skills through IT tools.
5. Update knowledge and skills in PC maintenance and usage of latest Operating Systems and Office automation tools.

LIST OF EXERCISES:

1. PC Hardware

a). Identify the peripherals of a personal computer, components in a Central Processing Unit (CPU) and its functions, block diagram of CPU along with the configuration of each peripheral.

b). Demonstrating assembling and disassembling of the Personal Computer.

c). Introduction to Operating Systems, components of OS, installation of Microsoft Windows-XP Operating System.

2. Operating System

a) Introduction to LINUX OS, installation of LINUX OS, Basic commands in LINUX - cat, ls, pwd, rm, rmdir, cd, cp, mv, who, date, cal, clear, man, wc

b) Introduction to DOS, Basic DOS commands – mkdir, cd, cls, del, copy, attrib, date, path, type, format, exit.

3. Hardware & Software Troubleshooting: Diagnosis of PC malfunction, types of faults, common issues and how to fix them. Basic Hardware & Software troubleshooting steps, PC diagnostic tools.

4. Libre Office:

a) Libre Writer

Introduction to **Writer**, importance of **Writer** as Word Processor, overview of toolbars, saving, accessing files, using help and resources.

i). Create a document using the features: Formatting fonts, drop cap, bullets and numbering, text effects, character spacing, borders and shading, tables, text direction, hyperlink, headers and footers, date and time.

ii). Create a document in using the features: picture effects, clipart, auto shapes & grouping, page setup, paragraph indentation, wrap text, footnote and equations.

5. **Libre Calc**

a). Introduction to **Calc** as a spreadsheet tool, overview of toolbars, accessing, saving **Calc** files, using help and resources.

i). Create a spreadsheet using the features: gridlines, format cells, auto fill, formatting text, formulae, table and charts.

ii). Create a spreadsheet using the features: split cells, text to columns, sorting,filter, conditional formatting, freeze panes, pivot tables, data validation.

6. **Libre Impress:**

a). Demonstration on **Impress** , utilities, overview of toolbars, PPT orientation, slide layouts, types of views.

i). Create a Presentation using the features: slide layouts, inserting text, formatting text, bullets and numbering, auto shapes, hyperlinks, pictures, clip art, audio, video, tables and charts.

ii). Create a Presentation using the features: slide design, slide hiding, slide transition, animation, rehearse timings and custom slideshow

7. **Libre Draw:** Draw vector graphics and flowcharts using Libre draw tools.

8. **LibreBase:** Create a sample database using Libre Base(Ex: Student database).

9. Introduction LaTeX Tool. Create a document using the features: formatting fonts, applying text\ effects, insert pictures and images, using date and time option.

10. **Internet & Computer Security**

Introduction to computer networking, demonstration on network components, drivers loading and configuration settings, mapping of IP addresses, configuration of Internet and Wi-Fi.

11. **Search Engines and Cyber Hygiene:**

Working of search engine, Awareness of various threats on Internet, types of attacks and how to overcome. Installation of antivirus software, configuration of personal firewall and Windows update on computers.

12. Students should implement exercises 6 to 9 using MS- Office tool.

I B.Tech. - II Semester

16BT21232: **OBJECT ORIENTED PROGRAMMING LAB**

(Common to CSE, CSSE & IT)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: A Course on "OOPS through C++".

COURSE DESCRIPTION: Hands-on experience on creating Virtual machines on Windows and Linux platforms, Development of Service based web applications & their deployment and Mobile app development.

COURSE OUTCOMES:

On successful completion of this course the students will be able to:

1. Demonstrate practical knowledge on Object oriented programming concepts - Object, Class, Inheritance, Polymorphism, encapsulation, Abstraction, message passing.
2. Apply object oriented programming concepts to develop real world applications.
3. Demonstrate Problem solving skills using basic and advanced concepts of C++.
4. Work individually and in teams collaboratively in implementing the applications.
5. Demonstrate communication skills both oral and written for preparing and presenting reports.

LIST OF EXERCISES:

1) A. Write a C++ program that takes length as input in feet and inches. The program should then convert the lengths in centimeters and display it on screen. Assume that the given lengths in feet and inches are integers.
   B. Write a C++ program to find the sum for the given variables using function with default arguments.
2) Implement the Number Guessing Game in C++ with the given instructions. In this game the computer chooses a random number between 1 and 100, and the player tries to guess the number in as few attempts as possible. Each time the player enters a guess, the computer tells him whether the guess is too high, too low, or right. Once the player guesses the number, the game is over.
3) Write a program to perform arithmetic operations on two numbers. The program must be menu driven, allowing to select the operation (+, -, *, or /) and input the numbers. Furthermore, the program must consist of following functions:
   i) Function showChoice: This function shows the options and must explain how to enter data.
   ii) Function add: This function accepts two number as arguments and returns sum.
   iii) Function subtract: This function accepts two number as arguments and returns their difference.
   iv) Function multiply: This function accepts two number as arguments and returns product.
   v) Function divide: This function accepts two number as arguments and returns quotient.
4) Write a menu driven C++ program with following option
   a. Accept elements of an array
   b. Display elements of an array
   c. Sort the array using bubble sort method Write C++ functions for all options. The functions should have two parameters name of the array and number of elements in the array.
5) X. Y, Z are arrays of integers of size M, N, and M + N respectively. The numbers in array X and Y appear in descending order. Write a user-defined function in C++ to produce third array Z by merging arrays X and Y in descending order.
6) A. Write a program to enter any number and find its factorial using constructor.
   B. Write a program to generate a Fibonacci series using copy constructor.
7) Write a program to perform addition of two complex numbers using constructor overloading. The first constructor which takes no argument is used to create objects which are not initialized, second which takes one argument is used to initialize real and imaginary parts to equal values and third which takes two argument is used to initialized real and imaginary to two different values.
8) A. Write a program to overload unary increment (++) operator.
   B. Write a program to overload binary + operator.
9) A. Define a class TEST in C++ with following description:

Private Members
TestCode of type integer
Description of type string
NoCandidate of type integer
CenterReqd (number of centers required) of type integer
A member function CALCNTR() to calculate and return the number of centers as (No Candidates/100+1)
Public Members
- A function SCHEDULE() to allow user to enter values for TestCode, Description, NoCandidate & call function CALCNTR() to calculate the number of Centres
- A function DISPTEST() to allow user to view the content of all the data members

b. Define a class REPORT with the following specification:
Private members :

adno	4 digit admission number
name	20 characters
marks	an array of 5 floating point values
average	average marks obtained
GETAVG()	a function to compute the average btained in five subject

Public members:
READINFO(): function to accept values for adno, name, marks. Invoke the function GETAVG()
DISPLAYINFO(): function to display all data members of report on the screen.
You should give function definitions.

10) A. Create a base class basic_info with data members name ,rollno, gender and two member functions getdata and display. Derive a class physical fit from basic_info which has data members height and weight and member functions getdata and display. Display all the information using object of derived class.
B. Create a class called LIST with two pure virtual function store() and retrieve(). To store a value call store and to retrieve call retrieve function. Derive two classes stack and queue from it and override store and retrieve.
11) A. Write a program to define the function template for swapping two items of the various data types such as integer, float, and characters.
B. Write a program to define the class template for calculating the square of given numbers with different data types.
12) A. Write a C++ program to write number 1 to 100 in a data file NOTES.TXT.
B. Write a program to read a set of lines from the keyboard and to store it on a specified file.

***Any one of the following Mini Projects to be implemented by a group of four to five students.**

1) Mini Project : Banking System
Develop an application on BANKING SYSTEM which has account class with data members like account number, name, deposit, withdraw amount and type of account. Customer data is stored in a binary file. A customer can deposit and withdraw amount in his account. Must support the features of creation, modifying and deletion account any time.
2) Mini Project : Library Management System
Develop an application on LIBRARY MANAGEMENT SYSTEM which has book and student class with data members like book no, bookname, authorname. Books records is stored in a binary file. A student can issue book and deposit it within 15 days. Student is allowed to issue only one book. Student Records are stored in binary file. Administrator can add, modify or delete record.
3) Mini Project : Supermarket Billing System
Develop a simple console application for SUPERMARKET BILLING SYSTEM which has product class with data members like product no, product name, price, quantity, tax, discount. Product details is stored in a binary file. A customer can purchase product and his invoice generated. Administrator can create, modify, view and delete product record.

II B. Tech. – I Semester

(16BT3BS01) **PROBABILITY DISTRIBUTIONS AND STATISTICAL METHODS**

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: Intermediate/senior secondary mathematics

COURSE DESCRIPTION: Random variables; mathematical expectations; probability distributions; correlation and regressions; statistical quality control; sampling distributions; tests for small and large samples and their significances.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1.Acquire basic knowledge in
- (a) probability distributions, correlation and regressions
- (b) statistical quality control and testing of hypotheses
- (c) Simple linear regression
- (d) Tests of significance for small and large samples

CO2.Develop skills for analyzing the data with
- (a) mathematical expectations for realistic results
- (b) probability distributions for practical situations.
- (c) control charts of statistical quality control
- (d) correlation and regression concepts
- (e) suitable tests of significance for practical situations.

CO3. Develop skills in designing
- (a) probability distributions
- (b) limitations of statistical quality control
- (c) control charts,
- (d) X, R, np, and c charts

CO4. Develop analytical skills for solving problems involving
- (a) probability distributions, means, variances and standard deviations
- (b) statistical techniques employed for quality
- (c) sampling techniques for decision making
- (d) Tests of significances for small and large samples

CO5. Use relevant probability and statistical techniques for
- (a) Mathematical expectations of desired results
- (b) Fitting probability distributions for experimental data.
- (c) Quality control and testing of hypothesis.

DETAILED SYLLABUS

UNIT I: RANDOM VARIABLE AND MATHEMATICAL EXPECTATIONS (09 Periods)

Random Variables: Discrete and Continuous random variables, Distribution function of random variable, Properties, Probability mass function, Probability density function, Mathematical expectation, Properties of Mathematical expectation, Mean and Variance.

UNIT II: PROBABILITY DISTRIBUTIONS (09 Periods)

Discrete Distributions: Binomial and Poisson Distributions, Mean, variance and standard deviations.

Continuous Distributions: Normal Distribution, Mean, Variance and properties.

UNIT III: CORRELATION, REGRESSION AND STATISTICAL QUALITY CONTROL (09 Periods)

Definition of correlation, correlation coefficient, Rank correlation. Simple linear regression, regression lines and properties.

Introduction, advantages and limitations of statistical quality control, Control charts, specification limits, , R, np and c charts.

UNIT IV: SAMPLING DISTRIBUTIONS AND TEST OF SIGNIFICANCE FOR LARGE SAMPLES (09 Periods)

Population and Sample, Parameter and Statistic, Sampling Distribution of Statistic, Standard Error of Statistic, Null and Alternative Hypothesis, Type I and II errors, Level of Significance, Critical region, Degrees of freedom. Tests of significance for proportions and means.

UNIT V: TEST OF SIGNIFICANCE FOR SMALL SAMPLES (09 Periods)

Student’s t-test: single mean, difference of means, F-test for equality of population variance, Chi-Square Test for Goodness of fit, contingency table, Chi-Square Test for Independence of Attributes.

Total Periods: 45

II B. Tech. – I Semester

(16BT30501) **COMPUTER ORGANIZATION**

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Digital Logic Design

COURSE DESCRIPTION:

Basic structure and operation of a digital computer; Organization and functional principles of the arithmetic and logic unit, control unit, memory unit and I/O unit; Concepts of pipelining and parallel processing techniques;

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:

- Computer Arithmetic units
- Register Transfer and Computer Instructions
- Design of Control Unit
- Input Output Organization and Memory system
- Pipelining and Multiprocessing.

CO2. Analyze the functional units of a digital computer.

CO3. Design the functional modules in a digital computer - Arithmetic Units, Memory and I/O.

CO4. Investigate the performance of memory, I/O, and pipelined processors.

CO5. Select appropriate techniques of I/O, Pipelining and Multiprocessing to solve computing problems.

CO6. Apply contextual knowledge of computer systems development to societal applications.

DETAILED SYLLABUS:

UNIT I:REGISTER TRANSFER & MICROOPERATIONS AND COMPUTER ARITHMETIC (09 Periods)

Register Transfer And Microoperations: Register transfer, Bus and memory transfers, Arithmetic microoperations, Logic microoperations, Shift microoperations, Arithmetic logic shift unit.

Computer Arithmetic: Fixed point representation, Floating point representation, Addition and subtraction, Binary multiplication algorithms, Binary division algorithms.

UNIT II: BASIC COMPUTER ORGANIZATION & DESIGN AND MICRO PROGRAMMED CONTROL (09 Periods)

Basic Computer Organization and Design: Instruction codes, Computer registers, Computer instructions, Instruction formats, Addressing modes, Timing and control, Instruction cycle, Memory reference instructions, Input - Output and Interrupt.

Micro Programmed Control: Control memory, Address sequencing, Design of control unit, Hardwired control, Microprogrammed control.

UNIT III: INPUT-OUTPUT ORGANIZATION (08 Periods)

Peripheral devices, Input-Output interface, Modes of transfer, Priority interrupt, Direct Memory Access, Input-Output Processor (IOP).

UNIT IV: THE MEMORY SYSTEM (10 Periods)

Semiconductor RAM memories – Internal organization, Static memories, Synchronous and Asynchronous DRAMs, Structure of larger memories; Read-Only memories, Cache memories – Mapping functions; Secondary Storage – Magnetic Disks, Optical Disks.

UNIT V: PIPELINE & VECTOR PROCESSING AND MULTIPROCESSORS (09 Periods)

Pipeline and Vector Processing: Parallel processing, Pipelining, Arithmetic pipeline, Instruction pipeline, Vector processing, Array processors.

Multiprocessors: Characteristics of multiprocessors, Interconnection structures, Inter-processor arbitration, Inter-processor communication and synchronization.

Total Periods: 45

TEXT BOOKS:

1. Morris Mano, *Computer System Architecture*, Pearson Education, 3rd Edition, 2007.
2. Carl V. Hamacher, Zvonko G. Vranesic and Safwat G. Zaky, *Computer Organization*, McGraw-Hill, 5th Edition, 2002.

REFERENCE BOOKS:

1. William Stallings, *Computer Organization and Architecture: Designing For Performance*, Pearson Education, 7th Edition, 2007.

2. John P. Hayes, *Computer Architecture and Organization*, McGraw-Hill, 3rd Edition, 2012.

II B. Tech. – I Semester

(16BT30502) DATA STRUCTURES

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Programming in C

COURSE DESCRIPTION:

Linked Lists; Type of lists; Operations and Applications; Stacks and Queues; Operations and Applications; Trees, Search trees and Heaps; Multi-way Trees and Graphs; Searching and Hashing.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on

- Principles of Data Structures.
- Linear and Non-linear Data Structures.
- Sorting and hashing techniques.

CO2. Analyze and Identify suitable data structure for computational problem solving.

CO3. Design solutions for complex engineering problems using linear and non-linear data structures.

CO4. Develop solutions for Complex computational problems by conducting explorative analysis.

CO5. Apply appropriate data structure to provide solutions for real time problems by using C Language.

CO6. Apply contextual knowledge of data structures to design applications for societal applications like payroll systems, web applications, banking and financial systems.

DETAILED SYLLABUS:

UNIT I: LINKED LISTS (08 Periods)

Pointers, Operations, Linked List definition, Single Linked Lists, Circular Linked List, Doubly Linked List, Circular Doubly Linked List, Application of Linked Lists.

UNIT II: STACKS AND QUEUES (08 Periods)

Stacks: Stack operations, Stack Linked List, Implementation, Stack applications.

Queues: Queue operations, Queue Linked List design, Queue applications.

UNIT III: TREES, SEARCH TREES AND HEAPS (10 Periods)

Trees: Tree concepts, Binary Trees.

Binary Search Trees (BST): Basic concepts, BST operations, BST applications.

AVL Search Trees: Basic concepts, AVL Tree implementations.

Heaps: Basic concepts, Heap implementation, Heap applications.

UNIT IV: MULTIWAY TREES AND GRAPHS (10 Periods)

Multiway Trees: B-Trees, Simplified B-Trees, B-Tree variations.

Graphs: Basic concepts, Operations, Graph storage structures, Graph algorithms - Create graph, Insert vertex, Delete vertex, Retrieve vertex, Depth-first traversal, Breadth-first traversal**.**

UNIT V: SORTING AND HASHING (09 Periods)

Internal Sorting: Quick Sort, Shell Sort, Merge Sort, Heap Sort.

External Sorting: Introduction, External storage device and sorting with tapes, Balanced Merge.

Hashing: Introduction, Hash Table structure, Hash functions, Linear Open Addressing, Chaining, Applications.

Total Periods: 45

TEXT BOOKS:

1. Richard Gileberg and Behrouz A. Forouzan, *Data Structures: A Pseudo-code Approach with C*, Cengage Learning, 2nd Edition, 2007.
2. G.A.V. Pai, *Data Structures and Algorithms*, Tata McGraw Hill, 2nd Edition, 2009.

II B. Tech. - I Semester

(16BT31201) DISCRETE MATHEMATICAL STRUCTURES

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Multivariable Calculus and Differential Equations.

COURSE DESCRIPTION: Mathematical Logic; Predicates; Functions and Relations; Algebra Structures; Mathematical Reasoning; Recurrence Relations; Graphs; Graph Theory and its Applications.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on mathematical logic, algebraic structures, relations, recurrence relations and mathematical reasoning.
CO2. Analyze and prove given statement by contradiction and automatic theorem.
CO3. Design network applications using Prim's and Kruskal's algorithms.
CO4. Solve tree traversal problems using Graph Theory.
CO5. Apply permutation, combinations, counting principle, Lagrange's theorem and graph theory in solving real-time problems.

DETAILED SYLLABUS:

UNIT I: MATHEMATICAL LOGIC AND PREDICATES (09 Periods)

Mathematical Logic: Statements and notations, Connectives, Well formed formulae, Truth tables, Tautology, Equivalence of formulae, Normal forms.

Predicates: Predicate calculus, Free and bound variables, Rules of inference, Consistency, Proof of contradiction and automatic theorem proving.

UNIT II: FUNCTIONS AND RELATIONS (08 Periods)

Relations: Properties of binary relations, Equivalence relations, Compatibility relations, Partial ordering relations, Hasse diagram and related applications.

Functions: Inverse functions, Composition of functions, Recursive functions, Lattice and its properties.

UNIT III: ALGEBRAIC STRUCTURES (08 Periods)

Algebraic System: Examples and general properties, Semi groups and monoids, Groups, Subgroups, Homomorphism and isomorphism, Lagrange's theorem.

UNIT IV: MATHEMATICAL REASONING AND RECURRENCE RELATIONS (10 Periods)

Mathematical Reasoning: Methods of proof, Mathematical induction, Basics of counting, The inclusion- exclusion principle, The pigeon hole principle, Permutations and combinations, Generalized permutations and combinations.

Recurrence Relations: Generating functions of sequences, Calculating coefficients of generating function, Recurrence relation, Solving recurrence relations by substitution and Generating functions, Methods of characteristic roots, Solutions of inhomogeneous recurrence relation.

UNIT V: GRAPH THEORY AND ITS APPLICATIONS (10 Periods)

Graphs: Introduction to graphs, Types of graphs, Graph basic terminology and special types of simple graphs, Representation of graphs and graph isomorphism, Euler paths and circuits, Hamiltonian paths and circuits, Planar graphs, Euler's formula and graph coloring, 4-color theorem.

Trees: Introduction to trees, Properties of trees, Applications of trees, Spanning trees, Counting trees, Depth-first search, Breadth-first search, Minimum spanning trees, Kruskal's algorithm and prim's algorithm.

Total Periods: 45

TEXT BOOKS:

1. J.P. Trembly and R. Manohar, *Discrete Mathematical Structures with Applications to Computer Science*, Tata McGraw Hill, Thirty 7th Edition, 2008.
2. R. K. Bisht and H. S. Dhami, *Discrete Mathematics*, Oxford Higher Education, 2015.

II B. Tech. – I Semester

(16BT41202) JAVA PROGRAMMING

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Object Oriented Programming through C++.

COURSE DESCRIPTION: Introduction of Java, Classes and Objects; Inheritance, Packages, Interfaces; Exception handling, Multithreading; Event handling, AWT, Collection Classes; Applets, Servlets.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Object Oriented Programming concepts - classes, objects, inheritance, polymorphism, encapsulation and abstraction.
- Packages, interfaces, multithreading, exception handling, event handling.

CO2. Analyze complex engineering problems using object oriented concepts.

CO3. Design and develop reusable code to provide effective solutions for real world problems using inheritance and polymorphism**.**

CO4. Apply AWT and Applets to create interactive Graphical User Interfaces.

CO5. Use advanced programming languages to develop web applications.

CO6. Build Java Applications suitable for societal requirements.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION (10 Periods)

Data types, Variables, Arrays, Operators, Control statements.

Classes and Objects: Concepts of Classes, Objects, Constructors, Methods, this keyword, Garbage collection, Overloading Methods and Constructors, Parameter passing, Access control, Recursion, String Class.

UNIT II: INHERITANCE, PACKAGES AND INTERFACES (09 Periods)

Inheritance: Inheritance basics, Super keyword, Multi-level hierarchy, Abstract classes, Final keyword with inheritance.

Packages: Definition, Creating and accessing a package, Understanding CLASSPATH, Importing packages.

Interfaces: Definition, Implementing interfaces, Nested interfaces, Applying interfaces, Variables in interface and Extending interfaces.

UNIT III: EXCEPTION HANDLING AND MULTITHREADING (08 Periods)

Exception Handling: Concepts of exception handling, Exception types, Usage of Try, Catch, Throw, Throws and Finally, Built in exceptions, Creating own exception sub classes.

Multithreading: Java thread model, Creating threads, Thread priority, Synchronizing threads, Inter-thread communication.

UNIT IV: COLLECTION CLASSES, THE APPLET CLASS AND AWT (10 Periods)

Collection Classes: ArrayList Class, LinkedList Class, Hashset Class, LinkedHashSet Class, TreeSet Class, PriorityQueue Class, EnumSet Class.

The Applet Class: Types of applets, Applet basics, Applet architecture, Applet skeleton, Passing parameters to applets.

AWT Control Fundamentals: User interface components, Layout managers.

UNIT V: EVENT HANDLING AND SERVLETS (08 Periods)

Delegation event model: Event classes, Event Listener Interfaces – Mouse and Key; Adapter classes.

Servlets: Life cycle of a servlet, Using Tomcat for Servlet development, Create and compile the servlet source code, Servlet API, Javax.Servlet package.

Total Periods: 45

TEXT BOOK:

1. Herbert Schildt, *Java the Complete Reference*, Oracle Press, 9th Edition, 2014.

REFERENCE BOOK:

1. Sachin Malhotra and Saurab Choudhary, *Programming in Java*, Oxford University press, 2nd Edition, 2014.

II B. Tech. - I Semester
(16BT31501) OPERATING SYSTEMS

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION: Operating systems operations, scheduling; Critical section problem, deadlocks; Paging, segmentation; File Concept, Disk scheduling; I/O interface; concepts of protection.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on Operating system operations, services, file management, disk management, I/O management and protection.
CO2. Identify the functionality involved in process management concepts like scheduling and synchronization.
CO3. Design models for handling deadlock and perform memory management.
CO4. Synthesize and apply programming API's to perform Process management.
CO5. Use appropriate protection tools to provide access control to Operating system users.

DETAILED SYLLABUS:

UNIT I: OPERATING SYSTEMS OVERVIEW AND PROCESS MANAGEMENT (08 Periods)

Operating systems, operations, Distributed systems, Special purpose systems, Operating systems services, Systems calls, Operating system structure.

Process Management: Process scheduling, Process Control Block, Inter process communication, Signals, Forks, Multithreading models, Threading issues, Scheduling criteria, Scheduling algorithms, Multilevel queue, Multilevel feedback queue.

UNIT II: SYNCHRONIZATION AND DEADLOCKS (10 Periods)

Synchronization: The critical-section problem, Peterson's Solution, Synchronization hardware, Semaphores, Classic problems of synchronization, Monitors.

Deadlocks: System model, Deadlock characterization, Methods for handling deadlocks, Deadlock prevention, Deadlock detection, Deadlock avoidance, Deadlock recovery.

UNIT III: MEMORY MANAGEMENT (09 Periods)

Memory-Management Strategies: Swapping, Contiguous memory allocation, Paging, Structure of the page table, Segmentation.

Virtual Memory Management: Demand paging, Copy-on-Write, Page replacement Algorithms, Thrashing.

UNIT IV: STORAGE MANAGEMENT (10 Periods)

File System: File Concept, Access methods, Directory structure, File system structure, i-node, File Descriptors, File system implementation, Directory implementation, Allocation methods.

Secondary Storage Structure: Disk structure, Disk attachment, Disk scheduling, Swap-space management, Stable-storage implementation, Tertiary storage structure.

UNIT V: I/O SYSTEMS AND PROTECTION (08 Periods)

I/O Systems: I/O Hardware, Application I/O interface, Kernel I/O subsystem.

Protection: Goals of protection, Principles of protection, Domain of protection, Access matrix, Implementation of access matrix, Access control, Revocation of access rights.

Total Periods: 45

TEXT BOOK:

1. Abraham Silberschatz, Peter Baer Galvin and Greg Gagne, *Operating System Principles*, Wiley India Edition, 7th Edition, 2011.

REFERENCE BOOKS:

1. William Stallings, *Operating Systems, Internals and Design Principles*, Pearson Education, 7th Edition, 2013.

2. Andrew S. Tanenbaum, *Modern Operating Systems*, PHI, 3rd Edition, 2009.

II B. Tech. – I Semester

(16BT30531) DATA STRUCTURES LAB

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: A course on Data Structures

COURSE DESCRIPTION:
Hands on practice on Linked Lists; Type of lists; Stacks and Queues; Trees and Search trees; Graphs; Searching and Hashing.

COURSE OUTCOMES:
On successful completion of this course, students will be able to:

CO1. Demonstrate practical knowledge on Stacks, Queues, Linked lists, Trees Sorting and Hashing Techniques.
CO2. Analyze suitable data structure to solve real world computing problems.
CO3. Design solutions for complex computational problems using linear and non-linear data structures.
CO4. Solve for Complex computational problems by conducting explorative analysis.
CO5. Use C language for implementing linear and non-linear data structures.
CO6. Apply contextual knowledge of data structures to design applications for societal requirements.
CO7. Communicate effectively using data structures with engineering community, being able to comprehend and write effective programs and Prepare Reports.
CO8. Engage in learning advances in Data structures.

LIST OF EXERCISES:

1. Write program to implement the following data structures:
   (a) Single Linked List
   (b) Double Linked List
   (c) Circular Linked List
2. Write a program to implement Stack and Queue using Linked List.
3. Write a program to evaluate a given postfix expression using Stack.
4. Write a program to convert a given infix expression to postfix form using Stack.
5. Write a program to implement
   (a) Stack using two Queues
   (b) Queue using two Stacks
6. Write a program to implement In-order, pre-order, post-order tree traversal of Binary Trees.
7. Write a program to perform operations on a Binary Search Tree (BST).
8. Write programs for implementation of graph traversals by applying:
   (a) Breadth First Search
   (b) Depth First Search
9. Implement the following sorting algorithms:
   (a) Merge Sort
   (b) Heap Sort
   (c) Quick Sort
10. Write a program to implement hashing with
   (a) Separate Chaining Method
   (b) Open Addressing Method

REFERENCE BOOKS:

1. Richard Gileberg and Behrouz A. Forouzan, *Data Structures: A Pseudocode Approach with C,*Cengage Learning, 2nd Edition, 2007.
2. G.A.V. Pai, *Data Structures and Algorithms,* Tata McGraw Hill, 2nd Edition, 2009.

II B. Tech. – I Semester

(16BT31231) JAVA PROGRAMMING LAB

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITE: A course on Java Programming.

COURSE DESCRIPTION: Hands on experience on Polymorphism; Inheritance and Interfaces; Exception Handling; Multithreading; Event Handling; AWT; Applets; Servlets.

COURSE OUTCOMES:

On successful completion of this course, the students will be able to:

CO1. Demonstrate knowledge on basic concepts of Java programming.
CO2. Design and develop efficient programs with multitasking ability and handle exceptions.
CO3. Demonstrate independent problem solving skills in developing interactive applications.
CO4. Apply object oriented approach to develop user friendly interface and learn how to communicate with systems over the network.
CO5. Build Java applications suitable for societal requirements.
CO6. Work effectively as an individual and as a member in team for case studies implementation.
CO7. Demonstrate communication skills, both oral and written for preparing and presenting reports.

LIST OF EXERCISES:

1.a. Write a Program to accept two integers through the command line arguments and print the sum of the two numbers.
b. Write a Program to accept a String as a Command line argument and the program should print a Welcome message.
2. Write a program that displays a menu with options 1. Add 2. Sub. Based on the options chosen, read 2 numbers and perform the relevant operation. After performing the operation, the program should ask the user if he wants to continue. If the user presses y or Y, then the program should continue displaying the menu else the program should terminate.[Use Scanner class]
3.a. Write a program to print the element of an array that has occurred highest number of time.
b. Write a program to find greatest number in a 3*3 array. The program is supposed to receive 9 integer numbers as command line arguments.
4.a. Create a class "Amount In Words" to convert the amount into words. (Consider the amount to be not more than 100000.)
b. Write a Program to count tokens- number of words and characters in a string.
5. Implement any one of the case study with the specifications given below:
a) Create classes, objects and their properties.
b) Add methods to classes and implement them.
c) Refine the objects by adding constructors and local variables.
d) Show communication between the objects by calling instance of one object from another class.
e) Handle Exceptions and Implement relationships like inheritance.

Case study 1: Banking Application:

The banking application consists of five divisions. They are customer details, creating a new account, withdrawing money, loan details and depositing money. The customer details consist of customer name, address, phone number, account number. To withdraw money checks the balance in the account and then get the money. The loan details consist of loan types like home loans, car loans, education loans etc. To deposit money enter the account number and give the account to be deposited.

Case study 2: Library Application:

The Library Application consists of Student, faculty and book details, Issue book, and return book. The student and faculty details consist of name, ID, Branch and maximum number of books can be issued to them. The book details consist of ID, Book name and Author name. To Issue a book to members, the librarian checks the availability of book and if the book is not available, then an error message will be displayed. To return the book, the librarian verifies the validity and if the validity is expired then the fine amount message will be displayed. The student and faculty can view the book details issued to them and also can check the count of remaining books that can be taken for issue.

6. A. Write a program that correctly implements producer consumer problem using the concept of inter-thread communication.
B. Write a program that demonstrates time slicing among equal priority threads, show that a lower priority thread's execution is deferred by the time slicing of higher-priority threads.
7. Develop an Applet that receives an integer in one text field, and computes its factorial value and returns it in another text field, when the button named "Compute" is clicked.
8. Write a Java program that works as a simple calculator. Use a grid layout to arrange buttons for the digits and for the +, -, *, % operations. Add a text field to display the result.
9. Create a Servlet that recognizes first time visitor to web application and responds by saying "Welcome to new user" otherwise "welcome back".

REFERENCE BOOKS:

1. Herbert Schildt, *Java the Complete Reference*, Oracle Press, 9th Edition, 2014.
2. Sachin Malhotra and Saurab Choudhary, *Programming in Java*, Oxford University press 2nd Edition, 2014.

II B. Tech. - I Semester

(16BT31531) OPERATING SYSTEMS LAB

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITE: A course on Operating Systems.

COURSE DESCRIPTION: Hands on practice in simulating algorithms for CPU Scheduling, Memory Management, I/O Management, Deadlock Handling mechanisms; Implementing Synchronization problems; practice on UNIX commands.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge of the following algorithms to solve problems:
   i. CPU Scheduling
   ii. Memory Management
   iii. I/O Management

CO2. Formulate and analyze solutions to problems pertaining to Memory and I/O.

CO3. Designing models for deadlock handling mechanisms.

CO4. Develop skills in basic UNIX commands.

CO5. Use appropriate APIs' available in modern operating systems (such as threads, system calls, semaphores, etc…) for software development.

CO6. Communicate effectively on complex operating system problems with implication to User-friendliness.

CO7. Develop and demonstrate user defined libraries to communicate with the kernel or effective implementation of projects across multidisciplinary environments

LIST OF EXPERIMENTS:

1. Write a program to implement the following system calls:
   a) fork b) exec c) getpid d) wait
2. a. Write a program to demonstrate File Permissions.
   b. Write a program to implement named and unnamed pipes.
3. Implement the following CPU Scheduling Algorithms:
   a) FCFS b) SJF (Preemptive) c) Round Robin d) Priority.
   Use the following set of processes, compare the performance of above scheduling policies

Process Name	Arrival Time	Processing Time	Priorities
A	0	3	2
B	1	5	4
C	3	2	1
D	9	5	5
E	12	5	3

4. Implement the following synchronization problems:
   a) Producer Consumer Problem b) Dining Philosopher's Problem.

Implement Banker's Algorithm for Deadlock Avoidance and Detection. Find the safe sequence. If Max. request of any one process is changed, detect whether deadlock is occurred or not. Consider number of resources are three and Jobs are five as shown in the figure:

Process	Allocation			Max			Available		
	A	B	C	A	B	C	A	B	C
P0	0	1	0	7	5	3	3	3	2
P1	2	0	0	3	2	2			
P2	3	0	2	9	0	2			
P3	2	1	1	2	2	2			
P4	0	0	2	4	3	3			

6. Implement the following Algorithms:
   a) First Fit b) Best Fit c) Worst Fit
7. Implement multiprogramming with fixed number of tasks and variable number of tasks. The size of the memory is 1000K. Operating system size is 200K. Number of processes are P1, P2, P3 with sizes 150K, 100K and 70K.
8. Implement the following Page Replacement Algorithms:

a) FIFO b) LFU c) LRU d) Optimal

Consider number of frames are three and Reference string is

2 3 2 1 5 2 4 5 3 2 4 2 4 5

II B.Tech - II Semester

(16BT3HS01) ENVIRONMENTAL STUDIES

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	0	-	3

PRE-REQUISITE: A course on Engineering Chemistry

COURSE DESCRIPTION: Multidisciplinary nature of environment; Natural resources; Ecosystems; Biodiversity; Environment pollution and control; Social issues and environment; Human population and environment; Field studies.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Acquire knowledge on nature of environment, natural resources, ecosystems, biodiversity, environmental pollution and control, social issues and human population.

CO2. Analyze natural resources, ecosystems, biodiversity, environmental pollution and control, social issues and human population.

CO3. Develop strategies for environmental pollution control and natural resource management.

CO4. Solve environmental problems through proper analysis and interpretation of environmental data.

CO5. Choose appropriate techniques in environmental pollution control and natural resource management.

CO6. Understand the impact of social issues and population on environment.

CO7. Provide solutions to individuals, industries and government for environmental sustainable development.

CO8. Follow environmental protection laws for sustainable development.

CO9. Communicate effectively on environmental issues in the form reports.

DETAILED SYLLABUS:

UNIT I: MULTIDISCIPLINARY NATURE OF ENVIRONMENT AND NATURAL RESOURCES (11 Periods)

Multidisciplinary Nature of Environment: Multidisciplinary nature of environment, Segments of environment - Lithosphere, Hydrosphere, Atmosphere, Biosphere; Need for public awareness.

Natural Resources: Renewable and non-renewable resources and associated problems - (a) Forest resources: Use and over exploitation, Deforestation-causes, effects and remedies, Case studies, (b) Water resources: Use and over utilization of surface and groundwater, Conflicts over water, Benefits and problems of large dams, Case studies, (c) Mineral resources: Mining, Adverse effects, Case studies, (d) Food resources: World food problems, Changes caused by agriculture and overgrazing, Effects of modern agriculture, Water logging and salinity, Case studies, (e) Energy resources: Growing needs, Renewable energy resources – Solar, Wind, Hydropower, Hydrogen fuel; Non-renewable energy resources - Coal, Natural gas, Nuclear energy, Role of an individual in conservation of natural resource and equitable use of resources for sustainable lifestyles.

UNIT II: ECOSYSTEMS AND BIODIVERSITY (10 Periods)

Ecosystems: Concept of an ecosystem, Structure and function of an ecosystem - Producers, Consumers, Decomposers; Food chains, Food webs, Ecological pyramids – Types; Characteristic features, Structure and functions of forest ecosystem, Desert ecosystem, Aquatic ecosystem, Energy flow in the ecosystem, Ecological succession.

Biodiversity: Concept and value of biodiversity, Role of biodiversity in addressing new millennium challenges, Hot spots of biodiversity, Threats to biodiversity, Man-wild life conflicts, Endemic, Endangered and extinct species of India, Conservation of biodiversity – In-situ and ex-situ.

UNIT III: ENVIRONMETAL POLLUTION AND CONTROL (08 Periods)

Causes, Adverse effects and control measures of pollution - Air pollution, Water pollution, Soil pollution, Noise pollution, Thermal pollution, Nuclear pollution; Solid waste management – Causes, Effects and control measures of urban and industrial wastes; Hazards and disaster management – Floods, Earthquakes, Tsunamis, Case studies.

UNIT IV: SOCIAL ISSUES AND THE ENVIRONMENT (08 Periods)

Sustainable development, Urban problems related to energy, Environmental ethics – Issues, Solutions; Global warming, Acid rain, Ozone layer depletion, Nuclear accidents and case studies, Wasteland reclamation, Consumerism and waste products, Concept of green technologies, Environment protection act, Air act, Water act, Wildlife protection act, Forest conservation act, Issues involved in enforcement of environmental legislation, Public environmental awareness.

UNIT V: HUMAN POPULATION AND THE ENVIRONMENT (08 Periods)

Population growth, Population characteristics and variation among nations, Population explosion, Family welfare programme, Environment and human health, Human rights, Value education, HIV/AIDS, Women and child welfare, Role of information technology in environment and human health, Case studies, **Field Work/Assignment/Seminar:** Environmental assets – Pond/Forest/Grassland/Hill/ Mountain/Environment impact assessment procedures for local environmental issues. **Total Periods: 45**

TEXT BOOKS:

1. A. Kaushik and C. P. Kaushik, *Environmental Studies*, New Age International (P) Ltd Publications, 4th Edition, 2014.
2. Erach Barucha, *Environmental Studies*, Orient Blackswan, 2nd Edition, 2013.

REFERENCE BOOKS:

II B. Tech. - II Semester

(16BT41204) THEORY OF COMPUTATION

(Common to IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Discrete Mathematical Structures.

COURSE DESCRIPTION: Fundamentals of Computation; Finite State Automaton; Regular Expressions; Grammars; Push Down Automaton; Turing Machine.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on Formal languages and automata.
CO2. Analyze the classification of languages, automata's and their computing power.
CO3. Design grammars and automata (recognizers) for regular expressions and formal languages.
CO4. Solve computational problems using automata.
CO5. Apply theorems to translate automata's and identify the class of languages.

DETAILED SYLLABUS:

UNIT I: FINITE AUTOMATA (10 Periods)

Introduction to Finite automata, The central concepts of automata theory, Deterministic finite automata, Nondeterministic Finite automata, The equivalence of DFA and NDFA, Finite automata with epsilon-transitions, Conversion of epsilon-NFA to NFA and DFA, Mealy and Moore models.

UNIT II: REGULAR EXPRESSIONS AND LANGUAGES (09 Periods)

Regular expressions, Identity rules, Finite automata and Regular expressions, Applications of regular expressions, Pumping lemma for regular languages, Applications of the pumping lemma, Closure properties of regular languages, Equivalence of two regular expressions, Equivalence of two finite automata and minimization of automata.

UNIT III: CONTEXT-FREE GRAMMARS (09 Periods)

Context-free grammars, Parse trees, Applications of context-free grammars, Ambiguity in grammars and languages, Normal forms for context-free grammars, The pumping lemma for context-free languages.

UNIT IV: PUSH DOWN AUTOMATA (07 Periods)

Definition of the pushdown automaton, The languages of a PDA, Equivalence of PDA's and CFG's, Deterministic pushdown automata, Chomsky hierarchy of languages, The model of linear bounded automaton.

UNIT V: TURING MACHINE (10 Periods)

Turing machine model, Representation of turing machine, Language acceptability by turing machine, Design of turing machine, Programming techniques for turing machine, Turing machine with semi-infinite tapes, Multi stack machines and counter machines, Universal turing machine.

Total Periods: 45

TEXT BOOKS:

1. John E. Hopcroft, Rajeev Motwani and Jeffrey D Ullman, *Introduction to Automata Theory, Languages and Computation,* Pearson Education, 3rd Edition, 2011.
2. K.L.P. Mishra and N.Chandrasekaran, *Theory of Computer Science: Automata Languages and Computation,* PHI Learning, 3rd Edition, 2009.

REFERENCE BOOK:

1. John C Martin, *Introduction to Languages and the Theory of Computation*, TMH, 3rd Edition, 2009.

II B. Tech. – II Semester

(16BT40502) DATABASE MANAGEMENT SYSTEMS

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION:

Database Systems; Database Design; Relational Model; SQL Queries, Constraints and Triggers; Schema Refinement and Normal Forms; Transaction Management; Concurrency Control; Overview of Storage and Indexing.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on
- Data models and Database Languages
- Database design
- Normal forms
- Storage and Indexing

CO2. Analyze databases using normal forms to provide solutions for real time applications.

CO3. Design solutions for database problems using database design, views design and framing queries.

CO4. Use database techniques for designing databases, managing databases and its security.

CO5. Select SQL, Hash based Indexing and Tree based Indexing to manage data in databases.

CO6. Apply contextual knowledge to develop database applications related to societal applications like Information Retrieval Systems, Banking and Financial systems.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION TO DATABASE SYSTEMS & DATABASE DESIGN (09 Periods)

Database Systems: Database system applications, Purpose of database systems, View of data-Data abstraction, Instances and Schemas, Data models; Database languages - DDL, DML; Database architecture, Database users and administrators.

Database Design: ER diagrams, Beyond ER design, Entities, Attributes and entity sets, Relationships and relationship sets, Additional features of ER model, Conceptual design with ER model.

UNIT II: THE RELATIONAL MODEL & RELATIONAL ALGEBRA AND CALCULUS (08 Periods)

Relational Model: Integrity constraints over relations, Enforcing integrity constraints, Querying relational data, Logical database design, Introduction to views, Destroying/altering tables and views.

Relational Algebra and Calculus: Preliminaries, Relational Algebra operators; Relational Calculus - Tuple and Domain Relational Calculus; Expressive power of Algebra and calculus.

UNIT III: SQL & SCHEMA REFINEMENT (10 Periods)

SQL: Form of basic SQL query- Examples of basic SQL queries; Nested queries- Introduction to nested queries, Correlated nested queries, Set-comparison operators; Aggregate operators, NULL values- Comparison using NULL values, Logical connectives AND, OR and NOT, Impact on SQL constructs, Outer joins, Disallowing NULL values; Complex integrity constraints in SQL ,Triggers and active databases.

Schema Refinement: Problems caused by redundancy, Decompositions, Problem related to decomposition, Functional dependencies, Reasoning about FDS, Normal forms – First, second and third normal forms, BCNF; Multi valued dependencies, Fourth normal form, Join dependencies, Fifth normal form.

UNIT IV: TRANSACTIONS AND CONCURRENCY CONTROL (09 Periods)

Transactions: Transaction concept, Transaction state, Implementation of atomicity and durability, Concurrent executions, Serializability, Recoverability, Implementation of isolation, Testing for serializability.

Concurrency Control: Lock based protocols, Timestamp based protocols, Validation based protocols, Multiple granularity, Deadlock handling.

UNIT V: STORAGE AND INDEXING (09 Periods)

Storage and Indexing: Data on external storage, File organization and indexing – Clustered indexes, Primary and secondary indexes; Index data structures – Hash based indexing, Tree based indexing; Comparison of file organizations.

Tree Structured Indexing: Intuition for tree indexes, Indexed Sequential Access Method (ISAM), B+ Trees- A dynamic index structure; Search, Insert, Delete; B-Tree index files. **Total Periods: 45**

TEXT BOOKS:

1. Raghu Ramakrishnan and Johannes Gehrke, *Database Management Systems*, Tata McGraw Hill, 3rd Edition, 2014.
2. A. Silberschatz, H.F.Korth and S. Sudarshan, *Database System Concepts*, Tata McGraw Hill, 5th Edition, 2006.

REFERENCE BOOKS:

1. Ramez Elmasri and Shamkant B. Navathe, *Database Systems*, Pearson Education, 6th Edition, 2013.

2. Peter Rob and Carlos Coronel, *Database Systems Design*, Implementation and Management, Cengage Learing, 7th Edition, 2009.

II B. Tech. – II Semester

(16BT41201) **DESIGN AND ANALYSIS OF ALGORITHMS**

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Data Structures.

COURSE DESCRIPTION: Introduction to Algorithms and Asymptotic Notations; Disjoint Sets and Graphs; Divide and Conquer Greedy Method; Dynamic Programming, Back Tracking; Branch and Bound.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Algorithm Complexities and Asymptotic notations.
- Algorithm Design techniques-Divide and Conquer, Greedy Method, dynamic programming, Back tracking, Branch and Bound.

CO2. Analyze the performance of algorithms with respect to Time and Space complexities.

CO3. Design the algorithms for solving real world problems.

CO4. Solve sorting and searching problems using Divide and Conquer method.

CO5. Use dynamic programming and backtracking in finding shortest paths.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION TO ALGORITHMS (08 Periods)

Algorithm, Algorithm Specifications-Pseudocode conventions; Performance Analysis-Space complexity, Time complexity; Asymptotic Notations - Big Oh, Omega, Theta, Little oh, and Little omega; Recurrences.

UNIT II: DISJOINT SETS AND GRAPHS (09 Periods)

Disjoint Sets: Operations, union and find algorithms.

Graphs: Breadth first search and Traversal, Depth first search and Traversal, Introduction to spanning trees, connected components and Bi-connected components.

UNIT III: DIVIDE AND CONQUER & GREEDY METHOD (10 Periods)

Divide and Conquer: General method, Applications - Analysis of binary search, Quick sort, Merge sort, Strassen's matrix multiplication.

Greedy Method: General method, Applications-Job sequencing with deadlines, knapsack problem, Minimum cost spanning trees, Single source shortest paths.

UNIT IV: DYNAMIC PROGRAMMING AND BACK TRACKING (10 Periods)

Dynamic Programming: General Method, Applications - Matrix chain multiplication, Optimal binary search trees, 0/1 knapsack problem, All pairs shortest path problem, Travelling sales person problem.

Back Tracking: General Method, Applications – N Queen problem, Sum of subsets problem, Graph coloring, Hamiltonian cycles.

UNIT V: BRANCH AND BOUND TECHNIQUES (08 Periods)

General method, Applications - Travelling sales person problem, 0/ 1 knapsack problem; LC Branch and Bound solution, FIFO Branch and Bound solution.

Total Periods: 45

TEXT BOOK:

1. Ellis Horowitz, Satraj Sahni and Rajasekharam, *Fundamentals of Computer Algorithms*, Galgotia Publications Pvt. Ltd, New Delhi, 2nd Edition, 2007.

II B. Tech. – II Semester
(16BT51202) OBJECT ORIENTED ANALYSIS AND DESIGN

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on Software Engineering and Object Oriented Programming through C++.

COURSE DESCRIPTION: Introduction to UML, Basic structural modeling; Advanced structural modeling, Class and object diagrams; Basic behavioral modeling; Advanced behavioral modeling; Architectural modeling.

COURSE OUTCOMES:
On successful completion of this course, students will be able to:
CO1. Demonstrate knowledge on principles of object oriented analysis and design through UML Diagrams.
CO2. Analyze user requirements and identify suitable structuraland behavioral modeling components.
CO3. Design and develop UML models for real time software applications.
CO4. Solve real world problems by applying structural and behavioral modeling techniques.
CO5. Use unified modeling language in preparing blue prints for software solutions.
CO6. Design and develop UML models to solve societal problems.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION TO UML AND BASIC STRUCTURAL MODELING (11 Periods)
Introduction to UML: Importance of modeling, Principles of modeling, Object oriented modeling, An overview of UML, Conceptual model of the UML, Architecture, Software development life cycle.
Basic Structural Modeling: Classes-Terms and concepts, Common modeling techniques; Relationships-Modeling simple dependencies, Single inheritance and structural relationships; Common mechanisms, Diagrams.

UNIT II: ADVANCED STRUCTURAL MODELING, CLASS AND OBJECT DIAGRAMS (07 Periods)
Advanced Structural Modeling: Advanced classes, Advanced relationships, Interfaces, Types and roles, Packages, Instances.
Class and Object Diagrams: Terms and concepts, Modeling techniques for class diagram-Modeling simple collaboration, Logical database schema, Forward and reverse engineering; Introduction to object diagrams.

UNIT III: BASIC BEHAVIORAL MODELING (09 Periods)
Basic Behavioral Modeling-I: Interactions-Terms and concepts, Modeling a flow of control; Interaction diagrams-Terms and concepts, Modeling flows of control by time ordering and control by organization, Forward and reverse engineering.
Basic Behavioral Modeling-II: Use cases-Terms and concepts, Modeling the behavior of the element; Use case Diagrams-Terms and concepts, Modeling the context of a system, Requirement of a system, Forward and reverse engineering; Activity Diagrams-Terms and concepts, Modeling a workflow, modeling an operation, Forward and reverse engineering.

UNIT IV: ADVANCED BEHAVIORAL MODELING (07 Periods)
Events and signals-Modeling a family of signals, exceptions; State machines-Modeling the lifetime of an object; Introduction to processes and threads, Time and space-Modeling timing constraints, Distribution of objects and objects that migrate; State chart diagrams-Modeling reactive objects, Forward and reverse engineering.

UNIT V: ARCHITECTURAL MODELING (11 Periods)
Component-Terms and concepts, Modeling executables and libraries, Modeling tables, Files and documents, Modeling an API; Deployment-Modeling processors and devices, Modeling the distribution of components; Component diagrams-Modeling source code, Executable release, Physical database, Adaptable systems, Forward and reverse engineering; Deployment diagrams-Modeling an embedded systems, Client/Server system, Fully distributed systems, Forward and reverse engineering.
Case Studies: Online student course registration system for university, Hospital Management.

Total Periods: 45

TEXT BOOK:

1. Grady Booch, James Rumbaugh and Ivar Jacobson, *The Unified Modeling Language User Guide*, Pearson Education, 2nd Edition, 2009.

REFERENCE BOOKS:

1. Magnus Penker, Brian Lyons, David Fado and Hans-Erik Eriksson, *UML 2 Toolkit*, Wiley-Dreamtech India Pvt. Ltd., 2006.

2. Pascal Roques, *Modeling Software Systems Using UML2*, Wiley-Dreamtech India pvt. Ltd, 2004.

II B. Tech. – II Semester

(16BT41203) SOFTWARE ENGINEERING

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION: Concepts of Software Engineering; Software Process Models; Conventional and Agile Process Models; Software Requirements Engineering Process; System Analysis; Architectural Design; User Interface Design and Re-engineering; Software Testing; Risk and Quality Management.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on:
- Fundamental concepts of software engineering.
- Process models.
- Software development life cycle.

CO2. Analyze software requirements and process models required to develop a software system.

CO3. Design and develop a quality software product using design engineering principles.

CO4. Develop software product as per user and societal requirements.

CO5. Follow standards for software development and quality management.

CO6. Demonstrate skills in applying risk and quality management principles for effective management of software projects.

DETAILED SYLLABUS:

UNIT I: SOFTWARE ENGINEERING AND SOFTWARE PROCESS (11 Periods)

A Generic View of Process: The nature of software, Software engineering- Software engineering layers; The software process, Software engineering practice, Software myths.

Process Models: A Generic process model, Incremental process models, Evolutionary Process models; The unified process, Agile Development-Agility, Agile process, Scrum, Agile modeling (AM), Agile Unified Process (AUP), The Cleanroom strategy.

UNIT II: REQUIREMENTS ENGINEERING AND MODELING (07 Periods)

Requirements Engineering: Functional and non-functional requirements, The software requirements document, Requirements specifications, Requirements engineering processes, Requirements elicitation and analysis, Requirements validation, Requirements management.

Requirements Modeling: Data modeling concepts, Flow-oriented modeling, Case study on requirements modeling for WebApps.

UNIT III: DESIGN ENGINEERING AND METRICS (08 Periods)

Design Engineering: Design within the context of software engineering, The Design process, Design concepts, Software architecture, Architectural styles, Architectural design.

Process and Project Metrics: Metrics in the process and project domains, Software measurement, Metrics for software quality.

UNIT IV: SOFTWARE TESTING STRATEGIES AND APPLICATIONS (09 Periods)

Testing Strategies: A strategic approach to software testing, Strategic issues, Test strategies for conventional software, Test strategies for object oriented software, Validation testing, System testing, The art of debugging.

Testing Conventional Applications: Software testing fundamentals, Basis path testing, White box and Black box testing, Object oriented testing methods.

UNIT V: RISK, QUALITY MANAGEMENT AND REENGINEERING (10 Periods)

Risk and Quality Management: Reactive and proactive risk strategies, Software risks, Risk Mitigation Monitoring and Management (RMMM), RMMM plan, Software quality factors, Defect amplification Model, Formal Technical Reviews (FTR), Software Quality Assurance (SQA)-Tasks, Goals and metrics; Software reliability.

Reengineering: Introduction, Business Process Reengineering (BPR), Software reengineering, Restructuring, Reverse engineering, Forward engineering. **Total Periods: 45**

TEXT BOOKS:

1. Roger S. Pressman, *Software Engineering-A Practitioner's Approach*, McGraw-Hill International Edition, 7th Edition, 2010.
2. Ian Sommerville, *Software Engineering*, Pearson Education, 9th Edition, 2011.

REFERENCE BOOKS:

1. K. K. Aggarwal and Yogesh Singh, *Software Engineering*, New Age International Publishers, 3rd Edition, 2007.
2. Shely Cashman Rosenblatt, *Systems Analysis and Design*, Thomson Publications, 6th Edition, 2006.

II B. Tech. II Semester

(16BT40531) DATABASE MANAGEMENT SYSTEMS LAB

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITE: A course on Database Management Systems

COURSE DESCRIPTION:

Hands on experience on - DDL, DML commands; Query processing using operators; Joins, Views, Single Row functions, Group Functions and SET functions; PL/SQL concepts - Basic Programs, Triggers, Functions, Cursors and Stored Procedures.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate practical knowledge on creation and alteration of tables, insertion and Querying of data.

CO2. Analyze and evaluate the databases using SQL DML/ DDL commands.

CO3. Design database schemas for the sales database, customer database and product database.

CO4. Develop solutions for database problems using stored procedures, stored functions, cursors and triggers.

CO5. Implement DDL and DML commands in SQL and PL/SQL, ORACLE to manage data in databases.

CO6. Apply contextual knowledge to develop database applications related to societal applications like Information Retrieval Systems, Banking and Financial systems.

CO7. Demonstrate communication skills, both oral and written for preparing and presenting reports on databases.

DESCRIPTION OF SALES DATABASE:

ABC is a company operating in the country with a chain of shopping centers in various cities. Everyday large numbers of items are sold in different shopping centers. The Sales database comprises of various tables like CUST, PROD, SALES_DETAIL, STATE_NAME with the following schemas

CUSTOMERS Name	**Type**	**Remark**
CID	VARCHAR2(6)	PRIMARY KEY
CNAME	VARCHAR2(10)	
CCITY	VARCHAR2(8)	
PRODUCTS		
Name	**Type**	**Remark**
PID	VARCHAR2(6)	PRIMARY KEY
PNAME	VARCHAR2(6)	
PCOST	NUMBER(5,2)	
PROFIT	NUMBER(3)	
SALES DETAILS		
Name	**Type**	**Remark**
CID	VARCHAR2(6)	COMPOSITE PRIMARY KEY
PID	VARCHAR2(6)	COMPOSITE PRIMARY KEY
SALE	NUMBER(3)	
SALEDT	DATE	COMPOSITE PRIMARY KEY
STATES		
Name	**Type**	**Remark**
CCITY	VARCHAR2(8)	PRIMARY KEY
STATE	VARCHAR2(15)	

LIST OF EXERCISES:

1. Execute: Data Definition Language (DDL) commands

I. Create the tables in sales database.

II. View the structure of the each table.
III. Change the structure of the table like add new column, change the width of a data type, change the data type of a column, delete column from the table, rename the column name and table names.
IV. Delete all records stored in a table, but the structure of the table is retained.
V. Remove a table from the database.

2. Execute: Data Manipulation Language (DML) commands

STATES PRODUCTS

CCITY	STATE
Mysore	Karnataka
Kolkata	Westbengal
Pune	Maharashtra
Tirupathi	Andhra Pradesh
Chennai	Tamilnadu

CUSTOMERS SALES DETAILS

PID	PNAME	PCOST	PROFIT
p1	pen	100	10
p2	pencil	15.5	2
p3	pendrive	950	50
p4	DVD	35	5
p5	mouse	500.5	Null

CID	CNAME	CCITY
c1	gopal	mysore
c2	haitvik	kolkata
c3	rohan	pune
c4	rajini	chennai
c5	mohan	tirupathi
c6	sanjay	mysore
c7	samhita	Kolkata

CID	PID	SALE	SALEDT
c1	p1	10	1-Sep-16
c2	p3	20	18-Mar-17
c5	p5	30	20-Dec-16
c3	p2	45	1-Sep-16
c4	p4	15	1-Sep-16
c7	p3	22	18-Mar-17
c1	p2	23	1-Sep-16
c2	p1	33	14-Jul-17
c3	p5	14	18-Mar-17
c6	p4	10	14-Jul-17
c1	p2	5	18-Mar-17
c4	p2	50	18-Mar-17
c5	p1	20	14-Jul-17
c3	p3	9	1-Sep-16
c6	p5	10	18-Mar-17
c3	p4	8	20-Dec-16

c7	p3	6	1-Sep-16
c1	p5	9	14-Jul-17

I. Write a query to display all customers.
II. Write a query to display pname of all products.
III. Write a query to display cname and ccity of all customers.
IV. Write a query to display cname, ccity of all customers who lives in mysore.
V. Write a query to display cname and ccity of all customers who live in Kolkata or Chennai.
VI. Find the cost of pencil.
VII. Display CID as Customer_Id, CNAME as Name for all customers.
VIII. Change the name of the product p3 from 'pendrive' to 'modem'.
IX. Find the product ids in sales detail table (eliminating duplicates).
X. Remove the record from sales detail table whose sale value is 5.

2. Implement table level and Column level constraints like NOT NULL, UNIQUE, PRIMARY KEY, FOREIGN KEY, CHECK, DEFAULT.

4. Operators

I. Display the sum of pcost and profit of all products.
II. Display the column heading as "Selling Price" instead of PCOST+PROFIT.
III. Find out what percent of pcost is profit for all products.
IV. List the cids of customers who purchased products on '14-jul-2017'.
V. List only the products whose cost is more than 50.00.
VI. List all the customers who are not belongs to 'pune'.
VII. Write a query to display the pname and pcost of all the products where pcost lies between 5 and 25.
VIII. Write a query to display distinct customer id where product id is p3 or sale date is '18-mar-2017'.
IX. Write a query to display cname, ccity of those customers whose cid is in c1 or c2 or c4 or c5 (using IN operator).
X. List customers whose name starts with 'h'.
XI. Write a query to display all records of prod table in which first and third character of pname is any character and second character is 'e'.
XII. Write a query to display all cname which includes two 'a' in the name.
XIII. List the products with unknown profit.
XIV. Display the profit of products as zero if unknown.

5. Joins and Views

I. Write a query to display cname, pname, sale, saledt for all customers.
II. Write a query to display cname who have purchased Pen.
III. Write a query to display cname, pname, sale for all customers who sold after '01-sep-2016'.
IV. Write a query to display cname,ccity,state of all customers.
V. Write a query to display cname,ccity of all customers who belongs to Karnataka.
VI. Create a view on product table which includes pid, pname and pcost of products.
VII. Insert a row into the view.
VIII. Update the rows in a view.
IX. Delete the rows from view.

6. Order by, group by and having clauses.

I. Write a query to display pname of all records. Sort all records by pname. (use order by clause)
II. Write a query to display cname and ccity of all records. Sort by ccity in descending order.
III. Write a query to display saledt and total sale on the date.
IV. Write a query to display saledt and total sale on the date labeled as sale of all items.
V. Write a query to display saledt and total sale on the date sold after 01-sep-2016.
VI. Write a query to display saledt and total sale on the date labeled as sale of all items other than DVD.
VII. Write a query to display total number of customers who purchase pen.

7. Single Row Functions: Date Function, Numeric and Character Function

I. Write a query to display system date
II. Write a query to display the system date by rounding it to next month.
III. Write a query to display the system date by rounding it to next year.

IV. Write a query to display the last date of the system date.
V. Write a query to display the next date of system date which is Friday.
VI. Write a query to display sale date and date after 02 months from sale date.
VII. Write a query to display system date, sale date and months between two dates.
VIII. Write a query to display the greatest date between sale date and system date, name it as BIG, also display sale date and SYSDATE.
IX. Write a query to display the least date between sale date and system date name it as SMALL, also display sale date and SYSDATE.
X. Write a query to display the product name along with the rounded value of product cost for product name is "Pencil".
XI. Write a query to display product cost along with MOD value if divided by 5.
XII. Write a query to display cname in uppercase, lowercase, titlecase from cust table where customer name is "rohan".
XIII. Write a query to display all concatenated value of cname, ccity by converting cname into titlecase and ccity into uppercase.
XIV. Write a query to display the first 3 characters of cname.
XV. Write a query to display the position of 'm' in the cname of the customer whose name is "samhita".
XVI. Write a query to display the length of all customer names.
XVII. PAD # character in left of product cost to a total width of 5 character position.

8. Group Functions and Set Functions

I. Write a query to display the total count of customer.
II. Write a query to display the minimum cost of product.
III. Write a query to display average value of product cost rounded to 2nd decimal places.
IV. Write a query to display product name with total sale detail in descending order.
V. Write a query to display product name, sale date and total amount collected for the product.
    1. Write a query to display sale date and total sale date wise which was sold after "14-jul-2016".
I. Write a query to display the customer name who belongs to those places whose name is having 'i' or 'p'.
II. Write a query to display customer name who belongs to a city whose name contains characters 'c' and whose name contains character 'a'.
III. Write a query to display the customer name who does not belong to 'pune'.

9. PL/SQL basic programs

I. Write a PL/SQL program to find largest number among three. (Hint: Use Conditional Statement)
II. Write a PL/SQL program to display the sum of numbers from 1 to N using for loop, loop…end and while…loop.

10. SQL Cursor based programs

1. Write a PL/SQL program to display the costliest and cheapest product in PROD table.
b) Write a PL/SQL program which will accept PID and display PID and its total sale value i.e. sum.

11. Functions

I. Write a function that accepts two numbers A and B and performs the following operations.
    1. Addition
    2. Subtraction
    3. Multiplication
    4. Division
II. Write a function that accepts to find the maximum PCOST in PROD table.

12. Procedures

1. Write a procedure that accepts two numbers A and B, add them and print.
2. Write procedures to demonstrate IN, IN OUT and OUT parameter.

13. Triggers

a) Develop a PL/SQL program using BEFORE and AFTER triggers.
b) Create a row level trigger for the PROD table that would fire for INSERT or PDATE or DELETE operations performed on the PROD table. This trigger will display the profit difference between the old values and new values.

PRE-REQUISITE: A course on Object Oriented Analysis & Design

COURSE DESCRIPTION:

Hands on Practice to Design and Implement - Automated Teller Machine, Library Information System, Online Ticket Reservation System, Point of Sales, Airport Simulation, Course Registration System, Home Appliance Control System and Hospital Management System using Object-Oriented Language.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate practical knowledge on principles of object oriented analysis and design through UML diagrams.
CO2. Analyze user requirements and identify suitable structural and behavioral modeling components.
CO3. Design and develop UML models for real time applications.
CO4. Solve real world problems by applying structural and behavioral modeling techniques.
CO5. Use UML to design the software system.
CO6. Apply contextual knowledge of UML models to assess societal issues.
CO7. Involve as individual to solve case studies.
CO8. Develop a model for complex computational activities by preparing and presenting reports through effective communication.

LIST OF EXERCISES:

Case studies given below should be Modeled using Visual Modeling tools in different views i.e. Use case view, logical view, component view, Deployment view.

CASE STUDY 1: AUTOMATED TELLER MACHINE (ATM)

Problem Statement:

Software is designed for supporting a computerized ATM banking network. All the process involved in the bank is computerized these days. All the accounts maintained in the bank and also the transactions effected, including ATM transactions are to be processed by the computers in the bank. An ATM accepts a relevant cash card, interacts with user, communicates with the central system to carry out the transaction, dispenses cash, and prints receipts. The system to be designed and implemented must include appropriate record keeping and security provisions. The system must handle concurrent access to the same account.

CASE STUDY 2: LIBRARY INFORMATION SYSTEM Problem Statement:

A library lends books and magazines to members, who are registered in the system. Also it handles the purchase of new titles for the library. Popular titles are bought in multiple copies. A member can reserve a book or magazine that is not currently available in the library, so that when it is returned back to the library, that person is notified. The library can easily create, update and delete information about the titles, members, loans and reservations in the systems.

CASE STUDY 3: ONLINE TICKET RESERVATION FOR RAILWAYS

Problem Statement:

Computer play an integral part of the day in today's life. It makes the entire job easier and faster, every job is computerized so that the ticket reservation can be done over the online ticket reservation system. During the booking of the ticket reservation, passenger has to select origin, date of journey, destination, class of train etc. The reservation counter keeps track of passenger's information. Thus, the system will have all the details about the trains and facilities provided by them. There are various trains with the different level of convenience for the passengers. The whole database will be maintained by database administrator. There are varieties of trains where the passengers can select the train according to the convenience for their destination journey. The journey could be within the state or across the India. Each train has the three types of classes i.e. Sleeper class, First class and AC compartment. Design the application for the above problem description.

CASE STUDY 4: A POINT OF SALE (POS) SYSTEM

Problem Statement:

A POS System is a computerized application used to record sales and handle payments; it is typically used in a retail store. It includes hardware components such as a computer, bar code scanner and software to run the system. It interfaces to various service applications, such as a third-party tax calculator and inventory control. These systems must be relatively fault tolerant; that is, even if remote services and temporarily unavailable they must still be of capturing sales and handling at least cash payments. A POS system must support multiple and varied client-side terminals and interfaces such as browser, PDA's and touch-screens.

CASE STUDY 5: A MULTI-THREADED AIRPORT SIMULATION

Problem Statement:

Simulate the operations in an airport. Your application should multiple aircrafts using several runways and gates avoiding collisions/conflicts. Loading: an aircraft uses the runway, lands and then taxis over to the terminal. Take-Off an aircraft taxies to the runway and then takes off.

CASE STUDY 6: ONLINE STUDENT COURSE REGISTRATION SYSTEM FOR UNIVERSITY

Problem Statement:

At the beginning of each Semester students may request A course catalogue containing a list of course offerings for the Semester. Information about each course, such as professor, department, and prerequisites will be included to help students make informed decisions. The new on-line registration system will allow students to select four course offerings for the coming Semester. In addition, each student will indicate two alternative choices in case A course offering becomes filled or cancelled. No course offering will have more than ten students. No course offering will have fewer than three students. A course offering with fewer than three students will be cancelled. Once the registration process is completed for a student, the registration system sends information to the billing system, so the student can be billed for the Semester. Professors must be able to access the on-line system to indicate which courses they will be teaching. They will also need to see which students signed up for their course offering. For each Semester, there is a period of time that students can change their schedules. Students must be able to access the on-line system during this time to add or drop courses. The billing system will credit all students for courses dropped during this period of time.

CASE STUDY 7: HOME APPLIANCE CONTROL SYSTEM

Problem Statement:

A home appliance control system (HACS) is a system which provides various services to remotely operate on home appliances, such as microwave oven, TV, and garage door etc through remote devices such as mobile phone, desktop and palm-top.A home appliance control system (HACS) is a system which is controlled by a remote system such as a mobile phone or a palm-top, and at the same time controls, monitors and coordinates home appliances such as air conditioner, microwave oven, garage doors, TV set, VCR, audio controller, indoor/outdoor lights, water sprinkler, home security system, bath tub controller, etc. In order to activate home appliances and to allow for different ways of cooking, the HACS needs mechanisms for communication between the different devices in the system, and for coordination among the various processes running on such devices. The system administrator of the HACS system has the ability to add a new appliance or delete an existing one. The system administrator has the ability to add a new remote device and configure it with HACS or delete an existing one when it is not used. Also the system administrator can create an account for a new user or delete existing account if it is no longer used.

CASE STUDY 8: HOSPITAL MANAGEMENT SYSTEM

Problem Statement:

Hospital Management System (HMS) is state-of-the-art software that offers comprehensive solutions to various segments of Healthcare Industry such as Super Specialty, Multi-specialty and General Hospitals of varied capacities, small Nursing Homes, HMOs, Polyclinics and General Practitioners. This HMS solution addresses the issues from multi-discipline angels namely patients, Doctors, Pharmacy, Hospital Management and Services. The software provides both clinical as well as patient care aspects to hospital management. The software is divided into different modules, each addressing a specific activity of the hospital and there by facilitating better patient care. Each module can be used as a standalone solution or can be integrated in a phased manner. Modules are designed so that they meet the present and future requirements of the hospital. HMS offers various sub-systems and a seamless integration. By being modular, each module can be used as a standalone solution or can be integrated in a phased manner. Modules are also so designed to meet the present as well as future requirements of the organization and process a unique ability with the business growth. HMS consists of the Base modules, Add-on modules and Specialty modules. Additional modules both add-on and specialty modules can be seamlessly integrated to the HMS at any time. The Integration Manager takes care of all the data consistency issues.

II B. Tech. – II Semester

(16BT4HS31) **SOFT SKILLS LAB**

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITE: English Language Laboratory in I B.Tech or English Laboratory at Diploma Level.

COURSE DESCRIPTION: This course covers Body Language; Assertiveness; Goal Setting; Creative Thinking; Interpersonal Skills; Team Work; Conflict Management; Etiquette; Report Writing; Group Discussions; Interviewing Skills.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Acquire knowledge in
- Goal Setting
- Creative Thinking
- Leadership Skills and
- Team Work

CO2. Analyze the situations and develop skills for
- Body Language
- Personality Development and
- Stress Management

CO3. Apply the techniques of soft skills in a problem situation enhanced through multimedia software.

CO4. Function effectively as an individual and as a member in diverse teams.

CO5. Communicate effectively in public speaking in formal and informal forums.

LIST OF EXERCISES:

1. Body Language
2. Assertiveness
3. Goal Setting
4. Creative Thinking
5. Interpersonal Skills
6. Team Work
7. Conflict Management
8. Etiquette
9. Report Writing
10. Resume Writing
11. Group Discussions
12. Interviewing Skills

Total Lab Slots: 10

III B. Tech. – I Semester

(16BT5HS01) MANAGEMENT SCIENCE

(Common to CSE and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION: Concepts of Management; Environmental Scanning; Concepts Related to Organization; Operations Management; Work Study; Statistical Quality Control; Inventory Management; Marketing; Human Resource Management; Project Management; Project Crashing; Entrepreneurship; Contemporary Management Practices.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate the concepts of operations management, human resources management, project management and contemporary management practices in managerial context.

CO2. Identify and analyse management problems in the business organizations reaching substantiated conclusions using principles of management.

CO3. Design appropriate organization structure for meeting the needs of the organization with consideration of the employees of the organization.

CO4. Competently employ broad based analytical tools for decision making, system design, analysis and performance.

CO5. Provide solution to organizations for sustainable development.

CO6. Apply knowledge of engineering and management principles to manage the projects in multidisciplinary environments.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION TO MANAGEMENT AND ORGANIZATION (09 Periods)

Concepts of management and Administration, Nature and Importance of management, Evolution of management thought, Functions of management, Contributions of F.W. Taylor and Henry Fayol to the management, Systems approach to management, Managerial skills, Elements of corporate planning process, Environmental scanning, SWOT Analysis, Social responsibilities of management.

Basic concepts related to organization, Objectives and Principles, Types of organizations- Line Organization, Line and Staff Organization, Functional Organization, Matrix Organization, Network organization.

UNIT II: OPERATIONS MANAGEMENT (12 Periods)

Plant location- Factors and Principles; Plant Layout- Principles and Types; Methods of production, Work study- Basic procedure involved in method study and work measurement; Statistical Quality Control- Factors affecting quality, Control charts for variables and attributes, Acceptance sampling; Materials management- objectives, Inventory- Types of inventory, Classical EOQ model, ABC analysis; Purchase procedure, Stores management, Marketing- Functions, Channels of distribution.

UNIT III: HUMAN RESOURCE MANAGEMENT (HRM) (06 Periods)

Nature and scope of HRM, Functions of HRM, Role of HR Manager in an organization, Job evaluation, Merit rating, Maslow's hierarchy of human needs, McGregor's theory X and theory Y, Herzberg's two-factor theory of motivation.

UNIT IV: PROJECT MANAGEMENT (PERT/CPM) AND ENTREPRENEURSHIP (09 Periods)

Network analysis - Critical path method (CPM), Program evaluation and review technique (PERT); Project cost analysis - Project crashing.

Introduction to Entrepreneurship, Entrepreneurial Traits, Entrepreneur vs Manager, Role of Entrepreneurship in Economic Development, Women as an Entrepreneur.

UNIT V: CONTEMPORARY MANAGEMENT PRACTICES (09 Periods)

Basic concepts of Material Requirements Planning, Enterprise resource planning (ERP), Just In Time (JIT) system, Total Quality Management (TQM), Value Chain Analysis, Business Process Outsourcing (BPO), Globalization, Management Challenges, Supply Chain Management (SCM), Role of Information Technology in managerial decision making, Six Sigma Concept, Maintenance Strategies- Preventive, Periodic and Breakdown Maintenance. **Total Periods: 45**

TEXT BOOKS:

1. O.P. Khanna, *Industrial Engineering and Management*, Dhanpat Rai and Sons, 2010.
2. Martand T.Telsang, *Industrial Engineering and Production Management*, S.Chand, 2nd Edition, 2006.

REFERENCE BOOK:

1. Koontz and Weihrich, *Essentials of Management*, TMH, 6th Edition, New Delhi, 2007.
2. N.D. Vohra, *Quantitative Techniques in Management*, TMH, 2nd Edition, New Delhi.

III B. Tech. – I Semester

(16BT50501) COMPUTER NETWORKS

(Common to ECE, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on Computer Organization and Operating Systems

COURSE DESCRIPTION:
Introduction to Computer Networks; The Physical Layer; The Data Link Layer; The Medium Access Control Sub-layer; The Network Layer; The Transport Layer; The Application Layer.

COURSE OUTCOMES:
On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Functionalities of Various OSI and TCP/IP layers
- 3G Mobile phone networks, 802.11
- TCP,UDP and SMTP

CO2. Analyze the issues related to data link, medium access and transport layers by using channel allocation and connection management schemes.
CO3. Design and compute subnet masks and addresses for networking requirements.
CO4. Solve problems related to Flow control, Error control, congestion control and Network Routing.
CO5. Apply Network Standards - 802.3 and 802.11 for developing computer Networks.
CO6. Assess the impact of wired and wireless Networks in the context of societal applications like VoIP, Multi-user Network Games, Internet of Things.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION AND PHYSICAL LAYER (09 Periods)
Introduction: Network hardware, Network software, Reference models - OSI, TCP/IP; Example networks – Internet; Wireless LANs - 802.11.
Physical Layer: Guided transmission media, Wireless transmission.

UNIT II: DATA LINK LAYER AND MEDIUM ACCESS CONTROL SUBLAYER (10 Periods)
Data Link Layer: Data link layer design issues, Error detection and correction-CRC, Hamming codes, Elementary data link protocols, Sliding window protocols.
Medium Access Control Sublayer: ALOHA, Carrier sense multiple access protocols, Collision-free protocols, Ethernet, Data link layer switching-Repeaters, Hubs, Switches, Routers, and Gateways.

UNIT III: NETWORK LAYER (10 Periods)
Network layer design issues, Routing algorithms - Shortest path, Flooding, Distance vector, Link state routing, Hierarchical, Broadcast, Multicast, Anycast; Congestion control algorithms, Network layer in the internet - The IP version 4 protocol, IP addresses, IP version 6, Internet control protocols.

UNIT IV: TRANSPORT LAYER (09 Periods)
UDP – Segment header, Remote procedure call, Real-time transport protocols; TCP **–** service model, Protocol, Segment header, Connection establishment, Connection release, Sliding window, Timer management, Congestion control.

UNIT V: APPLICATION LAYER (07 Periods)
Domain Name System (DNS)-Name space, Domain resource records, Name servers; Electronic mail-Architecture and services, User agent, Message formats, Message transfer, Final delivery; The World Wide Web- Architectural overview, HTTP.

Total Periods: 45

TEXT BOOK:
1. Andrew S. Tanenbaum and David J. Wetherall, *Computer Networks*, Pearson Education, 5th Edition, 2015.

REFERENCE BOOKS:
1. Behrouz A. Forouzan, *Data Communication and Networking*, Tata McGraw-Hill, 4th Edition, 2010.

III B. Tech. - I Semester

(16BT51501) COMPILER DESIGN

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Theory of Computation

COURSE DESCRIPTION:
Lexical analysis; Parsers; Run Time Environments; Syntax Directed Translation; Type checking; Code Optimization; Code Generation and Compiler tools.

COURSE OUTCOMES:
On successful completion of this course, students will be able to:
CO1. Demonstrate knowledge on the phases involved in design of compilers.
CO2. Analyze code optimization Techniques.
CO3. Design experiments for implementing parsing techniques.
CO4. Synthesize rules in compiler to demonstrate semantic attribution during Parsing.
CO5. Use compiler construction tools such as LEX and YACC for designing a Parser.
CO6. Apply Ethical principles for usage of stack and other storage memory.

DETAILED SYLLABUS:
UNIT I– INTRODUCTION TO COMPILER AND LEXICAL ANALYSIS (09 Periods)
Structure of a compiler, Interpretation- Interpreters, Recursive interpreters, Iterative interpreters.
Lexical Analysis: The Role of the Lexical Analyzer, Input Buffering, Specification of Tokens, The Lexical-Analyzer Generator LEX.

UNIT II – SYNTAX ANALYSIS (09 Periods)
The Role of the Parser, Eliminating Ambiguity, Eliminating of Left Recursion and Left Factoring.
Top-Down Parsing: Recursive descent parsing, Non Recursive Predictive parsing, LL (1) Grammars, A traditional top-down parser generator—YACC
Bottom-Up Parsing: Shift reduce parsing, LR parsers – Simple LR parser, Canonical LR parser, LALR parser, Using Ambiguous Grammars.

UNIT III – SYNTAX DIRECTED TRANSLATION AND TYPE CHECKING (09 Periods)
Syntax directed definition, S-attributed and L-attributed definitions, Construction of syntax trees.
Type Checking: Type Expressions, Type Equivalence, Rules for Type Checking, Type Conversions, Overloading of Functions and Operators.

UNIT IV – INTERMEDIATE CODE GENERATOR AND RUN TIME ENVIRONMENTS (09 Periods)
Preprocessing the intermediate code,Preprocessing of expressions, Preprocessing of if-statements and goto statements, Preprocessing of routines**,**Variants of Syntax Trees, Three Address Code, Boolean expressions, Flow-of-Control Statements, Control- Flow Translation of Boolean Expressions.
Run time Environments:
Storage organization, Stack Allocation of Space, Access to Nonlocal Data on the Stack.

UNIT V – CODE OPTIMIZATION AND CODE GENERATION (09 Periods)
Basic Blocks and Flow Graphs, Optimization of Basic Blocks, The principal sources of optimization, Introduction to data flow analysis.
Code Generation:
Issues in the Design of a Code Generator, The Target Language, Simple Code Generator, Peephole optimization, Register allocation and assignment. **Total No. Of Periods:45**

TEXT BOOK:
1. Alfred V. Aho, Monica S.Lam, Ravi Sethi, Jeffrey D.Ullman, *Compilers–Principles, Techniques and Tools*, Pearson Education, 2nd Edition, 2012.

REFERENCE BOOKS:
1. Dick GruneKees van Reeuwijk Henri, *Modern Compiler Design,* Springer, 2nd Edition, 2012.

III B. Tech. – I Semester

(16BT50442) MICROPROCESSORS AND INTERFACING

(Common to CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on Digital Logic Design and Computer Organization.

COURSE DESCRIPTION: INTEL 8086 & 8051- Architectures; Instruction set; Programmable Interfacing Concepts; ADC, DAC, 8255, 8257,8259 ,8279,8251, Advanced peripheral Interfacing; Applications.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO 1: Demonstrate knowledge in
  a) Internal Hardware details of Intel 8086, 8051 & programming devices like 8255, 8257, 8259, 8279 and 8251.
  b) Interfacing various peripherals to build standalone systems.

CO2. Analyze various peripherals and interfacing techniques.

CO3. Design application based Microcomputer system using 8086 and 8051.

CO4. Solve problems by providing microcomputer-based real time solutions.

CO5. Apply programming tools, appropriate techniques and resources to complex engineering activities for microprocessor and microcontroller based systems with understanding of limitations.

C06: Solving societal problems by applying concepts of microprocessors and microcontrollers.

DETAILED SYLLABUS:

UNIT I – INTEL 8086 ARCHITECTURE AND PROGRAMMING (09 Periods)

Evolution of Microprocessors, Architecture of 8086 microprocessor, Register organization, Physical Memory Organization, Signal description of 8086, General Bus Operation Minimum and Maximum mode operation of 8086, Timing diagram, Addressing modes.

UNIT II – ASSEMBLY LANGUAGE PROGRAMMING WITH 8086 AND INTERRUPTS (11 Periods)

Instruction set of 8086, Assembler directives and Operators; Interrupts and Interrupt service routines, Interrupt Cycle of 8086, Non Maskable interrupt, Maskable interrupt (INTR), Interrupt Programming, Passing Parameters to procedures, MACROS.

UNIT III–BASIC PERIPHERALS AND THEIR INTERFACING WITH 8086 (08 Periods)

Semiconductor memory Interfacing, Dynamic RAM interfacing, Interfacing I/O ports, Programmable Input-Output Port (PIO) 8255, Modes of operations of 8255, Interfacing analog to digital and digital to analog converters, stepper motor interfacing.

UNIT IV – SPECIAL PURPOSE PROGRAMMABLE PERIPHERAL DEVICES (09 Periods)

Programmable Interrupt Controller 8259A; The keyboard/Display Controller 8279-Architecture, Signal Description, Modes of operations; Programmable Communication Interface 8251 USART; DMA Controller 8257, DMA Transfers and Operations.

UNIT V – INTRODUCTION TO 8051 MICROCONTROLLER (09 Periods)

Microprocessors Vs Microcontrollers, The 8051 Architecture: Introduction, 8051 Microcontroller Hardware, input/output pins, Ports and circuits, External Memory, , Counters and Timers, Serial Data Input / Output, Interrupts; Addressing Modes, Instruction set of 8051, simple programs on arithmetic operations using 8051.

Total Periods: 46

TEXT BOOKS:

1. A.K. Ray & K.M.Bhurchandi, *Advanced Microprocessors and Peripherals- Architecture, Programming and Interfacing*, TMH, 2002 reprint.
2. Kenneth J. Ayala, *The 8051 Microcontroller-Architecture, Programming & Applications*, 3rd Edition, Cengage learning, June 2004.

REFERENCE BOOKS:

2. Yu-cheng Liu, Glenn A. Gibson, *Microcomputer systems:The 8086/8088 Family architecture,* Programming and Design, PHI, 2006.
3. Mazidi and Mazidi, *The 8051 Microcontroller and Embedded Systems*, PHI, 2000.

III B. Tech. - I Semester

(16BT51502) SYSTEMS SOFTWARE

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Operating Systems.

COURSE DESCRIPTION:
Kernel and Shell; The shell interpretive cycle ; Shell scripts; System calls for the File System - Open, Read, Write, File and record locking ; Process states and transitions;Process Creation; TCP/IP Basics; Resolving IP Addresses, Maintaining Security.

COURSE OUTCOMES:
On successful completion of this course, students will be able to
CO1. Demonstrate knowledge on commands for text processing and Files.
CO2. Analyze and Interpret process and System management techniques used in System Software
CO3. Use inbuilt UNIX system APIs to control system and its process.
CO4. Apply algorithms to manipulate the process context in system Software.
CO5. Perform effective troubleshooting using system error defines available with the operating system.

DETAILED SYLLABUS:
UNIT I: UNIX ARCHITECTURE AND COMMAND USAGE (09 Periods)
Division of Labor : Kernel and Shell, The file and process, The System calls, Features of UNIX, Internal And External Commands, Command Structure, General-Purpose Utilities: cal, date, echo, printf, bc, script, Email Basics, mailx, passwd, who, uname, tty, sty.
Handling Files: The file, File Name, The parent-child relationship, The home variable, pwd, cd, mkdir, rmdir, ls, cat, cp, rm, mv, more, file, wc, od, cmp, comm, diff, gzip, gunzip, tar, zip and unzip.

UNIT II: UNIX KERNEL AND SYSTEM CALLS (09 Periods)
Introduction to system concepts, Kernel Data Structures, System Administration
System calls for the File System: Open, Read, Write, File and record locking, Adjusting the position of file I/O, Close, File creation, Creation of special files, Change directory and change root, Change owner and change mode, Stat and fstat , Pipes, Dup, Mounting and unmounting file systems, Link, Unlink, File system abstractions, File system maintenance

UNIT III: PROCESS DESCRIPTION (09 Periods)
Process states and transitions, Layout of system memory, The context of a process, Saving the context of process, Manipulation of the process address, Sleep

UNIT IV: PROCESS CONTROL (08 Periods)
Process creation, Signals, Process termination, Awaiting process termination, Invoking other programs, The user id of a process, Changing the size of a process, The shell, System boot and init process.

UNIT V: ADVANCED SYSTEM MANAGEMENT (10 Periods)
Networking Tools: TCP/IP Basics, Resolving IP Addresses, The Applications, Ping: Checking the Network, telnet:Remote Login, ftp:File Transfer Protocol, SSH: The Secure Shell, The SSH Tools, The Domain Name System(DNS).
Maintaining Security, Partitions and File Systems, The Standard File Systems and Their Types, fdisk: Creating Partitions, mkfs: Creating a File System, Mounting and Unmounting File Systems, fsck: File System Checking.

Total Periods: 45

TEXT BOOKS:
1. Sumitabha Das*, Unix Concepts and Applications*, TMH, 4th Edition, 2006.
2. Maurice J. Bach, *The Design Of The Unix Operating System*, PHI, 2008.

REFERENCE BOOKS:

2. N.B Venkateswarlu*, Advanced Unix programming*, BS Publications, 2nd Edition, 2010.
3. Yashwanth Kanitkar, *Unix Shell programming,* BPB Publications, 2010.

III B. Tech. – I Semester
(16BT30503) **PYTHON PROGRAMMING**
(Interdisciplinary Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A course on Object Oriented Programming through C++.

COURSE DESCRIPTION:
Data types and Expressions; Control Statements; Strings; Text Files; Lists; Dictionaries; Functions; Objects and their use; Exception Handling; Design with Classes; Graphical User Interface.

COURSE OUTCOMES:
On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge in:
- Data Types, Variables, Expressions
- Control statements, Strings and Text files.
- Lists, Dictionaries and Functions.
- Objects and Design with classes
- Exception Handling and GUI

CO2. Analyze complex computational problems.
CO3. Design solutions for real life computational problems
CO4. Solve complex problems using python scripting constructs.
CO5. Implement python scripts using Integrated Development Environment.
CO6. Apply Python programming knowledge to solve problems related to societal applications like Medical and Weather Forecasting.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION, DATA TYPES AND EXPRESSIONS (08 Periods)
Introduction: Computer science, Computer algorithms, Computer software, The Python programming language, First program in Python.
Data Types and Expressions: Literals, Variables and Identifiers, Operators, Expressions and Data types.

UNIT II: CONTROL STRUCTURES, LISTS, DICTIONARIES AND SETS (08 Periods)
Control Structures: Control structures, Boolean expressions, Selection control and Iterative control.
Lists: List structures, Lists in Python, Iterations over lists, Assigning and copying lists, List comprehensions.
Dictionaries, Tuples and Sets: Dictionary types in Python, Implementation of Dictionary, Tuples, Set data type - the Set data type in Python, Implementation of sets.

UNIT III: DESIGN WITH FUNCTIONS, STRINGS AND TEXT FILES (09 Periods)
Program routines, Functions, Recursion-Recursive functions, Recursive problem solving, Iteration Vs Recursion, A case study of Towers of Hanoi using recursion; Using text files, String processing, Exception handling, A Case study on cigarette Use/Lung cancer Correlation program.

UNIT IV: OBJECTS AND THEIR USE, OBJECT ORIENTED PROGRAMMING (09 Periods)
Objects and Their Use: Software objects, Turtle graphics- Creating a turtle graphics window, The default turtle, Fundamental turtle attributes and behavior, Additional turtle attributes, Creating multiple turtles.
Object Oriented Programming: Encapsulation, Inheritance, and Polymorphism.

UNIT V: GUI PROGRAMMING (11 Periods)
Tkinter Overview - tkinter pragmatics, Documentation, Extensions, structure; tkinter coding alternatives, adding buttons and callbacks-lambda, bound method, callable class object, Binding events; adding multiple widgets, Reusable GUI Components with classes, Dialogs, Entry, check buttons and Radio buttons, Scales, Menus.

Total Periods: 45

TEXT BOOKS:

1. Charles Dierbach, *Introduction to Computer Science using Python: A Computational Problem-Solving Focus,* Wiley India Edition, 2016.
2. Mark Lutz, *Programming Python*, O'Reilly Publications, 4th Edition, 2011.

REFERENCE BOOK:

1. Kenneth Lambert and B.L. Juneja, *Fundamentals of Python*, Cengage Learning, 3rd Edition, 2012.

III B. Tech. – I Semester

(16BT71203) INFORMATION RETRIEVAL SYSTEMS

(Interdisciplinary Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on Data Structures and Database Management Systems.

COURSE DESCRIPTION: Architecture of Information Retrieval Systems; Functional Capabilities; Data Structures; Mathematical Algorithms; Indexing; Similarity and Clustering; Human Perception and Presentation; Text Search Techniques and Evaluation Measures.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:

- Information Retrieval System Architecture
- Functional capabilities
- Indexing and data presentation methods.
- Evaluation measures of Information Retrieval Systems.

CO2. Analyze indexing methods and clustering algorithms to group similar data items for efficient search.

CO3. Design and develop data structures used to store and retrieve data items.

CO4. Demonstrate problem solving skills in the usage of mathematical algorithms for information retrieval.

CO5. Use text search algorithms and collaborative filtering techniques for information retrieval and visualization methods for information presentation.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION (09 Periods)

Primary information retrieval problems, Objectives of information retrieval system, Functional overview, Understanding the search functions, Relationship to DBMS, Digital libraries and data warehouses, Data structures and mathematical algorithms.

UNIT II: INGEST AND INDEXING (09 Periods)

Ingest: Introduction, Item receipt, Duplicate detection, Item normalization, Zoning and creation of processing tokens, Stemming, Entity processing, Categorization, Citational metadata.

Indexing: Manual indexing process, Automatic indexing of text and multimedia.

UNIT III: SEARCH AND CLUSTERING (12 Periods)

Search: Similarity measures and ranking, Hidden markov models, Ranking algorithms, Relevance feedback, Selective dissemination of information search, Weighted searches for boolean systems, Multimedia searching.

Clustering: Introduction to clustering, Thesaurus generation, Item clustering, Hierarchy of clusters.

UNIT IV: INFORMATION PRESENTATION (07 Periods)

Introduction, Presentation of the hits, Display of the item, Collaborative filtering, Multimedia presentation, Human perception and presentation.

UNIT V: SEARCH ARCHITECTURE AND EVALUATION (08 Periods)

Search Architecture: Index search optimization, Text search optimization, GOOGLE Scalable multiprocessor architecture.

Evaluation: Information system evaluation, Measures used in system evaluation

Total Periods: 45

TEXT BOOK:

1. Gerald Kowalski, *Information Retrieval Architecture and Algorithms,* Springer, 2013.

REFERENCE BOOKS:

III B. Tech. - I Semester

(16BT51503) INTELLIGENT COMPUTING SYSTEMS

(Interdisciplinary Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES:
Courses on Discrete Mathematical Structures and Design and Analysis of Algorithms

COURSE DESCRIPTION: AI Problems; Problem Characteristics Search Algorithms; Inference in Propositional Logic; Forward and Backward Chaining Algorithms; Truth Maintenance Systems; Basic Probability Notations; Forms of Learning; Evolutionary Computing.

COURSE OUTCOMES:
On successful completion of this course, students will be able to:

CO1. Demonstrate Knowledge on
- Artificial Intelligent Techniques
- Searching algorithms
- Inference in Propositional and First Order Logic
- Evolutionary Computing

CO2. Analyze and solve problems involving search algorithms.
CO3. Design and develop knowledge based solutions for AI based systems.
CO4. Apply knowledge representation, reasoning, and machine learning techniques to solve real world problems.
CO5. Use appropriate evolutionary algorithms in intelligent computing systems.
CO6. Demonstrate the use of intelligent systems' principles in societal context to solve diverse problems.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION (09 Periods)
The AI Problems, The Underlying Assumption, The Levels of the Model, Criteria of Success, Some General References, One Final Word and Beyond. Problems, Problem Spaces, and Search: Defining the Problem as a State Space Search, Production Systems, Problem Characteristics, Production System Characteristics.

UNIT II: SEARCHING AND PROBLEM SOLVING (09 Periods)
Issues in the Design of Search Programs. Uninformed Search Strategies, Avoiding Repeated States. Informed Search and Exploration: Informed (Heuristic) Search Strategies, Heuristic Functions, Local Search Algorithms and Optimization Problems, Local Search in Continuous Spaces.

UNIT III: KNOWLEDGE AND REASONING (09 Periods)
Logical Agents, Knowledge–Based Agents, The Wumpus World, Logic, Propositional Logic a Very Simple Logic, Reasoning Patterns in Propositional Logic, Effective Propositional Inference, Agents Based on Propositional Logic.

First-Order Logic:
Representation Revisited, Syntax and Semantic of First-Order Logic, Using First-Order Logic, Knowledge Engineering in First-Order Logic. Inference in First-Order Logic: Propositional vs. First-Order Inference, Unification and Lifting, Forward Chaining, Backward Chaining, Resolution.

UNIT IV: KNOWLEDGE REPRESENTATION AND REASONING (09 Periods)
Ontological Engineering, Categories and Objects, Actions, Situations, and Events, Mental Events and Mental Objects, The Internet Shopping World, Reasoning Systems for Categories, Reasoning with Default Information, Truth Maintenance Systems. Uncertainty, Acting Under Uncertainty, Basic Probability Notation, The Axioms of Probability, Inference Using Full Joint Distributions, Independence, Bayes' Rule and its use.

UNIT V: LEARNING AND EVOLUTIONARY COMPUTATION CONCEPTS (09 Periods)
Learning from Observations, Forms of Learning, Inductive Learning, Learning Decision Trees, Ensemble Learning, Computational Learning Theory. History of Evolutionary Computation, Evolutionary Computation Overview, Genetic algorithms, Evolutionary Programming and strategies, Implementation issues, Genetic algorithm implementation, Particle Swarm Optimization Implementation.

Total Periods: 45

TEXT BOOKS:
1. Elaine Rich, Kevin Knight and Shivashankar B Nair, *Artificial Intelligence,* Tata McGraw Hill, 3rd Edition, 2007.
2. Stuart Russell and Peter Norvig, *Artificial Intelligence A Modern Approach*, Pearson Education, 2nd Edition, 2011.

REFERENCE BOOKS:
1. Russell C.Eberhart and Yuhui Shi, *Computational Intelligence: Concepts to Implementations,* Elsevier, 2007.

2. George F. Luther, *Artificial Intelligence: Structures and Strategies for Complex Problem Solving,* Pearson Education, 5th Edition, 2001.

III B. Tech. – I Semester

(16BT40501) COMPUTER GRAPHICS

(Interdisciplinary Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on Matrices and Numerical Methods and Programming in C.

COURSE DESCRIPTION:

Introduction to Computer Graphics; Output Primitives; 2-D Geometric Transformations and Viewing; 3-D Geometric Transformations and Viewing; 3-D Object Representation; Visible Surface Detection Methods and Rendering Methods.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on
- Graphical interactive devices
- Viewing transformations
- 2-D & 3-D object representations and
- Surface detection methods

CO2. Analyze Transformations and Clipping algorithms for 2-D and 3-D objects.
CO3. Design algorithms to generate points, lines, and polygons for 2-D and 3-D objects.
CO4. Develop innovative methods and techniques for 2-D and 3-D modeling.
CO5. Apply appropriate techniques and tools for surface detection and rendering methods.
CO6. Use contextual knowledge to solve problems related to societal issues.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION AND OUTPUT PRIMITIVES (10 Periods)

Overview of Graphics Systems: Video display devices, Raster-scan systems, Random-scan systems, Graphics monitors and workstations, Input devices.

Output Primitives: Points and lines, Line-drawing algorithms, Midpoint circle algorithm, Midpoint ellipse algorithm.

UNIT II: FILLED AREA PRIMITIVES AND 2-D GEOMETRIC TRANSFORMATIONS (09 Periods)

Filled Area Primitives: Scan-line polygon fill algorithm, Boundary-fill algorithm and Flood-fill algorithm.

2-D Geometric Transformations: Transformations – translation, scaling, rotation, reflection and shear; Homogeneous coordinates, Composite transformations, Transformations between coordinate systems.

UNIT III: 2-D VIEWING AND 3-D OBJECT REPRESENTATIONS (09 Periods)

2-D Viewing: The viewing pipeline, Viewing coordinate reference frame, Window-to-viewport coordinate transformation, Viewing functions, Cohen-Sutherland line clipping algorithm, Sutherland-Hodgeman polygon clipping algorithm.

3-D Object Representations: Polygon surfaces, Quadric surfaces, Spline representations, Hermite curve, Bezier curves and surfaces, B-Spline curves and surfaces.

UNIT IV: 3-D GEOMETRIC TRANSFORMATIONS AND VIEWING (09 Periods)

3-D Transformations: Transformations – translation, rotation, scaling, reflection and shear.

3-D Viewing: Viewing pipeline, Viewing coordinates, Projections and Clipping.

UNIT V: VISIBLE-SURFACE DETECTION METHODS AND SURFACE-RENDERING METHODS (08 Periods)

Surface Detection Methods: Classification, Back-face detection, Depth-buffer, Scan-line, Depth-sorting, BSP-tree, Area-subdivision and Octree methods.

Surface-Rendering methods: Gouraud shading, Phong shading.

Total Periods: 45

TEXT BOOK:

1. Donald Hearn and M.Pauline Baker, Computer Graphics C version, Pearson Education, 2nd Edition, 2006.

REFERENCE BOOKS:

1. Steven Harrington, *Computer Graphics: A Programming Approach*, McGraw-Hill, 2nd Edition, 1987.
2. William M. Newman and Robert F. Sproull, *Principles of Interactive Computer Graphics*, McGraw-Hill, 2nd Edition, 2005.

III B. Tech. – I Semester

(16BT50531) **COMPUTER NETWORKS LAB**

(Common to CSE and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: A course on Computer Networks

COURSE DESCRIPTION:

Hands on Practice on Data Link Layer Framing Methods; Routing Algorithms; Congestion Control Algorithms; Connection Management in Transport Layer;

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate Knowledge on:
- Framing methods for data link layer,
- Shortest path using Dijkstra’s routing algorithms

CO2. Identify suitable algorithm to find shortest path in a given network

CO3. Design and compute subnet masks and addresses for networking Requirements.

CO4. Solve problems related to Flow control, Error control, congestion control and Network Routing.

CO5. Apply Latest software tools and technologies for designing simple to complex applications in computer networks.

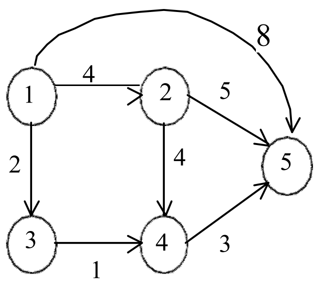
CO6. Assess the impact of wired and wireless Networks in the context of societal applications like VoIP, Multi-user Network Games, Internet of Things.

CO7. Work effectively as an individual to implement mini-project.

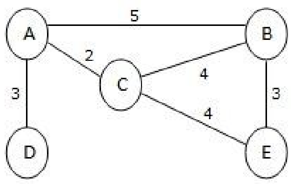
CO8. Demonstrate communication skills both oral and written for preparing and generating reports.

LIST OF EXCERCISES:

1. Implement the following data link layer framing methods.
   i. Character count. ii. Character stuffing. iii. Bit stuffing.
2. Implement the frame sorting technique used in buffers.
3. Design and develop a program to compute checksum for the given frame 1101011011 using CRC-12, CRC-16, and CRC-CCIP. Display the actual bit string transmitted. Suppose any bit is inverted during transmission. Show that this error is detected at the receivers end.
4. Implement Dijkstra‘s algorithm to compute the Shortest path for the given graph.



5. Develop a program to obtain routing table for each node using Distance Vector Routing Algorithm by considering the given subnet with weights indicating delay between Nodes.



6. Write a program to simulate flow based routing.
7. Write a program to simulate random early detection congestion control algorithm.
8. Using TCP/IP sockets, write a client-server program to open a file available in the server.
9. Write a program for congestion control using leaky bucket algorithm.
10. Write a program for the Mail Client
    i. POP Client: Gives the server name, user name and password retrieve the mails and allow manipulation of mail box using POP commands.
    ii. SMTP Client: Gives the server name, send e-mail to the recipient using SMTP commands
11. Write a program for HTTP server to implement the commands - GET, POST, HEAD and DELETE. The servermust handle multiple clients.

REFERENCE BOOK:

1. Andrew S. Tanenbaum and David J. Wetherall, *Computer Networks,* Pearson Education, 5th Edition, 2015.

III B. Tech. - I Semester

(16BT50451) MICROPROCESSORS AND INTERFACING LAB

(Common to ECE and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITE: Course on Microprocessors and interfacing.

COURSE DESCRIPTION:
Assembly language Programming for Intel 8086 & 8051; Programming of Interfacing standard peripherals - DAC, Stepper Motor, ADC, Logic Controller, Keyboard, Seven Segment Display.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1 Demonstrate knowledge on microcomputer & microcontroller based systems.
CO2. Analyze various programming alternatives, interfacing methods & usage of various on-chip resources like Displays, logic controllers ADC, DAC, Keyboard interfacing and Stepper Motor to build stand alone systems.
CO3. Design and develop microcomputer and microcontroller based system to suit market requirements.
CO4. Solve engineering problems by proposing potential solutions using microprocessors and microcontrollers.
CO5. Apply appropriate techniques, resources, and tools for modeling microcomputer and microcontroller based systems with understanding of limitations.
CO6. Work effectively as individual and as a team member in the area of microprocessors.
CO7. Communicate in oral and written form in the area of microprocessors.

LIST OF EXERCISES:
(Minimum of TWELVE experiments to be conducted)

I Programs using 8086

1. Introduction to MASM/TASM
2. Arithmetic operations
3. Logic operations
4. String operations
5. Modular program: using procedure & DOS/BIOS Programming

II Interfacing with 8086

1. Stepper motor
2. Logic controller
3. A/D converter
4. D/A Converter.
5. Seven segment display
6. Keyboard interfacing

III Programs using 8051

1. Arithmetic operations using internal and external memory.
2. Logical Operations and Bit-manipulation operations.
3. Programs using special instructions like SWAP, bit/byte, set/ reset etc.

III B. Tech. - I Semester
(16BT51531) **SYSTEMS SOFTWARE LAB**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: Courses on Programming in C and Operating Systems

COURSE DESCRIPTION: Hands on Implementation of copy of a file using standard I/O and system calls; emulate the UNIX commands; Access Permissions; Loops in Directory hierarchy; Displaying time of day for every 60 seconds; Print all error messages; Running two programs in pipeline.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate and interpret the working of commands available in UNIX.
CO2. Recognize different types of file supported by UNIX operating system.
CO3. Design and implement system-level applications for open-source operating systems.
CO4. Select and make use of the OS kernel functions and their APIs, standard programming Languages and utility tools.
CO5. Use different APIs for System Software design.

LIST OF EXPERIMENTS:

1. Write a C program that makes a copy of a file using standard I/O and system calls
2. Write a C program to emulate the UNIX ls –l command.
3. Write a program that prints the owner, file type, access permissions, and access times of files supplied as parameters. If a file (parameter) is a directory, the program should read the directory and print the above information for all files in the directory.
4. Write a program that visits every directory, starting with the current directory. How should it handle loops in the directory hierarchy?
5. Write a program that changes its root to a particular directory, and investigate the directory tree accessible to that program.
6. Write a C program that displays the real time of a day every 60 seconds.
7. Write a C program to print all error messages.
8. Write a C program to check all 12 permission bits of a file.
9. Write a C program to run two programs in a pipeline.

III B. Tech. - II Semester

(16BT3HS02) MANAGERIAL ECONOMICS AND PRINCIPLES OF ACCOUNTANCY

(Common to ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE- REQUISITE: —

COURSE DESCRIPTION: Managerial Economics; Demand and Elasticity of Demand; Production Functions; Markets and Pricing Policies; Formation of different types of Business Organizations; Basic concepts of Accounting (Journal, Ledger and Trial balance); Trading Account, Profit and Loss Account and Balance sheet with simple adjustments; Computerized Accounting.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Acquire Knowledge in
- a) Tools and concepts of Micro Economics.
- b) Basic Principles and concepts of Accountancy.
- c) Provides life skills for effective utilization of scarce resources.
- d) Financial Accounting.
- e) Significance of Economics and Accountancy

CO2. Develop skills in managerial decision making of an organization.

CO3. Apply the Economic theories i.e., Demand, Production, Cost, Markets and Price.

CO4. Develop effective communication in Business and Accounting transactions.

CO5. Ascertain the profitability and soundness of an organization.

CO6. Practice Financial Accounting

DETAILED SYLLABUS

UNIT I: INTRODUCTION TO MANAGERIAL ECONOMICS, DEMAND ANALYSIS (09 Periods)

Definition, Nature and Scope of Managerial Economics. **Demand:** Determinants of demand – Demand function - Law of demand, assumptions and exceptions - Elasticity of demand – Types of elasticity of demand - Demand forecasting and methods of demand forecasting.

UNIT II: THEORY OF PRODUCTION AND COST ANALYSIS (09 Periods)

Production Function: Isoquants and Isocosts – Input-output relationship - Law of returns. **Cost Concepts:** Total, Average and Marginal Cost **-** Fixed vs. Variable costs – Opportunity Costs Vs Outlay Costs– Separable Costs Vs Joint Costs, Urgent Costs Vs Postponable Costs- Avoidable Costs Vs Unavoidable Costs - **Break Even Analysis (BEA)** – Assumptions, Merits and demerits - Determination of Break Even Point (Simple problems).

UNIT III: MARKETS AND PRICING (09 Periods)

Market Structure: Types of Markets - Features of perfect competition - Monopoly and monopolistic competition - Price and Output determination in perfect competition, monopoly and monopolistic Markets.

Pricing : Objectives and policies of pricing – Sealed bid pricing - Marginal cost pricing - Cost plus pricing - Going rate pricing – penetration Pricing –skimming Pricing - Block pricing – Peak load pricing - Cross subsidization.

UNIT IV: INTRODUCTION TO PRINCIPLES OF ACCOUNTING & CAPITAL (09 Periods)

Accountancy: Introduction – Concepts – Conventions – Double Entry Book Keeping – Journal – Ledger - Trial Balance (Simple problems).

Capital : Significance - Types of capital – Sources of Capital.

UNIT V: FINAL ACCOUNTS - COMPUTERIZATION OF ACCOUNTING SYSTEM (09 Periods)

Introduction to Final Accounts - Trading account - Profit and Loss account and Balance Sheet with simple adjustments (Simple problems).**Computerization of Accounting System :** Manual Accounting *Vs* Computerized Accounting – Advantages and Disadvantages of Computerized Accounting.

Total Periods: 45

TEXT BOOKS:

1. A.R. Aryasri, *Managerial Economics and Financial Analysis,* Tata Mc- Graw Hill, New Delhi, 3rd Edition, 2007.
2. R.Cauvery, U.K. Sudhanayak, M. Girija and R. Meenakshi, *Managerial Economics, S. Chand and Company,* New Delhi, 2nd Edition, 2010.

3. S.P. Jain and K.L. Narang, *Financial Accounting*, Kalyani Publishers, Ludhiana, 6th Edition, 2002.

III B. Tech. – II Semester

(16BT61501) DATA WAREHOUSING AND DATA MINING

(Common CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Database Management Systems.

COURSE DESCRIPTION: Data Mining Fundamentals; Data Preprocessing; Operational Database Systems and Data Warehouses; Mining Frequent Patterns; Classification and Prediction; Clustering; New Trends and Research Frontiers.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on Concepts of data warehousing and data mining.
CO2. Analyze using data mining techniques to find useful and potential Knowledge.
CO3. Design of Data Warehouse for OLAP applications and deployment.
CO4. Evaluate the usage of association mining techniques on complex data objects.
CO5. Select appropriate techniques to measure the interesting patterns from heterogeneous databases.
CO6. Apply appropriate evolutionary data mining algorithms to find solutions of Real time Applications.

DETAILED SYLLABUS:

UNIT I: DATA WAREHOUSING AND ONLINE ANALYTICAL PROCESSING (09 Periods)

Data Warehouse, Operational Database Systems versus Data Warehouses, A Multi tired Architecture, A Multidimensional Data Model, Stars, Snowflakes and Fact Constellations: Schemas, Role of Concept hierarchies, Measures, OLAP Operations, From online Analytical processing to Multidimensional Data Mining, Indexing OLAP Data.

UNIT II: DATA MINING AND DATA PREPROCESSING (08 Periods)

Introduction to Data Mining, kinds of data, kinds of patterns, major issues in Data Mining, Data Pre-processing**,** Data Cleaning, Data Integration , Data Reduction, Data Transformation and Discretization.

UNIT III: ASSOCIATIONS AND CLASSIFICATION (10 Periods)

Basic Concepts , Frequent itemset Mining Methods, pattern evaluation methods- From Association Mining to Correlation Analysis ,Classification, Decision Tree Introduction, Bayesian Classification Methods, Rule Based Classification, Prediction: Linear Regression.

UNIT IV: CLUSTER ANALYSIS (09 Periods)

Cluster Analysis: Types of Data in Cluster Analysis, A Categorization of Major Clustering Methods, Partitioning Methods -k-Means and K-Medoids , Hierarchical methods-Agglomerative and divisive method, Density-Based Method-DBSCAN, Grid-Based Method-STING, Outlier Analysis.

UNIT V: DATA MINING TRENDS (09 Periods)

Mining Complex Data Types: Mining sequence data, Mining other kinds of data: Spatial, Text, Multimedia and Web data, Data Mining Trends.

Total Periods: 45

TEXT BOOK:

1. Jiawei Han, Micheline Kamber and Jian Pei, *Data Mining: Concepts and Techniques,* Elsevier, 3rd Edition, 2013.

REFERENCE BOOKS:

1. K.P. Soman, Shyam Diwakar and V. Ajay, *Insight into Data mining Theory and Practice,* Easter Economy Edition, Prentice Hall of India, 2006.
2. G. K. Gupta, *Introduction to Data Mining with Case Studies,* Easter Economy Edition, Prentice Hall of India, 2006.
3. Tan P.N, Steinbach M.and Kumar V., *Introduction to Data mining*, Addison-Wesley, 2006.

III B. Tech. – II Semester
(16BT51203) **WEB TECHNOLOGIES**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Java Programming.

COURSE DESCRIPTION: Hyper Text Markup Language (HTML); Features of HTML5; Cascading Style Sheets (CSS); JavaScript; JQuery; Bootstrap; Hypertext Preprocessor (PHP); MySQL.

COURSE OUTCOMES:
On successful completion of this course, students will be able to:
- CO1. Demonstrate knowledge on web page design elements, dynamic content and database interaction.
- CO2. Analyze user requirements to develop web applications.
- CO3. Design client-server applications using web technologies.
- CO4. Demonstrate problem solving skills to develop enterprise web applications.
- CO5. Use HTML, CSS, JavaScript, JQuery, Bootstrap and PHP technologies for device independent web application development.
- CO6. Apply Web Technologies to develop interactive, dynamic and scalable web applications for societal needs.

DETAILED SYLLABUS:

UNIT I: HTML (11 Periods)
Introduction: Fundamentals of HTML, Working with text, Organizing text in HTML, Working with links and URLs, Creating tables, Working with images, Canvas, Forms, Frames and Multimedia.
HTML5: Introduction, HTML5 document structure, Creating editable content, Checking spelling mistakes, Exploring custom data attributes, Client-Side storage, Drag and drop feature, Offline web applications, Web communications, Cross-Document messaging and desktop notifications.

UNIT II: CSS AND JAVASCRIPT (08 Periods)
CSS: Introduction, CSS selectors, Inserting CSS in an HTML document, Backgrounds, Fonts, and Text styles, Creating boxes, Displaying, Positioning and floating elements, Features of CSS3, Media queries.
Javascript: Overview of JavaScript, JavaScript functions, Events, Image maps and animations, JavaScript objects, Working with browser and document objects.

UNIT III: JQUERY AND BOOTSTRAP (09 Periods)
JQuery: Introduction, JQuery selectors, Events, Methods to access HTML elements and attributes, Introduction to AJAX.
Bootstrap: Getting started with Bootstrap, Creating responsive layouts using Bootstrap CSS - Basic HTML structure for Bootstrap, Responsive classes, Rendering images, the grid system, Constructing data entry forms.

UNIT IV: INTRODUCTION TO PHP (09 Periods)
Introduction, Data types, Variables, Constants, Expressions, String interpolation, Control structures, Functions, Arrays, Embedding PHP code in web pages, Object Oriented PHP.

UNIT V: PHP WEB FORMS AND MYSQL (08 Periods)
PHP Web forms: PHP and web forms, Sending form data to a server, Working with cookies and session handlers
PHP with MySQL: Interacting with the database, prepared statement, Database transactions.

Total Periods: 45

TEXT BOOKS:
1. Kogent Learning Solutions Inc, *HTML 5 Black Book: Covers CSS3, JavaScript, XML, XHTML, AJAX, PHP and JQuery*, Dreamtech Press, 2nd Edition, 2016.
2. W. Jason Gilmore, *Beginning PHP and MySQL*, APress, 4th Edition, 2011.

REFERENCE BOOKS:
1. Snig Bahumik, *Bootstrap Essentials*, PACKT Publishing, 2015 (e-book).

2. Thomas A. Powell, *The Complete Reference: HTML and CSS,* Tata McGraw Hill, 5th Edition, 2010.
3. Andrea Tarr*, PHP and MySQL*, Wiley India, 2012.

III B. Tech. – II Semester

(16BT50341) **OPTIMIZATION TECHNIQUES**

(Common to CE, CSE and CSSE)
(Interdisciplinary Elective-2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Multi-variable calculus and differential equations

COURSE DESCRIPTION:

Introduction to optimization; classical optimization techniques; classification of optimization problems; linear programming; transportation and assignment problem; non-linear programming; un-constrained non-linear programming; constrained non-linear programming; dynamic programming.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate the knowledge on Optimization techniques for Linear, Non linear and Dynamic programming problems.
CO2. Analyze and quantify a system architecture or product design problem for selecting appropriate objective function, design variables, parameters and constraints.
CO3. Develop mathematical models for real time optimization problems.
CO4. Conduct investigations on complex problems and make recommendations based on solutions, analysis and limitations of models.
CO5. Use optimization techniques for solving complex problems of real time applications.
CO6. Optimize the resources in organizations for sustainable development.

DETAILED SYLLABUS:

UNIT I: CLASSICAL OPTIMIZATION TECHNIQUES (09 Periods)

Introduction, Engineering applications of optimization, Statement of an optimization problem, Design vector, Design constraints, Constraint surface, Objective function, Classification of optimization problems, Single variable optimization, Multi variable optimization without constraints, Multi variable optimization with equality constraints - Lagrange multipliers method; Multi variable optimization with inequality constraint - Kuhn Tucker conditions.

UNIT II: LINEAR PROGRAMMING (09 Periods)

Introduction, Formulation, Graphical solution, Simplex method, Big M-method, Two–phase method, Duality principle, Dual simplex method.

UNIT III: TRANSPORTATION AND ASSIGNMENT PROBLEM (09 Periods)

Transportation problems: Formulation, Initial basic feasible solution - North–West corner rule, Least cost method, and Vogel's approximation method; Optimal solution using Modified distribution method - Unbalanced transportation problem, Degeneracy.

Assignment problems: Formulation, Solution of assignment problem and its variants, Traveling salesman problem.

UNIT IV: NON-LINEAR PROGRAMMING (09 Periods)

One dimensional minimization methods, classification - Fibonacci method, quadratic interpolation method; classification of unconstrained minimization methods - Powell's method, steepest descent method (Cauchy's method); classification of constrained optimization techniques - interior and exterior penalty function methods.

UNIT V: DYNAMIC PROGRAMMING (09 Periods)

Multistage decision processes, Concept of sub optimization and Principle of optimality, Computational procedure in dynamic programming - calculus method, Tabular method; Linear Programming problem by dynamic programming approach, Applications - reliability problem, shortest path problem, and capital budgeting problem.

Total Periods: 45

TEXT BOOKS:

1. Singiresu S Rao, *Engineering Optimization: Theory and Practice*, New Age International, 3rd Edition, 2010.
2. A.Ravindran, K.M.Ragsdell, G.V.Reklaitis, *Engineering Optimization: Methods and applications,* Wiley India Pvt. Ltd., 2nd Edition2006.

REFERENCE BOOKS:

1. C Mohan and Kusum Deep, *Optimization Techniques*, New Age International Publishers, 1st Edition, 2010.
2. Hamdy A. Taha, *Introduction to Operations Research*, PHI, 9th Edition, 2013.

III B. Tech. - II Semester

(16BT60404) IMAGE PROCESSING

(Common to ECE and CSSE)

(Interdisciplinary Elective-2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION:

Fundamentals of image processing; Image transforms; Image enhancement techniques in spatial and frequency domains; Restoration techniques; Image segmentation techniques; Image compression techniques.

COURSE OUTCOMES:

On successful completion of this course, students will be able to

CO1. Demonstarte knowledge in
- Image Fundamentals
- Image Enhancement & Restoration Techniques
- Image Segmentation & Compression Techniques
- Color image processing

CO2. Analyze different images using various processing techniques.

CO3. Design and Develop various image processing algorithms to process the images in various Real Time Applications.

CO4. Solve problems related to images for feasible and optimal solutions in the core area of Image Processing.

CO5. Apply appropriate techniques to complex engineering activities in the field of image processing.

CO6. Understand the impact of the image processing for societal needs.

DETAILED SYLLABUS:

UNIT I: IMAGE FUNDAMENTALS (10 Periods)

Fundamental steps in Image Processing, Image sampling & quantization, some basic relationships between pixels, Arithmetic operations, Logical operations, Spatial operations,

IMAGE TRANSFORMS: 2D-DFT and properties, Walsh Transform, Hadamard Transform, Discrete Cosine Transform, Haar-Transform, Slant Transform, Hotelling Transform.

UNIT II: IMAGE ENHANCEMENT (11 Periods)

Basic Intensity transformation functions, Histogram processing, Fundamentals of Spatial Filtering, Smoothing spatial filters, Sharpening spatial filters, Combining spatial Enhancement methods.

Basics of filtering in frequency domain, Correspondence between filtering in the spatial and frequency domains, Image smoothing using frequency domain filters, Image sharpening using frequency domain filters, Homomorphic filtering.

UNIT III: IMAGE RESTORATION (07 Periods)

Image degradation/Restoration model, Noise models, Restoration in the presence of Noise only-spatial filtering - mean, order- statistic and adaptive filters. Estimating the degradation function, Inverse filtering, Weiner filtering, Constrained least squares filtering.

UNIT IV: IMAGE COMPRESSION (08 Periods)

Classification of redundancy in Images, Image Compression models, Run length coding, Arithmetic coding, Dictionary based compression, bit-plane coding, Transform based coding, Fidelity Criteria, Image compression standards.

UNIT V: IMAGE SEGMENTATION AND COLOR IMAGE PROCESSING (09 Periods)

Detection of discontinuities- Point, line and edge Detection. Thresholding- global thresholding, adaptive thresholding. Region based Segmentation. Color image fundamentals - RGB, HSI models, conversions, Pseudo Color Image Processing, Color transformations.

Total Periods: 45

TEXT BOOKS:

1. Rafael C. Gonzalez & Richard E. Woods, *Digital Image Processing*, Pearson Education, 3rd Edition, 2008
2. S.Sridhar*, Digital Image Processing*, Oxford University, 2nd Edition, 2016

REFERENCE BOOKS:

1. William K. Pratt, *Digital Image Processing,* John Wiley and Sons, 3rd Edition, 2002.
2. Anil K.Jain, *Fundamentals of Digital Image processing*, Prentice Hall, 2007

III B. Tech. – II Semester

(16BT61201) CLOUD COMPUTING

(Common to IT and CSSE)

(Interdisciplinary Elective-2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on Computer Networks and Operating Systems.

COURSE DESCRIPTION: Virtualization, Virtualization Technologies; Cloud Computing Fundamentals, Deployment Models; Cloud Computing Architecture; Cloud Computing Mechanisms; Cloud Security, Cloud Disaster Recovery; Working with Clouds; and Case Studies.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on services, architecture, types of infrastructural models, disaster recovery and virtualization.

CO2. Analyze the issues in cloud computing Data, Network and Host security.

CO3. Apply API development skills in web applications for Cloud deployment.

CO4. Use research based knowledge to build cloud applications.

CO5. Use advanced programming languages to access cloud services.

CO6. Build cloud environment suitable for societal requirements.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION TO VIRTUALIZATION AND TECHNOLOGIES (09 Periods)

Introduction to Virtualization: Definition, Objectives, Characteristics, Benefits of virtualization, Taxonomy of virtualization technologies, Pros and cons of virtualization.

Virtualization Technologies: VMware, Hyper-V, Zen and virtual iron.

UNIT II: FUNDAMENTAL CLOUD COMPUTING AND MODELS (09 Periods)

Cloud Computing: Origin and influences, Basic concepts and terminology, Goals and benefits, Risks and challenges.

Cloud Models:Roles and boundaries, Cloud characteristics, Cloud delivery models, Cloud deployment models.

UNIT III: CLOUD COMPUTING MECHANISMS AND ARCHITECTURE (09 Periods)

Cloud-Enabling Technology: Broadband networks and internet architecture, Data center technology, Virtualization technology, Web technology, Multitenant technology, Service technology.

Cloud Architectures: Architecture - Workload distribution, Resource pooling, Dynamic scalability, Elastic resource capacity, Service load balancing, Cloud bursting, Elastic disk provisioning, Redundant storage.

UNIT IV: CLOUD SECURITY AND DISASTER RECOVERY (09 Periods)

Cloud Security: Data, Network and host security, Cloud security services and cloud security possible solutions.

Cloud Disaster Recovery: Disaster recovery planning, Disasters in the cloud, Disaster management, Capacity planning and cloud scale.

UNIT V: CLOUD CASE STUDIES (09 Periods)

Case Studies: Software-as-a-Service (SaaS) - Salesforce.com, Facebook; Platform–as-a-Service (PaaS) - Google App Engine, MS-Azure and IBM Bluemix; Infrastructure-as-a- Service (IaaS) - Amazon EC2, Amazon S3 and Netflix.

Total Periods: 45

III B. Tech. - II Semester

(16BT71204) MOBILE COMPUTING

(Common to CSE and CSSE)
(Interdisciplinary Elective-2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Computer Networks.

COURSE DESCRIPTION: Introduction to Mobile Computing, GSM; Medium Access Control, Wireless LAN; Mobile Network and Transport Layers; Data Dissemination; Mobile Ad-Hoc Networks (MANETs), Wireless Application Protocol (WAP).

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- GSM, GPRS, 3G, 4G, Wireless LAN, MANETs.
- Protocols in Data Link, Network, Transport and Application layer.

CO2. Analyze the issues related to database design and data retrieval in mobile applications.
CO3. Apply routing algorithms for finding shortest path in MANETs.
CO4. Use protocols of Wireless Technologies for security implementation in mobile computing.
CO5. Follow standards in the usage of mobile communications.

DETAILED SYLLABUS:

UNIT I: OVERVIEW OF MOBILE COMPUTING AND GSM (09 Periods)

Introduction: Introduction to mobile computing, Novel applications, Limitations, and Mobile computing architecture.

GSM: Mobile services, System architecture, Radio interface, Protocols, Localization and calling, Handover, Security, and New data services, Introduction to 3G and 4G Communications Standards: WCDMA, LTE, WiMAX

UNIT II: MEDIUM ACCESS CONTROL AND WIRELESS LAN (09 Periods)

Medium Access Control: Motivation for a specialized MAC - Hidden and exposed terminals, Near and far terminals, SDMA, FDMA, TDMA, CDMA.

Wireless LAN: IEEE 802.11 - System architecture, Protocol architecture, Physical layer, Medium access control layer, MAC management; Bluetooth - User scenarios, Architecture, Radio layer, Baseband layer, Link manager protocol, L2CAP, Security.

UNIT III: MOBILE NETWORK AND TRANSPORT LAYER (09 Periods)

Mobile IP: Goals, Assumptions, Entities and terminology, IP packet delivery, Tunneling and encapsulation, Optimizations; IPv6; Dynamic Host Configuration Protocol (DHCP).

Mobile Transport Layer: Traditional TCP, Indirect TCP, Snooping TCP, Mobile TCP, Fast retransmit/ fast recovery, Transmission/ time-out freezing, Selective retransmission, Transaction oriented TCP; TCP over 2.5G/3G wireless networks.

UNIT IV: DATABASE ISSUES AND DATA DISSEMINATION (09 Periods)

Database Issues: Hoarding techniques, Caching invalidation mechanisms, Client server computing with adaptation, Power-aware and context aware computing, Database transactional models, Query processing and recovery.

Data Dissemination: Communications asymmetry, Classification of data delivery mechanisms, Push-based mechanisms, Pull-based mechanisms, Hybrid mechanisms, Selective tuning (indexing) techniques.

UNIT V: MANETS AND WAP (09 Periods)

Mobile Ad Hoc Networks: Properties of a MANET, Spectrum of MANET, Applications, routing and routing algorithms, Security in MANETs.

Wireless Application Protocol: Architecture, Wireless datagram protocol, Wireless transport layer security, Wireless transaction protocol, Wireless session protocol, Wireless application environment.

Total Periods: 45

TEXT BOOKS:

1. Rajkamal, *Mobile Computing*, OXFORD University Press, 2nd Edition, 2012.
2. Jochen Schiller, *Mobile Communications*, Pearson Education, 2nd Edition, 2009.

REFERENCE BOOKS:

1. Gordon A. Gow and Richard K. Smith, *Mobile and Wireless Communication*, Mc Graw Hill, 2006.
2. Hansmann, Merk, Nicklous and Stober, *Principles of Mobile Computing*, Springer, 2nd Edition, 2003.

III B. Tech. - II Semester
(16BT70505) HUMAN COMPUTER INTERACTION

(Program Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION:

Graphical User Interface; Design Process; Screen Designing; Windows; Components; Software Tools; Interaction Devices.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on principles, characteristics, tools and devices of Human Computer Interaction.
CO2. Analyze the user requirements, technological and physical characteristics of users for better interface design.
CO3. Design appropriate user interface for desktop and web applications.
C04. Conduct investigations on User requirements to provide an effective user interface.
CO5. Utilize user interface mockup tools and input, output and pointing devices for designing user interfaces.
CO6. Apply Contextual knowledge to develop interfaces for differently abled people.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION (09 Periods)

Importance of User Interface: Definition, Importance of good design, Benefits of good design, A brief history of screen design.

Characteristics of Graphical and Web User Interfaces: The graphical user interface - popularity of graphics, The concept of direct manipulation, Graphical systems, Characteristics; Web user Interface - Popularity, Characteristics; Principles of user interface design.

UNIT II: CONTROL DESIGN PROCESS (08 Periods)

Design Process: Human interaction with computers, Importance of human characteristics, human considerations in design, Human interaction speeds, and understanding business functions.

UNIT III: SCREEN DESIGN (10 Periods)

Design Goals: Screen meaning and purpose, Organizing screen elements, Ordering of screen data and content, Screen navigation and flow, Visually pleasing composition, Amount of information, Focus and emphasis, Presenting information simply and meaningfully, Information retrieval on web, Statistical graphics, Technological considerations in interface design.

UNIT IV: WINDOWS AND MULTIMEDIA (08 Periods)

Windows Menus and Navigation Schemes: Selection of window, Selection of device based and screen based controls.

Components: text and messages, Icons and images, Multimedia, Color uses, Problems with colors, choosing colors.

UNIT V: SOFTWARE TOOLS AND DEVICES (10 Periods)

Software Tools: Specification methods, Interface building tools, Interaction devices - Keyboards and keypads, Pointing devices, Speech and auditory interfaces; Image and video displays, drivers.

Total Periods: 45

TEXT BOOKS:

1. Wilbert O. Galitz, *The Essential Guide to User Interface Design*, Wiley India Education, 2nd Edition, 2008.
2. Ben Schneiderman and Catherine Plaisant, *Designing the User Interface*, Pearson Education, 4th Edition, 2009.

REFERENCE BOOKS:

1. A Dix, Janet Finlay, G. D. Abowd and R. Beale, *Human-Computer Interaction*, Pearson Publishers, 3rd Edition, 2008.

2. Jonathan Wolpaw and Elizabeth Winter Wolpaw, *Brain-Computer Interfaces: Principles and Practice,* Oxford Publishers, 2012.

III B. Tech. - II Semester

(16BT61502) NETWORK SECURITY

(Program Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Computer Networks

COURSE DESCRIPTION:
Foundations of Network Security; Security Technologies; Symmetric and Asymmetric key encryption algorithms; System Security with Firewalls; Intrusion Detection.

COURSE OUTCOMES:
On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on types of attacks, firewalls, Symmetric encryption, Cryptography, message authentication and confidentiality
CO2. Analyze the principles of symmetric and public key cryptographic algorithms
CO3. Design appropriate algorithms suiting the security needs of the network.
CO4. Apply security schemes in firewall design to protect the organization's internet/ network systems.
CO5. Use modern engineering techniques to identify Intrusion Detection, types of malicious software and apply suitable counter measures.
CO6. Apply ethical means to integrate network operations, administration and information assurance in a network.

DETAILED SYLLABUS:

UNIT I: NETWORK SECURITY FOUNDATIONS (10 Periods)
Network Security Overview: Benefits of good Security Practices, Security Methodology
Attacks: Define Access Attacks, Modification attacks, DoS attacks, Repudiation attacks, Hacking Techniques, Sniffing Switch Networks, IP spoofing

UNIT II: SECURITY TECHNOLOGIES (08 Periods)
Firewalls: Types of firewalls, Develop firewall configuration, design firewall rule set
Virtual Private Network: Define VPN, Deploy User, site VPNs, Standard VPN techniques, types of VPN systems

UNIT III: SYMMETRIC KEY ENCRYPTION AND MESSAGE CONFIDENTIALITY (09 Periods)
Symmetric key Encryption Principles, Symmetric Block Encryption Algorithms, Random and Pseudorandom numbers, Stream Ciphers and RC4, Cipher block mode of operations

UNIT IV: PUBLIC KEY CRYPTOGRAPHY AND MESSAGE AUTHENTICATION (09 Periods)
Secure Hash functions, Message Authentication codes, public key cryptography principles and algorithms, Digital Signatures

UNIT V: SYSTEM SECURITY (09 Periods)
Intruders: Intrusion Detection, Password Management, Types of IDS, Setup IDS, manage IDS, Intrusion prevention
Malicious Software: Types of malicious software, viruses, Virus Counter measures, Worms

TEXT BOOKS:
1. William Stallings, *Network Security Essentials: Applications and Standards*, Pearson, 4th Edition, 2011.
2. Eric Maiwald, *Fundamentals of Network Security*, McGraw Hill Education, 2010.

REFERENCE BOOK:
1. Roberta Bragg, Mark Rhodes-Ousley, *Network Security: The Complete Reference,* McGraw Hill Education, 2004.

III B. Tech. - II Semester
(16BT61503) SOFTWARE PROJECT MANAGEMENT

(Program Elective – 1)
(Common to IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Software Engineering.

COURSE DESCRIPTION:
Conventional Software Management; Evolution of Software Economics; Improving Software Economics; Lifecycle Phases; Artifacts of the Process; Workflow of the Process; Checkpoints of the Process; Software Economics; Iterative Process Planning; Project Organization and Responsibilities; Project Control and Project Instrumentation; Agile Overview.

COURSE OUTCOMES:
On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on software effort estimation techniques, Agile life cycle, project control and instrumentation.
CO2. Analyze the major and minor milestones, artifacts, metrics from management and technical perspectives.
CO3. Design and develop software products using conventional and modern principles of software project management.
CO4. Effectively implement project management through appropriate planning of Work flows and Work Breakdown Structures of the process.
CO5. Select appropriate techniques to evaluate progress of software project in terms of milestones and check points.
CO6. Apply appropriate ethical principles to be followed in management of software economics.

DETAILED SYLLABUS:

UNIT I: SOFTWARE MANAGEMENT (**09 Periods**)

Software management:
The Waterfall Model, Conventional Software Management Performance. Evolution of Software Economics**:** Software Economics, Pragmatic Software Cost Estimation.

Improving Software Economics:
Reducing Software Product Size, Improving Software Processes, Improving Team Effectiveness, Improving Automation, Achieving Required Quality.

UNIT II: LIFE CYCLE PHASES **(09 Periods)**

Conventional and Modern Software Management:
Principles of Modern Software Engineering, Principles of Modern Software Management, Transitioning to an Iterative Process.

Life Cycle Phases:
Engineering and Production Stages, Inception, Elaboration, Construction, Transition Phases.

UNIT III: ARTIFACTS, ARCHITECTURES AND WORKFLOWS **(09 Periods)**

Artifacts of The Process: The Artifact Sets, Management Artifacts, Engineering Artifacts.

Model Based Software Architectures: Architecture- Management Perspective, Technical Perspective.

Workflows of the Process: Software Process Workflows, Iteration Workflows.

UNIT IV: CHECKPOINTS, PROCESS PLANNING AND PROJECT ORGANIZATION **(09 Periods)**

Checkpoints of a process: Major Milestones, Minor Milestones, Periodic Status Assessments.

Iterative Process Planning: Work Breakdown Structures, Planning Guidelines, The Cost and Schedule Estimating Process

Project Organizations and Responsibilities: Line of Business Organizations, Project organizations, Evolution of Organizations.

UNIT V: PROJECT CONTROL AND AGILE MANAGEMENT **(09 Periods)**

Project control and process Instrumentation: The Seven Core Metrics, Management Indicators, Quality Indicators.

Agile Management: An Agile Overview, Role of a project manager, Benefits of Agile.

Total Periods: 45

TEXT BOOK:

1. Walker Royce, *Software Project Management*, Pearson Education, 3rd Edition, 1998.

REFERENCE BOOKS:

1. Michele Sliger and Stacia Broderick, *The Software Project Manager's Bridge to Agility*, Addison-Wesley, 2008.
2. Bob Hughes and Mike Cotterell, *Software Project Management*, Tata McGraw- Hill, 2006.

III B. Tech. - II Semester

(16BT61504) WINDOWS PROGRAMMING

(Program Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Operating Systems.

COURSE DESCRIPTION:
Windows File Processing; Advanced File and Exception Handling; Memory Management; Process Management; Inter-process Communication; Network programming with Windows Sockets.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:
CO1. Acquire knowledge on Windows File processing and Exception Handling.
CO2. Analyze and Interpret process management techniques used in System Software.
CO3. Design and Develop memory mapping techniques for sequential files and Dynamic Link Libraries
CO4. Use contextual knowledge for implementing Inter-Process Communication and Network Programming With Sockets.
CO5. Apply Win32 programming techniques for Heap memory management and Parallel pattern searching.
CO6. Exhibit professional ethics and responsibilities by understanding Windows Programming standards compared to open standards.

DETAILED SYLLABUS:
UNIT I: WINDOWS PROGRAMMING (08 Periods)
Windows Standards and Open Systems, Principles,32-bit and 64-bit Source Code Portability, The Windows File Systems, File Naming, Opening, Reading, Writing, and Closing File, Unicode and Generic Characters, Unicode Strategies, Error Processing.

UNIT II: ADVANCED FILE AND EXCEPION HANDLING (10 Periods)
The 64-Bit File System, File Pointers, Getting the File Size, Random Record Updates, File Attributes and Directory Processing, Listing File Attributes, Setting File Times, File Processing Strategies, File Locking, Exceptions and their Handlers, Floating-Point Exceptions, Errors and Exceptions, Termination Handlers, Console control Handlers, Vectored Exception Handling.

UNIT III: MEMORY MANAGEMENT (08 Periods)
Windows Memory Management Architecture, Heaps, Managing Heap Memory, Sorting Files with a Binary Search Tree, Memory-Mapped Files, Sequential File Processing with Mapped Files, Sorting a Memory-Mapped File, Dynamic Link Libraries, Explicitly Linking a File Conversion Function.

UNIT IV: PROCESS MANAGEMENT (09 Periods)
Windows Processes and Threads, Process Creation, Process Identities, Duplicating Handles,Exiting and Terminating a Process, Waiting for a Process to Terminate, Environment Blocks and Strings, Parallel Pattern Searching, Processes in a Multiprocessor Environment, Process Execution Times, Generating Console Control Events.

UNIT V: INTERPROCESS COMMUNICATION & NETWORK PROGRAMMING (10 Periods)
Anonymous Pipes, Named Pipes, Named Pipe Transaction Functions, Comments on the Client/Server Command Line Processor, Mailslots, Pipe and Mailslot Creation, Connection and Naming, Windows Sockets, Socket Server & Client Functions, Comparing Named Pipes and Sockets, In-Process Servers, Line-Oriented Messages, DLL Entry Points an TLS, Datagrams, Berkeley Sockets versus Windows Sockets.

Total Periods: 45

TEXT BOOK:
1. Johnson M. Hart, *Windows System Programming*, Pearson Education, 4th Edition, 2010.

REFERENCE BOOK:
1. Leland L.Beck, *System Software,* Pearson Education, 3rd Edition, 2001.

III B. Tech. - II Semester

(16BT61531) DATA WAREHOUSING AND DATA MINING LAB

(Common CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITE: A course on Data warehousing and Data Mining

COURSE DESCRIPTION: Hands on practical experience on Warehouse design; OLAP operation; Data pre-processing techniques; Association rule mining; classification of data; Naïve Bayes classifier; Decision tree; Clustering technique using WEKA-Open source machine learning tool.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on the creation and usage of data warehouses.
CO2. Analyze and interpret the results using data mining techniques.
CO3. Design and develop transformations such as filter, join and rank on data warehouses.
CO4. Use classification and clustering techniques to find interesting patterns in large databases.
CO5. Choose and deploy modern tools to handle large, missing and noisy data in datasets.
CO6. Use appropriate data mining algorithms to find solutions for real time societal applications.
CO7. Function effectively as an individual to perform operations on different databases using Informatica.
CO8. Communicate effectively using report generation tools on business data.

LIST OF PROGRAMMING EXCERSICES:

Experiments on Informatica

To create Employee datawarehouse using Employee database system using following tables.

For the given data tables,

Employee table **Dept table**

Name	**Data type**	**Size**	**Name**	**Data type**	**Size**
Eno	Number	20	Eno	Number	20
Ename	Varchar2	25	Ename	Varchar2	25
Deptno	Number	10	Deptno	Number	10
DepName	Varchar2	12	DepName	Varchar2	12
Salary	Number	20	Salary	Number	20
Job	Varchar2	20	Job	Varchar2	20

List of Experiments

A. Implement mapping of warehouse server on Employee table.
B. Display the list of employees whose salary is greater than 5000 by designing filter transformation.
C. Find the maximum and minimum salaried employee using aggregate transformation.
D. Join Employee and Dept table using joiner transformation.
E. Rank transformation on employee table.
F. Router transformation on employee and department table.

II. Experiments on Weka:

Credit Risk Assessment:

The business of banks is making loans. Assessing the credit worthiness of an applicant is of crucial importance. You have to develop a system to help a loan officer decide whether the credit of a customer is good, or bad. A bank's business rules regarding loans must consider two opposing factors. On the one hand, a bank wants to make as many loans as possible. Interest on these loans is the banks profit source. On the other hand, a bank cannot afford to make too many bad loans. Too many bad loans could lead to the collapse of the bank. The bank's loan policy must involve a compromise: not too strict, and not too lenient.

To do the assignment, you first and foremost need some knowledge about the world of credit. You can acquire such knowledge in a number of ways.
1. **Knowledge Engineering**. Find a loan officer who is willing to talk. Interview her and try to represent her knowledge in the form of production rules.
2**. Books**. Find some training manuals for loan officers or perhaps a suitable textbook on finance. Translate this knowledge from text form to production rule form.
3. **Common Sense.** Imagine yourself as a loan officer and make up reasonable rules which can be used to judge the credit worthiness of a loan applicant.
4. Case Histories. Find records of actual cases where competent loan officers correctly judged when, and when not to, approve a loan application.
The German Credit Data: Actual historical credit data is not always easy to come by because of confidentiality rules. Here is one such dataset, consisting of 1000 actual cases collected in Germany. credit dataset (original) Excel spreadsheet version of the German credit data (Down load from web).In spite of the fact that the data is German, you should probably make use of it for this assignment. (Unless you really can consult a real loan officer!)

A few notes on the German dataset:
" **DM** stands for Deutsche Mark, the unit of currency, worth about 90 cents Canadian (but looks and acts like a quarter).
Owns_telephone. German phone rates are much higher than in Canada so fewer people own telephones.
" **Foreign_worker**. There are millions of these in Germany (many from Turkey). It is very hard to get German citizenship if you were not born of German parents.
There are **20 attributes** used in judging a loan applicant. The goal is the classify the applicant into one of two categories, good or bad.

List of Experiments:

1. Preprocess the data in weka with a simple experiments
   a) Handling missing data(both nomial and numerical)
   b) All types normalization(min-max,z-score,decimal scaling)
   c) sampling
2. Implement Decision tree classification of German data set.
3. Implement Naïve Bayes classifier on German data set.
4. Implement K-means clustering technique for German data.
5. Implement Apriori algorithm, calculate all frequent itemsets(L's) for the following transactional data and display the 10 most significant rules you get using the default values of support and confidence.

Transactional Data:

TID	List of item_ids
T100	I1,I2,I5
T200	I2,I4
T300	I2,I3
T400	I1,I2,I4
T500	I1,I3
T600	I2,I3
T700	I1,I3
T800	I1,I2,I3,I5
T900	I1,I2,I3

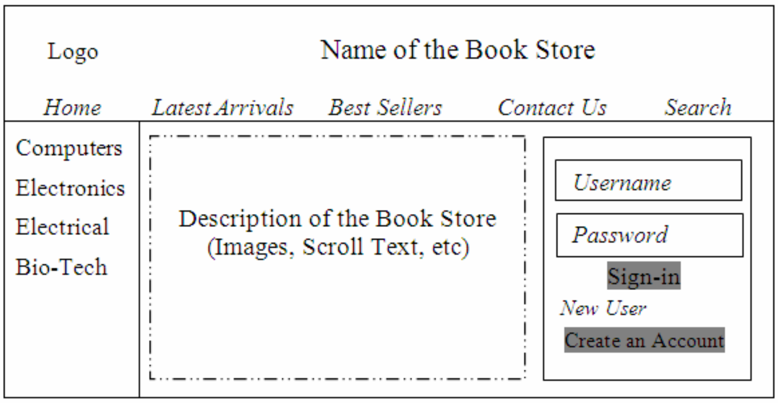
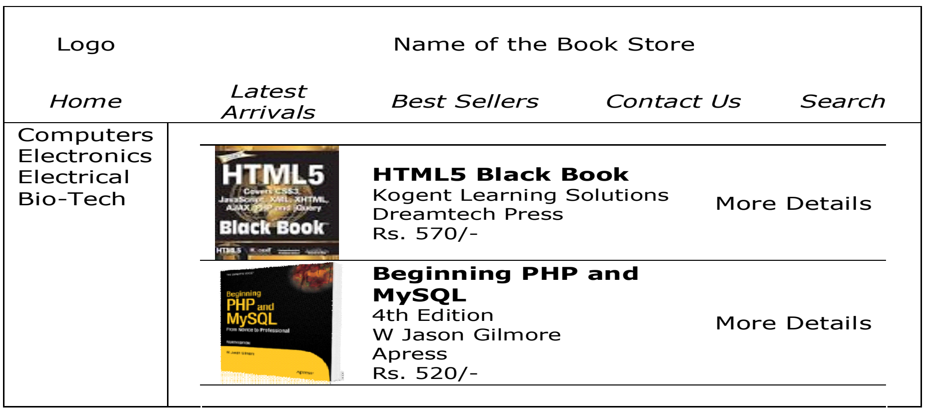
III B. Tech. – II Semester
(16BT51233) WEB TECHNOLOGIES LAB

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITE: A course on Web Technologies.
COURSE DESCRIPTION: Hands-on experience on HTML5; CSS; JavaScript; JQuery; Bootstrap; PHP and MySQL.
COURSE OUTCOMES:
On successful completion of this course, students will be able to:
CO1. Demonstrate knowledge on web page design elements, dynamic content and database Interaction.
CO2. Analyze user requirements to develop web applications.
CO3. Design client-server applications using web technologies.
CO4. Demonstrate problem solving skills to develop enterprise web applications.
CO5. Use HTML, CSS, JavaScript, JQuery, Bootstrap and PHP technologies for device independent web application development.
CO6. Apply web technologies to develop interactive, dynamic and scalable web applications for societal needs.
CO7. Work effectively as an individual and as a member in team for mini-project implementation.
CO8. Demonstrate communication skills, both oral and written for preparing and presenting reports.
LIST OF EXPERIMENTS:
1. Design the following static web pages of an online book store web application.
a. Home Page:



b. Catalogue Page:
The catalogue page should display the following details of available books.
i. Snap shot of cover page
ii. Title of the text book
iii. Author name
iv. Publisher
v. Price
vi. More details link.



c. Registration Page:
Design the Registration page with the following fields and navigate it with create an account link.

i. First Name	ii. Last Name	iii. Gender
iv. Date of Birth	v. Username	vi. Password
vii. Confirm Password	viii. Address	ix. Postal Code
x. Mobile No.	xi. Email-Id	

2. a. Design a web page to store username and password information using the local storage concept.
   b. Design a web page to store employee information including Name, Emp. Id, Department, Salary and Address on a client's machine using a real SQL database.
3. Apply the following styles to all web pages of online book store web application.
   a. Fonts and Styles: font-family, font-style, font-weight and font-size
   b. Backgrounds and colors: color, background-color, background-image and background-repeat
   c. Text: text-decoration, text-transformation, text-align and text-indentation, text-align
   d. Borders: border, border-width, border-color and border-style
   e. Styles for links: A: link, A: visited, A:active, A:hover
   f. Selectors, Classes, Layers and Positioning elements.
4. Write a JavaScript/JQuery code to validate the following fields of the Registration web page.
   a. First Name/Last Name - should contain only alphabets and the length should not be less than 8 characters.
   b. Username - It should contain combination of alphabets, numbers and underscore. It should not allow spaces and special symbols.
   c. Password - It should not less than 8 characters in length and it contains one uppercase letter and one special symbol.
   d. Date of Birth - It should allow only valid date; otherwise display a message stating that entered date is invalid. Ex. 29 Feb. 2009 is an invalid date.
   e. Postal Code: It must allow only 6 digit valid number.
   f. Mobile No. - It should allow only numbers and total number of digits should be equal to 10.
   g. e-mail id - It should allow the mail id with the following format: Ex. mailid@domainname.com
5. Design a web page with the following features using HTML5, JavaScript and JQuery
   a. Displaying of images with Custom animated effects
   b. Playing of selected video from the list of videos
   c. Showing the animated text in increasing and decreasing font size
   d. Changing the size of the area in a web page using DIV tag
   e. Hiding and Showing elements in a web page.
6. Design a web page with the following features using Bootstrap and Media Query.
   a. Components
   b. Responsive tables
   c. Responsive images and videos
7. a. Deploy and navigate web pages of online book store using WAMP/XAMPP web server.
   b. Write a PHP program to read user name and favorite color from the HTML form. Display the name of the user in green color and sets user favorite color as a background for the web page.
8. Write a PHP code to read the username and password entered in the Login form of the online book store and authenticate with the values available in cookies. If user enters a valid username and password, welcome the user by username otherwise display a message stating that, entered details are invalid.
9. Write a PHP code to read user details entered through the registration web page and store the same into MySQL database.
10. Write a PHP code for storing books details like Name of the book, author, publisher, Edition, price, etc into MySQL database. Embed a PHP code in catalogue page of the online book store to extract books details from the database.
11. Mini Project - 1: Design a web application for selling products online with the following features.

Mobile website option - The online store should be built on a responsive design template and its features need to be available to all users, at any time, from anywhere and in any device.
Image options - The photos should also be taken from different points of view to give you a clearer idea of the product. Image options should include viewing angles, zoom, multiple images, and more.
Detailed product description - The description should often include the important details, such as the expiration date, size dimensions, weight, manufacturers date, and practical uses must be included in a good product description.
Order Tracking - The customers should be able to track their ordered products by logging into an account created upon registration.
Payment Options - An online website should allow credit card/debit card/net banking for payment.
Mini Project – 2: Design a social website with the following features
Build Profile - Members allow to build their profiles.
Upload content - The Social Networking Sites allow members to upload text messages, photographs, audio and video files. All posts are arranged in descending order with the last post coming first.
Build conversations - Content posted by members can be browsed and commented upon by all members who form part of the community. Content can also be tagged from third party sites on subjects that interest the group.

III B. Tech.– II Semester
(16BT61532) **SEMINAR**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
	100	100	-	-	-	2

PRE-REQUISITES: All the courses of the program up to III B. Tech. – I Semester.

COURSE DESCRIPTION:
Identification of the topic for the seminar; Literature survey; Performing critical study and analysis of the topic identified; Preparation of report and presentation.

COURSE OUTCOMES:
Completion of the seminar work enables a successful student to demonstrate:

CO1. Knowledge on the seminar topic.
CO2. Analytical ability exercised during the seminar work.
CO3. Ability to investigate and solve complex engineering problems faced during the seminar work.
CO4. Ability to apply techniques to complex engineering activities with an understanding of limitations as applied in the seminar work.
CO5. Ability to function effectively as an individual as experienced during the seminar work.
CO6. Ability to present views cogently and precisely on the seminar topic.
CO7. Ability to engage in life-long leaning as experience during the seminar work.

III B. Tech - II Semester

(16BT6HS01) BANKING AND INSURANCE

(Common to CE, ME, CSE, IT and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION: Origin of Banking; Functions of Banking; Role & Functions of RBI; Bank-Customer Relationship; Deposit and Loan Services of Banks; Banking Procedures; Electronic Payment Mechanisms; Business Models; Concepts of Risk and Uncertainty; Fundamentals of Insurance; Principles of Insurance; Essentials of Insurance Contracts; Insurance players in India.

COURSE OUTCOMES:

On Successful completion of the course, students will be able to:

CO1. Demonstrate Knowledge in
- a) Tools and concepts of Banking and Insurance.
- b) Basic Principles and concepts of Insurance and Banking.
- c) e-fund transfers, e-payments and e-business models.

CO2. Develop skills in providing solutions for
- a) Online banking and e – payments...
- b) Risk Management through insurance benefits the society at large.
- c) Money management by leveraging on technology, banking and insurance services.

CO3. Exhibit conceptual soundness about banking and insurance, this would contribute to more employment opportunities.

CO4. Provide life skills for effective utilization of Banking and Insurance facilities.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION TO BANKING (09 Periods)

origin and growth of banking, meaning and functions of banking, importance of banking, Reserve Bank of India; functions, monetary policy, open market operations.

UNIT II: BANK-CUSTOMER RELATIONSHIP (09 Periods)

Debtor-creditor relationship, anti money laundering, deposit products or services, payment and collection of cheques. Accounts – Types of accounts, procedure for opening and closing an account. Loans and Advances- principles of lending, types of loans,

UNIT III: BUSINESS MODELS & ELECTRONIC PAYMENT SYSTEM (09 Periods)

Features, types of e-payment system, e-cash ,NEFT, RTGS, Credit cards, Electronic purses and Debit cards. Business models- B2B, B2C, C2C, and B2G.

UNIT IV: INTRODUCTION TO RISK AND INSURANCE (09 Periods)

Concept of risk, risk *Vs* uncertainty. Insurance definition, Insurance as risk mitigation mechanism, elements of insurance.

UNIT V: INSURANCE OVERVIEW (09 Periods)

Principles of insurance, insurance types, LIC & GIC insurance contract- nature, elements, functions, IRDA, Insurance Players in India.

TEXT BOOKS:

1. A.V. Ranganadha Chary, R.R. Paul, Banking and Financial *system*, Kalyani Publisher, New Delhi, 2nd Edition.
2. P.K.Gupta, *Insurance and Risk Management*, Himalaya Publishing House, New Delhi.

REFERENCE BOOKS:

III B. Tech - II Semester

(16BT6HS02) BUSINESS COMMUNICATION AND CAREER SKILLS

(Common to CE, ME, CSE, IT and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Technical English or English at Diploma level

COURSE DESCRIPTION:
Nature and Scope of Communication; Corporate Communication; Writing Business documents; Careers and Resumes; Interviews.

COURSE OUTCOMES:
On successful completion of this course, students will be able to

CO1. Demonstrate knowledge in
- Corporate Communication
- Main Stages of Writing Messages
- Career Building

CO2. Analyze the possibilities and limitations of language in
- Communication Networks
- Crisis Management/Communication

CO3. Design and develop the functional skills for professional practice in Business Presentations & Speeches

CO4. Apply written and oral communication techniques in preparing and presenting various documents in technical writing.

CO5. Function effectively as an individual and as a member in diverse teams.

CO6. Communicate effectively with the engineering community and society in formal and informal situations.

DETAILED SYLLABUS:

UNIT I - NATURE AND SCOPE OF COMMUNICATION (09 Periods)
Introduction: Functions of Communication – Roles of a Manager – Communication Basics – Communication Networks – Informal Communication – Interpersonal Communication –Communication Barriers

UNIT II - CORPORATE COMMUNICATION (09 Periods)
Introduction: What is Corporate Communication? – Corporate Citizenship and Social Responsibility – Corporate Communication Strategy – Crisis Management/Communication – Cross-Cultural Communication.

UNIT III - WRITING BUSINESS DOCUMENTS (09 Periods)
Introduction: Importance of Written Business Communication, Types of Business Messages - Five Main Stages of Writing Business Messages – Business Letter Writing – Effective Business Correspondence – Common Components of Business Letters – Strategies for Writing the Body of a Letter

UNIT IV – CAREERS AND RESUMES (09 Periods)
Introduction – Career Building – Business Presentations and Speeches – Resume Formats – Traditional, Electronic and Video Resumes – Sending Resumes – Follow-up Letters – Online Recruitment Process

UNIT V – INTERVIEWS (09 Periods)
Introduction – Fundamental Principles of Interviewing – General Preparation for an Interview – Success in an Interview – Types of Interviewing Questions – Important Non-verbal Aspects – Types of Interviews – Styles of Interviewing

Total Periods: 45

III B. Tech - II Semester

(16BT6HS03) COST ACCOUNTING AND FINANCIAL MANAGEMENT

(Common to CE, ME, CSE, IT and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION: Scope, Objectives and Elements of cost Accounting; Cost Sheet and Tender quotations; Variance Analysis: Material variances, Labor variances; Meaning and Scope, Liquidity, Profitability Ratios: concept of Risk and Return on Investment.

COURSE OUTCOMES:

On successful completion of this course, students will be able to

CO1. Acquire Knowledge in
- a) Elements of Costing.
- b) Basic concepts of Financial Management.
- c) Risk and Return
- d) Significance of Cost Accountancy
- e) Behavioral Finance

CO2. Develop skills in
- a) Material, Labor, Overheads control.
- b) Excellence and ability to minimize the cost of the organization

C03: Develop effective Communication in Cost control and Financial Management.

CO4. Provide solutions for effective investment decisions.

DETAILED SYLLABUS:

UNIT I : INTRODUCTION TO COST & COST ACCOUNTING (09 Periods)

Cost and Cost Accounting, Scope, Objectives, Advantages and disadvantages – Cost Accounting *Vs* Management Accounting – Elements of Costing – Installation of costing system – Material Control, Labour Control, Overhead Control.

UNIT II: COST SHEET & PREPARATION OF COST SHEET (09 Periods)

Analysis of Cost – Preparation of cost sheet, estimate, tender and quotation (Simple problems) – Importance of Costing while pricing the products.

UNIT III: STANDARD COSTING & VARIANCE ANALYSIS (09 Periods)

Introduction to Standard Costing & Variances – Variance Analysis: Material variances, Labour variances (Simple Problems).

UNIT IV : INTRODUCTION TO FINANCIAL MANAGEMENT & RATIO ANALYSIS (09 Periods)

Financial Management-Meaning and Scope, Liquidity, Profitability, Financial Statement Analysis through ratios (Simple Problems).

UNIT V: INTRODUCTION TO INVESTMENT & BEHAVIORAL FINANCE (09 Periods)

Investment-Meaning and Definition- concept of risk and returns-Investment Alternatives- Introduction to Behavioral Finance – Anomalies –Key Concepts –Anchoring – Mental Anchoring-Confirmation and Hindsight Bias-Gambler's Fallacy-Herd Behavior-Over Confidence-Overreaction and Availability Bias-Prospect Theory.

III B. Tech - II Semester

(16BT6HS04) ENTREPRENEURSHIP FOR MICRO, SMALL AND MEDIUM ENTERPRISES

(Common to CE, ME, CSE, IT and CSSE) (Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION: Introduction to Entrepreneur Development; Idea generation and formation of Business Plan; Micro and Small Enterprises; Institutional Finance and Support to Entrepreneur; Woman Entrepreneurship.

COURSE OUTCOMES:

On successful completion of this course, students will be able to

C01: Acquire Knowledge in

a) Schemes and institutions encouraging entrepreneurship.

b) Basic Principles and concepts of Accountancy.

c) Significance of entrepreneurship.

CO2. Develop skills in providing solutions for

a) Personal excellence through financial and professional freedom.

b) Women entrepreneurship serving as contrivance in societal development

CO3. Develop Critical thinking and evaluation ability.

CO4. Widens knowledge and build up attitude towards trouble shooting.

CO5. Demonstrate business acumen

DETAILED SYLLABUS:

UNIT I : INTRODUCTION TO ENTREPRENEURSHIP DEVELOPMENT (09 Periods)

Concept of Entrepreneurship – Growth of Entrepreneurship in India **-** Factors affecting entrepreneurship growth - Characteristics of an Entrepreneur – Functions of Entrepreneur – Need for an Entrepreneur – Entrepreneurial Decision Process – Types of Entrepreneurs – Distinction between an Entrepreneur and a manager.

UNIT II : IDEA GENERATION AND FORMULATION OF BUSINESS PLANS (09 Periods)

Sources of Ideas – Methods of idea generation – Steps in Setting up of a Small Business Enterprise – Formulation of Business Plan – Contents of Business Plan – Significance – Common Errors in Business Plan Formulation, The role of incubation centers for promoting Entrepreneurship, Start-up – New Guidelines.

UNIT III : MICRO AND SMALL ENTERPRISE (09 Periods)

Meaning and Definition – Micro and Macro units – Essentials – Features – Characteristics – Scope of Micro and Small Enterprises – Objectives of Micro Enterprises – relationship between Micro and Macro Enterprises - Problems of Micro and Small Enterprises

UNIT IV : INSTITUTIONAL FINANCE (09 Periods)

Institutional Finance **–** Need-Scope-Services - Various Institutions offering Institutional support: – Small Industries Development of Bank of India (SIDBI), State Industrial Development Corporations (SIDCs)– Small Industries Development Organisation (SIDO) – Small Industries Service Institutes (SISIs) – District Industries Centres (DICs) – National Institute of Entrepreneurship and Small Business Development (NIESBUD) – Technical Consultancy Organizations (TCOS). Micro Units Development and Refinance Agency Bank (MUDRA).

UNIT V : WOMEN & RURAL ENTREPRENEURSHIP (09 Periods)

Concept of Women entrepreneur - Functions of Women entrepreneurs - Growth of women entrepreneurship in India - Challenges of Women entrepreneurs- Programmes supporting women entrepreneurship – Rural Entrepreneurship – Meaning, Need for Rural entrepreneurship, Problems of rural entrepreneurship, Role of NGOs, Role of Bharatiya Mahila Bank for encouraging Women Entrepreneurs.

III B. Tech - II Semester
(16BT6HS05) FRENCH LANGUAGE
(La Langue Francais)

(Common to CE, ME, CSE, IT and CSSE)
(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE:—

COURSE DESCRIPTION: Oral communications; Basic grammar; Advanced grammar; basic writing; Business French (La Francais Commercial).

COURSE OUTCOMES:
On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge in
- Process of communication
- Modes of listening
- Paralinguistic features
- Skimming and Scanning
- Elements of style in writing

CO2. Analyze the possibilities and limitations of language, understanding
- Barriers to Communication
- Barriers to Effective Listening
- Barriers to Speaking
- Formal and metaphorical language

CO3. Design and develop language skills for professional practice.
CO4. Apply basic writing skills in writing Emails and understanding wide range of technical terminologies.
CO5. Understand French culture and civilization.
CO6. Communicate effectively with the native French in day to day situation**.**

DETAILED SYLLABUS:

UNIT I: ORAL COMMUNICATION (09 Periods)
Introduction - Language as a Tool of Communication, French alphabets, Phonetics and pronunciation, making contacts, giving information, Arranging things, Expression of feelings.

UNIT II: BASIC GRAMMAR (09 Periods)
Introduction –Articles, -Er ending Verbs, Nouns, Numbers, Gender, Pronouns, Sentence structure – Case study.

UNIT III: ADVANCED GRAMMAR (09 Periods)
Introduction -Adjectives, Prepositions, Introduction to tenses – Present tense, past tense and future tense, Active and Passive voice.

UNIT IV: BASIC WRITING (09 Periods)
Introduction -Introduction to written communication, Pre-writing, Creating context for writing and Data collection, fill in forms, Write greeting cards, Invitations and Short personal announcements, Short text to describe photos and pictures.

UNIT V: BUSINESS FRENCH (La Francais Commercial) (09 Periods)
Introduction - E-mail writing, Letter writing, Learning technical vocabulary and its application.
Case study of influential French companies, Learning computer/desktop/new age- media vocabulary, Introduction to how to present a topic, Fixing an Appointment

Total Periods: 45

TEXT BOOK:
1. Annie Berther, *Alter Ego*, Hachette Publications, 2012.

REFERENCE BOOKS:
1. RegineMerieux, *Yves Loiseau, Connexions,* Goyall Publishers, 2011.

2. DelphineRipaud, Saison, *French and European* Inc., 2015.

III B. Tech - II Semester

(16BT6HS07) INDIAN CONSTITUTION

(Common to CE, ME, CSE, IT and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —-

COURSE DESCRIPTION: Elements, functions and functionaries according to Indian Constitution, understanding for better professional practice and good citizenry

COURSE OUTCOMES:

On successful completion of this course, students will be able to

CO1. Gain knowledge in
- Parliamentary proceedings, laws, legislature, administration and its philosophy federal system and judiciary of India
- Socials problems and public services like central civil services and state civil services
- Indian and international political aspects and dynamics

CO2. Develop etiquette and professional behavior in line with the constitution of India for becoming a responsible citizen

DETAILED SYLLABUS :

UNIT- I: PREAMBLE AND ITS PHILOSOPHY (08 Periods)

Introduction and Evolution of Indian Constitution, preamble and its Philosophy.

UNIT- II: UNION GOVERNMENT (08 Periods)

Powers, Functions and Position of President, Vice-President and Council of Ministers, Composition of parliament, Constitution Amendment Procedure, Financial Legislation in Parliament.

UNIT III: FEDERAL SYSTEM (14 Periods)

Centre-State relations, Directive Principles of State Policy, Fundamental Rights and Duties, Centre-State Relations, Features of Federal System, Administrative Relationship between Union and States, Powers, Functions and Position of Governors, Function of Chief Ministers, Council of Ministers, Composition and powers of the State Legislature.

UNIT IV: JUDICIARY AND PUBLIC SERVICES (10 Periods)

The Union Judiciary - Supreme Court and High Court, All India Services, Central Civil Services, State Services, Local Services and Training of Civil Services.

UNIT V: INTERNATIONAL POLITICS (05 Periods)

Foreign Policy of India, International Institutions like UNO, WTO, SAARC and Environmentalism.

Total Periods: 45

TEXT BOOK:

1. Briji Kishore Sharma*, Introduction to the Constitution of India*, Prentice Hall of India, 2005.

REFERENCE BOOKS:

1. Mahendra Pal Singh,V. N. Shukla’s, Constitution of India, Eastern Book Company, 2011.

III B. Tech - II Semester

(16BT6HS08) **INDIAN ECONOMY**

(Common to CE, ME, CSE, IT and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION:
Introduction; Time Value of Money; Elementary Economic Analysis; Value Analysis; Value Engineering; Economic Planning.

COURSE OUTCOMES:
On successful completion of this course the students will be able to:

CO1. Acquire the knowledge in
- Micro and Macro Economics.
- Traditional and Modern methods of Capital Budgeting.
- Five year plans and NITI Aayog.

CO2. Analyze
- Capital Budgeting.
- Value Analysis and Value Engineering.
- Economic analysis
- Law of supply and demand

CO3. Understand the nuances of project management and finance

DETAILED SYLLABUS:

UNIT I: INTRODUCTION (09 Periods)
Economics- Flow in an Economy, Law of Supply and Demand; Micro and Macro Economics; Relationship between Science, Engineering, Technology, and Economic Development; Concept of Engineering Economics-Types of Efficiency, Definition and Scope of Engineering Economics.

UNIT II: TIME VALUE OF MONEY (12 Periods)
Concepts and Application; Capital Budgeting-Traditional and Modern Methods; Simple and Compound Interest, Cash Flow Diagram, Principle of Economic Equivalence; Evaluation of Engineering Projects – Present Worth Method, Future Worth Method, Annual Worth Method, Internal Rate of Return Method, Cost-benefit Analysis in Public Projects; Depreciation Policy-Depreciation of Capital Assets, Causes of Depreciation, Straight Line Method and Declining Balance Method.

UNIT III: ELEMENTARY ECONOMIC ANALYSIS (09 Periods)
Economic Analysis – Meaning, Significance, Simple Economic Analysis; Material Selection for a Product, Substitution of Raw Material; Design Selection for a Product;Material Selection-Process Planning, Process Modification.

UNIT IV: VALUE ENGINEERING (06 Periods)
Introduction- Value Analysis, Value Engineering, Functions, Aims; Value Analysis vs. Value Engineering; Value Engineering Procedure- Advantages, Application Areas.

UNIT V: ECONOMIC PLANNING (09 Periods)
Introduction- Need For Planning in India, Five year plans(1951-2012), NITI Aayog(from 2014 onwards); Inclusive Growth-Meaning, Significance, Need for inclusive growth in India, Strategy for more inclusive growth, Challenges and Prospects; Employment and Inclusive Growth in India, Role of engineers in sustaining inclusive growth. **Total Periods: 45**

TEXT BOOKS
1. Panneerselvam R., *Engineering Economics*, PHI Learning Private Limited, Delhi, 2nd Edition, 2013.

2. Misra, S.K. & V. K. Puri, *Indian Economy: Its Development Experience*, Himalaya Publishing House, Mumbai, 32nd Edition, 2010.

III B. Tech - II Semester

(16BT6HS09) INDIAN HERITAGE AND CULTURE

(Common to CE, ME, CSE, IT and CSSE)
(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION: Basic traits of Indian Culture; Humanistic Reforms under Jainism and Buddhism; Culture in the medieval period; Socio Religious reforms in Indian Culture; Reform movements for harmonious relations.

COURSE OUTCOMES:
On successful completion of this course, students will be able to:

CO1. Acquaint knowledge in
- (a) human aspirations and values in Vedic culture.
- (b) cultural aspects of Buddhism and Jainism
- (c) unification of our country under Mourya's and Gupta's administrations
- (d) socio Religious aspects of Indian culture
- (e) reform movements and harmonious relations.

CO2**.** Apply ethical principles and reforms as models for the upliftment of the societal status in the present cultural contexts

DETAILED SYLLABUS:

UNIT I: BASIC TRAITS OF INDIAN CULTURE (09 Periods)
Meaning and definition and various interpretations of culture . Culture and its features. The Vedic and Upanishadic culture and society. Human aspirations and values in these societies. Chaturvidha purushardhas, Chaturashrma and Chaturvarna theory.

UNIT II: HUMANISTIC REFORMS UNDER JAINISM AND BUDDHISM (09 Periods)
Salient features of Jainism - contributions of Jainism to Indian culture. Contributions of Aachaarya and Mahaapragya. Buddhism as a humanistic culture. The four noble truths of Buddhism. Contributions of Buddhism to Indian culture.

UNIT- III: CULTURE IN THE MEDIEVAL PERIOD (09 Periods)
Unifications of India under Mouryas and Guptas and their cultural achievements. Cultural conditions under satavahanas. Contributions to pallavas and cholas to art and cultural achievements of vijayanagara rulers.

UNIT- IV: SOCIO RELIGIOUS REFORMS IN INDIAN CULTURE (09 Periods)
Western impact on India, Introductin of western education, social and cultural awakening and social reform movements of Rajaramohan Roy - Dayanandha Saraswathi- Anne Besant. (theosophical society)

UNIT- V: REFORM MOVEMENTS FOR HARMONIOUS RELATIONS (09 Periods)
Vivekananda, Eswarchandra vidyasagar and Veeresalingam- emancipation of women and struggle against caste. Rise of Indian nationalism. Mahatma Gandhi- Non violence and satyagraha and eradication of untouchability.

Total Periods: *45*

TEXT BOOK:
1. Valluru Prabhakaraiah, *Indian Heritage and Culture*, Neelkamal Publications Pvt. Ltd. Delhi, reprint 2015.

(Common to CE, ME, CSE, IT and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	0	3

PRE-REQUISITE: Soft Skills Lab

COURSE DESCRIPTION:
Self-esteem & Self-Management; Developing Positive Attitudes; Self-Motivation & Self-Management; Getting Along with the Supervisor; Workplace Success.

COURSE OUTCOMES:
On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge in
- Self-Management
- Planning Career

CO2. Analyze the situations based on
- Attitudes
- Thinking strategies

CO3. Design and develop the functional skills for professional practice in

CO4. Function effectively as an individual and as a member in diverse teams.

CO5. Communicate effectively in public speaking in formal and informal situations.

DETAILED SYLLABUS:

UNIT I: SELF-ESTEEM & SELF-IMPROVEMENT (09 Periods)
Know Yourself – Accept Yourself; Self-Improvement: Plan to Improve - Actively Working to Improve Yourself.
Case study: 1

UNIT II: DEVELOPING POSITIVE ATTITUDES (09 Periods)
How Attitudes Develop – Attitudes are Catching – Improve Your Attitudes.
Case study: 2

UNIT III: SELF-MOTIVATION & SELF-MANAGEMENT (09 Periods)
Show Initiative – Be Responsible Self-Management; Efficient Work Habits – Stress Management – Employers Want People Who can Think – Thinking Strategies.
Case study: 3

UNIT IV: GETTING ALONG WITH THE SUPERVISOR (09 Periods)
Know your Supervisor – Communicating with Your Supervisor – Special Communications With Your Supervisor – What Should You Expect of Your Supervisor? – What Your Supervisor Expects of You - Moving Ahead Getting Along with Your Supervisor.
Case study: 4

UNIT V: WORKPLACE SUCCESS (09 Periods)
First Day on the Job – Keeping Your Job – Planning Your Career – Moving ahead.
Case study: 5

Total Periods: 45

TEXT BOOK:
1. Harold R. Wallace and L. Ann Masters, Personality Development, Cengage Learning, Delhi, 6th Indian Reprint 2011.

III B. Tech - II Semester

(16BT6HS12) PHILOSOPHY OF EDUCATION

(Common to CE, ME, CSE, IT and CSSE)
(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —-

COURSE DESCRIPTION: Introduction to Philosophy and Engineering Education; Philosophical methods and their implications in engineering; Philosophical education in India; Values and Engineering education; Outcome based education.

COURSE OUTCOMES:
On successful completion of this course the students will be able to

CO1. Acquire knowledge in
- Philosophy of Engineering education.
- Philosophical Methods.
- Knowledge acquiring methods.
- Engineering education and responsibilities.

CO2. Understand the impact of Outcome Based Education for effective educational outcomes

CO3. Apply reasoning to assess societal issues with the contextual knowledge of engineering education and responsibilities.

DETAILED SYLLABUS

UNIT I: INTRODUCTION TO PHILOSOPHY AND ENGINNERING EDUCATION (09 Periods)
Concept , Significance, and Scope of Philosophy in Engineering – Aims of Engineering Education – relationship between philosophy and engineering education – speculative, normative and critical approaches of philosophy in engineering.

UNIT II: PHILOSOPHICAL METHODS AND THEIR IMPLICATIONS IN ENGINEERING (09 Periods)
Introduction to Philosophical approaches: Idealism, Naturalism, Pragmatism, Realism and Existentialism; Significance and Scope in Engineering Education.

UNIT III: PHILOSOPHICAL EDUCATION IN INDIA (09 Periods)
Different branches of philosophy- meaning, Epistemology: nature and scope; Knowledge acquiring methods;Kinds and instruments of knowledge; Re-shapingof educational thoughts by Indian thinkers: Rabindranath Tagore, Sri Aurobindo Gosh, Mahatma Gandhi,Jiddu Krishnamurthy and Swamy Vivekananda.

UNIT IV: VALUES AND ENGINEERING EDUCATION (09 Periods)
Introduction; Engineering education and responsibilities: health, social, moral, ethics aesthetic; Value: crisis and strategies for inculcation;
Case study: Engineering Solutions given by Mokshagundam Visvesvaraya

UNIT V: OUTCOME- BASED EDUCATION (09 Periods)
Institutional visioning ;educational objectives ; programme outcomes , curriculum, stakeholders, infrastructure and learning resources ; governance and management, quality in education.

Total Periods: 45

TEXT BOOKS :
1. Ganta Ramesh, *Philosophical Foundations of Education*, Neelkamal Publications, 2013
2. CarlMicham, *Thinking through technology(The Paths between Engineering and Philosophy*). University of Chicago Press, 1994.
3. Louis L Bucciarelli, *Engineering Philosophy*, Delft University Press, 2003.
4. NBA/ABET Manuals.

REFERENCE BOOKS :
1. Louis L Bucciarelli, *Philosophy of Technology and Engineering Sciences*, North Holland, 2009(e-book).

2. Samuel Florman, *Existential pleasures of education*, Martins's Griffin S.T. publication, 1992.

III B. Tech. - II Semester

(16BT6HS13) PUBLIC ADMINISTRATION

(Common to CE, ME, CSE, IT and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION:

Introduction; Public Policy; Good Governance; E-Governance; Development Administration.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Acquire knowledge in
- Public Policy.
- Good Governance.
- E-governance.
- Development Administration.

CO2. Analyze the possibilities and limitations of existing policies through Good Governance perspective.

CO3. Design and develop solutions in e-governance models to find and provide opportunities in e-governance.

CO4. Adopt principles ofe-governance in addressing the existing issues and challenges in e-governance sector.

CO5. Understand the significance of Administrative Development in finding professional engineering solutions by probing
- Bureaucracy.
- Role of civil society.

DETAILED SYLLABUS :

UNIT I: INTRODUCTION **(09 Periods)**

Public and Private Administration- Differences and Similarities, Meaning, Scope; Importance of Public Administration in Modern Era; Public Administration and its implications in the field of Engineering.

Case Study: Unique Identification Authority of India (UIDAI): Aadhaar Project: Challenges Ahead

UNIT II: PUBLIC POLICY **(09 Periods)**

Meaning and Scope; Policy Formulation in India; Policy making process; Policy Implementation Engineering and Public Policy**,** Social, ethical, Monetary and fiscal policies; policy implications of engineering; The engineer's role in Public Policy.

Case Study: NITI Aayog: Demonetization and Aftermath of Demonetization – Cashless transactions.

UNIT III: GOOD GOVERNANCE **(09 Periods)**

Significance; Objectives; Concepts; Reforms; Organization and its basic problems Administrative and Governance reforms in India; Sustainable and Inclusive growth in India; Engineering and Sustainable Environment-Role of Engineers; Right to information Act

Case Study: Strategies in Good Governance: A Case Study of Karnataka, Kerala and Orissa.

UNIT IV: E-GOVERNANCE **(09 Periods)**

Meaning, Significance, Issues in E-governance; E-governance Models, Problems and Opportunities; Application of DataWarehousing and Data Mining in Governance; Engineers role in re-engineering E-governance.

Case Study: e-Housing System for Bhavana Nirman Dhanasahayam Online disbursement of housing assistance in Kerala.

UNIT V: DEVELOPMENT ADMINISTRATION **(09 Periods)**

Introduction;Development Administration-Administrative Development- Sustainable Development - Significance- Objectives; Bureaucracy - Personnel administration and human resources development; Role of civil society-Citizens and administration; Development and Engineering: Issues Challenges and Opportunities.

Case Study: Neeru-Chettu (Water-Tree) of Andhra Pradesh.

Case Study: TPDDL of Delhi and Odisha. **Total Periods: 45**

TEXT BOOKS

1. M.P. Sharma, B.L. Sadana, Harpreet Kaur*, Public Administration in Theory and Practice*, Kitab Mahal, Mumbai, 2014.
2. CSR Prabhu, *E. Governance – concepts and case studies*, PHI, New Delhi, 2nd Edition 2012.

REFERENCE BOOKS

1. SurendraMunshi, Bijupaul *Abraham, Good Governance, Democratic societies and Globalization,* Sage publications, New Delhi, 2004.
2. R.K.Sapru, *Public Policy*, Sterling Publishers Pvt Ltd., New Delhi, 2001.

III B. Tech. – II Semester
(16BT60112) BUILDING MAINTENANCE AND REPAIR
(Common to CE, ME, CSE, IT and CSSE)
(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION: Durability of buildings, Failure and repair of buildings, Material Techniques for repair, Maintenance of buildings, Conservation and recycling.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Acquire basic knowledge on durability and serviceability, failures, repair and rehabilitation of buildings.
CO2. Analyze failures, repair and rehabilitation techniques.
CO3. Solve complex building maintenance problems through proper investigations and interpretation.
CO4. Use modern tools and techniques for various repairs and rehabilitation of structures.
CO5. Provide solutions for building maintenance and repair problems considering health and safety.
CO6. Consider environmental sustainability in building maintenance and repair.
CO7. Maintain ethical standards for quality in repairs and rehabilitation of structures.
CO8. Evaluate specifications and perform cost analysis of building components while repair and rehabilitation.

DETAILED SYLLABUS:

UNIT I: DURABILITY AND SERVICEABILITY OF BUILDINGS (10 Periods)

Life expectancy of different types of buildings; Effect of environmental elements such as heat, dampness, frost and precipitation on buildings; Effect of chemical agents on building materials, Effect of pollution on buildings, Effect of fire on building; Damage by biological agents like plants, trees, algae, fungus, moss, insects, etc.; Preventive measures on various aspects, Inspection, Assessment procedure for evaluating for damaged structures, Causes of deterioration, Testing techniques.

UNIT II*:* FAILURE AND REPAIR OF BUILDINGS (10 Periods)

Building failure – Types, Methodology for investigation; Diagnostic testing methods and equipment, Repair of cracks in concrete and masonry, Materials for Repair, Methods of repair, Repair and strengthening of concrete buildings, Foundation repair and strengthening, Underpinning, Leakage of roofs and repair methods.

UNIT III: TECHNIQUES FOR REPAIR (08 Periods)

Rust eliminators and polymers coating for rebars during repair, Foamed concrete, Mortar and dry pack, Vacuum concrete, Gunite and shotcrete, Epoxy injection, Mortar repairs for cracks, Shoring and underpinning.

UNIT IV: MAINTENANCE OF BUILDINGS (09 Periods)

Reliability principles and its applications in selection of systems for building, Routine maintenance of building, Maintenance cost, Specifications for maintenance works, Dampness - Damp proof courses, Construction details for prevention of dampness; Termite proofing, Fire protection, Corrosion protection.

UNIT V: CONSERVATION AND RECYCLING (08 Periods)

Performance of construction materials and components in service, Rehabilitation of constructed facilities, Conservation movement, Materials and methods for conservation work, Recycling of old buildings and its advantages, Examples. **Total Periods: *45***

TEXT BOOKS:

1. Dennison Campbell, Allen and Harold Roper, *Concrete Structures – Materials, Maintenance and Repair,* Longman Scientific and Technical, UK, 1991.
2. Allen, R. T. L., Edwards, S. C. and J. D. N. Shaw, *The Repair of Concrete Structures,* Blackie Academic & Professional, UK, 1993.

REFERENCE BOOKS:

1. Peter H. Emmons, *Concrete Repair and Maintenance*, John Wiley and Sons Publications, 2002.
2. "*Building Construction under Seismic Conditions in the Balkan Region*, UNDP/UNIDO Project Rer/79/015, Volume 5, Repair and Strengthening of Reinforced Concrete, Stone and Brick Masonry Buildings, United Nations Industrial Development Organisation, Vienna.
3. Shetty, M. S., *Concrete Technology*, S. Chand and Company.
4. Smith, P. and Julian, W*., Building Services*, Applied Science Publications, London, 1976.
5. SP: 25, BIS; *Causes and Prevention of Cracks in Buildings*.
6. Champion, S., *Failure and Repair of Concrete Structures*, John Wiley and Sons Publications, 1961.
7. Perkins, P. H., Repair, *Protection and Water Proofing of Concrete Structures*, E& FN Spon, UK, 3rd Edition, 1997.

III B. Tech. – II Semester

(16BT60113) **CONTRACT LAWS AND REGULATIONS**

(Common to CE, ME, CSE, IT and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: -

COURSE DESCRIPTION: Construction contracts; Tenders; Arbitration; Legal requirements; Labour regulations.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate basic Knowledge on construction contracts, tenders, arbitration, legal requirements and labour regulations.
CO2. Analyze contracts and tenders.
CO3. Address the legal issues in contracts and tenders.
CO4. Follow laws and regulations in the preparation of contracts and tenders.
CO5. Prepare contract and tender documents as per the standards.
CO6. Consider project schedule, cost, quality and risk in the preparation of contracts and tenders.

DETAILED SYLLABUS:

UNIT I: CONSTRUCTION CONTRACTS (09 Periods)

Indian contracts act, Elements of contracts, Types of contracts, Features, Suitability, Design of contract documents, International contract document and laws, Standard contract document, Law of torts.

UNIT II: TENDERS (09 Periods)

Prequalification, Bidding, Accepting; Evaluation of tender from technical, contractual and financial points of view; Two cover system, Preparation of the documentation, Contract formation and interpretation, Potential contractual problems, Price variation clause, Comparison of actions and laws, Subject matter, Violations.

UNIT III: ARBITRATION (09 Periods)

Arbitration, Comparison of actions and laws, Agreements, Appointment of arbitrators, Conditions of arbitration, Powers and duties of arbitrator, Rules of evidence, Enforcement of award, Arbitration disputes, Dispute review board.

UNIT IV: LEGAL REQUIREMENTS (09 Periods)

Legal requirements for planning, Property law, Agency law, Tax laws – Income tax, Sales tax, Excise and custom duties, Local government approval, Statutory regulations, Insurance and bonding, Laws governing purchase and sale, Use of urban and rural land, Land revenue codes, EMD, Security deposits, Liquidated damages.

UNIT V: LABOUR REGULATIONS (09 Periods)

Social security, Welfare legislation; Laws relating to wages, bonus and industrial disputes; Labour administration, Insurance and safety regulations, Workmen's compensation act, Maternity benefit act, Child labour act, Other labour laws.

Total Periods: 45

TEXT BOOKS

1. Subba Rao, G. C. V., *Law of Contracts I & II*, S. Gogia & Co., 11th Edition, 2011.
2. Jimmie Hinze*, Construction Contracts,* McGraw Hill, 3nd Edition, 2011.

REFERENCE BOOKS

1. Kishore Gajaria, GT Gajaria's*, Law Relating to Building and Engineering Contracts in India*, Lexis Nexis Butterworths India, 4th Edition, 2000.
2. Patil, B. S., *Civil Engineering Contracts and Estimates*, University Press (India) Private Ltd., 4th Edition, 2015.
3. Joseph T. Bockrath, *Contracts and the Legal Environment for Engineers and Architects*, McGraw Hill Education, 7th Edition, 2010.
4. Akhileshwar Pathak, *Contract Law*, Oxford University Press, 2011.

III B. Tech. - II Semester

(16BT60114) DISASTER MITIGATION AND MANAGEMENT

(Common to CE, ME, CSE, IT and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION: Disasters; Earthquakes; Floods; Cyclones; Droughts; Landslides; Disaster management.

COURSE OUTCOMES:

On successful completion of course, the students will be able to:

CO1. Demonstrate knowledge on disasters, their vulnerability and mitigation measures.
CO2. Analyze disasters and their vulnerability.
CO3. Design strategies for effective disaster mitigation.
CO4. Address pre and post disaster issues for better preparedness and mitigation measures, through proper analysis and interpretation.
CO5. Use appropriate methods in disaster mitigation and management.
CO6. Use historical data of disasters to inform the people over preparedness and mitigation measures.
CO7. Solve disaster related issues considering environment.
CO8. Consider economical issues in disaster management.

DETAILED SYLLABUS:

UNIT I: DISASTERS (09 Periods)

Types of disasters - Natural disasters; Impact of disasters on environment, infrastructure and development; Concepts of hazards and vulnerability analysis, Hazard Assessment, Guidelines for hazard assessment and vulnerability analysis, Basic principles and elements of disaster mitigation.

UNIT II: EARTHQUAKES (09 Periods)

Introduction to earthquake, Intensity scale (MSK–64), Seismic activity in India, Seismic zones of India, Earthquakes in A.P., Action plan for earthquake disaster preparedness, Elements at risk, Recovery and rehabilitation after earthquake, Earthquake resistant design and construction of buildings; Tsunami – Onset, Types and causes, Warning, Elements at risk, Typical effects, Specific preparedness and mitigation strategies.

UNIT III: FLOODS, CYCLONES AND DROUGHTS (11 Periods)

Floods and Cyclones: Onset, Types, Warnings; Elements at risk, Typical effects, Indian floods and cyclones, Hazard zones, Potential for reducing hazards, Mitigation strategies and community based mitigation.

Droughts: Onset, Types and warning; Causes, Impact, Early warning and response mechanisms, Mitigation strategies, Droughts in India.

UNIT IV: LANDSLIDES (08 Periods)

Onset, Types and warning; Causes, Elements at risk, Indian landslides, Hazards zones, Typical effects, Mitigation strategies and community based mitigation.

UNIT V: DISASTER MANAGEMENT (08 Periods)

Disaster management organization and methodology, Disaster management cycle, Disaster management in India – Typical cases; Cost–benefit analysis with respect to various disaster management programs implemented by NGOs and Government of India.

Total Periods: 45

TEXT BOOKS:

1. V. K. Sharma, *Disaster Management,* Medtech Publishing, 2nd Edition, 2013.
2. Anand S. Arya, Anup Karanth, and Ankush Agarwal, *Hazards, Disasters and Your Community: A Primer for Parliamentarians, GOI–UNDP Disaster Risk Management Programme, Government of India, National Disaster Management Division,* Ministry of Home Affairs, New Delhi, Version 1.0, 2005.

REFERENCE BOOKS:

1. Donald Hyndman and David Hyndman, *Natural Hazards and Disasters*, Cengage Learning, 3rd Edition, 2011.
2. *Disaster Management in India, A Status Report, Ministry of Home Affairs, Govt. of India*, May 2011.
3. Rajendra Kumar Bhandari, *Disaster Education and Management: A Joyride for Students, Teachers, and Disaster Managers*, Springer India, 2014.

4. R. B. Singh, *Natural Hazards and Disaster Management*, Rawat Publications, 2009.

III B.Tech - II Semester

(16BT60115) ENVIRONMENTAL POLLUTION AND CONTROL

(Common to CE, ME, CSE, IT and CSSE)
(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION: Fundamentals of air pollution; Dispersion of pollutants; Effects and control of air pollution; Water pollution; Soil pollution and control; Municipal solid waste management.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on air, water, soil pollution and their control and solid waste management.
CO2. Analyze causes and effects of air, water and soil pollution and their remedial measures.
CO3. Recommend suitable solutions to complex environmental pollution problems.
CO4. Use appropriate remedial technique to solve environmental pollution problems.
CO5. Understand the effects of environmental pollutionon human health and vegetation.
CO6. Encourage sustainable development through implementation of pollution control measures.
CO7. Maintain IS Codes for environmental quality control.

DETAILED SYLLABUS:

UNIT I: AIR AND NOISE POLLUTION (08 Periods)

Air Pollution: Scope, Significance, Classification, Sources – Line, Area, Stationary, Mobile; Effects of air pollutants on man, material and vegetation; Global effects of air pollution; Air pollution meteorology - Lapse rate, Inversion, Plume pattern; Dispersion of air pollutants - Dispersion models and applications; Ambient air quality standards.

Noise Pollution: Sound pressure, Power and intensity, Impacts of noise, permissible limits of noise pollution, measurement of noise.

UNIT II: AIR AND NOISE POLLUTION CONTROL (10 Periods)

Self cleansing properties of the environment, Dilution method, Control at source, Process changes and equipment modifications, Control of particulates – Types of equipment, Design and operation - Settling chambers, Centrifugal separators, Bag house filters, Wet scrubbers, Electrostatic precipitators; Control of gaseous pollutants – Adsorption, Absorption, Condensation, Combustion; Control of air pollution from automobiles, Control of noise pollution.

UNIT III: WATER POLLUTION AND CONTROL (10 Periods)

Water pollution – Sources, Causes, Effects; Surface and groundwater quality – Physical, Chemical, Biological; Drinking water quality standards, Water purification – Processes, Engineered systems – Aeration, Solids separation, Settling operations, Coagulation, Softening, Filtration, Disinfection; Wastewater – Sources, Causes, Effects, Treatment and disposal – Primary, Secondary, Tertiary; Case studies.

UNIT IV: SOIL POLLUTION AND CONTROL (08 Periods)

Soil pollutants, Sources of soil pollution, Causes, Effects and control of soil pollution, Diseases caused by soil pollution, Methods to minimize soil pollution, Effective measures to control soil pollution, Case studies.

UNIT V: MUNICIPAL SOLID WASTE MANAGEMENT (09 Periods)

Types of solid waste, Composition of solid waste, Collection and transportation of solid waste, Methods of disposal – Open dumping, Sanitary landfill, Composting, Incineration, Utilization - Recovery and recycling, Energy Recovery.

Total Periods: 45

TEXT BOOKS:

1. eavy, H. S, Rowe, D. R., and Tchobanoglous, G. *Environmental Engineering*, McGraw Hill Inc., 1985.
2. C. S. Rao, *Environmental Pollution Control Engineering*, New Age International Pvt. Ltd., 2nd Edition, 2007.
3. Ibrahim A. Mirsa, *Soil Pollution: Origin, Monitoring & Remediation*, Springer, UK, 2nd Edition, 2008.

REFERENCE BOOKS:

1. M. N. Rao and H. V. N. Rao, *Air Pollution,* Tata McGraw–Hill Education Pvt. Ltd., 19th Edition, 2010.
2. Daniel Vallero, Fundamentals of *Air Pollution, Academic Press (Elsevier)*, 5th Edition, 2014.
3. S. M. Khopkar, *Environmental Pollution Monitoring and Control*, New Age International Pvt. Ltd., 2nd Edition, 2007.

4. V. M. Domkundwar, *Environmental Engineering*, Dhanpat Rai & Co. Pvt. Ltd., New Delhi, 2014.

III B.Tech - II Semester

(16BT60116) PLANNING FOR SUSTAINABLE DEVELOPMENT

(Common to CE, ME, CSE, IT and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE:—

COURSE DESCRIPTION: Sustainable development; Environmental impact; Sustainable Policies; Governance; Theories and strategies; Media and education for sustainability.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate the knowledge on sustainable development, environmental impact, sustainable policies, governance, systems and strategies, media and education for sustainability.

CO2. Analyze theories, environmental impact, policies, systems and strategies for sustainable development.

CO3. Develop suitable methods and systems for sustainable development.

CO4. Use appropriate techniques in solving issues related to sustainable development.

CO5. Provide solutions to problems associated with sustainable development considering society.

CO6. Consider environment while planning sustainable development.

CO7. Communicate effectively on sustainable development issues through media and education.

CO8. Consider economical issues while planning for sustainable development.

DETAILED SYLLABUS:

UNIT I: SUSTAINABLE DEVELOPMENT (09 Periods)

Definition and concepts of sustainable development, Capitalization of sustainability - National and global context; Millennium development goals, Emergence and evolution of sustainability and sustainable development, Theories of sustainability, Case studies.

UNIT II: ENVIRONMENTAL IMPACT (09 Periods)

Climate change – Science, Knowledge and sustainability; Unforeseen environmental impacts on development, Challenges of sustainable development, Centrality of resources in sustainable development, Case studies.

UNIT III: SUSTAINABLE POLICIES AND GOVERNANCE (09 Periods)

Governance - Democracy and Eco–welfare; Global civil society and world civil politics, Civic environmentalism, Policy responses to sustainable development, Economics of sustainability, Social responsibility in sustainability, National action, ISO 14001: Environmental management system.

UNIT IV: SUSTAINABLE SYSTEMS AND STRATAGIES (09 Periods)

Need for system innovation, Transition and co–evolution, Theories and methods for sustainable development, Strategies for eco–innovation, Ecological foot print analysis, Socio ecological indicators – Eco labels; Policy programmes for system innovation, Case studies.

UNIT V: MEDIA AND EDUCATION FOR SUSTAINABILITY (09 Periods)

Role of emerging media, Remarkable design and communication art, Activism and the public interest, Education for sustainability, Participation in decision making, Critical thinking and reflection, Case studies.

Total Periods: 45

TEXT BOOKS:

1. John Blewitt, *Understanding Sustainable Development*, Earth Scan Publications Ltd., 2nd Edition, 2008.
2. Jennifer A. Elliot, *An Introduction to Sustainable Development*, Earth Scan Publications Ltd., 4th Edition, 2006.

REFERENCE BOOKS:

1. Peter Rogers, Kazi F Jalal and John A Boyd, *An Introduction to Sustainable Development*, Earth Scan Publications Ltd., 2006.
2. Simon Dresner, *The Principles of Sustainability*, Earth Scan Publications Ltd., 2nd Edition, 2008.
3. Peter Bartelmus, Environment Growth and Development: *The Concepts and Strategies of Sustainability*, Routledge, 3rd Edition, 2003.
4. Gabriel Moser, Enric Pol, Yvonne Bernard, Mirilia Bonnes, Jose Antonio Corraliza and Maria Vittoria Giuliani, *People places and Sustainability*, Hogrefe & Huber Publishers, 2nd Edition, 2003.”

III B. Tech. – II Semester

(16BT60117) PROFESSIONAL ETHICS

(Common to CE, ME, CSE, IT and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: -

COURSE DESCRIPTION: Engineering ethics; Professional ideals and virtues; Engineering as social experimentation; Responsibilities and rights; Global issues.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate the principles of ethics, importance of professional values and social responsibility.
CO2. Analyze the problems in the implementation of moral autonomy and use ethical theories in resolving moral dilemmas.
CO3. Develop suitable strategies to resolve problems arise in practicing professional ethics.
CO4. Provide solutions to complex problems associated with professional ethics by proper analysis and interpretation.
CO5. Use appropriate theories in resolving issues pertain to professional ethics.
CO6. Understand the impact of professional ethics on society and address the limitations of codes of ethics.
CO7. Practice engineering with professionalism, accountability and ethics.
CO8. Function as a member, consultant, manager, advisor and leader in multi-disciplinary teams.
CO9. Write reports without bias and give instructions to follow ethics.

DETAILED SYLLABUS:

UNIT I: ENGINEERING ETHICS (09 Periods)

Scope and aim of engineering ethics, Senses of engineering ethics, Variety of moral issues, Types of inquiry, Moral dilemmas, Moral autonomy-Kohlberg's theory, Gilligan's theory, Consensus and controversy.

UNIT II: PROFESSIONAL IDEALS AND VIRTUES (08 Periods)

Theories about virtues, Professions, Professionalism, Characteristics, Expectations, Professional responsibility, Integrity, Self-respect, Sense of responsibility, Self-interest, Customs and religion, Self-interest and ethical egoism, Customs and ethical relativism, Religion and divine command ethics, Use of ethical theories, Resolving moral dilemmas and moral leadership.

UNIT III: ENGINEERING AS SOCIAL EXPERIMENTATION (10 Periods)

Engineering as experimentation, Similarities to standard experiments, Learning from the past and knowledge gained, Engineers as responsible experimenters, Conscientiousness, Moral autonomy and accountability, The challenger case, Codes of ethics and limitations, Industrial standards, Problems with the law of engineering.

UNIT IV: RESPONSIBILITIES AND RIGHTS (09 Periods)

Collegiality and loyalty, Respect for authority, Collective bargaining, Confidentiality, Conflict of interests, Occupational crime, Rights of engineers, Professional rights, Whistle-blowing, The BART case, Employee rights and discrimination.

UNIT V: GLOBAL ISSUES (09 Periods)

Multinational corporations, Professional ethics, Environmental ethics, Computer ethics, Engineers as consultants, Witnesses, Advisors and Leaders, Engineers as Managers, Managerial ethics applied to Engineering Profession, moral leadership.

Total Periods: 45

TEXT BOOKS:

1. Mike W. Martin and Roland Schinzinger, *Ethics in Engineering*, Tata McGraw-Hill, 3rd Edition, 2007.
2. Govindarajan, M., Nata Govindarajan, M., Natarajan, S. and Senthilkumar, V. S., *Engineering Ethics*, Prentice Hall of India, 2004.

REFERENCE BOOKS:

1. S. Kannan and K. Srilakshmi, *Human Values and Professional Ethics*, Taxmann Allied Services Pvt Ltd., 2009.
2. Edmund G. Seebauer and Robert L. Barry, *Fundamental of Ethics for Scientists and Engineers*, Oxford University Press, 2001.
3. Charles F. Fledderman, *Engineering Ethics,* Pearson Education, 2nd Edition, 2004.
4. R. Subramanaian, Professional Ethics, Oxford Higher Education, 2013.

III B. Tech. - II Semester

(16BT60118) RURAL TECHNOLOGY

(Common to CE, ME, CSE, IT and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: -

COURSE DESCRIPTION: Rural technology; Non conventional energy; Community development; IT in rural development.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate the knowledge on technologies for rural development.

CO2. Analyze various technologies available which are appropriate for rural development.

CO3. Carryout feasibility study on the public and private partnership for rural development.

CO4. Develop and use latest technologies for rural development.

CO5. Address health and safety issues while choosing technologies for rural development.

CO6. Educate the rural populace on the positive impacts of bio-fertilizers and usage of agro-machinery in agriculture.

DETAILED SYLLABUS:

UNIT I: RURAL TECHNOLOGY (09 Periods)

India - Technology and rural development, Pre and post independence period, Rural India Life, Indian farmer, Role of science and technology in rural development, Rural technology and poverty eradication, Rural business hubs, Technology in improving rural infrastructure, Various organizations related to innovation, Issues of technology transfer - CAPART, NABARD, CSIR, NIF.

UNIT II: NON CONVENTIONAL ENERGY (09 Periods)

Definition of energy, Types of alternative sources of energy, Sources of non conventional energy – Solar energy: Solar cooker, Solar heater; Biogas, Recycling and management, Wastes conservation, Assessment and production of biomass products and their utilization.

UNIT III: TECHNOLOGIES FOR RURAL DEVELOPMENT (09 Periods)

Food and agro based technologies, Tissue culture, Nursery, Building and construction technologies, Cultivation and processing of economic plants, Cottage and social industries.

UNIT IV: COMMUNITY DEVELOPMENT (09 Periods)

Water conservation, Rain water Harvesting, Drinking water, Environment and Sanitation, Bio fertilizers, Medical and aromatic plants, Employment generating technologies – Apiculture, Pisciculture, Aquaculture.

UNIT V: IT IN RURAL DEVELOPMENT (09 Periods)

Role of information technology (IT) in rural areas, Impact of IT in rural development, Need and necessity of technology, Corporate social responsibilities, Private sector participation (Activities in different spheres: Employment, Education, Health, Agriculture and service sectors) and Saansad Adarsh Gram Yojana (SAGY), Village adoption schemes.

TEXT BOOKS

1. M. S. Virdi, Sustainable Rural Technologies, Daya Publishing House, 2009.
2. S. V. Prabhath and P. Ch. Sita Devi, Technology and Rural India, Serials Publications, 2012.

REFERENCE BOOKS

1. R. Chakravarthy and P. R. S. Murthy, "Information Technology and Rural Development", Pacific Book International, 2012.
2. Shivakanth Singh, "Rural Development Policies and Programmes", Northern Book Centre, 2002.
3. L. M. Prasad, Principles and Practice of Management, S. Chand & Sons, 8th Edition, 2014.

4. Venkata Reddy, K., *Agriculture and Rural Development*- Gandhian Perspective, Himalaya Publishing House, 2001.

III B.Tech - II Semester

(16BT60308) GLOBAL STRATEGY AND TECHNOLOGY

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION: Introduction to strategic management; Strategic management process; Principles of good strategy; Globalization strategies; Research and Development strategies; Technology Management and Transfer; Elements of Transfer Process; Corporate Governance in the Indian scenario.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1: Demonstrate the knowledge on Strategic management, Research & development strategies, Technology management and transfer, Globalization and Corporate governance.

CO2: Indentify and analyze crucial problems in strategic management to improve performance of the organizations.

CO3: Develop the products and production process by using research and development strategies.

CO4: Conduct investigations on the impact of globalization in current scenario in the context of corporate governance.

CO5: Appraise the resources and capabilities of the firm in terms of their ability to confer sustainable development.

CO6: Apply ethics in strategic decision making.

DETAILED SYLLABUS:

UNIT I: STRATEGIC MANAGEMENT (09 Periods)

Introduction, Classes of decisions, Levels of strategy, Core competence, Strategic intent and stretch, Approaches to strategy making, Roles of different strategists, Strategic management- Process, Benefits, Limitations; Ethics in strategic decision making, Principles of good strategy, Strategic Management in India.

UNIT II: RESEARCH & DEVELOPMENT STRATEGIES (09 Periods)

Concept, Evolution of R&D Management, R&D as a business, R&D as competitive advantage, Elements of R & D strategies, Integration of R & D, Selection and implementation of R & D strategies, R & D trends.

UNIT III: TECHNOLOGY MANAGEMENT AND TRANSFER (09 Periods)

Technology Management: Introduction, Technology - Definition, Components, Classification Features; Technology Management- Concept, Nature; Drivers of Management of Technology- Significance, Scope, Responding to technology challenges.

Technology Transfer: Introduction, Definition, Classification, Significance, Elements of process, Types of Technology Transfer, Package, Modes of Transfer, Routes, Channels and Effectiveness of Technology Transfer.

UNIT IV: GLOBALISATION (09 Periods)

Definition, Stages, Essential conditions for globalization, Globalization strategies, Competitive advantage of Nations, Factors affecting Globalization, Globalization of Indian business.

UNIT V: CORPORATE GOVERNANCE: THE INDIAN SCENARIO (09 Periods)

Emergence of corporate governance in India- Landmarks, Models, Codes and status in India, Role and Responsibilities of Regulators, The Board of Directors; Corporate Governance- Specific issues in India, Family owned Business, Corporate Governance and the Indian ethos.

Total Periods: 45

TEXT BOOKS:

1. Francis Cherunilam, *Strategic Management*, Himalaya Publishing House, 3rd Edition, 2002.
2. C.S.G.Krishnamacharyulu and Lalitha Ramakrishnan, Management of Technology, Himalaya Publishing House, 2nd Edition, 2012.

REFERENCE BOOKS:

1. White and Bruton, *The Management of Technology and Innovation*: A Strategic Approach, Cengage Learning, 1st Edition, 2007.

2. S.K.Mandak, *Ethics in Business and Corporate Governance*, TMH, 2nd Edition, 2012.

III B.Tech - II Semester

(16BT60309) INTELLECTUAL PROPERTY RIGHTS AND MANAGEMENT

(Open Elective)

(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION: Protection of ideas; innovation and artistic endeavors; Acts and procedure related to patents, trademarks, copy right, design registration, trade secrets and cyber laws; Infringement; Commercialization of intellectual property rights; Case studies in each.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1: Demonstrate knowledge on intellectual property rights, patents, trademarks, copyrights, trade secrets and commercialization of intellectual property.

CO2: Analyse the commercial significance of discoveries and developments and to assist in bringing these into public use.

CO3: Investigate and ensure smooth transition from concept to final product by following National & International Laws of Intellectual Property.

CO4: Utilize the various policies and procedures related to patents, trademarks and copyrights relating to IPR.

CO5: Safeguard, review and manage the intellectual property so that it may receive adequate and appropriate legal protection against unauthorized use.

CO6: Follow ethical standards in capacity building and work as a platform for development, promotion, protection, compliance, and enforcement of intellectual property and knowledge.

CO7: Prepare documents and fill applications needed for filing a patent, design, copyright and trade mark.

DETAILED SYLLABUS

UNIT I: OVERVIEW OF INTELLECTUAL PROPERTY RIGHTS (09 Periods)

Introduction, Intellectual Property vs Conventional Property, and importance of intellectual property rights (IPRs), types of intellectual property, International Treaties for protection of IPR-Paris Convention, World Intellectual Property Organization (WIPO), World Trade Organization (WTO), Trade Related Aspects of Intellectual Property Rights (TRIP) Agreement, General Agreement on Tariffs and Trade(GATT).

UNIT II: TRADEMARKS (09 Periods)

Introduction, Functions and kinds of trademarks, Trade Mark Registration Process, Post registration procedures, Trade Mark maintenance, Transfer of rights, Inter parties Proceedings, Infringement and Dilution of Ownership of Trade Mark, Trade Mark claims, International Trade Mark Law.

UNIT III: PATENTS (09 Periods)

Introduction, Rights under Patent Law, Patent Application Process, Terms and Maintenance of Patents Requirements, Patent Ownership and Transfer, Licensing of Patent Rights, Sole and Joint Inventors, Disputes over Inventorship, Patent Infringement, International Patent Law, Patent Cooperation Treaty (PCT), Patent Law Treaty (PLT), Substantive Patent Law Treaty (SPLT).

UNIT IV: COPY RIGHTS, TRADE SECRETS, CYBER LAWS (09 Periods)

Copy Rights: Introduction, nature and scope, subject matter, Rights afforded by copyright law, Copyrights ownership, transfers and duration, Copyright registration process.

Trade Secrets: Introduction, Determination of Trade Secret Status, Emploer-Employee Relationships, Protection of submissions.

Cyber laws: E-commerce and cyber laws, cyber crime and legislation- need, objective and scope; IT Act 2000, Information Technology and Information Security.

UNIT V: INDUSTRIAL DESIGN AND COMMERCIALIZATION OF INTELLECTUAL PROPERTY RIGHTS (09 Periods)

Industrial Design: Introduction, Indian Law related to registration of Industrial Designs, Essential requirements for registration of a design in India, International Agreements – Hague System; Conflicts related to registration of design.

Commercialization of Intellectual Property Rights: Competition and Confidentiality Issues, Antitrust Laws, Assignment of Intellectual Property Rights, Technology, Transfer Agreements, Intellectual Property Issues in the Sale of Business, Legal Auditing of Intellectual Property, Due Diligence of Intellectual Property Rights in a Corporate Transaction. **Total Periods: 45**

TEXT BOOKS:

1. Deborah E. Bouchoux, *Intellectual Property: The Law of Trademarks, Copyrights, Patents and Trade Secrets*, Cengage Learning, 4th Edition, 2016.
2. Kompal Bansal and Parikshit Bansal, *Fundamentals of Intellectual Property for Engineers, B*S Publications, 1st Edition, 2013.

REFERENCE BOOKS:

1. Prabuddha Ganguli, *Intellectual Property Rights-Unleashing the Knowledge Economy*, McGraw Hill Education, 6th reprint, 2015.
2. P. Narayanan, *Intellectual Property Law, Eastern Book Company,* 3rd Edition, 2013.

3. R. Radha Krishnan, S. Balasubramanian, *Intellectual Property Rights: Text and Cases, Excel Books,* 1st Edition, 2008.

III B. Tech – II Semester

(16BT60310) MANAGING INNOVATION AND ENTREPRENEURSHIP

(Common to CE, ME, CSE, IT and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION: Evolution of entrepreneurship from economic theory Managerial and entrepreneurial competencies; Concepts of Shifting Composition of the Economy Purposeful Innovation & Sources of Innovative Opportunity; The Innovation Process; Innovative Strategies; Entrepreneurial Motivation; Entrepreneurs versus inventors; Ethics and International Entrepreneurship; Strategic Issues in International Entrepreneurship; Problem solving Innovation and Diversification.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1: Demonstrate the principles of business innovation and entrepreneurship for establishing industrial ventures.

CO2: Analyze business plans for potential investors and stakeholders and effectively answer probabilistic questions on the substance of plan.

CO3: Develop a comprehensive and well planned business structure for a new venture.

CO4: Conduct investigation on complex problems, towards the development of Project.

CO5: Apply modern statistical and mathematical tools to design projects and subsequent work procedures.

CO6: Apply ethics in constructive innovation framework.

CO7: Exhibit professionalism by employing modern project management and financial tools.

DETAILED SYLLABUS:

UNIT I: CREATIVITY AND INNOVATION (07 Periods)

Introduction, Levels of innovation, Purposeful innovation and the sources of innovative opportunity, The innovation process, Innovative strategies, Strategies that aim at introducing and innovation, Dynamics of ideation and creativity – Inbound, Outbound; Context and process of new product development, Theories of outsourcing.

UNIT II: PARADIGMS OF INNOVATION (11Periods)

Systems approach to innovation, Innovation in the context of developed economies and Emerging economies, Examining reverse innovation and its application, Performance gap, Infrastructure gap, Sustainability gap, Regulatory gap, Preference gap, organizational factors effecting innovation at firm level.

UNIT III: SOURCES OF FINANCE AND VENTURE CAPITAL (07 Periods)

Importance of finance, Comparison of venture capital with conventional development capital, Strategies of venture funding, Investment phases, Investment process, Advantages and disadvantages of venture capital, Venture capital developments in India.

UNIT IV: INTELLECTUAL PROPERTY INNOVATION AND ENTREPRENEURSHIP (11 Periods)

Introduction to Entrepreneurship, Evolution of entrepreneurship from economic theory, Managerial and entrepreneurial competencies, Entrepreneurial growth and development, Concepts, Ethics and Nature of International Entrepreneurship, Intellectual property – forms of IP, Patents, Trademarks, Design registration, Copy rights, Geographical indications, Patent process in India.

UNIT V: OPEN INNOVATION FRAMEWORK & PROBLEM SOLVING (09 Periods)

Concept of open innovation approach, Difference between open innovations and Cloud innovation approaches, Limitations and Opportunities of open innovation framework, Global context of strategic alliance, Role of strategic alliance, Problem Identification and Problem Solving, Innovation and Diversification.

Total Periods: 45

TEXT BOOKS:

1. Vinnie Jauhari, Sudhanshu Bhushan*, Innovation Management*, Oxford University Press, 1st Edition, 2014.
2. Drucker, P. F., *Innovation and Entrepreneurship*, Taylor & Francis, 2nd Edition, 2007.

REFERENCE BOOKS:

1. Robert D Hisrich, Claudine Kearney, *Managing Innovation and Entrepreneurship*, Sage Publications, 1st Edition, 2014.
2. V.K.Narayanan, *Managing Technology and Innovation for Competitive Advantage,* Pearson India, 1st Edition, 2002.

III B. Tech – II Semester

(16BT60311) MATERIALS SCIENCE

(Common to CE, ME, CSE, IT and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on Engineering Chemistry and Engineering Physics

COURSE DESCRIPTION: Structure and Bonding in metals; Steels, Cast Irons and Non Ferrous alloys; Material Selection for conductors, Insulators and semi conductors; Strengthening mechanisms of metals; Plastics and Ceramics as Insulators; AC and DC properties of Insulators; Semiconductors and Magnetic materials; Composite materials in Electrical and Electronics engineering; Material Selection and manufacturing of Optical fibers.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate the knowledge on concepts of fundamental science and engineering principles relevant to materials.

CO2. Analyze the structures of various types of Ferrous, Non ferrous alloys influencing various engineering applications.

CO3. Conduct investigations to select suitable materials with desired properties for engineering applications.

CO4. Use phase diagrams to interpret the data regarding microstructure of materials.

CO5. Consider health and safety issues while providing materials to real time applications.

CO6. Use composite materials that reduce material waste in design and manufacturing for sustainability.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION TO MATERIALS SCIENCE (07 Periods)

Structure of metals: Bonds in Solids, Crystallization of metals, Grain and grain boundaries, Effect of grain boundaries on the properties of metals/alloys, Determination of grain size measurement.

Constitution of alloys: Necessity of alloying, Types of solid solutions, Hume rothery rules, Intermediate alloy phases.

UNIT II: CAST IRONS, STEELS & NON-FERROUS METALS (12 Periods)

Structure and properties of Grey cast iron, Spheroidal cast iron, White Cast iron, Malleable Cast iron, Alloy cast irons, Classification of steels, structure and properties of plain carbon steels, Structure and properties of Copper and its alloys, Aluminum and its alloys.

UNIT III: ELECTRIC CONDUCTORS & INSULATORS (12 Periods)

Type of materials selected for conductors, Insulators and semi conductors, Introduction to ceramics - Bonding and microstructure, DC properties of ceramic materials, AC properties of ceramic materials, mechanical properties, Ceramics as Conductors, Insulators and capacitors; Introduction to Plastics - DC properties, AC properties, Mechanical properties.

UNIT IV: SEMICONDUCTORS AND MAGNETIC MATERIALS (09 Periods)

Fabrication of Semiconductors, Producing a silicon wafer-Lithography and Deposition packaging of semiconductors materials; Types of magnetic materials, Measuring magnetic properties, Application of soft magnetic materials in Electromagnets and relays, AC transformers, Generators and motors.

UNIT V: ADVANCED MATERIALS AND APPLICATIONS (05 Periods)

Composites - Fiber reinforced metal matrix, Ceramic matrix, Polymer matrix, Properties and applications of composites; Ceramics - Alumina, Zirconia, Silicon Carbide, SiAlONs, Reaction Bonded Silicon Nitride (RBSN); Glasses- properties and applications, manufacturing of optical fibers.

Total Periods: 45

TEXT BOOKS:

1. Kodgire V D, *Material Science and Metallurgy*, Everest Publishing House, Pune, 31st Edition, 2011.
2. Ian. P.Jones, *Material Science for Electrical and Electronic Engineers,* Oxford University Press, 1st Edition, 2000

REFERENCE BOOKS:

1. V. Raghavan, *Physical Metallurgy: Principles and Practices*, PHI, New Delhi, 2nd Edition, 2006.
2. William. D. Callister, *Materials Science & Engineering-An Introduction*, John Wiley and Sons, New Delhi, 6th Edition, 2002.

III B.Tech - II Semester
(16BT70412) **GREEN TECHNOLOGIES**
(Common to CE, ME, CSE, IT and CSSE)
(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —
COURSE DESCRIPTION:
Principles of green engineering; Green communications; Green energy; Green computing; Green construction; Green manufacturing.
COURSE OUTCOMES:
On successful completion of this course, students will be able to
CO1. Deploy conceptual knowledge in green technologies pertaining to engineering practice.
CO2. Analyze various green technologies for engineering practice.
CO3. Provide green solutions to engineering problems.
CO4. Apply various green techniques in the engineering practice.
CO5. Consider health and safety issues while providing green solutions to the society.
CO6. Understand issues related to environment sustainability.
CO7. Apply ethical standards for environmental sustainability in the engineering practice.
DETAILED SYLLABUS:
UNIT I: PRINCIPLES OF GREEN ENGINEERING AND GREEN COMMUNICATIONS (11 Periods)
Principles of Green Engineering:
Introduction, Definition of green engineering, Principles of green engineering.
Green Communications:
Introduction, Origin of Green Communications, Energy Efficiency in Telecommunication systems, Telecommunication system model and energy Efficiency, Energy saving concepts, Quantifying energy efficiency in ICT, Energy efficiency metrics of green wireless networks, Embodied energy of communication devices- Introduction, The extended energy model, Embodied/Operating Energy of a BS in Cellular network- A Case study; Energy efficient standards for wire-line communications.
UNIT II: GREEN ENERGY (09 Periods)
Introduction, adverse impacts of carbon emission, control of carbon emission– methods, greenhouse gas reduction – methods, Energy sources and their availability, Green energy for sustainable development. Green energy sources – Solar energy, Wind energy, Fuel cells, Bio-fuels, Wave and Geothermal energy (Principle of generation only).
UNIT III: GREEN IT (09 Periods)
The importance of Green Information technologies, Strategizing Green Initiatives, Implementation of Green IT, Information Assurance, Communication and Social Media, Regulating Green IT- Laws, Standards and Protocols; RoHS, REACh, WEEE, Legislating for GHG Emissions and Energy Use of IT Equipment, Non-regulatory Government Initiatives, Industry Associations and Standard Bodies, Green Building Standards, Green Data Centres, Social Movements and Greenpeace, Conclusions.
UNIT IV: GREEN CONSTRUCTION (09 Periods)
Green Building: Definition, Typical features, Benefits, Requisites for green building construction, Sustainability, Concept of REDUCE, REUSE, RECYCLE, RETHINK, REPLENISH AND REFUSE (6 R's), Sustainable construction focus point – Site selection, Planning, Water, Energy, Material, Indoor air quality, Construction procedures.
Indian Green Building Council: Introduction to IGBC green homes, Benefits of IGBC, IGBC green home rating system, Introduction to USGBC, LEED rating system, Procedure to get IGBC certification, GRIHA Rating.
UNIT V: GREEN MANUFACTURING (09 Periods)
Introduction, background, definition, motivation and barriers to green manufacturing, Impact of manufacturing in environmental ecology, Need for green manufacturing, Advantages and Limitations, green manufacturing strategies, Green manufacturing and sustainability, Sustainability tools; Waste stream mapping and application, Green manufacturing through clean energy supply, green lean manufacturing, green packaging and supply chain. **Total Periods: 47**
TEXT BOOKS:
1. Konstantinos Samdanis, Peter Rost, Andreas Maeder, Michela Meo, Christos Verikoukis, *Green Communications: Principles, Concepts and Practice*, John Wiley & Sons, 2015.
2. Soli J. Arceivala, *Green Technologies for a better future,* McGraw Hill Education (India) Pvt Ltd, 2014.
3. San Murugesan, G.R. Gangadharan, *Harnessing Green IT – Principles and Practices,* John Wiley & Sons Ltd., 2008.
4. Tom Woolley, Sam Kimmins, Paul Harrison and Rob Harrison, *Green Building Handbook,* Volume 1, E & FN Spon, an imprint of Thomson Science & Professional.
5. IGBC Green Homes Rating System Version 1.0 – A bridged reference guide.
6. J Paulo Davim, Green Manufacturing: Processes and Systems, Springer, 2012
7. David A Dornfeld, Green Manufacturing: Fundamentals and Applications, Springer, 2013
REFERENCE BOOKS:
1. Athanasios V Alavanidis, Thomais Vlachogianni, *Green Chemistry and Green Engineering,* Synchrona Themata, 2012.

2. G.D. Rai, *Non-conventional Energy Sources*, Khanna Publishers, Delhi, 5th Edition, 2011.
3. Marty Poniatowski, *Foundation of Green Information Technology*, Prentice Hall, 2009.
4. R. K. Gautham, *Green Homes*, BS publications, 2009.

III B. Tech. – II Semester

(16BT70413) INTRODUCTION TO NANOSCIENCE AND NANOTECHNOLOGY

(Common to CE, ME, CSE, IT and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION:

Introduction to the concept of nano; Description of nanomaterial; Nanostructure characterization tools; Classification of nanomaterials; Fabrication of nanomaterial; Different applications of nanostructures and nanomaterials.

COURSE OUTCOMES:

On successful completion of this course, students will be able to

CO1. Demonstrate knowledge in
- Nanoscale technology.
- Difference between micro and nanotechnology
- Classification of Nanostructure and Nanomaterial
- Fabrication of various nanomaterials and nanostructures.

CO2. Analyze numerical and analytical problems in Nanomaterial size by using Scanning Electron Microscope and X-Ray diffraction

CO3. Design and fabricate devices based on nanostructures like
- Nano solar cell
- Nano cantilever
- Nano bio-sensor

CO4. Synthesize nano particle of different materials to solve the problems related to fabrication of nanostructures.

CO5. Select appropriate technique for fabrication of nanostructures and nanocomposites.

CO6. Apply ethical standards and legal issues while using chemical substances in fabrication of new nanostructures.

DETAILED SYLLABUS:

UNIT I: FUNDAMENTALS OF NANOTECHNOLOGY (08 Periods)

Introduction – Scientific revolutions, Time and length scale in structures, Definition of a nanosystem; Dimensionality and size dependent phenomena - Surface to volume ratio Fraction of surface atoms, Surface energy and surface stress, surface defects, Properties at nanoscale (optical, mechanical, electronic, and magnetic).

UNIT II: IDENTIFICATION AND CHARACTERIZATION TOOLS FOR NANOMATERIALS AND NANOSTRUCTURE (10 Periods)

Field Emission Scanning Electron Microscopy (FESEM), Environmental Scanning Electron Microscopy (ESEM) High Resolution, Transmission Electron Microscope (HRTEM), Scanning Tunneling Microscope(STM), Surface enhanced Raman spectroscopy (SERS), Secondary Ion Mass Spectroscopy, Focused Ion Beam Photoelectron Spectroscopy, X-ray Photoelectron Spectroscopy (XPS), Auger electron spectroscopy (AES), Rutherford backscattering spectroscopy (RBS), X-Ray Diffraction, Intensities in X-Ray Scattering Particle Size Effect.

UNIT III: CLASSIFICATION OF NANOMATERIALS (10 Periods)

Classification based on dimensionality, Quantum Dots, Wells and Wires-III-V Nanoparticles, Electronic Structure of Nanosemiconductor, Carbon based nanomaterials (buckyballs, nanotubes, graphene), Metal based nano materials (nanogold, nanosilver and metal oxides), Nanocomposites, Nanopolymers, Nanoglasses, Nano ceramics, Biological nanomaterials, Fulrene-discovery and early years,.

UNIT IV: SOME FABRICATION TECHNIQUES OF NANOMATERIALS AND NANOSTRUCTURES (09 Periods)

Chemical Methods: Metal Nanocrystals by Reduction, Solvothermal Synthesis, Photochemical Synthesis, Sonochemical Routes, Chemical Vapor Deposition (CVD), Metal Oxide Chemical Vapor Deposition (MOCVD), Plasma Enhanced Chemical Vapour Deposition Technique (PECVD), Hydrothermal Method, Sol-Gel.

Physical Methods: Ball Milling, Electrodeposition, Spray Pyrolysis, Flame Pyrolysis, DC/RF Magnetron Sputtering, Molecular Beam Epitaxy (MBE) Thermal Evaporation Method.

UNIT V: APPLICATIONS (08 Periods)

Solar energy harvesting, Catalysis, Molecular electronics and printed electronics Nanoelectronics, Polymers with a special architecture, Liquid crystalline systems, Linear and nonlinear optical and electro-optical properties, Applications in displays and other devices, Nanomaterials for data storage, Photonics, Plasmonics, Chemical and biosensors, Nanomedicine and Nanobiotechnology, MESFET.

Total Periods: 45

TEXT BOOKS:

1. Pradeep T., *A Textbook of Nanoscience and Nanotechnology,* Tata McGraw Hill Education Pvt.Ltd., 2012.
2. Hari Singh Nalwa*, Nano-structured Materials and Nanotechnology,* Academic Press, 2002.

REFERENCE BOOKS:

1. Nabok A., *Organic and Inorganic Nanostructures*, Artech House, 2005.

2. Dupas C., Houdy P., Lahmani M., *Nanoscience:Nanotechnologies and Nanophysics*, Springer - Verlag Berlin Heidelberg, 2007.
3. S.M. Sze, *Physics of Semiconductor Devices*, 2nd Edition, 2001.

III B. Tech. – II Semester

(16BT60505) ENGINEERING SYSTEM ANALYSIS AND DESIGN

(Common to CE, ME, CSE, IT and CSSE)
(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION:
Systems Process; Technologies for Systems; System Development Life Cycle; System Analysis and Modeling; Levels of Management; Project Management; Systems Implementation and Importance of UML Prototyping; Maintaining and Managing the Systems Output Process.

COURSE OUTCOMES:
On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge in
- Systems Process and System Design
- Systems Analysis and Modeling
- System Development Life Cycle
- Design Management and Maintenance Tools.

CO2. Analyze System Process and estimate the given models by using case tools.
CO3. Design and Develop a model to the organizational systems.
CO4. Solve complex problems related to engineering systems and produce accurate results.
CO5. Apply object oriented techniques for modeling dynamic systems.
CO6. Contribute towards societal issues and responsibilities in designing, modeling and developing of organizational systems.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION (09 Periods)
Systems, Types of systems, Integrating technologies for systems, Need for system analysis and design, Role of the systems analyst, System development life cycle, CASE tools for analysis and design.

UNIT II: ANALYSIS AND MODELING ORGANIZATIONAL SYSTEM (09 Periods)
Organization as system, System analysis, Depicting systems graphically, Use case modeling, Levels of management, Organizational culture.

UNIT III: PROJECT MANAGEMENT (10 Periods)
Project initiation, Problem in organization, Determining feasibilities, Ascertaining hardware and software needs, Identifying, Forecasting, Comparing costs and benefits, Activity planning and control, Managing the project.

UNIT IV: OBJECT ORIENTED ANALYSIS AND DESIGN USING UML (08 Periods)
Introduction, Object modeling, Dynamic modeling, functional modeling, packages and other UML artifacts, the importance of using UML for modeling.

UNIT V: DESIGNING EFFECTIVE OUTPUT (09 Periods)
Output design objectives, Relating output content to output method, Realizing how output bias affects users, Designing output for display, Case studies-Designing a web site management, Online exam management, Online portal design.

Total Periods: 45

TEXT BOOK:
1. Kenneth E. Kendall and Julie E. Kendall, *System Analysis and Design,* Pearson Education, 9th Edition, 2011.

REFERENCE BOOKS:
1. Dennis, Wixom and Roth, *Systems Analysis and Design*, John Wiley, 5th Edition, 2012.
2. Shelly and Rosenblatt, *Systems Analysis and Design*, Cengage Learning, 9th Edition, 2012.

III B. Tech. – II Semester

(16BT71011) MICRO-ELECTRO-MECHANICAL SYSTEMS

(Common to CE, ME, CSE, IT and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Engineering Physics.

COURSE DESCRIPTION: Overview of Micro Electro Mechanical Systems (MEMS); scaling laws; working principles of microsensors and microactuators; materials; microfabrication processes; packaging of Microsystems.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on MEMS devices, scaling laws, microsensors and microactuators

CO2. Analyze the properties of materials and identify its suitability for MEMS devices.

CO3. Design MEMS devices that meet desired specifications and requirements.

CO4. Analyze and synthesize the information to provide effective solution to engineering problems with MEMS devices.

CO5. Use modern techniques in micro manufacturing process.

CO6. Develop efficient and cost effective MEMS based products for society.

DETAILED SYLLABUS:

UNIT I: OVERVIEW OF MEMS AND SCALING LAWS (09 Periods)

MEMS and Microsystems, Microsystems and microelectronics, miniaturization, applications of MEMS in the automotive industry and in other industries.

Scaling laws of miniaturization: Introduction to scaling, scaling in: geometry, rigid- body dynamics, electrostatic forces, electromagnetic forces, Electricity, Fluid mechanics, Heat transfer.

UNIT II: WORKING PRINCIPLES OF MICROSYSTEMS (09 Periods)

Microsensors, acoustic wave sensors, biomedical and biosensors, chemical sensors, pressure sensors, thermal sensors. Microactuation: actuation using thermal forces, shape-memory alloys, piezoelectric crystals, electrostatic forces. MEMS with microactuators, microgrippers, micromotors, microvalves, micropumps. Micro-accelerometers, microfludics.

UNIT III: MATERIALS FOR MEMS AND MICROSYSTEMS (09 Periods)

Substrate and wafers, silicon as a substrate material, silicon compounds, silicon piezoresistors, gallium arsenide, quartz, piezoelectric crystals, polymers, carbon nano tube (CNT), development of CNTs, application of CNTs.

UNIT IV: MEMS FABRICATION PROCESS AND MICROMANUFACTURING (09 Periods)

Photolithography, ion implantation, diffusion, oxidation, chemical vapor deposition, physical vapor deposition, deposition by epitaxy, etching, bulk micro-manufacturing, surface micro-manufacturing, LIGA process.

UNIT V: MEMS PACKAGING (09 Periods)

Introduction to microsystem packaging, objectives and general considerations in packaging design, three levels of microsystem packaging, interfaces in microsystem packaging, packaging technologies, three-dimensional packaging, selection of packaging materials, signal mapping and transduction, Design case: Pressure sensor packaging.

Total Periods: 45

TEXT BOOK:

1. Tai-Ran Hsu, MEMS & Microsystems*, Design and Manufacture*, McGraw Hill Education (India), Pvt. Ltd., 2002.

REFERENCES BOOKS:

1. G.K.Ananthasuresh, K.J.Vinoy, *Micro and Smart Systems*, Wiley India, 2010.
2. Nitaigour Premchand Mahalik, *MEMS*, McGraw Hill Education (India) Pvt. Ltd., 2007.

III B. Tech. – II Semester

(16BT61205) **CYBER SECURITY AND LAWS**

(Common to CE, ME, CSE, IT and CSSE)

(Open Elective)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION: Cyber Crimes and Indian IT Act; Cyber Offenses; Tools and Methods used in Cyber Crime; Phishing ad Identity Theft; Indian and Global Perspective on Cyber Crimes and Cyber Security; Organizational Implications on Cyber Security; IPR Issues; Cyber Crime and Terrorism; Cyber Crime Illustrations.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge in Cyber security, Cyber crimes and its related laws in Indian and Global Act.

CO2. Analyze the legal perspectives and laws related to cyber crimes in Indian context.

CO3. Apply security and privacy methods in development of modern applications and in organizations to protect people and to prevent cyber crimes.

CO4. Solve Cyber security issues using privacy policies.

CO5. Use antivirus tools to minimize the impact of cyber threats.

CO6. Follow security standards for the implementation of Cyber Security and laws.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION TO CYBER CRIMES AND OFFENSES (09 Periods)

Cyber Crimes: Introduction, Definition, Origin, Cyber crime and information security, Cyber criminals, Classifications of cyber crimes, The legal perspectives and Indian perspective, Cyber crime and Indian ITA 2000, Global perspective on cyber crimes.

Cyber Offenses: Introduction, Criminals planning on attacks, Social engineering, Cyber stalking, Cyber cafe and crimes, Botnets.

UNIT II: TOOLS AND METHODS USED IN CYBER CRIME & PHISHING AND IDENTITY THEFT (09 Periods)

Introduction, Proxy servers and Anonymizers, Phishing, Password cracking, Key loggers and Spywares, Virus, Worms and Ransomware, Trojan horses and Backdoors, Steganography, DoS and DDoS attacks.

Phishing and Identity Theft: Introduction, Phishing, Identity Theft (ID Theft).

UNIT III: CYBER CRIMES AND CYBER SECURITY-LEGAL PERSPECTIVES (08 Periods)

Introduction, Cyber laws in Indian context, The Indian IT act, Challenges to Indian law and Cyber crime scenario in India, Consequences of not addressing the weakness in IT act, Digital signatures and the Indian IT Act, Cyber Crime and Punishment, Cyberlaw, Technology and Students in India scenario.

UNIT IV: CYBER SECURITY-ORGANIZATIONAL IMPLICATIONS (10 Periods)

Introduction, Web threats for organizations – evils and perils, Security and privacy implications from cloud computing, Social Media Marketing-Security risks and Perils for organizations, Social computing and associated challenges for organizations, Protecting people's privacy in organization, Organizational guidelines for internet usage, Safe computing and Usage policy, Incident handling and Best practices.

UNIT V: CYBER CRIME & TERRORISM AND ILLUSTRATIONS (09 Periods)

Cyber Crime & Terrorism: Introduction, Intellectual property in the cyber space, The ethical dimension of cyber crimes, The psychology, Mindset and skills of hackers and cyber criminals, Sociology of cyber criminals, Information warfare.

Cyber Crime Illustrations: Indian banks lose millions of rupees, Justice vs. Justice, Parliament attack, The Indian case of online gambling, Bank and credit card related frauds, Purchasing goods and services scam, Nigerian 419 scam.

Total Periods: 45

TEXT BOOK:

1. Nina Gobole and Sunit Belapure, *Cyber Security: Understanding Cyber Crimes, Computer Forensics and Legal Perspectives*, Wiley India, 2011.

REFERENCE BOOK:

1. Prashant Mali, *Cyber Law and Cyber Crimes*, Snow White Publications Pvt. Ltd., 2013.

III B. Tech. – II Semester
(16BT61505) BIOINFORMATICS
(Open Elective)
(Common to CE, ME, CSE, IT and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION:
Introduction to Bioinformatics; Biology and Information; Sequence alignment and dynamic programming; Biological Database; Homology Modeling; Structure Prediction; Molecular Dynamics

COURSE OUTCOMES:
On successful completion of this course, students will be able to:
CO1. Demonstrate knowledge on concepts of biological databases, Genome and proteome.
CO2. Analyze biological sequences for Homology Modeling.
CO3. Apply clustering methods for Phylogenetic trees.
CO4. Solve bio sequencing problems using dynamic programming.
CO5. Select and apply appropriate techniques and tools to structure Prediction

DETAILED SYLLABUS:
UNIT I: NUCLEIC ACIDS, PROTEINS AND AMINO ACIDS (08 Periods)
Bioinformatics-Definition, Nucleic acid structure, Protein structure, the central dogma, Physico-chemical properties of the amino acids and their importance in protein folding, Polymerase chain reaction (PCR)

UNIT II: INFORMATION RESOURCES FOR GENES AND PROTEIN (10 Periods)
Database file formats, Nucleic acid sequence databases, Protein sequence databases
Sequence Alignment Algorithm
Pair wise sequence alignment – The problem, Pair wise sequence alignment – Dynamic programming methods, The effect of scoring parameters on the alignment, Multiple sequence alignment

UNIT III: PREDICTION OF THE THREE-DIMENSIONAL STRUCTURE OF A PROTEIN AND HOMOLOGY MODELING (09 Periods)
Secondary Structure Prediction, Basic Principles, The Steps of Comparative Modeling, Accuracy of Homology Models, Manual versus Automatic Models, SNPs, Motifs.

UNIT IV: PHYLOGENETIC METHODS (10 Periods)
Phylogenetic trees, choosing sequences, Distance matrices and clustering methods, Calculation of distances in the neighbor-joining method, Bootstrapping, Tree optimization criteria and tree search methods, The maximum-likelihood criterion, Calculating the likelihood of the data on a given tree, The parsimony criterion.

UNIT V: NEW FOLD MODELING (08 Periods)
Estimating the Energy of a Protein Conformation, Energy Minimization, Molecular Dynamics,
The "Omics" Universe-Transcriptomics, Proteomics, Interactomics, Structural Genomics, Pharmacogenomics.

Total Periods: 45

TEXT BOOKS:
1. Paul G. Higgs and Teresa K. Attwood, *Bioinformatics and Molecular Evolution*" Blackwell Publishing 2005.
2. Anna Tramontano, *Introduction to Bioinformatics*, Chapman and Hall/CRC, 2006.

REFERENCE BOOKS:
1. Hooman H. Rashidi and Lukas K. Buehler, *Bioinformatics Basics, Applications in Biological Science and Medicine*, CRC Press, Taylor & Francis Group, 2nd Edition, 2005.
2. Rastogi S. C., NamitaMendiratta and Parag Rastogi, *Bioinformatics: Methods and Applications: Genomics, Proteomics and Drug Discovery*, PHI Learning Pvt. Ltd., 3rd Edition, 2011.

IV B. Tech. - I Semester

(16BT71501) SYSTEM MODELING AND SIMULATION

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on Programming in C and Probability Distributions and Statistical Methods.

COURSE DESCRIPTION:
Discrete event simulation; R Studio Operations; Useful statistical models; Queueing systems; Properties of random numbers, Test for random numbers; Data collection, Types of simulations with respect to output analysis.

COURSE OUTCOMES:
On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on functional modeling of system design.
CO2. Analyze the performance of Queueing systems in real world applications.
CO3. Design dynamic system operations using simulation results using R.
CO4. Apply mathematical foundations and computer science theory in the modeling and design of experiments for real time systems.
CO5. Select suitable tools and simulation software for simulating computer based systems.
CO6**.** Relate appropriate professional principles of engineering practice for designing simulation models.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION TO DISCRETE EVENT SIMULATION (08 Periods)
Simulation-Advantages and Disadvantages, Areas of application, Steps in a simulation study, Basics of spreadsheet simulation, Queueing simulation in a spread sheet, Concepts in discrete-event simulation, List processing, Selection of simulation software, Simulation environments.

UNIT II: THE R ENVIRONMENT (10 Periods)
Command line interface, R Studio, Basic Math, Variables, Data Types, Vectors, Calling Functions, Missing Data, Reading data into R, ggplot2, Function arguments, Return values, Control statements, Loops, Correlation and covariance, T-Tests, ANOVA, Autoregressive moving average, VAR.

UNIT III: STATISTICAL MODELS (07 Periods)
Terminology and concepts, Useful statistical models, Discrete distributions, Continuous distributions, Poisson process, Empirical distributions.

UNIT IV: QUEUEING MODELS AND RANDOM NUMBERS (09 Periods)
Characteristics of queuing systems, Queueing notation, Long-run measures of performance of queueing systems. Properties of random numbers, Generation of pseudo-random numbers, Techniques for generating random numbers, Tests for random numbers, Inverse-transform technique, Acceptance-rejection technique.

UNIT V: ANALYSIS OF SIMULATION DATA (11 Periods)
Input Modeling-Data Collection, Identifying the distribution with data, Parameter estimation, Multivariate and time series input models. Validation of Simulation Models -Model building verification and validation, Verification of simulation models. Estimation of absolute performance - Types of simulations with respect to output analysis, stochastic nature of output data, Absolute measures of performance and their estimation, Output analysis of terminating Simulations.

Total Periods: 45

TEXT BOOKS:

1. Jerry Banks, John S. Carson II, Barry L.Nelson and David M.Nicol, *Discrete-Event System Simulation,* Pearson India,5th Edition, 2013.
2. Jared P. Lander, *R for Everyone*, Pearson India, 2014.

REFERENCE BOOKS:

1. Narsingh Deo, System *Simulation with Digital Computer*, Prentice Hall India 2009.

2. Averill M. Law, *Simulation Modeling and Analysis*, McGraw Hill Education (India) Private Limited, 4th Edition, 2007.

IV B. Tech. I Semester

(16BT70402) EMBEDDED SYSTEMS

(Common to EEE, ECE and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on Digital Logic Design and Microprocessors and Interfacing

COURSE DESCRIPTION:

Embedded system design approaches; MSP430 Architecture; Instruction Set; On-Chip Resources; Programming; Communication with peripherals; Internet of Things related Issues.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Apply knowledge in
- MSP430 Architecture, Pin out, Instruction set
- High level programming
- Usage of On-chip resources like ADC, DAC, Timers
- Internet of Things related issues

CO2. Analyze various design issues regarding
- Usage of on chip resources
- Low power modes
- Communication support

CO3. Design embedded systems using MSP430 series microcontrollers to suit market requirements.

CO4. Solve engineering problems and arrive at solutions in designing embedded systems to support interconnectivity.

C05. Apply techniques, program skills, On-Chip resources to design networked embedded systems with an understanding of limitations.

CO6. Reason out and practice professional engineering to deliver efficient and cost effective embedded based products to society.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION TO EMBEDDED SYSTEMS (09 Periods)

Embedded Systems - Definition, Approaches, Applications, Anatomy of microcontroller, Memory, Software; MSP430 Introduction- Pin out, Functional Block diagram, Memory, CPU, Memory mapped input and output, Clock generator; Exceptions- Interrupts and Resets.

UNIT II: ARCHITECTURE OF MSP430 (09 Periods)

CPU, Addressing Modes, Constant Generator and Emulated Instructions, Instruction Set, Example programs, Reflections on CPU and Instruction set, Resets, Clock System.

UNIT III: FUNDAMENTALS FOR PROGRAMMING (09 Periods)

Development Environment, C Programming Language, Assembly Language, Programming and Debugging, Sample programs- Light LEDs in C, Read input from a switch; Automatic Control-Flashing light by delay, use of subroutines, using Timer_A; Header files and issues, Functions, Interrupts and Low power modes.

UNIT IV: TIMERS, MIXED SIGNAL SYSTEMS AND COMMUNICATION (09 Periods)

Timers - Watchdog Timer, RTC, Measurement in capture mode; Mixed-Signal Systems- Comparator_A, ADC10 Architecture & operation, ADC12, Sigma-Delta ADC Architecture & operation, DAC; Communication- Communication Peripherals in MSP430, SPI, Inter-integrated Circuit Bus, Asynchronous communication with the USCI_A.

UNIT V: HARDWARE SOFTWARE CO-DESIGN AND INTERNET OF THINGS (09 Periods)

CO- Design Issues: Co-design Models, Architectures, Languages, a Generic Co-design Methodology

IOT: Introduction, Origins, Drivers and Applications, IOT Communication Models - Device to Device, Device to Cloud, Device to Gateway, Back end Data Sharing Model; IPV6 and IOTs', IOT Issues, Security Issues-challenges; Privacy Considerations, Interoperability/Standards.

Total Periods: 45

TEXT BOOKS:

1. John H. Davies, *MSP430 Microcontroller Basics*, Newnes Publications, 2008.
2. Karen Rose, Scott Eldridge, Lyman Chapin, T*he Internet of Things: An Overview: Understanding the Issues and Challenges of a More Connected World*, Internet Society, Oct. 2015.
3. Jorgen Staunstrup, Wayne Wolf, *Hardware / software co- design Principles and Practice*, Springer, 2009.

REFERENCE BOOK:

1. Chris Nagy, *Embedded Systems Design using the TI MSP30* Series, Newnes Publications, 2003.

IV B. Tech. - I Semester

(16BT71502) SYSTEMS ENGINEERING

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Software Engineering.

COURSE DESCRIPTION: Foundations of System Engineering; Complex Systems structure; System Engineering Management and Development.

COURSE OUTCOMES:

On the Successful Completion of this Course, students will be able to:

CO1. Demonstrate Knowledge on:
- System Engineering foundation
- Structure of Complex Systems
- System Engineering management and Development

CO2. Analyze the requirements for the development of structures of a system.

CO3. Design system engineering management plan for complex integrated systems and evaluate them in operational environment.

CO4. Use appropriate system engineering methods in iterative system development process

C05. Use appropriate methods to support the phases of Production, operation and maintenance in system development.

CO6. Apply ethical principles of System engineering for addressing the issues in modeling, simulation and trade-off analysis for complex systems development**.**

DETAILED SYLLABUS:

UNIT I: FOUNDATIONS OF SYSTEMS ENGINEERING (09 Periods)

Systems Engineering and the World of Modern Systems - Origins of Systems Engineering - Examples of Systems Requiring Systems Engineering - Systems Engineering Viewpoint - Systems Engineering as a Profession - The Power of Systems Engineering

System Engineering Landscape-System Engineering Viewpoint–Perspective of System Engineering–Systems Domain-System Engineering Field–System Engineering Approaches – System Engineering Activities and Products

UNIT II: STRUCTURE OF COMPLEX SYSTEMS (09 Periods)

System Building Blocks and Interfaces - Hierarchy of Complex Systems - System Building Blocks - The System Environment - Interfaces and Interactions

The System Development Process-Systems Engineering Through the System Life Cycle - Evolutionary Characteristics of the Development Process - The Systems Engineering Method - Testing Throughout System Development

UNIT III: CONCEPT DEVELOPMENT STAGE (10 Periods)

Needs Analysis- Originating a New System -Operations Analysis - Functional Analysis - Feasibility Definition - Needs Validation - System Operational Requirements

Concept Exploration- Developing the System Requirements - Operational Requirements Analysis - Performance Requirements Formulation

Concept Definition- Selecting the System Concept - Performance Requirements Analysis - Functional Analysis and Formulation - Concept Selection - Concept Validation - System Development Planning - System Functional Specifications

UNIT IV: ENGINEERING DEVELOPMENT STAGE (09 Periods)

Advanced Development -Reducing Program Risks - Requirements Analysis - Functional Analysis and Design - Prototype Development - Development Testing - Risk Reduction -**Engineering Design**-Implementing the System Building Blocks - Requirements Analysis - Functional Analysis and Design - Component Design - Design Validation - Configuration Management

UNIT V: POST DEVELOPMENT STAGE AND MANAGEMENT (08 Periods)

Production-Systems Engineering in the factory-Engineering for production-Transition from development to production-Production Operations

Operations and Support-Installing, Maintaining, and upgrading the system-Installation and test- In-Service support, Major System Upgrades: Modernization

Managing System Development and Risks - Work Breakdown Structure (WBS) - Systems Engineering Management Plan (SEMP) - Risk Management - Organization of Systems Engineering

Total Periods: 45

TEXT BOOK:

1. Alexander Kossiakoff , William N. Sweet, *Systems Engineering: Principles and Practice,*John Wiley & Sons, Inc*.,* Hoboken, New Jersey, 2nd Edition, 2016.

REFERENCE BOOK:

1. B. Blanchard and W. Fabrycky, *Systems Engineering and Analysis,* Prentice Hall, 4th Edition, 2006.

IV B. Tech. - I Semester

(16BT71503) DATA ANALYTICS

(Program Elective – 2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Data Warehousing and Data Mining

COURSE DESCRIPTION: Introduction to Data Analytics; Analytic Processes and Tools; Cluster Analysis; Big Data; Hadoop;

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on concepts of Data Analytics Characteristics, Hadoop Framework ecosystem components and Cluster Analysis.

CO2. Identify appropriate solutions through analysis for problems of Big data and Hadoop.

CO3. Design and model an effective sustainable Database system for better performance using Data Analytic techniques.

CO4. Appropriately use database models for storing, accessing and analyzing large data sets.

CO5. Apply Hadoop Framework for data processing.

CO6. Recognize the need for using Hadoop environment for solving complex engineering problems.

DETAILED SYLLABUS:

UNIT- I: WHOLENESS OF DATA ANALYTICS (09 Periods)

Data Analytics, Business Intelligence, Pattern Recognition, Data Processing chain, Terminology and careers.

Data Mining: Data Mining, Gathering and selecting Data, Data cleansing and preparation, outputs of Data mining, Evaluating Data Mining results, Data Mining Techniques.

Data Visualization: Data Visualization, Excellence in visualization, Types of charts, Visualization example, Tips for Data Visualization.

UNIT II: DATA ANALYSIS (08 Periods)

Decision Trees: Decision Tree problem, Decision Tree construction, Lessons from constructing trees, Decision tree algorithms.

Regression: Regression, correlations and relationships, visual look at relationships, Non linear regression, logistic regression, Advantages and Disadvantages of regression models.

Artificial Neural Networks: ANN, Business applications of ANN, Design principles of ANN, Representation of a Neural Network, Developing an ANN, Advantages and Disadvantages of using ANN's.

UNIT III: CLUSTER ANALYSIS (11 Periods)

Applications of Cluster Analysis, Representing Clusters, Clustering Techniques, K-means algorithm for clustering, selecting the number of clusters, Advantages and Disadvantages of K-means algorithm.

Association Rule Mining: Association Rule Mining, Business applications of Association Rules, Representing Association Rules, Algorithm for Association Rule, Apriori Algorithm, Association Rules, Creating Association Rules.

Naïve-Bayes Analysis: Naïve-Bayes Model, Simple classification Example, Text Classification Example, Advantages and Disadvantages of Naïve-Bayes.

Social Network Analysis: Social Network Analysis, Techniques and Algorithms, Page Rank, Practical considerations.

UNIT IV: BIG DATA (09 Periods)

Big Data, Defining Big Data, Big Data Landscape, Business implications of Big Data, Technology implications of Big Data, Big Data technologies, Management of Big Data.

Data Modeling Primer: Evolution of Data Management Systems

Statistics Primer: Statistics Primer, Descriptive Statistics, Normal Distribution and Bell Curve, Inferential Statistics, Predictive Statistics.

UNIT V: HADOOP (08 Periods)

Hadoop, RDBMS versus Hadoop, Distributed Computing Challenges, History of Hadoop, Hadoop Overview, Use Case of Hadoop, Hadoop Distributors, HDFS, Processing Data with Hadoop, Hadoop YARN, Hadoop Ecosystem.

MongoDB: Introduction to MongoDB, Terms used in RDBMS and MongoDB, Datatypes in MongoDB, MongoDB query Language.

Total Periods: 45

TEXT BOOKS:

1. Anil Maheswari, *Data Analytics*, McGraw Hill Education, 2017.
2. Seema Acharya and Subhashini C*, Big Data and Analytics*, Wiley India, 2015

REFERENCE BOOKS:

1. Bart Baesens, *Analytics in a Big Data World: The Essential Guide to Data Science and Its Applications*, Wiley Publications, 2014.
2. Michael Berthold, David J. Hand, *Intelligent Data Analysis*, Springer, 2014.

IV B. Tech. - I Semester

(16BT71504) PERFORMANCE EVALUATION OF COMPUTER SYSTEMS

(Program Elective-2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Probability Distributions and Statistical Methods.

COURSE DESCRIPTION: Performance Evaluation Systems; Workload characterization; Hardware and software monitors; Summarization of data, Linear regression models; Experimental Design.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on Performance Metrics, workload selection and Monitors.

CO2. Analyze and interpret the data using summarization techniques.

CO3. Design and develop Factorial Experimental models for evaluating the performance of a computer based systems.

CO4. Use statistical methods for interpretation of data in simulation based systems.

CO5. Select appropriate techniques for prediction of variability and index of dispersion.

CO6. Apply contextual knowledge to asses experimental errors in Factorial designs.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION TO PERFORMANCE EVALUATION (09 Periods)

The art of performance evaluation, Performance projects, Common mistakes, Systematic approach, Selecting an evaluation technique, Performance metrics- selection, Usage, Classification, Setting performance requirements.

UNIT II: WORKLOADS (09 Periods)

Types of workloads: Addition Instruction, Instruction Mixes, Kernels, Synthetic Programs, Application Benchmarks, Popular Benchmarks.

Workload selection and Characterization Techniques: Services Exercised, Level Of Detail, Representativeness, Timeliness, Terminology, Averaging, Specifying Dispersion, Single-Parameter Histograms, Multi parameter Histograms, Principal-Component Analysis, Markov Models, Clustering.

UNIT III: MONITORS (08 Periods)

Monitor terminology, classification, Software, Hardware monitors, Software versus Hardware monitors, Firmware and Hybrid monitors, Distributed system monitors, Program execution monitors, Techniques for improving program performance, Accounting logs, Analysis and inter presentation of accounting log data.

UNIT IV: SUMMARIZING DATA AND LINEAR REGRESSION MODELS (09 Periods)

Summarizing Data: Probability and statistics concepts, Summarizing data by a single number, Selecting among the mean, Median, and Mode, Common misuses of means, Geometric, mean, Harmonic mean, Mean of a ratio, Summarizing variability, Selecting the index of dispersion, Determining distribution of data.

Linear Regression Models: Definition of a good model, Estimation of model parameters, Confidence intervals for regression parameters, Confidence intervals for predictions.

UNIT V: EXPERIMENTAL DESIGN AND ANALYSIS (10 Periods)

Experimental design: Terminology, Common mistakes in Experimentation, Types of Experimental Designs, 2^2 Factorial Designs, Computation of effects, Sign table method for calculating effects, Allocation of variation.

General 2^k Factorial Designs: 2^2r Factorial Designs, Computation of effects, Estimation of Experimental errors, Allocation of variation, Confidence intervals for effects, Confidence intervals for predicted responses, General 2^kr Factorial design **Total Periods: 45**

TEXT BOOK:

1. Raj Jain, *The Art of Computer Systems Performance Analysis: Techniques for Experimental Design,Measurement, Simulation, and Modeling*, Wiley-India, Reprint Edition 2014.

REFERENCE BOOKS:

1. Kishore S.Trivedi, *Probability & Statistics with reliability, queuing, and computer science applications*, PHI, 8th Edition, 2011.

IV B. Tech. - I Semester

(16BT71505) NETWORK PROGRAMMING

(Common to IT and CSSE)

(Program Elective – 2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Computer Networks

COURSE DESCRIPTION:

OSI model, Unix standards; Normal startup, terminate and signal handling server process termination; lost datagram, summary of UDP example, Lack of flow control with UDP; Function and IPV6 support, uname function ,IPv4 Client- IPv6 Server ;FIFO's, streams and messages, RPC.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on concepts of sockets, inter process communication and remote login.

CO2. Identify appropriate TCP Echo server functions and Socket options used in Network based systems.

CO3. Analyze networking protocols such as TCP and UDP for connection establishment between client and server.

CO4. Design appropriate solutions for network applications based on UNIX.

CO5. Apply modern tools to create cooperating processes in network based Systems.

CO6. Relate suitable ethical principles to design and develop applications related to Network Traffic Monitoring.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION TO NETWORK PROGRAMMING AND SOCKETS (09 Periods)

OSI model, Unix standards, TCP and UDP & TCP connection establishment and Format, Buffer sizes and limitation, standard internet services, Protocol usage by common internet application, Address structures, Value Result Arguments, Byte ordering and manipulation function and related functions,

Elementary TCP sockets: Socket, connect, bind, listen, accept, fork and exec function, concurrent servers, Close function.

UNIT II: TCP CLIENT SERVER AND SOCKET OPTIONS (09 Periods)

TCP Echo server functions, Normal startup, terminate and signal handling, Server process termination, Crashing and Rebooting of server host, Shutdown of server host.

Socket Options:I/O Models, select function, Batch input, shutdown function, poll function, getsockopt and setsockopt functions, Socket states, Generic socket option, IPV6 socket options.

UNIT III: ELEMENTARY UDP SOCKET (08 Periods)

Introduction, UDP Echo server functions, UDP Echo client functions, lost datagram, summary of UDP example, Lack of flow control with UDP, Determining outgoing interface with UDP.

UNIT IV: DOMAIN NAME SERVER & IPv4 AND IPv6 INTEROPERABILITY (09 PERIODS)

DNS, gethostbyName function, gethostbyAddr Function, Resolver option, Function and IPv6 support, uname function and other networking Information.

IPv4 and IPv6 Interoperability: Introduction, IPv4 Client- IPv6 Server, IPv6 Client-IPv4 Server, IPv6 Address-Testing Macros, Source Code Portability.

UNIT V: INTERPROCESS COMMUNICATION AND REMOTE LOGIN (11 Periods)

Introduction, Pipes, popen and pclose functions, FIFO's, streams and messages, System V IPC: IPC_Perm Structure, IPC Permissions, Creating and Opening IPC Channels, Message queues (msgget, msgsnd, msgrcv, msgctl Functions), Shared Memory (shmget, shmat, shmdt, shmctlFunctions).

Remote Login: rlogin Overview, RPC.

TEXT BOOKS:

1. W.Richard Stevens, *UNIX Network Programming*, Vol. I, Sockets API, PHI, 3rd Edition, 2010.
2. W.Richard Stevens, *UNIX Network Programming IPC*, Vol. II, Pearson Education India, 2nd Edition, 2015.

REFERENCE BOOKS:

1. T Chan, *UNIX Systems Programming Using C++,* PHI, 3rd Edition, 2012
2. Graham Glass, King Ables, *UNIX for programmers and Users*, Pearson Education, 3rd Edition, 2003.

IV B. Tech. - I Semester

(16BT71506) SOFTWARE ARCHITECTURE AND DESIGN PATTERNS

(Program Elective – 2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Software Engineering.

COURSE DESCRIPTION: Architecture Business Cycle; Documenting Architecture; Layered Systems; Heterogeneous Architectures; Architectural Structures For Shared Information Systems; Formalizing Architectural Design Space; Selection and Usage Patterns;

COURSE OUTCOMES

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge in software architecture, styles, patterns and frameworks.
CO2. Analyze and select appropriate architectural patterns for software design
CO3. Design appropriate software architectures for software Project implementation.
CO4. Apply Skills for designing Architectural solutions using Formal Models and Specification.
CO5. Select appropriate techniques for designing and evaluating a system's architecture.

DETAILED SYLLABUS

UNIT I: INTRODUCTION TO SOFTWARE ARCHITECTURE (09 Periods)

Software Architecture, Software as Engineering Discipline, the Status of Software Architecture, Designing the Architecture, Documenting Architecture, Reconstructing Software Architecture. Software Architecture Guidelines, Baseline architecture, Good software architecture.

UNIT II: ARCHITECTURAL STYLES (09 Periods)

Pipes And Filters, Data Abstraction And Object Oriented Organization, Event-Based Implicit Invocation, Layered Systems, Repositories, Interpreters, Process Control, Familiar Architectures, Heterogeneous Architectures.

UNIT III: ARCHITECTURE DESIGN GUIDANCE AND FORMAL MODELS SPECIFICATION (08 Periods)

Database Integration, Batch Sequential, Simple Repository, Virtual Repository, Hierarchical Repository, Integration in Software Development Environments, Guidance for User Interfacing Architecture, Formalizing the Architecture of a Specific System, Formalizing an Architectural Style, Formalizing Architectural Design Space.

UNIT IV: DESIGN PATTERNS AND CREATIONAL PATTERNS (09 Periods)

Design Pattern, Smalltalk MVC, Catalogs, Role in Solving Design Problems, Selecting Design Pattern, Using Design Pattern. Creational Patterns: Abstract Factory, Prototype.

UNIT V: STRUCTURAL PATTERNS AND BEHAVIORAL PATTERNS (10 Periods)

Structural Patterns: Adapter, Bridge, Composite. Behavioral Patterns**:** Proxy, Interpreter, Iterator.

Total Periods: 45

TEXT BOOKS:

1. Mary Shaw, David Garlan, *Software Architecture Perspective: on an Emerging Discipline,* PHI, 2014.
2 Erich Gamma*, Design Patterns,* Pearson Education, 2006.

REFERENCE BOOKS:

2. Buschmann, *Pattern Oriented Software Architecture*, Wiley, 1996.
3. Gamma, Shaw, *An Introduction to Software Architecture*, World Scientific, 1995.

IV B. Tech. - I Semester

(16BT71507) BUSINESS ANALYTICS

(Program Elective – 3)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Database Management Systems

COURSE DESCRIPTION:
Analytics on Spreadsheets; Visualizing and Exploring Data; Descriptive Statistical Measures; Predictive Modeling and Analysis; Regression Analysis; Linear Optimization; Applications of Linear Optimization; Decision Analysis.

COURSE OUTCOMES:
On Successful Completion of this course, students will be able to:

CO1. Demonstrate knowledge on techniques involved in business analytics.
CO2. Analyze the techniques involved in classifying massive and opportunistic data.
CO3. Design solutions by evaluating business problems and determine suitable analytical methods.
CO4. Plan, organize and evaluate methods to prepare raw data for different analytical techniques.
CO5. Collect, manage, and interpret data to identify issues in the workplace and develop measures for solving them.
CO6. Apply ethical principles and commit to business decisions by using data analytic techniques.

DETAILED SYLLABUS:

UNIT I: FUNDAMENTALS OF BUSINESS ANALYTICS (11 Periods)

Introduction to Business Analytics: Evolution of Business Analytics, Scope of Business Analytics, Data for Business Analytics, Decision Models, Problem Solving and Decision Making.

Analytics on Spreadsheets: Basic Excel Skills, Excel Functions, Spreadsheet Modeling and Spreadsheet Engineering.

UNIT II: DESCRIPTIVE ANALYTICS (09 Periods)

Visualizing and Exploring Data: Data Visualization, Data Queries Using Sorting and Filtering, Statistical Methods for Summarizing Data.

Descriptive Statistical Measures: Populations and Samples, Measures of Location, Measures of Dispersion, Measures of Shape, Measures of Association, Statistical Thinking in Business Decisions, Details of Data Modeling.

UNIT III: PREDICTIVE ANALYTICS (09 Periods)

Predictive Modeling and Analysis: Logic-Driven Modeling, Data-Driven Modeling, Analyzing Uncertainty and Model Assumptions, Model Analysis Using Risk Solver Platform

Regression Analysis: Simple Linear Regression, Residual analysis and regression assumptions, multiple linear regression, Building good regression models, Regression with categorical independent variables, Regression model with nonlinear Terms

UNIT IV: PRESCRIPTIVE ANALYTICS (08 Periods)

Linear Optimization: Building Linear Optimization Models, Implementing Linear Optimization Models on Spreadsheets, Solving Linear Optimization Models, Graphical Interpretation of Linear Optimization, Using Optimization Models for Prediction and Insight.

Applications of Linear Optimization: Types of Constraints in Optimization Models, Process Selection Models, Blending Models, Portfolio Investment Models, Transportation Models, Multiperiod Production Planning Models, Models with Bounded Variables, A Production / Marketing Allocation Model.

UNIT V: NONLINEAR, NON-SMOOTH OPTIMIZATION AND MAKING DECISIONS (08 Periods)

Nonlinear And Non-Smooth Optimization: Modeling and Solving Nonlinear Optimization Problems, Quadratic Optimization, Evolutionary Solver for Non-Smooth Optimization

Decision Analysis: Making Decisions with Uncertain Information, Decision Trees, The Value of Information, Utility and Decision Making, Case Study

Total Periods: 45

TEXT BOOK:

1. James R. Evans, *Business Analytics*, Pearson, 2016.

REFERENCE BOOKS:

1. R. N. Prasad, Seema Acharya, *Fundamentals of Business Analytics*, Wiley, 2014.

2. Evan Stubbs, *Delivering Business Analytics: Practical Guidelines for Best Practice*, Wiley, 2013.

IV B. Tech. – I Semester

(16BT71202) **MOBILE APPLICATION DEVELOPMENT**

(Common to IT and CSSE)
(Program Elective – 3)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Courses on Java Programming and Web Technologies.

COURSE DESCRIPTION: Mobile platforms; Mobile User Interface and tools; Introduction to Android; Activities; Views; Menus; Database Storage; SMS; e-mail; Displaying Maps; Building a Location Tracker Web Services Using HTTP; Sockets Programming; Communication between a Service and an Activity; Introduction to iOS.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Mobile platforms and Mobile User Interface
- Android Activities and Intents
- Messaging, Networking, Location based Services, Android Services
- Basics of iOS

CO2. Analyze the context of complex problems and identify user interface design requirements.
CO3. Design and develop solutions for real world problems with android mobile applications.
CO4. Demonstrate problem solving skills to create applications for mobile devices.
CO5. Apply Android studio and iOS tools to develop mobile applications.
CO6. Create mobile applications as per societal needs.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION AND MOBILE USER INTERFACE DESIGN (08 Periods)

Mobile web presence, Mobile applications, Marketing, App as a mobile web app; User interface design - Effective use of screen real estate, Mobile application users, Mobile information design, Mobile platforms, Tools of mobile interface design.

Android versions, Features and architecture, required tools, Android application launching.

UNIT II: ACTIVITIES, INTENTS AND ANDROID USER INTERFACE (09 Periods)

Activities, Linking activities using intents, Displaying notifications, Components of a screen, Adapting to display orientation, Managing changes to screen orientation, Utilizing the action bar, Listening for UI notifications.

UNIT III: ADVANCED USER INTERFACE AND DATA PERSISTENCE (10 Periods)

Basic views, Picker views, List view, Image view, Menus with views, Web view, Saving and loading user preferences, Persisting data to files, Creating and using databases.

UNIT IV: MESSAGING, LOCATION-BASED SERVICES, AND NETWORKING (09 Periods)

SMS messaging, Sending e-mail, Displaying maps, Getting location data, Monitoring a location, Consuming web services using HTTP.

UNIT V: ANDROID SERVICES AND IOS (09 Periods)

Services, Communication between a service and an activity, Binding activities to services, Threading. iOS tools, iOS project, Debugging iOS apps, Objective-C basics, Hello world app, Building the derby app in iOS.

Total Periods: 45

TEXT BOOKS:

1. J. F. DiMarzio, *Beginning Android Programming with Android Studio,* Wiley India, 4th Edition, 2017.
2. Jeff McWherter and Scott Gowell, *Professional Mobile Application Development,* Wiley India, 2012.

REFERENCE BOOKS:

1. Neils Smyth, *Android Stduio Development Essentials,* Creative Space Independent publishing platform, 7th Edition 2016.
2. Paul Deital and Harvey Deital, *Android How to Program,* Detial associates publishers, 2013.

IV B. Tech. - I Semester

(16BT60502) SOFT COMPUTING

(Common to CSE and IT)
(Program Elective – 3)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: —

COURSE DESCRIPTION:
Concepts on Soft Computing Techniques; Artificial Neural Networks; Supervised Learning; Unsupervised Learning; Fuzzy logic; Genetic Algorithms.

COURSE OUTCOMES:
On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge in
- Artificial Neural Networks
- Supervised Learning Networks
- Unsupervised Learning Networks
- Fuzzy sets, relations and measures
- Genetic Operators

CO2. Analyze neural network architectures, Fuzzy systems and Genetic algorithms.
CO3. Design soft computing solutions for real life computational problems.
CO4. Use soft computing techniques to solve complex computational problems.
CO5. Create algorithms using soft computing techniques.
CO6. Apply contextual knowledge to solve problems related to societal issues like Business Intelligence, Forecasting.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION TO SOFT COMPUTING & ARTIFICIAL NEURAL NETWORKS (08 Periods)

Soft Computing: Neural networks, Application scope of neural networks, Hybrid systems, Soft computing, Applications of soft computing.
Artificial Neural Networks: Fundamentals, Evolution, Basic Models, Terminologies, Hebb network.

UNIT II: SUPERVISED LEARNING NETWORKS (10 Periods)

Perceptron Networks: Theory, Perceptron learning rule, Architecture, Flowchart for training process, Perceptron training algorithm for single and multiple output classes, Perceptron network testing algorithm.
Back-Propagation Networks: Theory, Architecture, Flow chart for training process, Training algorithm, Learning factors of back-propagation networks, Testing algorithm for back-propagation networks.

UNIT III: UNSUPERVISED LEARNING NETWORKS (09 Periods)

Unsupervised Learning Networks: Fixed weight competitive nets, Kohonen self-organizing feature maps, Learning vector quantization, Counter-propagation networks, Adaptive response theory network.

UNIT IV: FUZZY LOGIC (10 Periods)

Classical Sets and Fuzzy Sets: Classical sets- Operations, Properties, Function mapping; Fuzzy sets- Operations, Properties.
Classical Relations and Fuzzy Relations: Cartesian product of relation, Classical relations, Fuzzy relations, Tolerance and equivalence relations, Non-interactive fuzzy sets.

UNIT V: FUZZY SYSTEMS AND GENETIC ALGORITHMS (08 Periods)

Fuzzy Arithmetic and Fuzzy Measures: Fuzzy arithmetic, Extension principle, Fuzzy measures, Measures of fuzziness.
Genetic Algorithms: Genetic operators, Working principle, Fitness function, reproduction.

Total Periods: 45

TEXT BOOK:
1. S. N. Sivanandan and S. N. Deepa, *Principles of Soft Computing*, Wiley India, 2nd Edition, 2011.

REFERENCE BOOKS:

1. Jyh-Shing Roger Jang, Chuen-Tsai Sun and Eiji Mizutani, *Neuro-Fuzzy and Soft Computing,* Prentice-Hall India, 2003.

2. S. Rajasekaran and G. A. Vijayalakshmi Pai, *Neural Networks, Fuzzy Logic and Genetic Algorithms: Synthesis and Applications, PHI* Learning Private Ltd, 2011.

IV B. Tech. – I Semester

(16BT60501) **SOFTWARE TESTING**

(Common to IT and CSSE)
(Program Elective – 3)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Software Engineering.

COURSE DESCRIPTION:

Software Testing Basics: Goals, Defects, Terminology, Methodology, STLC in SDLC, Verification & Validation; Software Testing Techniques: White box testing, Black Box Testing, Regression testing; Test Management: Test Planning, Design & Specifications; Test Automation: Tool selection & Guidelines.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on
- Software Testing Life Cycle.
- Testing Techniques.
- Test Management & Metrics.
- Regression Testing
- Test Automation

CO2. Analyze testing circumstances and their resultants in software development.

CO3. Design and develop the appropriate test cases in accordance to the software development model.

CO4. Use problem solving skills to control and monitor the testing process

CO5. Apply testing tools for testing the software quality.

CO6. Apply contextual knowledge to perform testing on software related to societal applications

DETAILED SYLLABUS:

UNIT I: INTRODUCTION TO SOFTWARE TESTING (09 Periods)

Evolution of Software Testing, Software Testing—Myths and Facts, Goals of Software Testing, Psychology for Software Testing, Software Testing Definitions, Model for Software Testing, Effective Software Testing vs. Exhaustive Software Testing. Effective Testing is Hard, Software Testing as a Process.

Terminology & Methodology: Software Testing Terminology, Software Testing Life Cycle (STLC), Software Testing Methodology.

UNIT II: WHITE BOX TESTING (09 Periods)

Need of White-Box Testing, Logic Coverage Criteria, Basis Path Testing, Graph Matrices, Loop Testing, Data Flow Testing, Mutation Testing.

UNIT III: BLACK BOX TESTING (08 Periods)

Boundary Value Analysis (BVA), Equivalence Class Testing, State Table-Based Testing, Decision Table-Based Testing, Cause-Effect Graphing Based Testing, Error Guessing.

UNIT IV: SOFTWARE TEST MANAGEMENT & METRICS (10 Periods)

Test Management: Test Organization, Structure of Testing Group, Test Planning, Detailed Test Design, Test Specifications.

Software Metrics: Definition of Software Metrics, Classification of Software Metrics, Size Metrics.

UNIT V: REGRESSION AND AUTOMATION (09 Periods)

Regression Testing: Progressive vs. Regressive Testing, Regression Testing Produces Quality Software, Regression Testability, Objectives of Regression Testing, Regression Testing Types, Defining Regression Test Problem, Regression Testing Techniques.

Automation and Testing Tools: Need for Automation, Categorization of Testing Tools, Selection of Testing Tools, Costs Incurred in Testing Tools, Guidelines for Automated Testing, Overview of Some Commercial Testing Tools.

Total Periods: 45

TEXT BOOK

1. Naresh Chauhan, *Software Testing: Principles and Practices,* Oxford University Press, 2nd Edition, 2016.

REFERENCE BOOKS:

1. Boris Beizer, *Software Testing Techniques*, Dream Tech Press, 2nd Edition, 2004.

2. Dr. K. V. K. K. Prasad, *Software Testing Tools*, Dreamtech, 2004.

IV B. Tech. – I Semester

(16BT71210) HIGH PERFORMANCE COMPUTING

(Common to IT and CSSE)

(Program Elective - 4)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Computer Organization.

COURSE DESCRIPTION: Cache-based Microprocessor Architecture; Memory Hierarchies; Multithreaded Processors; Common Sense Optimizations; The Role of Compilers; Data Access Optimization; Shared-memory Computers; Parallel Scalability; Introduction to OpenMP; Parallel Jacobi Algorithm; Introduction to MPI; MPI Performance Tools; MPI Parallelization of Jacobi Solver.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on:
- Modern Processors and code Optimization.
- Parallel computing paradigms.

CO2. Analyze computation problems and identify the suitable parallel processing approaches to achieve optimum computation.

CO3. Design Parallel processing algorithms for achieving high performance computing.

CO4. Solve shared memory problems using Parallel Programming.

CO5. Use OpenMP and MPI tools in Parallel Programming.

DETAILED SYLLABUS:

UNIT I: MODERN PROCESSORS (08 Periods)

Stored-program computer architecture, General-purpose cache-based microprocessor architecture, Memory hierarchies, Multicore processors, Multi-threaded processors, Vector processors.

UNIT II: BASIC OPTIMIZATION TECHNIQUES FOR SERIAL CODE (10 Periods)

Scalar profiling, Common sense optimizations, Simple measures, Large impact, The role of compilers, C++ optimizations, Data access optimization-balance analysis and light speed estimates, Storage order.

Case study: The Jacobi algorithm and Dense matrix transpose.

UNIT III: PARALLEL COMPUTERS (09 Periods)

Taxonomy of parallel computing paradigms, Shared-memory computers, Distributed-memory computers, Hierarchical systems, Networks. Basics of parallelization, Data Parallelism, Function parallelism, Parallel scalability.

UNIT IV: PARALLEL PROGRAMMING WITH OpenMP (09 Periods)

Introduction to OpenMP – Parallel execution, Data scoping, OpenMP work sharing for loops, Synchronization, Reductions, Loop scheduling and tasking.

Case study: OpenMP-parallel Jacobi algorithm, Efficient OpenMP programming-profiling OpenMP programs, Performance pitfalls.

Case study: Parallel sparse matrix-vector multiply.

UNIT V: DISTRIBUTED-MEMORY PARALLEL PROGRAMMING WITH MPI (09 Periods)

Message passing, Introduction to MPI, Examples - MPI parallelization of Jacobi solver; Efficient MPI Programming - MPI performance tools, communication parameters, Synchronization, Serialization, Contention, Reducing communication overheads, Understanding intranode point-to-point communication.

Total Periods: 45

TEXT BOOK:

1. Georg Hager and Gerhard Wellein, *Introduction to High Performance Computing for Scientists and Engineers*, Chapman & Hall / CRC Computational Science Series, 2012.

REFERNCE BOOKS:

1. Charles Severance and Kevin Dowd, *High Performance Computing*, O'Reilly Media, 2nd Edition, 1998.

2. Kai Hwang and Faye Alaye Briggs, *Computer Architecture and Parallel Processing*, McGraw Hill, 1984.

IV B. Tech. - I Semester
(16BT71508) INTERNET OF THINGS
(Common to CSE, IT and CSSE)
(Program Elective – 4)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Computer Networks

COURSE DESCRIPTION:
Internet of Things Components; Communication models; Prototyping; Hardware; Design models; Analytics for IoT.

COURSE OUTCOMES:
On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on Protocols, functional blocks and communication models of Internet of things.
CO2. Identify appropriate sensors and communication modes used in IoT based systems.
CO3. Design appropriate solutions for IoT applications using Raspberry Pi and Arduino kits.
CO4. Appropriately synthesize the models and applications for usage in Home automation and cities.
CO5. Apply evolutionary techniques to perform analytics on the data integrated from IoT based systems.
CO6. Use advances in IoT technology to design and develop applications.

DETAILED SYLLABUS:

UNIT I: INTRODUCTION TO INTERNET OF THINGS (08 Periods)
Definition, Characteristics, Things, Protocols, Logical Design, Functional Blocks, Communication models, APIs, Enabling Technologies, Levels & Deployment templates.

UNIT II: DEVICES AND END POINTS (10 Periods)
IoT Devices-Examples-Raspberry PI interfaces, Arduino interfaces, Programming Raspberry PI with Python, Other IOT devices, Domain Specific IoTs.

UNIT III: SENSORS AND CONNECTIVITY (08 Periods)
Sensors-Types of Sensor Nodes; Internet Communications, IP Addresses, MAC Address, TCP & UDP ports, Application Layer Protocols.

UNIT IV: DESIGN METHODOLOGY AND CASE STUDIES (10 Periods)

Design Methodology:
Purpose and Requirements specifications, Process Specifications, Domain Model specifications, Information Model specifications, Service specification, Level Specifications, Functional View specifications, Operational View specifications, Device and Component integration, Application development.

Case Studies: Home Automation, Cities.

UNIT V: DATA ANALYTICS FOR IoT (09 Periods)
Analytics, Apache Hadoop, Hadoop MapReduce for Batch Data Analysis, Apache Oozie, Chef & Case studies.

Total Periods: 45

TEXT BOOK:
1. Arshdeep Bahga, Vijay Madisetti, *Internet of Things – A hands-on approach*, University Press, 2015.

REFERENCE BOOKS:
1. Adrian McEwen and Hakim Cassimally, *Designing the Internet of Things*, Wiley Publishing, 2013.
2. CharlesBell, *Beginning Sensor Networks with Arduino and Raspberry Pi*, Apress, 2013.
3. Marco Schwartz, *Internet of Things with the Arduino Yun,* Packt Publishing, 2014.

4. Matt Richardson, Shawn Wallace, *Getting Started with Raspberry Pi*, Maker Media, Inc, 2012.

IV B. Tech. -I Semester

(16BT71509) SECURE SOFTWARE ENGINEERING

(Program Elective – 4)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Software Engineering

COURSE DESCRIPTION:

Security in software; Requirements engineering for secure software; Secure software architecture & design, secure coding & testing; and Governance & managing.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on security issues in:
- Requirements Engineering
- Architecture and Design
- Coding and Testing
- System Assembling

CO2. Analyze complex software projects to describe security risks and its mitigation techniques.

CO3. Design secure software system with minimal risks and attacks.

CO4. Use statistical methods to collect metrics for assessing and improving the security of a product, process, and project objectives.

CO5. Create software solutions for secure access and protection of data.

CO6. Apply ethical principles and methods for secure software system design.

DETAILED SYLLABUS:

UNIT I: SECURITY IN SOFTWARE (10 Periods)

The problem, Software assurance and software security, Threats to software security, Sources of software insecurity, the benefits of detecting software security defects early, managing secure software development, Defining properties of secure software.

Secure Software: Defining Properties of Secure Software, Core Properties of Secure Software, Influential Properties of Secure Software, Influencing the Security Properties of Software, The Defensive Perspective, The Attacker's Perspective.

UNIT II: REQUIREMENTS ENGINEERING (09 Periods)

Requirements Engineering For Secure Software: Misuse and abuse cases, the SQUARE process Model, SQUARE sample outputs, Requirements elicitation, Requirements prioritization.

UNIT III: SECURITY PRINCIPLES (09 Periods)

Secure Software Architecture and Design: Software security practices for architecture and design: Architectural risk analysis. Software security knowledge for architecture and design: Security principles, Security guidelines, and Attack patterns.

UNIT IV: SECURE CODING AND TESTING (08 Periods)

Considerations for Secure Coding and Testing: Code analysis, Coding practices, Software security testing, Security testing considerations throughout the SDLC.

UNIT V: GOVERNANCE AND MANAGEMENT (09 Periods)

Governance and Managing for More Secure Software: Governance and security, Adopting an enterprise software security framework, security extent, Security and project management, Maturity of Practice.

Total Periods: 45

TEXT BOOK:

1. Julia H. Allen, Sean Barnum, Robert J. Ellison, Gary McGraw, and Nancy R. Mead, *Software Security Engineering: A Guide for Project Managers,* Pearson Education (India), 2009.

REFERENCE BOOKS:

1. Gary McGraw, *Software Security: Building Security In*, Addison-Wesley, 2006.
2. Mark Dowd, John McDonald and Justin Schuh, *The Art of Software Security Assessment: Identifying and Preventing Software Vulnerabilities,* Addison-Wesley, 2006.

IV B. Tech. – I Semester
(16BT60503) WIRELESS NETWORKS
(Common to CSE, IT and CSSE)
(Program Elective – 4)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITE: A course on Computer Networks

COURSE DESCRIPTION:

Generations of Wireless Networks; Voice and Data Processing; Wireless Network Topology; GSM; TDMA; CDMA; Wireless LANs; Wireless WANs; Wireless PAN;

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on
- Wireless Medium Access methods.
- Network Topology
- Wireless LAN, HIPERLAN
- GSM, CDMA, GPRS

CO2. Analyze the network topologies in Wireless Networks

CO3. Design solutions for network communications at physical and transport layers

CO4. Solve complex problems related to network communications and wireless networks

CO5. Apply GSM, CDMA, GPRS and Bluetooth to create Home Access Networks and wireless Personal Area Network.

CO6. Apply contextual knowledge to solve problems using societal applications like health care devices, Internet of Things.

DETAILED SYLLABUS:

UNIT I: OVERVIEW OF WIRELESS NETWORKS AND WIRELESS MEDIUM ACCESS ALTERNATIVES (09 Periods)

Overview of Wireless Networks: Different generations of wireless networks.

Wireless Medium Access Alternatives: Fixed assignment access for voice-oriented networks – Frequency Division Multiple Access (FDMA), Time Division Multiple Access (TDMA), Code Division Multiple Access (CDMA); Random access for data-oriented networks – Access methods for wireless LANs; Integration of voice and data traffic.

UNIT II: NETWORK PLANNING AND WIRELESS NETWORK OPERATIONS (09 Periods)

Network Planning: Wireless network topologies – Infrastructure of network topology, Ad hoc network topology; Cellular topology, Cellular concept, Cellular hierarchy; Cell fundamentals.

Wireless Network Operations: Mobility management – Location management, Handoff management, Mobile IP; Security in wireless networks – Security requirements for wireless networks, Overview of network security, Identification schemes.

UNIT III:INTRODUCTION TO WIRELESS LANS AND IEEE 802.11 WIRELESS LANS(09 Periods)

Introduction to Wireless LANs: Historical overview of the LAN industry, Wireless home networking-Home Access Networks (HAN), Needs of HAN, HAN technologies.

IEEE 802.11 WLANs: IEEE 802.11 – Overview of IEEE 802.11, Reference architecture, Layered protocol architecture; The PHY Layer – FHSS, DSSS, DFIR, IEEE 802.11a, IEEE 802.11b; MAC sublayer – General MAC frame format; MAC management sublayer – Registration, Handoff, Security.

UNIT IV: GSM TECHNOLOGY, CDMA TECHNOLOGY AND MOBILE DATA NETWORKS (10 Periods)

GSM Technology: GSM – Reference architecture; Mechanisms to support a mobile environment – Registration, Call establishment, Handoff, Security.

CDMA Technology: CDMA – IS-95 CDMA forward channel, IS-95 CDMA reverse channel, Packet and frame formats in IS-95.

Mobile Data Networks: GPRS – Reference architecture in GPRS, Mobility support in GPRS, Protocol layers in GPRS; SMS – Overview of SMS Operation; Mobile application protocols – Wireless application protocol, i-Mode.

UNIT V: WIRELESS ATM, HIPERLAN AND WIRELESS PAN (08 Periods)

Wireless ATM and HIPERLAN: Wireless ATM – Reference model, Protocol entities, PHY and MAC layer alternatives, Mobility support; HIPERLAN – HIPERLAN-1, Requirements and architecture, PHY and MAC layers; HIPERLAN-2 – Architecture and reference model, PHY layer, DLC layer, Convergence layer, Security, Overall comparison with 802.11.

Wireless PAN: IEEE 802-15 WPAN, Home RF – Architecture; Bluetooth – Overall architecture, Protocol stack, Physical connection, Security. **Total Periods: 45**

TEXT BOOK:

1. Kaveh Pahlavan and Prashant Krishna Murthy, *Principles of Wireless Networks*, PHI Learning Pvt. Ltd., 2009.

REFERENCE BOOKS:

1. William Stallings, *Wireless Communications and Networks,* Pearson Education, 2nd Edition, 2012.

2. C. Sivaram Murthy and B.S. Manoj, *Ad-hoc Wireless Networks Architectures and Protocols,* Pearson Education, 2nd Edition, 2007.

IV B. Tech. I Semester

(16BT70432) **EMBEDDED SYSTEMS LAB**

(Common to EEE, ECE and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITE: A course on Embedded systems.

COURSE DESCRIPTION:

IDE for Embedded System Design using MSP430; Interfacing Switch & LED; Timers-WDT, Configuring, Programming; ADC-usage; Power down modes; DAC; PWM Generator; Networking – SPI, Wi-Fi.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge in designing complex energy efficient embedded systems.

CO2. Analyze usage of various on-chip resources like GPIO, Timers, Interrupts, ADC, DAC, Comparator, SPI.

CO3. Design embedded systems to suit market requirements.

CO4. Solve engineering problems by proposing potential solutions using industry choice advanced Microcontrollers.

CO5. Apply appropriate techniques, resources, and CCSV6 based IDE for modeling embedded systems with understanding of limitations.

CO6. Provide embedded system solutions for societal needs.

CO7. Work individually and in a group to develop embedded systems.

CO8. Communicate effectively in oral and written form in the field of embedded systems.

LIST OF EXCERSISES:

1. Introduction to MSP430 launch pad and Programming Environment.
2. Read input from switch and Automatic control/flash LED (software delay).
3. Interrupts programming example using GPIO.
4. Configure watchdog timer in watchdog & interval mode.
5. Configure timer block for signal generation (with given frequency).
6. Read Temperature of MSP430 with the help of ADC.
7. Test various Power Down modes in MSP430.
8. PWM Generator.
9. Use Comparator to compare the signal threshold level.
10. Speed Control of DC Motor
11. Master slave communication between MSPs using SPI.
12. Networking MSPs using Wi-Fi.

Tool Requirement:

Code Composer Studio Version 6, *MSP430 based launch pads*, Wi-Fi booster pack.

REFERENCE BOOKS:

1. John H Davies, *MSP430 Microcontrollers Basics,* Newnes Publishers, 1st Edition, 2008.
2. C P Ravikumar, *MSP430 Microcontrollers in Embedded System Projects,* Elite Publishing House , 1st Edition, 2012.

IV B. Tech. - I Semester

(16BT71531) SYSTEM MODELING AND SIMULATION LAB

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: A course on Programming in C Lab and System Modeling and Simulation

COURSE DESCRIPTION:

Hands on Experience on Generation of random numbers; Input Modeling; Queuing System; Simulation models.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate Knowledge to solve complex engineering problems using Modeling and simulation.

CO2. Analyze the problems to develop models for applications to meet requirements of the system.

CO3. Design and develop solutions through modeling for computer based systems.

CO4. Apply simulation methods to interpret data and provide valid conclusions for problems in systems engineering

CO5. Use modern engineering techniques in modeling systems to provide effective solutions for real world problems.

CO6**.** Apply appropriate ethics and follow principles to model systems incrementally.

List of Experiments:

1. A baker is trying to figure out how many dozens of bagels to bake each day. The probability distribution of the number of bagel customers is as follows:

Number of Customers/Day	8	10	12	14
Probability	0.35	0.30	0.25	0.10

   Customers order 1,2,3 or 4 dozen bagels according to the following probability distribution.

Number of Dozen Ordered /Customer	1	2	3	4
Probability	0.4	0.3	0.2	0.1

   Bagels sell for $8.40 per dozen. They cost $5.80 per dozen to make. All Bagels not sold at the end of the day are sold at half price to a local grocery store. Based on 5 days of simulation, how many dozen bagels should be baked each day?

2. Develop a function for generation of pseudo-random numbers between 0 and 1.
3. Develop functions for generating random variates for continuous and discrete probability distributions using inverse transform technique and acceptance-rejection technique.
4. A self service car wash has 4 washing stalls. When in a stall, a customer may choose from among three options: 1. Rinse only 2. Wash and Rinse 3. Wash, Rinse and Wax. Each option has a fixed time to complete: Rinse only 3 minutes; wash and rinse 7 minutes; wash, rinse and wax 12 minutes. The owners have observed that 20% of customers choose rinse only; 70% wash and rinse; and 10% wash, rinse and wax. There are no scheduled appointments; the customers arrive at a rate of about 34 cars per hour. There is room for only 3 cars to wait in the parking lot, so, currently many customers are lost. The owners want to know how much more business they will do if they add another stall. Adding a stall will take away one space in the parking lot.

   Develop a queuing model of the system. Estimate the rate at which customers will be lost in the current and proposed system. Carefully state any assumptions or approximations you make.

5. Records pertaining to the monthly number of job-related injuries at an underground coal mine were being studied by a federal agency. The values for the past 100 months were as follows:

Injuries per month	Frequency of occurrence
0	35
1	40
2	13
3	6
4	4
5	1
6	1

a. Apply chi-square test to these data to test the hypothesis that the underlying distribution is poisson. Use the level of significance á = 0.05.

b. Apply chi-square test to these data to test the hypothesis that the distribution is poisson with mean 1.0. Again let á = 0.05.

c. What are the differences between parts (a) and (b), and when might each case arise.

6. Simulate a Single Server Queuing System.

7. Simulate Two-Server Queuing System.

8. Simulate and control a conveyor belt system

9. Perform Two-sample Kolmogorov-Smirnov test on sample data with atleast hundred entries.

10. Design and development of a simulation model for determining the parameters of periodic Review System.

IV B. Tech. – I Semester

(16BT71532) COMPREHENSIVE ASSESSMENT

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
	100	100	-	-	-	2

PRE-REQUISITES: All the courses of the program.

COURSE DESCRIPTION: Assessment of student learning outcomes in the courses of the program.

COURSE OUTCOMES:

Comprehensive Assessment enables a successful student to demonstrate:

CO1. Knowledge on the courses of the program.

CO2. Analytical ability in the courses of the program.

CO3. Design skills in the courses of the program.

CO4. Ability to investigate and solve complex engineering problems in the courses of the program.

CO5. Ability to apply tools and techniques to complex engineering activities with an understanding of limitations in the courses of the program.

CO6. Ability to provide solutions as per societal needs with consideration to health, safety, legal and cultural issues in the courses of the program.

CO7. Understanding of the impact of the professional engineering solutions in environmental context and need for sustainable development in the courses of the program.

CO8. Ability to apply ethics and norms of the engineering practice in the courses of the program.

CO9. Ability to function effectively as an individual in the courses of the program.

CO10. Ability to present views cogently and precisely in the courses of the program.

CO11. Ability to engage in life-long leaning in the courses of the program.

IV B. Tech. – II Semester

(16BT81531) **PROJECT WORK**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
100	100	200	-	-	-	12

PRE-REQUISITES: All the courses of the program.

COURSE DESCRIPTION:
Identification of topic for the project work; Literature survey; Collection of preliminary data; Identification of implementation tools and methodologies; Performing critical study and analysis of the topic identified; Time and cost analysis; Implementation of the project work; Preparation of thesis and presentation.

COURSE OUTCOMES:

Completion of the project work enables a successful student to demonstrate:

CO1. Knowledge on the project topic.

CO2. Analytical ability exercised in the project work.

CO3. Design skills applied on the project topic.

CO4. Ability to investigate and solve complex engineering problems faced during the project work.

CO5. Ability to apply tools and techniques to complex engineering activities with an understanding of limitations in the project work.

CO6. Ability to provide solutions as per societal needs with consideration to health, safety, legal and cultural issues considered in the project work.

CO7. Understanding of the impact of the professional engineering solutions in environmental context and need for sustainable development experienced during the project work.

CO8. Ability to apply ethics and norms of the engineering practice as applied in the project work.

CO9. Ability to function effectively as an individual as experienced during the project work.

CO10. Ability to present views cogently and precisely on the project work.

CO11. Project management skills as applied in the project work.

CO12. Ability to engage in life-long leaning as experience during the project work.

I B. Tech. - I Semester

(16BT1BS02) ENGINEERING PHYSICS

(Common to ECE, EEE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Intermediate / senior secondary Physics

COURSE DESCRIPTION:

Lasers; optical fibers; principles of quantum mechanics; band theory of solids; semiconductors; dielectric properties of materials; acoustics of buildings; superconductors; crystallography and nanomaterials.

COURSE OUTCOMES:

After completion of the course, a successful student will be able to:

CO1: Acquire basic knowledge of lasers, optical fibers, quantum mechanics, dielectrics, semiconductors, and superconductors, acoustic of buildings, crystallography and nanomaterials.

CO2: Analyze the construction and working of various laser systems, semiconductor devices, various types of optical fibers and its communication system and nano materials properties.

CO3: Gain skills in designing lasers, optical fiber cable, semiconductor devices, acoustically good halls and nanomaterials.

CO4: Develop problem solving skills in engineering context.

CO5: Use relevant techniques for assessing ball milling, pulsed laser deposition, p-n junction and Lasers.

DETAILED SYLLABUS:

UNIT I - LASERS AND FIBER OPTICS (11periods)

Lasers: Introduction, characteristics of lasers, spontaneous and stimulated emission of radiation, Einstein's coefficients - condition for amplification, population inversion, Nd:YAG laser, Helium-Neon laser, semiconductor laser and applications of lasers.

Fiber optics: Introduction, principle of optical fiber, acceptance angle, acceptance cone and numerical aperture, classification of optical fibers, optical fiber communication system and applications of optical fibers.

UNIT II – PRINCIPLES OF QUANTUM MECHANICS AND BAND THEORY OF SOLIDS (07 p*eriods*)

Principles of Quantum Mechanics: Introduction, de-Broglie's hypothesis, Schrödinger's one dimensional wave equation (time independent), significance of wave function, particle in a one dimensional potential box, Fermi-Dirac distribution and effect of temperature (qualitative treatment).

Band Theory of Solids: Electron in a periodic potential, Kronig-Penney model (qualitative treatment), origin of energy bands formation in solids, distinction between conductors, semiconductors and insulators based on band theory.

UNIT III – SEMICONDUCTORS AND DIELECTRIC PROPERTIES OF MATERIALS (13 periods)

Semiconductors: Introduction, types of semiconductors, intrinsic carrier concentration, electrical conductivity in semiconductors, drift and diffusion currents, Einstein's relation, Hall effect and its applications, direct and indirect band gap semiconductors, p-n junction, energy band diagram of p-n diode, LED, photo diode and Solar cell.

Dielectric Properties of Materials: Introduction, dielectric constant, electronic, ionic and orientation polarizations (qualitative treatment), local field, frequency dependence of polarizability (qualitative treatment), ferroelectricity.

UNIT IV – ACOUSTICS OF BUILDINGS AND SUPERCONDUCTIVITY (07 periods)

Acoustics of Buildings: Introduction, basic requirement of acoustically good hall, reverberation and time of reverberation, Sabine's formula for reverberation time (qualitative treatment), absorption coefficient of sound and its measurement, factors affecting the architectural acoustics and their remedies.

Superconductivity: Introduction, General properties - Meissner effect, penetration depth, Type-I and Type-II superconductors, flux quantization, Josephson effects, BCS theory (qualitative treatment), applications of superconductors.

UNIT V – CRYSTALLOGRAPHY AND NANOMATERIALS (07 p*eriods*)

Crystallography: Introduction, crystal planes, crystal directions and Miller indices, separation between successive (hkl) planes, X-ray diffraction by crystal planes, Bragg's law- powder method.

Nanomaterials: Introduction, principles of nanomaterials, properties of nanomaterials, synthesis of nanomaterials by ball milling and pulsed laser deposition and applications of nanomaterials.

Total Periods: 45

TEXT BOOK:

I B. Tech. – I Semester

(16BT1BS03) MATRICES AND NUMERICAL METHODS

(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Intermediate /Senior secondary mathematics
COURSE DESCRIPTION: Fundamentals of matrix theory; numerical solutions of equations, curve fitting; interpolation; numerical differentiation and integration; numerical solutions of ordinary differential equations.
COURSE OUTCOMES: After completion of the course a successful student is able to

CO1: Acquire basic **knowledge** in
- (a) Finding the rank of matrices and analyzing them.
- (b) Solving algebraic and transcendental equations by various numerical methods.
- (c) Fitting of various types of curves to the experimental data.
- (d) Estimating the missing data through interpolation methods.
- (e) Identification of errors in the experimental data
- (f) Finding the values of derivatives and integrals through various numerical methods.
- (g) Solving differential equations numerically when analytical methods fail.

CO2: Develop skills in **analyzing** the
- (a) methods of interpolating a given data
- (b) properties of interpolating polynomials and derive conclusions
- (c) properties of curves of best fit to the given data
- (d) algebraic and transcendental equations through their solutions
- (e) properties of functions through numerical differentiation and integration
- (f) properties of numerical solutions of differential equations

CO3: Develop skills in **designing** mathematical models for
- (a) Fitting geometrical curves to the given data
- (b) Solving differential equations
- (c) Constructing polynomials to the given data and drawing inferences.

CO4: Develop numerical skills in **solving the problems** involving
- (a) Systems of linear equations
- (b) Fitting of polynomials and different types of equations to the experimental data
- (c) Derivatives and integrals
- (d) Ordinary differential equations

CO5: Use relevant numerical **techniques** for
- (a) Diagonalising the matrices of quadratic forms
- (b) Interpolation of data and fitting interpolation polynomials
- (c) Fitting of different types of curves to experimental data
- (d) obtaining derivatives of required order for given experimental data
- (e) Expressing the functions as sum of partial fractions

DETAILED SYLLABUS:

UNIT–I : MATRICES (11 periods)
Rank of a matrix, echelon form, normal form, inverse of a matrix by elementary row operations. Solutions of linear system of equations. Eigen values, Eigen vectors and properties (without proof), Diagonalization. Quadratic form (QF), reductions to canonical form using orthogonal transformation and nature of QF.

UNIT-II NUMERICAL SOLUTIONS OF EQUATIONS AND CURVE FITTING (8 periods)
Solutions of Algebraic and Transcendental equations by bisection method, Regula-Falsi method, Newton – Raphson's method. Curve fitting by the principle of least squares, fitting of a straight line, parabola and exponential curves.

UNIT- III INTERPOLATION (8 periods)
Interpolation, difference operators and their relationships, Newton's forward and backward formulae, Lagrange's interpolation formula. Partial fractions using Lagrange's interpolation formula.

UNIT-IV NUMERICAL DIFFERENTIATION AND INTEGRATION (8 periods)
Numerical differentiation using Newton's forward and backward formulae. Numerical integration using Trapezoidal rule, Simpson's $1/3^{rd}$ rule and $3/8^{th}$ rule.

UNIT- V NUMERICAL SOLUTIONS OF ORDINARY DIFFERENTIAL EQUATIONS (10 periods)
Numerical solutions of first order Initial value problems using Taylor series method, Euler's method , modified Euler's method, Runge – Kutta method (4^{th}order only) and Milne's predictor – corrector method.

Total no. of periods: 45

TEXT BOOK:

I B. Tech. - I Semester

(16BT1BS04) MULTI - VARIABLE CALCULUS AND DIFFERENTIAL EQUATIONS

(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Intermediate /Senior secondary mathematics

COURSE DESCRIPTION: First order differential equations; higher order linear differential equations; functions of several variables; applications of integration; multiple integrals; vector calculus.

COURSE OUTCOMES: After completion of the course a successful student is able to

CO1: Acquire knowledge in
- (a) Higher order Differential equations
- (b) Maximum and minimum values for the functions of several variables
- (c) Double and triple integrals
- (d) Differentiation and integration of vector functions.
- (e) Line and surface volume
- (f) transforming integrals from three dimensional surfaces and volumes on to plane surfaces

CO2: Develop skills in analyzing the
- (a) methods for differential equation for obtaining appropriate solutions,
- (b) Properties of oscillatory electrical circuits and heat transfer in engineering systems
- (c) The variations in the properties of functions near their stationary values
- (d) Flow patterns of fluids, electrical and magnetic flux and related aspects

CO3: Develop skills in designing mathematical models for
- (a) R-C and L-R-C oscillatory electrical circuits
- (b) Heat transfer and Newton's law of cooling
- (c) Engineering concepts involving lengths of curves and areas of planes, Flux across surfaces

CO4: Develop analytical skills in solving the problems involving
- (a) Newton's law of cooling
- (b) non homogeneous linear differential equations
- (c) maximum and minimum values for the functions
- (d) lengths of curves, areas of surfaces and volumes of solids in engineering
- (e) transformation of integrals from three dimensional surfaces and volumes on to plane surfaces

CO5: Use relevant mathematical techniques for evaluating
- (a) various types of particular integrals in differential equations
- (b) stationary values for multi variable functions
- (c) multiple integrals in change of variables
- (d) integrations of vector functions.

DETAILED SYLLABUS:

UNIT-I: FIRST ORDER DIFFERENTIAL EQUATIONS (6 periods)

Linear and Bernoulli type, exact equations and reducible to exact. Orthogonal trajectories (Both Cartesian and polar forms). Newton's law of cooling.

UNIT II: HIGHER ORDER LINEAR DIFFERENTIAL EQUATIONS (9 periods)

Method for solution of linear equations- Differential operator *D*, Solution of second order linear homogeneous equations with constant coefficients, Solution of Higher order homogeneous linear equations with constant coefficients, **Solution of Non homogeneous linear equations**-Operator methods for finding particular integrals- for cases – e^{ax}, sin ax, cos ax, x^n, $e^{ax}V(x)$, xV(x). Method of Variation of parameters. Applications to oscillatory electrical circuits.

UNIT-III: FUNCTIONS OF SEVERAL VARIABLES (8 periods)

Functions of Two Variables: Limits, Continuity; **Partial Derivatives**: Total Differential and Derivatives, Jacobian, Functional dependence, Taylor's Theorem, maxima and minima of functions of two variables with and without constraints – Lagrange's method of undetermined multipliers.

UNIT-IV: APPLICATIONS OF INTEGRATION AND MULTIPLE INTEGRALS (10 periods)

Applications of integration to – lengths of curves, areas of surfaces of revolution, Double and Triple integrals – change of order of integration, change of variables in integrals. Area enclosed by plane curves, volumes of solids.

UNIT-V: VECTOR CALCULUS (12 periods)

Vector differentiation: Gradient of a scalar field and Directional Derivative, Divergence and Curl of a Vector field

Line integrals: Line integrals independent of path – work done.

Surface area and Surface Integrals: Surface Area, Surface Integrals, Flux across a surface.

Green's Theorem: Green's Theorem (without proof)-verification- applications

Gauss Divergence Theorem and Stoke's Theorem: Gauss Divergence theorem (without proof), Stokes's Theorem (without proof) –verifications and applications. **Total no. of periods: 45**

I B. Tech. - I Semester

(16BT10241) NETWORK ANALYSIS

(Common to ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	4	1	0	4

PRE-REQUISITES: --

COURSE DESCRIPTION: Basic concepts of electric circuits; Voltage - Current relationship of basic circuit elements; Mesh and Nodal analysis; Network theorems; AC circuits; Two-port network parameters; Transient analysis.

COURSE OUTCOMES: After successful completion of the course, student will be able to

CO1: Demonstrate knowledge in
- voltage and current relationships for various electric elements.
- network reduction techniques.
- concepts of AC fundamentals and single phase circuits.
- concepts of two-port networks.
- various network theorems.
- transient behavior of the circuits.

CO2: Analyze
- a circuit using conventional, mesh and nodal concepts.
- a two-port network for various network parameters.
- various types of two-port networks.
- the transient behavior of the circuits.

CO3: Design circuits to meet the required specifications

CO4: Evaluate
- electrical circuits for voltage, current and power using conventional circuit analysis methods and network theorems.
- transient response.
- two-port networks.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO ELECTRICAL CIRCUITS (12 Periods)

Concepts of charge, current, voltage, power, circuit elements, Ohm's law, Kirchoff's Laws, Network reduction techniques, voltage and current division rules, Series-Parallel circuits, Star-Delta and Delta-Star transformations, Source transformation, nodal analysis, mesh analysis- Problems.

UNIT-II: SINGLE PHASE AC CIRCUITS (12 Periods)

Introduction to AC quantities and basic definitions: Cycle, Time period, Frequency, Amplitude, determination of Average value, RMS value, Form factor and Peak factor for different alternating waveforms, phasor notation, phase and phase difference, phase relation in R, L, C circuits, series and parallel circuits, impedance and power triangle, power factor. Series and Parallel resonance, Quality factor and bandwidth-Problems.

UNIT-III: NETWORK THEOREMS (10 Periods)

Superposition, Thevenin's, Norton's, Maximum power transfer, Tellegen's, Millman's, Reciprocity, Compensation theorems for D.C. and sinusoidal excitation- Problems.

UNIT-IV: TWO-PORT NETWORKS (10 Periods)

Impedance parameters, admittance parameters, transmission (ABCD) parameters, hybrid parameters, conversion of one parameter to another, conditions for reciprocity and symmetry, interconnection of two-port networks in series, parallel and cascaded configurations - Problems.

UNIT-V: TRANSIENT ANALYSIS (10 Periods)

Transient response of R-L, R-C and R-L-C for DC excitation and Sinusoidal excitation - Solution by using Differential equation and Laplace Transforms method - Problems.

Total Periods: 54

TEXT BOOKS:

1. Sudhakar, S.P.Shyam Mohan, Circuits and Network analysis and synthesis, 5th edition, Tata McGraw Hill publishing company Ltd., New Delhi, 2007.
2. W. H. Hayt, J. E. Kemmerly, S. M. Durbin, Engineering Circuit Analysis, 6th edition, Tata McGraw Hill publishing company Ltd., New Delhi, 2008.

REFERENCE BOOKS:

I B. Tech. - I Semester
(16BT10501) PROGRAMMING IN C
(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: NIL
COURSE DESCRIPTION:
Program design; Operators and Expressions; Data Input and Output; Control Statements; Functions; Arrays; Strings; Pointers; Structures & Unions and File handling Techniques;
COURSE OUTCOMES:
After successful completion of the course, students will be able to:
CO1: Demonstrate knowledge in:
- o Elements of C Language
- o Selection and Repetition statements.
- o Arrays, Strings and Functional statements.
- o Derived data types, Files and Pointers

CO2: Analyze complex engineering problems to develop suitable solutions
CO3: Design algorithms for specified engineering problems
CO4: Use appropriate 'C' language constructs for solving engineering problems
CO5: Write programs using 'C' language to implement algorithms
DETAILED SYLLABUS:
UNIT I – INTRODUCTION TO C PROGRAMMING, OPERATORS & EXPRESSIONS (08 periods)
Introduction to C Programming: The C Character set, Writing First Program of C, Identifiers and Keywords, Data types, Constants, Variables and Arrays, Declarations, Expressions, Statements and Symbolic Constants.
Operators and Expressions: Arithmetic Operators, Unary Operators, Relational and Logical Operators, Assignment Operators, the Conditional Operators.
UNIT II – DATA INPUT AND OUTPUT & CONTROL STATEMENTS (08 periods)
Data Input and Output: Single Character Input and Output, Input Data & Output data, The gets and puts Function.
Control Statements: Branching: The if-else Statement, Looping: The while Statement, More Looping: The do-while Statement, Still More Looping: The for Statement, Nested Control Statement, The switch Statement, The break & continue Statements, The goto Statement.
UNIT III – FUNCTIONS, PROGRAM STRUCTURES & ARRAYS (11 p*eriods*)
Functions: A Brief Overview, Defining a Function, Accessing a Function, Function Prototypes, Parsing Argument to a Function, Recursion.
Program Structure: Storage Classes, Automatic Variables, External (Global) Variables, Static Variables, Multi file Programs,
Arrays: Defining an Array, Processing an Array, Processing Array to function, Multidimensional Arrays. Linear search, Binary search, Fibonacci search, Bubble sort and Insertion sort
UNIT IV – STRINGS & POINTERS (09 periods)
Strings: Defining a String, NULL Character, Initialization of Strings, Reading and Writing a String, Processing a Strings, Character Arithmetic, Searching and Sorting of Strings, Library Functions for Strings.
Pointers: Pointer Declaration, Passing Pointers to a Function, Pointers and One-dimensional Arrays, Dynamic Memory Allocation, Operations on Pointers, Pointers and Multidimensional Arrays, Arrays of Pointers.
UNIT V – STRUCTURES AND UNIONS & FILE HANDLING (09 periods)
Structures and Unions: Defining a Structure, Processing a Structure, User-Defined Data types (typedef), Structures and Pointers, Passing Structures to Function, Self –Referential Structures, Unions
File Handling: Files introduction, Opening and Closing a Data File, Reading and Writing a Data File, Processing a Data File, Unformatted Data File, Concept of Binary Files, Accessing the File Randomly.

Total Periods: *45*

TEXT BOOK:

I B. Tech. I-Semester

(16BT1BS32) ENGINEERING PHYSICS LAB

(Common to ECE, EEE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: Intermediate / senior secondary Physics.

COURSE DESCRIPTION:

Characteristics of p-n junction diode, Photodiode, LED, and semiconductor laser diode. Experimental determination of carrier concentration and energy gap of a semiconductor material, wave length of a laser source, size of fine particle, numerical aperture and acceptance angle of optical fiber. Determination of frequency of electrically vibrating tuning fork and A.C source using A.C sonometer, magnetic field along axial line of a current carrying coil and rigidity modulus of material of a wire using torsional pendulum.

COURSE OUTCOMES:

After completion of the course, a successful student will be able to:

CO1: Acquire basic knowledge about semiconductor materials, magnetic materials and lasers.

CO2: Acquire analytical skills in the estimation of carrier concentration of semiconductor materials and characterization of p-n junction.

CO3: Develop skills in designing electronic circuits using semiconductor components.

CO4: Acquire skills to use instrumental techniques in A.C sonometer and Melde's experiment.

CO5: Apply diffraction techniques for determination of size of tiny particles and wave length of lasers.

ENGINEERING PHYSICS LAB

Conduct a minimum of any **Ten** of the following experiments.

1. Determination of wavelength of a laser source using Diffraction Grating.
2. Determination of particle size by using a laser source.
3. Determination of Numerical aperture and acceptance angle of an optical fiber.
4. Melde's experiment - transverse & longitudinal modes.
5. Magnetic field along the axis of a current carrying coil- Stewart and Gee's method.
6. Calculation of A.C frequency using sonometer.
7. I-V Characteristics of a p-n Junction diode.
8. Energy gap of a material of a p-n Junction.
9. Characteristics of LED source.
10. Characteristics of Photo diode.
11. Hall Effect.
12. Determination of rigidity modulus of the material of the wire using torsional pendulum.

I B. Tech. - I Semester

(16BT10232) ELECTRICAL AND ELECTRONICS WORKSHOP PRACTICE

(Common to ECE, EEE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: NIL

COURSE DESCRIPTION: Identification and specifications of various Electric and Electronic devices; analysis of various series, parallel and series-parallel electrical circuits; develop various electrical circuits for domestic and industrial applications.

COURSE OUTCOMES: After successful completion of the course, student will be able to

CO1: Demonstrate knowledge on various Electrical and Electronic Devices.
CO2: Analyze various series and parallel electrical circuits.
CO3: Design and develop various electrical circuits for domestic and industrial applications.
CO4: Function effectively as individual and as a member in a team.
CO5: Communicate effectively both oral and written forms

DETAILED SYLLABUS:

PART A: (Demonstration)

1. Identification and Specifications of R, L, C Components (Colour Codes), Potentiometers, Switches (SPST, DPST and DPI), Gang Condensers, Relays, Bread Boards, PCBs, Fuses, MCBs, Earthing and Electrical Wiring accessories.
2. Identification and Specifications of Active Devices: Diodes, BJTs, Low-power JFETs, MOSFETs, Power Transistors, LEDs, LCDs, Optoelectronic Devices, SCR, UJT, DIACs, TRIACs, Linear and Digital ICs.
3. Study the operation of
   - Multimeter (Analog and Digital)
   - Function Generator
   - Regulated Power Supplies
   - CRO.

PART-B:

1. Measurement of Electrical Quantities (AC & DC) using: Voltmeter, Ammeter and Wattmeter.
2. Measurement of Resistivity of a conducting wire.
3. Circuit with one lamp controlled by one switch and provision of 2-pin or 3-pin socket PVC surface conduit system.
4. Circuit with two lamps controlled by two switches with PVC surface conduit system.
5. Circuit for Stair case wiring and Godown wiring.
6. Circuit connection for a Fluorescent tube
7. Solder simple electronic circuits.
8. B-H curve of a Magnetic material
9. I-V and P-V characteristics of a Solar panel
10. Design and Fabrication of a single-phase transformer
11. PCB preparation and design of a circuit on a PCB

I B. Tech. - I Semester

(16BT10251) NETWORK ANALYSIS LAB

(Common to ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: NIL

COURSE DESCRIPTION: Verification of KVL, KCL and network theorems; analysis of AC and DC circuits; determination of resonant frequency in series and parallel RLC circuits; evaluation of transients

COURSE OUTCOMES: After successful completion of the course, student will be able to

CO1: Demonstrate knowledge in

- Identification of various circuit elements and their values.
- Concepts of electric circuits and two-port networks.

CO2: Analyze and relate physical observations and measurements in electric circuits to theoretical perception.

CO3: Design circuit parameters to meet the required specifications.

CO4: Demonstrate skills in evaluating and interpret

- Various circuit parameters using conventional and network theorems
- Network parameters

CO5: Function effectively as individual and as a member in a team.

CO6: Communicate effectively in oral format and prepare laboratory reports.

LIST OF EXPERIMENTS:

Any TEN experiments are to be conducted

1. Verification of KVL and KCL.
2. Mesh and Nodal analysis.
3. Series and Parallel resonance.
4. Phasor analysis of RL, RC and RLC circuits.
5. Measurement of active and reactive power in a single phase circuit.
6. Steady state response of series RL and RC circuits.
7. Two-port network parameters.
8. Verification of Superposition and Reciprocity theorems.
9. Verification of Thevenin's and Norton's theorem.
10. Verification of Maximum Power transfer theorem for DC and AC excitations.
11. Verification of Millmann's and compensation theorem.
12. Transient response of RL, RC and RLC circuits.

I B. Tech. - I Semester
(16BT10531) PROGRAMMING IN C LAB
(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES:-
A course on "Programming in C"
COURSE DESCRIPTION:
Hands on practice in developing and executing simple programs using C Programming constructs– Conditional statements, Loops, Arrays, Strings, Functions, Structures, Pointers and Functions.
COURSE OUTCOMES:
After successful completion of the course, students will be able to:
CO1: Demonstrate practical knowledge of using C language constructs:
- Selection and Repetition statements.
- Arrays, Strings and Functional statements.
- Derived data types, Files and Pointers

CO2: Analyze problems to develop suitable algorithmic solutions
CO3: Design Solutions for specified engineering problems
CO4: Use appropriate 'C' language constructs for solving engineering problems
CO5: Implement and execute programs using 'C' language
CO6: Document programs and communicate effectively while conducting Professional transactions.

List of Exercises:

1. a. Let a and b are two integer variables whose values are 10 and 13 respectively. Write a program to evaluate the following arithmetic expressions.
i) a + b ii) a–b iii) a * b iv) a/b v) a % b
b. Write a program to evaluate the following algebraic expressions after reading necessary values from keyword.
i) $(ax + b)/(ax - b)$ ii) $2.5 \log x + \cos 32^0 + | x^2 + y^2 |$
iii) $x^5 + 10 x^4 + 8$ and $x^3 + 4 x + 2$ iv) ae^{kt}
2. a. Mr. Gupta deposited Rs.1000 in a bank. The bank gives simple interest at the rate of 15% per annum. Write a program to determine the amount in Mr. Gupta's account at the end of 5 years. (Use the formula I = P T R / 100)
b. A cashier has currency notes of denominations Rs.10, Rs. 50 and Rs. 100. If the amount to be withdrawn is input in hundreds, find the total number of notes of each denomination the cashier will have to give to the withdrawer.
c. In a town, the percentage of men is 52. The percentage of total literacy is 48.If total percentage of literate men is 35 of the total population; write a program to find the total number of illiterate men and women if the population of the town is 8000.
3. a. Write a program that prints the given 3 integers in ascending order using if - else.
b. Write a program to calculate commission for the input value of sales amount.
Commission is calculated as per the following rules:
i) Commission is NIL for sales amount Rs. 5000.
ii) Commission is 2% for sales when sales amount is >Rs. 5000 and <= Rs. 10000.
iii) Commission is 5% for sales amount >Rs. 10000.
c. A character is entered through keyboard. Write a program to determine whether the character entered is a capital letter, a small case letter, a digit or a special symbol. The following table shows the range of ASCII values for various characters.

Characters	**ASCII values**
A - Z	65 - 90
a - z	97- 122
0 - 9	48 - 57
Special Symbols	0 - 47, 58 - 64, 91- 96, 123 - 127

4. a. If cost price and selling price of an item is input through the keyboard, write program to determine whether the seller has made profit or incurred loss. Also determine how much profit or loss he incurred in percentage.
b. An insurance company calculates premium as follows:
i. If a person's health is excellent and the person is between 25 and 35 years of age and lives in a city and is a male then premium is Rs.4 per thousand and the policy amount cannot exceed Rs.2 lakhs.
ii. If a person satisfies all the above conditions and is female then the premium is Rs.3 per thousand and the policy amount cannot exceed Rs.1 lakh.
iii. If a person's health is poor and the person is between 25 and 35 years of age and lives in a village and is a male then premium is Rs.6 per thousand and the policy cannot exceed Rs. 10000.
iv. In all other cases the person is not insured.

Write a program to determine whether the person should be insured or not, his/her premium rate and maximum amount for which he/she can be insured.

5. a. Write a program, which takes two integer operands and one operator as input from the user, performs the operation and then prints the result. (Consider the operators +,-,*, /, %. Use switch statement)
   b. Write a program to find the grace marks for a student using switch. The user should enter the class obtained by the student and the number of subjects he has failed in. Use the following rules:
   i. If the student gets first class and the number of subjects failed is >3, then no grace marks are awarded. If the number of subjects failed is less than or equal to '3' then the grace is 5 marks per subject.
   ii. If the student gets second class and the number of subjects failed in is >2, then no grace marks are awarded. If the number of subjects failed in less than or equal to '3' then the grace is 4 marks per subject.
   iii. If the student gets third class and the number of subjects failed in is >1, then no grace marks are awarded. If the number of subjects failed in is equal to '1' then the grace is 5 marks per subject.
6. a. Write a program to find the sum of individual digits of a positive integer.
   b. A Fibonacci sequence is defined as follows:
   The first and second terms in the sequence are 0 and 1. Subsequent terms are found by adding the preceding two terms in the sequence. Write a program to generate the first N terms of the sequence. Write a program to generate all the prime numbers between 1 and N, where N is a value supplied by the user.
7. a. Write a program to find the largest and smallest number in a given list of integers.
   b. Write a program to perform the following:
   i. Addition of two matrices.
   ii. Multiplication of two matrices.
8. a. Write a program that uses functions to perform the following operations:
   i. To insert a sub-string in main string at a specified position.
   ii. To delete N characters from a given string from a specified position.
   b. Write a program to determine whether the given string is palindrome or not.
   c. Write a program to display the position or index in the main string S where the sub string T begins. Display -1 if S does not contain T.
   d. Write a program to count the number of lines, words and characters in a given text.
9. a. Write a program to read list of student names and perform the following operations using functions.
   i. to print list of names
   ii. to sort them in ascending order
   iii. to print the list after sorting.
   b. Write a menu driven program to read list of student names and perform the following operations using array of character pointers.
   i. to insert a student name
   ii. to delete a name
   iii. to print the name
10. Write a program that uses functions to perform the following operations:
   i. Reading a complex number
   ii. Writing a complex number
   iii. Addition of two complex numbers
   iv. Multiplication of two complex numbers
   (**Note:** Represent complex number using a structure.)
11. a. Write a program to accept the elements of the structure as:
   Employee-name,Basic pay Display the same structure along with the DA, CCA and Gross salary for 5 employees.
   Note: DA=51% of Basic pay, CCA=Rs.100.consolidated.
   b. Define a structure to store employee's data with the following specifications:
   Employee-Number, Employee-Name, Basic pay, Date of Joining
   i. Write a function to store 10 employee details.
   ii. Write a function to implement the following rules while revising the basic pay.
   If Basic pay<=Rs.5000 then increase it by 15%.
   If Basic pay> Rs.5000 and <=Rs.25000 then it increase by 10%.
   If Basic pay>Rs.25000 then there is no change in basic pay.
   Write a function to print the details of employees who have completed 20 years of service from the date of joining.
12. a. Write a program which copies one 'text file' to another 'text file'.
   b.Write a program to reverse the first N characters of a given text file.

Note: The file name and N are specified through command line.

13. Write a program to print the output by giving the Customer_ID as an input.

I B. Tech. - II Semester

(16BT1HS01) **Technical English**

(Common to ECE, EEE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: English at Intermediate level

COURSE DESCRIPTION: Introduction to Communication; Active Listening; Effective Speaking; Reading; and Writing.

COURSE OUTCOMES:

On successful completion of this course, the students will be able to:

CO1: Demonstrate knowledge in

- Process of communication
- Modes of listening
- Paralinguistic features
- Skimming and Scanning
- Elements of style in writing

CO2: Analyze the possibilities and limitations of language for understanding

- Barriers to Communication
- Barriers to Effective Listening
- Barriers to Speaking
- Formal and metaphorical language

CO3: Design and develop functional skills for professional practice.

CO4: Apply writing skills in preparing and presenting documents

CO5: Function effectively as an individual and as a member in diverse teams.

CO6: Communicate effectively with the engineering community and society in formal and informal situations.

DETAILED SYLLABUS:

UNIT I - INTRODUCTION TO COMMUNICATION: (9 periods)

Introduction -Language as a Tool of Communication - Communicative Skills (Listening, Speaking, Reading and Writing) - Effective Communication - Modes of Communication - Barriers to Communication (classification).

UNIT II - ACTIVE LISTENING: (9 periods)

Introduction - Reasons for poor Listening - Traits of a Good Listener - Listening Modes - Types of Listening - Barriers to Effective Listening - Listening for General Content and Specific Information.

UNIT III - EFFECTIVE SPEAKING: (9 periods)

Introduction - Achieving Confidence, Clarity and Fluency - Paralinguistic Features - Barriers to Speaking - Types of Speaking - Persuasive Speaking.

UNIT IV - READING: (9 periods)

Introduction and Reading Rates - Reading and Interpretation - Intensive and Extensive Reading - Critical Reading - Reading for Different Purposes - SQ3R Reading Technique -Study Skills.

UNIT V - WRITING: (9 periods)

Introduction - Language - Elements of Style - Techniques for Good Technical Writing - Referencing and Styling - Right Words and Phrases - Sentences. **Total Periods: 45**

TEXT BOOKS:

I B. Tech. - II Semester

(16BT1BS01): ENGINEERING CHEMISTRY

(Common to ECE, EEE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE REQUISITE: Intermediate/Senior Secondary Chemistry

COURSE DESCRIPTION: Water technology, Chemistry of Engineering materials, Nanochemistry, Green Chemistry, Electro chemical cells, Sensors, Corrosion and Lubricants.

COURSE OUTCOMES:

After completion of the course, a successful student is able to:

CO1: Acquire basic knowledge in water technology, engineering plastics, conducting polymers, composites, Electro chemical cells, Nano Chemistry, principles of Green Chemistry, corrosion phenomenon and lubricants.

CO2: Develop analytical skills in:
- a. Determination of hardness of water.
- b. Determination of viscosity, flame and fire points, cloud and pour points.

CO3: Develop designing skills in:
- a. Synthesis of engineering plastics.
- b. Chemical methods for the synthesis of Nano materials.

CO4: Develop skills for providing solutions through:
- a. Mitigation of hardness of water.
- b. Newer Nanomaterials and engineering plastics for specific applications

CO5: Acquire awareness to practice engineering in compliance to modern techniques such as:
- a. Nalgonda technique for defluoridation of water
- b. Electroplating technique for control of corrosion.

CO6: Acquire awareness to societal issues on:
- a. Quality of water.
- b. Bio-diesel
- c. Chemical materials utility and their impact.

DETAILED SYLLABUS:

UNIT–I: WATER TECHNOLOGY (9 periods)

Introduction: Types of water, impurities in water and their consequences, types of hardness of water, units of hardness of water, disadvantages of hardness of water, estimation of hardness of water by EDTA method, Boiler troubles: Scales and Sludges, Caustic embrittlement, Boiler corrosion and Priming and Foaming.

Softening of water: Zeolite process and Ion exchange process, advantages and disadvantages. Desalination of brackish water by Reverse Osmosis, Numerical problems on estimation of hardness of water.

Fluorides in water: Effects on human health, defluoridation method-Nalgonda method; comparison of merits and demerits of various defluoridation methods (Nalgonda, Bone Charcoal, Activated Alumina, Contact precipitation, Brick, Reverse osmosis).

UNIT – II: CHEMISTRY OF ENGINEERING MATERIALS (9 periods)

Engineering Plastics: Definition, general properties, synthesis, properties and applications of PC, PTFE, and PMMA.

Conducting polymers: Definition, types of conducting polymers: Intrinsic and extrinsic conducting polymers with examples, engineering applications of conducting polymers.

Biodegradable polymers: Definition, properties, classification, mechanism of degradation of biodegradable polymers and their applications.

Composites – Introduction, types of composites: fiber reinforced particulate and layered composites with examples, advantages of composites and applications.

UNIT– III: NANOCHEMISTRY AND GREEN CHEMISTRY (9 periods)

Nanochemistry: Introduction, classification, properties and applications of Nano materials (nano particles, nano tubes, nano wires, nano composites, dendrimers); synthesis of Nano materials – Sol-gel process.
Green Chemistry: Introduction, principles of green chemistry, Tools of Green Chemistry with Examples, Applications of Green Chemistry in science and technology.
Biodiesel: Introduction, Synthesis (Trans esterification method), advantages, disadvantages and applications.

UNIT–IV: ELECTROCHEMICAL CELLS AND SENSORS (9 periods)

Electrochemical cell: Introduction, EMF of an electrochemical cell.
Batteries: Introduction, types of Batteries: primary and secondary batteries with examples Ni-Cd batteries, Lithium-ion batteries, Lithium- Polymer batteries, Applications of batteries.
Fuel Cells: Definition, examples: $H_2 – O_2$ Fuel cell, solid oxide fuel cell, Bio-fuel cell and applications of fuel cells.
Sensors - Introduction, Types of Sensors, electrochemical sensor: construction and working principle of potentiometric sensor, and applications of electrochemical sensors.

UNIT–V: CORROSION AND LUBRICANTS (9 periods)

Corrosion: Introduction, Definition, types of corrosion (dry and wet corrosion), galvanic corrosion, concentration cell corrosion, Factors influencing corrosion, Corrosion control: cathodic protection; sacrificial anodic protection and impressed current cathodic protection; protective coatings: Galvanizing and Electroplating (Nickel).
Lubricants: Definition, functions of lubricants, mechanism of lubrication, classification of lubricants, properties of lubricants – viscosity, flash and fire points, cloud and pour points, Aniline points, neutralization number and mechanical strength.

Total periods: 45 periods

TEXT BOOKS:

I B. Tech. - II Semester
(16BT2BS01) TRANSFORMATION TECHNIQUES AND PARTIAL DIFFERENTIAL EQUATIONS

(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE REQUISITE: Intermediate /Senior secondary mathematics

COURSE DESCRIPTION: Fourier series; Fourier integrals and transforms; Laplace transforms; z – transforms; partial differential equations.

COURSE OUTCOMES:

After completion of the course a successful student is able to

CO1: Acquire basic knowledge in
- (a) Fourier series and Fourier transforms
- (b) Fourier integrals
- (c) Laplace transforms and their applications
- (d) z- transforms and their applications
- (e) solving partial differential equations

CO2: Develop skills in analyzing the
- (a) Properties of Fourier series for a given function
- (b) Partial differential equations through different evaluation methods
- (c) Difference equations through z – transforms
- (d) Engineering systems and processes involving wave forms and heat transfer

CO3: Develop skills in designing mathematical models for
- (a) Problems involving heat transfer and wave forms
- (b) Engineering concepts involving, Fourier transforms, Fourier integrals, Laplace transforms, z-transforms and difference equations

CO4: Develop analytical skills in solving the problems involving
- (a) Fourier series and Fourier transforms
- (b) Laplace transforms
- (c) Z-transforms and difference equations
- (d) Heat transfer and wave motion

CO5: Use relevant transformation techniques for
- (a) Obtaining Fourier transforms for different types of functions
- (b) Laplace transforms
- (c) Z- transforms
- (d) Partial differential equations

DETAILED SYLLABUS

UNIT- I : FOURIER SERIES (7 periods)

Fourier series: Determination of Fourier coefficients, convergence of Fourier series (Dirichlet's conditions), Fourier series of even and odd functions, Half-range Fourier sine and cosine expansions.

UNIT- II: FOURIER INTEGRALS AND FOURIER TRANSFORMS (8 periods)

Fourier integral theorem (statement only), Fourier sine and cosine integrals, Fourier transform, Fourier sine and cosine transforms –properties, Inverse transform and finite Fourier transforms.

UNIT-III: LAPLACE TRANSFORMS (12 periods)

Laplace transforms of standard functions. Properties of Laplace transforms. First and second shifting Theorems. Laplace transforms of derivatives and integrals. Inverse transforms. Convolution theorem (without proof), inverse Laplace transforms by convolution theorem. Laplace transform of periodic functions, Applications of Laplace transforms to ordinary differential equations of first and second order with constant coefficients.

UNIT-IV: Z- TRANSFORMS (9 periods)

Z – transforms, inverse Z– transforms, damping rule, shifting rule, initial and final value theorems. Convolution theorem (without proof), solution of difference equations by Z– transforms.

UNIT – V: PARTIAL DIFFERENTIAL EQUATIONS (9 periods)

Formation of Partial differential equations – Solutions of first order linear equations by method of grouping. First and second order equations by method of separation of variables – Solutions of one dimensional Wave equation, Heat equation.

Total no. of periods: 45

TEXT BOOKS:

I B. Tech. - II Semester

(16BT20401) **ELECTRONIC DEVICES AND CIRCUITS**

(Common to ECE, EEE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: A Course on Engineering Physics.

COURSE DESCRIPTION:

Characteristics of general and special purpose electronic devices; Rectifiers; filters and regulators; Biasing and small signal analysis of BJT and FET.

COURSE OUTCOMES:

On successful completion of this course the students will be able to:

CO1: Demonstrate knowledge in
- p-n junction diode and its characteristics
- Zener diode and its characteristics
- Rectifiers, Filters and Regulators
- Characteristics of BJT, FET, MOSFET and special purpose electronic devices.

CO2: Analyze numerical and analytical problems in
- Rectifiers using Filters
- Regulated Power Supplies
- Transistor biasing circuits and stabilization
- Transistor amplifiers
- FET biasing circuits and amplifiers

CO3: Design electronic circuits such as
- Rectifiers with and without filters
- Voltage regulators
- BJT and FET biasing circuits
- BJT and FET amplifiers

CO4: Solve engineering problems and arrive at solutions pertaining to electronic circuits.

CO5*:* Select appropriate technique for transistor modeling.

DETAILED SYLLABUS:

UNIT-I: P-N JUNCTION DIODE, RECTIFIERS AND REGULATORS (11 Periods)

P-N Junction Diode:

p-n Junction as a diode, *p-n* Junction diode equation, Volt-Ampere (V-I) characteristics, temperature dependence of *p-n* characteristics, diode resistance-static and dynamic resistances, transition and diffusion capacitances, break down mechanisms in semiconductor diodes, Zener diode characteristics.

Rectifiers and Regulators:

Half-Wave rectifier and Full-Wave rectifiers (Qualitative and quantitative analysis), Harmonic components in a rectifier circuit, Inductor filter, Capacitor filter, L - section filter, ð- section filter, comparison of various filter circuits in terms of ripple factors. Simple circuit of a regulator using Zener diode. Problems on rectifier circuits.

UNIT-II- *BIPOLAR JUNCTION TRANSISTOR, BIASING AND STABILIZATION*: (10 Periods)

Transistor construction, BJT Operation, Transistor currents and their relations, Input and Output Characteristics of a Transistor in Common Emitter, Common Base and Common Collector Configurations, BJT specifications, Transistor Operating Point, DC and AC Load Lines, Importance of Biasing, Fixed Bias, Emitter Feedback Bias, Collector to Base Feedback Bias, Voltage Divider Bias, Bias Stability, Transistor as an amplifier, Thermal Runaway, Problems on biasing circuits.

UNIT-III- *SMALL SIGNAL ANALYSIS OF BJT AMPLIFIERS*: (08 Periods)

BJT Modeling, Hybrid Modeling, Determination of h-Parameters from Transistor Characteristics, Measurement of h-Parameters, Miller's Theorem, Analysis of CE, CB and CC configurations using simplified Hybrid Model, Comparison of CB, CE and CC configurations.

UNIT-IV- *FIELD EFFECT TRANSISTORS*: (10 Periods)

Construction, Principle of operation and characteristics of JFET and MOSFET (Enhancement & Depletion), Biasing of FET, Small Signal Model of JFET, Common Source and Common Drain Amplifiers using JFET, Generalized FET Amplifier, FET as Voltage Variable Resistor, Comparison of BJT and FET.

UNIT-V- *SPECIAL PURPOSE ELECTRONIC DEVICES*: (06 Periods)

Principle of Operation and Characteristics of Tunnel Diode, Uni-Junction Transistor (UJT), Varactor Diode, Silicon Control Rectifier (SCR). Principle of operation of Schottky Barrier Diode.

Total Periods: *45*

TEXT BOOK:

I B. Tech. - II Semester

(16BT20541) **Foundations of Data Structures**

(Common to ECE, EEE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES:

A course on "Programming in C"

COURSE DESCRIPTION:

Concepts of sorting: sorting by exchange, sorting by distribution, sorting by merging and data structures: stacks, queues, linked lists, trees, graphs, and hash table.

COURSE OUTCOMES:

On successful completion of this course the students will be able to:

CO1: Gain knowledge in Sorting techniques, Linear and Non-linear Data Structures.

CO2: Analyze the performance of sorting techniques and their relationship to Data Structures.

CO3: Design appropriate hashing function for a given application and develop programs to implement Linear and Non-Linear data structures

CO4: Apply appropriate data structure to provide solutions for real time problems using C Language.

DETAILED SYLLABUS:

UNIT I – SORTING (9 periods)

SORTING - Sorting by Exchange-Shell Sort, Quick sort. Sorting By Distribution-Counting Sort, Bucket Sort, Radix Sort. Sorting By Merging-Merge Sort.

UNIT II– STACKS AND QUEUES (9 periods)

STACKS -Introduction, Stack Operations, Applications.

QUEUES - Introduction, Operations on Queues, Circular Queues and Applications.

UNIT III –LINKED LISTS (9 periods)

LINKED LISTS –Introduction, Single Linked List, Circular Linked List, Doubly Linked List, Multiply Linked List and Applications.

LINKED STACKS AND LINKED QUEUES - Introduction, Operations on Linked Stack and Linked Queues, Dynamic Memory Management and Linked Stacks.

UNIT IV – TREES AND BINARY TREES (9 periods)

TREES– Introduction, Definition and Basic Terminologies, Representation of Trees.

BINARY TREES – Basic Terminologies and Types, Representation of Binary Trees, Binary Tree Traversals, Binary Search Trees: Definition and Operations and Applications.

UNIT V – Graphs and Hashing (9 periods)

Graphs – Introduction, Definitions and Basic Terminologies, Representation of Graphs, Graph Traversals, Applications.

Hashing – Introduction, Hash Table Structure, Hash Functions, Linear Open Addressing, Chaining and Applications.

Total Periods: *45*

TEXT BOOK:

1. G.A.V. Pai, *"Data Structures and Algorithms",* Tata McGraw Hill, Second Edition, 2009.

REFERENCE BOOK:

(16BT1HS31) **ENGLISH LANGUAGE LAB**

(Common to ECE, EEE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES: English at intermediate or equivalent level.

COURSE DESCRIPTION: Phonetics; Vocabulary Building; Functional Grammar; Just a Minute; Elocution/Impromptu; Giving Directions/Conversation Starters; Role Play; Public Speaking; Describing People, Places, Objects and Events; Reading Comprehension; Listening Comprehension; Information Transfer.

COURSE OUTCOMES:

On successful completion of this course the students will be able to:

CO1: Demonstrate knowledge in
- Phonetics
- Information Transfer

CO2: Analyze the situations in professional context by using
- Vocabulary
- Grammar

CO3: Design and develop functional skills for professional practice.

CO4: Apply the techniques of Listening and Reading skills to comprehend Listening and Reading comprehension.

CO5: Function effectively as an individual and as a member in diverse teams through
- Extempore talk and
- Role Play

CO6: Communicate effectively in public speaking in formal and informal situations.

CO7: Recognize the need to engage in lifelong learning to upgrade competence of knowledge and communication.

LIST OF EXERCISES:

1. Phonetics
2. Vocabulary Building
3. Functional Grammar
4. Just a Minute
5. Elocution/Impromptu
6. Giving Directions/Conversation Starters
7. Role Play
8. Public Speaking
9. Describing People, Places, Objects and Events.
10. Reading Comprehension
11. Listening Comprehension
12. Information Transfer

SUGGESTED SOFTWARE:

1. ETNL Language Lab Software Version 4.0
2. GEMS - Globarena E- Mentoring System.
3. Speech Solutions.
4. English Pronunciation Dictionary by Daniel Jones.
5. Learn to Speak English 8.1, The Learning Company - 4 CDs.
6. Mastering English: Grammar, Punctuation and Composition.
7. English in Mind, Herbert Puchta and Jeff Stranks with Meredith Levy, Cambridge.
8. Dorling Kindersley Series - Grammar.
9. Language in Use 1, 2 & 3.
10. Cambridge Advanced Learner's Dictionary - 3rd Edition.
11. Centronix - Phonetics.
12. Let's Talk English, Regional Institute of English South India.
13. The Ultimate English Tutor.

I B. Tech. - II Semester
(16BT1BS31): **ENGINEERING CHEMISTRY LAB**

(Common to ECE, EEE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE REQUISITE: Intermediate/Senior Secondary Chemistry

COURSE DESCRIPTION: Estimation of hardness, alkalinity, dissolved oxygen of water samples and estimation of Iron by volumetric methods, determination of effect of P^H on rate of corrosion, measurement of viscosity of lubricants; Instrumental methods like potentiometer, conductivity meter, P^H meter and colorimeter; synthesis of Polymers and Nano materials.

COURSE OUTCOMES:

After completion of the course, a successful student is able to:

CO1: Acquire basic Knowledge about the volumetric analysis and synthesis of materials used for engineering applications.

CO2: Acquire analytical skills in the estimation of hardness of water, alkalinity of water, dissolved oxygen in water and estimation of Iron through wet laboratory methods.

CO3: Develop designing skills for the synthesis of polymers and Nanomaterials.

CO4: Acquire skills to use instrumental techniques for the determination of Electrical conductance of electrolytes, EMF of a cell, PH of a solution, determination of viscosity of lubricants and estimation of iron in cement.

CO5: Provide solutions for environmental issues through determination of quality of water.

List of Experiments:

A minimum of any **Ten** experiments are to be conducted among the following:.

1. Estimation of Hardness of water by EDTA method.
2. Estimation of alkalinity of Water.
3. Estimation of Dissolved Oxygen in water.
4. Estimation of Ferrous Iron by Dichrometry.
5. Preparation of Novalac Resin.
6. Synthesis of Nano metal-oxide using sol– gel process.
7. Conductometric titration of strong acid Vs strong base
8. Estimation of Ferrous ion by Potentiometry.
9. Determination of amount of corrosion of metals in different medium
10. Measurement of viscosity of lubricants by Ostwald viscometer.
11. Determination of P^H of a given solution by P^H metry.
12. Estimation of Ferric iron in cement by Colorimetric method.

Total Time Slots: 12

I B. Tech. - II Semester

(16BT10331) COMPUTER AIDED ENGINEERING DRAWING

(Common to ECE, EEE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	1	6	3

PRE-REQUISITES: *None*

COURSE DESCRIPTION:

Engineering drawing conventions; importance of engineering drawing; fundamental concepts of sketching; computed aided drafting and different types of projections of geometric entities (both 2D and 3D) through computer aided drafting packages.

COURSE OUTCOMES:

After completion of the course, a successful student is able to:

- CO1: Understand, write and read the language of engineering drawing in industry through International System of Standards.
- CO2: Develop the imagination and mental visualization ability for interpreting the geometrical details of engineering objects.
- CO3: Produce different views and projection in drawing.
- CO4: Use modern CAD software for design and drafting of drawings.
- CO5: Create multi-view drawings suitable for presentation to Engineering community.
- CO6: Introduce and communicate universally accepted conventions and symbols for their usage in technical drawing.

DETAILED SYLLABUS:

UNIT : I - BASICS OF ENGINEERING DRAWING PRACTICE, GEOMETRICAL CONSTRUCTIONS, CONICS AND SPECIAL CURVES (18 periods)

Introduction, drawing instruments and its uses, sheet layout, BIS conventions, lines, lettering and dimensioning practices. Geometrical constructions: Construction of regular polygons: Pentagon, Hexagon, Heptagon and Octagon. Conic sections**:** Introduction, construction of ellipse: rectangular method, eccentricity method. Construction of parabola: rectangular method, eccentricity method. Construction of hyperbola: eccentricity method. Special curves***:*** cycloid, involute.

UNIT: II – INTRODUCTION TO COMPUTER AIDED SKETCHING (18 periods)

Computer screen, layout of the software, creation of 2D/3D environment, selection of drawing size and scale, Standard tool bar/menus, Coordinate system, description of most commonly used toolbars, navigational tools: commands and creation of lines, Co-ordinate points, axes, poly-lines, square, rectangle, polygons, splines, circles, ellipse, text, move, copy, off-set, mirror, rotate, trim, extend, break, chamfer, fillet, curves, constraints viz. tangency, parallelism, inclination and perpendicularity.

UNIT: III – PROJECTION OF POINTS, STRAIGHT LINES AND PLANES (21 periods)

Introduction, method of projection, planes of projection, reference line and notations. Projection of points: Points in all the four quadrants. Projection of straight lines**:** lines inclined to HP / VP plane, inclined to both HP and VP planes (straight lines are assumed to be in first quadrant only)**.** Projection of planes**:** projection of triangle, square, rectangle, rhombus, pentagon, hexagon and circular plane for the condition inclined to HP / VP by change of position method.

UNIT IV –PROJECTION OF SOLIDS AND SECTION OF SOLIDS (21 Periods)

Projections of Solids: Introduction, projection of solids: prisms, pyramids, cylinders and cones with axis perpendicular to VP/HP and axis inclined to VP/HP only. Sections of solids**:** Introduction, Cutting plane, sectional views of right regular solids resting with base on HP: prisms, pyramids, cylinder and cone and true shapes of the sections.

UNIT V –ORTHOGRAPHIC AND ISOMETRIC PROJECTIONS AND DEVELOPMENT OF SURFACES (22 periods)

Orthographic projection: simple exercises. Isometric projection: Simple exercises.

Development of surfaces: prisms, pyramids, cylinders, cone and miscellaneous surfaces

Total Periods: *100*

Note: *Student shall practice Unit-I using sketch book only and remaining units using sketch book first and later CAD package.*

I B. Tech. - II Semester

(16BT20551) FOUNDATIONS OF DATA STRUCTURES LAB

(Common to ECE, EEE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PRE-REQUISITES:

A course on "Foundations of Data Structures"

COURSE DESCRIPTION:

Hands on programming to implement data structures - Linked lists, Stacks, Queues, Trees, Search trees, Sorting, and Hashing in C Language.

COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO1: Gain practical knowledge on stacks, queues, trees, graphs and Hashing Techniques

CO2: Identify suitable data structure to solve engineering problems.

CO3: Design solutions for complex engineering problems using linear and non-linear data structures.

CO4: Develop algorithms leading to multiple solutions byconducting investigations of complex problems.

CO5: Apply 'C' language as a tool for implementing linear and non linear data structures

CO6: Communicate effectively by writing Programs and document practical work.

LIST OF PRACTICAL EXERCISES:

1. Implement the following sorting techniques
   (a) Quick Sort (b) Radix Sort (c) Merge Sort
2. Implement the following data structures using arrays
   (a)Stack (b) Queue (c) Circular Queue
3. Implement the following operations on a single linked list.
   (a) Creation (b) Insertion (c) Deletion (d) Display
4. Implement the following operations on a double linked list.
   (a) Creation (b) Insertion (c) Deletion (d) Display
5. Implement the following operations on a circular linked list.
   (a) Creation (b) Insertion (c) Deletion (d) Display
6. Implement the following data structures using linked list.
   (a) Stack (b) Queue (c) Circular Queue
7. Implement the following tree traversals on a binary tree
   (a) Preorder (b) Inorder (c) Postorder
8. Implement the following operation on binary search tree
   (a) Creation (b) Insertion (c) Deletion (d) Inorder
9. Implement the following graph traversal techniques
   (a) Breadth First traversal (b) Depth First Traversal
10. Implement the following Hashing Techniques
    (a) Separate Chaining (b) Open addressing methods

II B.Tech. - I semester
(16BT3HS01) ENVIRONMENTAL STUDIES
(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	-	-	3

PREREQUISITES: ACourse on Engineering Chemistry
COURSE DESCRIPTION: Multidisciplinary nature of environment; Natural resources; Ecosystems; Biodiversity; Environment pollution and control; Social issues and environment; Human population and environment; Field studies.
COURSE OUTCOMES: On successful completion of the course, students will be able to:
CO1. Acquire knowledge on nature of environment, natural resources, ecosystems, biodiversity, environmental pollution and control, social issues and human population.
CO2. Analyze natural resources, ecosystems, biodiversity, environmental pollution and control, social issues and human population.
CO3. Develop strategies for environmental pollution control and natural resource management.
CO4. Solve environmental problems through proper analysis and interpretation of environmental data.
CO5. Choose appropriate techniques in environmental pollution control and natural resource management.
CO6. Understand the impact of social issues and population on environment.
CO7. Provide solutions to individuals, industries and government for environmental sustainable development.
CO8. Follow environmental protection laws for sustainable development.
CO9. Communicate effectively on environmental issues in the form reports.
DETAILED SYLLABUS:
UNIT - I: MULTIDISCIPLINARY NATURE OF ENVIRONMENT AND NATURAL RESOURCES (11 Periods)
Multidisciplinary Nature of Environment: Multidisciplinary nature of environment, Segments of environment - Lithosphere, Hydrosphere, Atmosphere, Biosphere; Need for public awareness.
Natural Resources: Renewable and non-renewable resources and associated problems - (a) Forest resources: Use and over exploitation, Deforestation-causes, effects and remedies, Case studies, (b) Water resources: Use and over utilization of surface and groundwater, Conflicts over water, Benefits and problems of large dams, Case studies, (c) Mineral resources: Mining, Adverse effects, Case studies, (d) Food resources: World food problems, Changes caused by agriculture and overgrazing, Effects of modern agriculture, Water logging and salinity, Case studies, (e)Energy resources: Growing needs, Renewable energy resources – Solar, Wind, Hydropower, Hydrogen fuel; Non-renewable energy resources - Coal, Natural gas, Nuclear energy, Role of an individual in conservation of natural resource and equitable use of resources for sustainable lifestyles.
UNIT - II: ECOSYSTEMS AND BIODIVERSITY (10 Periods)
Ecosystems: Concept of an ecosystem, Structure and function of an ecosystem - Producers, Consumers, Decomposers; Food chains, Food webs, Ecological pyramids – Types; Characteristic features, Structure and functions of forest ecosystem, Desert ecosystem, Aquatic ecosystem, Energy flow in the ecosystem, Ecological succession.
Biodiversity: Concept and value of biodiversity, Role of biodiversity in addressing new millennium challenges, Hot spots of biodiversity, Threats to biodiversity, Man-wild life conflicts, Endemic, Endangered and extinct species of India, Conservation of biodiversity – In-situ and ex-situ.
UNIT - III: ENVIRONMETAL POLLUTION AND CONTROL (08 Periods)
Causes, Adverse effects and control measures of pollution - Air pollution, Water pollution, Soil pollution, Noise pollution, Thermal pollution, Nuclear pollution; Solid waste management – Causes, Effects and control measures of urban and industrial wastes; Hazards and disaster management – Floods, Earthquakes, Tsunamis, Case studies.
UNIT - IV: SOCIAL ISSUES AND THE ENVIRONMENT (08 Periods)
Sustainable development, Urban problems related to energy, Environmental ethics –Issues, Solutions; Global warming, Acid rain, Ozone layer depletion, Nuclear accidents and case studies, Wasteland reclamation, Consumerism and waste products, Concept of green technologies, Environment protection act, Air act, Water act, Wildlife protection act, Forest conservation act, Issues involved in enforcement of environmental legislation, Public environmental awareness.
UNIT - V: HUMAN POPULATION AND THE ENVIRONMENT (08 Periods)
Population growth, Population characteristics and variation among nations, Population explosion, Family welfare programme, Environment and human health, Human rights, Value education, HIV/AIDS, Women and child welfare, Role of information technology in environment and human health, Case studies, **Field Work/Assignment/Seminar:** Environmental assets – Pond/Forest/Grassland/Hill/ Mountain/Environment impact assessment procedures for local environmental issues.

Total Periods: 45

TEXT BOOKS:
1. A. Kaushik and C. P. Kaushik, *Environmental Studies*, New Age International (P) Ltd Publications, 4th Edition, 2014.
2. Erach Barucha, *Environmental Studies*, Orient Blackswan, 2nd Edition, 2013.

II B.Tech. - I semester

(16BT3BS02) SPECIAL FUNCTIONS AND COMPLEX ANALYSIS

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Intermediate/senior secondary Mathematics

COURSE DESCRIPTION: Beta, Gamma functions and their properties; Limits continuity and analyticity of complex functions; Integration, power series, singularities, residues; conformal mapping.

COURSE OUTCOMES: On successful completion of the course, students will be able to:

CO1. Acquire knowledge in
- Beta and Gamma functions
- Expressing complex functions in power series
- Differentiation and integration of complex functions
- Conformal mappings and bilinear transformations
- Expressing complex functions in terms of graphs and power series

CO2. Develop skills in analyzing the
- The properties exhibited by complex functions in Argand plane
- Properties of real integrals through complex variable techniques
- The properties of improper integrals through residue theory
- Conformal transformations of complex valued functions for inferences
- The properties of complex functions by expressing them in power series and graphs

CO3. Develop skills in designing mathematical models involving
- Integrals of complex variable functions
- Improper integrals using beta and gamma functions
- Residue theory of complex functions
- Power series expansions of complex variable functions
- Transformations of complex variable functions
- Fluid flow patterns and flux functions.

CO4. Develop analytical skills in providing solutions for problems involving
- Fluid, Electrical and Magnetic Potential functions
- Integration of complex functions
- Improper real integrals

CO5. Use relevant Complex variable techniques for
- Residues and integrals of complex functions.
- Improper real integrals through complex functions
- Techniques of Beta and Gamma functions to improper integrals

DETAILED SYLLABUS

UNIT-I: SPECIAL FUNCTIONS (09 Periods)

Beta and Gamma functions - Properties - Relationship between Beta and Gamma functions- Evaluation of improper integrals using Beta and Gamma functions. Bessel function -Generating function (without proof) - Recurrence relations.

UNIT-II: ANALYTIC FUNCTIONS (09 Periods)

Function of a Complex Variable - Limits and Continuity of functions, uniform continuity, Differentiability and Analyticity – Cauchy Riemann equations (both Cartesian and polar) - Conjugate and harmonic conjugate functions - Milne Thomson method-Potential functions.

UNIT-III: COMPLEX INTEGRATION AND POWER SERIES (09 Periods)

Line integral - Evaluation of line integrals along curves and closed contours - Cauchy's Integral theorem - Cauchy's integral formula - Generalized integral formula- Evaluation of integrals using integral formula. Taylor's theorem (without proof) - Laurent's theorem (without proof) - Power series expansion of complex functions.

UNIT-IV: RESIDUE THEOREM (09 Periods)

Zeros, Singularities – Types of singularities- poles - Residues – Evaluation of residues at simple poles and poles of order m - Residue theorem - Evaluation of integrals using residue theorem – Evaluation of improper and real integrals of the type:

i) $\int_0^{2\pi} f(\cos\theta, \sin\theta)d\theta$ ii) $\int_{-\infty}^{\infty} f(x)dx$ iii) $\int_{-\infty}^{\infty} e^{imx} f(x)dx$

UNIT-V: CONFORMAL MAPPING (09 Periods)

Conformal mappings, Translation, Rotation, Inversion.Special transformations:
Bilinear transformation - Properties - Fixed points - Cross ratio - Invariance of circles under bilinear transformation - Determination of bilinear transformation using three given points. **Total Periods: 45**

TEXT BOOK:

1. T.K.V. Iyengar, B. Krishna Gandhi,S., Ranganatham and M.V.S.S.N. Prasad,*Text book of Engineering Mathematics,* Vol-III, S. Chand & Company, 9th Edition 2012.

II B.Tech. - I semester

(16BT30401) ELECTRONIC CIRCUIT ANALYSIS AND DESIGN

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: A course on Electronic Devices and Circuits

COURSE DESCRIPTION:

Single Stage Amplifiers; Multi-Stage amplifiers; Frequency Response; Feedback Amplifiers; Oscillators; Large Signal Amplifiers; Tuned Amplifiers.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge in
- Single Stage Amplifiers
- Multi Stage Amplifiers.
- BJT Frequency Response.
- Feedback Amplifiers.
- Power Amplifiers.
- Tuned Amplifiers.

CO2. Perform analysis of electronic circuits for meeting defined specifications.

CO3. Design and develop electronic circuits such as Feedback Amplifiers, Oscillators and Power amplifiers with given specifications.

CO4. Solve problems pertaining to electronic circuit design.

CO5. Select an Amplifier circuit for a specific electronic sub-system.

CO6. Apply course knowledge to assess societal issues and understand the consequent responsibilities relevant to the professional engineering practice using electronic circuits.

DETAILED SYLLABUS:

UNIT-I: BJT AMPLIFIERS (10 Periods)

Single Stage Amplifiers: Introduction, Classification of Amplifiers, Analysis of CE amplifier with an Emitter Resistance.

Multistage Amplifiers: Distortion in amplifiers, Cascading Transistor amplifiers, Methods of inter-stage coupling, RC Coupled Amplifier, Direct and Transformer Coupled Amplifier, Multistage Frequency Effects, Darlington Pair, Bootstrapped Darlington circuit, Cascode amplifier.

UNIT- II: HIGH FREQUENCY RESPONSE (09 Periods)

BJT: Frequency response of BJT amplifier, Analysis at low and high frequencies, Effect of coupling and bypass capacitors, Hybrid-ð Common Emitter transistor model, Hybrid-ð conductance, Hybrid-ð capacitances, validity of Hybrid-ð model, CE short circuit current gain, CE current gain with resistive load, Gain-Bandwidth Product.

FET: Analysis of Common Source and Common Drain Amplifier circuits at High frequencies.

UNIT-III: FEEDBACK AMPLIFIERS (10 Periods)

Negative feedback amplifiers: Feedback Concept, Classification, General characteristics, Effect of feedback on amplifier characteristics, Voltage series, Current series, Current shunt and Voltage shunt feedback configurations.

Oscillators: Conditions for oscillations, types of oscillators, RC-phase shift oscillators with BJT and FET with the relevant analysis, Wein bridge oscillator, Hartley oscillator, Colpitts oscillator, Piezoelectric crystal oscillator, Frequency Stability.

UNIT-IV: POWER AMPLIFIERS (08 Periods)

Classification, Class A large-signal amplifiers- Series Fed and Transformer-coupled Audio power amplifier, Efficiency**;** Second harmonic Distortions, Higher order harmonic Distortion, Class B amplifier- Transformer coupled Push-pull amplifier, Complementary symmetry Push-pull amplifier, Efficiency**;** MOSFET power amplifier, Thermal stability and Heat sinks.

UNIT-V: BJT TUNED AMPLIFIERS (08 Periods)

Introduction, Q-Factor, Small Signal Tuned Amplifiers, Effect of Cascading Single Tuned Amplifiers on Bandwidth, Double-tuned amplifier, Effect of Cascading Double Tuned Amplifiers on Bandwidth, Stagger Tuned Amplifiers, Stability of Tuned Amplifiers, Class-C Tuned amplifier. **Total Periods: 45**

TEXT BOOKS:

1. Jacob Millman and Christos C. Halkias, *Integrated Electronics*, Tata McGrawHill, 2nd Edition, 2010.
2. S Salivahanan, N.Suressh Kumar, A. Vallavaraj, *Electronic Devices and Circuits,* TataMcGraw Hill, 3rd Edition, 2008.

II B.Tech. - I semester
(16BT30402) SIGNALS AND SYSTEMS

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: A course on transformation techniques and partial differential equations.

COURSE DESCRIPTION:
Analysis of signals and systems; Representation of signals using Fourier series and Fourier transforms; Time-Domain and Frequency-Domain aspects of signals and systems; concept of convolution and correlation; Sampling and types of sampling; Laplace transform of signals; Z-Transform of sequences.

COURSE OUTCOMES: On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge in
- Representation of signals and systems.
- Fourier series representation of periodic signals
- Fourier transform of signals
- Convolution and correlation of functions
- Laplace transform
- Sampling Process
- Z-Transform

CO2. Analyze various continuous and discrete time signals and systems in time and frequency domains.

CO3. Develop solutions to stable and causal systems.

CO4. Solve problems pertaining to transforms and signal processing.

CO5. Select and apply appropriate transformation techniques for understanding of the frequency content of signals at the input and output of the systems.

DETAILED SYLLABUS:

UNIT I: SIGNALS AND SYSTEMS (10 Periods)
Elementary signals- Unit Impulse and Unit Step Functions, Exponential and Sinusoidal Signals. Classification of Continuous-Time and Discrete-Time Signals, Basic operations on signals, Classification of Continuous-Time and Discrete-Time Systems, Basic System Properties, Linear Time-Invariant Systems - Discrete-Time LTI Systems- The Convolution Sum, Continuous-Time LTI Systems - The Convolution Integral, Properties of Linear Time-Invariant Systems.

UNIT II: FOURIER SERIES AND FOURIER TRANSFORM (12 Periods)
Fourier series: Representation of Fourier series, Continuous time periodic signals, Dirichlet's conditions, Properties of CT Fourier Series, Trigonometric Fourier Series and Exponential Fourier Series with examples. Complex Fourier spectrum. Fourier series representation of a periodic signals.

Fourier Transforms: Deriving Fourier Transform from Fourier series, Fourier Transform of standard signals, Fourier Transform of Periodic Signals, Properties of CT Fourier Transform, Systems characterized by Linear constant coefficient differential equations. The Magnitude-Phase Representation of the Fourier Transform, The Magnitude-Phase Representation of the Frequency Response of LTI Systems.

UNIT III: CORRELATION OF SIGNALS (07 Periods)
Cross correlation and auto correlation of functions, properties of correlation function, Energy density spectrum, Parseval's theorem, Power density spectrum, Relation between auto correlation function and energy/power spectral density function. Relation between convolution and correlation, Detection of periodic signals in the presence of noise bycorrelation, Extraction of signal from noise by filtering.

UNIT IV: LAPLACE TRANSFORMS (07 Periods)
The Laplace Transform, The Region of Convergence for Laplace Transforms, The Inverse Laplace Transform, Relationship between Fourier and Laplace Transforms, Properties of the Laplace Transform, Some Laplace Transform Pairs, Analysis and Characterization of LTI Systems Using the Laplace Transform.

UNIT V: SAMPLING AND Z-TRANSFORMS (09 Periods)
Sampling: Representation of a Continuous-Time Signal by its Samples - Sampling Theorem, Reconstruction of a Signal from Its Samples Using Interpolation. Effect of under sampling - Aliasing, Discrete-Time Processing of Continuous-Time Signals.

Z-Transforms: Region of Convergence for the z-Transform, The Inverse z-Transform, Relation between Fourier and Z-Transforms, Properties of the z-Transform, Some Common z-Transform Pairs, Analysis and Characterization of LTI Systems Using z-Transforms. **Total Periods: 45**

TEXT BOOK:

II B.Tech. - I Semester

(16BT30403) SWITCHING THEORY AND LOGIC DESIGN

(Common to ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:—

COURSE DESCRIPTION:

Number system and Boolean algebra; Minimization; Analysis and synthesis of digital circuits; Asynchronous Sequential Logic & Programmable Memories.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate the knowledge in
- Conversion of number systems, Binary Codes.
- Basic theorems, properties and postulates of Boolean algebra.
- Minimization of switching functions using Map method and Tabular method.
- Combinational and sequential circuits.
- Realization of Boolean functions using PLDs.

CO2. Analyse combinational and sequential circuits.

CO3. Design and develop various combinational, sequential circuits and PLDs.

CO4. Solve problems and arrive at solutions pertaining to Digital Electronics.

CO5. Apply minimization techniques to asynchronous and synchronous designs and suggest appropriate design for engineering solutions.

CO6. Apply appropriate logic functions to obtain optimized designs useful for the society.

DETAILED SYLLABUS

UNIT I: NUMBER SYSTEM AND BOOLEAN ALGEBRA (10 Periods)

Introduction, Binary Numbers, Number base conversions, Complements of numbers, Signed binary numbers, Binary codes, Error detection and correction codes. Boolean Algebra-Basic definition, Basic theorems and properties, Boolean Functions, Canonical & Standard forms, logic operations & Logic gates.

UNIT II: GATE LEVEL MINIMIZATION (08 Periods)

Introduction, the map method, four variable, Five variable K-map, POS & SOP Simplification, Don't care conditions, NAND & NOR Implementation, Other two level Implementation, Ex-or Function, Quine-McCluskey Technique-simplification of Boolean function using tabulation Method.

UNIT III: ANALYSIS AND SYNTHESIS OF COMBINATIONAL CIRCUITS (10 Periods)

Combinational circuits, Analysis & Design procedure, Binary Adder-subtractor, Decimal Adder, Binary Multiplier, Magnitude comparator, Decoder, Encoders, Multiplexers, Demultiplexers-1-Line to 4-Line and 1-Line to 8-Line Demultiplexers.

UNIT IV: ANALYSIS AND SYNTHESIS OF SEQUENTIAL CIRCUITS (10 Periods)

Sequential Circuits, Latches, Flip-Flops, Analysis of Clocked sequential circuits, State Reduction & Assignment, Design procedure, Registers-Shift Registers, Counters- Synchronous counters and Asynchronous counters.

UNIT V: ASYNCHRONOUS SEQUENTIAL LOGIC & PROGRAMMABLE MEMORIES (07 Periods)

Introduction, Analysis procedure, Design Procedure, Reduction of State and flow tables, Hazards,Programmable Memories-ROM, PLA, PAL.

Total Periods: 45

TEXT BOOK:

1. M. Morris Mano, *Digital Design,* Pearson, 5thEdition, 2013.

REFERENCE BOOKS:

1. Anand Kumar, *Switching Theory and Logic Design*, PHI, 2008

2. ZviKohavi and NirahK.Jha, *Switching theory and Finite Automata Theory,* Tata McGraw-Hill, 2nd Edition, 1978.
3. Charles H. Roth, *Fundamentals of Logic Design*, Thomson Publications, 5thEdition, 2004.

II B.Tech. - I semester

(16BT30241) ELECTRICAL TECHNOLOGY

(Common to ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Courses on Network Analysis andEngineering Physics.

COURSE DESCRIPTION:

Analysis of phase & line quantities and measurement of power in three phase system; Constructional details, operation,performance evaluation andapplications of DC& AC machines; Testing of DC machines and Transformers;Special machines and single phase transformers.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on
- Constructionand operation of variouselectrical machines
- Measurement of powerin three-phase system
- Applications of various types of electrical machines

CO2. Analyze
- The operation and performance of various electrical machines
- The polyphase circuit for measurement of power

CO3. Design suitable accessories / controllers for various machines to meet the nominal specifications

CO4. Solve engineering problems pertaining to various machines and provide feasible solutions

CO5. Select appropriate control techniques for various electrical machines used in domestic and industrial applications

CO6. Apply the conceptual knowledge of variouselectrical machinesin relevance to industry and society

DETAILED SYLLABUS:

UNIT-I:DC MACHINES (13 Periods)

DC Generator: Construction and working principle, types, EMF equation, losses, open circuit and load characteristics, applications.

DC Motor: Working principle, types, torque equation, characteristicsand applications.Speed control of DC shunt motor.Necessity of starter, three-point starter.Swinburne's test.

UNIT-II:SINGLE PHASE TRANSFORMER (08 Periods)

Construction and working principle, EMF equation, losses, equivalent circuit,OC and SC tests on single phase transformer, predetermination of efficiency and regulation.

UNIT-III:THREE PHASE SYSTEMS (07 periods)

Introduction and advantages of polyphase system,generation of three phase voltages, phase sequence,star and delta connections, relationship between phase and line quantities in three phase balanced circuits, power measurement in three phase balanced and unbalanced systems using two wattmeter method.

UNIT-IV: THREE PHASE INDUCTION MOTOR AND ALTERNATOR (09 Periods)

Induction motor: Principle of operation, constructional details, slip, rotor frequency, starting and running torques, torque-slip characteristics.

Alternators: Principle of operation, constructional details, types, interrelation between speed and number of poles andEMF equation.

UNIT-V: SPECIAL MACHINES (07 Periods)

Construction of single phase induction motor, double field revolving theory,resistance start, capacitor start and capacitor start & run split phaseinduction motors operation and applications,Constructional details, operation and applications of shaded-pole motor, universal motor andstepper motor (VRandPM type only).

Total Periods: 44

II B.Tech. - I semester

(16BT30251) ELECTRICAL TECHNOLOGY LAB

(Common to ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: Courses onNetwork Analysis and Network Analysis lab.

COURSE DESCRIPTION:
Construction, operation, types, performance evaluation of DC& ACmachines and transformers;Necessity of starter for DC motors; Three phase power measurement.

COURSE OUTCOMES:
On successful completion of course, students will be able to:

CO1. Demonstrate knowledge on
- Construction, operation of DC& ACmachines and transformers.
- Starting and speed control of DC motors.
- Testing of DC& ACmachines and transformers.
- Characteristics of DC& ACmachines and transformers.
- Measurement of three phase power.
- Applications of DC& ACmachines and transformers.

CO2. Analyzethe operation and performance of DC& ACmachines, transformers and three phase system for various operating conditions.

CO3. Design the circuit with suitable accessories / controllers for desired operation conditions of DC & AC machines.

CO4. Interpret and synthesize the data obtained from experimentation on DC& ACmachines, transformers and three phase system and provide valid conclusions.

CO5. Select and apply appropriate technique for testing and control of DC& ACmachines and transformers useful in industry.

CO6. Apply the conceptual knowledge of electrical machines in relevance to industry and society.

CO7. Commit to ethical principles and standards while exercising the practical investigations on electrical machines.

CO8. Work individually or in a group while exercising practical investigationsin the field of electrical machines.

CO9. Communicate effectively in verbal and written form in relevance to electrical machines.

DETAILED SYLLABUS:

PART -A

1. Construction of DC machines, transformers, synchronous machines, induction motorsand DC motor starters.

PART – B

Any NINE experiments are to be conducted

1. Magnetization characteristic of a DC generator.
2. Load characteristics of DC shunt generator.
3. Swinburne's test on a DC shunt machine.
4. Brake test on a DC shunt motor.
5. Speed control of DC shunt motor by
   a. Field flux control method
   b. Armature voltage control method.
6. OC and SC tests on a singlephase transformer.
7. Load test on a single phase transformer.
8. Measurement of power using two wattmeter method
9. Brake test on a threephase induction motor.
10. Regulation of a three phase alternator by synchronous impedance method.

11. Brake test on single phase induction motor.

II B.Tech. - I semester

(16BT30431) BASIC ELECTRONICS AND DIGITAL DESIGN LAB

(Common to ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: Courses on Electronic Devices and Circuits & Switching Theory andLogic Design.

COURSE DESCRIPTION: Diode characteristics; Rectifiers; BJT and FET characteristics; UJT and SCR characteristics; BJT Amplifiers; Combinational Circuits; Realization of Flip-flops; Sequential Circuits; Demonstration on VHDL Programme.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge in different electronic devices, analog and digital circuits

CO2. Analyze the characteristics of different electronic devices and circuits like
- Diodes-PN Junction Diodes, Zener Diodes, SCR
- Transistors-BJT,FET,UJT
- Combinational Circuits-HA, FA
- Flip Flops-JK FF, D FF
- Sequential Circuits -Counters

CO3. Design electronic circuits like FET Amplifiers, Combinational Circuits and Sequential Circuits.

CO4. Solve engineering problems with better Electronic circuits.

CO5. Work individually and also in a group in the area of Analog and Digital circuits**.**

CO6. Communicate verbally and in written form in the area of Electronic Devices and circuits.

LIST OF EXERCISES:

PART A

ANALOG DEVICES AND CIRCUITS (Minimum SIX experiments to be conducted)

1. PN Junction and Zener diodes characteristics
2. Ripple Factor and Load Regulations of Rectifier with and without filters (Full wave or Half wave)
3. Input and Output characteristics of Transistor in CE configuration
4. Drain and Transfer Characteristics of JFET
5. Design an Common Source Amplifier Stage and Plot its Frequency response
6. UJT Characteristics
7. SCR characteristics

PART B

DIGITAL CIRCUITS (Minimum FOUR experiments to be conducted)

Design and Realization of
1. Basic gates using universal gates
2. Half Adder and Full Adder using logic gates
3. Multiplexer and Demultiplexer using logic gates
4. Flip Flops using logic gates
5. Asynchronous Counter using ICs
6. Synchronous Counter using ICs

Demonstration of

VHDL Programme

II B.Tech. - I semester

(16BT30432) SIGNALS AND SYSTEMS LAB

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: A Course on Signals and Systems.

COURSE DESCRIPTION:
Generation of various signals and sequences; convolution and correlation; verification of linearity and time invariance properties; sampling theorem verification.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge in
- Operations on Matrices.
- Generation of Various signals and Sequences.
- Convolution and Correlation of signals and Sequences
- Weiner-Khinchin relation and Sampling Theorem
- Fourier Transform , Laplace Transform and Z-Transform

CO2. Analyze the simulation results for a written program.
CO3. Design MATLAB programs for the given list of exercises.
CO4. Solve problems and obtain the required results to the given list of experiments.
CO5. Apply MATLAB tools for writing the programs.
CO6. Work individually or in group in the area of signals and systems.
CO7. Communicate orally and in written form in the area of signals and systems.

LIST OF EXERCISES:
(Minimum of twelve to be conducted)

1. Basic Operations on Matrices.
2. Generation of Various signals and Sequences Such as Unit Impulse, Unit Step, Square, Saw Tooth, Triangular, Sinusoidal, Ramp, Sinc function.
3. Operations on Signals and Sequences (Addition, Multiplication, Scaling, Shifting, Folding), Computation of Energy and Average Power.
4. Finding the Even and Odd Parts of Signal or Sequence and Real and Imaginary Parts of a Signal.
5. Verification of Linearity and Time Invariance Properties of a System.
6. Computation of Unit Sample, Unit Step and Sinusoidal Responses of the Given LTI System and Verifying its Stability.
7. Finding the Fourier Transform of a given Signal and plotting its Magnitude and Phase Spectrum.
8. Convolution of Signals and Sequences.
9. Autocorrelation and Cross correlation of Signals and Sequences.
10. Verification of Weiner-Khinchin Theorem.
11. Removal of Noise by Auto Correlation / Cross correlation in a given signal corrupted by noise.
12. Sampling Theorem Verification.
13. Laplace Transform for a given function.
14. Locating Zeros and Poles and plotting the Pole-Zero map in S-Plane and Z-Plane for the given Transfer Function
15. Impulse response of a Raised Cosine Filter.

II B.Tech. - II semester

(16BT40401) **ANALOG COMMUNICATIONS**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Courses on Electronic Devices and circuits, Signals and Systems.

COURSE DESCRIPTION:

Continuous wave modulations; Modulators and De-Modulators; Transmitters; Receivers; Noise performance; Pulse modulations; Multiplexing.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge in
- Elements of communication systems.
- Amplitude, Frequency, and Phase Modulations and De-Modulations.
- Noise
- Multiplexing.

CO2. Analyze Noise Performance in different modulation systems, calculation of total power and bandwidth.

CO3. Design Transmitters and Receivers with high signal to noise ratio.

CO4. Solve problems pertaining to modulation schemes, transmitters and receivers considering noise effects.

CO5. Select, and apply appropriate techniques for different modulation schemes understanding power and bandwidth limitations.

CO6. Follow standards while designing transmitters and receivers.

DETAILED SYLLABUS :

UNIT-I: AMPLITUDE MODULATION AND DEMODULATION (12 Periods)

Elements of Communication Systems, Modulation, Modulation Methods, Need for Modulation, Amplitude Modulation (AM), Generation of AM waves - Square law modulator, switching modulators; Demodulation of AM waves – Square law detector, Envelope detector; Double sideband suppressed carrier (DSBSC), Generation of DSBSC waves - Balanced modulator, Ring modulator; Coherent detection of DSBSC waves - Costas receiver, squaring loop; Single sideband modulation (SSB), Generation of SSB waves - Frequency Discrimination Method, Phase Discrimination Method; Demodulation of SSB waves, Vestigial sideband (VSB) modulation & demodulation, Frequency division multiplexing.

UNIT-II:ANGLE MODULATION AND DEMODULATION (09 Periods)

Basic Definitions Phase modulation (PM) and frequency modulation (FM), Single-Tone FM, Bandwidth of angle modulated waves - Narrow band frequency modulation (NBFM) and Wide band frequency modulation (WBFM); Transmission Bandwidth of FM Waves, Generation of FM waves – Indirect FM, Direct FM; Demodulation of FM Waves- Frequency Discrimination, PLL Demodulator**.**

UNIT-III: NOISE (09 Periods)

Noise in Analog communication System, Signal to Noise ratio in AM, DSB & SSB System, Signal to Noise ratio in Angle Modulation System, Threshold effect in Angle Modulation System, Pre-emphasis & De-emphasis, FM Capture Effect.

UNIT-VI: TRANSMITTERS AND RECEIVERS (10 Periods)

Radio Transmitter - Classification of Transmitters, AM Transmitter, FM Transmitter; Radio Receivers - Receiver Types, Tuned radio frequency receiver, Super heterodyne receiver, Intermediate frequency, AGC, FM Receiver, Amplitude limiting; Comparison FM with AM Receiver, Radio Receiver measurements - Sensitivity, Selectivity, and fidelity.

UNIT-V: PULSE MODULATION (05 Periods)

Analog pulse modulation schemes, Pulse amplitude modulation (PAM) & demodulation, Pulse-Time Modulation – Pulse Duration and Pulse Position modulations, and demodulation schemes; Time division multiplexing.

Total Periods: 45

TEXT BOOKS:

1. Simon Haykin, *Communication Systems,* Wiley-India edition, 3rd Edition, 2010.
2. R.P. Singh, S. P. Sapre, *Communication Systems*, TMH, 2nd Edition, 2007.

REFERENCE BOOKS:

2. B. P. Lathi, *Modern Digital and Analog Communication Systems*, Oxford Univ. press, 3rd Edition, 2006.

3. Sham Shanmugam, *Digital and Analog Communication Systems*, Wiley-India Edition, 2006.

II B.Tech. - II semester

(16BT40402) **DIGITAL IC APPLICATIONS**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:
Courses on Switching Theory and Logic Design &Electronic Devices and Circuits.

COURSE DESCRIPTION:
Logic Families – CMOS, Bipolar and its Interfacing; Verilog HDL Language Elements and Modelling; Combinational and Sequential Logic Design using ICs; Memories - ROM, SRAM, DRAM, FPGA.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge in:
- Classification of Integrated Circuits.
- Characteristics of Integrated Circuits.
- MOS, TTL and ECL Logic Families.
- Interfacing Between Different Logic Families.
- Digital Integrated Circuits.
- Memories.

CO2. Perform analysis of CMOS Circuits.
CO3. Design, develop and model combinational and sequentialcircuits.
CO4. Solve problems using relevant ICs to synthesize digitalintegrated circuits.
CO5. Select appropriate source code model to optimize the design of digital ICs.
CO6. Assess and propose cost effective digital IC solutions to meet design constraints to address societal needs.

DETAILED SYLLABUS

UNIT-I: DIGITAL LOGIC FAMILIES AND INTERFACING (10 Periods)
Introduction to logic families, CMOS logic, CMOS steady state and dynamic electrical behavior, CMOS logic families.Bipolar logic, Transistor-Transistor logic, TTL families, CMOS/TTL interfacing, Low voltage CMOS logic and interfacing, Emitter Coupled Logic.

UNIT-II: HARDWARE DESCRIPTION LANGUAGE (08 Periods)
Introduction, Language Elements, Expressions, Modeling-gate level modeling, data flow modeling, behavioral modeling, structural modeling.

UNIT-III: COMBINATIONAL LOGIC DESIGN (11 Periods)
74x999 Adder and Subtractor, 74x181 Arithmetic and Logic Unit, 8x8 Combinational Multiplier, 74X138 3-to-8 Decoder, 74x148 Priority Encoder, 74x541 and 74x245 Three-State Devices, 74x151 8X1 Multiplexer, 74x155, 74x139 as 2x4 Demultiplexer, 74x86 Exclusive-OR gates,74x280 9-Bit Parity Generator, 74x85 4-bit Comparator, Barrel Shifter using 74x151 multiplexer, Simple Floating point Encoder, Dual priority Encoder, modeling of circuits by using Verilog HDL.

UNIT-IV: SEQUENTIAL LOGIC DESIGN (09 Periods)
Latches and Flip-Flops – 74LS74, 74LS109, Counters - 74x163 binary counters, 74x169 up/down counter, Ring Counters, Johnson Counters. 74x194 universal shift register.Modeling of circuits by using Verilog HDL.Synchronous Design Methodology, Impediments to Synchronous Design.

UNIT-V: MEMORIES (07 Periods)
ROM: internal structure, 2D-decoding commercial types, timing applications.
STATIC RAM: internal structure, SRAM timing, standard SRAM, synchronous RAM.
DYNAMIC RAM: internal structure, timing, synchronous DRAM.
FPGA: Architecture, Applications.

Total Periods: 45

TEXT BOOKS:
1. John F. Wakerly, *Digital Design Principles & Practices*, Pearson Education Asia, 4th Edition, 2008.
2. J. Bhaskar, *A Verilog HDL Primer*, BS Publications, 2nd Edition, 2001.

II B.Tech. - II semester

(16BT40403) ELECTROMAGNETIC THEORY AND TRANSMISSION LINES

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Courses on Engineering Mathematics and Engineering Physics.

COURSE DESCRIPTION:
Static Fields; Maxwell's Equations; Electromagnetic Wave Characteristics; Transmission Lines.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Apply fundamental knowledge in characterizing
- Electrostatic Fields
- Magnetostatic Fields
- Boundary Conditions
- Electromagnetic Waves
- Transmission Lines

CO2. Analyze Problems in different medium conditions by using Maxwell's Equations.

CO3. Design and Develop various impedance transformation techniques.

CO4. Provide valid solutions to solve critical problems for Electromagnetic Wave Propagation in different media.

CO5. Understand limits of Electromagnetic Wave Propagation and apply appropriate technique to arrive at feasible solutions.

CO6. Create solutions to compensate impedance mismatch in real time applications for societal needs.

DETAILED SYLLABUS:
Review of calculus and vector algebra.

UNIT - I: STATIC FIELDS (15 Periods)
Coulomb's Law, Electric Field Intensity – Fields due to Different Charge Distributions.Electric Flux Density, Gauss Law and Applications, Electric Potential, Relations between E and V,Convection and Conduction Currents,Continuity Equation. Maxwell's Two Equations for Electrostatic Fields, Capacitance – Parallel Plate, Coaxial Capacitors. Biot-Savart's Law, Ampere's Circuital Law, Magnetic Flux Density, Maxwell's Two Equations for Magnetostatic Fields, Magnetic Scalar and Vector Potentials, Forces due to Magnetic Fields, Ampere's Force Law, illustrative Problems.

UNIT - II: MAXWELL'S EQUATIONS (06 Periods)
Faraday's Law and Transformer emf, Inconsistency of Ampere's Law and Displacement Current Density, Maxwell's Equations in Different Final Forms and Word Statements. Conditions at a Boundary Surface: Dielectric-Dielectric and Dielectric-Conductor Interfaces, illustrative Problems.

UNIT - III: EM WAVE CHARACTERISTICS (12 Periods)
Wave Equations for Conducting and Perfect Dielectric Media, Uniform Plane Waves – Definition, Sinusoidal Variations, Wave Propagation in Lossless and Conducting Media.Conductors & Dielectrics – Characterization, Wave Propagation in Good Conductors and Good Dielectrics.Polarization,Reflection - Normal and Oblique Incidences for both Perfect Conductor and Perfect Dielectrics.Refraction of Plane Waves - Brewster Angle, Total Internal Reflection.Poynting Vector and Poynting Theorem, Illustrative Problems.

UNIT - IV: TRANSMISSION LINES - I (06 Periods)
Types, Parameters, Transmission Line Equations, Primary & Secondary Constants, Expressions for Characteristic Impedance, Propagation Constant, Phase and Group Velocities, Infinite Line Concepts, Lossless/Low Loss Characterization, Condition for Distortionless Lines.

UNIT - V: TRANSMISSION LINES - II (06 Periods)
Input Impedance Relations, SC and OC Lines, Reflection Coefficient, VSWR. ë/4, ë/2, ë/8 Lines – Impedance Transformations. Smith Chart – Configuration and Applications, Single stub matching, Illustrative Problems.

Total Periods: 45

TEXT BOOKS:
1. Matthew N.O. Sadiku, *Elements of Electromagnetic*, Oxford University Press, 3rd Edition, 2001.
2. John D. Ryder, *Networks, Lines and Fields*, PHI, 2nd Edition, 1999.

4. E.C. Jordan and K.G. Balmain, *Electromagnetic Waves and Radiating Systems*, PHI, 2nd Edition, 2000.

II B.Tech. - II semester

(16BT40404) LINEAR IC APPLICATIONS

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Courses onNetwork Analysis & Pulse and digital Circuits.

COURSE DESCRIPTION:

Operational Amplifier (Op-Amp) basics and its characteristics; Op-Amp Linear and Non- Linear Applications; Voltage Regulators and Analog filter Design; study of internal functional blocks and the applications of special ICs like IC 555 Timer; PLL circuits; DAC and ADCs; DAC and ADC Specification.

COURSE OUTCOMES: On successful completion of the course, students will be able to:

CO1. Demonstrate the knowledge of
- operational amplifiers
- Regulators and filters
- 555 timer and PLL
- D-A and A-D convertors

CO2. Analyze Operational Amplifier circuits and evaluate parameters of Operational Amplifier circuits.

CO3. Using linear ICs, design and develop
- V to I and I to V convertors
- Integrators and Differentiators
- Multivibrators
- Triangular wave generators.

CO4. Solve engineering problems and arrive at solutions using electronic circuits designed using linear ICs.

CO5. Select appropriate technique for operating op amp and 555 timer in different modes of operation based on applications.

DETAILED SYLLABUS:

UNIT I: INTEGRATED CIRCUITS ANDOPERATIONAL AMPLIFIER (10 Periods)

Basics of IC fabrication, Differential amplifier – DC and AC analysis of Dual input balanced output configuration, Cascade differential amplifier stages, Level Translator; Basic information of OP-AMP, OP-Amp Block diagram, ideal and practical OP-Amp Specifications, DC and AC characteristics, 741 OP-Amp, input and output offset voltages and currents, slew rate, CMRR, PSRR, drift, Frequency compensation technique.

UNIT II: OPERATIONAL AMPLIFIER APPLICATIONS (11 Periods)

Introduction, Basic Op-Amp applications, Instrumentation Amplifiers, AC Amplifier, V to I and I to V Converters, Op-amp circuits using diodes, Sample and Hold Circuit, Log and Antilog Amplifiers, Differentiator & Integrator, Introduction to comparators and their applications, Multivibrators, Triangular Wave Generator.

UNIT III: VOLTAGE REGULATOR AND ANALOG FILTERS (08 Periods)

Voltage Regulator: Introduction, Series Op-amp Regulator, IC Voltage Regulators-Fixed Voltage Series Regulator, Characteristics, Line and Load Regulation, Dual Voltage Supply. 723 General Purpose Regulator.

Analog Filters: Introduction, RC Active Filters- first order and second order all pass, Low pass &High pass, Band pass and Band reject.

UNIT IV: IC 555 TIMERS AND PLL (09 Periods)

IC 555 Timer: Introduction to 555 Timer, functional diagram, Monostable Operations, Astable operations & their applications

PLL: Introduction, Basic principles, Phase Detector/Comparator, SE/NE 566 Voltage Controlled Oscillator (VCO), Low Pass Filter. Monolithic Phase-Locked Loop IC 566, Derivation of capture range and lock range of PLL, Applications of PLL- Frequency multiplication & frequency translation.

UNIT V: D-A AND A-D CONVERTERS (07 Periods)

D-A Converter: Introduction, Basic DAC techniques-Weighted resistor DAC, R-2R Ladder DAC, Inverted R-2R DAC and Monolithic DAC (IC1408).

A-D Converters: Introduction, Direct type ADCs- parallel comparator, Counter, Successive Approximation Converter & Dual slope ADC. DAC and ADC specifications. **Total Periods: 45**

TEXT BOOKS:

1. D. Roy Chowdhury, *Linear Integrated Circuits*, New Age International (p) Ltd, 4thEdition, 2011.
2. Ramakanth A. Gayakwad, *Op-Amps & Linear ICs*, PHI, 3rd Edition, 1998.

REFERENCE BOOKS

1. David A. Bell,*Operational Amplifiers & Linear ICs*, Oxford University Press, 2ndEdition, 1997.

2. R.F.Coughlin & Fredrick Driscoll, *Operational Amplifiers & Linear Integrated Circuits*, PHI, 6th Edition, 2001.

II B.Tech. - II semester

(16BT40405) PROBABILITY AND STOCHASTIC PROCESS

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: A Course on Engineering Mathematics.

COURSE DESCRIPTION:

Probability theory; The Random Variable; Operations on Single and Multiple Random Variables; Temporal Characteristics of Stochastic Processes; Noise analysis.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Apply knowledge of
- Concepts in Probability
- Single and multiple random variables
- Operations on Single and multiple random variables
- Random processes and their characteristics
- Noise

CO2. Analyze operations on single and multiple random variables and processes.

CO3. Formulate solutions for engineering problems involving probability and random processes.

CO4. Model random processes for the analysis of communication Systems.

DETAILED SYLLABUS :

UNIT-I: PROBABILITY (07 Periods)

Probability introduced through Sets and Relative Frequency, Experiments and Sample Spaces - Discrete and Continuous Sample Spaces; Events, Probability Definitions and Axioms, Mathematical Model of Experiments, Probability as a Relative Frequency, Joint Probability, Conditional Probability, Total Probability, Baye's Theorem, Independent Events, Bernoulli Trials.

UNIT-II: THE RANDOM VARIABLE (11 Periods)

Introduction, Random Variable Concept - Definition of Random variable, Condition for a function to be a Random Variable, Discrete and Continuous Random Variable; Distribution Function, Density FunctionProperties, The Gaussian Random Variable, Other distribution and density examples - Binomial, Poission, Uniform, Exponential, Rayleigh; Conditional Distribution and Density Functions, Properties.

Operations on One Random Variable: Introduction, Expectation, Moments - Moments about Origin, Central Moments, Variance and Skew; Chebychev's Inequality, Functions that give moments - Characteristic Function, Moment Generating Function; Transformations of a random Variable.

UNIT-III: MULTIPLE RANDOM VARIABLES (11 Periods)

Multiple Random Variables: Vector Random Variables, Joint Distribution and its Properties, Joint density and its Properties, Marginal Distribution and Density, Conditional Distribution and Density, Statistical Independence, Distribution and density of a sum of random variables, Central Limit Theorem.

Operations on Multiple Random Variables: Expected Value of a Function of Random Variables - Joint Moments about the Origin, Joint Central Moments, Joint Characteristic Functions, Jointly Gaussian Random Variables; Transformations of Multiple Random Variables, Linear Transformations of Gaussian Random Variables.

UNIT-IV: STOCHASTIC PROCESSES–TEMPORAL CHARACTERISTICS (10 Periods)

Concept of Stochastic process, Stationary and Statistical Independence, Time Averages and Ergodicity, Mean-Ergodic Processes, Correlation-Ergodic Processes, Correlation Functions - Auto correlation function and its properties, Cross correlation function and its properties, Covariance Functions;Gaussian Random Processes, Poisson Random Process, Linear system response of Mean and Mean-Squared Value, Autocorrelation function of Response, Cross-Correlation functions of Input and Output.

UNIT-V: NOISE ANALYSIS (06 Periods)

Noise classification - Uncorrelated Noise, External Noise, Atmospheric Noise, Extraterrestrial Noise, ManmadeNoise, Internal Noise, Shot Noise, Transit-Time Noise, Thermal noise, Noise power, Noise voltage, Correlated Noise, Impulse Noise; Interference, Signal-to-Noise Power Ratio, Noise Factor and Noise Figure, Equivalent Noise Temperature. **Total Periods: 45**

TEXT BOOKS:

1. Peyton Z. Peebles, *Probability, Random Variables & Random Signal Principles,* TMH, 4th Edition, 2002
2. Wayne Tomasi, *Electronic communications systems*, Pearson Education, 5th Edition, 2004

REFERENCE BOOKS:

1. George R. Cooper and Clare D. McGillem, *Probabilistic Methods of Signal and System Analysis,* Oxford, 3rd Edition, 1999

2. Athanasios Papoulis and S. Unnikrishna Pillai, *Probability, Random Variables and Stochastic Processes,* PHI, 4th Edition, 2002.

II B.Tech. - II semester

(16BT40406) PULSE AND DIGITAL CIRCUITS

(Common to ECE &EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Courses on Electronic Devices and Circuits & Network Analysis.

COURSE DESCRIPTION:
Linear and non-linear Wave shaping circuits; Switching characteristics of Diode and Transistor; Design of multivibrators; Sweep circuits; Sampling and logic gates.

COURSE OUTCOMES: On successful completion of the course, students will be able to:

CO1. Apply the knowledgein
- Responses of High-pass and low-pass RC circuits for different inputs
- Clipping and clamping operations.
- Multivibrators.
- Methods of generating the Time-base waveforms
- Operating Principles of of Sampling gates
- Realization of logic gates using Diodes and Transistors

CO2. Analyze theperformance of Linear and non-linear Wave shaping Circuits.
CO3. Design and develop different Multivibrator Circuits, Sweep circuits, clipper and clamper circuits.
CO4. Solve engineering problems pertaining to pulse and Digital circuits to provide valid conclusions.
CO5. Apply appropriate techniques to obtain optimum solution in the field of pulse and digital circuits.
CO6. Apply contextual knowledge in pulse and digital circuits to assess propagation delay and power dissipation parameters to the Professional engineering practice for societal use.

DETAILED SYLLABUS :

UNIT-I: LINEAR WAVE SHAPING (09 Periods)
High-pass, Low-pass RC circuits, Their response for Sinusoidal, Step, Pulse, Square and Ramp inputs. High pass RC network as a Differentiator and Low pass RC network as an Integrator, Ringing circuit, Attenuators and its application as a CRO probe.

UNIT-II: NONLINEAR WAVE SHAPING (09 Periods)
Diode clippers, Transistor clipper, Clipping at two independent levels, Comparators, Clamping operation, Clamping circuit taking source and Diode resistances into account, Clamping circuit theorem, Practical clamping circuits, Effect of Diode characteristics on Clamping voltage, Synchronized Clamping.

UNIT-III: MULTIVIBRATOR CIRCUITS (09 Periods)
Transistor as a switch, Analysis and Design of Fixed-Bias Bistable, Monostable, Astable Multivibrators (Collector-Coupled), Symmetrical and Asymmetrical triggering, Schmitt trigger Circuit.

UNIT-IV: TIME-BASE GENERATORS (10 Periods)
Voltage Time-Base Generators: General features of a Time-Base signal, Exponential Sweep Circuit, Constant Current Sweep Circuit, UJT Sweep Circuit, Miller and Bootstrap Time-Base generators - basic principles, Transistor Miller Time-Base generator, Transistor Bootstrap Time-Base generator.
Current Time-Base Generators: A Simple Current Sweep, Linearity Correction through Adjustment of Driving Waveform, Transistor Current Time-Base generator.

UNIT-V: SAMPLING GATES AND DIGITAL LOGIC CIRCUITS (08 Periods)
Sampling Gates: Basic operating principles of sampling gates, Unidirectional and Bi-directional sampling gates, Reduction of pedestal in gate circuits, Four Diode Sampling gate, Applications of sampling gates.
Digital Logic Circuits: Realization of Logic gates (OR, AND & NOT) using diodes & transistors,Introduction to DTL, TTL, ECL and CMOS Logic.

Total periods: 45

TEXT BOOKS:

1. Jacob Millman, Herbert Taub and Suryaprakash Rao Mothiki, *Pulse, Digital and Switching Waveforms*, TMH, 3rd Edition,2011.
2. David A. Bell,*Solid State Pulse Circuits*, PHI,4th Edition, 2009.

REFERENCE BOOKS:

1. A. Anand Kumar, *Pulse and Digital Circuits*, PHI, 2nd Edition, 2008.
2. R.Venkataraman, *Pulse Digital Circuits and Computer Fundamentals*, DhanapatRai Publications, 3rd Edition, 1994.

II B.Tech. - II semester

(16BT40431) **ANALOG COMMUNICATIONS LAB**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: ACourse on Analog Communications.

COURSE DESCRIPTION:
Simulation and study of various modulation schemes and analog Communications.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge in different analog communications.
CO2. Analyze the characteristics of different communication circuits like
- Pre-emphasis & De-emphasis.
- Mixer.
- Radio Receiver.

CO3. Design and simulate various modulation systems for communication needs.
CO4. Solve problems pertaining to modulation schemes and communication systems.
CO5. Use MATLAB tools for simulation of modulation schemes.
CO6. Function effectively as an individual and as a member in a group in the area of analog communications.
CO7. Communicate in verbal and written form in the area of analog communications.

LIST OF EXERCISES:

1. Amplitude Modulation and Demodulation.
2. DSB SC Modulation and Demodulation.
3. SSB Modulation and Demodulation.
4. Spectral analysis of AM signals using spectrum analyzer.
5. Frequency modulation and Demodulation.
6. Pre-emphasis & De-emphasis.
7. Characteristics of mixer.
8. Response of squelch circuit.
9. AGC characteristics.
10. Radio receiver measurements – Sensitivity, Selectivity and Fidelity.
11. Pulse Amplitude Modulation and demodulation
12. Pulse Width Modulation and demodulation

II B.Tech. - II semester
(16BT40432) ELECTRONIC CIRCUIT ANALYSIS AND DESIGN LAB

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES:
A Course onElectronic Circuit Analysis and Design.

COURSE DESCRIPTION:
Design, Simulation and Implementation of Single stage, Multistage Amplifiers, Feedback Amplifiers and Oscillators, Power Amplifiers, Tuned BJT Amplifiers.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:
CO1. Demonstrate knowledge in different electronic circuits and PSPICE tool.
CO2. Analyze amplifiers, Oscillator and Tuned circuits.
CO3. Design and develop single stage, multistage & Power amplifiers and Oscillator circuits.
CO4. Conduct of experiments, analysis and interpretation of data, and synthesis of the information to provide valid solutions.
CO5. Model an electronic circuit using simulation tools.
CO6. Function effectively as an individual and as a member in a group in the area of electronic circuits.
CO7. Communicate in verbal and written form in the area of electronic circuits.

LIST OF EXERCISES:
(Minimum of Twelve experiments to be conducted)

Part-A: Design and Simulation of the following circuits using simulation software
(Minimum of Six Experiments to be conducted):

1. Common Emitter (CE) amplifier
2. A Two Stage RC Coupled Amplifier
3. Cascode Amplifier
4. Current shunt and Voltage Series Feedback Amplifier
5. RC Phase Shift Oscillator
6. Class A Power Amplifier (Transformer less)
7. Class B Complementary Symmetry Amplifier

Part-B: Design and Implementation of the following circuits through hardware
(Minimum of Six Experiments to be conducted):

Any Three circuits from part-A
Any Three of the following

1. Darlington Pair
2. Hartley and Colpitt’s Oscillators
3. Class A Power Amplifier (with transformer load)
4. Class-B push-pull amplifier
5. Class C Tuned Power Amplifier

II B.Tech. - II semester
(16BT40433) **PULSE AND DIGITAL CIRCUITS LAB**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: A course on Pulse and Digital Circuits

COURSE DESCRIPTION:

Linear and non-linear Wave shaping circuits; Transistor switching times; UJT relaxation oscillator; sampling and logic gates; Design of Multivibrator circuits.

COURSE OUTCOMES: On successful completion of the course, students will be able to:

CO1. Apply the knowledge in different Pulse and digital circuits.
CO2. Analyze the characteristics of different Circuits like
- RC Low Pass and High pass Circuits
- Clipping and Clamping Circuits
- Sampling and Logic Gates

CO3. Design the circuits like Multi-vibrators, Sampling Gates, UJT Relaxation Oscillator,Bootstrap sweep circuit, Constant Current Sweep Generator using BJT.
CO4. Provide valid conclusions through the design and conduct of experiments, analysis and synthesis.
CO5. Apply conversion techniques for design of multivibrators.
CO6. Function effectively as an individual and as a member in a group in the area of pulseand digital circuits.
CO7. Communicate effectively to write report and design documentation in the area of pulse and digital circuits.

LIST OF EXERCISES:

PART – A

1. Linear wave shaping - High Pass and Low Pass RC Circuits.
2. Nonlinear wave shaping – Clippers and Clampers.
3. Transistor as a switch.
4. Schmitt Trigger.
5. UJT Relaxation Oscillator
6. Constant Current Sweep Generator using BJT.
7. Bootstrap sweep circuit.
8. Sampling Gates.
9. Characterization of CMOS Inverter.

PART – B (Design aspects included)

1. Bistable Multivibrator.
2. Monostable Multivibrator.
3. Astable Multivibrator.

III B.Tech. - I semester

(16BT3HS02) **MANAGERIAL ECONOMICS AND PRINCIPLES OF ACCOUNTANCY**

(Common to CE, EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:—

COURSE DESCRIPTION: Managerial Economics; Demand and Elasticity of Demand; Production Functions; Markets and Pricing Policies; Formation of different types of Business Organizations; Basic concepts of Accounting (Journal, Ledger and Trial balance); Trading Account, Profit and Loss Account and Balance sheet with simple adjustments; Computerized Accounting.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Acquire Knowledge in
- Tools and concepts of Micro Economics.
- Basic Principles and concepts of Accountancy.
- Provides life skills for effective utilization of scarce resources.
- Financial Accounting.
- Significance of Economics and Accountancy

CO2. Develop skills in managerial decision making of an organization.
CO3. Apply the Economic theories i.e., Demand, Production, Cost, Markets and Price.
CO4. Develop effective communication in Business and Accounting transactions.
CO5. Ascertain the profitability and soundness of an organization.
CO6. Practice Financial Accounting

DETAILED SYLLABUS:

UNIT – I:INTRODUCTION TO MANAGERIAL ECONOMICS, DEMAND ANALYSIS: (09 Periods)
Definition, Nature and Scope of Managerial Economics.**Demand:** Determinants of demand – Demand function - Law of demand, assumptions and exceptions - Elasticity of demand – Types of elasticity of demand - Demand forecasting and methods of demand forecasting.

UNIT – II:THEORY OF PRODUCTION AND COST ANALYSIS: (09 Periods)
Production Function: Isoquants and Isocosts – Input-output relationship - Law of returns.
Cost Concepts: Total, Average and Marginal Cost **-** Fixed vs. Variable costs – Opportunity Costs vs. Outlay Costs– Separable Costs vs. Joint Costs, Urgent Costs vs. Postponable Costs- Avoidable Costs vs. Unavoidable Costs - **Break Even Analysis (BEA)** – Assumptions, Merits and demerits - Determination of Break Even Point (Simple problems).

UNIT – III:INTRODUCTION TO MARKETS AND PRICING: (09 Periods)
Market Structure: Types of Markets - Features of perfect competition - Monopoly and monopolistic competition - Price and Output determination in perfect competition, monopoly and monopolistic Markets.
Pricing : Objectives and policies of pricing – Sealed bid pricing - Marginal cost pricing - Cost plus pricing - Going rate pricing – penetration Pricing –skimming Pricing - Block pricing – Peak load pricing - Cross subsidization.

UNIT – IV: INTRODUCTION TO PRINCIPLES OF ACCOUNTING AND CAPITAL: (09 Periods)
Accountancy: Introduction – Concepts – Conventions – Double Entry Book Keeping – Journal – Ledger - Trial Balance (Simple problems).
Capital : Significance - Types of capital – Sources of Capital.

UNIT – V:FINAL ACCOUNTS - COMPUTERIZATION OF ACCOUNTING SYSTEM: (09 Periods)
Introduction to Final Accounts - Trading account - Profit and Loss account and Balance Sheet with simple adjustments (Simple problems).
Computerization of Accounting System: Manual Accounting *Vs* Computerized Accounting – Advantages and Disadvantages of Computerized Accounting.

Total Periods: 45

TEXT BOOKS:
1. A.R. Aryasri, *Managerial Economics and Financial Analysis*, Tata McGraw Hill, New Delhi, 3rd Edition, 2007.
2. R.Cauvery, U.K. Sudhanayak, M. Girija and R. Meenakshi, *Managerial Economics*, S.Chand and Company, New Delhi, 2nd Edition, 2010.

REFERENCE BOOKS:
1. Varshaney and Maheswari, *Managerial Economics,* Sultan Chand and Sons, New Delhi, 19th Edition, 2005.
2. Ms. Samba Lalita, *Computer Accounting Lab Work*, 1st Edition, Kalyani Publishers, Ludhiana, 2009.

3. S.P. Jain and K.L. Narang, *Financial Accounting,* Kalyani Publishers, Ludhiana, 6th Edition, 2002.

III B.Tech. - I semester

(16BT50201) CONTROL SYSTEMS

(Common to EEE & ECE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:
Courses on Multivariable Calculus and Differential Equations, Transformation Techniques and Partial Differential Equations.

COURSE DESCRIPTION:
Concepts of control system, transfer function ofvarious physical systems, time response analysis, frequency responseanalysis, controller design, state space analysis.

COURSEOUTCOMES: On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on
- The concepts of open and closed loop control systems.
- Stability analysis in time and frequency domain.
- Controllers and compensators to meet the desired specifications.
- State variable techniques.

CO2. Analyze
- Timeand frequency response of second order systems.
- Stability analysis using root-locus, bode and Nyquist plots.
- Controllers and compensators to meet the desired response.
- State space representation from transfer function.

CO3. Design a compensator to meet the design specifications of control system.

CO4. Solve problems pertaining to control systems to provide feasible solutions inreal time environment.

CO5. Selectappropriate techniques to solve control system problems in relevance to industry.

CO6. Apply the conceptual knowledge of control systems in domestic and industrial applications.

DETAILED SYLLABUS:

UNIT-I: MATHEMATICAL MODELING OF SYSTEMS (11 Periods)
Introduction to control systems.Basic elements of control system – open loop and closed loop systems. Effect of feedback.Modeling of physical systems - electrical systems, mechanical systems, analogous systems, armature control and field control of DC motor, DC servomotor.Transfer function - block diagram reduction techniques, signal flow graph.

UNIT-II: TIME RESPONSE AND STABILITY ANALYSIS (13 Periods)
Various test signals and its importance. Time response of first and second order systems, Time-domain specifications, steady state response, steady state error and error constants, static and generalized error coefficients.Routh-Hurwitz stability criterion, Root locus technique- root locus diagram, rules to construct root loci, effect of pole zero additions on the root loci.

UNIT-III: FREQUENCY DOMAIN ANALYSIS (08 Periods)
Performance specifications in the frequency domain. Stability Analysis - Bode plot, Polar plot and Nyquist plot.

UNIT-IV: CONTROLLERS AND COMPENSATORS (06 Periods)
Introduction to controllers, effect of P, PI and PID controllers. Compensators - lag, lead, lead-lag compensator design using bode plot.

UNIT-V: STATE SPACE ANALYSIS (07 Periods)
Transfer function Vs. state space representation. Concepts of state, state variables and state model.Modeling of physical system in state space. Transfer function to state model and vice-versa.State transition matrix and its properties.Controllability and observability using Kalman's test.

Total Periods: 45

TEXT BOOKS:

1. A. Anand kumar, *Control Systems*, PHI learning Pvt. Ltd., 2ndEdition, 2014.

III B.Tech. - I semester

(16BT50401) DIGITAL COMMUNICATIONS

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Courses on Signals and Systems, Analog Communications & Probability and Stochastic Processes.

COURSE DESCRIPTION: Digitization techniques - PCM, DPCM, Delta modulation and Adaptive Delta Modulation; Digital Baseband and Passband signal transmission; Detection of Baseband and Passband signals and error probability; Information Theory - Source and channel coding techniques.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Apply knowledge in
- Elements of Digital Communication systems.
- Digitization techniques such as PCM, DPCM, DM and ADM
- Digital carrier modulation techniques
- Error Probability and detection of Baseband and Bandpass modulated signals
- Measure of information
- Source and Error Control Coding techniques.

CO2. Analyze different types of digital modulation schemes based on bit error probability.

CO3. Design methods for digital communications systems according to the required specifications like transmission power, bandwidth and SNR.

CO4. Solve problems using different coding techniques to improve error performance of Digital communication system.

CO5. Select appropriate coding techniques to improve transmission rates.

CO6. Apply the knowledge and skills to meet societal needs relevant to communication systems.

DETAILED SYLLABUS:

UNIT-I: PULSE DIGITAL MODULATION (10 Periods)

Elements of Digital Communication Systems; Advantages of Digital Communication Systems; Quantization of signals, Quantization error; Electrical representation of binary digits, Pulse Code Modulation (PCM);PCM System; Companding, Differential PCM, Delta Modulation and its drawbacks, Adaptive Delta Modulation.

UNIT-II: NOISE IN PULSE-CODE AND DELTA-MODULATION SYSTEMS (08 Periods)

PCM Transmission: Calculation of Quantization noise, Output Signal Power, Effect of thermal noise in PCM, Output Signal To Noise Ratio in PCM.

Delta Modulation: Quantization Noise in DM, Output signal power, Effect of thermal noise in DM, Output Signal To Noise Ratio in DM; Comparison of PCM and DM systems.

UNIT-III: DIGITAL MODULATION SCHEMES (12 Periods)

Base Band Data Transmission: Elements of Baseband Binary PAM Systems, Baseband Shaping, Correlative coding, Eye Pattern.

Band Pass Data Transmission: Introduction, Amplitude Shift Keying (ASK); Frequency Shift Keying (FSK); Phase Shift Keying (PSK); Quadrature PSK and M-ary PSK; Differential Phase Shift Keying (DPSK); M-ary QAM; Probability of error, Optimum filter, Matched filter, Correlator, Calculation of error Probability of ASK, PSK, FSK and QPSK.

UNIT-IV: INFORMATION THEORY (08 Periods)

Measure of Information, Source Encoding - Huffman coding, Shanon-Fano Coding; Error Free Communication over Noisy Channel, Channel Capacity of Discrete Memoryless Channel, Channel Capacity of Continuous Channel, Practical Communication Systems in light of Shannon's Equation.

UNIT-V: ERROR CORRECTION CODES (07 Periods)

Introduction, Linear Block codes, Cyclic Codes, Convolution Codes, Comparison of Coded and Uncoded Systems.

Total Periods: 45

TEXT BOOKS:

1. H. Taub and D. Schilling, *Principles of Communication Systems*, TMH, 2nd Edition, 2003.
2. B.P.Lathi, *Modern Digital and Analog Communication Systems,* Oxford reprint, 3rd Edition, 2004.

REFERENCE BOOKS:

1. Simon Haykin, *Digital communications*, John Wiley, 2005.
2. Sam Shanmugam, *Digital and Analog Communication Systems*, John Wiley, 2005.

3. R.P Singh and S.D Sapre, *Communication Systems Analog and Digital*, TMH, 2nd Edition, 2007.

III B.Tech. - I semester
(16BT50402) MICROPROCESSORS AND MICROCONTROLLERS

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:ACourse on Switching Theory and Logic Design.

COURSE DESCRIPTION:

Architecture, Instruction set and programming of 8086; Programmable interfacing devices - architecture and programming; Interfacing Memory and I/O devices with 8086; 8051 Microcontroller - Architecture, programming, interrupts and applications.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge in
- Internal hardware details of Intel 8086, 8051 and programmable devices like 8255, 8251, 8259, 8257.
- Interfacing various peripherals to build standalone systems.

CO2. Critically analyze the requirements to meet the specifications of microprocessors and microcontrollers based systems.

CO3. Design and develop suitable interfaces for real time applications.

CO4. Exhibit programming skills, choose suitable hardware and program the devices to solve Engineering problems.

CO5. Apply appropriate techniques, resources to complex engineering activities for modeling microcomputer and microcontroller based systems with understanding of limitations.

CO6. Apply concepts of microprocessors and microcontrollers for solving societal problems.

DETAILED SYLLABUS:

UNIT - I: 8086 ARCHITECTURE AND PROGRAMMING (10 Periods)

Microprocessor Evolution, Review of Intel 8085, 8086 internal Architecture - register organization, memory segmentation, memory organization; Introduction to programming the 8086 - Assembler directives, addressing modes, instruction set, simple programs, procedures and macros;

UNIT - II: 8086 INTERFACING AND INTERRUPTS (08 Periods)

Pin description, minimum & maximum mode operation of 8086, timing diagram. Interfacing memory (RAM and EPROM) to 8086. 8086 Interrupts - types and interrupt responses, Interrupt vector table, priority of interrupts; 8259 priority interrupt controller - architecture, system connections and cascading, initialization of 8529;

UNIT - III: PROGRAMMABLE DATA COMMUNICATION DEVICES (11 Periods)

Introduction to serial and parallel communication, methods of parallel data transfer. 8255 PPI - Internal architecture and system connections, operational modes and initialization, interfacing stepper motor, ADC, DAC, Optical Shaft Encoder; Methods of serial data transfer, 8251 USART - architecture and its initialization, sending and receiving characters; Serial communication standard - RS232C, USB; Architecture and operation of 8257 DMA controller.

UNIT - IV: MICROCONTROLLERS AND PROGRAMMING (08 Periods)

Microcontroller Vs. General purpose microprocessor, 8051/8052 Microcontroller – architecture, features, register organization, pin diagram, internal and external memories & their interfacing, instruction set, addressing modes, simple programs;

UNIT - V: 8051 INTERFACING (08 Periods)

Timer/Counters – Registers, modes and programming; Serial communication – registers, programming 8051 for serial communication; Interrupts – registers, programming; 8051 applications – Interfacing key board, LEDs and LCD;

Total Periods: 45

TEXT BOOKS:

1. Douglas V. Hall, *Microprocessors and Interfacing: Programming and Hardware,* Tata McGraw-Hill, revised 2nd Edition, 2006.
2. Muhammad Ali Mazidi and Janice Gillispie Mazidi, *The8051 Microcontroller and Embedded Systems,* Prentice Hall of India, 2000.

REFERENCE BOOKS:

1. A.K. Ray and K.M. Bhurchandi, *Advanced Microprocessors and Peripherals- Architecture, Programming and Interfacing,* Tata McGraw Hill, 2002 reprint.
2. Kenneth J. Ayala, *The 8051 microcontroller, Thomson Delmar learning,* 3rd Edition, 2004.

III B. Tech. I Semester
(16BT50403) **VLSI DESIGN**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES:
A Course on Digital IC Applications.

COURSE DESCRIPTION:
CMOS Technology; Stick Diagrams and Layouts; Subsystem design; Programmable Interconnect structures; Synthesis and Test Principles.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge in
- Understanding the Fabrication Process of MOS Transistors
- Electrical properties of CMOS Circuits
- Designing Static Combinational and Sequential logic at transistor level, including Mask layout.
- Estimating and optimizing combinational RC Circuit delay using RC delay models and logical effort.
- Design methodology and tools.
- Test Principles.

CO2. Analyze characteristics and performance of CMOS Circuits.
CO3. Design solutions for subsystems to compensate tradeoff between area, speed and power requirements.
CO4. Synthesize and extract information from designs and layouts for optimum solutions.
CO5. Select and apply appropriate designs to overcome the limitations of CMOS devices for high speed applications.
CO6. Assess test strategies for design and development of Integrated Circuits for societal needs.

DETAILED SYLLABUS:

UNIT-I: FABRICATION AND ELECTRICAL PROPERTIES OF MOS (10 Periods)
Basic Electrical Properties of MOS: Ids – Vds relationships, Threshold Voltage VT, gm-, gds and ù0; Pass Transistor, NMOS inverter, Pull up to pull down ratio for an NMOS inverter, CMOS Inverter, Fabrication Process for NMOS and CMOS technology.

UNIT-II: CMOS CIRCUIT DESIGN PROCESS (10 Periods)
VLSI design flow, MOS layers, stick diagrams, NMOS design style, CMOS design style, lambda based design rules, layouts for inverters, sheet resistance, capacitances of layers, Gate delays, Delay estimation, Limitations of Scaling.

UNIT-III: SUBSYSTEM DESIGN - I (08 Periods)
Adders – Transmission based Adder, Carry look-ahead adder, Manchester carry chain adder, Carry Skip Adder, Carry Select Adder; Barrel Shifter, Multipliers – Array Multiplier, Booth Multiplier; ALUs.

UNIT-IV: SUBSYSTEM DESIGN - II (09 Periods)
Counters- Synchronous and Asynchronous Counter; High Density Memory Elements - Design Approach, FPGAs, Programmable Interconnect structures - Fusible links, Antifuse via link, UV Erasable, Electrically Erasable; CPLDs, Cell based Design Methodology.

UNIT-V: LOW POWER DESIGN AND TESTING (08 Periods)
Need for Low Power VLSI Chips, Basic Principles Of Low Power Design, Low Power Techniques for SRAM, CMOS Testing, Need for testing, Test Principles, Design Strategies for test.

Total Periods: 45

TEXT BOOKS:

1. Kamran Eshraghian, Douglas A. Pucknell and Sholeh Eshraghian, *Essentials of VLSI Circuits and Systems*, PHI, 2005.
2. Weste and Eshraghian, *Principles of CMOS VLSI Design*, Pearson Education, 1999.

REFERENCE BOOKS:

1. Gary Yeap, *Practical Low-Power Digital VLSI Design*, Springer Publication, 1998.
2. John M. Rabaey, *Digital Integrated Circuits: A Design Perspective*, PHI, 2nd Edition, 1997.

3. Stephen Brown, Zvonko Vranesic, *Fundamentals of Digital Logic with VHDL Design*, TMH, 2007.

III B.Tech. - I semester

(16BT50404) ELECTRONIC MEASUREMENTS AND INSTRUMENTATION

(Interdisciplinary Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:—

COURSE DESCRIPTION:

Measurements and Measuring Systems; Signal Analyzers and Oscilloscopes; Transducers; Display Devices and Recorders; Data Acquisition Systems and Telemetry.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge in
- Working of measuring instruments
- Operating principles of various display and recording devices
- Various measurement techniques
- Errors in measurements and their rectification
- Transmitting techniques of various electrical and non-electrical quantities
- Application of digital techniques in development of instrumentation systems

CO2. Analyse and compare the performance of various measuring systems based on the response to the given inputs.

CO3. Design of basic electronic instruments according the required specifications.

CO4. Solve engineering problems using different transducers for measurement of an electrical or non-electrical quantity and establish the drawbacks of instruments.

CO5. Create effective and suitable techniques to overcome limitations of the instruments and display devices in measuring systems.

CO6. Apply the instrumentation technology to provide wide range of solutions for the problems of Societal, Health and Safety issues in real time world.

DETAILED SYLLABUS:

UNIT-I: MEASUREMENTS AND MEASURING SYSTEMS (10 Periods)

Static characteristics – Accuracy, Precision, Resolution, Sensitivity, measurement Errors; Dynamic Characteristics - Speed of response, fidelity, Lag, Dynamic error and Statistical Analysis; Basic meter movement; Ammeters – Multirange, Universal Shunt, Extending Ranges; DC voltmeters – Multirange, Range extension, Loading, Transistorized Voltmeter; AC voltmeters – Rectifier type, Thermocouple Type; Ohmmeters - Series type and Shunt type; Calibration of DC Instrument & Ohmmeter, Multimeter for Voltage, Current & Resistance measurements.

UNIT-II: TRANSDUCERS AND BRIDGES (10 Periods)

Transducers: Classification of Transducers; Measurement of Displacement (Resistance, Capacitance, Inductance, LVDT), Force (Strain Gauges), Pressure (Piezoelectric Transducers), Temperature (Resistance Thermometers, Thermocouples, Thermistors); Measurement of Velocity, Acceleration, Vibration, Moisture and pH value.

Bridges: Wheatstone bridge, Kelvin Bridge, Practical Kelvin's double bridge, Maxwell's bridge, Hay's bridge, Schering bridge, Wien Bridge, Anderson Bridge, Errors and precautions in using bridges, Q-meter.

UNIT-III: SIGNAL ANALYZERS AND OSCILLOSCOPES (12 Periods)

Signal Analyzers: Wave analyzers - Frequency Selective Wave Analyzer, Heterodyne Wave Analyzer, Application of Wave Analyzers, Harmonic Distortion Analyzers, Total Harmonic Distortion; Spectrum Analyzers – Basic Spectrum Analyzer, Spectral Displays, Spectra of Different Spectrum Analyzers.

Oscilloscopes: Oscilloscope Block diagram, Cathode Ray Tube, Vertical Deflection System, Delay Line, Horizontal Deflection System - Triggered Sweep, Delayed sweep; CRO Probes, Dual Beam & Trace CROs, Measurement of Amplitude, Frequency and Phase (Lissajous method), Sampling Oscilloscope, Analog Storage Oscilloscope, Digital Storage Oscilloscope.

UNIT-IV: DISPLAY DEVICES AND RECORDERS (07 Periods)

Display Devices: Segment Displays – Seven Segment Display, Dot Matrix Display; LCD Display, BCD to 7 Segment Converter, BCD to Dot Matrix Converter.

Recorders: Strip Chart Recorder and X-Y Recorder.

UNIT-V: DATA ACQUISITION SYSTEMS AND TELEMETRY (06 Periods)

Data Acquisition System: Generalized Data Acquisition System, Single and Multi-Channel DAS.

Telemetry: General Telemetry System, Types of Telemetry Systems, Land Line Telemetry Systems – Voltage, Current and Position Telemetering Systems; Introduction to Radio Frequency Telemetry.

Total Periods: 45

TEXT BOOKS:
1. A.D. Helfrick and W.D. Cooper, Modern *Electronic Instrumentation and Measurement Techniques*, PHI, 5th Edition, 2006.
2. A.K. Sawhney, *A Course in Electrical & Electronic Measurement and Instrumentation,* DhanpatRai& Company Private Limited, New Delhi, 18th Edition, 2007.

REFERENCE BOOKS:

1. David A. Bell, *Electronic Instrumentation & Measurements*, PHI, 2nd Edition, 2003.
2. H.S.Kalsi, *Electronic instrumentation,* TMH, 3rd Edition, 2015.

III B.Tech. - I semester

(16BT50501) COMPUTER NETWORKS

(Common to ECE, CSE, IT&CSSE)

(Interdisciplinary Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:—

COURSE DESCRIPTION:
Introduction to Computer Networks; The Physical Layer; The Data Link Layer; The Medium Access Control Sub layer; The Network Layer; The Transport Layer; The Application Layer.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on:
- Functionalities of Various OSI and TCP/IP layers
- 3G Mobile phone networks, 802.11
- TCP,UDP and SMTP

CO2. Analyze the issues related to data link, medium access and transport layers by using channel allocation and connection management schemes.

CO3. Design and compute subnet masks and addresses for networking requirements.

CO4. Solve problems related to Flow control, Error control, congestion control and Network Routing.

CO5. Apply Network Standards - 802.3 and 802.11 for developing computer Networks.

CO6. Assess the impact of wired and wireless Networks in the context of legal, safety, health and societal issues.

DETAILED SYLLABUS:

UNIT- I: INTRODUCTION AND PHYSICAL LAYER (09 Periods)
Introduction: Network Hardware, Network Software, Reference Models - OSI, TCP/IP; Example Networks – Internet; Wireless LANs - 802.11.
Physical Layer: Guided Transmission Media, Wireless Transmission.

UNIT- II: DATA LINK LAYER AND MEDIUM ACCESS CONTROL SUBLAYER (10 Periods)
Data Link Layer: Data Link Layer Design Issues, Error Detection and Correction-CRC, Hamming Codes, Elementary Data Link Protocols, Sliding Window Protocols.
Medium Access Control Sublayer: ALOHA, Carrier Sense Multiple Access Protocols, Collision-Free Protocols, Ethernet, Data Link Layer Switching- Repeaters, Hubs, Switches, Routers, and Gateways.

UNIT-III: NETWORK LAYER (10 Periods)
Network Layer Design Issues, Routing Algorithms - Shortest Path, Flooding, Distance Vector, Link State Routing, Hierarchical, Broadcast, Multicast, Anycast; Congestion Control Algorithms, Network Layer in the Internet - The IP Version 4 Protocol, IP Addresses, IP Version 6, Internet Control Protocols.

UNIT-IV: TRANSPORT LAYER (09 Periods)
Internet Transport Protocols: UDP – Segment Header, Remote Procedure Call, Real-Time Transport Protocols; TCP **–** Service Model, Protocol, Segment Header, Connection Establishment, Connection Release, Connection Management Modeling, Sliding Window, Timer Management, Congestion Control.

UNIT-V: APPLICATION LAYER (07 Periods)
Domain Name System (DNS)-Name Space, Domain Resource Records, Name Servers; Electronic Mail-Architecture and Services, User Agent, Message Formats, Message Transfer, Final Delivery; The World Wide Web- Architectural Overview, HTTP.

Total Periods: 45

TEXT BOOK:

1. Andrew S. Tanenbaum and David J. Wetherall, *Computer Networks,* Pearson Education, 5th Edition, 2015.

REFERENCE BOOKS:

1. Behrouz A. Forouzan, *Data Communication and Networking*, Tata McGraw-Hill, 4th Edition, 2010.
2. James F. Kurose and Keith W. Ross, *Computer Networking: A Top-Down Approach Featuring the Internet,* Pearson Education, 2nd Edition, 2012.

III B.Tech. - I semester

(16BT30501) COMPUTER ORGANIZATION

(Interdisciplinary Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:—

COURSE DESCRIPTION:

Basic structure and operation of a digital computer; Organization and functional principles of the arithmetic and logic unit, control unit, memory unit and I/O unit; Concepts of pipelining and parallel processing techniques;

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on:
- Computer Arithmetic units
- Register Transfer Language and Computer Instructions
- Design of Control Unit
- Input Output Organization and Memory system
- Pipelining and Multiprocessing.

CO2. Analyze the functional units of a digital computer.

CO3. Design the functional modules in a digital computer - Arithmetic Units, Memory and I/O.

CO4. Investigate the performance of memory, I/O, and pipelined processors.

CO5. Select appropriate techniques of I/O, Pipelining and Multiprocessing to solve computing problems.

CO6. Apply contextual knowledge of computer systems development to societal applications.

DETAILED SYLLABUS:

UNIT-I: REGISTER TRANSFER AND MICROOPERATIONS AND COMPUTER ARITHMETIC (09 Periods)

Register Transfer And Microoperations: Register transfer, Bus and memory transfers, Arithmetic microoperations, Logic microoperations, Shift microoperations, Arithmetic logic shift unit.

Computer Arithmetic: Fixed point representation, Floating point representation, Addition and subtraction, Binary multiplication algorithms, Binary division algorithms.

UNIT-II: BASIC COMPUTER ORGANIZATION AND DESIGN AND MICRO PROGRAMMED CONTROL (09 Periods)

Basic Computer Organization and Design: Instruction codes, Computer registers, Computer instructions, Instruction formats, Addressing modes, Timing and control, Instruction cycle, Memory reference instructions, Input - Output and Interrupt.

Micro Programmed Control: Control memory, Address sequencing, Design of control unit, Hardwired control, Microprogrammed control.

UNIT-III: INPUT-OUTPUT ORGANIZATION (08 Periods)

Peripheral devices, Input-Output interface, Modes of transfer, Priority interrupt, Direct Memory Access, Input-Output Processor (IOP), Serial communication.

UNIT-IV: THE MEMORY SYSTEM (10 Periods)

Semiconductor RAM memories – Internal organization, Static memories, Synchronous and Asynchronous DRAMs, Structure of larger memories, Memory system considerations, Rambus memory; Read-Only memories – ROM, PROM, EPROM, EEPROM, Flash memory; Cache memory – Mapping functions, Replacement algorithms; Performance considerations, Secondary storage – Magnetic disks, RAID disk arrays, Optical disks, Magnetic tape systems.

UNIT-V: PIPELINE AND VECTOR PROCESSING AND MULTIPROCESSORS (09 Periods)

Pipeline and Vector Processing: Parallel processing, Pipelining, Arithmetic pipeline, Instruction pipeline, Vector processing, Array processors.

Multiprocessors: Characteristics of multiprocessors, Interconnection structures, Inter-processor arbitration, Inter-processor communication and synchronization. **Total Periods: 45**

TEXT BOOKS:

1. Morris Mano, *Computer System Architecture*, 3rd Edition, Pearson Education, 2007.
2. Carl V. Hamacher, Zvonko G. Vranesic and Safwat G. Zaky, *Computer Organization*, 5th Edition, McGraw-Hill, 2002.

REFERENCE BOOKS:

1. William Stallings, *Computer Organization and Architecture: Designing For Performance*, 7th Edition, Pearson Education, 2007.
2. John P. Hayes, *Computer Architecture and Organization*, 3rd Edition, McGrawHill.

III B.Tech. - I semester

(16BT51241) OBJECT ORIENTED PROGRAMMING

(Common to ECE&EIE)

(Interdisciplinary Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:—

COURSE DESCRIPTION: Introduction of Java, Classes and Objects; Inheritance, Packages, Interfaces; Exception handling, Multithreading; Event handling, AWT, Collection Classes; Applets, Servlets.

COURSE OUTCOMES:
On successful completion of thecourse, students will be able to:

CO1. Demonstrate knowledge on:
- Object Oriented Programming concepts - classes, objects, inheritance, polymorphism, encapsulation and abstraction.
- Packages, interfaces, multithreading, exception handling, event handling.

CO2. Analyze complex engineering problems using object oriented concepts.
CO3. Design and develop reusable code to provide effective solutions for real world problems using inheritance and polymorphism.
CO4. Apply AWT and Applets to create interactive Graphical User Interfaces.
CO5. Use advanced programming languages to develop web applications.
CO6. Build Java Applications suitable for societal requirements.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION OF JAVA LANGUAGE (12 Periods)
Data types, Variables, Arrays, Operators, Control statements.
Classes and Objects: Concepts of Classes, Objects, Constructors, Methods, this keyword, Garbage collection, Overloading Methods and Constructors, Parameter passing, Access control, Recursion, String Class.

UNIT-II: INHERITANCE, PACKAGES AND INTERFACES (07 Periods)
Inheritance: Inheritance basics, Super Keyword, Multi-level hierarchy, Abstract classes, final Keyword with inheritance.
Packages: Definition, Creating and Accessing a package, Understanding CLASSPATH, Importing packages.
Interfaces: Definition, implementing interfaces, Nested interfaces, Applying interfaces, Variables in interface and Extending interfaces.

UNIT-III: EXCEPTION HANDLING AND MULTITHREADING (09 Periods)
Exception Handling: Concepts of exception handling, Exception Types, Usage of try, catch, throw, throws and finally, Built in exceptions, Creating own exception sub classes.
Multithreading: Java thread model, Creating threads, Thread priority, Synchronizing threads,Inter-thread communication.

UNIT-IV: COLLECTION CLASSES, THE APPLET CLASS AND AWT (09 Periods)
The Collection Classes: ArrayList Class, LinkedList Class, HashSet Class, LinkedHashSet Class, TreeSet Class, PriorityQueue Class, EnumSet Class.
The Applet Class: Types of applets, Applet Basics, Applet Architecture, Applet Skeleton, Passing Parameters to Applets.

The AWT Control Fundamentals, User interface components, Layout managers.

UNIT-V: EVENT HANDLING AND SERVLETS (08 Periods)
Delegation event model: Event Classes, Event Listener Interfaces – Mouse and Key; Adapter classes.
Servlets: Life Cycle of a Servlet, Using Tomcat for Servlet Development, Create and compile the servlet source code, Servlet API, Javax.Servlet package.

Total Periods: 45

TEXT BOOK:

1. Herbert Schildt, *Java the Complete Reference*, Oracle Press, 9thEdition, 2014.

REFERENCE BOOK:

1. Sachin Malhotra, Saurab Choudhary, *Programming in Java*, Oxford University Press, 2ndEdition, 2014.

III B.Tech. - I semester
(16BT50431) LINEAR AND DIGITAL IC APPLICATIONS LAB

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: Courses on Linear IC Applications and Digital IC Applications.

COURSE DESCRIPTION: Design and verification of Op-Amp applications; Timers; Voltage regulator; ADC and DAC; Simulation and synthesis of combinational and sequential circuits; XILINX tools.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge in different Linear and Digital integrated circuits applications and XILINX tools.
CO2. Analyzedifferentcircuits built with linear and digital ICs.
CO3. Design different multivibrator circuits, filters and digital circuits.
CO4. Conduct of experiments, analysis and interpretation of data, and synthesis of the information to provide valid solutions.
CO5. Model a Linear and Digital integrated circuits using HDL tools.
CO6. Function effectively as an individual and as a member in a group in the area of IC applications.
CO7. Communicate in verbal and written form in the area of IC applications.

LIST OF EXERCISES:

PART A: Linear IC Applications: (Minimum of **six experiments** to be conducted)

1. Op-Amp Applications-Adder, Subtractor and Comparator circuits.
2. Active Filter Applications-LPF, HPF (first and second order).
3. Function Generator using Op-Amps.
4. IC 555 Timer-Monostable and Astable Multivibrators.
5. IC 566-VCO Applications.
6. Voltage Regulator using IC 723.
7. 4 Bit ADC and DAC.
8. Precision Rectifier using Op-Amp.

PART B: **Digital IC Applications:** (Minimum of **six experiments** to be conducted)

Simulate the internal structure of the following Digital IC's using HDL and verify the operations of the Digital IC's (Hardware) in the Laboratory.

1. Half Adder, Full Adder, Half Subtractor & Full Subtractor.
2. 8-3 Encoder-74x148.
3. 3-8 Decoders -74x138.
4. 8x1 Multiplexer -74x151 and 2x4 Demultiplexer -74x155.
5. 4 Bit Comparator-74x85.
6. Decade counter-74x90.
7. Universal shift Register – 74X194/195

III B.Tech. - I semester
(16BT50432) MICROPROCESSORS AND MICROCONTROLLERS LAB

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: A course on Microprocessors and Microcontrollers.

COURSE DESCRIPTION:
Assembly language Programming for Intel 8086 & 8051; Interfacing standard peripherals & Programming-DAC, Stepper Motor, ADC, Logic Controller, Keyboard, Seven Segment Display.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge in various aspects of microprocessors, microcontrollers and interfaces.
CO2. Analyze various programming alternatives, interfacing methods & usage of various on-chip resources like Timers, Interrupts, ADC, DAC, and Stepper Motor to build standalone systems.
CO3. Design and develop microcomputer based systems to suit to market requirements.
CO4. Solve engineering problems by proposing potential solutions using microprocessors and microcontrollers.
CO5. Apply appropriate techniques, resources, and tools for modeling microcomputer based systems with understanding of limitations.
CO6. Apply concepts of microprocessors and microcontrollers to solve societal problems.
CO7. Work individually and in a group to develop microcomputer based systems.
CO8. Communicate effectively in oral and written form in the field of microprocessors and microcontrollers.

LIST OF EXERCISES:
(Minimum of **TWELVE** experiments to be conducted)

I Programs using 8086

1. Introduction to MASM/TASM
2. Arithmetic operations
3. Logic operations
4. String operations
5. Modular program: using procedure & DOS/BIOS Programming

II Interfacing with 8086

1. Stepper motor
2. Logic controller
3. A/D converter
4. D/A Converter.
5. Seven segment display
6. Keyboard interfacing

III Programs using 8051

1. Arithmetic operations using internal and external memory.
2. Logical Operations.
3. Programs using special instructions like SWAP, bit/byte, set/ reset etc.

IV Interfacing with 8051

1. Square wave generation using Timers in Mode 0 and Mode 1
2. Stepper Motor
3. Digital to Analog Converter

III B.Tech. - I semester

(16BT4HS31) **SOFT SKILLS LAB**

(Common to EEE, ECE&EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES:

English Language Laboratory in I B.Tech or English Laboratory at Diploma Level.

COURSE DESCRIPTION:

This course coversBody Language; Assertiveness; Goal Setting; Creative Thinking; Interpersonal Skills; Team Work; Conflict Management; Etiquette; Report Writing; Group Discussions; Interviewing Skills.

COURSE OUTCOMES:

On successful completion of the course,students will be able to:

CO1. Acquire knowledge in
- Goal Setting
- Creative Thinking
- Leadership Skills and
- Team Work

CO2. Analyse the situations and develop skills for
- Body Language
- Personality Development and
- Stress Management

CO3. Apply the techniques of soft skills in a problem situation enhanced through multimedia software.

CO4. Function effectively as an individual and as a member in diverse teams.

CO5. Communicate effectively in public speaking in formal and informal forums.

LIST OF EXERCISES:

1. Body Language
2. Assertiveness
3. Goal Setting
4. Creative Thinking
5. Interpersonal Skills
6. Team Work
7. Conflict Management
8. Etiquette
9. Report Writing
10. Resume Writing
11. Group Discussions
12. Interviewing Skills

Total Lab Slots: 10

REFERENCE BOOKS:

1. R. C. Sharma & Krishna Mohan, *Business Correspondence and Report Writing*, Tata McGraw-Hill Publishing Company Limited, Third Edition, New Delhi, 2012.
2. Gopalswamy Ramesh and Mahadevan Ramesh, *The Ace of Soft Skills*, Pearson, Noida, 2010.
3. Jeff Butterfeild, *Soft Skills for Everyone, Cengage learning*, Delhi, 2011.
4. Barun K. Mitra, *Personality Development and Soft Skills*, Oxford University Press, Noida, 2012.

SUGGESTED SOFTWARE:

1. ETNL Language Lab Software Version 4.0
2. GEMS – Globarena E- Mentoring System
3. Speech Solutions.
4. English Pronunciation Dictionary by Daniel Jones.
5. Learning to Speak English 8.1, The Learning Company –4 CDs.
6. Mastering English: Grammar, Punctuation and Composition.
7. English in Mind, Herbert Puchta and Jeff Stranks with Meredith Levy, Cambridge.
8. Dorling Kindersley Series of Grammar, Punctuation, Composition etc.
9. Language in Use 1, 2 & 3.
10. Cambridge Advanced Learner's Dictionary - 3rd Edition.
11. Centronix – Phonetics.

12. Let’s Talk English, Regional Institute of English South India.
13. Ultimate English Tutor.

III B.Tech. - II semester

(16BT5HS01) MANAGEMENT SCIENCE

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:—

COURSE DESCRIPTION: Concepts of Management; Environmental Scanning; Concepts Related to Organization; Operations Management; Work Study; Statistical Quality Control; Inventory Management; Marketing; Human Resource Management; Project Management; Project Crashing; Entrepreneurship; Contemporary Management Practices.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate the concepts of operations management, human resources management, project management and contemporary management practices in managerial context.

CO2. Identify and analyse management problems in the business organizations reaching substantiated conclusions using principles of management.

CO3. Design appropriate organization structure for meeting the needs of the organization with consideration of the employees of the organization.

CO4. Competently employ broad based analytical tools for decision making, system design, analysis and performance.

CO5. Provide solution to organizations for sustainable development.

CO6. Apply knowledge of engineering and management principles to manage the projects in multidisciplinary environments.

DETAILED SYLLABUS:

UNIT- I: INTRODUCTION TO MANAGEMENT AND ORGANIZATION (09 Periods)

Concepts of management and Administration, Nature and Importance of management, Evolution of management thought, Functions of management, Contributions of F.W. Taylor and Henry Fayol to the management, Systems approach to management, Managerial skills, Elements of corporate planning process, Environmental scanning, SWOT Analysis, Social responsibilities of management.

Basic concepts related to organization, Objectives and Principles, Types of organizations- Line Organization, Line and Staff Organization, Functional Organization, Matrix Organization, Network organization.

UNIT- II: OPERATIONS MANAGEMENT (12 Periods)

Plant location- Factors and Principles; Plant Layout- Principles and Types; Methods of production, Work study- Basic procedure involved in method study and work measurement; Statistical Quality Control- Factors affecting quality, Control charts for variables and attributes, Acceptance sampling; Materials management- objectives, Inventory- Types of inventory, Classical EOQ model, ABC analysis; Purchase procedure, Stores management, Marketing- Functions, Channels of distribution.

UNIT-III: HUMAN RESOURCE MANAGEMENT (HRM) (06 Periods)

Nature and scope of HRM, Functions of HRM, Role of HR Manager in an organization, Job evaluation, Merit rating, Maslow’s hierarchy of human needs, McGregor’s theory X and theory Y, Herzberg’s two-factor theory of motivation.

UNIT-IV: PROJECT MANAGEMENT (PERT/CPM) AND ENTREPRENEURSHIP (09 Periods)

Network analysis - Critical path method (CPM), Program evaluation and review technique (PERT); Project cost analysis - Project crashing.

Introduction to Entrepreneurship, Entrepreneurial Traits, Entrepreneur vs. Manager, Role of Entrepreneurship in Economic Development, Women as an Entrepreneur.

UNIT-V: CONTEMPORARY MANAGEMENT PRACTICES (09 Periods)

Basic concepts of Material Requirements Planning, Enterprise resource planning (ERP), Just In Time (JIT) system, Total Quality Management (TQM), Value Chain Analysis, Business Process Outsourcing (BPO), Globalization, Management Challenges, Supply Chain Management (SCM), Role of Information Technology in managerial decision making, Six Sigma Concept, Maintenance Strategies- Preventive, Periodic and Breakdown Maintenance.

Total Periods: 45

TEXT BOOKS:

1. O.P. Khanna, *Industrial Engineering and Management*, Dhanpat Rai and Sons, 2010.
2. Martand T.Telsang, *Industrial Engineering and Production Management*, S. Chand, 2nd Edition, 2006.

REFERENCE BOOKS:

1. Koontz and Weihrich, *Essentials of Management*, TMH, 6th Edition, New Delhi, 2007.
2. N.D. Vohra, *Quantitative Techniques in Management*,TMH, 2nd Edition, New Delhi.

III B.Tech. - II semester

(16BT60401) ANTENNAS AND WAVEGUIDES

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:ACourse on Electro Magnetic Theory and Transmission Lines.

COURSE DESCRIPTION:

Waveguides, Antenna Parameters; Wire antennas; Antenna Arrays; VHF, UHF and Microwave antennas; Antenna Measurements.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Apply the knowledge of fundamentals in antenna theory and waveguides.
CO2. Analyze the characteristics and performance of different antennas and waveguides.
CO3. Design and develop various antennas.
CO4. Provide solutions through different antenna designs.
CO5. Apply appropriate techniques, resources to complex engineering activities in the field of antennas.
CO6. Apply contextual knowledge for design of antennas with required radiation levels for communication needs meeting the public health and safety conditions.

DETAILED SYLLABUS:

UNIT-I: WAVEGUIDES (09 Periods)

Introduction, Rectangular waveguides-Solutions of wave equations in rectangular coordinates, TE and TM modes analysis, Expressions for fields, Characteristic equation and cutoff frequencies, Filter characteristics, Dominant and degenerate modes, sketches of TE and TM mode fields in the cross section; Mode characteristics – Phase and group velocities, Wavelengths and impedance relations, Power transmission and power losses; Micro strip lines-Introduction, ZO relations, Effective dielectric constant, Losses, Q-factor, Illustrative Problems.

UNIT-II: ANTENNA BASICS AND THIN LINEAR WIRE ANTENNAS (10 Periods)

Introduction, Radiation mechanism, Antenna parameters - patterns, Beam Area, Radiation Intensity, Beam Efficiency, Directivity-Gain-Resolution, Antenna Apertures, Effective height; Antenna Field Zones, Antenna theorems, Friis transmission equation, Retarded potentials, Radiation from small electric dipole, Quarter wave monopole and half wave dipole - Current distributions, Field components, Radiated power, Radiation resistance, Beam width, Directivity, Effective area and Effective height; Natural current distributions, far-fields and patterns of Thin linear center-fed antennas of different lengths, Illustrative problems.

UNIT-III: ANTENNA ARRAYS (10 Periods)

Point sources- Definition, Patterns, arrays of 2 isotropic sources different cases; Principle of pattern multiplication, Uniform linear arrays - Broadside arrays, End fire arrays, EFA with increased directivity, Derivation of their characteristics and comparison, BSA with non-uniform amplitude distribution - General considerations and Binomial arrays, Arrays with parasitic elements, Yagi-Uda arrays, Folded dipoles & their characteristics, Illustrative problems.

UNIT-IV: VHF, UHF AND MICROWAVE ANTENNAS (10 Periods)

Helical Antennas - Helical geometry, Helix modes, Practical design considerations for monofilar helical antenna in axial and normal modes ,Horn antenna,Microstrip antennas - Introduction, Features, Advantages and limitations; Rectangular patch antennas - Geometry and parameters, characteristics of microstrip antennas, Impact of different parameters on characteristics; Reflector antennas- Introduction, Flat sheet and corner reflectors, Paraboloidal reflectors - Geometry, Pattern characteristics, Feed methods, Reflector types, Illustrative problems.

UNIT-V: ANTENNA MEASUREMENTS (06 Periods)

Introduction, Concepts- Reciprocity, Near and far fields, Coordination system, Sources of errors, Pattern measurement arrangement, Measurement of Directivity, Gain(by comparison, Absolute and 3-Antenna Methods), Radiation pattern.

Total Periods: 45

TEXT BOOKS:

1. John D. Kraus and Ronald J. Marhefka and Ahmad S.Khan, *Antennas and wave propagation*, 4th Edition (Special Indian Edition), TMH, New Delhi, 2010.
2. Samuel Y. Liao, *Microwave devices and circuits,* Pearson Education, 3rd Edition, 2003

REFERENCE BOOKS:

1. C.A. Balanis, *Antenna Theory*, 2nd Edition, John Wiley & Sons, 2001.

2. E.C. Jordan and K.G. Balmain, *Electromagnetic Waves and Radiating Systems*, 2nd Edition, PHI, 2000.

III B.Tech. - II semester

(16BT60402) DIGITAL SIGNAL PROCESSING

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: A course on Signals and Systems.

COURSE DESCRIPTION:
Continuous and discrete signals and sequences; systems**;** DFT and FFT algorithms for the analysis of discrete sequences; design and realization of Digital IIR and FIR filters; DSP processors and architectures.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Apply the knowledge of fundamentals in
- Frequency analysis of signals and systems.
- DFT and FFT transforms.
- Analog & Digital Filter Design.
- Digital Filter Realization.
- DSP Processors.

CO2. Analyze numerical and analytical problems of discrete time signals and systems in frequency domain using Transforms.

CO3. Design and develop digital filters to optimize system performance and their realization.

CO4. Interpret and synthesize the response of Digital filters to validate their characteristics.

CO5. Apply appropriate techniques and algorithms to design digital signal processing systems with an understanding of limitations.

DETAILED SYLLABUS:

UNIT I – INTRODUCTION TO DIGITAL SIGNAL PROCESSING (10 Periods)
Discrete-time signals and systems, Linear shift invariant, Stability and Causality, Linear constant coefficient difference equations, solution for difference equations using Z-transforms, Frequency analysis of signals - Fourier series and Fourier transform of Discrete time signals; Frequency domain representation of Discrete Time Systems.

UNIT II – DISCRETE AND FAST FOURIER TRANSFORMS (09 Periods)
Discrete Fourier Transform, properties of DFT, linear filtering methods based on DFT, Relationship of FT to Z Transform.

Fast Fourier transforms (FFT): Radix-2 Decimation in time (DIT) and Decimation in frequency (DIF) FFT algorithms, Inverse FFT.

UNIT III – IIR DIGITAL FILTERS (10 Periods)
Design of IIR digital filters from analog filters-IIR filter design by approximation of derivatives, impulse invariance and bilinear transformation. Characteristics of common use analog filters, Frequency transformations. Structural realization of IIR systems-direct, cascade and parallel form structures, Transposed form.

UNIT IV – FIR DIGITAL FILTERS (09 Periods)
Symmetric and anti-symmetric FIR filters, Design of linear phase FIR digital filters using windowing techniques, Frequency sampling technique, Comparison of IIR and FIR filters. Structural realization of FIR filters-direct, cascade-form structures and linear phase structures.

UNIT V – INTRODUCTION TO DSP PROCESSORS (08 Periods)
Introduction to programmable DSPs: Multiplier and Multiplier Accumulator (MAC), Modified Bus Structures and Memory Access schemes in P-DSPs, Multiple access memory, multi-ported memory, VLIW Architecture, Pipelining, Special addressing modes, On-Chip Peripherals.

Architecture of TMS 320C6X: Introduction, Features of 'C6X Processors, Internal Architecture, CPU, General-Purpose Register Files, Functional Units and Operation, Data Paths, Control Register File.

Total Periods: 46

TEXT BOOKS:
1. John G. Proakis, Dimitris G. Manolakis, *Digital Signal Processing, Principles, Algorithms and Applications*, Pearson Education/PHI, 4th Edition, 2007.
2. B.Venkataramani, M. Bhaskar, *Digital Signal Processors– Architecture, programming and Applications,* TATA McGraw Hill, 2nd Edition, 2010

REFERENCE BOOKS:
1. Alan.V. Oppenheim, Ronald.W. Schafer, John R Buck, *Discrete Time Signal Processing,* Prentice Hall, 2nd Edition, 2006.
2. Tarun Kumar Rawat, *Digital Signal Processing*, Oxford University Press, 1st Edition, 2015 .

III B.Tech. - II semester

(16BT40502) DATABASE MANAGEMENT SYSTEMS

(Interdisciplinary Elective-2)

(Common to CE & ECE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:—

COURSE DESCRIPTION:

Database Systems; Database Design; Relational Model; SQL Queries, Constraints and Triggers; Schema Refinement and Normal Forms; Transaction Management; Concurrency Control; Overview of Storage and Indexing.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. Demonstrate knowledge on Data models and Database Languages
- Database design
- Normal forms
- Storage and Indexing

CO2. Analyze databases using normal forms to provide solutions for real time applications.

CO3. Design solutions for database problems using database design, views design and framing queries.

CO4. Use database techniques for designing databases, managing databases and its security.

CO5. Select SQL, Hash based Indexing and Tree based Indexing to manage data in databases.

CO6. Apply contextual knowledge to develop database applications related to societal issues.

DETAILED SYLLABUS:

UNIT- I: INTRODUCTION TO DATABASE SYSTEMS AND DATABASE DESIGN (09 Periods)

Database Systems: Database System Applications, Purpose of Database Systems, View of Data-Data Abstraction, Instances and Schemas, Data Models; Database Languages - DDL, DML; Database Architecture, Database Users and Administrators.

Database design: ER diagrams, Beyond ER design, Entities, Attributes and Entity Sets, Relationships and Relationship sets, Additional features of ER model, Conceptual Design with ER model.

UNIT II: THE RELATIONAL MODEL AND RELATIONAL ALGEBRA AND CALCULUS (08 Periods)

Relational Model: Integrity Constraints over Relations, Enforcing Integrity constraints, Querying relational data, Logical database Design, Introduction to Views, Destroying/altering Tables and Views.

Relational Algebra and Calculus: Preliminaries, Relational Algebra Operators; Relational Calculus - Tuple and Domain Relational Calculus; Expressive Power of Algebra and calculus.

UNIT III: SQL AND SCHEMA REFINEMENT (10 Periods)

SQL: Form of Basic SQL Query- Examples of Basic SQL Queries; Nested Queries- Introduction to Nested Queries, Correlated Nested Queries, Set- Comparison Operators; Aggregate Operators, NULL values-Comparison using Null values, Logical connectives AND, OR and NOT, Impact on SQL Constructs, Outer Joins, Disallowing NULL values; Complex Integrity Constraints in SQL ,Triggers and Active Databases.

Schema Refinement: Problems Caused by redundancy, Decompositions, Problem related to decomposition, Functional Dependencies, Reasoning about FDS, Normal Forms – First, Second and Third Normal forms, BCNF; Multi valued Dependencies, Fourth Normal Form, Join Dependencies, Fifth Normal form.

UNIT IV: TRANSACTIONS AND CONCURRENCY CONTROL (09 Periods)

Transactions: Transaction Concept, Transaction State, Implementation of Atomicity and Durability, Concurrent Executions, Serializability, Recoverability, Implementation of Isolation, Testing for serializability.

Concurrency Control: Lock Based Protocols, Timestamp Based Protocols, Validation Based Protocols, Multiple Granularity, Deadlock Handling.

UNIT V: STORAGE AND INDEXING (09 Periods)

Storage and Indexing: Data on External Storage, File Organization and Indexing – Clustered Indexes, Primary and Secondary Indexes; Index data Structures – Hash Based Indexing, Tree based Indexing; Comparison of File Organizations.

Tree Structured Indexing: Intuition for Tree Indexes, Indexed Sequential Access Method (ISAM), B+ Trees- A Dynamic Index Structure; Search, Insert, Delete;B-Tree Index files. **Total Periods: 45**

TEXT BOOKS:

1. Raghu Ramakrishnan and Johannes Gehrke, *Database Management Systems*, Tata McGraw Hill, 3rd Edition, 2014.
2. A. Silberschatz, H.F.Korth and S. Sudarshan, *Database System Concepts*, Tata McGraw Hill, 5th Edition, 2006.

REFERENCE BOOKS:

1. Ramez Elmasri and Shamkant B. Navathe, *Database Systems*, 6th Edition, Pearson Education, 2013.
2. Peter Rob and Carlos Coronel, *Database Systems Design, Implementation and Management,*Cengage Learing, 7th Edition, 2009.

III B.Tech. - II semester

(16BT71205) CRYPTOGRAPHY AND NETWORK SECURITY

(Interdisciplinary Elective-2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:—

COURSE DESCRIPTION: Principles and Practice of Cryptography and Network Security; Classical Systems; Symmetric Block Ciphers; Public-key Cryptography; Hash Functions; Authentication; Key Management; Key Exchange; Signature Schemes; E-mail; Web Security; Malicious Software; Intrusion Detection; Phishing and Identity Theft.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on:
- Cryptographic algorithms and their mathematical models
- Message Authentication
- Digital Signatures
- Malicious Software
- Intrusion Detection
- Phishing and Identity Theft

CO2. Analyze vulnerabilities and threats on information systems based on various security parameters

CO3. Apply security and privacy methods to protect and prevent cyber crimes

CO4. Solve information privacy issues using encryption and digital signatures

CO5. Use firewall and PGP to protect network and e-mail respectively

CO6. Follow standards in implementation of network security

DETAILED SYLLABUS:

UNIT-I: CLASSICAL ENCRYPTION TECHNIQUES (08 Periods)

Introduction: Services, Mechanisms, and Attacks Concepts, The OSI Security Architecture, Model for Network Security.

Classical Encryption Techniques: Symmetric Cipher Model, Substitution Techniques- Ceaser Cipher, Hill Cipher, Poly and Mono Alphabetic Cipher, Transposition Techniques.

UNIT-II: BLOCK CIPHERS AND PUBLIC-KEY CRYPTOGRAPHY (09 Periods)

Block Ciphers and the Data Encryption Standard: Block Cipher Principles, The Data Encryption Standard (DES), The Strength of DES, Block Cipher Design Principles, Block Cipher Modes of Operation.

Public-Key Cryptography: Principles of Public-Key Cryptosystems, the RSA Algorithm, Diffie-Hellman Key Exchange.

UNIT-III: MESSAGE AUTHENTICATION CODES, HASH FUNCTIONS, AND DIGITAL SIGNATURES (09 Periods)

Message authentication codes: Message Authentication Requirements, Message Authentication Functions, Message Authentication Codes, Hash Functions, Security of Hash Functions and MACs, Hash algorithms-SHA, HMAC.

Digital Signatures: Digital Signatures and The Indian IT Act, Digital Signature Standard (DSS), Authentication applications- Kerberos.

UNIT-IV: ELECTRONIC MAIL SECURITY, IP SECURITY AND WEB SECURITY (09 Periods)

Electronic Mail Security: Pretty Good Privacy (PGP).

IP Security: IP Security Overview, Architecture, Authentication Header, Encapsulating Security Payload, Combining Security Associations.

Web Security: Web security Considerations**,** Secure Sockets Layer (SSL),Transport Layer Security (TLS), Secure Electronic Transaction.

UNIT-V: MALICIOUS SOFTWARE, INTRUSION DETECTION, PHISHING AND IDENTITY THEFT (10 Periods)

Malicious Software: Spywares, Viruses and Worms, DoS and DDoS attacks and Countermeasures.

Intrusion Detection: Key loggers,Intrusion Detection, Password Management-Password Protection, Password selection; Firewall Design Principles, Trusted Systems.

Phishing and Identity Theft: Proxy Servers, Anonymizers, Phishing and Identity Theft (ID Theft).

Total Periods: 45

TEXT BOOKS:

1. William Stallings, *Cryptography and Network Security Principles and Practice,*Pearson Education, 4th Edition, 2010.

2. Nina Gobole, Sunit Belapure, *Cyber Security: Understanding Cyber Crimes, Computer Forensics and Legal Perspectives*, Wiley India, 2011.

REFERENCE BOOK:

1. Behrouz A Forouzan and Debdeed Mukhopadhyay, *Cryptography and Network Security*, McGraw Hill Education, 2ndEdition, 2010.

III B.Tech. - II semester

(16BT31501) OPERATING SYSTEMS

(Interdisciplinary Elective-2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:—

COURSE DESCRIPTION: Operating systems operations, scheduling; Critical section problem, deadlocks; Paging, segmentation; File Concept, Disk scheduling; I/O interface; concepts of protection.

COURSE OUTCOMES:

On Successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on Operating system operations, services, file management, disk management, I/O management and protection.

CO2. Identify the functionality involved in process management concepts like scheduling and synchronization.

CO3. Design models for handling deadlock and perform memory management.

CO4. Synthesize and apply programming API's to perform Process management.

CO5. Use appropriate protection tools to provide access control to Operating system users.

DETAILED SYLLABUS:

UNIT I: OPERATING SYSTEMS OVERVIEW AND PROCESS MANAGEMENT (08 Periods)

Operating systems, operations, Distributed systems, Special purpose systems, Operating systems services, Systems calls, Operating system structure.

Process Management: Process scheduling, Process Control Block, Inter process communication, Signals, Forks, Multithreading models, Threading issues, Scheduling criteria, Scheduling algorithms, Multilevel queue, Multilevel feedback queue.

UNIT II: SYNCHRONIZATION AND DEADLOCKS (10 Periods)

Synchronization: The critical-section problem, Peterson's Solution, Synchronization hardware, Semaphores, Classic problems of synchronization, Monitors.

Deadlocks: System model, Deadlock characterization, Methods for handling deadlocks, Deadlock prevention, Deadlock detection, Deadlock avoidance, Deadlock recovery.

UNIT III: MEMORY MANAGEMENT (09 Periods)

Memory-Management Strategies: Swapping, Contiguous memory allocation, Paging, Structure of the page table, Segmentation.

Virtual Memory Management: Demand paging, Copy-on-Write, Page replacement Algorithms, Thrashing.

UNIT IV: STORAGE MANAGEMENT (10 Periods)

File System: File Concept, Access methods, Directory structure, File system structure, i-node, File Descriptors, File system implementation, Directory implementation, Allocation methods.

Secondary Storage Structure: Disk structure, Disk attachment, Disk scheduling, Swap-space management, Stable-storage implementation, Tertiary storage structure.

UNIT V: I/O SYSTEMS AND PROTECTION (08 Periods)

I/O Systems: I/O Hardware, Application I/O interface, Kernel I/O subsystem.

Protection: Goals of protection, Principles of protection, Domain of protection, Access matrix, Implementation of access matrix, Access control, Revocation of access rights.

Total Periods: 45

TEXT BOOK:

1. Abraham Silberschatz, Peter Baer Galvin and Greg Gagne, *Operating System Principles*, Wiley India Edition, 7th Edition, 2011.

REFERENCE BOOKS:

1. William Stallings, *Operating Systems, Internals and Design Principles,* Pearson Education, 7th Edition, 2013.
2. Andrew S. Tanenbaum, *Modern Operating Systems*, PHI, 3rd Edition, 2009.

III B.Tech. - II semester

(16BT61241) WIRELESS SENSOR NETWORKS

(Interdisciplinary Elective-2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:—

COURSE DESCRIPTION: WSN architecture, types; Physical Layer;MAC protocols;Routing related Protocols; QoS in WSNs.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrateknowledge on:
- Wireless Sensor Networks
- Physical layer
- Data link layer
- Network layer
- Transport layer

CO2. Analyze various design issues related to Data link, network and transport protocols of wireless sensor network architectures.

CO3. Solve complex engineering problems pertaining to the field of wireless sensor networks.

CO4. Design and develop feasible and optimal wireless sensor networks based solutions for societal use.

DETAILED SYLLABUS:

UNIT I– INTRODUCTION TO WIRELESS SENSOR NETWORKS (09 Periods)

Challenges for Wireless Sensor Networks, Comparison of Sensor Network with Ad Hoc Network; Single Node Architecture - Hardware Components, Energy Consumption of Sensor Nodes; Network Architecture: Sensor Network Scenarios - Types of Sources and Sinks, Single Hop Versus Multi-Hop Networks, Multiple Sinks and Sources; Design Principles for Wireless Sensor Networks.

UNIT II – PHYSICAL LAYER (09 Periods)

Introduction, Wireless Channel and Communication Fundamentals – Frequency Allocation, Modulation and Demodulation, Wave Propagation Effects and Noise, Channels Models, Spread Spectrum Communication, Packet Transmission and Synchronization, Quality of Wireless Channels and Measures for Improvement; Physical Layer and Transceiver Design Consideration in Wireless Sensor Networks - Energy Usage Profile, Choice of Modulation, Power Management.

UNIT III –DATA LINK LAYER (09 Periods)

MAC Protocols: Fundamentals of Wireless MAC Protocols - Requirements and Design Constraints for Wireless MAC Protocols, Important Classes of MAC Protocols, MAC Protocols for Wireless Sensor Networks; Link Layer Protocols – Fundamentals Task and Requirements; Error Control - Causes and Characteristics of Transmission Errors, ARQ Techniques, FEC Techniques, Hybrid Schemes, Power Control.

UNIT IV – NETWORK LAYER (09 Periods)

Gossiping and Agent-Based Uni-Cast Forwarding - Basic Idea, Randomized Forwarding; Energy-Efficient Unicast, Broadcast and Multicast - Source-Based Tree Protocols, Shared, Core-Based Tree Protocols, Mesh-Based Protocols. Geographic Routing - Basics of Position-Based Routing, Geocasting; Mobile Nodes - Mobile Sinks, Mobile Data Collectors, Mobile Regions; Data Centric and Content-Based Networking - Introduction, Data-Centric Routing, Data Aggregation.

UNIT V – TRANSPORT LAYER (09 Periods)

The Transport Layer and QoS in Wireless Sensor Networks - Quality of Service/Reliability Transport Protocols; Coverage and Deployment - Sensing Models, Coverage Measures; Uniform Random Deployments: Poisson Point Processes, Coverage of Random Deployments: Boolean Sensing Model, General Sensing Model, Coverage Determination, Coverage of Grid Deployments; Reliable Data Transport, Single Packet Delivery - Using A Single Path, Multiple Paths, Multiple Receivers.

Total Periods:45

TEXT BOOK:

1. Holger Karl and Andreas willing,*Protocols and Architecture for Wireless Sensor Networks,*John wiley publication, 2007.

REFERENCE BOOKS:

1. Edgar H .Callaway, *Wireless Sensor Networks: Architecture and protocol*, CRC press, 2003.
2. C.S.Raghavendra Krishna, M.Sivalingam and Taribznati, *Wireless Sensor Networks,*Springer publication, 2006.

III B.Tech. - II semester

(16BT60403) **ANALOG IC DESIGN**

(Program Elective – 1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:A Course on Electronic Circuits analysis and design.

COURSE DESCRIPTION:

MOS & CMOS Devices and Modeling; Current mirrors and biasing techniques; Single stage amplifiers; Sample and Hold Circuits; Bandgap Reference Circuits and Comparators.

COURSE OUTCOMES: On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge in
- MOS device modeling
- Current Mirrors
- Single stage amplifiers
- Bandgap Reference Circuits.
- Sample and hold circuits
- Comparators.

CO2. Analyze analog integrated circuits suitable for real time applications.
CO3. Design and Develop Analog Integrated Circuits using MOS Transistor.
CO4. Use different styles of CMOS Circuit modelling to synthesize analog ICs.
CO5. Apply appropriate biasing techniques to improve performance of analog circuits.
CO6. Assess the performance of sample and hold circuits and Bandgap reference circuits in analog ICs suitable for societal use.

DETAILED SYLLABUS:

UNIT - I: MOS DEVICE MODELING (10 Periods)

MOSFET Capacitances, Latch up in CMOS Technology, Short Channel Effects in MOS Transistors, Weak Inversion in MOS Transistors, Small Signal Modeling of MOS Transistors, Large Signal Modeling of MOS Transistors.

UNIT - II: CURRENT MIRRORS AND BIASING TECHNIQUES (10 Periods)

Current Mirrors - Simple Current Mirrors, Simple Current Mirror with Source Degeneration, Cascode Current Mirror and Wilson Current Mirror.

Biasing Techniques: CS Biasing, CG Biasing, Source Follower Biasing, Differential Pair Biasing.

UNIT - III: SINGLE STAGE AMPLIFIERS (07 Periods)

Common Source Stage with resistive load, Source follower, Common Gate Stage, Cascode Stage.

UNIT - IV: SAMPLE AND HOLD CIRCUITS, BANDGAP REFERENCE CIRCUITS (10 Periods)

Performance of Sample and Hold Circuits, MOS Sample and Hold Basics, Examples of CMOS S/H circuits, Bipolar and BICMOS Sample and Hold circuits,Band gap Voltage Reference Basics, Circuits for Band gap References.

UNIT - V: COMPARATORS (08 Periods)

Using an Opamp for a Comparator, Charge-Injection Errors, Latched Comparators, Examples of CMOS and BiCMOS Comparators.

Total Periods: 45

TEXT BOOKS:

1. David A. Johns, Ken Martin,*Analog Integrated Circuit Design*, Wiley Student Edition, 1997.
2. Behzad Razavi, *Design of Analog CMOS Integrated Circuits,* Tata McGraw Hill, 2nd Edition, 2008.

REFERENCE BOOKS:

1. Paul R. Gray, Paul J. Hurst, S. Lewis and R. G. Meyer, *Analysis and Design of Analog Integrated Circuits,* Wiley India, 5th Edition, 2013.
2. Philip E. Allen and Douglas R. Holberg, *CMOS Analog Circuit Design*, Oxford University Press, International 2nd Edition/Indian Edition, 2010.

III B.Tech. - II semester

(16BT60404) **IMAGE PROCESSING**

(Program Elective – 1)

(Common to ECE & CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Courses on Digital signal processing and Digital communications.

COURSE DESCRIPTION:
Fundamentals of image processing; Image transforms; Image enhancement techniques in spatial and frequency domains; Restoration techniques; Image segmentation techniques; Image compression techniques.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Demonstarte knowledge in
- Image Fundamentals
- Image Enhancement & Restoration Techniques
- Image Segmentation & Compression Techniques
- Color image processing

CO2. Analyze different images using various processing techniques.
CO3. Design and develop various image processing algorithms to process the images in Real Time Applications.
CO4. Solve problems related to images for feasible and optimal solutions in the core area of Image Processing.
CO5. Apply appropriate techniques to complex engineering problems in the field of image processing.
CO6. Understand the impact of the image processing for societal needs.

DETAILED SYLLABUS:

UNIT-I: IMAGE FUNDAMENTALS (10 Periods)
Fundamental steps in Image Processing, Image sampling & quantization, some basic relationships between pixels, Arithmetic operations, Logical operations, Spatial operations,
IMAGE TRANSFORMS: 2D-DFT and properties, Walsh Transform, Hadamard Transform, Discrete Cosine Transform, Haar-Transform, Slant Transform, Hotelling Transform.

UNIT-II: IMAGE ENHANCEMENT (11 Periods)
Basic Intensity transformation functions, Histogram processing, Fundamentals of Spatial Filtering, Smoothing spatial filters, Sharpening spatial filters, Combining spatial Enhancement methods.
Basics of filtering in frequency domain, Correspondence between filtering in the spatial and frequency domains, Image smoothing using frequency domain filters, Image sharpening using frequency domain filters, Homomorphic filtering.

UNIT-III: IMAGE RESTORATION (07 Periods)
Image degradation/Restoration model, Noise models, Restoration in the presence of Noise only-spatial filtering - mean, order- statistic and adaptive filters. Estimating the degradation function, Inverse filtering, Weiner filtering, Constrained least squares filtering.

UNIT-IV: IMAGE COMPRESSION (08 Periods)
Classification of redundancy in Images, Image Compression models, Run length coding, Arithmetic coding, Dictionary based compression, bit-plane coding, Transform based coding, Fidelity Criteria, Image compression standards.

UNIT-V: IMAGE SEGMENTATION AND COLOR IMAGE PROCESSING (09 Periods)
Detection of discontinuities- Point, line and edge Detection.Thresholding- global thresholding, adaptive thresholding. Region based Segmentation. Color image fundamentals - RGB, HSI models, conversions, Pseudo Color Image Processing, Color transformations.

Total Periods: 45

TEXT BOOKS:
1. Rafael C. Gonzalez & Richard E. Woods, *Digital Image Processing*, Pearson Education, 3rd Edition, 2008

2. S.Sridhar, *Digital Image Processing*, Oxford University, 2nd Edition, 2016

REFERENCE BOOKS:

1. William K. Pratt, *Digital Image Processing*, John Wiley and Sons, 3rd Edition, 2002.
2. Anil K.Jain, *Fundamentals of Digital Image processing,* Prentice Hall, 2007.

III B.Tech. - II semester

(16BT60405) RADAR ENGINEERING

(Program Elective – 1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:

Courses on Antennas and Wave propagation &Microwave Engineering.

COURSE DESCRIPTION:

Radar equation; Targets; classification of radars; MTI and pulsed radar;Tracking with radar; radar receivers; Echo signal detection in the presence of noise; Navigational Aids.

COURSE OUTCOMES: On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge in
- Principle of working of radars
- MTI and Pulse Doppler radars
- Tracking and detection of radar signals
- Radar displays and duplexers
- Radar receivers.
- Navigational Aids.

CO2. Analyze to detect radar echo signals, range and Doppler measurement.

CO3. Design and develop optimum matched filters, radar receivers and radar system components.

CO4. Solve engineering problems to detect radar signals for range prediction and detectable signal in the presence of noise

CO5. Apply appropriate techniques for signal detection, tracking and global positioning in the field of radar systems and navigational aids.

CO6. Provide wide range of feasible solutions for accurate echo detection and study of Navigational aids useful in real time applications.

DETAILED SYLLABUS :

UNIT I: RADAR EQUATION (10 Periods)

Introduction, Maximum Unambiguous Range, Simple form of Radar Equation, Radar Block Diagram and Operation, Radar Frequencies and Applications, Prediction of Range Performance, Minimum Detectable Signal, Receiver Noise, Modified Radar Range Equation, SNR, Envelope Detector, False Alarm Time and Probability, Integration of Radar Pulses, Radar Cross section of Targets (simple targets - sphere, cone-sphere), Transmitter Power, PRF and Range Ambiguities, System Losses (qualitative treatment), Illustrative Problems.

UNIT II: DOPPLER RADAR (12 Periods)

Doppler Effect, CW Radar – Block Diagram, Isolation between Transmitter and Receiver, Non-zero IF Receiver, Receiver Bandwidth Requirements, Applications of CW radar, Illustrative Problems. FM-CW Radar, Range and Doppler Measurement, Block Diagram and Characteristics (Approaching/ Receding Targets), FM-CW altimeter, Multiple Frequency CW Radar, MTI- Introduction, Principle, MTI Radar with - Power Amplifier Transmitter and Power Oscillator Transmitter, Delay Line Cancellers – Filter Characteristics, Blind Speeds, Double Cancellation, Staggered PRFs. Range Gated Doppler Filters, MTI Radar Parameters, Limitations to MTI Performance, MTI versus Pulse Doppler radar.

UNIT III: RADAR TRACKING (06 Periods)

Tracking with Radar, Sequential Lobing, Conical Scan, Monopulse Tracking Radar – Amplitude Comparison Monopulse (one- and two- coordinates), Phase Comparison Monopulse, Tracking in Range, Acquisition and Scanning Patterns, Comparison of Trackers.

UNIT IV: RADAR TRANSMITTERS AND RECEIVERS (11 Periods)

Noise Figure and Noise Temperature, Display types. Duplexers – Branch type and Balanced type, Circulators as Duplexers. Introduction to Phased Array Antennas – Basic Concepts, Radiation Pattern, Beam Steering and Beam Width changes, Series versus Parallel Feeds, Applications, Advantages and Limitations. Detection of Radar Signals in Noise - Introduction, Matched Filter Receiver – Response Characteristics and Derivation, Correlation Function and Cross-correlation Receiver, Efficiency of Non-matched Filters, Matched Filter with Non-white Noise.

UNIT V: FUNDAMENTALS OF NAVIGATIONAL AIDS (06 Periods)

Introduction and Types of Navigational Aids, VHF Omni Directional Range (VOR) navigation system-salient features-principle of operation- advantages and limitations, Salient features of LORAN and DECCA navigation system. **Total Periods: 45**

TEXT BOOKS:

1. Merrill I. Skolnik, *Introduction to Radar Systems*, TMH Special Indian Edition, 2nd Edition, 2007.

2. G S N Raju, *Radar Engineering and Fundamentals of Navigational Aids*, I.K. International Pvt. Ltd, 1st Edition, 2010.

REFERENCE BOOKS:

1. Merrill I. Skolnik, *Introduction to Radar Systems*, TMH, 3rd Edition, 2001.
2. Byron Edde, *Radar Principles, Technology, Applications*, Pearson Education, 2004.

III B.Tech. - II semester

(16BT60406) TELECOMMUNICATION SWITCHING SYSTEMS

(Program Elective – 1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Courses on Analog and Digital Communications.

COURSE DESCRIPTION:

Overview of telecommunication switching systems; telephone networks; signaling techniques in telephone networks; ISDN; DSL technology and SONET.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge in:
- Switching systems.
- Subscriber loop systems, numbering plan, charging plan and transmission plan.
- Signaling techniques and traffic in the context of telecommunication network.
- Integrated Services Digital Network (ISDN).
- Frame relay and ATM.
- DSL technologies and SONET networks.

CO2. Perform analysis of traffic load parameters like blocking probability and grade of service.

CO3. Solve engineering problems pertaining to implementation of communication networks.

CO4. Apply appropriate Signaling techniques, networks and topologies of Telecommunications systems with understanding of limitations.

CO5. Understand the probabilistic methods and statistics to solve communication network problems related to societal issues.

CO6. Use standards to meet the responsibilities and norms of the engineering practice in the area of telecommunication switching systems.

DETAILED SYLLABUS:

UNIT-I:PRINCIPLES AND EVOLUTION OF SWITCHING SYSTEMS (13 Periods)

Evolution of telecommunications, Simple telephone communication, Basics of a switching system, Manual switching system, crossbar switching, Electronic space division switching, Time division switching, Combination switching.

UNIT-II: TELEPHONE NETWORKS (06 Periods)

Subscriber loop systems, switching hierarchy and routing, transmission plan, numbering plan, charging plan.

UNIT-III: SIGNALLING TECHNIQUES (06 Periods)

In-channel signaling, common channel signaling, Network traffic load and parameters, grade of service and blocking probability.

UNIT-IV: DATA NETWORKS (12 Periods)

Data transmission in PSTNs, Switching techniques for data transmission, Motivation for ISDN, services, network and protocol architecture, transmission channels and user network interfaces, Signaling, numbering and addressing, ISDN standards, Broadband ISDN, Introduction to the basic principles of frame relay, ATM.

UNIT-V: ADVANCED TECHNOLOGIES (08 Periods)

DSL TECHNOLOGY: ADSL, Traditional Cable Networks, HFC Networks, Sharing, CM & CMTS and DOCSIS.

SONET: Devices, Frame, Frame Transmission, Synchronous Transport Signals, STS I, Virtual Tributaries.

Total Periods: 45

TEXT BOOKS:

1. Thyagarajan Viswanath, *Telecommunication Switching Systems and Networks*, PHI, 2008.
2. B.A. Forouzan, *Data Communication & Networking*, TMH, 4th Edition, 2006.

REFERENCE BOOKS:

1. Wayne Tomasi, *Advanced Electronic Communications systems*, Pearson Education, 6th Edition, 2004.
2. Achyut. S .Godbole*, Data Communications & Networks*, TMH, 2004.

III B.Tech. - II semester

(16BT60407) **DIGITAL CMOS IC DESIGN**

(Program Elective – 2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: ACourses on VLSI Design.

COURSE DESCRIPTION:

Design styles and characteristics of CMOS digital circuits; Layout design rules; Memory design; Interconnect strategies; Design Methodologies.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Apply knowledge in
- CMOS Circuits
- MOS Layouts
- Memories
- Interconnects
- Methodologies

CO2. Analyze Problems in Interconnect Design.

CO3. Design optimized CMOS Circuits and develop the corresponding Stick Diagrams and Layouts.

CO4. Provide valid solutions to critical problems in CMOS Design.

CO5. Understand the limitations of techniques applied in CMOS design.

CO6. Create Solutions to reduce the power dissipation in CMOS devices for societal needs.

DETAILED SYLLABUS:

UNIT - I: CMOS CIRCUIT AND LOGIC DESIGN (08 Periods)

CMOS Logic Gate Design, CMOS Logic Structures, Clocking Strategies – 2 phase clocking, 4 phase clocking.

UNIT - II:LAYOUT DESIGN RULES (10 Periods)

Need for Design Rules, Stick diagrams, Physical Design of Logic Gates, Design Capture Tools, Design Verification Tools.

UNIT - III: SEMICONDUCTOR MEMORIES (10 Periods)

Classification of Memories, RAM array organization, DRAM – Types, Operation, Leakage currents in DRAM cell and refresh operation; SRAM - operation, Leakage currents in SRAM cells; Flash Memory-NOR Flash and NAND Flash.

UNIT - IV: INTERCONNECT AND CLOCKING STRATEGIES (09 Periods)

Interconnect Parameters – Capacitance, Resistance and Inductance; Electrical Wire Models, Timing classification of Digital Systems, Synchronous Design, Self-Timed Circuit Design.

UNIT - V:CMOSDESIGN METHODS (08 Periods)

Introduction, Design Flows, Design Strategies, Design Methods, Design Options, Design Economics, Data Sheets and Documentation.

Total Periods: 45

TEXT BOOKS:

1. Kamran Eshranghian, Douglas A.Pucknell and Sholeh Eshranghian, *Essential of VLSI Circuits and Systems*, PHI, 1st Edition, 2005.
2. Jan M Rabaey, *Digital Integrated Circuits-A Design Perspective*, Prentice Hall, 1stEdition, 1997.

3. Neil H. E. Weste, David Harris, Ayan Banerjee, *CMOS VLSI Design-A Circuit and Systems Perspective,* Pearson Education India, 3rd Edition, 2005.

REFERENCE BOOK:

1. Jacob Baker, *CMOS: Circuit Design, Layout, and Simulation*, Wiley IEEE Press, 3rd Edition, 2010.

III B.Tech. - II semester

(16BT60408) INFORMATION THEORY AND CODING

(Program Elective - 2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: A Course on Digital Communications.

COURSE DESCRIPTION:
Information theory; Channel capacity; Linear block codes; Cyclic codes; Convolutional codes; Read-Solomon and Turbo codes.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge in Information Theory, Channel Capacity and various error control coding technique.
CO2. Analyze complex engineering problems critically in the domain of information theory, source encoding techniques, channel capacity and error control coding.
CO3. Design various types of channel encoders, syndrome circuits and channel decoders.
CO4. Solve problems pertaining to entropy, source coding and channel coding.
CO5. Use appropriate source and channel coding techniques.
CO6. Apply source and channel coding techniques for providing optimal communication systems for societal use.

DETAILED SYLLABUS

UNIT I: INTRODUCTION **(09 Periods)**

Entropy: Discrete stationarysources, Markov sources, Entropy of a discrete Random variable- Joint, conditional, relative entropy, Mutual Information and conditional mutual information. Chain rules for entropy, relative entropy and mutual information, Differential Entropy - Joint, relative, conditional differential entropy and Mutual information.

Loss less Source coding: Uniquely decodable codes, Instantaneous codes, Kraft's inequality, optimal codes, Huffman code, Shannon's Source Coding Theorem.

UNIT II: CHANNEL CAPACITY **(08 Periods)**

Capacity computation for some simple channels, Channel Coding Theorem,Fano's inequality and the converse to the Coding Theorem, Equality in the converse to the coding theorem,The joint source Channel Coding Theorem, The Gaussian channels- Capacity calculation for Band limited Gaussian channels, Parallel Gaussian Channels, Capacity of channels with colored Gaussian noise.

UNIT III: CHANNEL CODING-1 **(07 periods)**

LinearBlockCodes: Introduction to Linear blockcodes, GeneratorMatrix, SystematicLinearBlockcodes, Encoder Implementation of Linear Block Codes, Parity Check Matrix, Syndrometesting, Errorcorrection, Decoder Implementation of Linear Block Codes,Error Detecting and Correcting capability of Linear Block codes.

UNITIV: CHANNEL CODING-2 **(11 Periods)**

CyclicCodes: Algebraic Structure of Cyclic Codes, Binary Cyclic Code Properties, Encoding in Systematic Form, Systematic Encoding with an (n - k)-Stage Shift Register, Error Detection with an (n - k)-Stage Shift Register, Well-Known Block Codes-Hamming Codes, Extended Golay Code, BCH Codes.

ConvolutionalCodes: Convolution Encoding, Convolutional Encoder Representation, Formulation of the Convolutional Decoding Problem, Properties of Convolutional Codes, Sequential Decoding, Application of Viterbi and sequential decoding.

UNIT V: CHANNEL CODING-3 **(11 Periods)**

Reed-Solomon Codes- Reed-Solomon Error Probability, Finite Fields, Reed-Solomon Encoding, Reed-Solomon Decoding, Interleaving and Concatenated Codes- Block Interleaving, Convolutional Interleaving, Concatenated Codes. Coding and Interleaving Applied to the Compact Disc Digital Audio System- CIRC Encoding, CIRC Decoding. Turbo Codes-Turbo Code Concepts, Encoding with Recursive Systematic Codes, Feedback Decoder, The MAP Decoding Algorithm.

Total Periods: 46

TEXT BOOKS:

1. Thomas M. Cover and Joy A. Thomas, *Elements of Information Theory*, John Wiley & Sons,1st Edition, 1999.
2. Bernard Sklar, *Digital Communications – Fundamental and Application*, PearsonEducation, 2nd Edition, 2009.

REFERENCE BOOKS:

1. John G. Proakis, *Digital Communications*, McGraw Hill Publication, 5th Edition, 2008.

2. SHU LIN and Daniel J. Costello, Jr.,*Error Control Coding – Fundamentals and Applications*, Prentice Hall, 2nd Edition, 2002.

III B.Tech. - II semester

(16BT60409) LIGHT WAVE COMMUNICATIONS

(Program Elective - 2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:
Courses on Engineering physics, Electronic devices and Circuits, Digital communications.

COURSE DESCRIPTION:
Ray theory; Single mode fibers; Fiber materials; Fiber losses; Optical sources and detectors; Power launching in to the fiber; Optical links; WDM.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Apply knowledge to understand
- Mode theory of optical communication.
- Losses in optical fibers.
- Optical sources and detectors.
- Power Launching and coupling techniques.
- Optical links.
- WDM concepts.
- Optical Networks.

CO2. Analyze Problems in analog and Digital Links.
CO3. Design and Develop Optical Sources, Detectors and Links.
CO4. Provide valid solutions to overcome losses in optical fibers.
CO5. Select appropriate optical components to suit advanced optical communications and Networks.
CO6. Assess and propose cost effective solutions to minimize the radiation hazards caused by wireless links.

DETAILED SYLLABUS:
UNIT I: INTRODUCTION TO OPTICAL FIBER WAVEGUIDES (08 Periods)
The General System, Advantages of Optical Fiber Communications, Ray Theory of Transmission, Electromagnetic Mode Theory for Optical Propagation, Cylindrical Fiber. Single Mode Fibers, Fiber Materials, Fiber Fabrication, Mechanical Properties of Fibers, Fiber Optic Cables.
UNIT II: FIBER LOSSES (07 Periods)
Attenuation, Absorption, Scattering, Bending and Core & Cladding losses. Signal Distortion in Fibers - Pulse Broadening, Intramodal Dispersion, Intermodal Dispersion, Overall Fiber Dispersion in Multi Mode and Single Mode Fibers. Polarization.
UNIT III: OPTICAL SOURCES AND DETECTORS (11 Periods)
OPTICAL SOURCES: LED Structures, Light Source Materials, Quantum Efficiency and LED Power, Modulation of LED, Laser Diode Modes and Threshold Conditions, Laser Diode Rate Equations, External Quantum Efficiencies, Resonant Frequencies.
OPTICAL DETECTORS: Physical Principles of Photo Diodes, Photo Detector Noise, Detector Response Time, Avalanche Multiplication Noise, Structures for InGaAs & APDs, Temperature Effect on Avalanche Gain, Comparisons of Photo Detectors.
UNIT IV: POWER LAUNCHING AND COUPLING (07 Periods)
Source to Fiber Power Launching, Lensing Schemes for Coupling Improvement, Fiber-to-Fiber Joints, Fiber alignment and joint loss, LED coupling to single mode fibers, Fiber Splices, Fiber Connectors.
UNIT V: OPTICAL LINKS AND COMPONENTS (12 Periods)
DIGITAL LINKS: Point-to-Point Links, Power Penalties, Error Control.
ANALOG LINKS: Overview, Carrier to Noise Ratio, Multi-channel Transmission Techniques, RF over Fiber, Radio over Fiber Links.
NETWORKS: Introduction to WDM and Optical Networks.

Total Periods: 45

TEXT BOOK:
1. Gerd keiser, *Optical Fiber Communications*, McGraw Hill International, 4th Edition, 2009.

REFERENCE BOOKS:

1. Max Ming-Kang Liu, *Principles and Applications of Optical Communications*, TMH, 2010.
2. S.C.Gupta, *Optical Fiber Communication and its Applications*, PHI, 2011.

III B.Tech. - II semester

(16BT60410) NANOELECTRONICS

(Program Elective - 2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:
Courses on Basic Engineering Physics, Basic Engineering Chemistry and Electronic Devices.

COURSE DESCRIPTION:
Basics of Nanoelectronics; Crystal structure of materials; Fabrication techniques and measurement of nanostructures; Nanoelectronic devices.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Demonstrate the basic knowledge in
- Nanoelectronics,
- Crystal structure of semiconducting material
- Various techniques for fabrication and measurement of nanostructure,
- Semiconducting nano electronic devices.

CO2. Analyze
- Crystal lattices and energy band diagram of semiconducting hetero structures of nanomaterials
- Energy states in nanomaterials.

CO3. Design and develop new semiconducting nano structures with the knowledge of density of states and electron transport.

CO4. Solve the problems related to fabrication of nanoelectronic devices.

CO5. Apply techniques of fabrication and measurement to create nanostructures.

CO6. Apply the ethical standards and legal issues while using chemical substances in fabricating nano device structures.

DETAILED SYLLABUS:

UNIT - I: INTRODUCTION TO NANOELECTRONICS (08 Periods)
The “Top-Down” Approach, Lithography, The “Bottom-Up” Approach; Importance of Nanoelectronics Nanotechnology Potential. The Schr’odinger wave equation, Wave mechanics of particles, Atoms and atomic orbitals.

UNIT – II: MATERIALS FOR NANOELECTRONICS (09 Periods)
Semiconductors, Crystal lattices: bonding in crystals, Electron energy bands, Semiconductor heterostructures, Lattice-matched and pseudomorphic heterostructures; Organic semiconductors, Carbon nanomaterials: nanotubes and fullerenes.

UNIT–III:FABRICATION AND MEASUREMENT TECHNIQUES FOR NANOSTRUCTURES (10 Periods)
Bulk crystal and heterostructure growth: Nanolithography, etching, physical and chemical deposition for fabrication of nanostructures and nanodevices; Techniques for characterization of nanostructures, Spontaneous formation and ordering of nanostructures; Clusters and nanocrystals, Methods of nanotube growth, Chemical and biological methods for nanoscale fabrication, Fabrication of nanoelectromechanical systems.

UNIT – IV: SEMICONDUCTING NANO STRUCTURES (09 Periods)
Time and length scales of the electrons in solids, Statistics of the electrons in solids and nanostructures; The density of states of electrons in nanostructures, Electron transport in nanostructures, Electrons in Quantum well, Quantum wire and Quantum dots.

UNIT – V: NANOELECTRONIC DEVICES (09 Periods)
Resonant tunneling diodes, Field effect transistors, Single electron transfer devices, Potential effect transistors, Light emitting diodes and lasers; Nanoelectromechanical system devices, Quantum dot cellular automata.

Total Periods:45

TEXT BOOKS:

1. Vladimir V. Mitin, Viatcheslav A. Kochelap, Michael A. Stroscio, *Introduction to Nanoelectronics: Science, Nanotechnology, Engineering, and Applications,* Cambridge University Press, 2012.
2. George W. Hanson, *Fundamentals of Nanoelectronics*, Prentice Hall, 2007.

REFERENCE BOOKS:

1. Mitin.V, Kochelap.V and Stroscio.M, *Introduction to Nanoelectronics*, Cambridge University Press, 2008.

2. Karl Goserl, Peter Glosekotter and Jan Dienstuhl, *Nanoelectronics and Nanosystems: From Transistors to Molecular and Quantum devices*, Springer, 2005.

III B.Tech. - II semester

(16BT60431) DIGITAL COMMUNICATIONS LAB

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: Courses on Signal and Systems &Digital Communications .

COURSE DESCRIPTION:
Simulation and study of various Digital modulation and Demodulation schemes.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:
CO1. Demonstrate knowledge in different Digital Communications.
CO2. Compare the characteristics of various Digital modulation schemes and analyze their performance.
CO3. Design various digital modulation and demodulation circuits and study their characteristics.
CO4. Solve problems pertaining to development of modulation schemes.
CO5. Use MATLAB tools for simulation of modulation schemes.
CO6. Function effectively as an individual and as a member in a group in the area of digital communications.
CO7. Communicate in verbal and written form in the area of digital communications.

LIST OF EXERCISES :

1. Verification of Sampling Theorem
2. Pulse code modulation and demodulation
3. Delta modulation and demodulation
4. FSK Modulation and demodulation
5. PSK Modulation and demodulation
6. DPSK Modulation and demodulation
7. QPSK Modulation and demodulation
8. Generation and Detection of PSK & DPSK signals using MATLAB
9. Generation and Detection of QPSK signal using MATLAB
10. Generation and Detection of DM and FSK signals using MATLAB
11. Generation of PCM and DPCM signals using MATLAB
12. Generation of TDM signal using MATLAB

III B.Tech. - II semester

(16BT60432) **DIGITAL SIGNAL PROCESSING LAB**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: A Course on Digital Signal Processing.

COURSE DESCRIPTION:
Implementation of Convolution; DFT and FFT; Design of Analog, Digital FIR and IIR filters.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Demonstrate Knowledge in transforms, FFT algorithm, FIR and IIR filters.
CO2. Analyze the characteristics of Digital and Analog filters such as IIR, FIR and signals using various techniques.
CO3. Design the FIR and IIR filters for feasible and optimal solutions in the core area of signal processing.
CO4. Solve engineering problems using filters in communication and allied areas.
CO5. Use CCS and MATLAB tools, techniques and resource for design of analog and digital filters with understanding of limitations.
CO6. Work individually and in a group effectively in the area of digital signal processing.
CO7. Communicate effectively in oral and written form in the area of digital signal processing.

LIST OF EXERCISES:

1. Verify linear convolution of aperiodic sequences using CCS on DSP processors and also verify using MATLAB.
2. Verify the circular convolution on Periodic sequences using CCS on DSP processors and also verify using MATLAB.
3. Verify N-point DFT & IDFT using CCS on DSP processors and also verify using MATLAB.
4. Verify N-point FFT algorithm using CCS on DSP processors and also verify using MATLAB.
5. Find the frequency response of analog Butterworth prototype filters (LP/HP/BP/BR) using MATLAB.
6. Find the frequency response of analog chebyshev prototype filters (LP/HP/BP/BR) using MATLAB.
7. Design FIR filter (LP/HP/BP/BR) using following windowing techniques with MATLAB
   A) rectangular window
   B) triangular window
8. Design FIR filter (LP/HP/BP/BR) using following windowing technique with MATLAB
   A) Hamming window
   B) Hanning window
   C) Blackman window
9. Design FIR filter (LP/HP/BP/BR) using Kaiser window with MATLAB.
10. Implement IIR Butterworth filter (LP/HP/BP/BR) using bilinear transformation techniques with MATLAB.
11. Implement IIR Chebyshev filter (LP/HP/BP/BR) using impulse-invariance transformation techniques with MATLAB.
12. Design of FIR filters using frequency sampling method with MATLAB.

III B.Tech. - II semester

(16BT60433) **SEMINAR**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
	100	100	-	-	-	2

PREREQUISITES: All the courses of the program up to III B. Tech. – I Semester.

COURSE DESCRIPTION:
Identification of topic for the seminar; Literature survey; Performing critical study and analysis of the topic identified; Preparation of report and presentation.

COURSE OUTCOMES:

Completion of the seminar work enables a successful student to demonstrate:
CO1. Knowledge on the seminar topic.
CO2. Analytical ability exercised during the seminar work.
CO3. Ability to investigate and solve complex engineering problems faced during theseminar work.
CO4. Ability to apply techniques to complex engineering activities with anunderstanding of limitations as applied in the seminar work.
CO5. Ability to function effectively as an individual as experienced during the seminar work.
CO6. Ability to present views cogently and precisely on the seminar topic.
CO7. Ability to engage in life-long leaning as experience during the seminar work.

IV B.Tech. - I semester

(16BT70401) CELLULAR AND MOBILE COMMUNICATIONS

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Courses on Analog and Digital Communications &Antennasand waveguides.

COURSE DESCRIPTION: Concepts of cellular systems; Lee-model for cellular coverage; Desired C/I; Interference and reduction techniques; Frequency management in cellular systems; Handoff techniques; Various modulation techniques and Multiple Access techniques; 2G Systems - GSM - IS-95; 3G systems - WCDMA - CDMA 2000.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate fundamental knowledge in
- Cellular systems
- Interference and cell coverage in Cellular systems
- Handoffs and Dropped calls
- Modulation techniques for cellular systems
- 2G and 3G Wireless communication systems
- Introduction to 4G

CO2. Analyze low interference cellular systems.

CO3. Design omni-directional and directional antenna systems.

CO4. Provide appropriate solution for various scenarios to overcome interference problems.

CO5. Select appropriate antennas to suit the requirements of advanced communication systems.

CO6. Assess and propose cost effective solutions for societal use and minimize the radiation hazards caused by wireless links.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO CELLULAR MOBILE SYSTEMS (10 Periods)

A basic cellular system, performance criteria, uniqueness of mobile radio environment, operation of cellular systems, planning a cellular system, overview of generations of cellular systems.

Elements Of Cellular Radio Systems Design:

General description of the problem, concept of frequency reuse channels, co-channel interference reduction factor, desired C/I from a normal case in an omni directional antenna system, cell splitting, consideration of the components of cellular systems.

UNIT-II: COCHANNEL AND NONCOCHANNEL INTERFERENCE (10 Periods)

Introduction to co-channel interference, Exploring co-channel interference areas in a system, Real time cochannel interference measurement, Design of different antenna systems, Lowering the antenna height, antenna parameters and their effects, Diversity Receiver, Types of Noncochannel Interference.

UNIT-III: CELL COVERAGE FOR SIGNAL AND ANTENNA STRUCTURES (08 Periods)

General introduction, obtaining the mobile point to point model, propagation over water or flat open area, foliage loss, propagation near in distance, long distance propagation, point to point prediction model – characteristics; Cell site antenna heights and signal coverage cells, mobile to mobile propagation, Characteristics of basic antenna structures, antenna at cell site, mobile antennas.

UNIT- IV: FREQUENCY MANAGEMENT AND CHANNEL ASSIGNMENT, HAND OFF AND DROPPED CALLS (06 Periods)

Frequency Management, fixed channel assignment, non-fixed channel assignment, traffic & channel assignment, Why hand off, types of handoff and their characteristics, dropped call rates & their evaluation.

UNIT-V: DIGITAL CELLULAR SYSTEMS (2G AND 3G SYSTEMS) (12 Periods)

Advantages of Digital systems, GSM: , North American TDMA - Architecture, Transmission and modulation, Time alignment and Limitation of Emission, Error corrections, Interleaving and coding, Channels, Enhanced NA-TDMA; CDMA - Output power limits and control-modulation characteristics, Joint detection, call processing; Introduction to 3G, WCDMA-UMTS Physical layer, WCDMA TDD Physical Layer; Overview of CDMA 2000 - Physical layer; Introduction to 4G.

Total Periods: 46

TEXT BOOKS:

1. William C. Y. Lee, *Mobile Cellular Telecommunications*, McGraw Hill, 2nd Edition, 1990.
2. William C. Y. Lee, *Wireless & Cellular Telecommunications*, McGraw Hill, 3rd Edition, 2006.

REFERENCE BOOKS:

IV B.Tech. - I semester

(16BT70402) **EMBEDDED SYSTEMS**

(Common to EEE, ECE & CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:
Courses on Switching Theory and Logic Design, Microprocessors and Microcontrollers.

COURSE DESCRIPTION:
Embedded system design approaches; MSP430 Architecture; Instruction Set; On-Chip Resources; Programming; Communication with peripherals; Internet of Things related Issues.

COURSE OUTCOMES: On successful completion of the course, students will be able to:

CO1. Apply knowledge in
- MSP430 Architecture, Pin out, Instruction set
- High level programming
- Usage of On-chip resources like ADC, DAC, Timers
- Internet of Things related issues

CO2. Analyze various design issues regarding
- Usage of on chip resources
- Low power modes
- Communication support

CO3. Design embedded systems using MSP430 series microcontrollers to suit market requirements.

CO4. Solve engineering problems and arrive at solutions in designing embedded systems to support interconnectivity.

CO5. Apply techniques, program skills, On-Chip resources to design networked embedded systems with an understanding of limitations.

CO6. Reason out and practice professional engineering to deliver efficient and costeffective embedded based products to society.

DETAILED SYLLABUS:

UNIT - I: INTRODUCTION TO EMBEDDED SYSTEMS (09 Periods)
Embedded Systems - Definition, Approaches, Applications, Anatomy of microcontroller, Memory, Software; MSP430 Introduction- Pin out, Functional Block diagram, Memory, CPU, Memory mapped input and output, Clock generator; Exceptions- Interrupts and Resets.

UNIT - II: ARCHITECTURE OF MSP430 (09 Periods)
CPU, Addressing Modes, Constant Generator and Emulated Instructions, Instruction Set, Example programs, Reflections on CPU and Instruction set, Resets, Clock System.

UNIT - III: FUNDAMENTALS FOR PROGRAMMING (09 Periods)
Development Environment, C Programming Language, Assembly Language, Programming and Debugging, Sample programs- Light LEDs in C, Read input from a switch; Automatic Control-Flashing light by delay, use of subroutines, using Timer_A; Header files and issues, Functions, Interrupts and Low power modes.

UNIT - IV: TIMERS, MIXED SIGNAL SYSTEMS AND COMMUNICATION (09 Periods)
Timers - Watchdog Timer, RTC, Measurement in capture mode; Mixed-Signal Systems- Comparator_A, ADC10 Architecture & operation, ADC12, Sigma-Delta ADC Architecture & operation, DAC; Communication- Communication Peripherals in MSP430, SPI, Inter-integrated Circuit Bus, Asynchronous communication with the USCI_A.

UNIT - V: HARDWARE SOFTWARE CO-DESIGN AND INTERNET OF THINGS (09 Periods)
CO- Design Issues: Co-design Models, Architectures, Languages, a Generic Co-design Methodology
IOT: Introduction, Origins, Drivers and Applications, IOT Communication Models - Device to Device, Device to Cloud, Device to Gateway, Back end Data Sharing Model; IPV6 and IOTs', IOT Issues, Security Issues-challenges; Privacy Considerations, Interoperability/Standards. **Total Periods: 45**

TEXT BOOKS:
1. John H. Davies, *MSP430 Microcontroller Basics*, Newnes Publications, 2008.
2. Karen Rose, Scott Eldridge, Lyman Chapin, *The Internet of Things: An Overview: Understanding the Issues and Challenges of a More Connected World, Internet Society*, Oct. 2015.
3. Jorgen Staunstrup, Wayne Wolf, *Hardware/software co-design Principles and Practice*, Springer, 2009.

REFERENCE BOOK:

1. Chris Nagy, *Embedded Systems Design using the TI MSP30 Series*, Newnes Publications, 2003.

IV B.Tech. - I semester
(16BT70403) MICROWAVE ENGINEERING

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: A course on Electromagnetic Theory and Transmission Lines.

COURSE DESCRIPTION: Wave Propagation; Waveguide components; Microwave tubes; Microwave solid state devices; and Microwave measurements.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge in
- Wave Propagation
- Microwave Components
- Microwave Tubes
- Microwave Measurements

CO2. Analyze the Performance of Microwave components and Microwave Tubes.

CO3. Design microwave components such as hybrid junctions, ferrite devices, and phase shifters.

CO4. Solve problems pertaining to microwave junctions and waveguide components.

CO5. Use appropriate resources to solve the problems related to microwave communication systems.

CO6. Use various microwave components like phase shifters, attenuators and tubes to model a communication system for societal needs.

DETAILED SYLLABUS:

UNIT-I: MICROWAVE COMPONENTS (10 Periods)

Introduction, Microwave spectrum and bands, applications of Microwaves, Scattering Matrix-Significance, Formulation and properties. S Matrix calculations for 2-port junction, Waveguide multiport junctions-E plane and H plane Tees, Magic Tee, Directional coupler; Ferrites- composition and characteristics, Faraday rotation, ferrite components –Isolator and Circulator. Waveguide discontinuities – waveguide Windows, tuning screws and posts, matched loads; Coupling mechanisms-probe, loop. Waveguide attenuators- resistive card, rotary vane Attenuators, waveguide phase shifters - dielectric, rotary vane phase shifters; Illustrative problems.

UNIT-II: MICROWAVE SOURCES (10 Periods)

Limitations and losses of conventional tubes at microwave frequencies.Classification of Microwave tubes.Two cavity klystron (Only Qualitative Treatment). Reflex Klystrons - structure, Velocity Modulation, Applegate diagram, mathematical theory of bunching, power output, efficiency, oscillating modes and O/P characteristics. Slow wave structures; structure of Helix TWT and amplification process. Magnetrons - different types, cylindrical travelling wave magnetron – Hull cutoff and Hartree conditions, Illustrative Problems.

UNIT-III: MICROWAVE SOLID STATE DEVICES (08 Periods)

Introduction, classification, applications, Transfer Electronic Devices, Gunn diode- principles, RWH theory, characteristics, basic modes of operation – Gunn oscillation modes, LSA Mode; Transit-Time Devices – IMPATT, TRAPATT and BARITT.

UNIT-IV: MICROWAVE MEASUREMENTS (08 Periods)

Description of Microwave bench –different blocks and their features, errors and precaution; Microwave power measurement- Bolometer method, Measurement of attenuation, frequency, low and high VSWR, Q of the cavity and impedance measurements.

UNIT-V: WAVE PROPAGATION (09 Periods)

Introduction, Modes of wave propagation, Ground wave propagation, Space wave propagation - Introduction, field strength variation with distance and height, effect of earth's curvature, absorption; Super refraction, M-curves and duct propagation, scattering phenomena, troposphere propagation, fading. Sky wave propagation-Introduction, structure of Ionosphere, refraction and reflection of sky waves by Ionosphere, Ray path, Critical frequency, MUF, LUF, OF, Virtual height and Skip distance, Relation between MUF and Skip distance, Multi-Hop propagation. **Total Periods: 45**

TEXT BOOKS:

1. Samuel Y. Liao, *Microwave devices and circuits*, Pearson Education, 3rd Edition, 2003.
2. John D. Kraus and Ronald J. Marhefka and Ahmad S.Khan, *Antennas and wave propagation*, 4th Edition (special Indian Edition), TMH, New Delhi, 2010.

REFERENCE BOOKS:

1. F.E. Terman, *Electronic and Radio Engineering*, McGraw-Hill, 4th Edition, 1955.

2. Annapurna Das and Sisir K Das, *Microwave Engineering, McGraw-Hill*, 2nd Edition, 2009.
3. M.Kulkarni, *Microwave and Radar Engineering*, Umesh Publications, 3rd Edition, 2008.

IV B.Tech. - I semester

(16BT70404) ADVANCED DIGITAL SIGNAL PROCESSING

(Program Elective - 3)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: A Course on Digital Signal Processing

COURSE DESCRIPTION:
Digital filter banks; Parametric and Non-Parametric Power Spectrum Estimation methods; Computationally efficient algorithms; Applications of DSP.

COURSE OUTCOMES: On successful completion of the course, students will be able to :

CO1. Apply knowledge in
- Filter banks and Wavelets
- Linear Prediction
- Efficient power Spectral Estimation Techniques.
- Applications of Multirate signal processing

CO2. Analyze complex engineering problems in the Power Spectrum Estimation, Sampling rate conversion and Linear Prediction.

CO3. Design optimum filters, multirate DSP systems and computationally efficient DSP algorithms.

CO4. Solve Engineering problems pertaining to Digital Signal Processing.

CO5. Apply DSP Algorithms, and algorithms related to Forward and Backward Prediction in digital system design with an understanding of the limitations.

CO6. Apply computationally efficient DSP Algorithms, Optimum Filters and perfect reconstruction filters to address societal issues in multirate signal processing and communications.

DETAILED SYLLABUS:

UNIT-I: MULTIRATE FILTER BANKS (10 Periods)

Decimation, Interpolation, Sampling rate conversion by a rational factor I/D, Multistage Implementation of sampling rate conversion.

Digital Filter Banks: Two-Channel Quadrature-Mirror Filter Bank, Elimination of aliasing, condition for Perfect Reconstruction, Polyphase form of QMF bank, Linear phase FIR QMF bank, IIR QMF bank, Perfect Reconstruction Two-Channel FIR QMF Bank .

UNIT-II: POWER SPECTRAL ESTIMATIONS (09 Periods)

Estimation of spectra from finite duration observation of signals.

Non-Parametric Methods: Bartlett, Welch, Blackman &Tukey methods. Performance Characteristics of Non parametric Power Spectrum Estimators, Computational Requirements of Non parametric Power Spectrum Estimates.

Parametric Methods of Power Spectral Estimation:
Autocorrelation & Its Properties, Relationship between autocorrelation &model parameters, Yule-walker &Burg Methods, MA &ARMA models for power spectrum estimation.

UNIT-III: LINEAR PREDICTION (09 Periods)

Forward and Backward Linear Prediction – Forward Linear Prediction, Backward Linear Prediction, Optimum reflection coefficients for the Lattice Forward and Backward Predictors. Solution of the Normal Equations: Levinson Durbin Algorithm, Schur Algorithm. Properties of Linear Prediction Filters.

UNIT-IV: DSP ALGORITHMS (08 Periods)

Fast DFT algorithms based on Index mapping, Sliding Discrete Fourier Transform, DFT Computation Over a narrow Frequency Band, Split Radix FFT, Linear filtering approach to Computation of DFT using Chirp Z-Transform.

UNIT-V: APPLICATIONS OF DIGITAL SIGNAL PROCESSING (09 Periods)

Digital cellular mobile telephony, Adaptive telephone echo cancellation, High quality A/D conversion for digital Audio, Efficient D/A conversion in compact hi-fi systems, Acquisition of high quality data, Multirate narrow band digital filtering, High resolution narrowband spectral analysis.

Total Periods: 45

TEXT BOOKS:

1. John G. Proakis, Dimitris G. Manolakis, *Digital signal processing, principles, Algorithms and applications*, Prentice Hall, 4th Edition, 2007.
2. Sanjit K Mitra, *Digital signal processing, A computer base approach*, McGraw-Hill Higher Education, 4th Edition, 2011.

REFERENCE BOOKS:

1. Emmanuel C Ifeachor Barrie. W. Jervis, *DSP-A Practical Approach*, Pearson Education, 2nd Edition, 2002.

2. A.V. Oppenheim and R.W. Schaffer, *Discrete Time Signal Processing*, PHI, 2nd Edition, 2006.

IV B.Tech. - I semester
(16BT70405) MIXED SIGNAL DESIGN
(Program Elective - 3)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: A course on VLSI Design.

COURSE DESCRIPTION:
Switched Capacitor Circuits; PLLs; Nyquist Rate Data Converters.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:
CO1. Demonstrate knowledge in
- Switched Capacitor Circuits
- PLL
- Data Converters – ADC and DAC.

CO2. Analyze non-ideal effects of switched capacitor circuits and PLLs.
CO3. Design and Develop Switched Capacitor Circuits, PLLs and Data Converters.
CO4. Solve problems by using alternate data converters to compensate performance limitations.
CO5. Apply appropriate techniques to improve the performance of data converters.
CO6. Understand the impact of mixed signal design for societal needs.

DETAILED SYLLABUS:

UNIT - I: SWITCHED CAPACITOR CIRCUITS (07 Periods)
Introduction to Switched Capacitor circuits- basic building blocks, Basic Operation and Analysis - Resistor equivalance of switched capacitor, Parasitic sensitive integrator, parasitic insensitive integrator, signal flow graph analysis; Non-ideal effects in switched capacitor circuits.

UNIT - II: PHASED LOCK LOOP (08 Periods)
Simple PLL - Phase detector, Basic PLL topology, Dynamics of simple PLL; Charge pump PLLs - Problem of Lock acquisition, Phase/Frequency detector and charge pump; Non-ideal effects in PLLs.

UNIT - III: DATA CONVERTER FUNDAMENTALS (07 Periods)
Introduction to data converters, Ideal D/A converter, Ideal A/D converter, Quantization noise, Signed codes, performance limitations.

UNIT - IV: NYQUIST RATE D/A CONVERTERS (11 Periods)
Decoder based Converters - resistor string converters, folded resistor string converters, multiple R-string converters, signed outputs; Binary-Scaled converters - binary weighted resistor converters, reduced resistance ratio ladders, R-2R Based converters, charge- redistribution switched capacitor converters,current mode converters; Thermometer-code converters, Hybrid converters.

UNIT - V: NYQUIST RATE A/D CONVERTERS (12 Periods)
Successive approximation converters, Flash converter, Two-step A/D converters, Folding A/D converters, Pipelined A/D converters, Time-Interleaved Converters

Total Periods: 45

TEXT BOOKS:
1. David A. Johns, Ken Martin, *Analog Integrated Circuit Design,* Wiley Student Edition, 1997.
2. Behzad Razavi, *Design of Analog CMOS Integrated Circuits*, Tata McGraw Hill, 2008.

REFERENCE BOOKS:
1. Rudy Van De Plassche, *CMOS Integrated Analog-to-Digital and Digital-to-Analog converters*, Kluwer Academic Publishers, 2007.
2. R. Jacob Baker, *CMOS Mixed-Signal Circuit Design*, Wiley Interscience, 2014.

IV B.Tech. - I semester

(16BT70406) SATELLITE COMMUNICATIONS

(Program Elective - 3)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Courses on Analog Communications and Digital Communications.

COURSE DESCRIPTION: Orbital Aspects; Satellite Subsystems; Satellite Link Design; Earth Station Technology; Multiple Access; Orbit Considerations; Global Positioning System.

COURSE OUTCOMES: On successful completion of the course, students will be able to:

CO1. Demonstrate knowledge in
- Basic concepts of satellite communications
- Satellite Orbits and Sub-Systems
- Satellite link design
- Earth station subsystems
- FDMA,TDMA,CDMA
- Geostationary and non-geostationary satellite systems
- Satellite navigation and global positioning system.

CO2. Identify and analyze critical engineering problems in the field of satellite subsystem design.

CO3. Design efficient uplink and downlink satellite subsystems.

CO4. Solve engineering problems with feasible and economical solutions during satellite systems link design.

CO5. Apply appropriate and efficient techniques of multiple accessing and spread spectrum while designing satellite subsystems.

CO6. Develop solutions following IEEE, ITU and FCC standards in the field of satellite communications.

DETAILED SYLLABUS :

UNIT-I: INTRODUCTION, ORBITAL MECHANICS AND LAUNCHERS (10 Periods)

Origin of Satellite Communications, Historical Background, Basic Concepts of Satellite Communications, Frequency Allocations for Satellite Services, Applications, Future Trends of Satellite. Orbital Mechanics, Kepler's Laws of planetary motion, Look Angle Determination, Orbital Perturbations, Orbit Determination, Launches and Launch Vehicles, Orbital Effects in Communication Systems Performance.

UNIT-II: SATELLITE SUBSYSTEMS AND SATELLITE LINK DESIGN (10 Periods)

Satellite Subsystems - Attitude and Orbital Control System, Telemetry, Tracking, Command and Monitoring, Power Systems, Communication Subsystems, Satellite Antennas.Equipment Reliability and Space Qualification. Basic Transmission Theory, System Noise Temperature and G/T ratio, Design of Uplink and Down Links, Design of Satellite Links for specified C/N, System Design examples.

UNIT-III: EARTH STATION SUBSYSTEMS AND MULTIPLE ACCESS (09 Periods)

EARTH STATION: Introduction, Transmitters, Receivers, Antennas, Tracking Systems, **MULTIPLE ACCESS:** Frequency Division Multiple Access (FDMA), Intermodulation, Calculation of C/N, Time Division Multiple Access (TDMA) Frame Structure, examples. Satellite Switched TDMA Onboard Processing, DAMA, Code Division Multiple Access (CDMA), Spread Spectrum Transmission and Reception.

UNIT-IV: LOW EARTH ORBIT AND NON-GEOSTATIONARY SATELLITE SYSTEMS (08 Periods)

Orbit Consideration, Coverage and Frequency Considerations, Delay and Throughput Considerations, System Considerations, Operational NGSO Constellation Designs and comparisons.

UNIT-V: SATELLITE NAVIGATION AND THE GLOBAL POSITIONING SYSTEM (09 periods)

Radio and Satellite Navigation, GPS Position Location Principles, GPS Receivers and Codes, Satellite Signal Acquisition, GPS Navigation Message, GPS Signal Levels, Timing Accuracy, GPS Receiver Operation, GPS C/A Code Accuracy, Differential GPS.

Total Periods: 46

TEXT BOOKS:

1. Timothy Pratt, Charles W Bostian and Jeremy E Allnutt, WSE, *Satellite Communications,*Wiley publications, 2nd Edition, 2003.
2. Dennis Roddy, *Satellite communications,* McGraw Hill, 4th Edition, 2009.

REFERENCE BOOKS:

1. Wilbur L.Pritchard, Henri G.Suyderhoud and Robert A. Nelson, *Satellite Communications Engineering,* Pearson Publications, 2nd Edition, 2008.
2. D.C. Agarwal, *Satellite communications,* Khanna Publications, 7th Edition, 2009.

IV B.Tech. - I semester

(16BT70407) WIRELESS COMMUNICATIONS AND NETWORKS

(Program Elective - 3)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:A Course on Computer Networks.

COURSE DESCRIPTION:
Multiple Access techniques; Concepts of Wired and Wireless networks; operation of Mobile IP; Wireless Application Protocol; Architecture of Wireless LAN; Layered architecture of Bluetooth; High speed data networks.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Apply knowledge to understand
- Routing in wireless networks.
- Various protocols for Wireless networks.
- Various wireless LAN technologies.
- Bluetooth
- Architectures of various Wireless Data Networks.

CO2. Analyze various protocols related to wireless networks.
CO3. Design and Develop innovative techniques for implementation of high performance networking.
CO4. Provide valid solutions to overcome challenges in wireless networks.
CO5. Apply appropriate techniques to solve complex engineering problems in wireless networking domain.
CO6. Apply standards in area of wireless networking.

DETAILED SYLLABUS:

UNIT-I: WIRELESS NETWORKING AND DATA SERVICES (15 Periods)
Introduction, Difference between Wireless and Fixed Telephone Networks, Development of Wireless Networks, FDMA, TDMA, Spread Spectrum Multiple Access techniques, Capture Effect in Packet Radio, Traffic Routing in Wireless Networks. CDPD, ARDIS, RMD, Common Channel Signaling, ISDN, Broadband ISDN and ATM, SS7.

UNIT-II: MOBILE IP AND WIRELESS APPLICATION PROTOCOL (11 Periods)
Operation of mobile IP, Discovery, Co-located address, Registration, Tunneling, WAP Architecture, overview, WML, WML scripts.
WAPprotocol stack: Wireless Application Environment, Wireless session Protocol, Wireless Transaction Protocol, Wireless Transport Layer Security Protocol and Wireless Datagram Protocol.

UNIT-III: WIRELESS LAN TECHNOLOGY (11 Periods)
Overview, WLAN Requirements, Infrared LANs, Spread Spectrum LANs, Narrow Band Microwave LANs, IEEE 802 Protocol Architecture, IEEE802.11 Architecture and Services, 802.11 Medium Access Control, 802.11 Physical Layer. Wi-Fi and Introduction to WiMAX.

UNIT-IV: BLUETOOTH (08 Periods)
Overview, Radio Specification, Base band Specification, Links Manager Specification, Logical Link Control and Adaptation Protocol.WLL Technology.

UNIT-V: MOBILE DATA NETWORKS (10 Periods)
Introduction, Data oriented CDPD Network, GPRS and higher Data Rates, Short Messaging Service in GSM, Mobile Application Protocol. Wireless ATM, HIPER LAN - Architecture, Physical Model, Layers and Security.

Total Periods: 45

TEXT BOOKS:
1. Theodore S. Rappaport, *Wireless Communications,* 2nd Edition, PHI, 2008.
2. William Stallings, *Wireless Communications and Networks,* 2nd Edition, Pearson Education, 2007.
3. Kaveh Pahlavan and Prashant Krishna Murthy, *Principles of Wireless Networks,* PHI, 2005.

REFERENCE BOOKS:
1. Kamilo Feher, *Wireless Digital Communications,* PHI, 2001.
2. Andreaws F. Molisch, *Wideband Wireless Digital Communications,* Pearson Education, 2002.

3. Dharma Prakash Agarwal, Qing-An Zeng, *Introduction to Wireless and Mobile Systems,* 2nd Edition, Thomson, 2006.
4. Gordon L. Stuber, *Principles of Mobile Communications,* 2nd Edition, Springer International, 2007.

IV B.Tech. - I semester

(16BT70408) LOW POWER CMOS VLSI DESIGN

(Program Elective - 4)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:A Course on VLSI Design.

COURSE DESCRIPTION:
Basic Principles; Methodologies and techniques of CMOS Circuit Designs; Need For Low Power VLSI Design; Principles Of Low Power Circuit Design; Simulation Analysis of Low Power; Logic and Circuit Analysis; Special Techniques Of Low Power Design; Performance Management in Architecture or System level.

COURSE OUTCOMES:
On successful completion of the course, students will be able to

CO1. Demonstrate knowledge in
- Design of logic Circuits for low power Requirements
- Power Estimation
- Low power architecture & systems
- Low Power Methodologies & Techniques.

CO2. Analyze complex problems in the domain of low power devices, CMOS Circuits, effects and related issues.
CO3. Design low power circuits to negotiate various constraints such as area, speed and power.
CO4. Solve problems using relevant methods to synthesize Low power CMOS Circuits.
CO5. Apply special techniques in evaluating the performance of low power CMOS devices.
CO6. Contribute positively towards societal issues and responsibilities in designing and developing Low Power Integrated Circuits.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO LOW POWER VLSI DESIGN (07 Periods)
Needs For Low Power VLSI Chips, Charging And Discharging Capacitances, Short Circuit Current in CMOS, CMOS Leakage Current, Static Current, Basic Principles Of Low Power Design, Low Power Figure Of Merits.

UNIT-II: POWER ANALYSIS AND ESTIMATION (10 Periods)
Spice Circuit Simulation, Discrete Transistor Modeling and Analysis, Gate Level Logic Simulation, Architecture Level Analysis, Data Correlation Analysis, Monte Carlo Simulation.

UNIT-III: LOW POWER CIRCUITS (11 Periods)
Circuit Analysis:
Transistor and Gate Sizing, Equivalent Pin Ordering, Network Restructuring and Reorganization, Special latches and Flip flops.
Logic Analysis:
Gate Reorganization, Signal Gating, Logic Encoding, State Machine Encoding, Pre computation Logic.

UNIT-IV: SPECIAL TECHNIQUES (08 Periods)
Power Reduction in Clock Networks, CMOS Floating Node, Low Power Bus, Delay Balancing, Low Power Techniques for SRAM.

UNIT-V: ARCHITECTURE AND SYSTEM (09 Periods)
Power and Performance Management, Switching Activity Reduction, Parallel Architecture with Voltage Reduction, Flow Graph Transformation.

Total Periods: 45

TEXT BOOK:
1. Gary Yeap, *Practical Low-Power Digital VLSI Design*, Springer Publication, 1998.

REFERENCE BOOKS:

1. A.P.Chandrakasan, R.W.Broadersen, *Low Power Digital CMOS Design*, Kluwer, 1995.
2. Kaushik Roy, Sharat Prasad, *Low-Power CMOS VLSI Circuit Design*, Wiley Student Edition, 2000.

IV B.Tech. - I semester

(16BT70409) **RF ENGINEERING**

(Program Elective - 4)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Courses on Basic Electronics and Wave Theory

COURSE DESCRIPTION:

Concepts of transmission line theory; RF Electronics; high frequency circuit behavior; design of tuning and matching networks; RF Passive and active components; RF Transistor amplifier design; Oscillators and RF Mixers.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. Understand basics of RF Electronics and transmission lines.

CO2. Analyze Transmission lines, Matching and biasing networks.

CO3. Design Matching and biasing networks, RF passive and active components, and RFtransistor amplifiers.

CO4. Solve problems in transmission lines, filters, oscillators and Mixers.

CO5. Apply appropriate Oscillators, Mixers and components to RF Circuit design.

CO6. Apply RF electronics in the field of wireless communication systems and allied areasfor societal use.

DETAILED SYLLABUS

UNIT – I: INTRODUCTION TO RF ELECTRONICS (10 Periods)

The Electromagnetic Spectrum, units and Physical Constants, Microwave bands, RF behavior of Passive components: Tuned resonant circuits, Vectors, Inductors and Capacitors. Voltage and Current in capacitor circuits, Tuned RF / IF Transformers.

UNIT – II: TRANSMISSION LINE ANALYSIS (10 Periods)

Examples of transmission lines, Transmission line equations and Biasing: Kirchoffs Voltage and current law representation, Traveling voltage and current waves, General Impedance definition, lossless transmission line model. Micro Strip Transmission Lines, Special Termination Conditions, sourced and Loaded Transmission Lines.

Single And Multiport Networks: The Smith Chart, Interconnectivity networks, Network properties and Applications, Scattering Parameters.

UNIT -III: MATCHING AND BIASING NETWORKS (10 Periods)

Impedance matching using discrete components, Micro strip line matching networks, Amplifier classes of Operation and Biasing networks.

RF Passive & Active Components: Filter Basics, Lumped filter design, Distributed Filter Design, Diplexer Filters, Crystal and Saw filters, Active Filters, Tunable filters. Power Combiners / Dividers: Directional Couplers, Hybrid Couplers, Isolators. RF Diodes: BJTs, FETs, HEMTs and Models.

UNIT – IV: RF TRANSISTOR AMPLIFIER DESIGN (09 Periods)

Characteristics of Amplifiers, Amplifier Circuit Configurations, Amplifier Matching Basics, Distortion and noise products, Stability Considerations, Small Signal amplifier design, Power amplifier design, MMIC amplifiers, Broadband High Power multistage amplifiers, Low noise amplifiers, VGA Amplifiers.

UNIT – V: OSCILLATORS and Mixers (09 Periods)

Oscillator basics, Low phase noise oscillator design, High frequency Oscillator configuration, LC Oscillators, VCOs, Crystal Oscillators, PLL Synthesizer, and Direct Digital Synthesizer.

RF Mixers: Basic characteristics of a mixer, Active mixers, Image Reject and Harmonic mixers, Frequency domain considerations.

Total Periods: 48

TEXT BOOKS:

1. Reinhold Ludwing, Pavel Bretchko, *RF Circuit design: Theory and applications*, Pearson Education Asia Publication, New Delhi 2001.
2. Joseph Carr, *Secrets of RF Design*, Tata McGraw Hill Publications, 3rd Edition, 2004.

REFERENCE BOOKS:

1. Devendra K. Misra, *Radio Frequency and Microwave Communication Circuits – Analysis and Design,* Wiley Student Edition, John Wiley & Sons, 2nd Edition, July 2004.

2. Christopher Bowick, Cheryl Aljuni and John Biyler,*RF Circuit Design*, Elsevier Science, 2008.
3. Mathew M.Radmangh, *Radio frequency and microwave electronics*, PE Asia Publication, 2001.

IV B.Tech. - I semester

(16BT70410) **SPEECH PROCESSING**

(Program Elective - 4)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Courses on Signals and Systems & Digital Signal Processing

COURSE DESCRIPTION:
Acoustic Theory of speech production; model for speech signals and speech processing systems; Mathematical analysis of speech signal - Homomorphic and LPC models; Speech and Speaker recognition systems.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:

CO1. Demonstrate fundamental knowledge in
- Digital Model representation of speech signal
- STFT analysis
- LPC analysis
- Homomorphic models.

CO2. Analyze speech signal using homomorphic and linear predictive techniques.
CO3. Design efficient algorithms for feasible and optimal solutions in speech processing.
CO4. Synthesize features of speech signals to solve the problems in designing of speech and speaker recognition system.
CO5. Apply appropriate techniques and approaches to analyze and synthesis speech signals with an understanding of limitations.
CO6. Use speaker recognition system for societal needs.

DETAILED SYLLABUS:

UNIT-I: DIGITAL MODEL FOR THE SPEECH SIGNAL (10 Periods)
The process of speech production - the mechanism of speech production, acoustic phonetics. The Acoustic theory of speech production- sound propagation, uniform lossless tubes, Effect of losses in the vocal tract, Effect of radiation at the lips, Vocal tract transfer functions for vowels, the effect of nasal coupling, Excitation of sound in the vocal tract. Digital models for speech signals.

UNIT II: TIME DOMAIN MODELS FOR SPEECH PROCESSING (09 Periods)
Introduction, Window considerations, Short time energy and average magnitude, Short time average zero crossing rate, Speech vs silence discrimination using Average energy and zero crossing, Pitch period estimation using parallel processing approach, The short time autocorrelation function, The short time average magnitude difference function, Pitch period estimation using the autocorrelation function.

UNIT-III: HOMOMORPHIC SPEECH PROCESSING (09 Periods)
Short time Fourier transform: Definition, Fourier transform interpretation, linear filter interpretation, Filter Bank summation method, Overlap Addition method. Homomorphic systems for convolution – properties of the complex Cepstrum, computational considerations. The complex Cepstrum of speech, pitch detection, formant estimation, Homomorphic vocoder.

UNIT-IV: LINEAR PREDICTIVE CODING OF SPEECH (10 Periods)
Basic principles of linear predictive analysis – Auto correlation method, The covariance method. Computation of the gain for the model, solution of LPC Equations – Cholesky Decomposition solution for the covariance method. Durbin's Recursive solution for the autocorrelation equations.Comparison between methods of solutions of LPC analysis equations.Applications of LPC parameters – Pitch detection using LPC parameters, Formant analysis using LPC parameters.

UNIT-V: SPEECH AND SPEAKER RECOGNITION SYSTEMS (08 Periods)
Speaker Verification vs. recognition, features that distinguish speaker, Speaker recognition system- speaker verification system, speaker identification systems.

Basic pattern recognition approaches, parametric representations of Speech recognition, Speech recognition system- isolated digit recognition system, continuous digit recognition system, LPC distance measure.

Total Periods: 46

TEXT BOOK:

1. L R Rabiner and SW Schafer, *Digital processing of speech signals*, Pearson Education, 2006.

REFERENCE BOOKS:

1. Douglas O Shaughnessy, *Speech Communications*, Oxford University Press, 2nd Edition, 2000

2. L R Rabiner, BH Juang, B Yegnanarayana, *Fundamentals of Speech Recognition*, Pearson Education, 2009.

IV B.Tech. - I semester

(16BT70411) SPREAD SPECTRUM COMMUNICATIONS

(Program Elective - 4)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: A Course onDigital Communications.

COURSE DESCRIPTION: Fundamentals of spread spectrum systems; Analysis of spread spectrum systems; Detection of spread spectrum signals; Applications of spread spectrum to communications.

COURSE OUTCOMES:
On successful completion of the course, students will be able to:
CO1. Demonstrate knowledge in various types of spread spectrum techniques, generation and detection of spread spectrum signals and their applications in communications.
CO2. Analyze problems in direct sequence and avoidance-type spread spectrum systems.
CO3. Consider design and development issues in spread spectrum communication systems.
CO4. Solve engineering problems pertaining to spread spectrum communications.
CO5. Apply spread spectrum techniques to communications.
CO6. Apply engineering standards to meet the responsibilities and norms of engineering practice.

DETAILED SYLLABUS:

UNIT-I: FUNDAMENTALS OF SPREAD SPECTRUM SYSTEMS (07 Periods)
General concepts, Direct sequence (DS), Frequency Hopping (FH), Time Hopping (TH), Comparison of modulation methods, Hybrid spread spectrum systems, Chirp spread spectrum.

UNIT-II: ANALYSIS OF DIRECT SEQUENCE SPREAD SPECTRUM SYSTEMS (09 Periods)
Properties of Pseudo noise (PN) sequences, m-sequences and their properties, Partial Correlation, PN signal from PN sequences, Partial correlation of PN signals, The PN Signal, De-spreading the PN signal, Interference rejection, Output signal to noise ratio, Anti-jam characteristics, Interception, Energy bandwidth efficiency.

UNIT-III: ANALYSIS OF AVOIDANCE – TYPE SPREAD SPECTRUM SYSTEMS & GENERATION OF SPREAD SPECTRUM SIGNALS (07 Periods)

Analysis of avoidance – type spread spectrum systems:
Thefrequency hopped signal, Interference rejection in a frequency hopping receiver, The time hopped signal.

Generation of Spread Spectrum Signals:
Shift register sequence generators, Discrete frequency synthesizers, SAW device PN generators.

UNIT-IV: DETECTION OF SPREAD SPECTRUM SIGNALS (12 Periods)
Tracking: Coherent direct sequence receivers, other method of carrier tracking, Delay lock loop analysis, Tau – Dither loop, Coherent carrier tracking, Non-coherent frequency hop receiver.
Acquisition: Acquisition of spread spectrum signals, Acquisition by cell-by-cell searching, Reduction of acquisition time, Acquisition with matched filters, Matched filters for PN sequences, Matched filters for frequency hopped signals, Matched filters with acquisition - aiding waveform.

UNIT-V: APPLICATION OF SPREAD SPECTRUM TO COMMUNICATIONS (10 Periods)
Commercial Applications: Code Division Multiple Access, Multipath channels, The FCC part-15 rules for spread spectrum systems, Direct sequence and frequency hopping.
Cellular Systems: Direct sequence CDMA, Comparison of FDMA, TDMA and CDMA, Interference-limited versus dimension-limited systems, IS-95 CDMA digital cellular system.

Total Periods: 45

4. Stephen P. Robbins and Timothy A. Judge*, Organizational Behaviour*, Prentice Hall, Delhi, 16thEdition 2014.

IV B.Tech. - I Semester

(16BT6HS12) **PHILOSOPHY OF EDUCATION**

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: –

COURSE DESCRIPTION:
Introduction to Philosophy and Engineering Education; Philosophical methods and their implications in engineering; Philosophical education in India; Values and Engineering education; Outcome based education.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. Acquire knowledge in
- Philosophy of Engineering education.
- Philosophical Methods.
- Knowledge acquiring methods.
- Engineering education and responsibilities.

CO2. Understand the impact of Outcome Based Education for effective educational outcomes

CO3. Apply reasoning to assess societal issues with the contextual knowledge of engineering education and responsibilities.

DETAILED SYLLABUS:

UNIT-I:INTRODUCTION TOPHILOSOPHY AND ENGINNERING EDUCATION (09 Periods)
Concept , Significance, and Scope of Philosophy in Engineering – Aims of Engineering Education – relationship between philosophy and engineering education – speculative, normative and critical approaches of philosophy in engineering.

UNIT-II:PHILOSOPHICAL METHODS AND THEIR IMPLICATIONS INENGINEERING (09Periods)
Introduction to Philosophical approaches: Idealism, Naturalism, Pragmatism, Realism and Existentialism; Significance and Scope in Engineering Education.

UNIT-III: PHILOSOPHICAL EDUCATION IN INDIA (09 Periods)
Different branches of philosophy- meaning, Epistemology: nature and scope; Knowledge acquiring methods;Kinds and instruments of knowledge; Re-shapingof educational thoughts by Indian thinkers: Rabindranath Tagore, Sri Aurobindo Gosh, Mahatma Gandhi,Jiddu Krishnamurthy and Swamy Vivekananda.

UNIT-IV:VALUES AND ENGINEERING EDUCATION (09 Periods)
Introduction; Engineering educationand responsibilities: health,social, moral, ethics aesthetic;Value: crisis and strategies forinculcation;
Case study: Engineering Solutions given by Mokshagundam Visvesvaraya.

UNIT-V:OUTCOME-BASED EDUCATION (09 Periods)
Institutional visioning;educational objectives; programme outcomes, curriculum,stakeholders, infrastructure and learning resources; governance and management, quality in education.

Total periods: 45

TEXT BOOKS:
1. Ganta Ramesh, *Philosophical Foundations of Education*, Neelkamal Publications, 1stEdition,2013.
2. CarlMicham,*Thinking through technology(The Paths between Engineering and Philosophy)*, University of Chicago Press, 1stEdition,1994.
3. Louis L Bucciarelli,*Engineering Philosophy,*Delft University Press,1stEdition, 2003.
4. NBA/ABET Manuals.

REFERENCE BOOKS:
1. Louis L Bucciarelli, *Philosophy of Technology and Engineering Sciences*, North Holland, 1stEdition, 2009 (e-book).
2. Samuel Florman, *Existential pleasures of education*, Martins's Griffin S.T. publication, 1stEdition, 1992.

IV B.Tech. - I Semester

(16BT6HS13) PUBLIC ADMINISTRATION

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: –

COURSE DESCRIPTION:

Introduction; Public Policy; Good Governance; E-Governance; Development Administration.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. Acquireknowledge in
- Public Policy.
- Good Governance.
- E-governance.
- Development Administration.

CO2. Analyze the possibilities and limitations of existing policies through Good Governance perspective.

CO3. Design and develop solutions in e-governance modelsto find and provide opportunities in e-governance.

CO4. Adopt principles ofe-governance in addressing the existing issues and challenges in e-governance sector.

CO5. Understand the significance of Administrative Development in finding professional engineering solutions by probing
- Bureaucracy.
- Role of civil society.

DETAILEDSYLLABUS:

UNIT-I: INTRODUCTION **(09 Periods)**

Public and Private Administration- Differences and Similarities, Meaning, Scope; Importance of Public Administration in Modern Era; Public Administration and its implications in the field of Engineering.

Case Study: **Unique Identification Authority of India (UIDAI):Aadhaar Project: Challenges Ahead.**

UNIT-II: PUBLIC POLICY **(09 Periods)**

Meaning and Scope; Policy Formulation in India; Policy making process; Policy Implementation.
Engineering and Public Policy**,**Social, ethical, Monetary and fiscal policies; policy implications of engineering;The engineer's role in Public Policy.

Case Study:NITI Aayog: Demonetization and Aftermath of Demonetization – Cashless transactions.

UNIT-III: GOOD GOVERNANCE **(09 Periods)**

Significance; Objectives;Concepts;Reforms;Organization and its basic problemsAdministrative and Governance reforms in India; Sustainable and Inclusive growth in India;Engineering and Sustainable Environment-Role of Engineers; Right to information Act.

Case Study: Strategies in Good Governance: A Case Study of Karnataka, Kerala and Orissa.

UNIT-IV: E-GOVERNANCE **(09 Periods)**

Meaning, Significance, Issues in E-governance; E-governance Models, Problems and Opportunities; Application of DataWarehousing and Data Mining in Governance; Engineers role in re-engineering E-governance.

Case Study: e-Housing System for Bhavana Nirman Dhanasahayam Online disbursement of housing assistance in Kerala.

UNIT-V: DEVELOPMENT ADMINISTRATION **(09 Periods)**

Introduction; Development Administration-Administrative Development- Sustainable Development - Significance- Objectives; Bureaucracy - Personnel administration and human resources development; Role of civil society-Citizens and administration;Development and Engineering: Issues Challenges and Opportunities.

Case Study: Neeru-Chettu (Water-Tree) of Andhra Pradesh.

Case Study: TPDDL of Delhi and Odisha. **Total Periods: 45**

TEXT BOOKS:

1. M.P. Sharma, B.L. Sadana, HarpreetKaur,*Public Administration in Theory and Practice,* KitabMahal, Mumbai,1stEdition,2014.
2. CSR Prabhu, *E., Governance – concepts and case studies*, PHI, New Delhi,2ndEdition, 2012.

REFERENCE BOOKS:

1. SurendraMunshi, Bijupaul Abraham, *Good Governance, Democratic societies and Globalization,*

Sage publications, New Delhi,1stEdition, 2004.
2. R.K.Sapru, *Public Policy,*Sterling Publishers Pvt. Ltd., New Delhi, 1stEdition, 2001.

IV B.Tech. - I Semester

(16BT60112) BUILDING MAINTENANCE AND REPAIR

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: —

COURSE DESCRIPTION:
Durability of buildings, Failure and repair of buildings, Material Techniques for repair, Maintenance of buildings, Conservation and recycling.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. Acquire basic knowledge on durability and serviceability, failures, repair and rehabilitation of buildings.
CO2. Analyzefailures, repair and rehabilitation techniques.
CO3. Solve complex building maintenance problems through proper investigations and interpretation.
CO4. Use modern tools and techniques for various repairs and rehabilitation of structures.
CO5. Provide solutions for building maintenance and repair problems considering health and safety.
CO6. Consider environmental sustainability in building maintenance and repair.
CO7. Maintain ethical standards for quality in repairs and rehabilitation of structures.
CO8. Evaluate specifications and perform cost analysis of building components while repair and rehabilitation.

DETAILED SYLLABUS:

UNIT-I: DURABILITY AND SERVICEABILITY OF BUILDINGS (10 Periods)
Life expectancy of different types of buildings; Effect of environmental elements such as heat, dampness, frost and precipitation on buildings; Effect ofchemical agents on building materials, Effect of pollution on buildings, Effect of fire onbuilding; Damage by biological agents like plants, trees, algae, fungus, moss, insects, etc.; Preventive measures on various aspects, Inspection, Assessment procedure for evaluating for damaged structures, Causes of deterioration, Testing techniques.

UNIT-II:FAILURE AND REPAIR OF BUILDINGS (10 Periods)
Building failure – Types, Methodology for investigation; Diagnostictesting methodsandequipment, Repair of cracks inconcrete and masonry, Materials for Repair,Methods of repair, Repair and strengthening of concrete buildings, Foundationrepair and strengthening, Underpinning, Leakage of roofs and repair methods.

UNIT-III: TECHNIQUES FOR REPAIR (08 Periods)
Rust eliminators and polymers coating for rebars during repair, Foamed concrete, Mortar and dry pack, Vacuum concrete, Gunite and shotcrete, Epoxy injection, Mortar repairs for cracks, Shoring and underpinning.

UNIT-IV: MAINTENANCE OF BUILDINGS (09 Periods)
Reliability principles and its applications in selection of systemsfor building, Routine maintenance of building, Maintenance cost, Specifications formaintenance works, Dampness-Damp proof courses, Construction details for prevention ofdampness; Termite proofing, Fire protection, Corrosion protection.

UNIT-V: CONSERVATION AND RECYCLING (08 Periods)
Performance of construction materials and components in service, Rehabilitation of constructed facilities, Conservation movement, Materials and methodsfor conservation work, Recycling of old buildings and its advantages, Examples. **Total Periods: 45**

TEXT BOOKS:
1. Dennison Campbell, Allen and Harold Roper, *Concrete Structures – Materials, Maintenance and Repair*, Longman Scientific and Technical, UK, 1991.
2. Allen, R.T. L., Edwards, S.C. and J. D. N. Shaw,*TheRepair of Concrete Structures*, Blackie Academic & Professional, UK, 1993.

REFERENCE BOOKS:
1. Peter H. Emmons, *Concrete Repair and Maintenance*, John Wiley and Sons Publications, 2002.
2. Building Constructionunder Seismic Conditions in the Balkan Region, UNDP/UNIDO Project Rer/79/015,Volume 5, *Repair and Strengthening of Reinforced Concrete, Stone and Brick Masonry Buildings*, United Nations Industrial Development Organisation, Vienna.
3. Shetty, M. S., *Concrete Technology*, S. Chand and Company.
4. Smith, P. and Julian, W., *Building Services*, Applied Science Publications, London, 1976.
5. SP: 25, BIS;*Causes and Prevention of Cracks in Buildings*.
6. Champion, S., *Failure and Repair of Concrete Structures*, John Wiley and Sons Publications, 1961.

7. Perkins, P. H., Repair, Protection and Water Proofing of Concrete Structures, E& FN Spon, UK, 3rdEdition, 1997.

IV B.Tech. - I Semester

(16BT60113) CONTRACT LAWS AND REGULATIONS

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: –

COURSE DESCRIPTION:
Construction contracts; Tenders; Arbitration; Legal requirements; Labour regulations.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. Demonstrate basic Knowledge on construction contracts, tenders, arbitration, legal requirements and labour regulations.
CO2. Analyze contracts and tenders.
CO3. Address the legal issues in contracts and tenders.
CO4. Follow laws and regulations in the preparation of contracts and tenders.
CO5. Prepare contract and tender documents as per the standards.
CO6. Consider project schedule, cost, quality and risk in the preparation of contracts and tenders.

DETAILED SYLLABUS:

UNIT-I:CONSTRUCTION CONTRACTS (09 Periods)
Indian contracts act, Elements of contracts, Types of contracts, Features, Suitability, Design of contract documents, International contract document and laws, Standard contract document, Law of torts.

UNIT-II: TENDERS (09 Periods)
Prequalification, Bidding, Accepting; Evaluation of tender from technical, contractual and financial points of view; Two cover system, Preparation of the documentation, Contract formation and interpretation, Potential contractual problems, Price variation clause, Comparison of actions and laws, Subject matter, Violations.

UNIT-III: ARBITRATION (09 Periods)
Arbitration, Comparison of actions and laws, Agreements, Appointment of arbitrators, Conditions of arbitration, Powers and duties of arbitrator, Rules of evidence, Enforcement of award, Arbitration disputes, Dispute review board.

UNIT-IV: LEGAL REQUIREMENTS (09 Periods)
Legal requirements for planning, Property law, Agency law, Tax laws – Income tax, Sales tax, Excise and custom duties, Local government approval, Statutory regulations, Insurance and bonding, Laws governing purchase and sale, Use of urban and rural land, Land revenue codes, EMD, Security deposits, Liquidated damages.

UNIT-V:LABOUR REGULATIONS (09 Periods)
Social security, Welfare legislation; Laws relating to wages, bonus and industrial disputes; Labour administration, Insurance and safety regulations, Workmen's compensation act, Maternity benefit act, Child labour act, Other labour laws.

Total Periods: 45

TEXT BOOKS:

1. SubbaRao,G.C.V., *Law of Contracts I & II*, S. Gogia & Co., 11thEdition, 2011.
2. Jimmie Hinze, *Construction Contracts,*McGraw Hill, 3rdEdition, 2011.

REFERENCE BOOKS:

1. Kishore Gajaria, *GT Gajaria's Law Relating to Building and Engineering Contracts in India*, Lexis NexisButterworths India,4thEdition, 2000.
2. Patil, B. S,*Civil Engineering Contracts and Estimates*, University Press (India) Private Ltd., 4thEdition, 2015.
3. Joseph T. Bockrath, *Contracts and the Legal Environment for Engineers and Architects*, McGraw Hill Education,7thEdition, 2010.

4. AkhileshwarPathak, *Contract Law*, Oxford University Press, 2011.

IV B.Tech. - I Semester

(16BT60114) DISASTER MITIGATION AND MANAGEMENT

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: –

COURSE DESCRIPTION:
Disasters; Earthquakes; Floods; Cyclones; Droughts; Landslides; Disaster management.

COURSE OUTCOMES: On successful completion of course, students will be able to:

CO1. Demonstrateknowledge on disasters, their vulnerability and mitigation measures.
CO2. Analyze disasters and their vulnerability.
CO3. Design strategies for effective disaster mitigation.
CO4. Address pre and post disaster issues for better preparedness and mitigation measures, through proper analysis and interpretation.
CO5. Use appropriate methods in disaster mitigation and management.
CO6. Use historical data of disasters to inform the people over preparedness and mitigation measures.
CO7. Solve disaster related issues considering environment.
CO8. Consider economical issues in disaster management.

DETAILED SYLLABUS:

UNIT-I: DISASTERS **(09 Periods)**

Types of disasters - Natural disasters; Impact of disasters on environment, infrastructure and development; Concepts of hazards and vulnerability analysis, Hazard Assessment, Guidelines for hazard assessment and vulnerability analysis, Basic principles and elements of disaster mitigation.

UNIT-II: EARTHQUAKES **(09 Periods)**

Introduction to earthquake, Intensity scale (MSK–64), Seismic activity in India, Seismic zones of India, Earthquakes in A.P., Action plan for earthquake disaster preparedness, Elements at risk, Recovery and rehabilitation after earthquake, Earthquake resistant design and construction of buildings; Tsunami – Onset, Types and causes,Warning, Elements at risk, Typical effects, Specific preparedness and mitigation strategies.

UNIT-III: FLOODS, CYCLONES AND DROUGHTS **(11 Periods)**

Floods and Cyclones: Onset, Types, Warnings; Elements at risk, Typical effects, Indian floods and cyclones, Hazard zones, Potential for reducing hazards, Mitigation strategies and community based mitigation.

Droughts: Onset, Types and warning; Causes, Impact, Early warning and response mechanisms, Mitigation strategies, Droughts in India.

UNIT-IV: LANDSLIDES **(08 Periods)**

Onset, Types and warning; Causes, Elements at risk, Indian landslides, Hazards zones, Typical effects, Mitigation strategies and community based mitigation.

UNIT-V: DISASTER MANAGEMENT **(08 Periods)**

Disaster management organization and methodology, Disaster management cycle, Disaster management in India – Typical cases; Cost–benefit analysis with respect to various disaster management programs implemented by NGOs and Government of India.

Total Periods: 45

TEXT BOOKS:

1. V. K. Sharma, *Disaster Management, Medtech Publishing,* 2ndEdition, 2013.
2. Anand S. Arya, AnupKaranth, and AnkushAgarwal, *Hazards, Disasters and Your Community: A Primer for Parliamentarians*, GOI–UNDP Disaster Risk Management Programme, Government of India, National Disaster Management Division, Ministry of Home Affairs, New Delhi, Version 1.0, 2005.

REFERENCE BOOKS:

1. Donald Hyndman and David Hyndman, *Natural Hazardsand Disasters*, Cengage Learning, 3rdEdition, 2011.
2. *Disaster Management in India,*AStatus Report, Ministry of Home Affairs, Govt. of India, May, 2011.

3. Rajendra Kumar Bhandari, *Disaster Education and Management: A Joyride for Students, Teachers, and Disaster Managers*, Springer India, 2014.
4. R. B. Singh, *Natural Hazards and Disaster Management*, Rawat Publications, 2009.

IV B.Tech - I Semester

(16BT60115) ENVIRONMENTAL POLLUTION AND CONTROL

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: –

COURSE DESCRIPTION:

Fundamentals ofair pollution;Dispersion of pollutants; Effects and control of air pollution; Water pollution;Soil pollution and control; Municipal solid waste management.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. Demonstrateknowledge on air, water, soil pollution and their control and solid waste management.
CO2. Analyze causes and effects of air, water and soilpollution and their remedial measures.
CO3. Recommend suitable solutionsto complex environmental pollution problems.
CO4. Use appropriate remedial technique to solve environmental pollution problems.
CO5. Understand the effects of environmental pollutionon human health and vegetation.
CO6. Encourage sustainable development through implementation of pollution control measures.
CO7. Maintain IS Codes for environmental quality control.

DETAILED SYLLABUS:

UNIT-I: AIR AND NOISE POLLUTION (08 Periods)

Air Pollution: Scope, Significance, Classification, Sources – Line, Area, Stationary, Mobile; Effects of air pollutants on man, material and vegetation; Global effects of air pollution; Air pollution meteorology - Lapse rate, Inversion, Plume pattern;Dispersion of air pollutants - Dispersion models and applications; Ambient air quality standards.

Noise Pollution: Sound pressure, Power and intensity,Impacts of noise, permissible limits of noise pollution, measurement of noise.

UNIT-II: AIR AND NOISE POLLUTIONCONTROL (10 Periods)

Self-cleansing properties of the environment,Dilution method, Control at source, Process changes and equipment modifications, Control of particulates–Types of equipment, Design and operation – Settlingchambers,Centrifugal separators, Bag house filters, Wet scrubbers, Electrostatic precipitators; Control of gaseouspollutants – Adsorption, Absorption, Condensation, Combustion; Control of air pollution from automobiles, Control of noise pollution.

UNIT-III: WATER POLLUTIONAND CONTROL (10 Periods)

Water pollution – Sources, Causes, Effects; Surface and groundwater quality – Physical, Chemical, Biological; Drinking water quality standards, Water purification – Processes, Engineered systems – Aeration, Solids separation, Settling operations, Coagulation, Softening, Filtration, Disinfection; Wastewater – Sources, Causes, Effects, Treatment and disposal – Primary, Secondary, Tertiary; Case studies.

UNIT-IV: SOIL POLLUTION AND CONTROL (08 Periods)

Soil pollutants, Sources of soil pollution, Causes, Effectsand control of soil pollution, Diseases caused by soil pollution, Methods to minimize soil pollution, Effective measures to control soil pollution, Case studies.

UNIT-V: MUNICIPAL SOLID WASTE MANAGEMENT (09 Periods)

Types of solid waste, Composition of solid waste, Collection and transportation of solid waste, Methods of disposal – Opendumping, Sanitary landfill, Composting, Incineration, Utilization - Recovery and recycling, Energy Recovery. **Total Periods: 45**

TEXT BOOKS:

1. Peavy, H. S, Rowe, D. R., and Tchobanoglous, G., *Environmental Engineering*, McGraw Hill Inc., 1985.
2. C.S.Rao, *Environmental Pollution Control Engineering*, New Age International Pvt. Ltd., 2ndEdition, 2007.
3. Ibrahim A. Mirsa, *Soil Pollution: Origin, Monitoring & Remediation*, Springer, UK, 2ndEdition, 2008.

REFERENCE BOOKS:

1. M.N. Rao and H.V.N. Rao, *Air Pollution,* Tata McGraw–Hill Education Pvt. Ltd., 19thEdition, 2010.
2. Daniel Vallero, *Fundamentals of Air Pollution,* Academic Press (Elsevier)*,* 5thEdition, 2014.
3. S.M.Khopkar,*Environmental Pollution Monitoring and Control,* New Age International Pvt. Ltd., 2ndEdition, 2007.

4. V. M. Domkundwar, Environmental Engineering, DhanpatRai& Co. Pvt. Ltd., New Delhi, 2014.

IV B.Tech - I Semester

(16BT60116) PLANNING FOR SUSTAINABLE DEVELOPMENT

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: –

COURSE DESCRIPTION:
Sustainable development;Environmental impact;Sustainable Policies; Governance; Theories and strategies; Media and education for sustainability.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. Demonstrate the knowledge on sustainable development, environmental impact, sustainable policies, governance, systems and strategies, media and education for sustainability.
CO2. Analyze theories, environmental impact, policies, systems and strategies for sustainable development.
CO3. Develop suitable methods and systems for sustainable development.
CO4. Use appropriate techniquesin solving issues related to sustainable development.
CO5. Provide solutions to problems associated with sustainable development considering society.
CO6. Consider environment while planning sustainable development.
CO7. Communicate effectively on sustainable development issues through media and education.
CO8. Consider economical issues while planning for sustainable development.

DETAILED SYLLABUS:

UNIT-I: SUSTAINABLE DEVELOPMENT (09 Periods)
Definition and concepts of sustainable development, Capitalization of sustainability - National and global context;Millennium development goals, Emergence and evolution of sustainability and sustainable development, Theories of sustainability, Case studies.

UNIT-II: ENVIRONMENTAL IMPACT (09 Periods)
Climate change – Science, Knowledge and sustainability; Unforeseen environmental impacts on development, Challenges of sustainable development, Centrality of resources in sustainable development, Case studies.

UNIT-III: SUSTAINABLE POLICIES AND GOVERNANCE (09 Periods)
Governance - Democracy and Eco–welfare; Global civil society and world civil politics, Civic environmentalism, Policy responses to sustainable development, Economics of sustainability, Social responsibility in sustainability, National action, ISO 14001: Environmental management system.

UNIT-IV: SUSTAINABLE SYSTEMS AND STRATAGIES (09 Periods)
Need for system innovation, Transition and co–evolution, Theories and methods for sustainable development, Strategies for eco–innovation, Ecological foot print analysis, Socio ecological indicators – Eco labels; Policy programmes for system innovation, Case studies.

UNIT-V: MEDIA AND EDUCATION FOR SUSTAINABILITY (09 Periods)
Role of emerging media, Remarkable design and communication art, Activism and the public interest, Education for sustainability, Participation in decision making, Critical thinking and reflection, Case studies.

Total Periods: 45

TEXT BOOKS:
1. John Blewitt, *Understanding Sustainable Development*, Earth Scan Publications Ltd., 2ndEdition, 2008.
2. Jennifer A. Elliot, *An Introduction to Sustainable Development*, Earth Scan Publications Ltd., 4thEdition, 2006.

REFERENCE BOOKS:
1. Peter Rogers, Kazi F Jalal and John A Boyd, *An Introduction to Sustainable Development*, Earth Scan Publications Ltd., 2006.
2. Simon Dresner, *The Principles of Sustainability*, Earth Scan Publications Ltd.,2ndEdition, 2008.
3. Peter Bartelmus, *Environment Growth and Development: The Concepts and Strategies of Sustainability*, Routledge, 3rdEdition, 2003.

4. Gabriel Moser, Enric Pol, Yvonne Bernard, MiriliaBonnes, Jose Antonio Corraliza and Maria Vittoria Giuliani, *People Places and Sustainability*, Hogrefe& Huber Publishers, 2ndEdition, 2003.

IV B.Tech. - I Semester

(16BT60117) **PROFESSIONAL ETHICS**

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: —

COURSE DESCRIPTION:
Engineering ethics; Professional ideals and virtues; Engineering as social experimentation; Responsibilities and rights; Global issues.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. Demonstrate the principles of ethics, importance of professional values and social responsibility.
CO2. Analyze the problems in the implementation of moral autonomy and use ethical theories in resolving moral dilemmas.
CO3. Develop suitable strategies to resolve problems arise in practicing professional ethics.
CO4. Provide solutions to complex problems associated with professional ethics by proper analysis and interpretation.
CO5. Use appropriate theories in resolving issues pertain to professional ethics.
CO6. Understand the impact of professional ethics on society and address the limitations of codes of ethics.
CO7. Practice engineering with professionalism, accountability and ethics.
CO8. Function as a member, consultant, manager, advisor and leader in multi-disciplinary teams.
CO9. Write reports without bias and give instructions to follow ethics.

DETAILED SYLLABUS:

UNIT-I: ENGINEERING ETHICS (09 Periods)
Scope and aim of engineering ethics, Senses of engineering ethics, Variety of moral issues, Types of inquiry, Moral dilemmas, Moral autonomy-Kohlberg's theory, Gilligan's theory, Consensus and controversy.

UNIT-II:PROFESSIONAL IDEALS AND VIRTUES (08 Periods)
Theories about virtues, Professions, Professionalism, Characteristics, Expectations, Professional responsibility, Integrity, Self-respect, Sense of responsibility, Self-interest, Customs and religion, Self-interest and ethical egoism, Customs and ethical relativism, Religion and divine command ethics, Use of ethical theories, Resolving moral dilemmas and moral leadership.

UNIT-III:ENGINEERING AS SOCIAL EXPERIMENTATION (10 Periods)
Engineering as experimentation, Similarities to standard experiments, Learning from the past and knowledge gained, Engineers as responsible experimenters, Conscientiousness, Moral autonomy and accountability, The challenger case, Codes of ethics and limitations, Industrial standards, Problems with the law of engineering.

UNIT-IV: RESPONSIBILITIES AND RIGHTS (09 Periods)
Collegiality and loyalty, Respect for authority, Collective bargaining, Confidentiality, Conflict of interests, Occupational crime, Rights of engineers, Professional rights, Whistle-blowing, The BART case, Employee rights and discrimination.

UNIT-V: GLOBAL ISSUES (09 Periods)
Multinational corporations, Professional ethics, Environmental ethics, Computer ethics, Engineers as consultants, Witnesses, Advisors and Leaders, Engineers as Managers, Managerial ethics applied to Engineering Profession, moral leadership.

Total Periods: 45

TEXT BOOKS:

1. Mike W. Martin and Roland Schinzinger, *Ethics in Engineering*, Tata McGraw-Hill, 3rdEdition, 2007.
2. Govindarajan, M., NataGovindarajan, M., Natarajan, S. and Senthilkumar, V. S., *Engineering Ethics*, Prentice Hall of India, 2004.

REFERENCE BOOKS:

1. S. Kannan and K. Srilakshmi, *Human Values and Professional Ethics*, Taxmann Allied Services Pvt Ltd., 2009.
2. Edmund G. Seebauer and Robert L. Barry, *Fundamental of Ethics for Scientists and Engineers*, Oxford University Press, 2001.

3. Charles F. Fledderman, *Engineering Ethics*, Pearson Education, 2ndEdition, 2004.R. Subramanaian, *Professional Ethics*, Oxford Higher Education, 2013.

IV B.Tech. - I Semester

(16BT60118) RURAL TECHNOLOGY

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: –

COURSE DESCRIPTION:
Rural technology; Non conventionalenergy; Community development; IT in rural development.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. Demonstrate the knowledge on technologies for rural development.
CO2. Analyze various technologies available which are appropriate for rural development.
CO3. Carryout feasibility study on the public and private partnership for rural development.
CO4. Develop and use latest technologies for rural development.
CO5. Address health and safety issues while choosing technologies for rural development.
CO6. Educate the rural populace on the positive impacts of bio-fertilisers and usage of agro machinery in agriculture.

DETAILED SYLLABUS:

UNIT-I:RURAL TECHNOLOGY (09 Periods)
India - Technology and rural development, Pre and post-independence period,Rural India Life, Indian farmer, Role of science and technology in rural development, Rural technology and poverty eradication, Rural business hubs, Technology in improving rural infrastructure,Various organizations related to innovation, Issues of technology transfer - CAPART, NABARD, CSIR, NIF.

UNIT-II: NON CONVENTIONAL ENERGY (09 Periods)
Definition of energy, Types of alternative sources of energy, Sources of non-conventional energy – Solar energy: Solar cooker,Solar heater; Biogas, Recycling and management,Wastes conservation, Assessment and production of biomass products and their utilization.

UNIT-III: TECHNOLOGIES FOR RURAL DEVELOPMENT (09 Periods)
Food and agro based technologies, Tissue culture, Nursery,Building and construction technologies, Cultivation and processing of economic plants, Cottage and social industries.

UNIT-IV: COMMUNITY DEVELOPMENT (09 Periods)
Water conservation, Rain water Harvesting, Drinking water, Environment and Sanitation, Bio fertilizers, Medical and aromatic plants, Employment generating technologies–Apiculture, Pisciculture and Aquaculture.

UNIT-V:IT IN RURAL DEVELOPMENT (09 Periods)
Role of information technology (IT) in rural areas, Impact of IT in rural development, Need and necessity of technology, Corporate social responsibilities, Private sector participation (Activities in different spheres: Employment, Education, Health, Agriculture and service sectors) and SaansadAdarsh Gram Yojana (SAGY), Village adoptionschemes.

Total Periods: 45

TEXT BOOKS:
1. M.S.Virdi, *Sustainable Rural Technologies*, Daya Publishing House, 2009.
2. S.V. Prabhathand, P. Ch. Sita Devi, *Technology and Rural India*, Serials Publications, 2012.

REFERENCE BOOKS:
1. R. Chakravarthy and P.R.S. Murthy, *Information Technology and Rural Development,*Pacific Book International, 2012.
2. Shivakanth Singh, *Rural Development Policies and Programmes,* Northern Book Centre, 2002.
3. L.M.Prasad, *Principles and Practice of Management*, S. Chand & Sons, 8th edition, 2014.

4. Venkata Reddy, K., *Agriculture and Rural Development -Gandhian Perspective*,Himalaya Publishing House, 2001.

IV B.Tech - I Semester

(16BT60308) **GLOBAL STRATEGY AND TECHNOLOGY**

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: —

COURSE DESCRIPTION:
Introduction to strategic management; Strategic management process; Principles of good strategy; Globalization strategies; Research and Development strategies; Technology Management and Transfer; Elements of Transfer Process; Corporate Governance in the Indian scenario.

COURSE OUTCOMES:
On successful completion of the course, students will be able to
- CO1. Demonstrate the knowledge on Strategic management, Research & development strategies, Technology management and transfer, Globalization and Corporate governance.
- CO2. Identify and analyze crucial problems in strategic management to improve performance of the organizations.
- CO3. Develop the products and production process by using research and development strategies.
- CO4. Conduct investigations on the impact of globalization in current scenario in the context of corporate governance.
- CO5. Appraise the resources and capabilities of the firm in terms of their ability to confer sustainable development.
- CO6. Apply ethics in strategic decision making.

DETAILED SYLLABUS:

UNIT-I: STRATEGIC MANAGEMENT (09 Periods)
Introduction, Classes of decisions, Levels of strategy, Core competence, Strategic intent and stretch, Approaches to strategy making, Roles of different strategists, Strategic management- Process, Benefits, Limitations; Ethics in strategic decision making, Principles of good strategy, Strategic Management in India.

UNIT-II: RESEARCH & DEVELOPMENT STRATEGIES (09 Periods)
Concept, Evolution of R&D Management, R&D as a business, R&D as competitive advantage, Elements of R & D strategies, Integration of R & D, Selection and implementation of R & D strategies, R & D trends.

UNIT-III: TECHNOLOGY MANAGEMENT AND TRANSFER (09 Periods)
Technology Management: Introduction, Technology - Definition, Components, Classification Features; Technology Management- Concept, Nature; Drivers of Management of Technology- Significance, Scope, Responding to technology challenges.
Technology Transfer: Introduction, Definition, Classification, Significance, Elements of process, Types of Technology Transfer, Package, Modes of Transfer, Routes, Channels and Effectiveness of Technology Transfer.

UNIT-IV: GLOBALISATION (09 Periods)
Definition, Stages, Essential conditions for globalization, Globalization strategies, Competitive advantage of Nations, Factors affecting Globalization, Globalization of Indian business.

UNIT-V: CORPORATE GOVERNANCE: THE INDIAN SCENARIO (09 Periods)
Emergence of corporate governance in India- Landmarks, Models, Codes and status in India, Role and Responsibilities of Regulators, The Board of Directors; Corporate Governance- Specific issues in India, Family owned Business, Corporate Governance and the Indian ethos.

Total periods: 45

TEXT BOOKS:
1. Francis Cherunilam, *Strategic Management*, Himalaya Publishing House, 3rdEdition, 2002.
2. C.S.G.Krishnamacharyulu and Lalitha Ramakrishnan, *Management of Technology*, Himalaya Publishing House, 2ndEdition, 2012.

REFERENCE BOOKS:
1. White and Bruton, *The Management of Technology and Innovation: A Strategic Approach*, Cengage Learning, 1stEdition, 2007.
2. S.K.Mandak, *Ethics in Business and Corporate Governance*, TMH, 2ndEdition, 2012.

IV B.Tech - I Semester

(16BT60309) **INTELLECTUAL PROPERTY RIGHTS AND MANAGEMENT**

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: —

COURSE DESCRIPTION:

Protection of ideas; innovation and artistic endeavors; Acts and procedure related to patents, trademarks, copy right, design registration, trade secrets and cyber laws; Infringement; Commercialization of intellectual property rights; Case studies in each.

COURSE OUTCOMES:

On successful completion of the course, students will be able to

CO1. Demonstrate knowledge on intellectual property rights, patents, trademarks, copyrights, trade secrets and commercialization of intellectual property.

CO2. Analyse the commercial significance of discoveries and developments and to assist in bringing these into public use.

CO3. Investigate and ensure smooth transition from concept to final product by following National & International Laws of Intellectual Property.

CO4. Utilize the various policies and procedures related to patents, trademarks and copyrights relating to IPR.

CO5. Safeguard, review and manage the intellectual property so that it may receive adequate and appropriate legal protection against unauthorized use.

CO6. Follow ethical standards in capacity building and work as a platform for development, promotion, protection, compliance, and enforcement of intellectual property and knowledge.

CO7. Prepare documents and fill applications needed for filing a patent, design, copyright and trade mark.

DETAILED SYLLABUS:

UNIT-I: OVERVIEW OF INTELLECTUALPROPERTY RIGHTS (09 Periods)

Introduction, Intellectual Property vs. Conventional Property, and importance of intellectual property rights (IPRs), types of intellectual property, International Treaties for protection of IPR-Paris Convention, World Intellectual Property Organization (WIPO), World Trade Organization (WTO), Trade Related Aspects of Intellectual Property Rights (TRIP) Agreement, General Agreement on Tariffs and Trade(GATT).

UNIT-II: TRADEMARKS (09 Periods)

Introduction, Functions and kinds of trademarks, Trade Mark Registration Process, Post registration procedures, Trade Mark maintenance, Transfer of rights, Inter parties Proceedings, Infringement and Dilution of Ownership of Trade Mark, Trade Mark claims, International Trade Mark Law.

UNIT-III: PATENTS (09 Periods)

Introduction, Rights under Patent Law, Patent Application Process, Terms and Maintenance of Patents Requirements, Patent Ownership and Transfer, Licensing of Patent Rights, Sole and Joint Inventors, Disputes over Inventorship, Patent Infringement, International Patent Law, Patent Cooperation Treaty (PCT), Patent Law Treaty (PLT), Substantive Patent Law Treaty (SPLT).

UNIT-IV: COPY RIGHTS, TRADE SECRETS, CYBER LAWS (09 Periods)

Copy Rights: Introduction, nature and scope, subject matter, Rights afforded by copyright law, Copyrights ownership, transfers and duration, Copyright registration process.

Trade Secrets: Introduction, Determination of Trade Secret Status, Employer-Employee Relationships, Protection of submissions.

Cyber laws: E-commerce and cyber laws, cybercrime and legislation- need, objective and scope; IT Act 2000, Information Technology and Information Security.

UNIT-V: INDUSTRIAL DESIGN AND COMMERCIALIZATION OF INTELLECTUAL PROPERTY RIGHTS (09 Periods)

Industrial Design: Introduction, Indian Law related to registration of Industrial Designs, Essential requirements for registration of a design in India, International Agreements – Hague System; Conflicts related to registration of design.

Commercialization of Intellectual Property Rights: Competition and Confidentiality Issues, Antitrust Laws, Assignment of Intellectual Property Rights, Technology, Transfer Agreements, Intellectual Property Issues in the Sale of Business, Legal Auditing of Intellectual Property, Due Diligence of Intellectual Property Rights in a Corporate Transaction. **Total Periods: 45**

TEXT BOOKS:

1. Deborah E. Bouchoux, *Intellectual Property: The Law of Trademarks, Copyrights, Patents and Trade Secrets*, Cengage Learning, 4thEdition, 2016.
2. KompalBansal and ParikshitBansal, *Fundamentals of Intellectual Property for Engineers*, BS Publications, 1stEdition, 2013.

REFERENCE BOOKS:

1. PrabuddhaGanguli, *Intellectual Property Rights-Unleashing the Knowledge Economy*, McGraw Hill Education, 6th reprint, 2015.
2. P. Narayanan, *Intellectual Property Law*, Eastern Book Company, 3rdEdition, 2013.

3. R.Radha Krishnan, S. Balasubramanian, *Intellectual Property Rights: Text and Cases*, Excel Books, 1stEdition, 2008.

IV B.Tech. - I Semester

(16BT60310) MANAGING INNOVATION AND ENTREPRENEURSHIP

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:—

COURSE DESCRIPTION:

Evolution of entrepreneurship from economic theory Managerial and entrepreneurial competencies; Concepts of Shifting Composition of the Economy Purposeful Innovation & Sources of Innovative Opportunity; The Innovation Process; Innovative Strategies; Entrepreneurial Motivation; Entrepreneurs versus inventors; Ethics and International Entrepreneurship; Strategic Issues in International Entrepreneurship; Problem solving Innovation and Diversification.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. Demonstrate the principles of business innovation and entrepreneurship for establishing industrial ventures.

CO2. Analyze business plans for potential investors and stakeholders and effectively answer probabilistic questions on the substance of plan.

CO3. Develop a comprehensive and well planned business structure for a new venture.

CO4. Conduct investigation on complex problems, towards the development of Project.

CO5. Apply modern statistical and mathematical tools to design projects and subsequent work procedures.

CO6. Apply ethics in constructive innovation framework.

CO7. Exhibit professionalism by employing modern project management and financial tools.

DETAILED SYLLABUS:

UNIT-I: CREATIVITY AND INNOVATION (07 Periods)

Introduction, Levels of innovation, Purposeful innovation and the sources of innovative opportunity, The innovation process, Innovative strategies, Strategies that aim at introducing and innovation, Dynamics of ideation and creativity – Inbound, Outbound; Context and process of new product development, Theories of outsourcing.

UNIT-II: PARADIGMS OF INNOVATION (11Periods)

Systems approach to innovation, Innovation in the context of developed economies and Emerging economies, Examining reverse innovation and its application, Performance gap, Infrastructure gap, Sustainability gap, Regulatory gap, Preference gap, organizational factors effecting innovation at firm level.

UNIT-III: SOURCES OF FINANCE AND VENTURE CAPITAL (07 Periods)

Importance of finance, Comparison of venture capital with conventional development capital, Strategies of venture funding, Investment phases, Investment process, Advantages and disadvantages of venture capital, Venture capital developments in India.

UNIT-IV: INTELLECTUAL PROPERTY INNOVATION AND ENTREPRENEURSHIP (11 Periods)

Introduction to Entrepreneurship, Evolution of entrepreneurship from economic theory, Managerial and entrepreneurial competencies, Entrepreneurial growth and development, Concepts, Ethics and Nature of International Entrepreneurship, Intellectual property – forms of IP, Patents, Trademarks, Design registration, Copy rights, Geographical indications, Patent process in India.

UNIT-V: OPEN INNOVATION FRAMEWORK AND PROBLEM SOLVING (09 Periods)

Concept of open innovation approach, Difference between open innovations and Cloud innovation approaches, Limitations and Opportunities of open innovation framework, Global context of strategic alliance, Role of strategic alliance, Problem Identification and Problem Solving, Innovation and Diversification.

Total Periods: 45

TEXT BOOKS:

1. Vinnie Jauhari, SudhanshuBhushan, *Innovation Management*, Oxford University Press, 1stEdition, 2014.
2. Drucker, P. F., *Innovation and Entrepreneurship*, Taylor & Francis, 2ndEdition, 2007.

REFERENCE BOOKS:

1. Robert D Hisrich, Claudine Kearney, *Managing Innovation and Entrepreneurship,* Sage Publications, 1stEdition, 2014.

2. V.K.Narayanan, *Managing Technology and Innovation for Competitive Advantage*, Pearson India, 1stEdition, 2002.

IV B.Tech. - I Semester

(16BT60311) MATERIALS SCIENCE

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:—

COURSE DESCRIPTION:
Structure and Bonding in metals; Steels, Cast Irons and Non Ferrous alloys; Material Selection for conductors, Insulators and semiconductors; Strengthening mechanisms of metals; Plastics and Ceramics as Insulators; AC and DC properties of Insulators; Semiconductors and Magnetic materials; Composite materials in Electrical and Electronics engineering; Material Selection and manufacturing of Optical fibers.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. Demonstrate the knowledge on concepts of fundamental science and engineering principles relevant to materials.
CO2. Analyze the structures of various types of Ferrous, Non-ferrous alloys influencing various engineering applications.
CO3. Conduct investigations to select suitable materials with desired properties for engineering applications.
CO4. Use phase diagrams to interpret the data regarding microstructure of materials.
CO5. Consider health and safety issues while providing materials to real time applications.
CO6. Use composite materials that reduce material waste in design and manufacturing for sustainability.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO MATERIAL SCIENCE (07 Periods)
Structure of metals: Bonds in Solids, Crystallization of metals, Grain and grain boundaries, Effect of grain boundaries on the properties of metals / alloys, Determination of grain size measurement.
Constitution of alloys: Necessity of alloying, Types of solid solutions, Hume rothery rules, Intermediate alloy phases.

UNIT-II: CAST IRONS, STEELS AND NON-FERROUS METALS (12 Periods)
Structure and properties of Grey cast iron, Spheroidal cast iron, White Cast iron, Malleable Cast iron, Alloy cast irons, Classification of steels, structure and properties of plain carbon steels, Structure and properties of Copper and its alloys, Aluminum and its alloys.

UNIT-III: ELECTRIC CONDUCTORS AND INSULATORS (12 Periods)
Type of materials selected for conductors, Insulators and semiconductors, Introduction to ceramics - Bonding and microstructure, DC properties of ceramic materials, AC properties of ceramic materials, mechanical properties, Ceramics as Conductors, Insulators and capacitors; Introduction to Plastics - DC properties, AC properties, Mechanical properties.

UNIT-IV: SEMICONDUCTORS AND MAGNETIC MATERIALS (09 Periods)
Fabrication of Semiconductors, Producing a silicon wafer-Lithography and Deposition packaging of semiconductors materials; Types of magnetic materials, Measuring magnetic properties, Application of soft magnetic materials in Electromagnets and relays, AC transformers, Generators and motors.

UNIT-V: ADVANCED MATERIALS AND APPLICATIONS (05 Periods)
Composites - Fiber reinforced metal matrix, Ceramic matrix, Polymer matrix, Properties and applications of composites; Ceramics - Alumina, Zirconia, Silicon Carbide, SiAlONs, Reaction Bonded Silicon Nitride (RBSN); Glasses- properties and applications, manufacturing of optical fibers.

Total Periods: 45

TEXT BOOKS:

1. Kodgire V D, *Material Science and Metallurgy*, Everest Publishing House, Pune, 31stEdition, 2011.
2. Ian. P.Jones, *Material Science for Electrical and Electronic Engineers*, Oxford University Press, 1stEdition, 2000.

REFERENCE BOOKS:

1. V. Raghavan, *Physical Metallurgy: Principles and Practices*, PHI, New Delhi, 2nd Edition, 2006.

2. William. D. Callister, *Materials Science & Engineering-An Introduction*, John Wiley and Sons, New Delhi, 6th Edition, 2002.

IV B.Tech. - I Semester
(16BT70412) GREEN TECHNOLOGIES
(Open Elective)
(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: —

COURSE DESCRIPTION:
Principles of green engineering; Green communications; Green energy; Green computing; Green construction; Green manufacturing.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. Deploy conceptual knowledge in green technologies pertaining toengineering practice.
CO2. Analyze various green technologies for engineering practice.
CO3. Provide green solutions to engineering problems.
CO4. Apply various green techniques in the engineering practice.
CO5. Consider health and safety issues while providing green solutions to the society.
CO6. Understand issues related to environment sustainability.
CO7. Apply ethical standards for environmental sustainability in the engineering practice.

DETAILED SYLLABUS:

UNIT-I: PRINCIPLES OF GREEN ENGINEERING AND GREEN COMMUNICATIONS (11 Periods)

Principles of Green Engineering:
Introduction, Definition of green engineering, Principles of green engineering.

Green Communications:
Introduction, Origin of Green Communications, Energy Efficiency in Telecommunication systems, Telecommunication system model and energy Efficiency, Energy saving concepts, Quantifying energy efficiency in ICT, Energy efficiency metrics of green wireless networks, Embodied energy of communication devices- Introduction, The extended energy model, Embodied/Operating Energy of a BS in Cellular network- A Case study; Energy efficient standards for wireline communications.

UNIT-II: GREEN ENERGY (09 Periods)
Introduction, adverse impacts of carbon emission, control of carbon emission– methods, greenhouse gas reduction – methods, Energy sources and their availability, Green energy for sustainable development. Green energy sources – Solar energy, Wind energy, Fuel cells, Biofuels, Wave and Geothermal energy (Principle of generation only).

UNIT-III: GREEN IT (09 Periods)
The importance of Green Information technologies, Strategizing Green Initiatives, Implementation of Green IT, Information Assurance, Communication and Social Media, Regulating Green IT- Laws, Standards and Protocols; RoHS, REACh, WEEE, Legislating for GHG Emissions and Energy Use of IT Equipment, Non-regulatory Government Initiatives, Industry Associations and Standard Bodies, Green Building Standards, Green Data Centres, Social Movements and Greenpeace, Conclusions.

UNIT-IV: GREEN CONSTRUCTION (09 Periods)
Green Building: Definition, Typical features, Benefits, Requisites for green building construction, Sustainability, Concept of REDUCE, REUSE, RECYCLE, RETHINK, REPLENISH AND REFUSE (6 R's), Sustainable construction focus point – Site selection, Planning, Water, Energy, Material, Indoor air quality, Construction procedures.
Indian Green Building Council: Introduction to IGBC green homes, Benefits of IGBC, IGBC green home rating system, Introduction to USGBC, LEED rating system, Procedure to get IGBC certification, GRIHA Rating.

UNIT-V: GREEN MANUFACTURING (09 Periods)
Introduction, background, definition, motivation and barriers to green manufacturing, Impact of manufacturing in environmental ecology, Need for green manufacturing, Advantages and Limitations, green manufacturing strategies, Green manufacturing and sustainability, Sustainability tools; Waste stream mapping and application, Green manufacturing through clean energy supply, green lean manufacturing, green packaging and supply chain. **Total Periods: 47**

TEXT BOOKS:
1. KonstantinosSamdanis, Peter Rost, Andreas Maeder, MichelaMeo, Christos Verikoukis, *Green Communications: Principles, Concepts and Practice,*John Wiley & Sons, 2015.
2. Soli J. Arceivala, *Green Technologies for a better future,* McGraw Hill Education (India) Pvt. Ltd, 2014.
3. San Murugesan, G.R. Gangadharan, *Harnessing Green IT – Principles and Practices,* John Wiley & Sons Ltd., 2008.
4. Tom Woolley, Sam Kimmins, Paul Harrison and Rob Harrison, *Green Building Handbook*, *Volume 1*, E & FN Spon, an imprint of Thomson Science & Professional.
5. *IGBC Green Homes Rating System Version 1.0* – A bridged reference guide.
6. J Paulo Davim, Green Manufacturing: Processes and Systems, Springer, 2012.
7. David A Dornfeld, Green Manufacturing: Fundamentals and Applications, Springer, 2013.

REFERENCE BOOKS:
1. Athanasios V Alavanidis, ThomaisVlachogianni, *Green Chemistry and Green Engineering*, SynchronaThemata, 2012.

2. G.D. Rai, *Non-conventional Energy Sources*, Khanna Publishers, Delhi, 5thEdition,2011.
3. Marty Poniatowski, *Foundation of Green Information Technology, Prentice Hall, 2009.*
4. R. K. Gautham, *Green Homes*, BS publications, 2009.

IV B.Tech. - I Semester

(16BT70413) INTRODUCTION TO NANOSCIENCE AND NANOTECHNOLOGY

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:—

COURSE DESCRIPTION:

Introduction to the concept ofnano;Description of nanomaterial;Nanostructure characterization tools; Classification of nanomaterials;Fabrication of nanomaterial;Different applications of nanostructures and nanomaterials.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. Demonstrate knowledge in
- Nanoscale technology.
- Difference between micro and nanotechnology
- Classification of Nanostructure and Nanomaterial
- Fabrication of various nanomaterials and nanostructures.

CO2. Analyze numerical and analytical problems in
- Nanomaterial size by using Scanning Electron Microscope and X-Ray diffraction

CO3. Design and fabricate devices based on nanostructures like
- Nano solar cell
- Nano cantilever
- Nano bio-sensor

CO4. Synthesize nano particle of different materials to solve the problems related to fabrication of nanostructures.

CO5. Select appropriate technique for fabrication ofnanostructures and Nano composites.

CO6. Apply ethical standards and legal issues while using chemical substances infabrication of new nanostructures.

DETAILED SYLLABUS:

UNIT-I: FUNDAMENTALS OF NANOTECHNOLOGY (08 Periods)

Introduction – Scientific revolutions, Time and length scale in structures, Definition of a nanosystem; Dimensionality and size dependent phenomena - Surface to volume ratio Fraction of surface atoms, Surface energy and surface stress, surface defects, Properties at nanoscale (optical, mechanical, electronic, and magnetic).

UNIT-II:IDENTIFICATION AND CHARACTERIZATION TOOLS FOR NANOMATERIALS AND NANOSTRUCTURE (10 Periods)

Field Emission Scanning Electron Microscopy (FESEM), Environmental Scanning ElectronMicroscopy (ESEM) High Resolution, Transmission Electron Microscope (HRTEM), Scanning Tunneling Microscope(STM), Surface enhanced Raman spectroscopy (SERS), Secondary Ion Mass Spectroscopy, Focused Ion Beam Photoelectron Spectroscopy, X-ray Photoelectron Spectroscopy (XPS), Auger electron spectroscopy (AES), Rutherford backscattering spectroscopy (RBS), X-Ray Diffraction, Intensities in X-Ray Scattering Particle Size Effect.

UNIT-III:CLASSIFICATION OF NANOMATERIALS (10 Periods)

Classification based on dimensionality, Quantum Dots,Wells and Wires-III-V Nanoparticles, Electronic Structure of Nanosemiconductor, Carbon based nanomaterials (buckyballs, nanotubes, graphene), Metal based nano materials (nanogold, nanosilver and metal oxides), Nanocomposites, Nanopolymers, Nanoglasses, Nano ceramics, Biological nanomaterials, Fulrene-discovery and early years,.

UNIT-IV:SOME FABRICATION TECHNIQUES OF NANOMATERIALS AND NANOSTRUCTURES(09 Periods)

Chemical Methods: Metal Nanocrystals by Reduction, Solvothermal Synthesis, Photochemical Synthesis,Sonochemical Routes, Chemical Vapor Deposition (CVD), Metal Oxide Chemical Vapor Deposition (MOCVD), Plasma Enhanced Chemical Vapour Deposition Technique(PECVD), Hydrothermal Method, Sol-Gel.

PhysicalMethods: Ball Milling, Electrodeposition, Spray Pyrolysis, Flame Pyrolysis, DC/RF Magnetron Sputtering, Molecular Beam Epitaxy (MBE) Thermal Evaporation Method.

UNIT-V:APPLICATIONS (08 Periods)

Solar energy harvesting, Catalysis,Molecular electronics and printed electronics Nanoelectronics, Polymers with aspecial architecture, Liquid crystalline systems, Linear and nonlinear optical and electro-optical properties, Applications in displays and other devices, Nanomaterials for data storage, Photonics, Plasmonics, Chemical and biosensors, Nanomedicine and Nanobiotechnology, MESFET.

Total Periods: 45

TEXT BOOKS:

1. Pradeep T., *A Textbook of Nanoscience and Nanotechnology*, Tata McGraw Hill Education Pvt. Ltd., 2012.
2. Hari Singh Nalwa, *Nanostructured Materials and Nanotechnology*, Academic Press, 2002.

REFERENCE BOOKS:

1. Nabok A., *Organic and Inorganic Nanostructures*, Artech House, 2005.

2. Dupas C., Houdy P., Lahmani M, *Nanoscience: Nanotechnologies and Nanophysics*, Springer - Verlag Berlin Heidelberg, 2007.
3. S.M. Sze, Physics of Semiconductor Devices, 2ndEdition, 2001.

IV B.Tech. - I Semester

(16BT60505) ENGINEERING SYSTEM ANALYSIS AND DESIGN

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:—

COURSE DESCRIPTION:
Systems Process; Technologies for Systems; System Development Life Cycle; System Analysis and Modeling; Levels of Management; Project Management; Systems Implementation and Importance of UML Prototyping; Maintaining and Managing the Systems Output Process.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. Demonstrate knowledge in
- Systems Process and System Design
- Systems Analysis and Modeling
- System Development Life Cycle
- Design Management and Maintenance Tools.

CO2. Analyzesystem Process and estimate the given models by using case tools.
CO3. Design and develop a model to the organizational systems.
CO4. Solve complex problems related to engineering systems and produce accurate results
CO5. Apply object oriented techniques for modeling dynamic systems.
CO6. Contribute towards societal issues and responsibilities in designing, modeling and developing of organizational systems.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION (09 Periods)
Systems, Types of systems, Integrating technologies for systems, Need for system analysis and design, Role of the systems analyst, System development life cycle, CASE tools for analysis and design.

UNIT-II: ANALYSIS AND MODELING ORGANIZATIONAL SYSTEM (09 Periods)
Organization as system, System analysis, Depicting systems graphically, Use case modeling, Levels of management, Organizational culture.

UNIT-III: PROJECT MANAGEMENT (10 periods)
Project initiation, Problem in organization, Determining feasibilities, Ascertaining hardware and software needs, Identifying, Forecasting, Comparing costs and benefits, Activity planning and control, Managing the project.

UNIT-IV: OBJECT ORIENTED ANALYSIS AND DESIGN USING UML (08 Periods)
Introduction, Object modeling, Dynamic modeling, functional modeling, packages and other UML artifacts, the importance of using UML for modeling.

UNIT-V: DESIGNING EFFECTIVE OUTPUT (09 Periods)
Output design objectives, Relating output content to output method, Realizing how output bias affects users, Designing output for display, Case studies-Designing a web site management, Online exam management, Online portal design.

Total Periods:45

TEXT BOOK:
1. Kenneth E. Kendall and Julie E. Kendall,*System Analysis and Design*, Pearson Education, 9thEdition, 2011.

REFERENCE BOOKS:
1. Dennis, Wixom and Roth,*Systems Analysis and Design*, John Wiley, 5thEdition, 2012.
2. Shelly and Rosenblatt,*Systems Analysis and Design*, Cengage Learning, 9thEdition, 2012.

IV B.Tech.- I Semester

(16BT71011) MICRO-ELECTRO-MECHANICAL SYSTEMS

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:–

COURSE DESCRIPTION:
Overview of Micro Electro Mechanical Systems (MEMS); scaling laws; working principles of microsensors and microactuators; materials; microfabrication processes; packaging of Microsystems.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. Demonstrate knowledge on MEMS devices, scaling laws, microsensors and microactuators

CO2. Analyze the properties of materials and identify its suitability for MEMS devices.

CO3. Design MEMS devices that meet desired specifications and requirements.

CO4. Analyze and synthesize the information to provide effective solution to engineering problems with MEMS devices.

CO5. Use modern techniques in micro manufacturing process.

CO6. Develop efficient and cost effective MEMS based products for society.

DETAILED SYLLABUS:

UNIT-I: OVERVIEW OF MEMS AND SCALING LAWS (09 periods)
MEMS and Microsystems, Microsystems and microelectronics, miniaturization, applications of MEMS in the automotive industry and in other industries.
Scaling laws of miniaturization: Introduction to scaling, scaling in: geometry, rigid- body dynamics, electrostatic forces, electromagnetic forces, Electricity, Fluid mechanics, Heat transfer.

UNIT-II: **WORKING PRINCIPLES OF MICROSYSTEMS (09 periods)**
Microsensors,acoustic wave sensors, biomedical and biosensors, chemical sensors, pressure sensors, thermal sensors. Microactuation: actuation using thermal forces, shape-memory alloys, piezoelectric crystals, electrostatic forces. MEMS with microactuators, microgrippers, micromotors, microvalves, micropumps.Microaccelerometers, microfludics.

UNIT-III:MATERIALS FOR MEMS AND MICROSYSTEMS (09 periods)
Substrate and wafers, silicon as a substrate material, silicon compounds, silicon piezoresistors, gallium arsenide, quartz, piezoelectric crystals, polymers, carbon nano tube (CNT), development of CNTs, application of CNTs.

UNIT-IV: MEMS FABRICATION PROCESS AND MICROMANUFACTURING (09 periods)
Photolithography, ion implantation, diffusion, oxidation, chemical vapor deposition, physical vapor deposition, deposition by epitaxy, etching, bulk micromanufacturing, surface micromanufacturing, LIGA process.

UNIT-V: MEMS PACKAGING (09 periods)
Introduction to microsystem packaging, objectives and general considerations in packaging design, three levels of microsystem packaging, interfaces in microsystem packaging, packaging technologies, three-dimensional packaging, selection of packaging materials, signal mapping and transduction, Design case: Pressure sensor packaging.

Total Periods: 45

TEXT BOOK:

1. Tai-Ran Hsu, *MEMS & Microsystems, Design and Manufacture*, McGraw Hill Education (India) Pvt. Ltd., 2002.

REFERENCES BOOKS:

1. G.K.Ananthasuresh, K.J.Vinoy,*Micro and Smart Systems*, Wiley India, 2010.
2. NitaigourPremchandMahalik, *MEMS*, McGraw Hill Education (India) Pvt. Ltd., 2007.

IV B.Tech. – I Semester

(16BT61205) CYBER SECURITY AND LAWS

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:—

COURSE DESCRIPTION:
Cyber Crimes and Indian IT Act; Cyber Offenses; Tools and Methods used in Cyber Crime; Phishing ad Identity Theft; Indian and Global Perspective on Cyber Crimes and Cyber Security; Organizational Implications on Cyber Security; IPR Issues; Cyber Crime and Terrorism; Cyber Crime Illustrations

COURSE OUTCOMES: On successful completion of the course, students will be able to

- CO1. Demonstrate knowledge in Cyber security, Cybercrimes and its related laws in Indian and Global Act.
- CO2. Analyze the legal perspectives and laws related to cybercrimes in Indian context.
- CO3. Apply security and privacy methods in development of modern applications and in organizations to protect people and to prevent cybercrimes.
- CO4. Solve Cyber security issues using privacy policies.
- CO5. Use antivirus tools to minimize the impact of cyber threats.
- CO6. Follow security standards for the implementation of Cyber Security and laws.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO CYBER CRIMES AND OFFENSES (09 Periods)

Cyber Crimes: Introduction, Definition, Origin, Cybercrime and information security, Cyber criminals, Classifications of cybercrimes, The legal perspectives and Indian perspective, Cybercrime and Indian ITA 2000, Global perspective on cybercrimes.

Cyber Offenses: Introduction, Criminals planning on attacks, Social engineering, Cyber stalking, Cyber cafe and crimes, Botnets.

UNIT-II: TOOLS AND METHODS USED IN CYBER CRIME AND PHISHING AND IDENTITY THEFT (09 Periods)

Introduction, Proxy servers and Anonymizers, Phishing, Password cracking, Key loggers and Spywares, Virus, Worms and Ransomware, Trojan horses and Backdoors, Steganography, DoS and DDoS attacks.

Phishing and Identity Theft: Introduction, Phishing, Identity Theft (ID Theft).

UNIT-III: CYBER CRIMES AND CYBER SECURITY-LEGAL PERSPECTIVES (08 Periods)

Introduction, Cyber laws in Indian context, The Indian IT act, Challenges to Indian law and Cybercrime scenario in India, Consequences of not addressing the weakness in IT act, Digital signatures and the Indian IT Act, Cyber Crime and Punishment, Cyber law, Technology and Students in India scenario.

UNIT-IV: CYBER SECURITY-ORGANIZATIONAL IMPLICATIONS (10 Periods)

Introduction, Web threats for organizations – evils and perils, Security and privacy implications from cloud computing, Social Media Marketing-Security risks and Perils for organizations, Social computing and associated challenges for organizations, Protecting people's privacy in organization, Organizational guidelines for internet usage, Safe computing and Usage policy, Incident handling and Best practices.

UNIT-V: CYBER CRIME AND TERRORISMAND ILLUSTRATIONS (09 Periods)

Cyber Crime & Terrorism: Introduction, Intellectual property in the cyber space, The ethical dimension of cybercrimes, The psychology, Mindset and skills of hackers and cyber criminals, Sociology of cyber criminals, Information warfare.

Cyber Crime Illustrations: Indian banks lose millions of rupees, Justice vs. Justice, Parliament attack, The Indian case of online gambling, Bank and credit card related frauds, Purchasing goods and services scam, Nigerian 419 scam.

Total Periods: 45

TEXT BOOK:

1. Nina Gobole and SunitBelapure, *Cyber Security: Understanding Cyber Crimes, Computer Forensics and Legal Perspectives,* Wiley India, 2011.

REFERENCE BOOK:

1. Prashant Mali, *Cyber Law and Cyber Crimes,* Snow White Publications Pvt. Ltd., 2013.

IV B.Tech. - I Semester

(16BT61505) BIO-INFORMATICS

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: –

COURSE DESCRIPTION:
Introduction to Bioinformatics; Biology and Information; Sequence alignment and dynamic programming; Biological Database; Homology Modeling; Structure Prediction; Molecular Dynamics.

COURSE OUTCOMES: On successful completion of the course, students will be able to
CO1. Demonstrate knowledge on concepts of biological databases, Genome and proteome.
CO2. Analyze biological sequences for Homology Modeling.
CO3. Apply clustering methods for Phylogenetic trees.
CO4. Solve bio sequencing problems using dynamic programming.
CO5. Select and apply appropriate techniques and tools to structure Prediction.

DETAILED SYLLABUS:

UNIT-I: NUCLEIC ACIDS, PROTEINS AND AMINO ACIDS (08 periods)
Bioinformatics - Definition, Nucleic acid structure, Protein structure, the central dogma, Physico-chemical properties of the amino acids and their importance in protein folding, Polymerase chain reaction (PCR)

UNIT-II: INFORMATION RESOURCES FOR GENES AND PROTEIN (10 periods)
Database file formats, Nucleic acid sequence databases, Protein sequence databases.
Sequence Alignment Algorithm
Pair wise sequence alignment – The problem, Pair wise sequence alignment – Dynamic programming methods, The effect of scoring parameters on the alignment, Multiple sequence alignment.

UNIT-III: PREDICTION OF THE THREE-DIMENSIONAL STRUCTURE OF A PROTEIN AND HOMOLOGY MODELING (09 Periods)
Secondary Structure Prediction, Basic Principles, The Steps of Comparative Modeling, Accuracy of Homology Models, Manual versus Automatic Models, SNPs, Motifs**.**

UNIT-IV: PHYLOGENETIC METHODS (10 periods)
Phylogenetic trees, choosing sequences, Distance matrices and clustering methods, Calculation of distances in the neighbor-joining method, Bootstrapping, Tree optimization criteria and tree search methods, The maximum-likelihood criterion, Calculating the likelihood of the data on a given tree, The parsimony criterion.

UNIT-V: NEW FOLD MODELING (08 periods)
Estimating the Energy of a Protein Conformation, Energy Minimization, Molecular Dynamics, The "Omics" Universe-Transcriptomics, Proteomics, Interactomics, Structural Genomics, Pharmacogenomics.

TEXTBOOKS:

1. Paul G. Higgs and Teresa K. Attwood, *Bioinformatics and Molecular Evolution* Blackwell Publishing, 2005.
2. Anna Tramontano, *Introduction to Bioinformatics* Chapman and Hall/CRC, 2006.

REFERENCE BOOKS:

1. Hooman H. Rashidi and Lukas K. Buehler, *Bioinformatics Basics, Applications in Biological Science and Medicine*, CRC Press, Taylor & Francis Group, 2ndEdition, 2005.
2. Rastogi S. C., NamitaMendiratta and ParagRastogi, *Bioinformatics: Methodsand Applications: Genomics, Proteomics and Drug Discovery*, PHI Learning Pvt. Ltd., 3rdEdition, 2011.

IV B.Tech. - I semester
(16BT70431) **ANTENNAS AND MICROWAVE ENGINEERING LAB**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: Courses on EM theory, Antennas and Microwave Engineering.

COURSE DESCRIPTION:
Design and verification of various antennas; Study of Microwave components' characteristics; Power supplies.

COURSE OUTCOMES: On successful completion of the course, students will be able to:
CO1. Apply the knowledge of antennas and microwaves to understand the working of various devices.
CO2. Analyze the characteristics of different microwave components like
- Attenuators
- Directional Couplers
- Horn antennas etc.,

CO3. Design various antennas for different communication needs.
CO4. Solve problems using different antenna designs and microwave devices.
CO5. Apply appropriate tools to design and analyze various antennas.
CO6. Understand the working of various antennas and microwave components and provide engineering solutions for societal use.
CO7. Commit to ethical principles in the design of antennas and microwave components.
CO8. Work individually or in a group in the field of antennas and microwaves.
CO9. Communicate effectively in verbal and written form in the area of antennas and microwaves.

List of Exercises:

PART – A: (Antennas)
(Minimum of **six experiments** to be conducted)

1. Design of Monopole and Half Wave Dipole antenna
2. Design of Folded dipole antenna
3. Design of End fire and Broadside antenna array
4. Design of Yagi-Uda (minimum of 5 elements) antenna
5. Design of Helical antenna
6. Design of Horn antenna
7. Design of Microstrip patch antenna (strip and probe feeding)
8. Design of Parabolic antenna

Note: Verification for couple of antennas may be demonstrated.

PART – B: (Microwave Engineering)
(Minimum of **six experiments** to be conducted)

1. Reflex Klystron Characteristics
2. Gunn Diode Characteristics
3. Attenuation Measurement
4. Directional Coupler Characteristics
5. VSWR Measurement
6. Impedance Measurement
7. Waveguide parameters measurement
8. Scattering parameters of circulator.

IV B.Tech. - I semester

(16BT70432) **EMBEDDED SYSTEMS LAB**

(Common to EEE, ECE & CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: Courses on Embedded systems, C Programming.

COURSE DESCRIPTION:
IDE for Embedded System Design using MSP430; Interfacing Switch & LED; Timers-WDT, Configuring, Programming; ADC-usage; Power down modes; DAC; PWM Generator; Networking – SPI, Wi-Fi.

COURSE OUTCOMES:
On successful completion of the course,students will be able to:

CO1. Demonstrate knowledge in designing complex energy efficient embedded systems.
CO2. Analyze usage of various on-chip resources like GPIO, Timers, Interrupts, ADC, DAC,Comparator, SPI.
CO3. Design embedded systems to suit market requirements.
CO4. Solve engineering problems by proposing potential solutions using industry choice advanced Microcontrollers.
CO5. Apply appropriate techniques, resources, and CCSV6 based IDE for modeling embedded systems with understanding of limitations.
CO6. Provide embedded system solutions for societal needs.
CO7. Work individually and in a group to develop embedded systems.
CO8. Communicate effectively in oral and written form in the field of embedded systems.

LIST OF EXCERSISES:

1. Introduction to MSP430 launch pad and Programming Environment.
2. Read input from switch and Automatic control/flash LED (software delay).
3. Interrupts programming example using GPIO.
4. Configure watchdog timer in watchdog & interval mode.
5. Configure timer block for signal generation (with given frequency).
6. Read Temperature of MSP430 with the help of ADC.
7. Test various Power Down modes in MSP430.
8. PWM Generator.
9. Use Comparator to compare the signal threshold level.
10. Speed Control of DC Motor
11. Master slave communication between MSPs using SPI.
12. Networking MSPs using Wi-Fi.

Tool Requirement:

Code Composer Studio Version 6, MSP430 based launch pads, Wi-Fi booster pack.

REFERENCE BOOKS:

1. John H Davies, *MSP430 Microcontrollers Basics*, Newnes Publishers, 1st Edition, 2008.
2. C P Ravikumar, *MSP430 Microcontrollers in Embedded System Projects*, Elite Publishing House, 1st Edition, 2012.

IV B.Tech. - I semester
(16BT70433) **COMPREHENSIVE ASSESSMENT**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
	100	100	-	-	-	2

PREREQUISITES: All the courses of the program.

COURSE DESCRIPTION:
Assessment of student learning outcomes in the courses of the program.

COURSE OUTCOMES:

Comprehensive Assessment enables a successful student to demonstrate:

CO1. Knowledge in the courses of the program.

CO2. Analytical ability in the courses of the program.

CO3. Design skills in the courses of the program.

CO4. Ability to investigate and solve complex engineering problems in the courses of the program.

CO5. Ability to apply tools and techniques to complex engineering activities with anunderstanding of limitations in the courses of the program.

CO6. Ability to provide solutions as per societal needs with consideration to health, safety, legal and cultural issues in the courses of the program.

CO7. Understanding of the impact of the professional engineering solutions in environmental context and need for sustainable development in the courses of the program.

CO8. Ability to apply ethics and norms of the engineering practice in the courses of the program.

CO9. Ability to function effectively as an individual in the courses of the program.

CO10. Ability to present views cogently and precisely in the courses of the program.

CO11. Ability to engage in life-long leaning in the courses of the program.

IV B.Tech. - II semester
(16BT80431) **PROJECT WORK**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
100	100	200	-	-	-	12

PREREQUISITES: All the courses of the program.

COURSE DESCRIPTION:
Identification of topic for the project work; Literature survey; Collection of preliminary data; Identification of implementation tools and methodologies; Performing critical study and analysis of the topic identified; Time and cost analysis; Implementation of the project work; Preparation of thesis and presentation.

COURSE OUTCOMES:

Completion of the project work enables a successful student to demonstrate:

CO1. Knowledge on the project topic.

CO2. Analytical ability exercised in the project work.

CO3. Design skills applied on the project topic.

CO4. Ability to investigate and solve complex engineering problems faced during theproject work.

CO5. Ability to apply tools and techniques to complex engineering activities with anunderstanding of limitations in the project work.

CO6. Ability to provide solutions as per societal needs with consideration to health, safety, legal and cultural issues considered in the project work.

CO7. Understanding of the impact of the professional engineering solutions in environmental context and need for sustainable development experienced duringthe project work.

CO8. Ability to apply ethics and norms of the engineering practice as applied in theproject work.

CO9. Ability to function effectively as an individual as experienced during the project work.

CO10. Ability to present views cogently and precisely on the project work.

CO11. Project management skills as applied in the project work.

CO11. Ability to engage in life-long leaning as experience during the project work.

SREE VIDYANIKETHAN ENGINEERING COLLEGE

I B. Tech. - I Semester

(16BT1BS02) **ENGINEERING PHYSICS**

(Common to ECE, EEE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Intermediate / senior secondary Physics

COURSE DESCRIPTION:

Lasers; optical fibers; principles of quantum mechanics; band theory of solids; semiconductors; dielectric properties of materials; acoustics of buildings; superconductors; crystallography and nanomaterials.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. demonstrate basic knowledge of lasers, optical fibers, quantum mechanics, dielectrics, semiconductors,and superconductors, acoustic of buildings, crystallography and nanomaterials.

CO2. analyze the construction and working of various laser systems, semiconductor devices, various types of optical fibers and its communication system and nano materials properties.

CO3. demonstrate skills in designing lasers, optical fiber cable, semiconductor devices, acoustically good halls and nanomaterials.

CO4. develop problem solving skills in engineering context.

CO5. use relevant techniques for assessing ball milling, pulsed laser deposition, p-n junction and Laser

DETAILED SYLLABUS:

UNIT-I: LASERS AND FIBER OPTICS (11 periods)

Lasers: Introduction, characteristics of lasers, spontaneous and stimulated emission of radiation, Einstein's coefficients - condition for amplification, population inversion, Nd:YAG laser, Helium-Neon laser, semiconductor laser and applications of lasers.

Fiber optics: Introduction, principle of optical fiber, acceptance angle, acceptance cone and numerical aperture, classification of optical fibers, optical fiber communication system and applications of optical fibers.

UNIT-II: PRINCIPLES OF QUANTUM MECHANICS AND BAND THEORY OF SOLIDS (07 periods)

Principles of Quantum Mechanics: Introduction, de-Broglie's hypothesis, Schrödinger's one dimensional wave equation (time independent), significance of wave function, particle in a one dimensional potential box, Fermi-Dirac distribution and effect of temperature (qualitative treatment).

Band Theory of Solids: Electron in a periodic potential, Kronig-Penney model (qualitative treatment), origin of energy bands formation in solids, distinction between conductors, semiconductors and insulators based on band theory.

UNIT-III: SEMICONDUCTORS AND DIELECTRIC PROPERTIES OF MATERIALS (13 periods)

Semiconductors: Introduction, types of semiconductors, intrinsic carrier concentration, electrical conductivity in semiconductors, drift and diffusion currents, Einstein's relation, Hall effect and its applications, direct and indirect band gap semiconductors, p-n junction, energy band diagram of p-n diode, LED, photo diode and Solar cell.

Dielectric Properties of Materials: Introduction, dielectric constant, electronic, ionic and orientation polarizations (qualitative treatment), local field, frequency dependence of polarizability (qualitative treatment), ferroelectricity.

UNIT-IV:ACOUSTICS OF BUILDINGS AND SUPERCONDUCTIVITY (07 periods)

Acoustics of Buildings: Introduction, basic requirement of acoustically good hall, reverberation and time of reverberation, Sabine's formula for reverberation time (qualitative treatment), absorption coefficient of sound and its measurement, factors affecting the architectural acoustics and their remedies.

Superconductivity: Introduction, General properties - Meissner effect, penetration depth, Type-I and Type-II superconductors, flux quantization, Josephson effects, BCS theory (qualitative treatment), applications of superconductors.

UNIT-V:CRYSTALLOGRAPHY AND NANOMATERIALS (07 p*eriods*)

Crystallography: Introduction, crystal planes, crystal directions and Miller indices, separation between successive (hkl) planes, X-ray diffraction by crystal planes, Bragg's law-powder method.

Nanomaterials: Introduction, principles of nanomaterials, properties of nanomaterials, synthesis of nanomaterials by ball milling and pulsed laser deposition and applications of nanomaterials.

Total Periods: 45

TEXT BOOK:

1. P. K. Palaniswamy, *Engineering Physics*, Scitech Publications India Private Limited, 2nd edition, 2009.

I B. Tech. – I Semester

(16BT1BS03) MATRICES AND NUMERICAL METHODS

(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Intermediate /Senior secondary mathematics

COURSE DESCRIPTION: Fundamentals of matrix theory; numerical solutions of equations, curve fitting; interpolation; numerical differentiation and integration; numerical solutions of ordinary differential equations.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. demonstrate basic knowledge in
- Finding the rank of matrices and analyzing them.
- Solving algebraic and transcendental equations by various numerical methods.
- Fitting of various types of curves to the experimental data.
- Estimating the missing data through interpolation methods.
- Identification of errors in the experimental data
- Finding the values of derivatives and integrals through various numerical methods.
- Solving differential equations numerically when analytical methods fail.

CO2. develop skills in analyzing the
- methods of interpolating a given data
- properties of interpolating polynomials and derive conclusions
- properties of curves of best fit to the given data
- algebraic and transcendental equations through their solutions
- properties of functions through numerical differentiation and integration
- properties of numerical solutions of differential equations

CO3. develop skills in designing mathematical models for
- Fitting geometrical curves to the given data
- Solving differential equations
- Constructing polynomials to the given data and drawing inferences.

CO4. develop numerical skills in solving the problems involving
- Systems of linear equations
- Fitting of polynomials and different types of equations to the experimental data
- Derivatives and integrals
- Ordinary differential equations

CO5. use relevant numerical techniques for
- Diagonalising the matrices of quadratic forms
- Interpolation of data and fitting interpolation polynomials
- Fitting of different types of curves to experimental data
- obtaining derivatives of required order for given experimental data
- Expressing the functions as sum of partial fractions

DETAILED SYLLABUS:

UNIT–I: MATRICES (11 periods)

Rank of a matrix, echelon form, normal form, inverse of a matrix by elementary row operations. Solutions of linear system of equations. Eigen values, Eigen vectors and properties (without proof), Diagonalization. Quadratic form (QF), reductions to canonical form using orthogonal transformation and nature of QF.

UNIT-II: NUMERICAL SOLUTIONS OF EQUATIONS AND CURVE FITTING (08 periods)

Solutions of Algebraic and Transcendental equations by bisection method, Regula-Falsi method, Newton – Raphson's method. Curve fitting by the principle of least squares, fitting of a straight line, parabola and exponential curves.

UNIT- III: INTERPOLATION (08 periods)

Interpolation, difference operators and their relationships, Newton's forward and backward formulae, Lagrange's interpolation formula. Partial fractions using Lagrange's interpolation formula.

UNIT-IV: NUMERICAL DIFFERENTIATION AND INTEGRATION (08 periods)

Numerical differentiation using Newton's forward and backward formulae. Numerical integration using Trapezoidal rule, Simpson's $1/3^{rd}$ rule and $3/8^{th}$ rule.

UNIT-V: NUMERICAL SOLUTIONS OF ORDINARY DIFFERENTIAL EQUATIONS (10 periods)

Numerical solutions of first order Initial value problems using Taylor series method, Euler's method , modified Euler's method, Runge – Kutta method (4^{th}order only) and Milne's predictor – corrector method.

Total no. of periods: 45

TEXT BOOK:

1. T.K.V. Iyenger, B. Krishna Gandhi, S.Ranganadham and M.V.S.S.N.Prasad, *Mathematical Methods,* S.Chand and Company, 8^{th} edition, 2013

REFERENCE BOOKS:

1. B.S. Grewal, *Higher engineering mathematics*, Khanna Publishers, 42^{nd} edition, 2012

I B. Tech. - I Semester

(16BT1BS04) **MULTI - VARIABLE CALCULUS AND DIFFERENTIAL EQUATIONS**

(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PRE-REQUISITES: Intermediate /Senior secondary mathematics

COURSE DESCRIPTION: First order differential equations; higher order linear differential equations; functions of several variables; applications of integration; multiple integrals; vector calculus.

COURSE OUTCOMES: On successful completion of this course, students will be able to:

CO1. demonstrate knowledge in
- Higher order Differential equations
- Maximum and minimum values for the functions of several variables
- Double and triple integrals
- Differentiation and integration of vector functions.
- Line and surface volume transforming integrals from three dimensional surfaces and volumes on to plane surfaces

CO2. develop skills in analyzing the
- methods for differential equation for obtaining appropriate solutions,
- Properties of oscillatory electrical circuits and heat transfer in engineering systems
- The variations in the properties of functions near their stationary values
- Flow patterns of fluids, electrical and magnetic flux and related aspects

CO3. develop skills in designing mathematical models for
- R-C and L-R-C oscillatory electrical circuits
- Heat transfer and Newton's law of cooling
- Engineering concepts involving lengths of curves and areas of planes, Flux across surfaces

CO4. develop analytical skills in solving the problems involving
- Newton's law of cooling
- non homogeneous linear differential equations
- maximum and minimum values for the functions
- lengths of curves, areas of surfaces and volumes of solids in engineering
- transformation of integrals from three dimensional surfaces and volumes on to plane surfaces

CO5. use relevant mathematical techniques for evaluating
- various types of particular integrals in differential equations
- stationary values for multi variable functions
- multiple integrals in change of variables
- integrations of vector functions.

DETAILED SYLLABUS:

UNIT-I: FIRST ORDER DIFFERENTIAL EQUATIONS (06 periods)

Linear and Bernoulli type, exact equations and reducible to exact. Orthogonal trajectories (Both Cartesian and polar forms). Newton's law of cooling.

UNIT II: HIGHER ORDER LINEAR DIFFERENTIAL EQUATIONS (09 periods)

Method for solution of linear equations- Differential operator *D*, Solution of second order linear homogeneous equations with constant coefficients, Solution of Higher order homogeneous linear equations with constant coefficients, **Solution of Non homogeneous linear equations**-Operator methods for finding particular integrals- for cases – e^{ax}, sin ax, cos ax, x^n, $e^{ax}V(x)$, xV(x). Method of Variation of parameters. Applications to oscillatory electrical circuits.

UNIT-III: FUNCTIONS OF SEVERAL VARIABLES (08 periods)

Functions of Two Variables: Limits, Continuity; **Partial Derivatives**: Total Differential and Derivatives, Jacobian, Functional dependence, Taylor's Theorem, maxima and minima of functions of two variables with and without constraints – Lagrange's method of undetermined multipliers.

UNIT-IV: APPLICATIONS OF INTEGRATION AND MULTIPLE INTEGRALS (10 periods)

Applications of integration to – lengths of curves, areas of surfaces of revolution, Double and Triple integrals – change of order of integration, change of variables in integrals. Area enclosed by plane curves, volumes of solids.

UNIT-V: VECTOR CALCULUS (12 periods)

Vector differentiation: Gradient of a scalar field and Directional Derivative, Divergence and Curl of a Vector field

Line integrals: Line integrals independent of path – work done.

Surface area and Surface Integrals: Surface Area, Surface Integrals, Flux across a surface.

Green's Theorem: Green's Theorem (without proof)-verification- applications

Gauss Divergence Theorem and Stoke's Theorem: Gauss Divergence theorem (without proof), Stokes's Theorem (without proof) –verifications and applications. **Total no. of periods: 45**

TEXT BOOK:

1. T.K.V. Iyengar, B. Krishna Gandhi, S.Ranganatham and M.V.S.S.N. Prasad, *Engineering Mathematics, Vol-1*, S. Chand & Company, 13th edition, 2014.

I B. Tech. - I Semester
(16BT10201) ELECTRIC CIRCUITS

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	4	1	-	4

PREREQUISITES: Physics at Intermediate Level

COURSE DESCRIPTION:

Fundamentals of electric circuit parameters; nodal and mesh analysis; analysis of single phase and polyphase systems; analysis of coupled circuits; network theorems.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

CO1. demonstrate knowledge on

- voltage and current relationships for various electric elements
- network reduction techniques
- concepts of 1-phase and 3-phase electric circuits
- concepts of magnetically coupled circuits
- various circuit theorems

CO2. analyze electric and coupled circuits with conventional concepts and theorems

CO3. design resonant circuits to meet the required specifications

CO4. evaluate electric and magnetically coupled circuits parameters using conventional techniques and theorems.

DETAILED SYLLABUS:

UNIT-I: FUNDAMENTALS OF ELECTRICAL CIRCUITS (13 periods)

Concepts of charge, current, voltage, power and energy; Basic definitions of network, circuit, node, branch and loop; circuit elements – classifications; Ohm's law, Kirchhoff's laws; network reduction techniques-series, parallel, series-parallel circuits, source transformation, wye-to-delta and delta-to-wye transformations; current division and voltage division rules; nodal analysis and super node concept, mesh analysis and super mesh concept – problems.

UNIT-II: SINGLE PHASE AC CIRCUITS (13 periods)

Fundamentals of AC quantities; average and effective values of periodic waveforms; representation of electrical quantities in sinusoids and phasors, phasor relationships for circuit elements; impedance and admittance, impedance triangle; instantaneous and average power, power triangle; Sinusoidal response of R, L and C elements with different combinations; current locus; Resonance, bandwidth and quality factor for series and parallel networks – problems.

UNIT-III: CIRCUIT THEOREMS (10 periods)

Superposition, Thevenin's, Norton's, Maximum power transfer, Millmann's, Reciprocity and Compensation, Tellegen's theorems for DC & AC Excitations (without proof) – problems. Concept of dual and duality.

UNIT-IV: THREE PHASE AC CIRCUITS (11 periods)

Introduction to polyphase system and its advantages; phase sequence; analysis of three phase balanced and unbalanced systems; measurement of active and reactive power in balanced and unbalanced systems – problems.

UNIT-V: MAGNETICALLY COUPLED CIRCUITS (08 periods)

Coupled circuits-self and mutual inductance, coefficient of coupling, DOT convention; series and parallel connection of coupled coils, equivalent circuits of coupled coils; energy in coupled circuit; analogy between electrical and magnetic circuits – problems. **Total Periods: 55**

TEXT BOOKS:

1. Charles K. Alexander, Mathew N O Sadiku, *Fundamentals of Electric Circuits*, McGraw hill education(India) Pvt. Ltd, New Delhi, 5th edition, 2013.
2. A. Sudhakar, Shyammohan S Palli, Circuits and Networks Analysis and Synthesis, Mc Graw Hill company, New Delhi 5th edition, 2015.

I B. Tech. - I Semester

(16BT10501) PROGRAMMING IN C

(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: --

COURSE DESCRIPTION:

Program design; Operators and Expressions; Data Input and Output; Control Statements; Functions; Arrays; Strings; Pointers; Structures & Unions and File handling Techniques;

COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO1. demonstrate knowledge in:
- Elements of C Language
- Selection and Repetition statements.
- Arrays, Strings and Functional statements.
- Derived data types, Files and Pointers

CO2. analyze complex engineering problems to develop suitable solutions

CO3. design algorithms for specified engineering problems

CO4. use appropriate 'C' language constructs for solving engineering problems

CO5. write programs using 'C' language to implement algorithms

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO C PROGRAMMING, OPERATORS & EXPRESSIONS (08 periods)

Introduction to C Programming: The C Character set, Writing First Program of C, Identifiers and Keywords, Data types, Constants, Variables and Arrays, Declarations, Expressions, Statements and Symbolic Constants.

Operators and Expressions: Arithmetic Operators, Unary Operators, Relational and Logical Operators, Assignment Operators, the Conditional Operators.

UNIT-II: DATA INPUT AND OUTPUT & CONTROL STATEMENTS (08 periods)

Data Input and Output: Single Character Input and Output, Input Data & Output data, The gets and puts Function.

Control Statements: Branching: The if-else Statement, Looping: The while Statement, More Looping: The do-while Statement, Still More Looping: The for Statement, Nested Control Statement, The switch Statement, The break & continue Statements, The goto Statement.

UNIT-III: FUNCTIONS, PROGRAM STRUCTURES & ARRAYS (11 p*eriods*)

Functions: A Brief Overview, Defining a Function, Accessing a Function, Function Prototypes, Parsing Argument to a Function, Recursion.

Program Structure: Storage Classes, Automatic Variables, External (Global) Variables, Static Variables, Multi file Programs,

Arrays: Defining an Array, Processing an Array, Processing Array to function, Multidimensional Arrays. Linear search, Binary search, Fibonacci search, Bubble sort and Insertion sort

UNIT-IV: STRINGS & POINTERS (09 periods)

Strings: Defining a String, NULL Character, Initialization of Strings, Reading and Writing a String, Processing a Strings, Character Arithmetic, Searching and Sorting of Strings, Library Functions for Strings.

Pointers: Pointer Declaration, Passing Pointers to a Function, Pointers and One-dimensional Arrays, Dynamic Memory Allocation, Operations on Pointers, Pointers and Multidimensional Arrays, Arrays of Pointers.

UNIT-V: STRUCTURES AND UNIONS & FILE HANDLING (09 periods)

Structures and Unions: Defining a Structure, Processing a Structure, User-Defined Data types (typedef), Structures and Pointers, Passing Structures to Function, Self –Referential Structures, Unions

File Handling: Files introduction, Opening and Closing a Data File, Reading and Writing a Data File, Processing a Data File, Unformatted Data File, Concept of Binary Files, Accessing the File Randomly.

Total Periods: *45*

TEXT BOOK:

1. Byron Gottfried and Jitender Kumar C *Programming with C*, Third Edition, McGraw Hill Education (India) Pvt, Ltd, New Delhi, 2016.

REFERENCE BOOKS:

1. Pradip Dey and Manas Ghosh, *Programming in C,* Second Edition, Oxford University Press, NewDelhi, 2007.
2. E. Balagurusamy, *Programming in C,* Seventh Edition, Mc Graw Hill Education (India) Pvt, Ltd, New Delhi, 2014.

I B. Tech. - I Semester

(16BT1BS32) **ENGINEERING PHYSICS LAB**

(Common to ECE, EEE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: Intermediate / senior secondary Physics.

COURSE DESCRIPTION:

Characteristics of p-n junction diode, Photodiode, LED, and semiconductor laser diode. Experimental determination of carrier concentration and energy gap of a semiconductor material, wave length of a laser source, size of fine particle, numerical aperture and acceptance angle of optical fiber. Determination of frequency of electrically vibrating tuning fork and A.C source using A.C sonometer, magnetic field along axial line of a current carrying coil and rigidity modulus of material of a wire using torsional pendulum.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. demonstrate basic knowledge about semiconductor materials, magnetic materials and lasers.

CO2. demonstrate analytical skills in the estimation of carrier concentration of semiconductor materials and characterization of p-n junction.

CO3.develop skills in designing electronic circuits using semiconductor components.

CO4. use instrumental techniques in A.C sonometer and Melde's experiment.

CO5.apply diffraction techniques for determination of size of tiny particles and wave length of lasers.

ENGINEERING PHYSICS LAB

Conduct a minimum of any **Ten** of the following experiments.

1. Determination of wavelength of a laser source using Diffraction Grating.
2. Determination of particle size by using a laser source.
3. Determination of Numerical aperture and acceptance angle of an optical fiber.
4. Melde's experiment - transverse & longitudinal modes.
5. Magnetic field along the axis of a current carrying coil- Stewart and Gee's method.
6. Calculation of A.C frequency using sonometer.
7. I-V Characteristics of a p-n Junction diode.
8. Energy gap of a material of a p-n Junction.
9. Characteristics of LED source.
10. Characteristics of Photo diode.
11. Hall Effect.
12. Determination of rigidity modulus of the material of the wire using torsional pendulum.

I B. Tech. - I Semester

(16BT10231) **ELECTRIC CIRCUITS LAB**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: -

COURSE DESCRIPTION:

Verification of Ohm's law, KVL, KCL and network theorems; analysis of AC and DC circuits; determination of resonant frequency in series and parallel RLC circuits; determination of self and mutual inductances in coupled circuits;

COURSE OUTCOMES:

After successful completion of the course, student will be able to:

CO1. demonstrate knowledge on
- identification of various circuit elements and their values.
- concepts of electrical and magnetic circuits.

CO2. analyze and relate physical observations and measurements in electric circuits to theoretical principles and theorems.

CO3. design circuit parameters to meet the required specifications

CO4. demonstrate skills in
- obtaining the current locus diagrams.
- determining the parameters of magnetically coupled circuits.
- measuring of active and reactive powers.

CO5. function effectively as an individual and as a member in a team

CO6. communicate effectively both oral and prepare laboratory reports.

DETAILED SYLLABUS:

LIST OF EXPERIMENTS:

1. Verification of Ohm's Law and Kirchhoff's Laws
2. Variation of Resistance of Conductor with temperature
3. Phasor analysis of RL, RC and RLC circuits
4. Analyzing the series RL, RC and RLC circuits for various excitation systems
5. Current locus diagram of RL and RC series circuits
6. Series and Parallel resonance
7. Verification of Superposition and Reciprocity theorems
8. Verification of Thevenin's and Norton's theorem
9. Verification of Millmann's and Compensation theorems
10. Verification of Maximum Power transfer theorem for DC & AC excitations
11. Measurement of active and reactive power in three phase circuits
12. Determination of self and mutual inductance and coefficient of coupling
13. Determination of equivalent inductance for aiding and opposing fluxes.

I B. Tech. - I Semester

(16BT10232) **ELECTRICAL AND ELECTRONICS WORKSHOP PRACTICE**

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: --

COURSE DESCRIPTION: Identification and specifications of various Electric and Electronic devices; analysis of various series, parallel and series-parallel electrical circuits; develop various electrical circuits for domestic and industrial applications.

COURSE OUTCOMES: After successful completion of the course, student will be able to

CO1. demonstrate knowledge on various Electrical and Electronic Devices.

CO2. analyze various series and parallel electrical circuits.

CO3. design and develop various electrical circuits for domestic and industrial applications.

CO4. function effectively as individual and as a member in a team.

CO5. communicate effectively both oral and written forms

DETAILED SYLLABUS:

PART A: (Demonstration)

1. Identification and Specifications of R, L, C Components (Colour Codes), Potentiometers, Switches (SPST, DPST and DPI), Gang Condensers, Relays, Bread Boards, PCBs, Fuses, MCBs, Earthing and Electrical Wiring accessories.

2. Identification and Specifications of Active Devices: Diodes, BJTs, Low-power JFETs, MOSFETs, Power Transistors, LEDs, LCDs, Optoelectronic Devices, SCR, UJT, DIACs, TRIACs, Linear and Digital ICs.

3. Study the operation of
   - Multimeter (Analog and Digital)
   - Function Generator
   - Regulated Power Supplies
   - CRO.

PART-B:

1. Measurement of Electrical Quantities (AC & DC) using: Voltmeter, Ammeter and Wattmeter.
2. Measurement of Resistivity of a conducting wire.
3. Circuit with one lamp controlled by one switch and provision of 2-pin or 3-pin socket PVC surface conduit system.
4. Circuit with two lamps controlled by two switches with PVC surface conduit system.
5. Circuit for Stair case wiring and Godown wiring.
6. Circuit connection for a Fluorescent tube
7. Solder simple electronic circuits.
8. B-H curve of a Magnetic material
9. I-V and P-V characteristics of a Solar panel
10. Design and Fabrication of a single-phase transformer
11. PCB preparation and design of a circuit on a PCB

I B. Tech. - I Semester
(16BT10531) **PROGRAMMING IN C LAB**
(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES:-
A course on Programming in C
COURSE DESCRIPTION:
Hands on practice in developing and executing simple programs using C Programming constructs–Conditional statements, Loops, Arrays, Strings, Functions, Structures, Pointers and Functions.
COURSE OUTCOMES:
On successful completion of this course, students will be able to:
CO1. demonstrate practical knowledge of using C language constructs:
- Selection and Repetition statements.
- Arrays, Strings and Functional statements.
- Derived data types, Files and Pointers

CO2. analyze problems to develop suitable algorithmic solutions
CO3. design Solutions for specified engineering problems
CO4. use appropriate 'C' language constructs for solving engineering problems
CO5. implement and execute programs using 'C' language
CO6. document programs and communicate effectively while conducting Professional transactions.
List of Exercises:
1. a. Let a and b are two integer variables whose values are 10 and 13 respectively. Write a program to evaluate the following arithmetic expressions.
   i) a + b ii) a–b iii) a * b iv) a/b v) a % b
   b. Write a program to evaluate the following algebraic expressions after reading necessary values from keyword.
   i) $(ax + b)/(ax - b)$ ii) $2.5 \log x + \cos 32^0 + | x^2 + y^2|$
   iii) $x^5 + 10 x^4 + 8$ and $x^3 + 4 x + 2$ iv) ae^{kt}
2. a. Mr. Gupta deposited Rs.1000 in a bank. The bank gives simple interest at the rate of 15% per annum. Write a program to determine the amount in Mr. Gupta's account at the end of 5 years. (Use the formula I = P T R / 100)
   b. A cashier has currency notes of denominations Rs.10, Rs. 50 and Rs. 100. If the amount to be withdrawn is input in hundreds, find the total number of notes of each denomination the cashier will have to give to the withdrawer.
   c. In a town, the percentage of men is 52. The percentage of total literacy is 48.If total percentage of literate men is 35 of the total population; write a program to find the total number of illiterate men and women if the population of the town is 8000.
3. a. Write a program that prints the given 3 integers in ascending order using if - else.
   b. Write a program to calculate commission for the input value of sales amount.
   Commission is calculated as per the following rules:
   i) Commission is NIL for sales amount Rs. 5000.
   ii) Commission is 2% for sales when sales amount is >Rs. 5000 and <= Rs. 10000.
   iii) Commission is 5% for sales amount >Rs. 10000.
   c. A character is entered through keyboard. Write a program to determine whether the character entered is a capital letter, a small case letter, a digit or a special symbol. The following table shows the range of ASCII values for various characters.

Characters	**ASCII values**
A - Z	65 - 90
a - z	97- 122
0 - 9	48 - 57
Special Symbols	0 - 47, 58 - 64, 91- 96, 123 - 127

4. a. If cost price and selling price of an item is input through the keyboard, write program to determine whether the seller has made profit or incurred loss. Also determine how much profit or loss he incurred in percentage.
   b. An insurance company calculates premium as follows:
   i. If a person's health is excellent and the person is between 25 and 35 years of age and lives in a city and is a male then premium is Rs.4 per thousand and the policy amount cannot exceed Rs.2 lakhs.
   ii. If a person satisfies all the above conditions and is female then the premium is Rs.3 per thousand and the policy amount cannot exceed Rs.1 lakh.
   iii. If a person's health is poor and the person is between 25 and 35 years of age and lives in a village and is a male then premium is Rs.6 per thousand and the policy cannot exceed Rs. 10000.
   iv. In all other cases the person is not insured.
   Write a program to determine whether the person should be insured or not, his/her premium rate and maximum amount for which he/she can be insured.

5. a. Write a program, which takes two integer operands and one operator as input from the user, performs the operation and then prints the result. (Consider the operators +,-,*, /, %. Use switch statement)
   b. Write a program to find the grace marks for a student using switch. The user should enter the class obtained by the student and the number of subjects he has failed in. Use the following rules:
   i. If the student gets first class and the number of subjects failed is >3, then no grace marks are awarded. If the number of subjects failed is less than or equal to '3' then the grace is 5 marks per subject.
   ii. If the student gets second class and the number of subjects failed in is >2, then no grace marks are awarded. If the number of subjects failed in less than or equal to '3' then the grace is 4 marks per subject.
   iii. If the student gets third class and the number of subjects failed in is >1, then no grace marks are awarded. If the number of subjects failed in is equal to '1' then the grace is 5 marks per subject.
6. a. Write a program to find the sum of individual digits of a positive integer.
   b. A Fibonacci sequence is defined as follows:
   The first and second terms in the sequence are 0 and 1. Subsequent terms are found by adding the preceding two terms in the sequence. Write a program to generate the first N terms of the sequence.
   Write a program to generate all the prime numbers between 1 and N, where N is a value supplied by the user.
7. a. Write a program to find the largest and smallest number in a given list of integers.
   b. Write a program to perform the following:
   i. Addition of two matrices.
   ii. Multiplication of two matrices.
8. a. Write a program that uses functions to perform the following operations:
   i. To insert a sub-string in main string at a specified position.
   ii. To delete N characters from a given string from a specified position.
   b. Write a program to determine whether the given string is palindrome or not.
   c. Write a program to display the position or index in the main string S where the sub string T begins. Display -1 if S does not contain T.
   d. Write a program to count the number of lines, words and characters in a given text.
9. a. Write a program to read list of student names and perform the following operations using functions.
   i. to print list of names
   ii. to sort them in ascending order
   iii. to print the list after sorting.
   b. Write a menu driven program to read list of student names and perform the following operations using array of character pointers.
   i. to insert a student name
   ii. to delete a name
   iii. to print the name
10. Write a program that uses functions to perform the following operations:
   i. Reading a complex number
   ii. Writing a complex number
   iii. Addition of two complex numbers
   iv. Multiplication of two complex numbers
   (**Note:** Represent complex number using a structure.)
11. a. Write a program to accept the elements of the structure as:
   Employee-name,Basic pay Display the same structure along with the DA, CCA and Gross salary for 5 employees.
   Note: DA=51% of Basic pay, CCA=Rs.100.consolidated.
   b. Define a structure to store employee's data with the following specifications:
   Employee-Number, Employee-Name, Basic pay, Date of Joining
   i. Write a function to store 10 employee details.
   ii. Write a function to implement the following rules while revising the basic pay.
   If Basic pay<=Rs.5000 then increase it by 15%.
   If Basic pay> Rs.5000 and <=Rs.25000 then it increase by 10%.
   If Basic pay>Rs.25000 then there is no change in basic pay.
   Write a function to print the details of employees who have completed 20 years of service from the date of joining.
12. a. Write a program which copies one 'text file' to another 'text file'.
   b.Write a program to reverse the first N characters of a given text file.

Note: The file name and N are specified through command line.

13. Write a program to print the output by giving the Customer_ID as an input.

I B. Tech. - II Semester
(16BT1HS01) **Technical English**
(Common to ECE, EEE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: English at Intermediate level

COURSE DESCRIPTION: Introduction to Communication; Active Listening; Effective Speaking; Reading; and Writing.

COURSE OUTCOMES:
On successful completion of this course, the students will be able to:
CO1. demonstrate knowledge in
- Process of communication
- Modes of listening
- Paralinguistic features
- Skimming and Scanning
- Elements of style in writing

CO2. analyze the possibilities and limitations of language for understanding
- Barriers to Communication
- Barriers to Effective Listening
- Barriers to Speaking
- Formal and metaphorical language

CO3. design and develop functional skills for professional practice.
CO4. apply writing skills in preparing and presenting documents
CO5. function effectively as an individual and as a member in diverse teams.
CO6. communicate effectively with the engineering community and society in formal and informal situations.

DETAILED SYLLABUS:
UNIT-I: INTRODUCTION TO COMMUNICATION (09 periods)
Introduction -Language as a Tool of Communication - Communicative Skills (Listening, Speaking, Reading and Writing)
UNIT-II: ACTIVE LISTENING (09 periods)
Introduction - Reasons for poor Listening - Traits of a Good Listener - Listening Modes - Types of Listening - Barriers to Effective Listening - Listening for General Content and Specific Information.
UNIT-III: EFFECTIVE SPEAKING (09 periods)
Introduction - Achieving Confidence, Clarity and Fluency - Paralinguistic Features - Barriers to Speaking - Types of Speaking - Persuasive Speaking.
UNIT-IV: READING (09 periods)
Introduction and Reading Rates - Reading and Interpretation - Intensive and Extensive Reading - Critical Reading - Reading for Different Purposes - SQ3R Reading Technique -Study Skills.
UNIT-V: WRITING (09 periods)
Introduction - Language - Elements of Style - Techniques for Good Technical Writing - Referencing and Styling - Right Words and Phrases - Sentences.

Total Periods: 45

I B. Tech - II Semester

(16BT1BS01): **ENGINEERING CHEMISTRY**

(Common to ECE, EEE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Intermediate/Senior Secondary Chemistry

COURSE DESCRIPTION: Water technology, Chemistry of Engineering materials, Nanochemistry, Green Chemistry, Electro chemical cells, Sensors, Corrosion and Lubricants.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. acquire basic knowledge in water technology, engineering plastics, conducting polymers, composites, Electro chemical cells, Nano Chemistry, principles of Green Chemistry, corrosion phenomenon and lubricants.

CO2. develop analytical skills in:
- Determination of hardness of water.
- Determination of viscosity, flame and fire points, cloud and pour points.

CO3. develop designing skills in:
- Synthesis of engineering plastics.
- Chemical methods for the synthesis of Nano materials.

CO4. develop skills for providing solutions through:
- Mitigation of hardness of water.
- Newer Nanomaterials and engineering plastics for specific applications

CO5. acquire awareness to practice engineering in compliance to modern techniques such as:
- Nalgonda technique for defluoridation of water
- Electroplating technique for control of corrosion.

CO6. acquire awareness to societal issues on:
- Quality of water.
- Bio-diesel
- Chemical materials utility and their impact.

DETAILED SYLLABUS:

UNIT–I: WATER TECHNOLOGY (09 periods)

Introduction: Types of water, impurities in water and their consequences, types of hardness of water, units of hardness of water, disadvantages of hardness of water, estimation of hardness of water by EDTA method, Boiler troubles: Scales and Sludges, Caustic embrittlement, Boiler corrosion and Priming and Foaming.

Softening of water: Zeolite process and Ion exchange process, advantages and disadvantages. Desalination of brackish water by Reverse Osmosis, Numerical problems on estimation of hardness of water.

Fluorides in water: Effects on human health, defluoridation method-Nalgonda method; comparison of merits and demerits of various defluoridation methods (Nalgonda, Bone Charcoal, Activated Alumina, Contact precipitation, Brick, Reverse osmosis).

UNIT-II: CHEMISTRY OF ENGINEERING MATERIALS (09 periods)

Engineering Plastics: Definition, general properties, synthesis, properties and applications of PC, PTFE, and PMMA.

Conducting polymers: Definition, types of conducting polymers: Intrinsic and extrinsic conducting polymers with examples, engineering applications of conducting polymers.

Biodegradable polymers: Definition, properties, classification, mechanism of degradation of biodegradable polymers and their applications.

Composites – Introduction, types of composites: fiber reinforced particulate and layered composites with examples, advantages of composites and applications.

UNIT-III: NANOCHEMISTRY AND GREEN CHEMISTRY (09 periods)

Nanochemistry: Introduction, classification, properties and applications of Nano materials (nano particles, nano tubes, nano wires, nano composites, dendrimers); synthesis of Nano materials – Sol-gel process.

Green Chemistry: Introduction, principles of green chemistry, Tools of Green Chemistry with Examples, Applications of Green Chemistry in science and technology.

Biodiesel: Introduction, Synthesis (Trans esterification method), advantages, disadvantages and applications.

UNIT-IV: ELECTROCHEMICAL CELLS AND SENSORS (09 periods)

Electrochemical cell: Introduction, EMF of an electrochemical cell.

Batteries: Introduction, types of Batteries: primary and secondary batteries with examples, Ni-Cd batteries, Lithium-ion batteries, Lithium- Polymer batteries, Applications of batteries.

Fuel Cells: Definition, examples: $H_2 - O_2$ Fuel cell, solid oxide fuel cell, Bio-fuel cell and applications of fuel cells.

Sensors - Introduction, Types of Sensors, electrochemical sensor: construction and working principle of potentiometric sensor, and applications of electrochemical sensors.

UNIT-V: CORROSION AND LUBRICANTS (09 periods)

Corrosion: Introduction, Definition, types of corrosion (dry and wet corrosion), galvanic corrosion, concentration cell corrosion, Factors influencing corrosion, Corrosion control: cathodic protection; sacrificial anodic protection and impressed current cathodic protection; protective coatings: Galvanizing and Electroplating (Nickel).

Lubricants: Definition, functions of lubricants, mechanism of lubrication, classification of lubricants, properties of lubricants – viscosity, flash and fire points, cloud and pour points, Aniline points, neutralization number and mechanical strength. **Total periods: 45**

I B. Tech. - II Semester

(16BT2BS01) TRANSFORMATION TECHNIQUES AND PARTIAL DIFFERENTIAL EQUATIONS

(Common to all Branches)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Intermediate /Senior secondary Mathematics

COURSE DESCRIPTION: Fourier series; Fourier integrals and transforms; Laplace transforms; z –transforms; partial differential equations.

COURSE OUTCOMES:

On successful completion of this course, students will be able to

CO1. demonstrate basic knowledge in
- Fourier series and Fourier transforms
- Fourier integrals
- Laplace transforms and their applications
- z- transforms and their applications
- solving partial differential equations

CO2. analyze
- Properties of Fourier series for a given function
- Partial differential equations through different evaluation methods
- Difference equations through z – transforms
- Engineering systems and processes involving wave forms and heat transfer

CO3. design mathematical models for
- Problems involving heat transfer and wave forms
- Engineering concepts involving, Fourier transforms, Fourier integrals, Laplace transforms, z transforms and difference equations

CO4. solve problems involving
- Fourier series and Fourier transforms
- Laplace transforms
- Z-transforms and difference equations
- Heat transfer and wave motion

CO5. use relevant transformation techniques for
- Obtaining Fourier transforms for different types of functions
- Laplace transforms
- Z- transforms
- Partial differential equations

DETAILED SYLLABUS:

UNIT-I: FOURIER SERIES **(07 periods)**

Fourier series: Determination of Fourier coefficients, convergence of Fourier series (Dirichlet's conditions), Fourier series of even and odd functions, Half-range Fourier sine and cosine expansions.

UNIT-II: FOURIER INTEGRALS AND FOURIER TRANSFORMS **(08 periods)**

Fourier integral theorem (statement only), Fourier sine and cosine integrals, Fourier transform, Fourier sine and cosine transforms –properties, Inverse transform and finite Fourier transforms.

UNIT-III: LAPLACE TRANSFORMS **(12 periods)**

Laplace transforms of standard functions. Properties of Laplace transforms. First and second shifting Theorems. Laplace transforms of derivatives and integrals. Inverse transforms. Convolution theorem (without proof), inverse Laplace transforms by convolution theorem. Laplace transform of periodic functions, Applications of Laplace transforms to ordinary differential equations of first and second order with constant coefficients.

UNIT-IV: Z- TRANSFORMS **(09 periods)**

Z – transforms, inverse Z– transforms, damping rule, shifting rule, initial and final value theorems. Convolution theorem (without proof), solution of difference equations by Z– transforms.

UNIT-V: PARTIAL DIFFERENTIAL EQUATIONS **(09 periods)**

Formation of Partial differential equations – Solutions of first order linear equations by method of grouping. First and second order equations by method of separation of variables – Solutions of one dimensional Wave equation, Heat equation. **Total no. of periods: 45**

TEXT BOOKS:

1. T.K.V. Iyengar, B. Krishna Gandhi, S.Ranganadham and M.V.S.S.N. Prasad, *Engineering Mathematics, vol-1*, S. Chand & Company 13th edition, 2014.
2. T.K.V. Iyenger, B. Krishna Gandhi, S. Ranganadham and M.V.S.S.N.Prasad, *Mathematical Methods,* S. Chand and Company, 8th edition, 2013.

REFERENCE BOOKS:

1. Grewal, B.S., *Higher Engineering Mathematics*, Khanna publishers, Delhi, 42nd edition, 2012.

I B. Tech. - II Semester
(16BT20401) **ELECTRONIC DEVICES AND CIRCUITS**
(Common to ECE, EIE & EEE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: A Course on Engineering Physics.

COURSE DESCRIPTION:
Characteristics of general and special purpose electronic devices; Rectifiers; filters and regulators; Biasing and small signal analysis of BJT and FET.

COURSE OUTCOMES:
On successful completion of this course, students will be able to:

CO1. demonstrate knowledge in
- p-n junction diode and its characteristics
- Zener diode and its characteristics
- Rectifiers, Filters and Regulators
- Characteristics of BJT, FET, MOSFET and special purpose electronic devices.

CO2. analyze numerical and analytical problems in
- Rectifiers using Filters
- Regulated Power Supplies
- Transistor biasing circuits and stabilization
- Transistor amplifiers
- FET biasing circuits and amplifiers

CO3. design electronic circuits such as
- Rectifiers with and without filters
- Voltage regulators
- BJT and FET biasing circuits
- BJT and FET amplifiers

CO4. solve engineering problems and arrive at solutions pertaining to electronic circuits.

CO5. select appropriate technique for transistor modeling.

DETAILED SYLLABUS:

UNIT-I: P-N JUNCTION DIODE, RECTIFIERS AND REGULATORS (11 Periods)

P-N Junction Diode:
p-n Junction as a diode, *p-n* Junction diode equation, Volt-Ampere (V-I) characteristics, temperature dependence of *p-n* characteristics, diode resistance-static and dynamic resistances, transition and diffusion capacitances, break down mechanisms in semiconductor diodes, Zener diode characteristics.

Rectifiers and Regulators:
Half-Wave rectifier and Full-Wave rectifiers (Qualitative and quantitative analysis), Harmonic components in a rectifier circuit, Inductor filter, Capacitor filter, L - section filter, ð- section filter, comparison of various filter circuits in terms of ripple factors. Simple circuit of a regulator using Zener diode. Problems on rectifier circuits.

UNIT-II: BIPOLAR JUNCTION TRANSISTOR, BIASING AND STABILIZATION (10 Periods)
Transistor construction, BJT Operation, Transistor currents and their relations, Input and Output Characteristics of a Transistor in Common Emitter, Common Base and Common Collector Configurations, BJT specifications, Transistor Operating Point, DC and AC Load Lines, Importance of Biasing, Fixed Bias, Emitter Feedback Bias, Collector to Base Feedback Bias, Voltage Divider Bias, Bias Stability, Transistor as an amplifier, Thermal Runaway, Problems on biasing circuits.

UNIT-III: SMALL SIGNAL ANALYSIS OF BJT AMPLIFIERS (08 Periods)
BJT Modeling, Hybrid Modeling, Determination of h-Parameters from Transistor Characteristics, Measurement of h-Parameters, Miller's Theorem, Analysis of CE, CB and CC configurations using simplified Hybrid Model, Comparison of CB, CE and CC configurations.

UNIT-IV: FIELD EFFECT TRANSISTORS (10 Periods)
Construction, Principle of operation and characteristics of JFET and MOSFET (Enhancement & Depletion), Biasing of FET, Small Signal Model of JFET, Common Source and Common Drain Amplifiers using JFET, Generalized FET Amplifier, FET as Voltage Variable Resistor, Comparison of BJT and FET.

UNIT-V: SPECIAL PURPOSE ELECTRONIC DEVICES (06 Periods)
Principle of Operation and Characteristics of Tunnel Diode, Uni-Junction Transistor (UJT), Varactor Diode, Silicon Control Rectifier (SCR). Principle of operation of Schottky Barrier Diode.

Total Periods: *45*

TEXT BOOK:
1. J. Millman, Christos C. Halkias and SatyabrataJit, *Electronic Devices and Circuits,* TMH, 3rd edition, 2010.

I B. Tech. - II-Semester

(16BT20541) **Foundations of Data Structures**

(Common to ECE, EEE and EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: A course on Programming in C

COURSE DESCRIPTION:

Concepts of sorting: sorting by exchange, sorting by distribution, sorting by merging and data structures: stacks, queues, linked lists, trees, graphs, and hash table.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. demonstrate knowledge in Sorting techniques, Linear and Non-linear Data Structures. CO2. analyze the performance of sorting techniques and their relationship to Data Structures.

CO3. design appropriate hashing function for a given application and develop programs to implement Linear and Non-Linear data structures

CO4. apply appropriate data structure to provide solutions for real time problems using C Language.

DETAILED SYLLABUS:

UNIT-I: SORTING **(09 periods)**

SORTING - Sorting by Exchange-Shell Sort, Quick sort. Sorting By Distribution-Counting Sort, Bucket Sort, Radix Sort. Sorting By Merging-Merge Sort.

UNIT-II: STACKS AND QUEUES **(09 periods)**

STACKS -Introduction, Stack Operations, Applications.

QUEUES - Introduction, Operations on Queues, Circular Queues and Applications.

UNIT-III: LINKED LISTS **(09 periods)**

LINKED LISTS –Introduction, Single Linked List, Circular Linked List, Doubly Linked List, Multiply Linked List and Applications.

LINKED STACKS AND LINKED QUEUES - Introduction, Operations on Linked Stack and Linked Queues, Dynamic Memory Management and Linked Stacks.

UNIT-IV: TREES AND BINARY TREES **(09 periods)**

TREES– Introduction, Definition and Basic Terminologies, Representation of Trees.

BINARY TREES – Basic Terminologies and Types, Representation of Binary Trees, Binary Tree Traversals, Binary Search Trees: Definition and Operations and Applications.

UNIT-V: Graphs and Hashing **(09 periods)**

Graphs – Introduction, Definitions and Basic Terminologies, Representation of Graphs, Graph Traversals, Applications.

Hashing – Introduction, Hash Table Structure, Hash Functions, Linear Open Addressing, Chaining and Applications.

Total Periods: *45*

TEXT BOOK:

1. G.A.V. Pai, *Data Structures and Algorithms,* Tata McGraw Hill, Second Edition, 2009.

(16BT1HS31) **ENGLISH LANGUAGE LAB**

(Common to ECE, EEE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: English at intermediate or equivalent level.

COURSE DESCRIPTION: Phonetics; Vocabulary Building; Functional Grammar; Just a Minute; Elocution/Impromptu; Giving Directions/Conversation Starters; Role Play; Public Speaking; Describing People, Places, Objects and Events; Reading Comprehension; Listening Comprehension; Information Transfer.

COURSE OUTCOMES:

On successful completion of this course the students will be able to:

CO1**.** demonstrate knowledge in
- Phonetics
- Information Transfer

CO2**.** analyze the situations in professional context by using
- Vocabulary
- Grammar

CO3**.** design and develop functional skills for professional practice.

CO4**.** apply the techniques of Listening and Reading skills to comprehend Listening and Reading comprehension.

CO5**.** function effectively as an individual and as a member in diverse teams through
- Extempore talk and
- Role Play

CO6**.** communicate effectively in public speaking in formal and informal situations.

CO7**.** recognize the need to engage in lifelong learning to upgrade competence of knowledge and communication.

LIST OF EXERCISES:

1. Phonetics
2. Vocabulary Building
3. Functional Grammar
4. Just a Minute
5. Elocution/Impromptu
6. Giving Directions/Conversation Starters
7. Role Play
8. Public Speaking
9. Describing People, Places, Objects and Events.
10. Reading Comprehension
11. Listening Comprehension
12. Information Transfer

Total Lab Slots: 10

I B. Tech- II Semester

(16BT1BS31): **ENGINEERING CHEMISTRY LAB**

(Common to ECE, EEE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: Intermediate/Senior Secondary Chemistry

COURSE DESCRIPTION: Estimation of hardness, alkalinity, dissolved oxygen of water samples and estimation of Iron by volumetric methods, determination of effect of P^H on rate of corrosion, measurement of viscosity of lubricants; Instrumental methods like potentiometer, conductivity meter, P^H meter and colorimeter; synthesis of Polymers and Nano materials.

COURSE OUTCOMES:

After completion of the course, a successful student is able to:

CO1. Acquire basic Knowledge about the volumetric analysis and synthesis of materials used for engineering applications.

CO2. Acquire analytical skills in the estimation of hardness of water, alkalinity of water, dissolved oxygen in water and estimation of Iron through wet laboratory methods.

CO3. Develop designing skills for the synthesis of polymers and Nanomaterials.

CO4. Acquire skills to use instrumental techniques for the determination of Electrical conductance of electrolytes, EMF of a cell, PH of a solution, determination of viscosity of lubricants and estimation of iron in cement.

CO5. Provide solutions for environmental issues through determination of quality of water.

List of Experiments:

A minimum of any **Ten** experiments are to be conducted among the following:.

1. Estimation of Hardness of water by EDTA method.
2. Estimation of alkalinity of Water.
3. Estimation of Dissolved Oxygen in water.
4. Estimation of Ferrous Iron by Dichrometry.
5. Preparation of Novalac Resin.
6. Synthesis of Nano metal-oxide using sol– gel process.
7. Conductometric titration of strong acid Vs strong base
8. Estimation of Ferrous ion by Potentiometry.
9. Determination of amount of corrosion of metals in different medium
10. Measurement of viscosity of lubricants by Ostwald viscometer.
11. Determination of P^H of a given solution by P^H metry.
12. Estimation of Ferric iron in cement by Colorimetric method.

Total Time Slots: 12

I B. Tech. - II Semester

(16BT10331) **COMPUTER AIDED ENGINEERING DRAWING**

(Common to ECE, EEE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	1	6	3

PREREQUISITES: --

COURSE DESCRIPTION:

Engineering drawing conventions; importance of engineering drawing; fundamental concepts of sketching; computed aided drafting and different types of projections of geometric entities (both 2D and 3D) through computer aided drafting packages.

COURSE OUTCOMES:

On Successful completion of this course, students will be able to:

CO1. understand, write and read the language of engineering drawing in industry through International System of Standards.

CO2. develop the imagination and mental visualization ability for interpreting the geometrical details of engineering objects.

CO3. produce different views and projection in drawing.

CO4. Use modern CAD software for design and drafting of drawings.

CO5. create multi-view drawings suitable for presentation to Engineering community.

CO6. introduce and communicate universally accepted conventions and symbols for their usage in technical drawing.

DETAILED SYLLABUS:

UNIT-I: BASICS OF ENGINEERING DRAWING PRACTICE, GEOMETRICAL CONSTRUCTIONS, CONICS AND SPECIAL CURVES (18 periods)

Introduction, drawing instruments and its uses, sheet layout, BIS conventions, lines, lettering and dimensioning practices. Geometrical constructions: Construction of regular polygons: Pentagon, Hexagon, Heptagon and Octagon. Conic sections**:** Introduction, construction of ellipse: rectangular method, eccentricity method. Construction of parabola: rectangular method, eccentricity method. Construction of hyperbola: eccentricity method. Special curves***:*** cycloid, involute.

UNIT-II: INTRODUCTION TO COMPUTER AIDED SKETCHING (18 periods)

Computer screen, layout of the software, creation of 2D/3D environment, selection of drawing size and scale, Standard tool bar/menus, Coordinate system, description of most commonly used toolbars, navigational tools: commands and creation of lines, Co-ordinate points, axes, poly-lines, square, rectangle, polygons, splines, circles, ellipse, text, move, copy, off-set, mirror, rotate, trim, extend, break, chamfer, fillet, curves, constraints viz. tangency, parallelism, inclination and perpendicularity.

UNIT-III: PROJECTION OF POINTS, STRAIGHT LINES AND PLANES (21 periods)

Introduction, method of projection, planes of projection, reference line and notations. Projection of points: Points in all the four quadrants. Projection of straight lines**:** lines inclined to HP / VP plane, inclined to both HP and VP planes (straight lines are assumed to be in first quadrant only)**.** Projection of planes**:** projection of triangle, square, rectangle, rhombus, pentagon, hexagon and circular plane for the condition inclined to HP / VP by change of position method.

UNIT-IV: PROJECTION OF SOLIDS AND SECTION OF SOLIDS (21 Periods)

Projections of Solids: Introduction, projection of solids: prisms, pyramids, cylinders and cones with axis perpendicular to VP/HP and axis inclined to VP/HP only. Sections of solids**:** Introduction, Cutting plane, sectional views of right regular solids resting with base on HP: prisms, pyramids, cylinder and cone and true shapes of the sections.

UNIT-V: ORTHOGRAPHIC AND ISOMETRIC PROJECTIONS AND DEVELOPMENT OF SURFACES (22 periods)

Orthographic projection: simple exercises. Isometric projection: Simple exercises.

Development of surfaces: prisms, pyramids, cylinders, cone and miscellaneous surfaces

Total Periods: *100*

Note: *Student shall practice Unit-I using sketch book only and remaining units using sketch book first and later CAD package.*

(16BT20551) **FOUNDATIONS OF DATA STRUCTURES LAB**

(Common to ECE, EEE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: *A course on "Foundations of Data Structures"*

COURSE DESCRIPTION:

Hands on programming to implement data structures - Linked lists, Stacks, Queues, Trees, Search trees, Sorting, and Hashing in C Language.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO1. demonstrate practical knowledge on stacks, queues, trees, graphs and Hashing Techniques

CO2. identify suitable data structure to solve engineering problems.

CO3. design solutions for complex engineering problems using linear and non-linear data structures.

CO4. develop algorithms leading to multiple solutions by conducting investigations of complex problems.

CO5. apply 'C' language as a tool for implementing linear and non linear data structures

CO6. communicate effectively by writing Programs and document practical work.

LIST OF PRACTICAL EXERCISES:

1. Implement the following sorting techniques
   (a) Quick Sort (b) Radix Sort (c) Merge Sort
2. Implement the following data structures using arrays
   (a)Stack (b) Queue (c) Circular Queue
3. Implement the following operations on a single linked list.
   (a) Creation (b) Insertion (c) Deletion (d) Display
4. Implement the following operations on a double linked list.
   (a) Creation (b) Insertion (c) Deletion (d) Display
5. Implement the following operations on a circular linked list.
   (a) Creation (b) Insertion (c) Deletion (d) Display
6. Implement the following data structures using linked list.
   (a) Stack (b) Queue (c) Circular Queue
7. Implement the following tree traversals on a binary tree
   (a) Preorder (b) Inorder (c) Postorder
8. Implement the following operation on binary search tree
   (a) Creation (b) Insertion (c) Deletion (d) Inorder
9. Implement the following graph traversal techniques
   (a) Breadth First traversal (b) Depth First Traversal
10. Implement the following Hashing Techniques
   (a) Separate Chaining (b) Open addressing methods

REFERENCE BOOKS:

1. G.A.V. Pai, *Data Structures and Algorithms,* Tata McGraw Hill, Second Edition, 2009.
2. Debasis Samanta, *Classic Data Structures,* PHI Learning, Second Edition, 2009.

II B.Tech. - I semester
(16BT3HS01) **ENVIRONMENTAL STUDIES**
(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	0	-	3

PREREQUISITES: Course on Engineering Chemistry

COURSE DESCRIPTION:
Multidisciplinary nature of environment; Natural resources; Ecosystems; Biodiversity; Environment pollution and control; Social issues and environment; Human population and environment; Field studies.

COURSE OUTCOMES: On successful completion of this course, students will be able to

CO1. demonstrate knowledge on nature of environment, natural resources, ecosystems, biodiversity, environmental pollution and control, social issues and human population.
CO2. analyze natural resources, ecosystems, biodiversity, en vironmental pollution and control, social issues and human population.
CO3. develop strategies for environmental pollution control and natural resource management.
CO4. solve environmental problems through proper analysis and interpretation of environmental data.
CO5. choose appropriate techniques in environmental pollution control and natural resource management.
CO6. understand the impact of social issues and population on environment.
CO7. provide solutions to individuals, industries and government for environmental sustainable development.
CO8. follow environmental protection laws for sustainable de velopment.

DETAILED SYLLABUS:

UNIT-I: MULTIDISCIPLINARY NATURE OF ENVIRONMENT AND NATURAL RESOURCES (11 periods)

Multidisciplinary Nature of Environment: Multidisciplinary nature of environment, Segments of environment - Lithosphere, Hydrosphere, Atmosphere, Biosphere; Need for public awareness.

Natural Resources: Renewable and non-renewable resources and associated problems - (a) Forest resources: Use and over exploitation, Deforestation-causes, effects and remedies, Case studies, (b) Water resources: Use and over utilization of surface and groundwater, Conflicts over water, Benefits and problems of large dams, Case studies, (c) Mineral resources: Mining, Adverse effects, Case studies, (d) Food resources: World food problems, Changes caused by agriculture and overgrazing, Effects of modern agriculture, Water logging and salinity, Case studies, (e) Energy resources: Growing needs, Renewable energy resources - Solar, Wind, Hydropower, Hydrogen fuel; Non-renewable energy resources - Coal, Natural gas, Nuclear energy, Role of an individual in conservation of natural resource and equitable use of resources for sustainable lifestyles.

UNIT-II: ECOSYSTEMS AND BIODIVERSITY (10 periods)

Ecosystems: Concept of an ecosystem, Structure and function of an ecosystem - Producers, Consumers, Decomposers; Food chains, Food webs, Ecological pyramids - Types; Characteristic features, Structure and functions of forest ecosystem, Desert ecosystem, Aquatic ecosystem, Energy flow in the ecosystem, Ecological succession.

Biodiversity: Concept and value of biodiversity, Role of biodiversity in addressing new millennium challenges, Hot spots of biodiversity, Threats to biodiversity, Man-wild life conflicts, Endemic, Endangered and extinct species of India, Conservation of biodiversity - In-situ and ex-situ.

UNIT-III: ENVIRONMETAL POLLUTION AND CONTROL (08 periods)

Causes, Adverse effects and control measures of pollution - Air pollution, Water pollution, Soil pollution, Noise pollution, Thermal pollution, Nuclear pollution; Solid waste management - Causes, Effects and control measures of urban and industrial wastes; Hazards and disaster management - Floods, Earthquakes, Tsunamis, Case studies.

UNIT-IV: SOCIAL ISSUES AND THE ENVIRONMENT (08 periods)

Sustainable development, Urban problems related to energy, Environmental ethics -Issues, Solutions; Global warming, Acid rain, Ozone layer depletion, Nuclear accidents and case studies, Wasteland reclamation, Consumerism and waste products, Concept of green technologies, Environment protection act, Air act, Water act, Wildlife protection act, Forest conservation act, Issues involved in enforcement of environmental legislation, Public environmental awareness.

UNIT-V: HUMAN POPULATION AND THE ENVIRONMENT (08 periods)

Population growth, Population characteristics and variation among nations, Population explosion, Family welfare programme, Environment and human health, Human rights, Value education, HIV/AIDS, Women and child welfare, Role of information technology in environment and human health, Case studies, Field Work/Assignment/Seminar: Environmental assets - Pond/Forest/Grassland/Hill/Mountain/Environment impact assessment procedures for local environmental issues.

Total periods: 45

TEXT BOOKS:

II B.Tech. - I Semester

(16BT3BS02) SPECIAL FUNCTIONS AND COMPLEX ANALYSIS

(Common to EEE, ECE and EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Intermediate/senior secondary Mathematics

COURSE DESCRIPTION: Beta, Gamma functions and their properties; Limits continuity and analyticity of complex functions; Integration, power series, singularities, residues; conformal mapping.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1.demonstrate knowledge in
- Beta and Gamma functions
- Expressing complex functions in power series
- Differentiation and integration of complex functions
- Conformal mappings and bilinear transformations
- Expressing complex functions in terms of graphs and power series

CO2.develop skills in analyzing the
- the properties exhibited by complex functions in Argand plane
- properties of real integrals through complex variable techniques
- the properties of improper integrals through residue theory
- conformal transformations of complex valued functions for inferences
- the properties of complex functions by expressing them in power series and graphs

CO3.develop skills in designing mathematical models involving
- Integrals of complex variable functions
- Improper integrals using beta and gamma functions
- Residue theory of complex functions
- Power series expansions of complex variable functions
- Transformations of complex variable functions
- Fluid flow patterns and flux functions.

CO4.develop analytical skills in providing solutions for problems involving
- Fluid, Electrical and Magnetic Potential functions
- Integration of complex functions
- Improper real integrals

CO5.(i) use relevant Complex variable techniques for
- Residues and integrals of complex functions.
- Improper real integrals through complex functions

(ii) techniques of Beta and Gamma functions to improper integrals

DETAILED SYLLABUS

UNIT-I: SPECIAL FUNCTIONS (09 periods)

Beta and Gamma functions - Properties - Relationship between Beta and Gamma functions- Evaluation of improper integrals using Beta and Gamma functions. Bessel function -Generating function (without proof)- Recurrence relations.

UNIT-II: ANALYTIC FUNCTIONS (09 periods)

Function of a Complex Variable - Limits and Continuity of functions, uniform continuity, Differentiability and Analyticity - Cauchy Riemann equations (both Cartesian and polar) - Conjugate and harmonic conjugate functions - Milne Thomson method-Potential functions.

UNIT-III: COMPLEX INTEGRATION AND POWER SERIES (09 periods)

Line integral - Evaluation of line integrals along curves and closed contours - Cauchy's Integral theorem - Cauchy's integral formula - Generalized integral formula- Evaluation of integrals using integral formula. Taylor's theorem (without proof) - Laurent's theorem (without proof) - Power series expansion of complex functions.

UNIT-IV: RESIDUE THEOREM (09 periods)

Zeros, Singularities - Types of singularities- poles - Residues - Evaluation of residues at simple poles and poles of order m - Residue theorem - Evaluation of integrals using residue theorem - Evaluation of improper and real integrals of the type:

i) $\int_0^{2\pi} f(\cos\theta, \sin\theta)d\theta$ ii) $\int_{-\infty}^{\infty} f(x)dx$ iii) $\int_{-\infty}^{\infty} e^{imx} f(x)dx$

UNIT-V: CONFORMAL MAPPING (09 periods)

Conformal mappings, Translation, Rotation, Inversion. Special transformations: Bilinear transformation - Properties - Fixed points - Cross ratio - Invariance of circles under bilinear transformation - Determination of bilinear transformation using three given points. **Total periods: 45**

TEXT BOOK:

1. T.K.V. Iyengar, B. Krishna Gandhi, S. Ranganatham and M.V.S.S.N. Prasad, *Text book of Engineering Mathematics*, Vol-III, S. Chand & Company, 9th edition, 2012.

REFERENCE BOOKS:

2.Shahnaz Bathul, *Special Functions and Complex Variables*, PHI Learning, 2nd edition, 2010.

II B.Tech. - I Semester
(16BT30201) **DC MACHINES**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Courses on Electric Circuits and Engineering Physics.

COURSE DESCRIPTION:
Construction, operation, types and applications of DC machines; Performance evaluation of various DC machines.

COURSE OUTCOMES: On successful completion of the course, students will be able to
CO1. demonstrate knowledge on
- construction and operation of various types of DC machines
- armature reaction and commutation
- characteristics of DC machines
- parallel operation of DC generators
- starting, braking and speed control of DC motors
- testing of DC machines

CO2.analyze the performance of DC machine for various operating conditions
CO3. design suitable accessories / controllers for desired operation of DC Machines
CO4. solve engineering problems pertaining to DC machines and provide feasible solutions
CO5. apply the conceptual knowledge of DC machines in relevance to societal needs

DETAILED SYLLABUS:

UNIT-I: DC GENERATORS (08 periods)
Principle, operation and constructional details of generator. EMF equation and methods of excitation. Losses - constant, variable and minimization of losses. Calculation of efficiency - condition for maximum efficiency.

UNIT-II: ARMATURE REACTION AND COMMUTATION (08 periods)
Armature reaction - cross magnetizing and de-magnetizing AT/pole, compensating winding. Commutation - reactance voltage, methods of improving commutation.

UNIT-III: CHARACTERISTICS OF DC GENERATORS (10 periods)
OCC of Separately excited DC generator. Build-up of EMF in a self-excited DC generator, critical field resistance and critical speed, causes for failure of self-excitation and remedial measures. Internal and external characteristics of shunt, series and compound generators - applications.

Parallel operation of DC generators - conditions for parallel operation, use of equalizer bars and cross connection of field windings, load sharing.

UNIT-IV: DC MOTORS (11 periods)
Principle of operation of DC motor, Back EMF, speed and torque equation. Characteristics and applications of shunt, series and compound motors. Speed control of DC shunt and series motor. Ward-Leonard system. Electric braking. Starters for DC Motors (2-, 3- and 4-point).

UNIT-V: TESTING OF DC MACHINES (08 periods)
Brake test, Swinburne's test, Hopkinson's test, Field's test, Retardation test, separation of stray losses test.

Total Periods: 45

TEXT BOOKS:

1. JB Gupta, *Theory and performance of Electrical Machines (DC machines, Poly phase Circuits & AC machines) in SI Units*, S.K. Kataria& Sons, New Delhi, 15th edition, 2015.
2. R.K. Rajput, *Electrical Machines in S.I. Units*, Laxmi Publications (P) Ltd, 6th edition, New Delhi, 2017.

II B.Tech. - I Semester
(16BT30202) **ELECTROMAGNETIC FIELDS**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:
Courses on Multi-Variable Calculus & Differential Equations and Engineering Physics.

COURSE DESCRIPTION: Static electric fields; Gauss's law and its applications; Potential and Potential Gradient; steady magnetic fields; Ampere's circuital law and its applications; Force in magnetic fields; behavior of various materials in electric and magnetic fields; Inductance and capacitance calculations; Maxwell's equations for time variant and time invariant fields.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on:
- static electric fields due to electric charges
- static magnetic fields due to steady currents
- time varying electric and magnetic fields

CO2. analyze Maxwell's equations for both time variant and time invariant electric and magnetic fields.

CO3. solve problems using laws of electromagnetics to provide feasible solutions in electric and magnetic circuits.

CO4. select and apply appropriate law of electromagnetics to determine electric and magnetic fields around various charge distributions and current carrying conductors.

CO5. apply various principles and laws of electromagnetics to industrial applications.

DETAILED SYLLABUS:

UNIT-I: ELECTROSTATICS - I (13 periods)
Introduction to electrostatic fields, coulomb's law in vector form, electric field intensity (EFI), EFI due to various charge distributions, electric flux density, Gauss's law, application of Gauss's law - symmetrical charge distributions, differential volume element, Maxwell's first equation in point and integral form. Energy expended in moving a point charge in an electric field, electric potential, potential for different charge distributions, potential gradient, Maxwell's second equation in point and integral form.

UNIT-II: ELECTROSTATICS - II (10 periods)
Electric Dipole, dipole moment, Potential and EFI due to an electric dipole. Current density, conduction and convection current density, Ohm's law in point form, current continuity equation, conductors and dielectric materials, properties, boundary conditions between conductor and dielectric material, two perfect dielectric materials, law of refraction, polarization, Capacitance - Capacitance of a parallel plate capacitor (with and without composite dielectric), energy density in electrostatic field.

UNIT-III: MAGNETOSTATICS (09 periods)
Introduction to Magnetic fields, relation between magnetic flux density and magnetic Field Intensity (MFI), Biot-Savart's law, MFI due to various current carrying elements, Ampere's Circuital law, Maxwell's third equation in point and integral form, applications of Ampere's Circuital law - infinite line current, infinite sheet of current, infinitely long co-axial transmission line, solenoid and toroid. Maxwell's fourth equation in point and integral form. Scalar magnetic potential and vector magnetic potential.

UNIT-IV: FORCE IN MAGNETIC FIELDS (08 periods)
Force due to magnetic fields, Lorentz force equation, force on a straight and long current carrying conductor in a magnetic field, force between two straight long and parallel current carrying conductors. Magnetic dipole and dipole moment, torque on a current loop placed in a magnetic field, magnetization, magnetic materials, magnetic boundary conditions between different magnetic materials. Self-inductance of a solenoid, toroid, co-axial cable and two wire transmission line, energy density in magnetic field.

UNIT-V: TIME VARYING FIELDS (05 periods)
Introduction to time varying fields, Faraday's laws of electromagnetic induction, statically and dynamically induced EMF, concept of displacement current, modifications of Maxwell's equations for time varying fields, Poynting theorem. **Total Periods: 45**

TEXT BOOKS:
1. William H. Hayt and John A. Buck, *Engineering Electromagnetic*, McGraw Hill Education (India) Pvt. Ltd., 8th edition, 2014.
2. Matthew N.O. Sadiku, *Principles of Electromagnetics*, Oxford University Press, New Delhi, 4th edition, 2007.

REFERENCE BOOK:

1. Joseph A. Edminister, *Theory and Problems of Electromagnetics,* Schaum's Outline Series, Tata McGraw Hill Inc., New Delhi, 2009.

II B.Tech. - I Semester

(16BT30203) SIGNALS, SYSTEMS AND NETWORKS

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:
Courses on Multi-variable calculus and Differential equations, Transformation Techniques & Partial Differential Equations and Electric circuits.

COURSE DESCRIPTION:
Signals and systems in continuous-time domain; Transformations on signals; Transient analysis of DC and AC circuits; Two Port networks; Filters.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- signals and systems
- transformation of signals in time and frequency domain
- transient behavior of various circuits
- two port network parameters
- various filters

CO2. analyze
- continuous signals and linear time invariant systems
- signals transformed in time and frequency domain
- transient response for various circuits
- network parameters for various networks
- various filter circuits

CO3. Design
- different types of filters based on frequency and impedance.
- Two-port network for the given parameters.

CO4. evaluate the response of various LTI systems & signal transformations, transient response and different parameters of two port networks & filters to provide viable solutions.

CO5. apply appropriate transformation techniques for analyzing the signals and networks in time and frequency domains.

CO6. apply the conceptual knowledge of signals, transients, filters and two port network models in relevance to industry and society.

DETAILED SYLLABUS:

UNIT-I: CONTINUOUS TIME SIGNALS AND SYSTEMS (08 periods)
Signals: Definition, test signals - Unit step, ramp, parabolic, unit impulse and exponential signals. Basic operation on signals, odd and even components, Energy and power signals.
Systems: Definition, classification, linearity, time variance, causality and stability. Response of LTI systems. Convolution of LTI systems.

UNIT-II: TRANSFORMATION OF SIGNALS (12 Periods)
Fourier transforms: Review of Fourier series, properties of Fourier series. Fourier transforms - definition, properties of Fourier transforms. Fourier transform of periodic signals, inverse Fourier transform. Applications - Circuit analysis.
Laplace transforms: Review of Laplace transform, properties of the Laplace transform, Inverse Laplace transform, theorems - initial and final value (without proof). Laplace transform of periodic signals. Applications - Circuit analysis. Comparison between Fourier and Laplace transforms.

UNIT-III: TRANSIENT ANALYSIS (10 periods)
DC Transients: Transient response of RL, RC and RLC circuits, initial conditions, solution methods using differential equation and Laplace transforms.
AC Transients: Transient response of RL, RC and RLC circuits, initial conditions, solution methods using differential equation and Laplace transforms.

UNIT-IV: TWO PORT NETWORKS (08 periods)
Network Functions - Driving point and transfer functions. Z-parameters, Y-parameters, ABCD parameters and h-parameters. Symmetry and reciprocity property in two port network. Inter-relationships of different parameters. Inter-connection of two port networks.

UNIT-V: FILTERS (07 periods)
Classification of filters, filter networks, analysis of prototype filter networks - attenuation, phase shift, characteristic impedance in pass band and stop band, constant K low pass & high pass filters, m-derived filters, band pass & band elimination filters. Design of prototype filters. **Total Periods: 45**

REFERENCE BOOKS:

1. Matthew N Sadiku, and Warsame Hassan Ali, *Signals and Systems: A Primer with MATLAB,* CRC Press, 2016.

2. A Chakrabarthi, *Network Analysis and Synthesis,* Dhanpat Rai & Co., New Delhi, 2nd revised edition, 2016.

II B.Tech. - I Semester

(16BT30441) **ANALOG ELECTRONIC CIRCUITS**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:
Courses on Electronic Devices and Circuits and Electric Circuits.

COURSE DESCRIPTION:
BJT frequency response; Feedback amplifiers and Oscillators; Power amplifiers; Wave-shaping circuits; Multivibrators.

COURSE OUTCOMES: On successful completion of this course, students will be able to

CO1. apply the knowledge in
- BJT Frequency Response
- Feedback Amplifiers
- Oscillators
- Power Amplifiers
- Wave-shaping circuits
- Multi-vibrators

CO2. analyze BJT frequency response, amplifiers, oscillators and pulse circuits.

CO3. design and develop different types of amplifiers, oscillators and pulse circuits.

CO4. solve engineering problems pertaining to analog electronic circuits to provide valid conclusions.

CO5. apply appropriate techniques to obtain optimum solution in the field of analog electronic circuits.

CO6. provide real time solutions for societal needs in the area of analog electronic circuits.

DETAILED SYLLABUS:

UNIT-I: BJT FREQUENCY RESPONSE (10 periods)
Review of BJT simplified hybrid model, analysis of CE amplifier with emitter resistance, emitter follower, Different coupled Schemes -RC coupled amplifier, transformer coupled amplifier, Direct coupled amplifier. Frequency response of BJT amplifier, analysis at low and high frequencies, effect of coupling and bypass capacitors, The hybrid-pi common-emitter transistor model, CE short circuit current gain, current gain with resistive load, gain-bandwidth product.

UNIT-II: FEEDBACK AMPLIFIERS AND OSCILLATORS (09 periods)
The feedback concept, The transfer gain with feedback, feedback amplifier topologies, general characteristics of negative
feedback amplifiers, effect of feedback on input resistance and output resistance-voltage series, voltage shunt, current series and current shunt feedback configuration.

Oscillators: Conditions for oscillations, Hartley, Colpitts, RC phase shift oscillator using FET and Wein bridge oscillators using Transistor, crystal oscillator.

UNIT-III: LARGE SIGNAL AMPLIFIERS (09 periods)
Class A amplifiers- series-fed, transformer coupled, efficiency. Second harmonic distortion, higher-order harmonic generation.Class B amplifier, Push pull amplifiers- class B push-pull and class B complementary symmetry push-pull amplifier, efficiency, Phase inverters,Distortion in power Amplifier.

UNIT-IV: WAVE SHAPING CIRCUITS (08 periods)
High pass, low pass RC circuits, their response for sinusoidal, step, pulse, square and ramp inputs. Diode clippers, clipping at two independent levels, clamping operation, clamping circuits taking source and diode resistances into account, practical clamping circuit.

UNIT-V: MULTIVIBRATORS (09 periods)
Bistablemultivibrator- Stable states of a bistablemultivibrator, fixed bias transistor bistablemultivibrator, unsymmetrical triggering, symmetrical triggering. MonostableMultivibrator- collector coupled monostable multivibrator, triggering of the monostablemultivibrator. Astablemultivibrator- Astable collector coupled multivibrator, Schmitt trigger.

Total Periods: 45

TEXT BOOKS:
1. Jacob Milliman, Christors C Halkias, *Integrated Electronics*, Tata McGraw-Hill, 1991.
2. J.Millman and H.Taub, Pulse, *Digital and Switching Wave forms*, McGraw-Hill, 2000.

REFERENCE BOOKS:
1. S.Salivahana, N.Suresh Kumar, *Electronic Devices and Circuits*, Tata McGraw-Hill, 3rd edition, 2012.
2. A. Anand Kumar, *Pulse and Digital Circuits*, Prentice Hall India, 2nd edition, 2008.

II B.Tech. - I Semester
(16BT30231) **DC MACHINES LAB**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES:
Courses on Electric Circuits and Electric Circuits Lab

COURSE DESCRIPTION:
Construction, operation, types and applications of DC machines; Performance evaluation of various DC machines.

COURSEOUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- construction and working of various types of DC ma-chines.
- starting, braking and speed control of DC motors.
- testing of DC machines.
- parallel operation of DC generators.
- characteristics of DC machines.

CO2. analyze the performance of DC machines for various operating conditions.

CO3. design the circuit with suitable accessories / controllers for desired operating conditions of DC machines.

CO4. interpret and synthesize the data obtained from experi mentation on DC machines and provide valid conclusions.

CO5. select and apply appropriate technique for testing and control of DC machines used in industry.

CO6. apply the conceptual knowledge of DC machines in relevance to industry and society.

CO7. commit to ethical principles and standards while exercising the practical investigations on DC machines.

CO8. work individually or in a group while exercising practical investigations in the field of DC machines.

CO9. communicate effectively in verbal and written form in relevance to DC machines.

DETAILED SYLLABUS:

PART-A:

1. Construction of DC machine and DC motor starters.
2. Armature windings - lap and wave, simplex and multiplex, single layer and multi-layer, equalizer rings and dummy coils.

PART-B: Any EIGHT experiments are to be conducted from the following

1. Magnetization characteristic of DC shunt generator.
2. Load test on DC shunt generator.
3. Load test on DC series generator.
4. Load test on DC compound generator (cumulative and differential connections).
5. Parallel operation of DC generator
6. Speed control of DC shunt motor.
7. Brake test on DC compound motor.
8. Brake test on DC shunt motor.
9. Brake test on DC series motor.
10. Swinburne's test.
11. Hopkinson's test.
12. Field's test.
13. Separation of losses in DC shunt machine.
14. Electric braking of DC motor

II B.Tech. - I Semester

16BT30232: **SIGNALS AND NETWORKS LAB**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES:
Courses on Multi-variable calculus & Differential equations, Transformation Techniques & Partial Differential Equations, Electric circuits and Electric Circuits Lab.

COURSE DESCRIPTION:
Experimentation on Signals and systems; Transient analysis; Twoport network parameters and passive filters.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on signals, transients, two port networks & filters and their experimental implementation.
CO2. analyze and relate the experimental observations & mea surements for validation.
CO3. design a suitable experimental/simulation procedure for practical investigations on signals, systems and net works.
CO4. demonstrate skills in evaluating various parameters and interpret the observations to provide feasible solutions.
CO5. select appropriate technique for experimental investigations, analysis and interpretation of signals and net works.
CO6. apply the conceptual knowledge of signals, transients, filters and twoport network models in relevance to industry and society.
CO7. commit to ethical principles and standards while exercising the practical investigations on signals and net works.
CO8. work individually or in a group in the field of signals and networks.
CO9. communicate effectively in verbal and written form in signals and networks domain.

LIST OF EXPERIMENTS:

Conduct any **TEN** experiments using appropriate Software Tools / Hardware

1. Generation of continuous time signals.
2. Basic operations on the signals.
3. Systems and their properties.
4. Convolution of signals.
5. Transformation of signals into time and frequency do mains.
6. Transient response of RL circuit and applications.
7. Transient response of RC circuit and applications.
8. Transient response of RLC circuit and applications.
9. Determination of Open circuit and Short circuit parameters in isolated and interconnected networks.
10. Determination of ABCD and Hybrid parameters in isolated and interconnected networks.
11. Design, analysis and application of Low pass and High pass filters.
12. Design, analysis and application of Band Pass and Band stop filters.

II B.Tech. - I Semester
(16BT30451) ANALOG ELECTRONIC CIRCUITS LAB

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES:
Courses on Electronic Devices and Circuits andAnalog Electronic Circuits.

COURSE DESCRIPTION:
Diode characteristics; Rectifiers; BJT and FET characteristics; UJT and SCR characteristics; BJT Amplifiers; Non-linear AND Linear Wave shaping circuits; Feed Back Amplifiers; Design of Multi-vibrator circuits; Power Amplifiers.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. apply the knowledge in
- Diodes-PN Junction Diodes, Zener Diodes, SCR
- Transistors-BJT,FET,UJT
- Feedback amplifiers and oscillators
- Clipping and Clamping Circuits
- RC High Pass and Low Pass Circuits
- Multi-vibrators

CO2. analyze different types amplifier, oscillator and pulse cir cuits.
CO3. design different types of Electronic circuits like feedback amplifiers, Oscillators, Multi-vibrators, Schmitt Trigger.
CO4. provide solutions through the design and conduct of experiments, analysis and synthesis.
CO5. apply biasing technique for design of amplifiers.
CO6. function effectively as an individual and as a member in a group in the area of analog electronic circuits.
CO7. communicate effectively in oral and written form in the area of analog electronic circuits.

LIST OF EXERCISES: (Minimum of **ten experiments** to be conducted)

PART - A
ELECTRONIC DEVICES AND CIRCUITS (Minimum five experiments to be conducted)

1. PN Junction and Zener diodes characteristics.
2. Ripple Factor and Load Regulations of Rectifier with and without filters of Half wave Rectifiers.
3. Ripple Factor and Load Regulations of Rectifier with and without filters of Full wave Rectifiers.
4. Input and Output characteristics of Transistor in CE configuration.
5. Drain and Transfer Characteristics of JFET.
6. Gain and Frequency response of CE Amplifier.
7. UJT characteristics.
8. SCR characteristics.

PART B
ANALOG ELECTRONIC CIRCUITS (Minimum **five experiments** to be conducted)

1. Voltage series Feedback Amplifier
2. Current shunt Feedback Amplifier
3. Class A Power Amplifier (with transformer load).
4. Hartley and Colpitt's Oscillators.
5. Linear wave shaping- RC High Pass and Low Pass.
6. Non Linear wave shaping - Clippers and Clampers.
7. Astable Multivibrator
8. Schmitt Trigger

II B.Tech. - II Semester
(16BT40201) **ELECTRICAL MEASUREMENTS**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Courses on Transformation Techniques &Partial Differential Equations and Signal, Systems & Networks.

COURSE DESCRIPTION:
Measurement of electrical quantities; construction, working, design and applications of various electrical measuring instruments; Performance evaluation of various electrical measuring instruments.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- construction, working and testing of various measuring instruments
- various errors and compensation
- measurement of various electrical parameters and quantities

CO2. analyze
- errors and compensations in instruments
- instrument performance
- measuring circuits

CO3. design appropriate arrangement for extension of range in measuring instruments.

CO4. estimate various electrical quantities using suitable instruments and techniques to provide viable solutions.

CO5. select& use appropriate technique and instrument for the measurement of electrical quantities in domestic and industrial applications.

CO6. apply the conceptual knowledge of electrical measuring instruments and testing in relevance to industry and society.

DETAILED SYLLABUS:

UNIT-I: MEASUREMENT OF VOLTAGE AND CURRENT (12 periods)
Measurement and methods of measurements.Static characteristics, limiting and relative limiting errors, combination of quantities with limiting errors, types of errors. Classification of analog instruments, essential operating forces and systems; PMMC and MI instruments - construction, working, torque equation, extensions, errors, compensations and advantages & disadvantages.

UNIT-II: MEASUREMENT OF POWER AND ENERGY (09 periods)
Measurement of power: Power measurements in DC and AC circuits. EDM wattmeter - construction, working, torque equation, shape of scale, errors & compensations and LPF wattmeter.Measurement of three phase active and reactive power for balanced and unbalanced loads.
Measurement of energy: Single phase induction type energy meter - construction, working, driving and braking torques, lag adjustment devices, errors & compensations. Three phase energy meter.

UNIT-III: INSTRUMENT TRANSFORMERS AND POWER FACTOR METERS (07 periods)
Current and Potential transformers - construction, working, phasor diagram, errors, characteristics. Measurement of power using instrument transformers, Testing of current transformer by Silsbee's method. Power Factor meters - single phase and three phase electrodynamometer type.

UNIT-IV: DC AND AC BRIDGES (06 periods)
Measurement of resistance - Wheatstone bridge, Kelvin's double bridge and loss of charge method.
Measurement of inductance & quality factor - Maxwell's inductance bridge, Hay's bridge, Anderson's bridge and Owens's bridge.
M**easurement of capacitance & loss angle** - De-sauty's bridge, Schering bridge and modified Schering bridge.
Measurement of frequency - Wien's bridge.

UNIT-V: POTENTIOMETERS, DIGITAL METERS AND CRO (11 periods)
DC Potentiometers: Basic slide wire potentiometer circuit, DC Crompton's potentiometer - principle, operation, standardization and applications.
AC Potentiometers: Principle & operation of polar and coordinate type potentiometers, standardization and applications.
Digital meters and CRO: Digital voltmeters and types(ramp, integrating, successive approximation), Digital Energy meter.
Cathode ray oscilloscope: Introduction, cathode ray tube, time base generator, horizontal and vertical amplifiers, measurement of phase & frequency and lissajous patterns. **Total Periods: 45**

TEXT BOOKS:

1. A.K. Sawhney, A course on *Electrical and Electronics Measurements & Instrumentation*, DhanpatRai and Co. Publishers, 19th edition, 2015.
2. J.B. Gupta, A course on *Electrical and Electronics Measurements & Instrumentation*, S.K. Kataria publishers, 14th edition, 2014.

REFERENCE BOOKS:

1. U.A. Bakshi, A. V. Bakshi, *Electrical measurements and Instrumentation*, Technical publications, 1st edition, 2009.

2. E. W. Golding & F.C. Widdis, *Electrical Measurements and Measuring Instruments*, Wheeler Publishers, 5th edition, 1997.
3. H S Kalsi, *Electronic Instrumentation*, Tata McGraw-Hill, 3rd edition, 2010.

II B.Tech - II Semester

(16BT40202) GENERATION OF ELECTRIC POWER

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:
Courses on EngineeringPhysics, EngineeringChemistry, Electronic Devices and Circuits.

COURSE DESCRIPTION:
Generation of electric power using hydro, thermal, nuclear, gas and renewable energy sources;Cogeneration;Economic aspects of power generation and power factor improvement.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- layout of various power plants and their operation.
- different types of turbines and their applications in power generating stations.
- non-conventional energy sources.
- aspects of cogeneration.
- economic aspects of power generation.
- power factor improvement methods.

CO2. analyze
- load factor, loss factor and their relations.
- power factor improvement methods and economic as pects of power generation.

CO3. design capacitors for most economic power factor.
CO4. evaluate various parameters and economic aspects of power generation to provide aviablesolution.
CO5. select feasible geographical sites for erecting different power plants.
CO6. apply the conceptual knowledge of electric power generation through conventional and non-conventional sources to substantiate the societal needs.
CO7. realizeconstraints and impacts of conventional & non-conventional power generation technology on environment and society.
CO8. adhere environmental regulations for eco-friendly operation of power plants.

DETAILED SYLLABUS:

UNIT-I: HYDRO POWER STATIONS AND STEAM POWER STATIONS (09 periods)
Hierarchy of power system.Environmental regulations on power plants.
Hydro power plant: Selection of site for hydroelectric power station, layout and classification of hydroelectric power station, concept of pumped storage plants, available hydro power and mass curve.
Steam power plant: Layout of steam power plant -fuel handling, combustion equipment for steam boilers, fluidized bed combustion, ash handling, dust collectors, boilers, condenser, chimney and cooling towers.
Turbines: Classification, description and working principle of various turbines- impulse and reaction turbines, comparison between impulse and reaction turbine, Pelton wheel, Francis turbine and Kaplan turbine.

UNIT-II:NUCLEAR AND PEAK LOAD POWER PLANTS (09 periods)
Nuclear power stations: Nuclear fission, chain reaction, site selection, layout of nuclear power station, nuclear reactors-classification, components, PWR, BWR and breeder reactor.
Peak load plants:
Diesel engine power plant: Introduction, applications, site selection, classification of internal combustion engines,essential components and operationof dieselpowerplant.**Gas turbine power plant:**Gas turbines, site selection, simple gas turbine plant, energy cycle, layout and essential components of gas turbine power plant.

UNIT-III:RENEWABLE ENERGY RESOURCES (08 periods)
Introduction to micro grid, applications of renewable sources as distributed generation.Siteselection - solar and wind. **Solar power** - performance of PV cell by single diode model, PV module, terminology and applications. **Wind Power**-Wind power extracted by turbine, horizontal and vertical axis windmills. **Fuel cells**-working, Performance characteristics, types-Phosphoric and alkaline fuel cells only. **Biogas**-Biogas generation from Biomass.Impacts of renewable energy generation on environment.

UNIT-IV:ECONOMIC ASPECTS OF POWER GENERATION AND TARIFF (09 periods)
Introduction, terms and definitions - connected load, maximum demand, load factor, demandfactor, diversityfactor, plant capacityfactor, utilization factor, Plant use factor, loss factor, coincidence factor and contribution factor. Relation between loss factor and load factor. Cost analysis - initial cost, interest and methods of depreciation. Tariffs -simple, flat rate, block rate, maximum demand, two-part, three-part and power factor tariffs.

UNIT-V:COGENERATION AND POWER FACTOR CORRECTION (10 periods)
Cogeneration- Electricity generating systems, Economic benefits, Environmental benefits. Operation modes of cogeneration systems, Factors to consider, project risks, cogeneration usage in different places, Practical aspects of installing a cogeneration plant.
Power factor correction: Causes of low power factor, methods of improving power factor -power capacitors, series and shunt capacitors for power factor correction. Most economical power factor.

II B.Tech. - II Semester
(16BT40203) **TRANSFORMERS AND INDUCTION MACHINES**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Course on DC Machines, Electromagnetic Fields.

COURSE DESCRIPTION:
Constructional details, principle of operation, equivalent circuit, testing, performance and applications of transformers and three phase induction motors.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- construction, operation of various types of transformers and induction machines.
- characteristics of transformers and induction machines.
- parallel operation of transformers.
- starting, braking and speed control of induction machines.
- testing of transformers and induction machines.

CO2. analyze the operation and performance of transformers and induction machines for various operating conditions.
CO3. design suitable accessories / controllers for machines to meet the desired specifications.
CO4. solve engineering problems pertaining for transformers and induction machines to provide viable solutions.
CO5. select appropriate techniques and tools for desired operation of transformers and induction machines in domestic, agriculture and industrial applications.
CO6. apply the conceptual knowledge of Transformers and Induction Machines in relevance to industry and society.

DETAILED SYLLABUS:

UNIT-I: SINGLE PHASE TRANSFORMERS (10 periods)
Single phase transformers - working principle, constructional details, types, ideal transformer, EMF equation, operation on no-load and on-load, phasor diagrams, losses, equivalent circuit, OC and SC tests, separation of losses test, efficiency and regulation. Effects of variation of frequency and supply voltage on iron losses.

UNIT-II: TRANSFORMER TESTING AND AUTOTRANSFORMER (08 periods)
Polarity test, Sumpner's test, all day efficiency.Parallel operation with equal and unequal voltage ratios. Auto transformers - equivalent circuit, comparison with two winding transformers.

UNIT-III: THREE PHASE TRANSFORMERS (08 periods)
Introduction to three-phase transformers. Three-phase transformer connections Scott connections. Three winding transformers -tertiary windings, determination of Z_p, Z_s and Z_t. OFF-load and ON-load tap changing.

UNIT-IV: THREE PHASE INDUCTION MOTORS (09 periods)
Three phase induction motors -construction details of cage and wound rotor machines, production of rotating magnetic field, principle of operation, rotor EMF and rotor frequency, rotor reactance, rotor current and power factor at standstill and during operation, torque equation - expressions for maximum torque and starting torque, torque-slip characteristics, rotor power input, rotor copper loss and mechanical power developed and their inter relation. Double-cage and deep bar rotors. Equivalent circuit and phasor diagram.

UNIT-V: CIRCLE DIAGRAM, STARTING AND SPEED CONTROL METHODS (10 periods)
No-load and blocked rotor tests, stator resistance test, circle diagram, predetermination of performance. Methods of starting - starting current and torque calculations. Crawling and cogging. Speed control - change of frequency, change of poles, cascade connection, injection of emf into rotor circuit (qualitative treatment only). Induction generator - principle of operation.

Total Periods: 45

II B.Tech - II Semester
(16BT41002) **LINEAR AND DIGITAL ICs**
(Common to EEE and EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Courses on Electronic Devices and Circuits& Analog Electronic Circuits.

COURSE DESCRIPTION:
Differential Amplifier; Characteristics of Operational Amplifiers; Linear & Non-Linear Applications of Op-Amp; IC 555 timer and phase locked loops; Application of PLL; A-D & D-A Converters; CMOS and Bipolar Logic Interfacing; HDL with combinational and sequential logic design.

COURSE OUTCOMES: On successful completion of the course,students will be able to

CO1. demonstrate knowledge in
- Op-amp operation and applications.
- Timer & PLL circuits.
- A-D & D-A Converters
- CMOS and Bipolar logic Interfacing.
- HDL design and programming.

CO2. analyze
- Op-amp based circuits.
- Timers for various circuits.
- Different logic families.

CO3. design
- Circuits using Op-amps.
- Logic gates using CMOS.
- Combinational and sequential circuits.

CO4. solve problems in
- Evaluating parameters of Op-amp based circuits.
- Programming of various combinational and sequential logic design.

CO5. apply appropriate modeling technique to suit IC Design.

CO6. understand the impact of design and use of Linear and Digital ICs on the development of efficient and cost effective products.

DETAILED SYLLABUS:

UNIT-I: OPERATIONAL AMPLIFIER (11 periods)
Op-amp internal circuit - Differential Amplifier, Transfer Characteristics, Level Translator, Output stage; Basic information of Op-Amp, Ideal & Practical operational Amplifier-Inverting, non-Inverting & Differential Amplifier, Voltage follower, DC Characteristics- Input Bias Current, Input Offset Current, Input Offset Voltage, Total Output Offset Voltage, CMRR, PSRR, Thermal Drift. AC Characteristics-Frequency Response, Frequency Compensation, Slew Rate, Features and characteristics of 741 op-Amp.

UNIT-II: LINEAR & NON LINEAR APPLICATIONS, FILTERS (10 Periods)
Linear Applications - Integrator and differentiator, Instrumentation amplifier, AC amplifier, Non - Linear Applications - Comparators & its applications, Multivibrators: monostable and astable, RC phase shift oscillator, Log and Antilog amplifiers.
Filters: First - order LPF, HPF, Butterworth Filters, Second order LPF, HPF.

UNIT-III: IC 555 TIMER, PLL & CONVERTERS (08 Periods)
Introduction to 555 timer, functional diagram, monostable and astable operations and applications. PLL - Introduction, block schematic, principles and description of individual blocks, Voltage Controlled Oscillator (IC 566).
D-A Converters: R-2R ladder & Inverted R-2R ladder, A-D converters: Sample and hold circuit, Flash type, Successive Approximation type and Dual slope ADC.

UNIT-IV: CMOS LOGIC & HDL Programming (08 Periods)
CMOS logic, CMOS steady state electrical behavior, CMOS dynamic electrical behavior. Introduction to Verilog: HDL based design flow, program structure, language elements, operators, User defined primitives, data flow modeling, behavioral modeling, structural modeling.

UNIT-V: MODELING & DESIGN OF DIGITAL CIRCUITS USING VERILOG (08 Periods)
Introduction to 74x283 adder, 74x151 multiplexer, 74x541, 74x245 three state devices, 74x138 decoder, 74x148 encoder, Flip-flops- SR & JK, 74x163 Counter. Design and programming of Digital IC applications using the above components. **Total Periods: 45**

TEXTBOOKS:
1. D. Roy Chowdhury, *Linear Integrated Circuits*, New Age International Pvt. Ltd., 4th edition, 2010.
2.John F. Wakerly, Digital Design Principles & Practices, Pearson Education, 4th edition, 2009.

REFERENCE BOOKS:

1.Ramakanth A. Gayakwad, Op-Amps & Linear ICs, PHI, 3rd edition, 1987.
2. J. Bhasker, *VERILOG Primer,* BS Publications, 2nd edition, 2001.
3.Stephen Brown, ZvonkoVranesic, *Fundamentals of Digital Logic* with VERILOG Design, TMH, 2nd edition, 2007.
4. T.R. Padmanabhan, B. Bala Tripura Sundari, *Design through Verilog HDL*, Wiley India, 2004.

II B.Tech - II Semester

(16BT30403) SWITCHING THEORY AND LOGIC DESIGN

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:--

COURSE DESCRIPTION:

Number system and Boolean algebra; Minimization; Analysis and synthesis of digital circuits; Asynchronous Sequential Logic & Programmable Memories.

COURSE OUTCOMES: On successful completion of the course, students willbe able to

CO1. demonstrate the knowledge in

- Conversion of number systems, Binary Codes.
- Basic theorems, properties and postulates of Boolean algebra.
- Minimization of switching functions using Map method and Tabular method.
- Combinational and sequential circuits.
- Realization of Boolean functions using PLDs.

CO2. analyse combinational and sequential circuits.

CO3. design and develop various combinational, sequential circuits and PLDs.

CO4. solve problems and arrive at solutions pertaining to Digital Electronics.

CO5. apply minimization techniques to asynchronous and syn chronous designs and suggest appropriate design for engineering solutions.

CO6. apply appropriate logic functions to obtain optimized designs useful for the society.

DETAILED SYLLABUS:

UNIT-I:NUMBER SYSTEM & BOOLEAN ALGEBRA (10 periods)

Introduction, Binary Numbers, Number base conversions, Complements of numbers, Signed binary numbers, Binary codes, Error detection and correction codes. Boolean Algebra-Basic definition, Basic theorems and properties, Boolean Functions, Canonical & Standard forms, logic operations & Logic gates.

UNIT-II: GATE LEVEL MINIMIZATION (08 periods)

Introduction, the map method, four variable, Five variable K-map, POS & SOP Simplification, Don't care conditions, NAND & NOR Implementation, Other two level Implementation, Ex-or Function, Quine-McCluskey Technique-simplification of Boolean function using tabulation Method.

UNIT-III: ANALYSIS AND SYNTHESIS OF COMBINATIONAL CIRCUITS (10 periods)

Combinational circuits, Analysis & Design procedure, Binary Adder-subtractor, Decimal Adder, Binary Multiplier, Magnitude comparator, Decoder, Encoders, Multiplexers,Demultiplexers-1-Line to 4-Line and 1-Line to 8-LineDemultiplexers.

UNIT-IV: ANALYSIS AND SYNTHESIS OF SEQUENTIAL CIRCUITS (10 periods)

Sequential Circuits, Latches, Flip-Flops, Analysis of Clocked sequential circuits, State Reduction & Assignment, Design procedure, Registers-Shift Registers, Counters- Synchronous counters and Asynchronous counters.

UNIT-V: ASYNCHRONOUS SEQUENTIAL LOGIC& PROGRAMMABLE MEMORIES (07 periods)

Introduction, Analysis procedure, Design Procedure, Reduction of State and flow tables, Hazards,Programmable Memories-ROM,PLA, PAL. **Total Periods: 45**

TEXT BOOK:

1. M. Morris Mano, *Digital Design*, Pearson education, 5th edition, 2013.

REFERENCE BOOKS:

1. Anand Kumar, *Switching Theory and Logic Design*, PHI, 2008.
2. ZviKohavi and NirahK.Jha, *Switching theory and Finite Automata Theory*, Tata McGraw-Hill, 2nd edition, 1978.

3. Charles H. Roth, *Fundamentals of Logic Design*, Thomson Publications, 5th edition, 2004.

II B.Tech - II Semester

(16BT41041) COMPUTER ARCHITECTURE AND ORGANIZATION

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: --

COURSE DESCRIPTION:
Basic structure of computers; computer arithmetic operations; register transfer and organization; 8085 architecture, programming and interfacing of 8085 microprocessor; Concepts of micro programmed control, pipelining and memory system.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- Internal organization of a computer.
- Various memories and hierarchy in a computer.
- Architecture, instruction set and addressing modes of 8085 microprocessor.

CO2. analyze the performance of a computer.

CO3. design microprocessor based systems for real time applications.

CO4. solve engineering problems and arrive at solutions by developing embedded products.

CO5. choose appropriate hardware, algorithm and program using suitable IDE.

CO6. practice professional engineering to deliver efficient and cost effective embedded based products for society.

DETAILED SYLLABUS:

UNIT-I: STRUCTURE OF COMPUTERS AND MEMORY SYSTEMS (07 periods)

Structure of Computers: Computer Types, Functional Units, Basic Operational concepts, Bus Structures, Software and Performance.

Memory System: Internal organization of memory chips - SRAM, DRAM, ROM, Flash memory and cache memory, Memory hierarchy - speed, size and cost. Auxiliary memory - Magnetic disk and tape.

UNIT-II: 8085 ARCHITECTURE (11 periods)

Microprocessor evolution and types, introduction to 8085 architecture, Pin description, Register Organization, Timing Diagram, Instruction Set: Data transfer, arithmetic and logic, branch control, I/O and machine control instructions.

UNIT-III: 8085 PROGRAMMING & INTERFACING (09 Periods)

Addressing modes, Interrupts of 8085, Simple programs, Interfacing - Memory, I/O devices - memory mapped I/O and I/O mapped I/O.

UNIT-IV: REGISTER TRANSFER AND MICROOPERATIONS (10 periods)

Register Transfer, Bus and memory transfers, Arithmetic microoperations, 4-bit arithmetic circuit, Logical microoperations, Shift Microoperations, Arithmetic logic shift unit, Computer registers, Computer Instructions, RISC Vs CISC processors, Timing and control and Instruction cycle.

UNIT-V: COMPUTER ARITHMETIC, MICROPROGRAMMED CONTROL ANDPIPELINING (08 periods)

Computer Arithmetic: Addition and Subtraction, Multiplication and Division Algorithms.

Microprogrammed Control: Control memory, address sequencing, design of control unit.

Pipelining: Basic concepts, Data Hazards, Instruction Hazards, Out of order execution.

Total Periods: 45

TEXT BOOKS:
1. M. Moris Mano, *Computer System Architecture*, Pearson/ PHI, 3rd edition, 2008.
2. Ramesh S Gaonkar, *Microprocessor - Architecture, Programming and Applications with the 8085*, Penram International Publishing Private Limited, 5th edition, 2007.

REFERENCE BOOKS:
1. Carl Hamacher, ZvonksVranesic, SafeaZaky, *Computer Orga*

nization, Mc Graw Hill, 5^{th} edition, 2002.
2. William Stallings, *Computer Organization and Architecture,* Pearson/PHI, 6^{th} edition, 2003.

II B.Tech. - II Semester
(16BT40231)**ELECTRICAL MEASUREMENTS LAB**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES:
Courses on Signal, Systems and Networks,Electric Circuits Lab and DC Machines Lab.

COURSE DESCRIPTION:
Measurement of electrical quantities; Testing of single phase energy meter and current transformer.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- measurement of electrical quantities
- measuring instruments and their testing

CO2. analyze various electrical quantities, parameters and measuring instruments.
CO3. design the circuit with suitable accessories for desired measurement and testing.
CO4. interpret and synthesize the data obtained from experimentation on measurement of electrical quantities to provide valid conclusions.
CO5. select and use various measuring instruments in domestic and industrial applications.
CO6. apply the conceptual knowledge of instruments, measurement and testing techniques in relevance to industry and society.
CO7. commit to ethical principles and standards while exercising the practical investigations on measurement and testing techniques.
CO8. work individually or in a group in the field of electrical measurements and instrument testing.
CO9. communicate effectively in verbal and written form in relevance to electrical measurements and instrument testing.

DETAILED SYLLABUS: Conduct any **TEN** experiments from the following

1. Measurement of parameters of a choke coil using three volt meter and three ammeter methods.
2. Design of ammeter and voltmeter using shunt and multiplier.
3. Measurement of three phase active and reactive power.
4. Measurement of three phase power using one wattmeter with two no. of C.Ts
5. Calibration of LPF wattmeter by phantom loading
6. Calibration and testing of single phase energy meter
7. Calibration of dynamometer power factor meter
8. Kelvin's double Bridge and Wheatstone's bridge
9. Schering bridge& Anderson bridge.
10. Crompton D.C. Potentiometer - Calibration of PMMC ammeter and PMMC voltmeter
11. C.T testing by Silsbee's method.
12. Dielectric oil testing using HT testing kit
13. Measurement of earth and insulation resistance.
14. AC potentiometer - Calibration of AC voltmeter, parameters of choke.
15. Measurement of phase and frequency using CRO

II B.Tech. - II Semester
(16BT40232)**TRANSFORMERS AND INDUCTION MACHINES LAB**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: Course on DC Machines Lab

COURSE DESCRIPTION:
Construction, types, operation and applications of transformers and induction machines; Performance evaluation of transformers and induction machines.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- construction, operation of various types of transformers and induction machines.
- starting and speed control of induction machines.
- testing of transformers and induction machines.
- parallel operation of transformers.
- characteristics of transformers and induction machines.

CO2. analyze the performance of transformers and induction motors for various operating conditions.

CO3. design the circuit with suitable accessories / controllers for desired operation of Transformers and Induction motors.

CO4. interpret and synthesize the data obtained from experimentation on transformers & induction machines and provide valid conclusions.

CO5. select and apply appropriate technique for testing and control of transformers & induction machines used in domestic and industrial applications.

CO6. apply the conceptual knowledge of Transformers and Induction motors in relevance to industry and society.

CO7. commit to ethical principles and standards while exercising the practical investigations on Transformers and Induction motors.

CO8. work individually or in a group while exercising practical investigations in the field of Transformers and Induction motors.

CO9. communicate effectively in verbal and written form in relevance to Transformers and Induction motors.

DETAILED SYLLABUS:
PART-A:

1. Construction of transformers
2. Construction of three phase induction motors.

PART-B: Any **EIGHT** experiments are to be conducted from the following

1. OC and SC tests on single phase transformer.
2. Separation of core losses of a single phase transformer.
3. Load test on single phase transformer.
4. Sumpner's test on a pair of single phase transformers.
5. Conversion of single phase transformer into autotransformer.
6. Parallel operation of single phase transformers.
7. Scott connection of transformers.
8. Heat run test on a bank of single phase delta connected transformers.
9. Brake test on three phase induction motor.
10. Separation of no-load losses of three phase induction motor.
11. No-load and blocked rotor tests on three phase inductionmotor.
12. Speed control of induction motor.

II B.Tech.- II Semester
(16BT41033)**LINEAR AND DIGITAL ICs LAB**
(Common to EEE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: A course on Linear and Digital ICs.

COURSE DESCRIPTION:
Op-Amp characteristics; Applications of Op-Amp; 555 timer; PLL; Digital logic families and interfacing; Digital IC Applications; Programming of digital IC's in HDL.

COURSE OUTCOMES: On successful completion of the course, students will be able to:

CO1. demonstrate knowledge on analog and digital circuits.
CO2. apply analytical skills to determine the op-amp parameters.
CO3. design of analog and digital circuits for Linear & Nonlinear applications.
CO4. provide valid conclusions through analysis and synthesis of analog and digital circuits.
CO5. apply appropriate simulation tools for programming of analog and digital circuits.
CO6. work individually and also in a group to develop applications using linear and digital ICs.
CO7. communicate effectively with engineering community to design analog circuits.

LIST OF EXPERIMENTS: (Minimum of **Ten** experiments to be conducted)

PART: A (Minimum of **Three** experiments to be done using any simulation software)

1. Design and Simulate an Active filter (LPF / HPF) for given cut off frequency.
2. Design and Simulate D-A converter (R-2R ladder) with required voltage levels.
3. Design and Simulate an Instrumentation Amplifier with required gain.
4. Design and Simulate Op-Amp applications - (integrator / Differentiator) for given cut off frequency.
5. Design and Simulate applications of 555 timer (Monostable / AstableMultivibrator) with given duty cycle and frequency.

PART - B: Linear IC's (Minimum of **Four** experiments to be done using hardware)

1. Design and Verify
   - Op-Amp based comparator with Given reference voltage.
   - Op-Amp based Schmitt Trigger with given Duty cycle and frequency.
2. Design and Verify the Applications of Op-Amp- (integrator / Differentiator) for given cut off frequency.
3. Design and Verify the Applications of 555 timer (Monostable/ AstableMultivibrator) with given Duty cycle and frequency.
4. Design and Verify and R-2R Ladder DAC circuit using op- amp-741.
5. Design and Verification of active filter (LPF / HPF) for given cut off frequency.
6. Design and Verify an Instrumentation Amplifier with required Gain.

PART: C (Minimum of **Three** experiments to be done using Verilog HDL)

1. Simulate the Model of Adder and Subtractor with different flow (Structural, Data and behavioral).
2. Simulate the Model of 3x8 using 2x4 Decoder & 8x3 using 4x2 Encoder.
3. Simulate the Model of 8x1 using 4x1 using 2x1 Multiplexer.
4. Simulate the Model of J-K, T, D Flip-flops using Logic gates.
5. Simulate the Model of 4-Bit Universal shift register.
6. Simulate the Model of Mod-8 Counter.

III B.Tech. - I Semester

(16BT3HS02) **MANAGERIAL ECONOMICS AND PRINCIPLES OF ACCOUNTANCY**

(Common to CE, EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:--

COURSE DESCRIPTION:

Managerial Economics; Demand and Elasticity of Demand; Production Functions; Markets and Pricing Policies; Basic concepts of Accounting (Journal, Ledger and Trial balance); Trading Account, Profit and Loss Account and Balance sheet with simple adjustments; Computerized Accounting.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate Knowledge in
- Tools and concepts of Micro Economics
- Basic Principles and concepts of Accountancy
- Financial Accounting
- Significance of Economics and Accountancy

CO2. apply skills in managerial decision making of an organization.
CO3. apply the economic theories i.e., Demand, Production, Cost, Markets and Price
CO4. demonstrate effective communication in Business and Accounting transactions
CO5. ascertain the profitability and soundness of an organization
CO6. practice financial accounting

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO MANAGERIAL ECONOMICS, DEMAND ANALYSIS (09 periods)

Definition, Nature and Scope of Managerial Economics.Demand: Determinants of demand – Demand function - Law of demand, assumptions and exceptions - Elasticity of demand - Types of elasticity of demand - Demand forecasting and methods of demand forecasting.

UNIT-II: THEORY OF PRODUCTION AND COST ANALYSIS (09 periods)

Production Function: Isoquants and Isocosts - Input-output relationship - Law of returns. Cost Concepts: Total, Average and Marginal Cost - Fixed Vs Variable costs - Opportunity Costs Vs Outlay Costs - Separable Costs Vs Joint Costs, Urgent Costs VsPostponable Costs- Avoidable Costs Vs Unavoidable Costs - Break Even Analysis (BEA) - Assumptions, Merits and demerits - Determination of Break Even Point (Simple problems).

UNIT-III: INTRODUCTION TO MARKETS AND PRICING (09 periods)

Market Structure: Types of Markets - Features of perfect competition - Monopoly and monopolistic competition - Price and Output determination in perfect competition, monopoly and monopolistic Markets.

Pricing :Objectives and policies of pricing - Sealed bid pricing - Marginal cost pricing - Cost plus pricing - Going rate pricing - penetration Pricing - skimming Pricing - Block pricing - Peak load pricing - Cross subsidization.

UNIT-IV: INTRODUCTION TO PRINCIPLES OF ACCOUNTING & CAPITAL (09 periods)

Accountancy: Introduction - Concepts - Conventions - Double Entry Book Keeping - Journal - Ledger - Trial Balance (Simple problems).

Capital: Significance - Types of capital - Sources of Capital.

UNIT-V: FINAL ACCOUNTS - COMPUTERIZATION OF ACCOUNTING SYSTEM (09 periods)

Introduction to Final Accounts - Trading account - Profit and Loss account and Balance Sheet with simple adjustments (Simple problems).

Computerization of Accounting System: Manual Accounting Vs Computerized Accounting - Advantages and Disadvantages of Computerized Accounting.

TEXT BOOKS:

1. A.R. Aryasri, *Managerial Economics and Financial Analysis*, Tata Mc- Graw Hill, New Delhi, 3rd edition, 2007.
2. R.Cauvery, U.K. Sudhanayak, M. Girija and R. Meenakshi, *Managerial Economics*, S. Chand and Company, New Delhi, 2nd edition, 2010.

REFERENCE BOOKS:

1. Varshaney and Maheswari, *Managerial Economics*, Sultan Chand and Sons, New Delhi, 19th edition, 2005.

2. Ms. Samba Lalita, *Computer Accouting Lab Work*, 1st edition, Kalyani Publishers, Ludhiana, 2009.
3. S.P. Jain and K.L. Narang, *Financial Accounting,* Kalyani Publishers, Ludhiana, 6th edition, 2002.

III B.Tech. - I Semester
(16BT50201) **CONTROL SYSTEMS**
(Common to EEE & ECE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Courses on Multivariable Calculus and Differential Equations, Transformation Techniques and Partial Differential Equations and DC Machines/Electrical Technology.

COURSE DESCRIPTION:
Concepts of control system, transfer function ofvarious physical systems, time response analysis, frequency responseanalysis, controller design, state space analysis.

COURSEOUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- the concepts of open and closed loop control systems.
- stability analysis in time and frequency domain.
- controllers and compensators to meet the desired speci fications.
- state variable techniques.

CO2. analyze
- time and frequency domain response of second order systems.
- stability analysis using root-locus, Bode and Nyquist plots.
- controllers and compensators to meet the desired response.
- state space representation from transfer function.

CO3. design a compensator to meet the design specifications of control system.

CO4. solve problems pertaining to control systems to provide feasible solutions inreal time environment.

CO5. selectappropriate techniques to solve control system problems in relevance to industry.

CO6. apply the conceptual knowledge of control systems in domestic and industrial applications.

DETAILED SYLLABUS:

UNIT-I: MATHEMATICAL MODELING OF SYSTEMS (11 periods)
Introduction to control systems. Basic elements of control system - open loop and closed loop systems. Effect of feedback.Modeling of physical systems - electrical systems, mechanical systems, analogous systems, armature control and field control of DC motor, DC servomotor. Transfer function - block diagram reduction techniques, signal flow graph.

UNIT-II: TIME RESPONSE AND STABILITY ANALYSIS (13 periods)
Various test signals and its importance. Time response of first and second order systems, Time-domain specifications, steady state response, steady state error and error constants, static and generalized error coefficients. Routh-Hurwitz stability criterion, Root locus technique- root locus diagram, rules to construct root loci, effect of pole zero additions on the root loci.

UNIT-III: FREQUENCY DOMAIN ANALYSIS (08 periods)
Performance specifications in the frequency domain. Stability analysis - Bode plot, Polar plot and Nyquist plot.

UNIT-IV: CONTROLLERS AND COMPENSATORS (06 periods)
Introduction to controllers, effect of P, PI and PID controllers. Compensators - lag, lead, lead-lag compensator design using Bode plot.

UNIT-V: STATE SPACE ANALYSIS (07 periods)
Transfer function vs state space representation. Concepts of state, state variables and state model.Modeling of physical system in state space. Transfer function to state model and vice-versa. State transition matrix and its properties. Controllability and observability using Kalman's test.

Total Periods: 45

TEXT BOOKS:

1. A. Anandkumar, *Control Systems*, PHI learning Pvt Ltd., 2nd edition, 2014.
2. Katsuhiko Ogata, *Modern Control Engineering,* Pearson Education Publishers, 5th edition, 2010.

REFERENCE BOOKS:

1. Nagrath I.J. and Gopal M, *Control Systems Engineering*, New Age International Publications, 5th edition, 2010.
2. Richard C. Dorf and Robert H. Bishop, *Modern Control Systems,* Prentice Hall, 12th edition, 2010.

3. Benjamin C.Kuo and FaridGolnaraghi, *Automatic Control Systems,* John Wiley & Sons Publications, 8th edition, 2002.
4. A.Nagoorkani, *Control Systems,* RBA Publications, 2nd edition, 2006.

III B.Tech. - I Semester
(16BT50202) **POWER ELECTRONICS**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Courses on Engineering Physics, Electrical Circuits and Electronic Devices & Circuits.

COURSE DESCRIPTION:
Power semiconductor devices; Silicon Controlled Rectifier - Turn-on methods, Triggering and commutation circuits for SCR; Single phase and three phase Rectifiers; AC voltage controllers; Cycloconverters; Choppers and Inverters.

COURSEOUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- •the characteristics of various power transistors.
- •operation, switching characteristics, ratings, protection and combinations of SCR.
- •various triggering methods and commutation techniques for SCR.
- •operation of line commutated converters and SCR based forced commutated converters.

CO2. analyze the performance of different power converters subjected to various loads.

CO3. design static and dynamic equalizing circuits, snubber circuits and commutating elements for protection and functionality of power electronic circuits.

CO4. investigate various configurations of power electronic circuits to provide feasible solutions.

CO5. select an appropriate power semiconductor device and/ or circuit for real time applications.

CO6. apply the conceptual knowledge of power semiconduc tor devices and/or circuitsin relevance to industry.

DETAILED SYLLABUS:

UNIT-I: POWER SEMICONDUCTOR DEVICES (11 periods)
Introduction, Power transistors - power BJT, power MOSFET, IGBT and their characteristics. Thyristor - basic theory and operation, static and dynamic characteristics, two transistor analogy, turn-on methods, UJT firing circuits, series and parallel operation, ratings, protection against dv/dt and di/dt, design of snubber circuit.

UNIT-II: PHASE CONTROLLED RECTIFIERS (11 periods)
Single phase controlled rectifiers: Introduction, half wave controlled rectifier, bridge connections - semi and fully controlled rectifiers with R and RL loads, derivation of average load volt age and current, effect of freewheeling diode, effect of source inductance. Three phase controlled rectifiers: Half and fully controlled rectifiers - midpoint connection with R load, Bridge connectionswith R and RL loads, derivation of average load voltage.

UNIT-III: DUAL CONVERTERS & AC VOLTAGE CONTROLLERS (07 periods)
Dual converters - circulating and non-circulating current modes of operation of single phase and three phase dual converters with R-Load. Single phase AC voltage controllers - two SCRs in anti-parallel with R and RL loads, derivation of rms load voltage and load current.
Cycloconverters - single phase midpoint and bridge type (step-up and step-down operations) with R and RL loads.

UNIT-IV: COMMUTATION CIRCUITS AND CHOPPERS (07 periods)
Thyristor forced commutation circuits. Chopper: step down and step up - operation,control strategies, derivation of load voltage and load currents with R and RL loads. Morgan's chopper, AC chopper.

UNIT-V: INVERTERS (09 periods)
Single phase inverters - basic operation, voltage source inverters, basic series and parallel inverters, current source inverter, voltage control by pulse width modulation techniques (single pulse, multiple pulse and sinusoidal). Three phase bridge Inverters - 180° and 120° conduction modes of operation.

Total Periods: 45

TEXT BOOKS:
1. Dr. P. S. Bimbhra, *Power Electronics*, Khanna Publishers, 4th edition, Delhi, 2008.
2. M. D. Singh & K. B. Kanchandhani, *Power Electronics,* Tata McGraw - Hill Publishing Company, 2013.

III B.Tech. - I Semester
(16BT50203) **SYNCHRONOUS MACHINES**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Course onTransformers and Induction machines.

COURSE DESCRIPTION:
Construction, operation, characteristics, voltage regulation and parallel operation of alternators; operation and performance characteristics of synchronous motors; construction, operation, characteristics and applications of fractional kW motors.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- constructional details, working, characteristics and per formance of a three phase synchronous machine and fractional kilowatt motors.
- armature reaction, voltage regulation and synchronization of alternator.
- starting of a synchronous motor.
- parallel operation of alternators.

CO2. analyse the performance of synchronous and single phase machines for various operating conditions.

CO3. design suitable accessories/controllers for desired opera tion of synchronous machines.

CO4. solve problems pertaining to synchronous machines and fractional kWmotors to provide feasible solutions.

CO5. select appropriate techniques for control and operation of synchronous and fractional kW machines in relevance to industrial applications.

CO6. apply the conceptual knowledge of synchronous machines in relevance to industry.

DETAILED SYLLABUS:

UNIT-I: SYNCHRONOUS GENERATORS (11 periods)
Constructional details of synchronous machines. Armature windings- integral slot and fractional slot, distributed and concentrated, short pitch and full pitch, winding factors. EMF equation, harmonics in generated EMF, suppression of harmonics. Armature reaction and its effect for various operating power factors. Open circuit, short circuit and ZPF characteristics of synchronous machine - phasor diagrams.

UNIT-II: REGULATION OF SYNCHRONOUS GENERATOR (07 periods)
Voltage regulation - Synchronous impedance method, Ampere Turns method, ZPF method and new ASA method. Salient pole alternators - two-reaction theory, phasor diagrams, voltage regulation. Power flow equations in synchronous generator.

UNIT-III: PARALLEL OPERATION OF SYNCHRONOUS GENERATORS (11 periods)
Conditions for parallel operation, methods of synchronization. Synchronizing current, power and torque, rigidity factor. Effect of change of excitation and mechanical power input on parallel operation of two alternators, load sharing between two alternators, Synchronous machines on infinite bus bars. Short Circuit Ratio (SCR) and its significance, time period of oscillations.

UNIT-IV: THREE PHASE SYNCHRONOUS MOTORS (08 periods)
Principle of operation, starting methods - auxiliary-motor, damper winding, synchronous-induction motor. Phasor diagrams. Variation of current and power factor with excitation, synchronous condenser. Power flow equations in synchronous motor. Circle diagram - excitation and power circles. Hunting and its suppression.

UNIT-V: FRACTIONAL KILOWATT MOTORS (08 periods)
Single phase induction motor - constructional features, double revolving field theory. Principle, characteristics and applications of resistance split-phase motors, capacitor split phase motors, capacitor start & run split phase motors and shaded pole motor. Construction, principle, characteristics and applications of AC series motor, universal motor and reluctance motors.

Total Periods: 45

III B.Tech.- I Semester
(16BT50204)**TRANSMISSION AND DISTRIBUTION**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Courses on Generation of Electric Power, Electromagnetic Fields and Signals, Systems & Networks.

COURSE DESCRIPTION:
Parameters of overhead transmission lines and underground cables; Performance of transmission lines, travelling wave phenomenon; Types of insulators; Sag and corona; Distribution systems classification, analysis and its planning.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- classification of transmission and distribution systems
- parameters and configurations of transmission and distribution systems
- transients, corona and sag
- insulation system for cables and transmission lines

CO2. analyze
- the electrical and mechanical aspects of cables and transmission lines
- various distribution feeder configurations
- voltage drop and power loss in distribution system

CO3. design
- parameters for transmission lines and underground cables.
- substation feeders.

CO4. evaluate the parameters, performance& mechanical aspects of transmission lines, underground cables and distribution systems to provide feasible solutions.

CO5. select appropriate model for transmission and distribution systems while exercising modeling and planning of power system.

CO6. apply the conceptual knowledge of transmission and distribution systems in relevance to industry and society.

CO7. follow professional norms for voltage regulation in transmission and distribution systems.

DETAILED SYLLABUS:

UNIT-I: OVERHEAD TRANSMISSION LINE AND UNDERGROUND CABLES (10 periods)
TRANSMISSION LINES: Overhead line & underground cables and their types, Parameters resistance, inductance and capacitance calculations in single and three phase transmission lines, single and double circuits, symmetrical and unsymmetrical spacing, concepts of GMR and GMD, effect of earth on capacitance. Underground cables:Construction, types of insulating materials, classification of cables, laying of cables, insulation resistance, capacitance of single and 3-core belted cables.Grading of cables - capacitance and inter sheath grading.

UNIT-II: ANALYSIS OF TRANSMISSION LINES (10 periods)
Transmission lines:Classification - short line, medium line and long line.Equivalent circuits -end condenser, Nominal-T, Nominal-pie models. ABCD constants, voltage regulation and efficiency of transmission lines. Travelling waves on transmission lines:Travelling waves - open end line, short circuited line, line terminated through a resistor, line connected to a cable, T-junction.Beweley's Lattice diagram.

UNIT-III: MECHANICAL ASPECTS OF OVER HEAD LINE AND CORONA (09 periods)
Overhead transmission line: Line supports, overhead line insulators, types of insulators, string efficiency and methods for improvement. Sag in overhead line:Sag and tension calculations with equal and unequal heights of towers, effect of wind and ice on sag, stringing chart. Corona: Corona phenomenon - factors affecting corona, critical voltages and power loss, advantages and disadvantages.

UNIT-IV: DISTRIBUTIONSYSTEMS (08 periods)
Classification and Characteristics - residential, commercial, agricultural and industrial loads. Voltage drop calculations in DC distributors - radial DC distributor fed at one end, at both the ends (equal/unequal voltages)and ring main distributor.
Voltage drop calculations in AC distributors - power factors referred to receiving end voltage and respective load voltages.

UNIT-V: SUBSTATIONS AND DISTRIBUTION SYSTEM PLANNING (08 periods)
Classification of substations:Indoor and outdoor, gas and air insulated substations. Substation layout, different bus bar schemes, location of substations-rating of distribution substations, service area with 'n' primary feeders. Distribution System Planning:Factors affecting system planning, substation expansion, distribution system planning models, present distribution system planning techniques.

Total Periods: 45

III B.Tech.- I Semester

(16BT40502) DATABASE MANAGEMENT SYSTEMS

(Common to EEE & ME)

(Interdisciplinary Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:--

COURSE DESCRIPTION:

Database Systems; Database Design; Relational Model; SQL Queries, Constraints and Triggers; Schema Refinement and Normal Forms; Transaction Management; Concurrency Control; Overview of Storage and Indexing.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- Data models and Database Languages
- Database design
- Normal forms
- Storage and Indexing

CO2. analyze databases using normal forms to provide solutions for real time applications.

CO3. design solutions for database problems using database design, views design and framing queries.

CO4. use database techniques for designing databases, man aging databases and its security.

CO5. Select SQL, Hash based Indexing and Tree based Index ing to manage data in databases.

CO6. apply contextual knowledge to develop database applications related to societal applications like Information Retrieval Systems, Banking and Financial systems.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTIONTO DATABASE SYSTEMS AND DATABASE DESIGN (09 periods)

Database Systems: Database system applications, Purpose of database systems, View of data-Data abstraction, Instances and Schemas, Data models; Database languages - DDL,DML; Database architecture, Database users and administrators.

Database Design: ER diagrams, Beyond ER design, Entities, Attributes and entity sets, Relationships and relationship sets, Additional features of ER model, Conceptual design with ER model.

UNIT-II: THE RELATIONAL MODEL&RELATIONAL ALGEBRA AND CALCULUS (08 periods)

Relational Model: Integrity constraints over relations, Enforcing integrity constraints, Querying relational data, Logical database design, Introduction to views, Destroying/altering tables and views.

Relational Algebra and Calculus: Preliminaries, Relational Algebra operators; Relational Calculus - Tuple and Domain Relational Calculus; Expressive power of Algebra and calculus.

UNIT-III: SQL AND SCHEMA REFINEMENT (10 periods)

SQL: Form of basic SQL query- Examples of basic SQL queries; Nested queries- Introduction to nested queries, Correlated nested queries, Set-comparison operators; Aggregate operators, NULL values-Comparison using NULL values, Logical connectives AND, OR and NOT, Impact on SQL constructs, Outer joins, Disallowing NULL values; Complex integrity constraints in SQL ,Triggers and active databases.

Schema Refinement: Problems caused by redundancy, Decompositions, Problem related to decomposition, Functional dependencies, Reasoning about FDS, Normal forms - First, second and third normal forms, BCNF; Multi valued dependencies, Fourth normal form, Join dependencies, Fifth normal form.

UNIT-IV: TRANSACTIONS AND CONCURRENCY CONTROL (09 periods)

Transactions: Transaction concept, Transaction state, Implementation of atomicity and durability, Concurrent executions, Serializability, Recoverability, Implementation of isolation,Testing for serializability. Concurrency Control: Lock based protocols, Timestamp based protocols, Validation based protocols, Multiple granularity, Deadlock handling.

UNIT-V: STORAGE AND INDEXING (09 periods)

Storage and Indexing: Data on external storage, File organization and indexing - Clustered indexes, Primary and secondary indexes; Index data structures - Hash based indexing, Tree based indexing; Comparison of file organizations.

Tree Structured Indexing: Intuition for tree indexes, Indexed Sequential Access Method (ISAM), B+ Trees- A dynamic index structure; Search, Insert, Delete;B-Tree index files.

Total Periods: 45

TEXT BOOKS:

1. Raghu Ramakrishnan and Johannes Gehrke, *Database Management Systems,* Tata McGraw Hill, 3rd edition, 2014.
2. A.Silberschatz, H.F.Korth and S.Sudarshan, *Database System Concepts*, Tata McGraw hill, 5th edition, 2006.

REFERENCE BOOKS:

1. Ramez Elmasri and Shamkant B.Navathe, *Database Systems*, Pearson Education, 6th edition, 2013.
2. Peter Rob and Carlos Coronel, *Database Systems Design, Implementation and Management*, Cengage Learning, 7th edition, 2009.

III B.Tech.- I Semester

(16BT51003) **PRINCIPLES OF COMMUNICATIONS**

(Common to EEE and EIE)

(Interdisciplinary Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Course on Signals, Systems and Networks.

COURSE DESCRIPTION:
Fundamentals of Communications; Analog and digital communications - modulation and Demodulation Techniques; Information theory and coding.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate fundamental knowledge in
- •elements of communication systems.
- •amplitude, Frequency, and Phase Modulators and De modulators.
- •data transmission and detection of digital signals.
- •information theory and coding techniques.

CO2. perform analysis of different modulation techniques and calculate various performance parameters

CO3. design and develop modulators and demodulators for communication systems.

CO4. solve engineering problems for feasibility and provide optimal solutions in the area of Analog and Digital Communication Systems.

CO5. select the appropriate modulation and demodulation techniques for transmission and reception of signals.

CO6. follow standards while developing the communication systems.

DETAILED SYLLABUS:

UNIT-I: AMPLITUDE MODULATION **(10 periods)**
Block diagram of Electrical Communication System, Types of Communications, Need for Modulation, Types of Amplitude Modulation: AM, DSBSC, SSBSC, Power and BW requirements, generation of AM, DSBSC, SSBSC, Demodulation of AM: Diode detector, Product demodulation for DSBSC & SSBSC.

UNIT-II: ANGLE MODULATION **(09 periods)**
Frequency & Phase Modulations, Advantages of FM over AM, Bandwidth consideration, Narrowband and Wideband FM, generation and demodulation of FM, Comparison of FM & PM.

UNIT-III: PULSE MODULATION **(08 periods)**
Elements & Advantages of Digital communication systems, PAM, Regeneration of Base band Signal, PWM and PPM, Time Division Multiplexing, Frequency Division Multiplexing, Asynchronous Multiplexing.

UNIT-IV: DIGITAL TRANSMISSION **(10 periods)**
Pulse Code Modulation: Advantages, Block diagram of PCM, Quantization, effect of Quantization, Quantization error, DM, ADM and Comparison.

Digital Modulation: ASK, FSK, PSK, QPSK, DPSK, Modulation and Demodulation - Coherent and Non-coherent techniques.

UNIT-V: INFORMATION THEORY AND CODING **(08 periods)**
Concept of Information, Entropy and Rate of Information, Coding efficiency, Shannon-Fano and Huffman Coding, Error Control Coding, Error Detection and Correction Codes, Block Codes, Convolutional Codes.

Total Periods:45

TEXT BOOKS:

1. R.P. Singh and S D Sapre, *Communication Systems - Analog and Digital*, TMH, 2nd edition 2007.

2. Simon Haykin, *Communication Systems*, John Wiley, 2nd edition 2007.

REFERENCE BOOKS:

1. H. Taub and D. Schilling, *Principles of Communication Systems,* TMH, 2nd edition, 1991.
2. Sam Shanmugam, *Digital and Analog Communication Systems*, John Wiley, 2006.

III B.Tech. - I Semester

(16BT51041) SENSORS AND SIGNAL CONDITIONING

(Interdisciplinary Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Courses onElectrical Measurements and Linear & Digital ICs.

COURSE DESCRIPTION:
Principle of operation, construction, advantages, limitations and applications of resistive, inductive, capacitive, self-generating, digital and other sensors; Signal conditioning circuits and their operations.

COURSE OUTCOMES: On completion of the course, the students will be able to

CO1. demonstrate knowledge on
- various sensors.
- signal conditioning circuits.

CO2. analyze
- various sensors for measuring physical quantities.
- signal conditioning circuits.

CO3. design an appropriate instrumentation amplifiers for commercial applications.

CO4. evaluate physical quantities using sensors and signal conditioning circuits to provide feasible solutions.

CO5. select& use appropriate sensors for the measurement of physical quantities in domestic and industrial applications.

CO6. apply the conceptual knowledge of sensors and signal conditioning circuits in relevance to industry and society.

DETAILED SYLLABUS:

UNIT-I: RESISTIVE SENSORS (09 Periods)
Principle of transducers, classification, Factors influencing the choice of transducers. Potentiometers, Metal and semiconductor strain gauges-principle of operation, gauge factor, gauge sensitivity; Resistance temperature detectors, Thermistors, Light dependent resistors, resistive hygrometer.

UNIT-II: CAPACITIVE AND INDUCTIVE SENSORS (09 Periods)
Capacitor sensors: Variation in overlapping area, variation in dielectric constant, variation in distance between the plates of variable and differential capacitor. Frequency response of ca pacitive sensors.
Inductive sensors: Variable reluctance sensors, Eddy current sensors, Linear variable differential transformers, Synchros, Resolvers, Electromagnetic sensors based on Faraday's law, Hall effect sensors.

UNIT-III: SELF-GENERATING SENSORS (09 Periods)
Thermoelectric sensors: Thermoelectric effects, Thermocouple laws, Cold junction compensation, common thermocouples. Piezoelectric sensors-Piezoelectric effect, deformation modes, equivalent circuit, materials; Pyro electric Sensors-Pyro electric effect, materials; Photoelectric sensors-photovoltaic effect, materials; Magneto-strictive sensors.

UNIT-IV: DIGITAL AND OTHER SENSORS (09 Periods)
Digital transducers: Tachometer encoder, incremental encoder, absolute encoder. Semiconductor sensors- principle of operation and techniques; Film sensors-Thin film sensors, Thick film sensors; Fiber optic sensors-principle of operation, sensor technology; Ultrasonic sensors- principle of operation, sensing methods; Basics of SMART sensors.

UNIT-V: SIGNAL CONDITIONING (09 Periods)
Block diagram of signal conditioning, balance and deflection measurement in Wheatstone bridge, measurement of reactance; Push-pull bridge and Blumein bridge; Carrier amplifier, chopper amplifier, low drift amplifier and charge amplifier, Instrumentation amplifier.

Total Periods: 45

TEXT BOOKS:

1. Ramon Pallas-Areny and John G. Webster, *Sensors and Signal Conditioning*, John Wiley & Sons, Inc., 2nd edition, 2001.
2. A.K.Sawhney, *A Course in Electrical and Electronic Mea surements and Instrumentation*, Dhanpat Rai & Co., 19th edi tion,2015.

REFERENCE BOOKS:

1. D. V. S Murty, *Transducers and Instrumentation*, PHI Learning Private Limited, 2nd edition, 2010.
2. D. Patranabis, *Sensors and Transducers*, PHI Learning Pri vate Limited, 2nd edition, 2003.
3. John P. Bentley, *Principles of Measurement Systems*, Pearson Education, 4th edition, 2005.

III B.Tech. - I Semester
(16BT31501) **OPERATING SYSTEMS**
(Common EEE & EIE)
(Interdisciplinary Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: --

COURSE DESCRIPTION:
Operating systems operations, scheduling; Critical section problem, deadlocks; Paging, segmentation; File Concept, Disk scheduling; I/O interface; concepts of protection.

COURSE OUTCOMES: On Successful completion of the course, students will be able to

CO1. demonstrate knowledge on Operating system operations, services, file management, disk management, I/O management and protection.
CO2. identify the functionality involved in process management concepts like scheduling and synchronization.
CO3. design models for handling deadlock and perform memory management.
CO4. synthesize and apply programming API's to perform Pro cess management.
CO5. use appropriate protection tools to provide access con trol to Operating system users.

DETAILED SYLLABUS:

UNIT-I: OPERATING SYSTEMS OVERVIEW AND PROCESS MANAGEMENT (08 periods)

Operating systems, operations, Distributed systems, Special purpose systems, Operating systems services, Systems calls, Operating system structure.

Process Management: Process scheduling, Process Control Block, Inter process communication, Signals, Forks, Multithreading models, Threading issues, Scheduling criteria, Scheduling algorithms, Multilevel queue, Multilevel feedback queue.

UNIT-II: SYNCHRONIZATION AND DEADLOCKS (10 periods)

Synchronization: The critical-section problem, Peterson's Solution, Synchronization hardware, Semaphores, Classic problems of synchronization, Monitors.

Deadlocks: System model, Deadlock characterization, Methods for handling deadlocks, Deadlock prevention, Deadlock detection, Deadlock avoidance, Deadlock recovery.

UNIT-III: MEMORY MANAGEMENT (09 periods)

Memory-Management Strategies: Swapping, Contiguous memory allocation, Paging, Structure of the page table, Segmentation.

Virtual Memory Management: Demand paging, Copy-on-Write, Page replacement Algorithms, Thrashing.

UNIT-IV: STORAGE MANAGEMENT (10 periods)

File System: File Concept, Access methods, Directory structure, File system structure, i-node, File Descriptors, File system implementation, Directory implementation, Allocation methods.

Secondary Storage Structure: Disk structure, Disk attachment, Disk scheduling, Swap-space management, Stable-storage implementation, Tertiary storage structure.

UNIT-V: I/O SYSTEMS AND PROTECTION (08 periods)

I/O Systems: I/O Hardware, Application I/O interface, Kernel I/O subsystem.

Protection: Goals of protection, Principles of protection, Domain of protection, Access matrix, Implementation of access matrix, Access control, Revocation of access rights.

Total Periods: 45

TEXT BOOK:

1. Abraham Silberschatz, Peter Baer Galvin and Greg Gagne, *Operating System Principles*, Wiley India Edition, 7th edition, 2011.

REFERENCE BOOKS:

1. William Stallings, *Operating Systems, Internals and Design Principles*, Pearson Education, 7th edition, 2013.
2. Andrew S. Tanenbaum, *Modern Operating Systems*, PHI, 3rd edition, 2009.

III B.Tech. - I Semester
(16BT50231) **CONTROL SYSTEMS LAB**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: Courses on Signals, Systems and Networks, DC Machines, Transformers & Induction Machines, Analog Electronic Circuits and Linear & Digital ICs.

COURSE DESCRIPTION:
Open and closed loop systems; DC and AC servo motor; stability analysis for mechanical and electrical systems; process control system; design of compensators.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- open and closed loop systems
- stability analysis of a given system
- process control
- speed control of DC motor
- compensators

CO2. analyze
- characteristicsof AC and DC servomotors
- stability of the system using root locus, Bode and Nyquist plots
- time and frequency domainspecifications of second order system
- concept of controllability and observability of the system

CO3. design
- compensators& controllers to analyze the stability of the system
- ladder network for PLC to verify boolean expressions

CO4. interpret the experimental investigations to provide feasible solutions using the concepts of control engineering.

CO5. select and apply appropriate technique for solving complex problems in control systems.

CO6. apply the conceptual knowledge of control systems in relevance to industry and society.

CO7. commit to ethical principles and standards while exercising the practical investigations on control systems.

CO8. work individually or in a group in the domain of control systems.

CO9. communicate effectively in verbal and written form in relevance to control systems.

DETAILED SYLLABUS:
Conduct any TEN experiments from the following:

1. Programmable logic controller - study and verification of truth tables of logic gates, simple Boolean expressions and application of speed control of motor.
2. Effect of feedback on DC servomotor.
3. Determination of transfer function for a given Mechanical/Electrical system.
4. Performance Characteristics of DC and AC servomotor.
5. Time response of second order system.
6. Determination of time domain specifications for unit step input using MATLAB.
7. Stability analysis of Mechanical and Electrical systems.
8. Study and analysis of second order system using frequency response and determination of transfer function from Bode plot.
9. Effect of P, PI and PID controllers on a second order system (Hardware/Software).
10. Lag, Lead and Lag-lead compensation of a linear time invariant system using Bode plot.
11. Analysis of a physical system using MATLAB.
    - Transfer function to state space and Vice versa
    - Controllability and observability
    - Implementation using SIMULINK
12. Design of P, PI and PID controllers for a time delayed systems.
13. Balance control of rotary inverter pendulum using LABVIEW.
14. Performance analysis of water tank level controller.

III B.Tech. - I Semester

(16BT50232) **SYNCHRONOUS MACHINES LAB**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: Course on Transformers and Induction Machines Lab

COURSE DESCRIPTION:
Construction, performance and parallel operation of alternators; V and inverted-V curves for synchronous motor; determination of equivalent circuit and performance characteristics of single phase induction motors.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- construction and operation of 3-phase synchronous machines and 1-phase motors.
- V and inverted-V curves of synchronous motor.
- parallel operation of 3-phase synchronous generators.
- characteristics of synchronous machines.

CO2. analyze the performance of synchronous and fractional kW machines for various operating conditions.

CO3. design the circuit with suitable accessories / controllers for desired operating conditions of synchronous and fractional kW machines.

CO4. interpret and synthesize the data obtained from experimentation on synchronous and fractional kW machines to provide valid conclusions.

CO5. select and apply appropriate technique for testing and control of synchronous and fractional kW machines for domestic and industrial applications.

CO6. apply the conceptual knowledge of synchronous and fractional kW machines in relevance to domestic and industrial needs.

CO7. follow ethical principles and standards while exercising the practical investigations on synchronous and fractional kW machines.

CO8. work individually or in a group while exercising practical investigations in the field of synchronous and fractional kW machines.

CO9. communicate effectively in verbal and written form in relevance to synchronous and fractional kW machines.

DETAILED SYLLABUS:

PART - A:

1. constructional details of alternator.
2. constructional details of single phase induction motor.

PART - B: Conduct any EIGHT experiments

1. Regulation of a three phase alternator by E.M.F and M.M.F. methods.
2. Regulation of three phase alternator by Z.P.F. and A.S.A methods.
3. Efficiency of a three phase alternator.
4. Determination of Xd and Xq of a salient pole synchronous machine.
5. Parallel operation of alternators.
6. V and inverted V curves of a three phase synchronous motor.
7. Determination of sequence impedance of a three phase alternator.
8. Equivalent circuit of a single phase induction motor.
9. Brake test on single phase induction motor.
10. Performance characteristics of Schrage motor.
11. Performance characteristics of Universal motor.

III B.Tech. - I Semester

(16BT4HS31) **SOFT SKILLS LAB**

(Common to EEE, ECE and EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	-	-	3	2

PREREQUISITES: English Language Laboratory in I B.Tech or English Laboratory at Diploma Level.

COURSE DESCRIPTION:

This course covers Body Language; Assertiveness; Goal Setting; Creative Thinking; Interpersonal Skills; Team Work; Conflict Management; Etiquette; Report Writing; Group Discussions; Interviewing Skills.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge in
- Goal Setting
- Creative Thinking
- Leadership Skills and
- Team Work

CO2. analyse the situations and develop skills for
- Body Language
- Personality Development and
- Stress Management

CO3. apply the techniques of soft skills in a problem situation enhanced through multimedia software.

CO4. function effectively as an individual and as a member in diverse teams.

CO5. communicate effectively in public speaking in formal and informal forums.

LIST OF EXERCISES:

1. Body Language
2. Assertiveness
3. Goal Setting
4. Creative Thinking
5. Interpersonal Skills
6. Team Work
7. Conflict Management
8. Etiquette
9. Report Writing
10. Resume Writing
11. Group Discussions
12. Interviewing Skills

Total Lab Slots: 10

REFERENCE BOOKS:

SUGGESTED SOFTWARE:

1. ETNL Language Lab Software Version 4.0
2. GEMS - Globarena E- Mentoring System
3. Speech Solutions.
4. English Pronunciation Dictionary by Daniel Jones.
5. Learning to Speak English 8.1, The Learning Company – 4 CDs.
6. Mastering English: Grammar, Punctuation and Composition.
7. English in Mind, Herbert Puchta and Jeff Stranks with Meredith Levy, Cambridge.
8. Dorling Kindersley Series of Grammar, Punctuation, Composition etc.
9. Language in Use 1, 2 & 3.
10. Cambridge Advanced Learner's Dictionary - 3rd Edition.
11. Centronix - Phonetics.
12. Let's Talk English, Regional Institute of English South India.

13. Ultimate English Tutor.

III B.Tech.- II Semester
(16BT5HS01) **MANAGEMENT SCIENCE**
(Common to ECE, EEE and EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: --

COURSE DESCRIPTION:
Concepts of Management; Environmental Scanning; Concepts Related to Organization; Operations Management; Work Study; Statistical Quality Control; Inventory Management; Marketing; Human Resource Management; Project Management; Project Crashing; Entrepreneurship; Contemporary Management Practices.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate the concepts of operations management, human resources management, project management and contemporary management practices in managerial con text.

CO2. identify and analyse management problems in the busi ness organizations reaching substantiated conclusions using principles of management.

CO3. design appropriate organization structure for meeting the needs of the organization with consideration of the employees of the organization.

CO4. competently employ broad based analytical tools for decision making, system design, analysis and performance.

CO5. provide solution to organizations for sustainable development.

CO6. apply knowledge of engineering and management prin ciples to manage the projects in multidisciplinary envi ronments.

DETAILED SYLLABUS:

UNIT-I:INTRODUCTION TO MANAGEMENT AND ORGANIZATION (09 periods)
Concepts of management and Administration, Nature and Importance of management, Evolution of management thought, Functions of management, Contributions ofF.W. Taylor and Henry Fayol to the management, Systems approach to management, Managerial skills, Elements of corporate planning process, Environmental scanning, SWOT Analysis, Social responsibilities of management.
Basic concepts related to organization, Objectives and Principles, Types of organizations- Line Organization, Line and Staff Organization, Functional Organization, Matrix Organization, Network organization.

UNIT-II: OPERATIONS MANAGEMENT (12 periods)
Plant location- Factors and Principles; Plant Layout- Principles and Types; Methods of production, Work study- Basic procedure involved in method study and work measurement; Statistical Quality Control- Factors affecting quality, Control charts for variables and attributes, Acceptance sampling; Materials management- objectives, Inventory- Types of inventory, Classical EOQ model, ABC analysis; Purchase procedure, Stores management, Marketing- Functions, Channels of distribution.

UNIT-III: HUMAN RESOURCE MANAGEMENT (HRM) (06 periods)
Nature and scope of HRM, Functions of HRM, Role of HR Manager in an organization, Job evaluation, Merit rating, Maslow's hierarchy of human needs, McGregor's theory X and theory Y, Herzberg's two-factor theory of motivation.

UNIT-IV: PROJECT MANAGEMENT (PERT/CPM) AND ENTREPRENEURSHIP (09 periods)
Network analysis - Critical path method (CPM), Program evaluation and review technique (PERT); Project cost analysis - Project crashing. Introduction to Entrepreneurship, Entrepreneurial Traits, Entrepreneur vs Manager, Role of Entrepreneurship in Economic Development, Women as an Entrepreneur.

UNIT-V: CONTEMPORARY MANAGEMENT PRACTICES (09 periods)
Basic concepts of Material Requirements Planning, Enterprise resource planning (ERP), Just In Time (JIT) system, Total Quality Management (TQM), Value Chain Analysis, Business Process Outsourcing (BPO), Globalization, Management Challenges, Supply Chain Management (SCM), Role of Information Technology in managerial decision making, Six Sigma Concept, Maintenance Strategies- Preventive, Periodic and Breakdown Maintenance..

Total Periods: 45

TEXT BOOKS:

1. O.P. Khanna, *Industrial Engineering and Management*, Dhan- pat Rai and Sons, 2010.
2. MartandT.Telsang, *Industrial Engineering and Production Management*, S. Chand, 2nd edition, 2006.

REFERENCE BOOKS:

1. Koontz and Weihrich, Essentials of Management, TMH, 6th edition, New Delhi, 2007.

2. N.D. Vohra, *Quantitative Techniques in Management*, TMH, 2nd edition, New Delhi.

III B.Tech - II Semester

(16BT60201) **POWER SEMICONDUCTOR DRIVES**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:Courses on Power Electronics, Synchronous Machines and Control Systems.

COURSE DESCRIPTION:
DC drives: Rectifier fed and Chopper fed drives; AC Drives: Induction motor drives, Synchronous and Stepper motor drives.

COURSEOUTCOMES:On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- dynamics of electrical drives.
- operation and speed control of various DC & AC drives.
- open loop and closed loop control of DC & AC drives.

CO2. analyze single and multi-quadrant operations of DC & AC drives with speed-torque characteristics.
CO3. design and develop various configurations of power elec tronic converters for AC & DC drives.
CO4. investigateopen and closed loop operations of various drives using different speed control techniquesto enhance the drive performance.
CO5. applyappropriate power converters for controlling the drives in real time applications.
CO6. apply the conceptual knowledge of power semiconduc tor drivesin relevance to industry and society.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO ELECTRICAL DRIVES (08 periods)
Concept of electrical drives.Dynamics of electrical drives - fundamental torque equations, speed-torque conventions and multi-quadrant operation; Load torques - components, nature and classification.Steady state stability.Electric braking methods - regenerative dynamic and plugging.Modes of operation of electrical drive. Speed control and drive classifications, closed loop control of drives.

UNIT-II: SINGLE PHASE AND THREE PHASE CONVERTER FED DC DRIVES (11 periods)
Introduction to DC drives, control of DC separately excited motor by single-phase and three-phase half and full converters - voltage and current waveforms for continuous and discontinuous motor currents, speed-torque equations and characteristics. Dual converter control of DC separately excited motor.

UNIT-III: DC CHOPPER FED DRIVES (08 periods)
Control of DC separately excited motor by one, two and four quadrant choppers, voltage and current waveforms for continuous conduction mode. Closed loop model of separately excited DC motor, closed loop speed control scheme.

UNIT-IV: INDUCTION MOTOR DRIVES (10 periods)
Introduction, stator voltage control by AC voltage controllers.Stator frequency control - slip speed control, torque and power limitations, modes of operation.Variable frequency control by voltage source inverters (VSI), current source inverters (CSI).Static rotor resistance control. Slip power recovery schemes - static Scherbius drive, static Kramer drive.

UNIT-V: SYNCHRONOUS AND STEPPER MOTOR DRIVES (08 periods)
Modes of variable frequency control. Operation of self-controlled synchronous motors byVSI, CSI. Load commutated CSI fed synchronous motor drive - operation and waveforms. Stepper motor drives - torque Vs stepping rate characteristics, drive circuits. **Total Periods: 45**

TEXT BOOKS:
1. Gopal K. Dubey, *Fundamentals of Electric Drives*, Narosa Publications, 2nd edition, 2004.
2. VedamSubramaniam, *Electric drives (concepts and applications)*,Tata Mc Graw-Hill Education, 2011.

REFERENCE BOOKS:
1. Gopal K. Dubey, *Power Semiconductor Controlled Drives*, Prentice-Hall International, 1989.
2. Paresh C. Sen, *Thyristor DC Drives*, Wiley-Interscience, 1981.

III B.Tech.- II Semester

(16BT60202) **POWER SYSTEM ANALYSIS**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Courses on Matrices & Numerical Methods, Electric Circuits and Transmission and Distribution.

COURSE DESCRIPTION:

Per unit representation; Symmetrical component theory; Sequence networks for power system networks; Formulation of bus impedance and admittance matrices; Computation of power flow using various numerical techniques; Analysis of various faults; Power system stability analysis.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- per unit representation, symmetrical component theory and sequence network representation of power system networks.
- formation of power system network matrices.
- load flow studies.
- various faults.
- power system stability.

CO2. analyze
- the power system network for sequence network rep resentation.
- the power system networks for the formation of bus impedance and admittance matrices.
- the load flow problem of a power system network for different conditions.
- various faults.
- the stability of the power system under different oper ating conditions.

CO3. evaluate
- per unit quantities for various power system components and networks.
- thepower system network for various planning strategies and provide a feasible solution.

CO4. apply appropriate techniques/methods to analyze power system network operating under various conditions.

CO5. apply the conceptual knowledge of power system analysis to assess and analyze a power system for various scenarios.

DETAILED SYLLABUS:

UNIT-I: PER UNIT SYSTEMS AND SYMMETRICAL COMPONENT THEORY (10 periods)

Per unit system representation, advantages, per unit equiva lent reactance representation of power system components. Symmetrical component theory - voltages, currents and impedances.Sequence representation of power system components - generators, transformers, transmission line, load and networks.

UNIT-II: POWER SYSTEM NETWORK MATRICES (08 periods)

Bus admittance matrix - Direct inspection method.Bus impedance matrix- Formation of Zbus matrix for partial network, algorithm for the modification of bus impedance matrix - addition of element from a new bus to reference, new bus to an old bus, between an old bus & reference and between two old buses.

UNIT-III: POWER FLOW STUDIES (12 periods)

Introduction, derivation of static load flow equations. Load flow solution using Gauss-Seidel method, Newton-Raphson method - with and without PV bus, Decoupled and Fast decoupled methods (maximum of 3-buses for one iteration only). Algorithm and flowcharts, Comparison of different load flow methods.

UNIT-IV: FAULT ANALYSIS (08 periods)

Introduction, Unsymmetrical faults - LG, LL, LLG - with and without fault impedance. Symmetrical fault - LLL & LLLG faults. Symmetrical fault analysis using Zbus, short circuit current and MVA calculations.

UNIT-V: POWER SYSTEM STABILITY (07 periods)

Elementary concepts of stability.Steady state stability - power limit, transfer reactance, power angle curve, derivation of swing equation.Transient stability - equal area criterion, applications - critical clearing angle, critical clearing time. Methods to improve stability - auto re-closure and fast operating circuit breakers.

Total Periods: 45

2. John J. Grainger and William D. Stevenson, JR, *Power System Analysis*, Mc Graw-Hill Education (India) Pvt. Limited, 1994.
3. HadiSaadat, *Power System Analysis*, Tata Mc Graw-Hill Pub lishing Company Limited, New Delhi, 2nd edition, 2002.

III B.Tech. - II Semester

(16BT50501) **COMPUTER NETWORKS**

(Interdisciplinary Elective-2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:Course on Computer Architecture and Organization

COURSE DESCRIPTION:

Introduction to Computer Networks; The Physical Layer; The Data Link Layer; The Medium Access Control Sublayer; The Network Layer; The Transport Layer; The Application Layer.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on:
- Functionalities of Various OSI and TCP/IP layers
- 3G Mobile phone networks, 802.11
- TCP,UDP and SMTP

CO2. analyze the issues related to data link, medium access and transport layers by using channel allocation and connection management schemes.

CO3. design and compute subnet masks and addresses for networking requirements.

CO4. solve problems related to Flow control, Error control, congestion control and Network Routing.

CO5. apply Network Standards - 802.3 and 802.11 for developing computer Networks.

CO6. assess the impact of wired and wireless Networks in the context of societal applications like VoIP, Multi-user Net work Games, Internet of Things.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION AND PHYSICAL LAYER (09 periods)

Introduction: Network hardware, Network software, Reference models - OSI, TCP/IP; Example networks - Internet; Wireless LANs - 802.11.

Physical Layer: Guided transmission media, Wireless transmission.

UNIT-II: DATA LINK LAYER AND MEDIUM ACCESS CONTROL SUBLAYER (10 periods)

Data Link Layer: Data link layer design issues, Error detection and correction-CRC, Hamming codes, Elementary data link protocols, Sliding window protocols.

Medium Access Control Sublayer: ALOHA, Carrier sense multiple access protocols, Collision-free protocols, Ethernet, Data link layer switching-Repeaters, Hubs, Switches, Routers, and Gateways.

UNIT-III: NETWORK LAYER (10 periods)

Network layer design issues, Routing algorithms - Shortest path, Flooding, Distance vector, Link state routing, Hierarchical, Broadcast, Multicast, Anycast; Congestion control algorithms, Network layer in the internet - The IP version 4 protocol, IP addresses, IP version 6, Internet control protocols.

UNIT-IV: TRANSPORT LAYER (09 periods)

UDP - Segment header, Remote procedure call, Real-time transport protocols; TCP - service model, Protocol, Segment header, Connection establishment, Connection release, Sliding window, Timer management, Congestion control.

UNIT-V: APPLICATION LAYER (07 periods)

Domain Name System (DNS)-Name space, Domain resource records, Name servers; Electronic mail-Architecture and services, User agent, Message formats, Message transfer, Final delivery; The World Wide Web- Architectural overview, HTTP. **Total Periods: 45**

TEXT BOOK:

1. Andrew S. Tanenbaum and David J. Wetherall, *Computer Networks*, Pearson Education, 5th edition, 2015.

REFERENCE BOOKS:

1. Behrouz A. Forouzan, Data Communication and Networking, Tata Mc Graw-Hill, 4th edition, 2010.
2. James F. Kurose and Keith W. Ross, Computer Networking: A Top-Down Approach Featuring the Internet, Pearson Education, 2nd edition, 2012.

III B.Tech.- II Semester

(16BT61001) **ARM PROCESSORS & PIC MICROCONTROLLERS**

(Common to EEE & EIE)

(Interdisciplinary Elective-2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Course on Switching theory and logic design.

COURSE DESCRIPTION:
ARM Processors architecture, Programming, PIC microcontroller architecture, Interrupts and timers of PIC microcontroller, Interfacing.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge in ARM Processors architecture, PIC architecture, Pin out, Instruction set.

CO2. analyze various design issues regarding usage of on chip resources and Low power modes.

CO3. design embedded systems using ARM Processors and PIC microcontrollers to suit market requirements.

CO4. solve engineering problems and arrive at solutions in de signing embedded Systems.

CO5. use on-chip resources to design embedded systems with an understanding of limitations.

CO6. practice professional engineering to deliver efficient and cost effective microcontroller based products.

DETAILED SYLLABUS:

UNIT-I: PIC MICROCONTROLLER ARCHITECTURE (10 Periods)
Microcontrollers vs general purpose microprocessor, Overview of PIC18 family, WREG register in PIC, PIC file register, Default access bank, PIC status register, Data formats and directives, Program counter and program ROM space, Arithmetic, Logic instructions, Branch, call and time delay instructions, I/O port programming, PIC18 pin description, Bit addressability of data RAM, bank switching, Macros and modules.

UNIT-II: TIMERS, SERIAL PORT AND INTERRUPTS (09 Periods)
Programming timers 0 and 1, Counter programming, Programming timers 2 and 3, Basics of serial communication, PIC18 connection to RS232, Serial port programming in assembly, PIC18 interrupts, Programming timer interrupts, Programming serial interrupts.

UNIT-III: PERIPHERALS AND INTERFACING (07 Periods)
7 segment LED and LCD interfacing, keyboard interfacing, interfacing ADC, DAC, Interfacing stepper motor, DC motor interfacing and PWM.

UNIT-IV: INTRODUCTION TO ARM PROCESSORS (09 Periods)
Introduction to ARM Cortex M3 processor, Background of ARM and ARM architecture, Cortex M3 Processor applications, Cortex M3 fundamentals, registers, Operation modes, Memory system, memory map, Memory system attributes, ARM Pipeline, Exception types.

UNIT-V: ARM PROGRAMMING (10 Periods)
Data transfer instructions, Pseudo Instructions, Data Processing Instructions, Call & unconditional Branch Instructions, Decisions & conditional Branch instructions, Several useful instructions in Cortex M3, ARM Assembly Language Programming, Thumb Instruction Set, ARM Mode & Thumb mode Programming, ARM Programming in C. **Total Periods: 45**

TEXT BOOKS:

1. Muhammad Ali Mazidi, Rolin D. McKinlay, Danny causey, *PIC Microcontroller and Embedded Systems*: Using C and PIC18, Pearson Education, 2008.
2. Joseph Yiu, The Definitive Guide to the *ARM Cortex-M3 & M4*, Elsevier, 3rd edition, 2013.

REFERENCE BOOKS:

1. Andrew Sloss, Dominic Symes, Chris Wright, ARM System Developer's Guide: *Designing and Optimizing System Software (The Morgan Kaufmann Series in Computer Architecture and Design)*, 2004.
2. John.B. Peatman, *Design with PIC Microcontroller*, Pearson education, 1988.

III B.Tech.- II Semester

(16BT61041) PROGRAMMABLE LOGIC CONTROLLERS

(Interdisciplinary Elective-2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Course on Switching Theory and Logic Design.

COURSE DESCRIPTION:
Introduction to PLC; PLC ladder diagrams; programming PLC; timers, counters and sequences used in PLC; data handling functions; Bit Patterns; advanced PLC functions.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on programmable logic controllers, various functions of PLCs.
CO2. analyze the process of automation using PLCs.
CO3. design skills in automating a process control.
CO4. solve engineering problems in industries using PLCs.
CO5. select suitable PLC with an understanding of limitations.
CO6. practice professional engineering to deliver efficient and cost effective designs for society and domestic applications.

DETAILED SYLLABUS:

UNIT-I:PLC BASICS AND PROGRAMMING (09 periods)

Introduction, PLC advantages, disadvantages, PLC system, CPU, I/O modules and interfacing, power supplies, Programming equipment, Programming formats, Construction of PLC ladder diagrams, Devices connected to I/O modules. Input instructions, Outputs, Operational procedures, Programming examples using contacts and coils, Fail-Safe Circuits, Drill press operation.

UNIT-II: LADDER DIAGRAMS, REGISTERS AND TIMER FUNCTIONS (09 periods)

Digital logic gates, Boolean algebra PLC programming, Conversion examples. Ladder Diagrams for process control: Ladder diagrams & sequence listings, ladder diagram construction and flowchart for spray process system. Characteristics of Registers, module addressing, holding registers, Input Registers, Output Registers.Timer function & Industrial applications, Counter function & industrial applications.

UNIT-III: INTERMEDIATE AND DATA HANDLING FUNCTIONS (09 periods)

Intermediate functions: Arithmetic functions, Number comparison functions, Number conversion functions. Skip, Master control relay, Jump functions. PLC data move systems: Move function, FIFO, FAL, ONS, CLR & Sweep functions and their applications.

UNIT-IV: PLC FUNCTIONS WORKING WITH BITS (08 periods)

Bit Pattern, Changing a register bit status, Shift register functions and applications, Sequencer functions and applications, Controlling of two-axis & three axis Robots with PLC, Matrix functions.

UNIT-V: ADVANCED PLC FUNCTIONS (10 periods)

Analog modules & systems, Analog signal processing, Multi-bit Data Processing, Analog output application examples, PID principle, position indicator with PID control, PID Modules, PID tuning, PID functions, Networking of PLCs, Alternative Programming languages, PLC auxiliary commands and functions.

TEXT BOOK:
1. John W. Webb & Ronald A. Reiss, *Programmable Logic Con-trollers Principles and Applications*, PHI, 5th edition, 2002

REFERENCE BOOK:
1. M.Chidambaram, *Computer Control of Process*, Narosa, 2nd edition, 2003.

III B.Tech.- II Semester

(16BT51241) **OBJECT ORIENTED PROGRAMMING**

(Interdisciplinary Elective-2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: --

COURSE DESCRIPTION:
Introduction of Java, Classes and Objects; Inheritance, Packages, Interfaces; Exception handling, Multithreading; Event handling, AWT, Collection Classes; Applets, Servlets.

COURSE OUTCOMES: On successful completion of the course, students will be able to:

CO1. demonstrate knowledge on:
- Object Oriented Programming concepts - classes, objects, inheritance, polymorphism, encapsulation and abstraction.
- Packages, interfaces, multithreading, exception handling, event handling.

CO2. analyze complex engineering problems using object oriented concepts.

CO3. design and develop reusable code to provide effective solutions for real world problems using inheritance and polymorphism.

CO4. apply AWT and Applets to create interactive Graphical User Interfaces.

CO5. use advanced programming languages to develop web applications.

CO6. build Java Applications suitable for societal requirements.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION (10 periods)
Data types, Variables, Arrays, Operators, Control statements. Classes and Objects: Concepts of Classes, Objects, Constructors, Methods, this keyword, Garbage collection, Overloading Methods and Constructors, Parameter passing, Access control, Recursion, String Class.

UNIT-II: INHERITANCE, PACKAGES AND INTERFACES (09 periods)
Inheritance: Inheritance basics, Super keyword, Multi-level hierarchy, Abstract classes, Final keyword with inheritance.
Packages: Definition, Creating and accessing a package, Understanding CLASSPATH, Importing packages.
Interfaces: Definition, Implementing interfaces, Nested interfaces, Applying interfaces, Variables in interface and Extending interfaces.

UNIT-III: EXCEPTION HANDLING AND MULTITHREADING (08 periods)
Exception Handling: Concepts of exception handling, Exception types, Usage of Try, Catch, Throw, Throws and Finally, Built in exceptions, Creating own exception sub classes.
Multithreading: Java thread model, Creating threads, Thread priority, Synchronizing threads,Inter-thread communication.

UNIT-IV: COLLECTION CLASSES, THE APPLET CLASS AND AWT (10 periods)
Collection Classes: Array List Class, LinkedList Class, Hash set Class, LinkedHashSet Class, TreeSet Class, PriorityQueue Class, EnumSet Class.
The Applet Class: Types of applets, Applet basics, Applet architecture, Applet skeleton, Passing parameters to applets.
AWTControl Fundamentals:User interface components, Layout managers.

UNIT-V: EVENT HANDLING AND SERVLETS (08 periods)
Delegation event model: Event classes, Event Listener Interfaces - Mouse and Key; Adapter classes.
Servlets: Life cycle of a servlet, Using Tomcat for Servlet development, Create and compile the servlet source code, Servlet API, Javax.Servlet package.

Total Periods: 45

TEXT BOOK:

1. Herbert Schildt, *Java the Complete Reference*,Oracle Press, 9th edition, 2014.

REFERENCE BOOK:
1. SachinMalhotra and SaurabChoudhary, *Programming in Java*, Oxford University Press, 2nd edition, 2014.

III B.Tech.-II Semester

(16BT60203) DESIGN AND ESTIMATION OF ELECTRICAL SYSTEMS

(Program Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:Course on Electrical and Electronic workshop practice.

COURSE DESCRIPTION:

Design and estimation of residential & commercial buildings, overhead transmission & distribution lines and industrial buildings; Light sources, principals of light & design, types of lamps; electric heating, welding and their applications.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- electrical wiring of residential & commercial and indus trial buildings.
- material and size of conductors for overhead transmission & distribution lines.
- light sources and illumination.
- electric heating & welding.

CO2. analyze
- estimation of residential & commercial buildings, over head transmission & distribution lines and industrial buildings.
- proper illumination strategy for effective lighting.
- heating and welding schemes for industrial purpose.

CO3. design of electrical wiring for residential & commercial buildings and industrial buildings, overhead transmission & distribution lines and suitable illumination system for effective lighting.

CO4. solve engineering problems pertaining to utilization of electrical energy and provide feasible solutions.

CO5. apply suitable electric wiring, heating, welding and illumination techniques for domestic and industrial applications.

CO6. apply the conceptual knowledge of utilization strategies and techniques in relevance to industry and society.

CO7. adhere the constraints and standards for applications of electric energy in different fields.

DETAILED SYLLABUS:

UNIT-I: DESIGN AND ESTIMATION OF RESIDENTIAL AND COMMERCIAL BUILDINGS (11 periods)

Introduction to residential wiring system, systems of distribution of electric energy, methods of wiring, systems of wiring, choice of wiring, rating of wires and cables, load calculations and selection of size of conductor, Introduction to estimation & costing, sequence to be followed for preparing estimate, recording of estimates, determination of required quantity of material, preparation of detailed estimates and costing of residential and commercial building. General idea about IE rule, Indian electricity act and major applicable I.E rules

UNIT-II: DESIGN AND ESTIMATION OF OVERHEAD TRANSMISSION & DISTRIBUTION LINES (09 periods)

Introduction, typical AC electrical power system, main components of overhead lines, conductor materials, determination of size of conductor for overhead transmission line, conductors configuration spacing and clearances, span lengths, testing and commissioning of overhead distribution lines, some important specifications, preparation of detailed estimates and costing of overhead transmission and distribution lines.

UNIT-III: DESIGN AND ESTIMATION OF INDUSTRIAL NETWORK INSTALLATION (09 periods)

Introduction and classification of industrial buildings, design process, Industries with less than or equal to 1MVA and above 1MVA load, selection of distribution architecture, selection of transformer substations, selection of drives, selection of switch gears.

UNIT-IV: PRINCIPLES OF LIGHT AND DESIGN (10 periods)

Light sources, colour characteristics, terms used in illumination, laws of illumination, polar curves, photometry - integrating sphere. Types of lamps, LED lights, photometric analysis, lighting calculations, average lumen method, light loss factor, quality of lighting, design procedures, arrangement of fixtures, factory lighting, street lighting and flood lighting.

UNIT-V: ELECTRIC HEATING AND ELECTRIC WELDING (06 periods)

ELECTRIC HEATING: Design of heating element, advantages, methods and applications - resistance, induction and dielectric heating.

ELECTRIC WELDING: Classification, resistance and arc welding, electric welding, comparison between AC and DC welding.

Total Periods: 45

TEXT BOOKS:

1. J.B.Gupta, A Course in *Electrical Installation Estimating and Costing*, S.K.Kataria and Sons, Reprint edition, 2013.
2. M. K. Giridharan, *Electrical Systems Design*, I K International Publishing House Pvt. Ltd, 3rd edition, 2015.

REFERENCE BOOKS:

2. Hemant Joshi, Residential - Commercial and Industrial Electrical Systems: Network and Installation(Volume 2), Mc Graw Hill Education, 21st edition, 2007.
3. J.B.Gupta, *Utilization of Electric Power and Electric Traction*, S.K.Kataria and Sons, 10th edition, 2013.

III B.Tech. - II Semester

(16BT60204) **DIGITAL SIGNAL PROCESSING FOR ELECTRICAL ENGINEERS**

(Program Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Courses on Signals, Systems &Networks and Power Electronics.

COURSE DESCRIPTION:
Discrete-time signals and systems; Discrete Fourier series, Discrete Fourier Transforms (DFT) and Fast Fourier Transform (FFT) algorithms for the analysis of discrete time sequences; design and realization of Digital IIR and FIR filters; DSP based control of stepper motors; DSP based implementation of DC-DC buck-boost converters.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- digital signals and systems
- DFT and FFT
- analog & digital filter
- digital filter realization

CO2. Analyze discrete time signals and systems using DFT and FFT techniques.
CO3. design and realize IIR and FIR digital filters using different techniques.
CO4. evaluate the Discrete Fourier Transform (DFT) of a sequence and use the DFT to compute the convolution of two sequences and plot the frequency response of lin eartime-invariant systems.
CO5. Use relevant DSP controllers and techniques for applica tions in power electronics and electrical machines.
CO6. apply the conceptual knowledge of digital signal processing in relevance to industry and society.

DETAILED SYLLABUS:

UNIT-I: FUNDAMENTALS OF DSP **(07 periods)**
Review of discrete time signals and systems, Solutions for difference equation of discrete time systems, frequency response of discrete time signals, A/D and D/A conversion, Introduction to DSP system with block diagram.

UNIT-II: FOURIER TRANSFORMS **(12 periods)**
Discrete Fourier series - Introduction to discrete Fourier series and its properties.
Discrete Fourier Transforms - Introduction, relation with other transforms, properties, circular and linear convolution. Fast Fourier Transforms - Radix-2 Decimation in time and Decimation in frequency algorithms.

UNIT-III: DIGITAL FILTERS **(10 periods)**
Digital Vs Analog filters, advantages and disadvantages of digital filters, Realization of Digital filters using Direct form-I and Direct form-II structures.

IIR Digital Filters:
Analog low pass filter design: Butterworth and Chebyshev low pass filters. Design of IIR filter from analog filters using Impulse Invariance and Bilinear transformation techniques. Frequency transformation in digital domain.

UNIT-IV: FIR DIGITAL FILTERS **(08 periods)**
Linear phase FIR filters and its frequency response, location of zeros in linear phase FIR filters, Fourier series method for design of FIR filters. Design of FIR filters using windows -Rectangular, Triangular, Hamming and Blackmann windows.

UNIT-V:TMSLF2407 DSP CONTROLLERS **(08 periods)**
Introduction to peripherals - types of physical memory - software used (Preliminary approach). DSP based control of stepper motors - principle of hybrid stepper motors - basic operation, stepper motor drive system, implementation of stepper motor control system using LF2407 DSP controller. DSP based implementation of DC-DC buck boost converters - introduction, converter structure, continuous and discontinuous conduction modes, connecting DSP to buck-boost converter, controlling the buck-boost converter.

Total Periods: 45

TEXT BOOKS:
1. A.Anandkumar, *Digital signal processing*, PHI Learning Private limited, New Delhi,2013.
2. Hamid A. Toliyat, Steven G. Campbell, *DSP based electromechanical motion control*, CRC Press Special Indian edition, 2012.

REFERENCE BOOKS:

1. John G. Proakis, Dimitris G. Manolakis, *Digital Signal Processing, Principles, Algorithms and Applications*, Pearson Education/PHI, 4th edition, 2007.
2. Alan.V. Oppenheim, Ronald.W. Schafer, John R Buck, *Discrete Time Signal Processing*, Prentice Hall, 2nd edition, 2006.

III B.Tech. - II Semester
(16BT60205) **ELECTRICAL MACHINE DESIGN**
(Program Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: Course on Synchronous Machines.

COURSE DESCRIPTION:
Electrical machine design concepts; Design of transformers, DC machines, Induction machines and Alternators.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on design concepts of various types of electrical apparatus.
CO2. analyze the specific electric& magnetic loading characteristics for performance evaluation.
CO3. design a suitable electrical machine for domestic and industrial needs.
CO4. investigate and interpret the design data for evaluating the performance of electrical apparatus to provide valid conclusions.
CO5. apply appropriate technique/procedure for designing electrical apparatus.

DETAILED SYLLABUS:
UNIT-I: INTRODUCTION (08 periods)
Major considerations in electrical machine design, electrical engineering materials, space factor, choice of specific electrical and magnetic loadings, leakage reactance calculation. Thermal considerations, heat flow, temperature rise, rating of machines and standard specifications.
UNIT-II: DC MACHINES (08 periods)
Output equations, main dimensions, magnetic circuit calculations, Carter's coefficient, net length of iron, real & apparent flux densities, selection of number of poles, design of armature, design of commutator and brushes, performance prediction using design values.
UNIT-III: TRANSFORMERS (09 periods)
Output equations, main dimensions, kVA output for single and three phase transformers, window space factor, overall dimensions, operating characteristics, regulation, no load current, temperature rise in transformers, design of tank, methods of cooling of transformers.
UNIT-IV: INDUCTION MOTORS (10 periods)
Output equation of induction motor, main dimensions, length of air gap, rules for selecting rotor slots of squirrel cage machines, design of rotor bars & slots, design of end rings, design of wound rotor, magnetic leakage calculations, leakage reactance of poly phase machines, magnetizing current, short circuit current, circle diagram, operating characteristics.
UNIT-V: SYNCHRONOUS MACHINES (10 periods)
Output equations, choice of loadings, design of salient pole machines, short circuit ratio, shape of pole face, armature design, armature parameters, estimation of air gap length, design of rotor, design of damper winding, determination of full load field mmf, design of field winding, design of turbo alternators, rotor design. **Total Periods: 45**

TEXT BOOKS:
1. A.K. Sawhney, A. Chakrabarthi , A Course in *Electrical Machine Design*, 6th edition,Dhanpat Rai & Co, Delhi, 2013.
2. M.V.Deshpande, *Design and Testing of ElectricalMachines*, PHI learning Pvt. Ltd, New Delhi, 3rd edition, May 2010.

REFERENCE BOOKS:

2. V.N.Mittle, Arvind Mittal, *Design of Electrical Machines*, 5th edition, Standard publications, New Delhi, 2013.
3. A. NagoorKani, *A Simplified Text in Electrical Machine Design*, 2nd edition, RBA publications, Chennai 2017.

III B.Tech. - II Semester
(16BT60206) **HVDC TRANSMISSION**
(Program Elective-1)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	--	3

PREREQUISITES: Courses on Power Electronics and Transmission & Distribution.

COURSE DESCRIPTION:
Need for HVDC Transmission, planning and modern trends; Analysis and control of power converters; Harmonics; Characteristics and design of filters; Faults and protection of converters.

COURSEOUTCOMES: On successful completion of the course, students will be able to
CO1. demonstrate knowledge on
- different types of HVDC transmission system, various converter configurations and their control.
- effects of harmonics, faults and their control methods.

CO2. analyze
- different converter configurations.
- different control and protection strategies in HVDC system.
- power flow in HVDC transmission system.

CO3. demonstrate skills in designing filter circuits for minimizing harmonics.
CO4. solve problems in HVDC transmission to provide viable solutions.
CO5. select and apply appropriate devices, schemes and techniques for real time applications in HVDC transmission.
CO6. apply the conceptual knowledge of HVDC transmission in relevance to industry and society.

DETAILED SYLLABUS:
UNIT-I: INTRODUCTION TO HVDC TRANSMISSION (08 periods)
Need for HVDC transmission, apparatus required for HVDC transmission system, types of DC links, comparison of EHVAC and HVDC transmission systems, applications of HVDC transmission system, planning and modern trends in HVDC transmission system.
UNIT-II: STATIC POWER CONVERTER ANALYSIS (10 periods)
Introduction, analysis of Graetz circuit, characteristics of 6 pulse & 12 pulse converters, commutation process, rectifier and inverter operation, equivalent circuit for converters, special features of converter transformers.
UNIT-III: CONTROL OF HVDC CONVERTER AND SYSTEMS (10 periods)
Principle of DC link control, constant current, constant extinction angle and constant ignition angle control, individual phase control and equidistant firing angle control. Effect of source inductance on the system. Starting and stopping of DC link. Power flow control.
UNIT-IV: HARMONICS AND FILTERS (09 periods)
HARMONICS: Generation of harmonics, characteristic harmonics, calculation of AC harmonics, non-characteristic harmonics, effects of harmonics, calculation of voltage and current harmonics, effect of pulse number on harmonics.
FILTERS: Types of AC filters, filter characteristics, design of single tuned filters, design of high pass filters, DC filters.
UNIT-V: CONVERTER FAULTS AND PROTECTION (08 periods)
Converter faults, over voltages in converter station, protection against over current and over voltage in converter station, surge arresters, protection of DC line, DC breakers. **Total Periods: 45**

TEXT BOOKS:
1. K.R. Padiyar,HVDC Power Transmission Systems,New Academic Science, 2nd edition, 2011.
2. Sunil S Rao, EHV-AC, HVDC Transmission and Distribution Engineering, Khanna Publishers, 3rd edition, 2001.

REFERENCE BOOKS:

2. Jos Arillaga, *High Voltage Direct Current Transmission, The Institute of Electrical Engineers*, London, United Kingdom, 2nd edition, 1998.
3. E. W. Kimbark, *Direct current Transmission*, John Wiely & Sons, New York.

III B.Tech.- II Semester

(16BT60207) **ADVANCED CONTROL SYSTEMS**

(Common to EEE & EIE)

(Program Elective-2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	--	3

PREREQUISITES:Course on Control systems

COURSE DESCRIPTION:

Design of compensators and controllers, state space, canonical forms, controllability and observability, describing function, phase plane analysis, Lyapunov's stability analysis, Full order observer and reduced order observer.

COURSEOUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- state space analysis.
- various compensators and controllers.
- stability in the sense of Lyapunov.
- full and reduced order observers in state space analysis.

CO2. analyze the stability of nonlinear system using
- describing function approach.
- phase plane analysis.
- Lyapunov's method.

CO3. design suitable compensator and controllers using root locus and Bode plot.

CO4. evaluate stability of systems using pole placement and Lyopunov method to provide valid solutions.

CO5. select appropriate techniques for analyzing the stability of the system.

CO6. apply the conceptual knowledge of advanced control systems in relevance to industry and society.

DETAILED SYLLABUS:

UNIT-I: LINEAR CONTROL SYSTEM DESIGN (10 periods)

Introduction to control system design, types of compensators, design of compensators using root locus technique. Types of controllers, design of PI, PD and PID controllers using Bode plot and root locus technique.

UNIT-II: STATE SPACE ANALYSIS (08 periods)

Review of state space analysis. Canonical forms - Controllable canonical form, observable canonical form, Jordan canonical form. Tests for controllability and observability for continuous time systems - Time varying case, time invariant case, principle of duality, controllability and observability form Jordan canonical form.

UNIT-III: ANALYSIS OF NONLINEAR SYSTEMS (13 periods)

Introduction to non-linear systems, different types of physical nonlinearities, describing functions, derivation of describing functions for dead zone, saturation, backlash, relay and hysteresis. Stability analysis of nonlinear systems through describing functions, phase-plane analysis, singular points, methods for constructing trajectories - Isoclines' method, delta method.

UNIT-IV:STABILITY ANALYSIS (06 periods)

Stability in the sense of Lyapunov.Lyapunov's stability and Lypanov's instability theorems.Direct method of Lypanov for the linear and nonlinear continuous time autonomous systems.Generation of Lyapunov functions - Variable gradient method, Krasooviski's method and Popov's criterion.

UNIT-V:DESIGN OF CONTROL SYSTEMS IN STATE SPACE (08 periods)

Necessity of pole placement, design by pole placement, necessary and sufficient conditions for arbitrary pole placement. Determination of feedback gain matrix using direct substitution method and Ackermann's formula. Full order observer and reduced order observer. **Total Periods: 45**

TEXT BOOKS:

1. M. Gopal, *Modern Control System Theory*, New Age International (P) Ltd., 2nd edition, 2000.
2. K. Ogata, *Modern Control Engineering*, Prentice Hall of India, 4th edition, 2006.

REFERENCE BOOKS:

1. A. Nagoorkani, Advanced control theory, RBA publications, 2nd edition, 1999.
2. I.J. Nagrath and M.Gopal, *Control Systems Engineering*, New Age International (P) Ltd., 2007.

III B.Tech.- II Semester

(16BT60208) HIGH VOLTAGE ENGINEERING

(Program Elective-2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	--	3

PREREQUISITES: Courses on Engineering Physics, Engineering Chemistry, Electromagnetic Fields and Electrical Measurements.

COURSE DESCRIPTION:

Types of insulation systems; Breakdown process in solid, liquid and gaseous dielectrics; Generation of high AC and DC voltages, Impulse voltages and currents; Measurement of high voltage, current, resistivity, dielectric constant and loss factor; Testing of electrical apparatus.

COURSE OUTCOMES: on successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- various insulation systems and their behavior under voltage stress.
- generation and measurement of high voltages and cur rents.
- testing of various high voltage electrical apparatus.

CO2. analyze
- breakdown phenomenon in different insulation systems.
- circuits for generation of high voltage and currents.
- methods of measuring high voltage quantities.

CO3. design circuits for high voltage generation, measurement and testing.
CO4. evaluate different parameters in high voltage engineering to provide valid conclusions.
CO5. select suitable testing and diagnostic techniques for the high voltage apparatus.
CO6. apply contextual knowledge of high voltage engineering to sustain industrial needs.
CO7. follow the appropriate standard for testing of high volt age apparatus.

DETAILED SYLLABUS:

UNIT-I: BREAKDOWN PHENOMENA (09 periods)

Introduction to High Voltage engineering, electrical field stresses.

Gaseous dielectrics: primary and secondary ionization processes, criteria for gaseous insulation breakdown mechanism- Townsend's theory, streamer's theory, corona discharges, breakdown in electro negative gases, Paschen's law and its significance, time lags of breakdown.

Breakdown in solid dielectrics: Intrinsic Breakdown, avalanche breakdown, thermal breakdown and electro mechanic breakdow.

Breakdown of liquid dielectrics: Suspended particle theory, electronic Breakdown, cavity breakdown, electro convection breakdown.

UNIT-II: GENERATION OF HVAC AND HVDC (08 periods)

Generation of HVAC: Need for cascade connection and working of transformer units connected in cascade; Series resonant circuit -principle of operation, Tesla coil.

Generation of HVDC: Voltage doubler circuit, Cockroft-walton type high voltage DC set, Vande-graaff generator, calculation of high voltage regulation, ripple and optimum number of stages for minimum voltage drop.

UNIT-III: GENERATION OF IMPULSE VOLTAGE AND CURRENT (08 periods)

Introduction to standard lightning and switching impulse voltages, analysis of single stage impulse generator-expression for output impulse voltage.Multistage impulse generator - working of Marx impulse, rating of impulse generator, components of multistage impulse generator, triggering of impulse generator by three electrode gap arrangement, trigatron gap and oscillograph time sweep circuits.Generation of switching impulse voltage and high impulse current.

UNIT-IV: MEASUREMENT OF HIGH VOLTAGES (08 periods)

Chubb and Fortescue method for HVAC measurement, generating voltmeter - Principle & construction.Series resistance micro ammeter for HVDC measurements, standard sphere gap measurements of HVAC, HVDC, and impulse voltages, factors affecting the measurements. Potential dividers-resistive, capacitance and mixed RC.Measurement of high impulse currents-rogowsky coil and magnetic Links.

UNIT-V: HIGH VOLTAGE TESTS ON ELECTRICAL APPARATUS (12 periods)

Measurement of DC resistivity, measurement of dielectric constant and loss factor, partial discharge measurements.Testing of electrical apparatus - insulators, bushings, isolators, circuit breakers, cables, transformers and surge arresters; radio interference measurements. **Total Periods: 45**

TEXT BOOKS:

1. M.S. Naidu and V.Kamaraju, *High Voltage Engineering*, 5th edition, Tata Mc Graw-Hill Publications, 2013.
2. E.Kuffel, W.S.Zaengl and J.Kuffel, *High Voltage Engineering*: Fundamentals, 2nd edition,2005.

REFERENCE BOOKS:

1. C.L.Wadhwa, *High Voltage Engineering*, 2nd edition, New Age International (P) Limited, 2007.
2. Mazen Abdel-Salam, Hussein Anis, Ahdab *El-Morshedy, RoshdyRadwan, High Voltage Engineering Theory and Practice*, 2nd edition (Revised & Expanded) Marcel-Dekker Publishers(Special Indian Edn.).
3. L.L.Alston, *High Voltage Technology*, Oxford University Press, 1st Indian edition, 2011.

III B.Tech.- II Semester

(16BT60209) **INSTRUMENTATION**

(Program Elective-2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	--	3

PREREQUISITES: Courses on Analog Electronic Circuits, Electrical Measurements, Computer Architecture and Organization.

COURSE DESCRIPTION:

Principle of operation, advantages and limitations of various types of electronic and digital instruments for measurement of electrical quantities; Storage oscilloscopes, Data acquisition, display devices and recorders.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstration knowledge on
- various types of electronic and digital instruments.
- signal analyzers and storage oscilloscopes.
- data acquisition systems, display devices and recorders.

CO2. analyze
- various types of electronic and digital instruments.
- signal analyzers and storage oscilloscopes.
- display devices, recorders and various data acquisition systems.

CO3. design an appropriate display system for industrial and commercial applications.

CO4. estimate the magnitude, phase, frequency and spectrum of signal with oscilloscope to provide feasible solution.

CO5. selectan appropriate instrumentation principles and tech niques to substantiate the industrial requirements.

CO6. apply the conceptual knowledge of various instrumentation principles and techniques in relevance to industry.

DETAILED SYLLABUS:

UNIT-I: ELECTRONIC INSTRUMENTS (10 periods)

Electronic voltmeter using rectifiers, AC voltmeter - Average, Peak and true RMS voltmeters; Electronic multi meters-electronic ohm meter; Vector impedance meter, Vector voltmeters, Q meter-measurement of low, high impedance and band width, errors.

UNIT-II: DIGITAL INSTRUMENTS (09 periods)

Basic digital instrument. Digital frequency meter - Period and Time interval measurement; Digital phase meter, Capacitance meter, Digital Tachometer, Digital LCR meter, LCR Bridge, Characteristics of digital meters, specification of DVM, Digital multi meter. Microprocessor based ramp type DVM.

UNIT-III: SIGNAL ANALYZERS & STORAGE OSCILLOSCOPES (10 periods)

Analyzers-Resonant wave analyzers, Frequency-selective analyzers, Heterodyne analyzers, Application of wave analyzers; Harmonic distortion analyzers, Total Harmonic distortion analyzers, logic analyzers,Power analyzers. Spectrum analyzers-basic spectrum analyzers, spectra of different signal. Storage oscilloscope-Sampling oscilloscope, digital storage oscilloscope, electronic switch, oscilloscope probes.

UNIT-IV: DATA ACQUISITION SYSTEMS (09 periods)

Generalized data acquisition system and its components, Types of multiplexing systems - time division and frequency division multiplexing; Digital data acquisition system, use of data acquisition systems and recorders in digital systems, Digital recording systems -block diagram and its working; modern digital DAS- Analog Multiplexer operation, Operation of Sample- Hold circuits.

UNIT-V: DISPLAY DEVICES AND RECORDERS (07 periods)

Display devices-LED, LCD, LVD,VDU; Recorders- graphic, ultraviolet and magnetic tape recorders, digital tape recorders, biomedical recorders. **Total Periods: 45**

TEXT BOOKS:

1. A.K.Sawhney, A course on *Electrical and Electronics Measurements & Instrumentation*, DhanpatRai and Co. Publishe- rs,19th edition, 2015.

2. J.B. Gupta, A course on *Electrical and Electronics Measure ments & Instrumentation*, S.K. Kataria publishers, 14th edit- ion, 2015.

REFERENCE BOOKS:

1. H. S. Kalsi, *Electronic Instrumentation*-by Tata MC Graw Hill Company, 3rd edition, 2010.
2. D.V.S Murthy, *Transducers and Instrumentation*, Prentice Hall of India, New Delhi, 2nd edition,2010.

III B.Tech.- II Semester

(16BT60210) **SPECIAL ELECTRICAL MACHINES**

(Program Elective-2)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	--	3

PREREQUISITES: Course on Synchronous Machines

COURSE DESCRIPTION:

Construction, operation, types, characteristics and applications of Stepper Motors, Switched Reluctance Motor, PM Brushless DC Motor, Synchronous Reluctance, Linear Induction and synchronous Motors.

COURSEOUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- construction and operation of various types of special electrical machines.
- characteristics of special electrical machines.
- open loop and closed loop operation of special electrical machines.

CO2. analyze the operation and performance of special electrical machines for various operating conditions.

CO3. design suitable accessories / controllers for desired op eration and control of special electrical machines.

CO4. solve engineering problems pertaining to special electri cal machines to provide feasible solutions.

CO5. Select and apply appropriate technique and tools for con trol and operation of special electrical machines in domestic and industrial applications.

CO6. apply the conceptual knowledge of special electrical machines in relevance to industry and society.

DETAILED SYLLABUS:

UNIT-I:STEPPER MOTOR (09 periods)

Types of construction and working principle of stepping motor. Various configurations for switching the phase windings, torque equation and characteristics. Open loop and closed loop control of stepper motor, applications.

UNIT-II:SWITCHED RELUCTANCE MOTOR (09 periods)

Construction details, Principle of operation - Design of stator and rotor pole arcs - torque equation and characteristics, power converter for switched reluctance motor, control of switched reluctance motor, rotor sensing mechanism.

UNIT-III: SYCHRONOUS RELUCTANCE MOTOR (09 periods)

Constructional features, Types – Axial and Radial flux motors.

Principle of operation, torque-speed characteristics, Phasor diagram, Characteristics, control of SyRM, advantages and applications.

UNIT-IV:PERMANENT MAGNET BRUSHLESS DC MOTOR (09 periods)

Permanent magnet materials-hysteresis loop, analysis of magnetic circuits. Constructional details, principle of operation, BLDC square wave motor, types of BLDC motor, sensing and switching logic schemes, sensorless and sensor based control of BLDC motors.

UNIT-V:LINEAR MOTORS (09 periods)

Linear Induction Motor (LIM): Construction, principle of operation- single sided and double-sided LIM, thrust equations and performance equations based on current sheet concept, equivalent circuit of LIM, applications.

Linear Synchronous Motor (LSM): Construction, types, principle of operation, thrust equation, control and applications. **Total Periods: 45**

TEXT BOOKS:

1. K. VenkataRatnam, *Special electrical machines*, University press, New Delhi, 2009.
2. E.G. Janardhanan, *Special electrical machines*, PHI learning private limited, 2014.

REFERENCE BOOKS:

1. Takashi Kenjo, *Stepping Motors and their Microprocessor controls*, clarenden press, Oxford, 1984.

2. T. Kenjo and S. Nagamori, *Permanent-Magnet and Brushless DC Motors*, clarenden press, Oxford, 1984.
3. T.J.E. Miller, *Brushless Permanent Magnet and Reluctance Motor Drives*, clarenden press, Oxford 1989.
4. R. Krishnan, *Switched Reluctance Motor Drives - Modeling, Simulation, analysis, Design and Applications*, CRC press, Special Indian Edition, 2015.

III B.Tech.- II Semester

(16BT60231) **POWER ELECTRONICS AND DRIVES LAB**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	--	--	3	2

PREREQUISITES: Courses on Transformers & Induction Machines and Power Electronics.

COURSE DESCRIPTION:
Characteristics of power switching devices; Triggering and commutation circuits of SCR; working of various power electronic converters and AC & DC drives.

COURSE OUTCOMES:On successful completion of the course, students will be able to

CO1. demonstrate knowledge on characteristics of power switching devices, their triggering and commutation circuits, various converters and drives.
CO2. analyse physical observations and measurements of vari ous parameters related to powerswitching devicwes, converter circuitsand drives.
CO3. design, validate and applydifferent triggering and commutation circuits for SCR.
CO4. interpret and synthesize the data obtained from experi mentation on power electronic devices / circuits / drives to provide valid conclusions.
CO5. select an appropriate power switching device and/or cir cuit for real time applications.
CO6. apply the conceptual knowledge of power semiconduc tor drives in relevance to industry and society.
CO7. commit to ethical principles and standards while exercising the practical investigations on power electronics and drives.
CO8. work individually or in a group in the field of Powerelectronics and drives.
CO9. communicate effectively in verbal and written form in relevance to power electronics and drives.

DETAILED SYLLABUS:

PART-A:Any Seven of the experiments to be conducted from PART-A.

1. Characteristics of SCRand TRIAC.
2. Characteristics of Power MOSFET and IGBT.
3. Gate firing circuits for SCR (R, RC and UJT).
4. Forced commutation circuits for SCR.
5. Single phase half and full controlled bridge converter with R and RL loads.
6. Three phase semi-controlled bridge converter with R and RL loads.
7. Single phase dual converter with RL loads.
8. DC Jones chopper with R and RL Loads.
9. Single phase AC voltage controller with R and RL Loads.
10. Single phase cycloconverter with R and RL loads.
11. Single phase parallel inverter with R and RL loads.

PART-B:Any Three of the experiments to be conducted from PART-B.

1. Speed control of separately excited DC motor using single phase full converter.
2. Four quadrant chopper fed DC drive.
3. Speed control of single phase induction motor using cycloconverter.
4. Three phase fully controlled rectifier fed separately excited DC motor.
5. Speed control of single phase induction motor using IGBT based PWM inverter.

III B.Tech.- II Semester
(16BT60232) **POWER SYSTEM - I LAB**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
50	50	100	--	--	3	2

PREREQUISITES:Course on Transmission &Distribution and Power System Analysis.

COURSE DESCRIPTION:
Experimentation on Transmission and distributionsystems; Load flow, Fault and Stability analysis.

COURSE OUTCOMES: On successful completion of the course, students will be able to
CO1. demonstrate knowledge on transmission & distribution systems and various types of power system analysis for experimental implementation.
CO2. analyze, evaluate and relate experimental observations and measurements for validation.
CO3. design a suitable measuring and testing setup for experimentation on power systems.
CO4. interpret the data obtained from experimentation to provide valid conclusions
CO5. select and apply appropriate technique for solving complex problems in the power systems.
CO6. apply the conceptual knowledge of power systems in relevance to industry and society
CO7. commit to ethical principles and standards while exercising the practical investigations on power system.
CO8. work individually or in a group while exercising practical investigations in the field of power system analysis.
CO9. communicate effectively in verbal and written form in relevance to power system.

DETAILED SYLLABUS:

Conduct any **TEN** exercises from the following

1. Determination of transmissionline parameters.
2. Performance of a transmission line for different load conditions.
3. Corona characteristics.
4. Determination of efficiencyof string insulator.
5. Power angle characteristicof salient pole synchronous machine.
6. Performance characteristics of distribution system.
7. Formation of Ybus.
8. Formation of Zbus
10. Fault analysis.
11. Rotor dynamics using swing equation.
12. Transient stability analysis.

III B.Tech.- II Semester

(16BT60233) **SEMINAR**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
--	100	100	--	--	--	2

PREREQUISITES:
All the courses of the program up to III B. Tech. - I Semester.

COURSE DESCRIPTION:
Identification of topic for the seminar; Literature survey; Performing critical study and analysis of the topic identified; Preparation of report and presentation.

COURSE OUTCOMES:
Completion of the seminar work enables a successful student to demonstrate:

CO1. Knowledge on the seminar topic.
CO2. Analytical ability exercised during the seminar work.
CO3. Ability to investigate and solve complex engineering problems faced during the seminar work.
CO4. Ability to apply techniques to complex engineering activities with an understanding of limitations as applied in the seminar work.
CO5. Ability to function effectively as an individual as experienced during the seminar work.
CO6. Ability to present views cogently and precisely on the seminar topic.
CO7. Ability to engage in life-long leaning as experience during the seminar work.

IV B.Tech - I Semester
(16BT70201) **POWER SYSTEM OPERATION AND CONTROL**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	--	3

PREREQUISITES: Courses on Transmission & Distribution and Control Systems.

COURSE DESCRIPTION:
Load forecasting; Optimal operation of generators in thermal power station; Optimal scheduling of hydrothermal system; Unit commitment; Modeling of Power system components; Reactive power and Voltage control; Load frequency control.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on:
- load forecasting methods.
- characteristics, scheduling and optimal operation of thermal and hydro power plants
- unit commitment.
- modeling of power system components for LFC and AVR studies.
- concepts of reactive power and voltage control.
- load frequency control in single - and two-area systems.

CO2. analyze
- the criteria for optimal operation of thermal and hydro thermal plants with and without transmission losses.
- unit commitment of thermal units.
- compensation and tap settings required for reactive power and voltage control
- LFC parameters in single - and two-area power system.

CO3. design suitable strategy to control reactive power, voltage and LFC dynamics in power system.

CO4. evaluate various operational parameters for scheduling & economic operation and control of power system to provide viable solution.

CO5. apply appropriate tools and techniques for secured operation and control of power system.

CO6. apply the conceptual knowledge of power system operation and control in relevance to industry and society.

DETAILED SYLLABUS:

UNIT-I: PLANNING AND ECONOMIC OPERATION OFTHERMAL POWER SYSTEM (12 Periods)

Planning: Load curves, importance of load forecasting, quadratic, simple regression and exponential curve fitting techniques of forecasting.

Economic Operation of thermal plants: Characteristics of thermal plants. Optimum allocation with and without transmission losses, loss coefficients, general transmission line loss formula.

UNIT-II: HYDROTHERMAL SCHEDULING (07 Periods)

Introduction, classification of hydro plants, scheduling of hydro plants - long-term, short-term, scheduling energy.Hydrothermal scheduling - problem formulation, objective function, operational constraints. Short term scheduling - Lagrange function, iteration method, penalty factor.

UNIT-III: UNIT COMMITMENT (07 Periods)

Unit commitment Vs Economic dispatch.Constraints in unit commitment - start-up and shut-down costs, up time and down time. Unit commitment solution methods - priority list method, dynamic Programming method (maximum of three plants for three operating hours only).

UNIT-IV: REACTIVE POWER AND VOLTAGE CONTROL (08 Periods)

Introduction, reactive power and voltage control in transmission lines - Line compensation, Load compensation and Static compensation. Voltage control methods - Excitation systems - AC, DC and Static types. Tap-changing transformers. Components and block diagram representation of IEEE type-1 excitation system, AVR model.

UNIT-V: LOAD FREQUENCY CONTROL IN POWER SYSTEM (12 Periods)

Load frequency control of single area system: Necessity of keeping frequency constant, LFC Model - speed governor, turbine - reheat and non-reheat, generator-load model. steady state response - uncontrolled and controlled case, dynamic response. Load frequency control and economic dispatch control. Load frequency control of two area system: Block diagram representation, uncontrolled and controlled case, tie-line bias control. State space representation and optimal controller.

TEXT BOOKS: **Total Periods: 45**

1. K. Uma Rao, *Power system operation and control*, Wiley India Pvt. Ltd, 1st edition, 2013.
2. A. Chakravarthi and S. Halder, *Power System Analysis Operation and Control*, Prentice Hall India, 3rd edition, 2006.

REFERENCE BOOKS:

4. T.J.E. Miller, *Reactive Power control in electric systems*, Wiley, 1982.

IV B. Tech. - I Semester

(16BT70402) **EMBEDDED SYSTEMS**

(Common to EEE, ECE and CSSE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	--	3

PREREQUISITES:
Courses on Switching Theory and Logic Design and Computer Architecture and Organization

COURSE DESCRIPTION:
Embedded system design approaches; MSP430 Architecture; Instruction Set; On-Chip Resources; Programming; Communication with peripherals; Internet of Things related Issues.

COURSE OUTCOMES: On successful completion of the course, student will be able to

CO1. demonstrate knowledge in
- MSP430 Architecture, Pin out, Instruction set
- High level programming
- Usage of On-chip resources like ADC, DAC, Timers
- Internet of Things related issues

CO2. analyze various design issues regarding
- Usage of on chip resources
- Low power modes
- Communication support

CO3. design embedded systems using MSP430 series micro controllers to suit market requirements.

CO4. solve engineering problems and arrive at solutions in de signing embedded systems to support interconnectivity.

CO5. apply techniques, program skills, On-Chip resources to design networked embedded systems with an under standing of limitations.

CO6. reason out and practice professional engineering to de liver efficient and cost effective embedded based products to society.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO EMBEDDED SYSTEMS (09 periods)
Embedded Systems - Definition, Approaches, Applications, Anatomy of microcontroller, Memory, Software; MSP430 Introduction- Pin out, Functional Block diagram, Memory, CPU, Memory mapped input and output, Clock generator; Exceptions- Interrupts and Resets.

UNIT-II: ARCHITECTURE OF MSP430 (09 periods)
CPU, Addressing Modes, Constant Generator and Emulated Instructions, Instruction Set, Example programs, Reflections on CPU and Instruction set, Resets, Clock System.

UNIT-III: FUNDAMENTALS FOR PROGRAMMING (09 periods)
Development Environment, C Programming Language, Assembly Language, Programming and Debugging, Sample programs- Light LEDs in C, Read input from a switch; Automatic Control-Flashing light by delay, use of subroutines, using Timer_A; Header files and issues, Functions, Interrupts and Low power modes.

UNIT-IV: TIMERS, MIXED SIGNAL SYSTEMS AND COMMUNICATION (09 periods)
Timers - Watchdog Timer, RTC, Measurement in capture mode; Mixed-Signal Systems- Comparator_A, ADC10 Architecture & operation, ADC12, Sigma-Delta ADC Architecture & operation, DAC; Communication- Communication Peripherals in MSP430, SPI, Inter-integrated Circuit Bus, Asynchronous communication with the USCI_A.

UNIT-V: HARDWARE SOFTWARE CO-DESIGN AND INTERNET OF THINGS (09 periods)
CO-Design Issues: Co-design Models, Architectures, Languages, a Generic Co-design Methodology.
IOT: Introduction, Origins, Drivers and Applications, IOT Communication Models - Device to Device, Device to Cloud, Device to Gateway, Back end Data Sharing Model; IPV6 and IOTs', IOT Issues, Security Issues-challenges; Privacy Considerations, Interoperability/Standards.

Total Periods: 45

TEXT BOOKS:
1. John H. Davies, *MSP430 Microcontroller Basics*, Newnes Publications, 2008.
2. Karen Rose, Scott Eldridge, Lyman Chapin, T*he Internet of Things: An Overview: Understanding the Issues and Challenges of a More Connected World*, Internet Society, Oct, 2015.
3. Jorgen *Staunstrup, Wayne Wolf, Hardware / software co- design Principles and Practice*, Springer, 2009.

REFERENCE BOOK:

1. Chris Nagy, *Embedded Systems Design using the TI MSP30 Series*, Newnes Publications, 2003.

IV B.Tech. - I Semester

(16BT70202) **SWITCHGEAR AND PROTECTION**

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	--	3

PREREQUISITES: Courses on Transformers and Induction Machines, Synchronous Machines and Transmission & Distribution.

COURSE DESCRIPTION:

Overview of protection schemes; Fuses and circuit breakers; Electromagnetic, static and microprocessor based relays; Protection schemes for various components under various operating conditions; Neutral grounding.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- operation of various protective devices and schemes.
- protection principles for power system components.
- neutral grounding.

CO2. analyzedifferent protective devices and protection schemes under various operating conditions.

CO3. designproper protection scheme for different power sys tem components.

CO4. Evaluate operating parameters and settings of protective devices in different protection schemes to provide feasible solutions.

CO5. select and apply appropriate protective device and scheme for different scenarios.

CO6. apply various grounding methods for safety of power system components and personnel.

DETAILED SYLLABUS:

UNIT-I: RELAYS (11 periods)

Electromagnetic relays: Introduction, types of relays, construction, operation and torque equation of induction type relays, differential relays and biased differential relays. Characteristics of over current, directional and distance relays (R-X).

Static relays: Advantages and disadvantages, block diagram of a basic static relay, definite time, inverse and inverse definite minimum time (IDMT) static relays. Comparators - amplitude and phase comparators.

Microprocessor based relays: Advantages and disadvantages, block diagram with flow chart - distance relays and over current relays - definite, inverse & IDMT.

UNIT-II: FUSES AND CIRCUIT BREAKERS (09 periods)

Fuses - types of fuses & characteristics. Circuit breakers -elementary principles of arc interruption, recovery voltage, restriking voltage, RRV, average and maximum rate of rise of restriking voltage, current chopping and resistance switching. Construction and principle of operation - minimum oil circuit breaker, air blast circuit breaker, vacuum circuit breaker and SF_6 circuit breaker. Isolators.

UNIT-III: PROTECTION OF GENERATORS AND TRANSFORMERS (08 periods)

Protection of generators: Differential protection, restricted earth fault protection and inter turn fault protection, rotor fault protection, calculation of percentage winding unprotected.

Transformer protection: Differential protection, percentage differential protection, design of CT's ratio. Protection against internal faults - buchholtz relay.

UNIT-IV: PROTECTION OF FEEDERS AND TRANSMISSION LINES (10 periods)

Protection of transmission lines: Three-zone distance protection using distance relays, carrier current protection using over current relays.

Protection of feeders: Protection of radial and ring main feeders using over current relays. Protection of bus bars.

Protection against Over Voltages: Causes of over voltages in power systems, protection against lightning over voltages - non-linear (valve type) and metal oxide (zinc-oxide) surge arresters, surge absorbers. Insulation coordination, basic impulse insulation level (BIIL).

UNIT-V: NEUTRAL GROUNDING (07 periods)

Grounded and ungrounded systems.Effects of ungrounded neutral on system performance. Methods of neutral grounding - solid, resistance, reactance, arc suppression coil (Peterson coil), grounding practices.

Total Periods: 45

IV B.Tech. - I Semester

(16BT70203) ENERGY CONSERVATION AND MANAGEMENT

(Program Elective-3)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	--	3

PREREQUISITES: Courses on Electrical Measurements and Transmission & Distribution.

COURSE DESCRIPTION:

Principles of energy conservation, audit and management; Energy efficient motors, lighting, instruments and significance of energy economics.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- energy auditing practices.
- energy conservation schemes.
- energy economics and management.

CO2. analyze
- energy conservation measures.
- energy auditing practices.
- energy economics and management.

CO3. design an appropriate energy conservation scheme for commercial and industrial applications.

CO4. explore relevant methods of energy auditing in various industries and provide feasible solutions to conserve energy.

CO5. select and apply appropriate technique for energy auditing and conservation.

DETAILED SYLLABUS:

UNIT-I: ENERGY AUDIT AND MANAGEMENT PRINCIPLES (10 periods)

Energy audit - definitions, concept, types of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, energy conservation schemes - energy audit of industries - energy saving potential, energy audit of process industry, thermal power station, building energy audit.

Energy management- Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting.

UNIT-II: ENERGY CONSERVATION PRINCIPLES (08 periods)

Rules for efficient energy conservation - technologies for energy conservation - Energy scenario, principles of energy conservation, resource availability, energy savings, current energy consumption in India, roles and responsibilities of energy managers in industries.

UNIT-III: ENERGY EFFICIENT MOTORS AND LIGHTING (09 periods)

Energy efficient motors - factors affecting efficiency, loss distribution, constructional details, characteristics, variable speed, variable duty cycle systems, motor energy audit.

Lighting: Good lighting system design and practice, lighting control, lighting energy audit.

UNIT-IV: ENERGY INSTRUMENTS AND ECONOMIC ANALYSIS (08 periods)

Energy Instruments- watt meter, data loggers, thermocouples, pyrometers, lux meters, tongue testers.PLCs and applications. Energy Economic Analysis - The time value of money concept. Cash flow models, payback analysis, depreciation, taxes and tax credit - numerical problems.

UNIT-V: DEMAND SIDE MANAGEMENT (10 periods)

Introduction to DSM, concept of DSM, benefits of DSM, different techniques of DSM - time of day pricing, multi-utility power exchange model, and time of day models for planning. Load management, load priority technique, peak clipping, peak shifting, valley filling, strategic conservation, energy efficient equipment. Management and organization of energy conservation awareness programs.

Total Periods: 45

IV B.Tech. - I Semester

(16BT70204) FLEXIBLE AC TRANSMISSION SYSTEMS

(Program Elective-3)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	--	3

PREREQUISITES: Courses on Power Electronics and Transmission & Distribution.

COURSE DESCRIPTION:
Conventional AC Power Transmission System; Real and Reactive Power Transmission; load and line compensation; Concepts of FACTS; Compensation using FACTS Devices and Controllers; Shunt Compensation, Series Compensation, Phase angle Regulation and Combined compensation.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- real and reactive power flow in conventional system.
- concept of FACTS devices and controllers.
- shunt and series compensation using FACTS devices.
- phase angle regulation and combined compensation.

CO2. analyze
- stability and voltage profile of a compensated and un compensated transmission lines.
- Voltage regulation, improvement of transient stability, prevention of voltage instability, power oscillation damping with various FACTS devices and controllers.

CO3. design suitable compensation strategy for better volt age profile and secured operation of power system.

CO4. solve problems of transmission system to provide feasible solutions.

CO5. select and apply appropriate devices, schemes and tech niques for real time applications in AC power transmission.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO AC TRANSMISSION SYSTEMS (10 Periods)
Overview of interconnected power system. Power flow in AC systems - Expression for real and reactive power flow between two nodes of a power system, controllable parameters, conventional controllers for real and reactive power flows - merits and demerits.
FACTS - benefits - types of FACTS controllers.

UNIT-II: REACTIVE POWER CONTROL (09 Periods)
Reactive power - it's significance and control in Electrical Power Transmission - Different types of reactive power compensation equipment for transmission systems. Load compensation - specification of load compensator. Uncompensated and compensated transmission lines: shunt and series compensation.

UNIT-III: STATIC SHUNT COMPENSATION (11 Periods)
Operating characteristics and control schemes of static VAR generators - variable impedance type: TCR, TSR, TSC, Switching converter type - STATCOM; Hybrid VAR generators. Applications of static shunt compensators - Voltage regulation, improvement in transient stability, prevention of voltage instability, power oscillation damping. Comparison of static shunt compensators.

UNIT-IV: STATIC SERIES COMPENSATION (08 Periods)
Operating characteristics and control schemes of static VAR generators - variable impedance type: GCSC, TSSC, TCSC, Switching converter type: SSSC. Applications of static series compensators - improvement in transient stability, power oscillation damping. Comparison of static series compensators.

UNIT-V: STATIC PHASE ANGLE REGULATORS AND COMBINED COMPENSATORS (07 Periods)
Power flow control by phase angle regulators - operation and control of TCPAR, objectives of TCPAR: improvement of transient stability, power oscillation damping. Principle of UPFC - comparison of UPFC to series compensators and phase angle regulators, control schemes of UPFC, operating principle and characteristics of IPFC. **Total Periods: 45**

TEXT BOOKS:
1. T.J.E. Miller, *Reactive Power control in electric systems*, Wiley, 1982.
2. Narain G. Hingorani, LasziGyugyi, *Understanding FACTS: Concepts and Technology of Flexible AC Transmission Systems*, Wiley-IEEE Press, 1999.

REFERENCE BOOKS:
1. Xiao-Ping, Rehtanz, Christian, Pal, Bikash, *Flexible AC Transmission Systems: Modeling and Control, Springer Power Systems Series*, 2006.

2. R. Mohan Mathur and Rajiv K. Varma, *Thyristor based FACTS controllers for Electrical Transmission Systems*, Wiley-IEEE Press, 2002.

IV B.Tech. - I Semester
(16BT70205) **POWER SYSTEM AUTOMATION**
(Program Elective-3)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	--	3

PREREQUISITES: Course on Switchgear and Protection.
COURSE DESCRIPTION:
Power system operation and control, Substation and Distribution automation; Deregulation and Restructuring of power system.
COURSE OUTCOMES: On successful completion of the course, students will be able to
CO1. demonstrate knowledge on
- real time operation and control of power system.
- substation and distribution automation.
- restructuring of power system.

CO2. analyze
- various automation devices.
- technical issues.
- restructured model of power system.

CO3. design a suitable architecture for substation automation.
CO4. examine operational and technical issues to provide fea ible solutions for substation and distribution automation.
CO5. apply principles of DMS framework to integrate with real time power system.
CO6. apply the conceptual knowledge of real time operation and control of power system in relevance to industry and society.

DETAILED SYLLABUS:
UNIT-I: POWER SYSTEM CONTROL **(08 periods)**
Introduction, Decomposition, Operation of power systems, organization and operator activities, Investment factor, Control centre, elements of computer control system.
UNIT-II: POWER SYSTEM AUTOMATION **(10 periods)**
Evolution of automation systems, SCADA in power system, Building blocks of SCADA system, Remote terminal unit, Intelligent electronic devices, Data concentrators and merging units, SCADA communication systems, Master station, Human-machine interface, Classification of SCADA systems.
UNIT-III: SUBSTATION AUTOMATION **(09 periods)**
Substation automation, conventional automation, New smart devices for substation automation, new integrated digital substation, technical issues, new digital simulation. Substation automation architectures, Substation automation applications functions, Benefits of data warehousing.
UNIT-IV: DISTRIBUTION AUTOMATION **(08 periods)**
Introduction to Distribution automation - Customer, Feeder and substation automation, Subsystems in a distribution control center, Distributed Management System(DMS) framework integration with subsystems, Advanced real-time DMS applications, advanced analytical DMS applications, DMS coordination with other systems.
UNIT-V: POWER SYSTEM RESTRUCTURING **(10 periods)**
Deregulation- need for deregulation, Advantages of deregulation in power system; Restructuring Models- PoolCo Model, Bilateral Model, Hybrid Model; Independent system operator (ISO) - Role of ISO; Power exchange, Market operations, Market power, Standard cost, Transmission pricing, Congestion pricing - management of congestion.

Total Periods: 45

TEXT BOOKS:
1. Torstencegrell, *Power systems control Technology*, Prentice Hall, 1986.
2. Mini S Thomas and John D Mcdonald, *Power System SCADA and Smart Grids*, CRC Press, 2015.
3. M Shahidehpour, MuwaffaqAlomoush, *Restructured electrical power systems operation*, trading and volatility, CRC Press, 2001.

REFERENCE BOOKS:
1. James Northcote-Green and Robert Wilson, *Control and Automation of Electrical Power Distribution Systems*, CRC Press, 2013.
2. Edmund Handschin, *Real time control of Electric Power System*, Elsevier Publishing company, 1972.

IV B.Tech. - I Semester

(16BT70206) **POWER SYSTEM RELIABILITY**

(Program Elective-3)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	--	3

PREREQUISITES: Courses onMulti-variable Calculus & Differential Equations and Transmission & Distribution.

COURSE DESCRIPTION:
Overview of Probability theory; Study of network modelling and reliability functions; Assessment of repairable systems; Evaluation of generation system reliability, estimation of distribution system reliability indices.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- elements of probability theory and probability distributions.
- types of failures, reliability block diagram reductions.
- network reduction techniques and Markov modelling.
- loss of generation, frequency and duration techniques.
- distribution system reliability indices.

CO2. analyze
- various probability distributions.
- the network reduction techniques and Markov modelling.
- frequency and duration techniques.
- loss of generation, customer, load and energy oriented indices.

CO3. design component/system for desired life expectancy and reliability.

CO4. investigate various reliability indices and evaluate the power system performance to provide feasible solutions.

CO5. select and apply appropriate mathematical tool for assessment of power system reliability indices.

CO6. apply the conceptual knowledge of reliability engineering and its applications in relevance to industry and society.

DETAILED SYLLABUS:

UNIT-I: PROBABILITY THEORY (09 periods)

Introduction - rules for combining probabilities of events - bernoulli's trials, probability density and distribution functions.

Probability Distributions - discrete distributions - binomial distribution, poisson distribution. Continuous distributions - exponential distribution, weibull distribution and normal distribution - mean, standard deviation, variance.

UNIT-II: RELIABILITY FUNCTIONSAND NETWORK MODELLING (10 periods)

Reliability functions f(t), F(t), R(t), ?(t) and their relationships, bath tub curve. Reliability measures - MTTF, MTTR, MTBF. Reliability economics. Reliability block diagrams - series, parallel systems and combined series-parallel systems.Reliability analysis of series parallel networks using exponential distribution.Reliability evaluation of non-series-parallel systems - decomposition method, cut-set and tie-set method. Concept of redundancy - standby redundant systems, perfect switching, imperfect switching.

UNIT-III:MARKOV MODELLING & FREQUENCY AND DURATION TECHNIQUES (10 periods)

Markov chain - concept of stochastic transitional probability matrix (STPM), evaluation of limiting state probabilities. Markov processes - time dependent probability evaluation - evaluation of limiting state probabilities using STPM - one, two component repairable models. Frequency and duration concept - evaluation of frequency of encountering state for one, two component repairable models - evaluation of cumulative probability and cumulative frequency of encountering of merged states.

UNIT-IV:GENERATION SYSTEM RELIABILITY ANALYSIS (08 periods)

Generation system reliability analysis - reliability model of a generation system - recursive relation for unit addition and removal. Load modelling - merging of generation load model - evaluation of transition rates for merged state model - cumulative probability, cumulative frequency of failure evaluation - LOLP, LOLE, LOEE.

UNIT-V:DISTRIBUTION SYSTEM RELIABILITY ANALYSIS (08 periods)

Distribution system reliability analysis - radial networks - evaluation of basic reliability indices, performance indices - customer oriented, load and energy oriented indices and application to radial systems - effect of lateral distributor protection, disconnects and protection failure.

TEXT BOOKS: **Total Periods: 45**

1. Roy Billinton and Ronald N Allen, *Reliability Evaluation of Engineering Systems*, Springer, 2nd edition, 2007.
2. Roy Billinton and Ronald N Allen, *Reliability Evaluation of Power Systems*, Springer, 2nd edition, 2007.

REFERENCE BOOKS:
1. V. Sankar, *System Reliability Concepts*, Himalaya Publishing House, 1st edition. 2015.

2. Charles E. Ebeling, *An Introduction to Reliability and Maintainability Engineering*, Tata McGraw-Hill, 2nd edition, 2000.

IV B.Tech. - I Semester

(16BT70207) **ANALYSIS OF POWER ELECTRONIC CONVERTERS**

(Program Elective-4)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	--	3

PREREQUISITES: Courses on Electrical Circuits, Electronic Devices & Circuits, Analog Electronics Circuits, Linear and Digital ICs and Power Electronics.

COURSE DESCRIPTION:

Advanced Power semiconductor devices; MOSFET and IGBT-Gate and base drive circuits; 3-, 6- and 12- pulse converters; Switching Regulators; Advanced PWM Techniques.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on the characteristics of various special power switching devices & various triggering methods for MOSFET and IGBT.

CO2. analyze the performance of different power converters subjected to various loads.

CO3. design the suitable switching regulators for appropriate power electronic applications.

CO4. examine various configurations of power electronic circuits to provide feasible solutions.

CO5. select an appropriate power semiconductor device and/ or circuit for real time applications.

CO6. apply the conceptual knowledge of power semiconductor devices and/or circuits in relevance to industry.

DETAILED SYLLABUS:

UNIT-I: SPECIAL POWER SWITCHING DEVICES (10 periods)

Thyristors: GTOs - Construction, operation, steady state characteristics and switching characteristics. Construction and operation of BCTs, FET - CTHs, ETOs, IGCTs, MCTs, SITHs, ASCR, RCT, SCS and light activated thyristor. Comparison of various thyristors Transistors: Construction and operation of COOLMOS and SITs.

UNIT-II: GATE & BASE DRIVE CIRCUITS (10 periods)

MOSFET and BJT gate drive circuits. Isolation of gate and base drives - pulse transformer, opto-couplers. Thyristor firing circuits - R, RC firing circuits, photo - SCR isolator, pulse transformer isolation, 1:6 isolation transformer for inverter gate bias circuits and thyristor converter gating circuits. Gate drive ICs - MOSFETs and IGBTs. Drive ICs for converters - MOS Gated Driver.

UNIT-III: ANALYSIS OF MULTIPULSE CONVERTERS (09 periods)

Operation of 3-, 6-, and 12- pulse converters. Performance analysis of 3-, 6-, and 12- pulse converters - Low Order Harmonics (LOH), Total Harmonic Distortion(THD), Power Factor, Ripple Factor, Form Factor, Distortion Factor.

UNIT-IV: SWITCHING REGULATORS (08 periods)

Design and analysis of buck, boost, buck-boost and cuk converters.Resonant Converters-Zero Voltage Switching (ZVS) and Zero Current Switching (ZCS) converters.

UNIT-V: ADVANCED PWM TECHNIQUES (08 periods)

Modified Sinusoidal Pulse Width Modulation, Phase Displacement Control, Trapezoidal Modulation Technique, Staircase Modulation, Stepped Modulation, Harmonic Injection Modulation, Delta Modulation. Selective Harmonics Elimination (SHE) Technique. **Total Periods: 45**

TEXT BOOKS:

1. Muhammad H. Rashid, *Power Electronics: Circuits, Devices and Applications*, Pearson Education, 4th Edition, 2013.
2. Ned Mohan, T. M. Undeland, W.P. Robbins, *Power Electronics: Converters, Applications and Design*, Wiley, 3rd Edition, 2007.

REFERENCE BOOKS:

1. P C Sen , *Modern Power Electronics*, Wheeler publishing Co, 1st Edition , New Delhi, 1998.
2. Bimal K Bose, *Modern Power Electronics and Drives*, Pearson Education, 2nd Edition, 2003.

IV B.Tech. - I Semester

(16BT70208) **POWER QUALITY**

(Program Elective-4)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	--	3

PREREQUISITES: Course on Transmission and Distribution

COURSE DESCRIPTION:

Power quality terminology, power quality issues, classification; Different sources of power quality disturbances; Harmonic distortion; Principles for controlling harmonics; Power quality measuring equipment; Power quality monitoring standards; Impact of distributed generation on power quality.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- sources of power quality disturbances and issues.
- power quality monitoring and measuring instruments.
- power quality standards.
- effect of distributed generation on power quality.

CO2. analyze various power quality issues.

CO3. design a suitable harmonic filter for commercial and industrial loads.

CO4. investigate various power quality issues and provide fea sible solutions for improvement of power quality.

CO5. Select and use an appropriate equipment for monitoring and measurement of power quality.

CO6. apply the conceptual knowledge of power quality in relevance to industry and society.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO POWER QUALITY (08 periods)

Power Quality- definition, terminology, issues, evaluation procedure, responsibilities of the suppliers and users of electric power, power quality standards, CBEMA and ITI curves.

UNIT-II: POWER QUALITY DISTURBANCES (10 periods)

General classes of power quality problems- Impulsive and oscillatory transients. Long duration voltage variations - over voltage, under voltage, sustained interruption. Short duration voltage variations- interruption, sag, swell and outage. Sources of sags and interruptions, estimating voltage sag performance -overview of mitigation methods.

UNIT-III: FUNDAMENTALS OF HARMONICS (10 periods)

Harmonic distortion, voltage versus current distortion, harmonics versus transients, power system quantities under non-sinusoidal conditions, harmonic indices.Harmonic sources from commercial and industrial loads.Effects of harmonic distortion. Applied harmonics - harmonic distortion evaluation, principles of controlling harmonics, devices for controlling harmonic distortion. Harmonic filter design and standards on harmonics.

UNIT-IV: POWER QUALITY MONITORING (09 periods)

Power quality benchmarking, monitoring considerations, choosing monitoring locations, permanent power quality monitoring equipment, historical perspective of power quality measuring instruments. Power quality measurement equipment-types of instruments, assessment of power quality measurement data, power quality monitoring standards.

UNIT-V: DISTRIBUTED GENERATION AND GRID INTERCONNECTION (08 periods)

Distributed generation -connection requirements and impacts on the network.Interaction and optimal location of DG-Eigen analysis and voltage interaction.Power quality in DG-Mitigation of voltage dip during motor start, harmonic effects with DG, voltage flicker and fluctuation. Islanding issues, distribution line compensation-heavy Load and Light load condition, real generation, protection issues for distributed generation, technologies for distributed generation, power quality impact from different DG types.

Total Periods: 45

TEXT BOOKS:

1. Roger C. Dugan, Mark F. Mc Granaghan, Surya Santoso, H. Wayne Beaty, *Electrical Power Systems Quality*, 3rd edition, TMH Education Pvt. Ltd., 2012.
2. ArindamGhosh, Gerard Ledwich, *Power quality enhancement using custom power devices*, Kluwer academic publishers, 2002.

REFERENCE BOOKS:

1. G.T. Heydt, *Electric Power Quality*, Stars in a circle Publications, 1991. USA.
2. Surajit Chattopadhyaya, Madhuchhanda Mitra, Samarjit Senugupta, *Electrical Power Quality*, Springer Dordrecht Heidelberg London New York.
3. Math H. J. Bollen, *Understanding Power quality problems,* IEEE Press, 2007.

IV B.Tech. - I Semester
(16BT70209) **SMART GRID TECHNOLOGY**
(Program Elective-4)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	--	3

PREREQUISITES: Course on Transmission and Distribution

COURSE DESCRIPTION:
Smart grid benefits and requirements; Distribution management systems, smart substations, energy management systems; Smart meters and AMI; Power quality in smart grids; Communication channels and networks.

COURSE OUTCOMES: On successful completion of the course, students will be able to
CO1. demonstrate knowledge on
- smart grid initiatives and technologies
- communication technologies for the smart grid
- sensing, measurement, control and automation.

CO2. analyze different communication channels and networks in smart grid.
CO3. use modern techniques/tools to convert conventional grid to smart grid.
CO4. apply principles of energy management systems to industrial applications.
CO5. follow the protocols and standards for communication technologies.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO SMART GRID (07 periods)
Smart Grid - Key requirements, operations, key features, challenges - technical and non-technical, comparison between smart grid and conventional grid. Concept of smart grid, need for smart grid and smart grid drivers. Functions and benefits of smart grid. Smart grid deployment in India. Functional model of a smart grid.

UNIT-II: TECHNOLOGIES FOR TRANSMISSION AND DISTRIBUTION SYSTEMS (12 periods)
Distribution system topology. Distribution system tools - Remote terminal unit (RTU) and its architecture; Distribution Management System (DMS) - functions, features and applications; Voltage/VAR control - devices, fault detection, isolation and service restoration; Outage management systems. Smart substation - functions, features, substation automation, wide area monitoring system (WAMS); Feeder automation - functions. Energy management systems - benefits, functions, duality between DMS and EMS.

UNIT-III: SMART METERS AND ADVANCED METERING INFRASTRUCTURE (09 periods)
Smart electricity meters - evolution, need for smart meter, benefits, differences between conventional and smart meter, hardware used; Advanced metering infrastructure (AMI) - benefits, drivers, system model, security requirements, AMI Vs AMR; Communication infrastructure and protocols for smart metering - Home area network (HAN), Neighbourhood area network (NAN) - protocols and standards for communication; Intelligent Electronic Devices (IEDs) - functions, Smart meter issues.

UNIT-IV: POWER QUALITY MANAGEMENT IN SMART GRID (07 periods)
Introduction to power quality, Electromagnetic compatibility (EMC) in smart grid, Grid connected renewable energy sources - equipment required, power quality conditioner; Web based power quality monitoring - hardware and software. Power quality audit.

UNIT-V: HIGH PERFORMANCE COMPUTING FOR SMART GRID APPLICATIONS (10 periods)
Introduction, communication channels - wired and wireless, wired Vs wireless; Networks used in communication - LAN, WAN, HAN, FAN, NAN, IAN, BAN; Communication technologies - Internet protocol, introduction to cloud computing and properties. **Total Periods: 45**

TEXT BOOKS:
1. Bharat Modi, AnuPrakash and Yogesh Kumar, *Fundamentals of Smart Grid Technology*, S.K.Kataria& Sons, 2016.
2. JanakaEkanayake, KithsiriLiyanage, Jianzhong Wu, Akihiko Yokoyama, Nick Jenkins, *Smart Grid Technology and Applications*, Wiley Publications, 2012.

REFERENCE BOOKS:
1. James Momoh, Smart Grid: *Fundamentals of Design and Anal sis*, Wiley, IEEE Press, 2012.

IV B.Tech. - I Semester

(16BT70210) **SOFT COMPUTING TECHNIQUES**

(Program Elective-4)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	--	3

PREREQUISITES: Courses on DC Machines and Transmission and Distribution.

COURSE DESCRIPTION:
Architectures of artificial neural networks; Learning strategies; Fuzzy set theory; Fuzzy systems design; Applications of neural networks and fuzzy systems; Genetic algorithms and its applications.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate knowledge on
- learning rules, strategies and algorithms of artificial neural network.
- fuzzy logic system.
- genetic algorithms.

CO2. analyze
- learning methods and algorithms of neural networks.
- fuzzy& classical sets.
- operators of genetic algorithms.

CO3. design fuzzy systems, neural networks and genetic algorithms for desired specifications.

CO4. evaluate electrical engineering problems using soft com puting techniques to provide feasible solutions.

CO5. select and apply suitable soft computing techniques to solve electrical engineering problems.

CO6. apply the conceptual knowledge of soft computing tech niques in relevance to industry and society.

DETAILED SYLLABUS:

UNIT-I: FUNDAMENTALS OF ARTIFICIAL NEURAL NETWORKS (09 periods)
Neural networks - introduction, biological neural network. Artificial neural network - advantages, architectures, activation functions, important terminologies of ANN. Mcculloch-pits neuron model. Learning strategies - supervised, unsupervised and reinforced. Hebbian learning rule, Perceptron learning rule, delta learning rule, Widrow-hoff learning rule, correlation learning rule, winner-take-all learning rule, out star learning rule, concept of linear separability.

UNIT-II: FEEDFORWARD AND FEEDBACK NETWORKS (11 periods)
Supervised networks: Back propagation neural network - architecture, training algorithm, learning factors, initial weights, steepness of the activation function, learning constant, momentum method and necessary number of hidden neurons. Un-supervised networks: Kohonen self-organizing map-competitive process, cooperation process, adaptive process, training algorithm.

Associative memories: Concepts, Bidirectional Associative Memory (BAM) - architecture, discrete BAM-algorithm, analysis of hamming distance, energy function and storage capacity. Discrete Hopfield network - architecture and training algorithm. Electrical load forecasting - Artificial neural networks for short-term electrical load forecasting.

UNIT-III: CLASSICAL AND FUZZY SETS (09 periods)
Introduction to fuzzy logic. Classical sets - operations, properties. Fuzzy sets - operations, properties. Crisp relations - cardinality, operations, properties, cartesian product, composition. Fuzzy relations - cardinality, operations, properties, fuzzy cartesian product, composition. Linguistic hedges, membership functions - features, methods of membership value assignments - intuition, inference, rank ordering, neural networks, inductive reasoning.

UNIT-IV: FUZZY LOGIC SYSTEMS (08 periods)
Defuzzification - Lambda-cuts for fuzzy sets and fuzzy relations. Defuzzification methods - max membership principle, weighted average, centroid, center of sums. Fuzzy rule base - formation of rules, decomposition of rules, aggregation of rules - design procedure.

Speed control of DC motor - need of fuzzy logic, selection of membership functions, design of rule base for speed control.

UNIT-V: GENETIC ALGORITHM (08 periods)
Introduction to evolutionary computing - GA, biological background of GA. Terminologies and operators of GA - search space, individuals, genes, fitness function, population, encoding - binary encoding, breading. Selection - roulette wheel, rank, tournament. Crossover - single point and two point crossovers. Mutation - flipping, interchanging and reversing. Probabilities of cross over and mutation. Replacement - random, weak parent replacement. Termination criteria, flow chart, advantages, limitations and applications. Application of genetic algorithm for optimal allocation of capacitors in distribution system.

Total Periods: 45

TEXT BOOKS:

1. S.N. Sivanandam, S.N. Deepa, *Principles of Soft computing*, Wiley India private Ltd., 2nd edition, 2013.
2. Timothy J Ross, Fuzzy Logic with Engineering Application, Mc Graw Hill Inc., 3rd edition, 2014.

IV B.Tech. - I Semester

(16BT6HS01) **BANKING AND INSURANCE**

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:—

COURSE DESCRIPTION:
Origin of Banking; Functions of Banking; Role & Functions of RBI; Bank-Customer Relationship; Deposit and Loan Services of Banks; Banking Procedures; Electronic Payment Mechanisms; Business Models; Concepts of Risk and Uncertainty; Fundamentals of Insurance; Principles of Insurance; Essentials of Insurance Contracts; Insurance players in India.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate Knowledge in
- Tools and concepts of Banking and Insurance.
- Basic Principles and concepts of Insurance and Banking.
- e-fund transfers, e-payments and e-business models.

CO2. develop skills in providing solutions for
- Online banking and e – payments...
- Risk Management through insurance benefits the society at large.
- Money management by leveraging on technology, banking and insurance services.

CO3. exhibit conceptual soundness about banking and insurance, this would contribute to More employment opportunities.

CO4. provide life skills for effective utilization of Banking and Insurance facilities.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO BANKING (09 Periods)
Origin and growth of banking, meaning and functions of banking, importance of banking, Reserve Bank of India; functions, monetary policy, open market operations.

UNIT-II:BANK-CUSTOMER RELATIONSHIP (09 Periods)
Debtor-creditor relationship, anti-money laundering, deposit products or services, payment and collection of cheques. Accounts – Types of accounts, procedure for opening and closing an account. Loans and Advances- principles of lending, types of loans.

UNIT-III:BUSINESS MODELS AND ELECTRONIC PAYMENT SYSTEM (09 Periods)
Features, types of e-payment system, e-cash,NEFT, RTGS, Credit cards, Electronic purses and Debit cards.Business models- B2B, B2C, C2C, and B2G.

UNIT-IV:INTRODUCTION TO RISK AND INSURANCE (09 Periods)
Concept of risk, risk *Vs* uncertainty. Insurance definition, Insurance as risk mitigation mechanism, elements of insurance.

UNIT-V:INSURANCE OVERVIEW (09 periods)
Principles of insurance, insurance types, LIC & GIC insurance contract- nature, elements, functions, IRDA, Insurance Players in India. **Total Periods: 45**

TEXT BOOKS:
1. A.V. Ranganadha Chary, R.R. Paul,*Banking and Financial system*, Kalyani Publisher, New Delhi, 2nd edition.
2. P.K.Gupta,*Insurance and Risk Management*, Himalaya Publishing House, New Delhi.

IV B.Tech. - I Semester
(16BT6HS08) INDIAN ECONOMY
(Open Elective)
(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: —

COURSE DESCRIPTION:
Introduction; Time Value of Money; Elementary Economic Analysis; Value analysis, Value Engineering; Economic Planning.

COURSE OUTCOMES:
On successful completion of the course, the students will be able to

CO1. demonstrate knowledge in
- Micro and Macro Economics.
- Traditional and Modern methods of Capital Budgeting.
- Five year plans and NITI Aayog.

CO2. analyze
- Capital Budgeting.
- Value Analysis and Value Engineering.
- Economic analysis
- Law of supply and demand

CO3. understand the nuances of project management and finance

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION **(09 Periods)**
Economics- Flow in an Economy, Law of Supply and Demand; Micro and Macro Economics; Relationship between Science, Engineering, Technology, and Economic Development; Concept of Engineering Economics-Types of Efficiency, Definition and Scope of Engineering Economics.

UNIT-II: TIME VALUE OF MONEY **(12 Periods)**
Concepts and Application; Capital Budgeting-Traditional and Modern Methods; Simple and Compound Interest, Cash Flow Diagram, Principle of Economic Equivalence; Evaluation of Engineering Projects – Present Worth Method, Future Worth Method, Annual Worth Method, Internal Rate of Return Method, Cost-benefit Analysis in Public Projects; Depreciation Policy-Depreciation of Capital Assets, Causes of Depreciation, Straight Line Method and Declining Balance Method.

UNIT-III: ELEMENTARY ECONOMIC ANALYSIS **(09 Periods)**
Economic Analysis – Meaning, Significance, Simple Economic Analysis; Material Selection for a Product, Substitution of Raw Material; Design Selection for a Product; Material Selection-Process Planning, Process Modification.

UNIT-IV: VALUE ENGINEERING **(06 Periods)**
Introduction- Value Analysis, Value Engineering, Functions, Aims; Value Analysis vs. Value Engineering; Value Engineering Procedure- Advantages, Application Areas.

UNIT-V: ECONOMICPLANNING **(09 Periods)**
Introduction- Need For Planningin India,Five year plans(1951-2012), NITI Aayog(from 2014 onwards); Inclusive Growth-Meaning, Significance, Need for inclusive growth in India, Strategy for more inclusive growth, Challenges and Prospects; Employment and Inclusive Growth in India, Role of engineers in sustaining inclusive growth.

- E-governance.
- Development Administration.

CO2. analyze the possibilities and limitations ofexisting policies through Good Governance perspective.

CO3. design and develop solutions in e-governance modelsto find and provide opportunities in e-governance.

CO4. adopt principles ofe-governance in addressing the existing issues and challenges in e-governance sector.

CO5. understand the significance of Administrative Development in finding professional engineering solutions by probing
- Bureaucracy.
- Role of civil society.

DETAILEDSYLLABUS:

UNIT-I: INTRODUCTION **(09 Periods)**

Public and Private Administration- Differences and Similarities, Meaning, Scope; Importance of Public Administration in Modern Era; Public Administration and its implications in the field of Engineering.

Case Study: Unique Identification Authority of India (UIDAI):Aadhaar Project: Challenges Ahead.

UNIT-II: PUBLIC POLICY **(09 Periods)**

Meaning and Scope; Policy Formulation in India; Policy making process; Policy Implementation.

Engineering and Public Policy**,**Social, ethical, Monetary and fiscal policies; policy implications of engineering;The engineer's role in Public Policy.

Case Study:NITI Aayog: Demonetization and Aftermath of Demonetization – Cashless transactions.

UNIT-III: GOOD GOVERNANCE **(09 Periods)**

Significance; Objectives;Concepts;Reforms;Organization and its basic problemsAdministrative and Governance reforms in India; Sustainable and Inclusive growth in India;Engineering and Sustainable Environment-Role of Engineers; Right to information Act.

Case Study: Strategies in Good Governance: A Case Study of Karnataka, Kerala and Orissa.

UNIT-IV: E-GOVERNANCE **(09 Periods)**

Meaning, Significance, Issues in E-governance; E-governance Models, Problems and Opportunities; Application of DataWarehousing and Data Mining in Governance; Engineers role in re-engineering E-governance.

Case Study: e-Housing System for Bhavana Nirman Dhanasahayam Online disbursement of housing assistance in Kerala.

UNIT-V: DEVELOPMENT ADMINISTRATION **(09 Periods)**

Introduction; Development Administration-Administrative Development- Sustainable Development - Significance- Objectives; Bureaucracy - Personnel administration and human resources development; Role of civil society-Citizens and administration;Development and Engineering: Issues Challenges and Opportunities.

Case Study: Neeru-Chettu (Water-Tree) of Andhra Pradesh.

Case Study: TPDDL of Delhi and Odisha. **Total Periods: 45**

TEXT BOOKS:

1. M.P. Sharma, B.L. Sadana, Harpreet Kaur, *Public Administration in Theory and Practice,* Kitab Mahal, Mumbai, 1st edition,2014.
2. CSR Prabhu, *E., Governance – concepts and case studies*, PHI, New Delhi, 2nd edition, 2012.

REFERENCE BOOKS:

1. Surendra Munshi, Bijupaul Abraham, *Good Governance, Democratic societies and Globalization,* Sage publications, New Delhi, 1st edition, 2004.
2. R.K.Sapru, *Public Policy,*Sterling Publishers Pvt. Ltd., New Delhi, 1st edition, 2001.

IV B.Tech. - I Semester

(16BT60112) **BUILDING MAINTENANCE AND REPAIR**

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: –

COURSE DESCRIPTION:

Durability of buildings, Failure and repair of buildings, Material Techniques for repair, Maintenance of buildings, Conservation and recycling.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate basic knowledge on durability and serviceability, failures, repair and rehabilitation of buildings.
CO2. analyzefailures, repair and rehabilitation techniques.
CO3. solve complex building maintenance problems through proper investigations and interpretation.
CO4. use modern tools and techniques for various repairs and rehabilitation of structures.
CO5. provide solutions for building maintenance and repair problems considering health and safety.
CO6. consider environmental sustainability in building maintenance and repair.
CO7. maintain ethical standards for quality in repairs and rehabilitation of structures.
CO8. evaluate specifications and perform cost analysis of building components while repair and rehabilitation.

DETAILED SYLLABUS:

UNIT-I: DURABILITY AND SERVICEABILITY OF BUILDINGS (10 Periods)

Life expectancy of different types of buildings; Effect of environmental elements such as heat, dampness, frost and precipitation on buildings; Effect ofchemical agents on building materials, Effect of pollution on buildings, Effect of fire onbuilding; Damage by biological agents like plants, trees, algae, fungus, moss, insects, etc.; Preventive measures on various aspects, Inspection, Assessment procedure for evaluating for damaged structures, Causes of deterioration, Testing techniques.

UNIT-II:FAILURE AND REPAIR OF BUILDINGS (10 Periods)

Building failure – Types, Methodology for investigation; Diagnostictesting methodsandequipment, Repair of cracks inconcrete and masonry, Materials for Repair,Methods of repair, Repair and strengthening of concrete buildings, Foundationrepair and strengthening, Underpinning, Leakage of roofs and repair methods.

UNIT-III: TECHNIQUES FOR REPAIR (08 Periods)

Rust eliminators and polymers coating for rebars during repair, Foamed concrete, Mortar and dry pack, Vacuum concrete, Gunite and shotcrete, Epoxy injection, Mortar repairs for cracks, Shoring and underpinning.

UNIT-IV: MAINTENANCE OF BUILDINGS (09 Periods)

Reliability principles and its applications in selection of systemsfor building, Routine maintenance of building, Maintenance cost, Specifications formaintenance works, Dampness-Damp proof courses, Construction details for prevention ofdampness; Termite proofing, Fire protection, Corrosion protection.

UNIT-V: CONSERVATION AND RECYCLING (08 Periods)

Performance of construction materials and components in service, Rehabilitation of constructed facilities, Conservation movement, Materials and methodsfor conservation work, Recycling of old buildings and its advantages, Examples. **Total Periods: 45**

TEXT BOOKS:

1. Dennison Campbell, Allen and Harold Roper, *Concrete Structures – Materials, Maintenance and Repair*, Longman Scientific and Technical, UK, 1991.
2. Allen, R.T. L., Edwards, S.C. and J. D. N. Shaw,*TheRepair of Concrete Structures*, Blackie Academic & Professional, UK, 1993.

REFERENCE BOOKS:

1. Peter H. Emmons, *Concrete Repair and Maintenance*, John Wiley and Sons Publications, 2002.
2. Building Constructionunder Seismic Conditions in the Balkan Region, UNDP/UNIDO Project Rer/79/015,Volume 5, *Repair and Strengthening of Reinforced Concrete, Stone and Brick Masonry Buildings*, United Nations Industrial Development Organisation, Vienna.
3. Shetty, M. S., *Concrete Technology*, S. Chand and Company.
4. Smith, P. and Julian, W., *Building Services*, Applied Science Publications, London, 1976.
5. SP: 25, BIS;*Causes and Prevention of Cracks in Buildings*.

6. Champion, S., *Failure and Repair of Concrete Structures*, John Wiley and Sons Publications, 1961.
7. Perkins, P. H., Repair, Protection and Water Proofing of Concrete Structures, E & FN Spon, UK, 3rd edition, 1997.

IV B.Tech. - I Semester

(16BT60113) **CONTRACT LAWS AND REGULATIONS**

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: —

COURSE DESCRIPTION:
Construction contracts; Tenders; Arbitration; Legal requirements; Labour regulations.

COURSE OUTCOMES: On successful completion of the course, students will be able to
CO1. demonstrate basic Knowledge on construction contracts, tenders, arbitration, legalrequirements and labour regulations.
CO2. analyze contracts and tenders.
CO3. address the legal issues in contracts and tenders.
CO4. follow laws and regulations in the preparation of contracts and tenders.
CO5. prepare contract and tender documents as per the standards.
CO6. consider project schedule, cost, quality and risk in the preparation of contracts and tenders.

DETAILED SYLLABUS:
UNIT-I:CONSTRUCTION CONTRACTS (09 Periods)
Indian contracts act, Elements of contracts, Types of contracts, Features, Suitability, Design of contract documents, International contract document and laws, Standard contract document, Law of torts.

UNIT-II: TENDERS (09 Periods)
Prequalification, Bidding, Accepting; Evaluation of tender from technical, contractual and financial points of view; Two cover system, Preparation of the documentation, Contract formation and interpretation, Potential contractual problems, Price variation clause, Comparison of actions and laws, Subject matter, Violations.

UNIT-III: ARBITRATION (09 Periods)
Arbitration, Comparison of actions and laws, Agreements, Appointment of arbitrators, Conditions of arbitration, Powers and duties of arbitrator, Rules of evidence, Enforcement of award, Arbitration disputes, Dispute review board.

UNIT-IV: LEGAL REQUIREMENTS (09 Periods)
Legal requirements for planning, Property law, Agency law, Tax laws – Income tax, Sales tax, Excise and custom duties, Local government approval, Statutory regulations, Insurance and bonding, Laws governing purchase and sale, Use of urban and rural land, Land revenue codes, EMD, Security deposits, Liquidated damages.

UNIT-V:LABOUR REGULATIONS (09 Periods)
Social security, Welfare legislation; Laws relating to wages, bonus and industrial disputes; Labour administration, Insurance and safety regulations, Workmen's compensation act, Maternity benefit act, Child labour act, Other labour laws. **Total Periods: 45**

TEXT BOOKS:

1. **Subba Rao,G.C.V., *Law of Contracts I & II*, S. Gogia & Co., 11th edition, 2011.**
2. Jimmie Hinze, *Construction Contracts,*McGraw Hill, 3rd edition, 2011.

REFERENCE BOOKS:
1. Kishore Gajaria, *GT Gajaria's Law Relating to Building and Engineering Contracts in India*, Lexis Nexis Butterworths India, 4th edition, 2000.
2. Patil, B. S,*Civil Engineering Contracts and Estimates*, University Press (India) Private Ltd., 4th edition, 2015.

3. Joseph T. Bockrath, *Contracts and the Legal Environment for Engineers and Architects*, McGraw Hill Education, 7th edition, 2010.
4. AkhileshwarPathak, *Contract Law*, Oxford University Press, 2011.

IV B.Tech. - I Semester
(16BT60114) **DISASTER MITIGATION AND MANAGEMENT**
(Open Elective)
(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: –

COURSE DESCRIPTION:
Disasters; Earthquakes; Floods; Cyclones; Droughts; Landslides; Disaster management.

COURSE OUTCOMES: On successful completion of course, students will be able to:
CO1. demonstrate knowledge on disasters, their vulnerability and mitigation measures.
CO2. analyze disasters and their vulnerability.
CO3. design strategies for effective disaster mitigation.
CO4. address pre and post disaster issues for better preparedness and mitigation measures, through proper analysis and interpretation.
CO5. use appropriate methods in disaster mitigation and management.
CO6. use historical data of disasters to inform the people over preparedness and mitigation measures.
CO7. solve disaster related issues considering environment.
CO8. consider economical issues in disaster management.

DETAILED SYLLABUS:
UNIT-I: DISASTERS **(09 Periods)**
Types of disasters - Natural disasters; Impact of disasters on environment, infrastructure and development; Concepts of hazards and vulnerability analysis, Hazard Assessment, Guidelines for hazard assessment and vulnerability analysis, Basic principles and elements of disaster mitigation.
UNIT-II: EARTHQUAKES **(09 Periods)**
Introduction to earthquake, Intensity scale (MSK–64), Seismic activity in India, Seismic zones of India, Earthquakes in A.P., Action plan for earthquake disaster preparedness, Elements at risk, Recovery and rehabilitation after earthquake, Earthquake resistant design and construction of buildings; Tsunami – Onset, Types and causes,Warning, Elements at risk, Typical effects, Specific preparedness and mitigation strategies.
UNIT-III: FLOODS, CYCLONES AND DROUGHTS **(11 Periods)**
Floods and Cyclones: Onset, Types, Warnings; Elements at risk, Typical effects, Indian floods and cyclones, Hazard zones, Potential for reducing hazards, Mitigation strategies and community based mitigation.
Droughts: Onset, Types and warning; Causes, Impact, Early warning and response mechanisms, Mitigation strategies, Droughts in India.
UNIT-IV: LANDSLIDES **(08 Periods)**
Onset, Types and warning; Causes, Elements at risk, Indian landslides, Hazards zones, Typical effects, Mitigation strategies and community based mitigation.
UNIT-V: DISASTER MANAGEMENT **(08 Periods)**
Disaster management organization and methodology, Disaster management cycle, Disaster management in India – Typical cases; Cost–benefit analysis with respect to various disaster management programs implemented by NGOs and Government of India.

Total Periods: 45

TEXT BOOKS:
1. V. K. Sharma, *Disaster Management, Medtech Publishing,* 2nd edition, 2013.
2. Anand S. Arya, AnupKaranth, and AnkushAgarwal, *Hazards, Disasters and Your Community: A Primer for Parliamentarians,* GOI–UNDP Disaster Risk Management Programme, Government of India, National Disaster Management Division, Ministry of Home Affairs, New Delhi, Version 1.0, 2005.

REFERENCE BOOKS:

1. Donald Hyndman and David Hyndman, *Natural Hazardsand Disasters*, Cengage Learning, 3rd edition, 2011.
2. *Disaster Management in India,* AStatus Report, Ministry of Home Affairs, Govt. of India, May, 2011.
3. Rajendra Kumar Bhandari, *Disaster Education and Management: A Joyride for Students, Teachers, and Disaster Managers*, Springer India, 2014.
4. R. B. Singh, *Natural Hazards and Disaster Management*, Rawat Publications, 2009.

IV B.Tech - I Semester

(16BT60115) **ENVIRONMENTAL POLLUTION AND CONTROL**

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: —

COURSE DESCRIPTION:

Fundamentals ofair pollution;Dispersion of pollutants; Effects and control of air pollution; Water pollution;Soil pollution and control; Municipal solid waste management.

COURSE OUTCOMES: On successful completion of the course,
students will be able to

CO1. demonstrateknowledge on air, water, soil pollution and their control and solid waste management.
CO2. analyze causes and effects of air, water and soilpollution and their remedial measures.
CO3. recommend suitable solutionsto complex environmental pollution problems.
CO4. use appropriate remedial technique to solve environmental pollution problems.
CO5. understand the effects of environmental pollutionon human health and vegetation.
CO6. encourage sustainable development through implementation of pollution control measures.
CO7. maintain IS Codes for environmental quality control.

DETAILED SYLLABUS:

UNIT-I: AIR AND NOISE POLLUTION (08 Periods)

Air Pollution: Scope, Significance, Classification, Sources – Line, Area, Stationary, Mobile; Effects of air pollutants on man, material and vegetation; Global effects of air pollution; Air pollution meteorology - Lapse rate, Inversion, Plume pattern;Dispersion of air pollutants - Dispersion models and applications; Ambient air quality standards.

Noise Pollution: Sound pressure, Power and intensity,Impacts of noise, permissible limits of noise pollution, measurement of noise.

UNIT-II: AIR AND NOISE POLLUTIONCONTROL (10 Periods)

Self-cleansing properties of the environment,Dilution method, Control at source, Process changes and equipment modifications, Control of particulates–Types of equipment, Design and operation – Settlingchambers,Centrifugal separators, Bag house filters, Wet scrubbers, Electrostatic precipitators; Control of gaseouspollutants – Adsorption, Absorption, Condensation, Combustion; Control of air pollution from automobiles, Control of noise pollution.

UNIT-III: WATER POLLUTIONAND CONTROL (10 Periods)

Water pollution – Sources, Causes, Effects; Surface and groundwater quality – Physical, Chemical, Biological; Drinking water quality standards, Water purification – Processes, Engineered systems – Aeration, Solids separation, Settling operations, Coagulation, Softening, Filtration, Disinfection; Wastewater – Sources, Causes, Effects, Treatment and disposal – Primary, Secondary, Tertiary; Case studies.

UNIT-IV: SOIL POLLUTION AND CONTROL (08 Periods)

Soil pollutants, Sources of soil pollution, Causes, Effectsand control of soil pollution, Diseases caused by soil pollution, Methods to minimize soil pollution, Effective measures to control soil pollution, Case studies.

UNIT-V: MUNICIPAL SOLID WASTE MANAGEMENT (09 Periods)

Types of solid waste, Composition of solid waste, Collection and transportation of solid waste, Methods of disposal – Opendumping, Sanitary landfill, Composting, Incineration, Utilization - Recovery and recycling, Energy Recovery. **Total Periods: 45**

TEXT BOOKS:

1. Peavy, H. S, Rowe, D. R., and Tchobanoglous, G., *Environmental Engineering*, McGraw Hill Inc., 1985.
2. C.S.Rao, *Environmental Pollution Control Engineering*, New Age International Pvt. Ltd., 2nd edition, 2007.
3. Ibrahim A. Mirsa, *Soil Pollution: Origin, Monitoring & Remediation*, Springer, UK, 2nd edition, 2008.

REFERENCE BOOKS:

1. M.N. Rao and H.V.N. Rao, *Air Pollution,* Tata McGraw–Hill Education Pvt. Ltd., 19th edition, 2010.
2. Daniel Vallero, *Fundamentals of Air Pollution,* Academic Press (Elsevier), 5th edition, 2014.
3. S.M.Khopkar,*Environmental Pollution Monitoring and Control,* New Age International Pvt. Ltd., 2nd edition, 2007.
4. V. M. Domkundwar, Environmental Engineering, Dhanpat Rai & Co. Pvt. Ltd., New Delhi, 2014.

IV B.Tech - I Semester
(16BT60116) PLANNING FOR SUSTAINABLE DEVELOPMENT
(Open Elective)
(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: —

COURSE DESCRIPTION:
Sustainable development;Environmental impact;Sustainable Policies; Governance; Theories and strategies; Media and education for sustainability.

COURSE OUTCOMES: On successful completion of the course, students will be able to
- CO1. demonstrate the knowledge on sustainable development, environmental impact, sustainable policies, governance, systems and strategies, media and education for sustainability.
- CO2. analyze theories, environmental impact, policies, systems and strategies for sustainable development.
- CO3. develop suitable methods and systems for sustainable development.
- CO4. use appropriate techniquesin solving issues related to sustainable development.
- CO5. provide solutions to problems associated with sustainable development considering society.
- CO6. consider environment while planning sustainable development.
- CO7. communicate effectively on sustainable development issues through media and education.
- CO8. consider economical issues while planning for sustainable development.

DETAILED SYLLABUS:

UNIT-I: SUSTAINABLE DEVELOPMENT (09 Periods)
Definition and concepts of sustainable development, Capitalization of sustainability - National and global context;Millennium development goals, Emergence and evolution of sustainability and sustainable development, Theories of sustainability, Case studies.

UNIT-II: ENVIRONMENTAL IMPACT (09 Periods)
Climate change – Science, Knowledge and sustainability; Unforeseen environmental impacts on development, Challenges of sustainable development, Centrality of resources in sustainable development, Case studies.

UNIT-III: SUSTAINABLE POLICIES AND GOVERNANCE (09 Periods)
Governance - Democracy and Eco–welfare; Global civil society and world civil politics, Civic environmentalism, Policy responses to sustainable development, Economics of sustainability, Social responsibility in sustainability, National action, ISO 14001: Environmental management system.

UNIT-IV: SUSTAINABLE SYSTEMS AND STRATAGIES (09 Periods)
Need for system innovation, Transition and co–evolution, Theories and methods for sustainable development, Strategies for eco–innovation, Ecological foot print analysis, Socio ecological indicators – Eco labels; Policy programmes for system innovation, Case studies.

UNIT-V: MEDIA AND EDUCATION FOR SUSTAINABILITY (09 Periods)
Role of emerging media, Remarkable design and communication art, Activism and the public interest, Education for sustainability, Participation in decision making, Critical thinking and reflection, Case studies.

Total Periods: 45

TEXT BOOKS:

1. John Blewitt, *Understanding Sustainable Development*, Earth Scan Publications Ltd., 2nd edition, 2008.
2. Jennifer A. Elliot, *An Introduction to Sustainable Development*, Earth Scan Publications Ltd., 4th edition, 2006.

REFERENCE BOOKS:

1. Peter Rogers, Kazi F Jalal and John A Boyd, *An Introduction to Sustainable Development*, Earth Scan Publications Ltd., 2006.
2. Simon Dresner, *The Principles of Sustainability*, Earth Scan Publications Ltd., 2nd edition, 2008.
3. Peter Bartelmus, *Environment Growth and Development: The Concepts and Strategies of Sustainability*, Routledge, 3rd edition, 2003.
4. Gabriel Moser, Enric Pol, Yvonne Bernard, MiriliaBonnes, Jose Antonio Corraliza and Maria Vittoria Giuliani, *People Places and Sustainability*, Hogrefe & Huber Publishers, 2nd edition, 2003.

IV B.Tech. - I Semester

(16BT60117) **PROFESSIONAL ETHICS**

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: —

COURSE DESCRIPTION:
Engineering ethics; Professional ideals and virtues; Engineering as social experimentation; Responsibilities and rights; Global issues.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate the principles of ethics, importance of professional values and social responsibility.
CO2. analyze the problems in the implementation of moral autonomy and use ethical theories in resolving moral dilemmas.
CO3. develop suitable strategies to resolve problems arise in practicing professional ethics.
CO4. provide solutions to complex problems associated with professional ethics by proper analysis and interpretation.
CO5. use appropriate theories in resolving issues pertain to professional ethics.
CO6. understand the impact of professional ethics on society and address the limitations of codes of ethics.
CO7. practice engineering with professionalism, accountability and ethics.
CO8. function as a member, consultant, manager, advisor and leader in multi-disciplinary teams.
CO9. write reports without bias and give instructions to follow ethics.

DETAILED SYLLABUS:

UNIT-I: ENGINEERING ETHICS (09 Periods)
Scope and aim of engineering ethics, Senses of engineering ethics, Variety of moral issues, Types of inquiry, Moral dilemmas, Moral autonomy-Kohlberg's theory, Gilligan's theory, Consensus and controversy.

UNIT-II:PROFESSIONAL IDEALS AND VIRTUES (08 Periods)
Theories about virtues, Professions, Professionalism, Characteristics, Expectations, Professional responsibility, Integrity, Self-respect, Sense of responsibility, Self-interest, Customs and religion, Self-interest and ethical egoism, Customs and ethical relativism, Religion and divine command ethics, Use of ethical theories, Resolving moral dilemmas and moral leadership.

UNIT-III:ENGINEERING AS SOCIAL EXPERIMENTATION (10 Periods)
Engineering as experimentation, Similarities to standard experiments, Learning from the past and knowledge gained, Engineers as responsible experimenters, Conscientiousness, Moral autonomy and accountability, The challenger case, Codes of ethics and limitations, Industrial standards, Problems with the law of engineering.

UNIT-IV: RESPONSIBILITIES AND RIGHTS (09 Periods)
Collegiality and loyalty, Respect for authority, Collective bargaining, Confidentiality, Conflict of interests, Occupational crime, Rights of engineers, Professional rights, Whistle-blowing, The BART case, Employee rights and discrimination.

UNIT-V: GLOBAL ISSUES (09 Periods)
Multinational corporations, Professional ethics, Environmental ethics, Computer ethics, Engineers as consultants, Witnesses, Advisors and Leaders, Engineers as Managers, Managerial ethics applied to Engineering Profession, moral leadership.

Total Periods: 45

TEXT BOOKS:

1. Mike W. Martin and Roland Schinzinger, *Ethics in Engineering*, Tata McGraw-Hill, 3rd edition, 2007.
2. Govindarajan, M., NataGovindarajan, M., Natarajan, S. and Senthilkumar, V. S., *Engineering Ethics*, Prentice Hall of India, 2004.

REFERENCE BOOKS:

1. S. Kannan and K. Srilakshmi, *Human Values and Professional Ethics*, Taxmann Allied Services Pvt Ltd., 2009.

2. Edmund G. Seebauer and Robert L. Barry, *Fundamental of Ethics for Scientists and Engineers*, Oxford University Press, 2001.
3. Charles F. Fledderman, *Engineering Ethics*, Pearson Education, 2nd edition, 2004.

IV B.Tech. - I Semester

(16BT60118) **RURAL TECHNOLOGY**

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: –

COURSE DESCRIPTION:
Rural technology; Non conventionalenergy; Community development; IT in rural development.

COURSE OUTCOMES: On successful completion of the course, students will be able to
CO1. demonstrate the knowledge on technologies for rural development.
CO2. analyze various technologies available which are appropriate for rural development.
CO3. carryout feasibility study on the public and private partnership for rural development.
CO4. develop and use latest technologies for rural development.
CO5. address health and safety issues while choosing technologies for rural development.
CO6. educate the rural populace on the positive impacts of bio-fertilisers and usage of agro machinery in agriculture.

DETAILED SYLLABUS:

UNIT-I:RURAL TECHNOLOGY (09 Periods)
India - Technology and rural development, Pre and post-independence period,Rural India Life, Indian farmer, Role of science and technology in rural development, Rural technology and poverty eradication, Rural business hubs, Technology in improving rural infrastructure,Various organizations related to innovation, Issues of technology transfer - CAPART, NABARD, CSIR, NIF.

UNIT-II: NON CONVENTIONAL ENERGY (09 Periods)
Definition of energy, Types of alternative sources of energy, Sources of non-conventional energy – Solar energy: Solar cooker,Solar heater; Biogas, Recycling and management,Wastes conservation, Assessment and production of biomass products and their utilization.

UNIT-III: TECHNOLOGIES FOR RURAL DEVELOPMENT (09 Periods)
Food and agro based technologies, Tissue culture, Nursery,Building and construction technologies, Cultivation and processing of economic plants, Cottage and social industries.

UNIT-IV: COMMUNITY DEVELOPMENT (09 Periods)
Water conservation, Rain water Harvesting, Drinking water, Environment and Sanitation, Bio fertilizers, Medical and aromatic plants, Employment generating technologies–Apiculture, Pisciculture and Aquaculture.

UNIT-V:IT IN RURAL DEVELOPMENT (09 Periods)
Role of information technology (IT) in rural areas, Impact of IT in rural development, Need and necessity of technology, Corporate social responsibilities, Private sector participation (Activities in different spheres: Employment, Education, Health, Agriculture and service sectors) and SaansadAdarsh Gram Yojana (SAGY), Village adoptionschemes. **Total Periods: 45**

TEXT BOOKS:
1. M.S.Virdi, *Sustainable Rural Technologies*, Daya Publishing House, 2009.
2. S.V. Prabhathand, P. Ch. Sita Devi, *Technology and Rural India*, Serials Publications, 2012.

REFERENCE BOOKS:
1. R. Chakravarthy and P.R.S. Murthy, *Information Technology and Rural Development,*Pacific Book International, 2012.
2. Shivakanth Singh, *Rural Development Policies and Programmes,* Northern Book Centre, 2002.
3. L.M.Prasad, *Principles and Practice of Management*, S. Chand & Sons, 8th edition, 2014.

4. Venkata Reddy, K., *Agriculture and Rural Development -Gandhian Perspective*,Himalaya Publishing House, 2001.

IV B.Tech - I Semester

(16BT60308) GLOBAL STRATEGY AND TECHNOLOGY

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: —

COURSE DESCRIPTION:
Introduction to strategic management; Strategic management process; Principles of good strategy; Globalization strategies; Research and Development strategies; Technology Management and Transfer; Elements of Transfer Process; Corporate Governance in the Indian scenario.

COURSE OUTCOMES:
On successful completion of the course, students will be able to

CO1. demonstrate the knowledge on Strategic management, Research & development strategies, Technology management and transfer, Globalization and Corporate governance.
CO2. identify and analyze crucial problems in strategic management to improve performance of the organizations.
CO3. develop the products and production process by using research and development strategies.
CO4. conduct investigations on the impact of globalization in current scenario in the context of corporate governance.
CO5. appraise the resources and capabilities of the firm in terms of their ability to confer sustainable development.
CO6. apply ethics in strategic decision making.

DETAILED SYLLABUS:

UNIT-I: STRATEGIC MANAGEMENT (09 Periods)
Introduction, Classes of decisions, Levels of strategy, Core competence, Strategic intent and stretch, Approaches to strategy making, Roles of different strategists, Strategic management- Process, Benefits, Limitations; Ethics in strategic decision making, Principles of good strategy, Strategic Management in India.

UNIT-II: RESEARCH & DEVELOPMENT STRATEGIES (09 Periods)
Concept, Evolution of R&D Management, R&D as a business, R&D as competitive advantage, Elements of R & D strategies, Integration of R & D, Selection and implementation of R & D strategies, R & D trends.

UNIT-III: TECHNOLOGY MANAGEMENT AND TRANSFER (09 Periods)
Technology Management: Introduction, Technology - Definition, Components, Classification Features; Technology Management- Concept, Nature; Drivers of Management of Technology- Significance, Scope, Responding to technology challenges.
Technology Transfer: Introduction, Definition, Classification, Significance, Elements of process, Types of Technology Transfer, Package, Modes of Transfer, Routes, Channels and Effectiveness of Technology Transfer.

UNIT-IV: GLOBALISATION (09 Periods)
Definition, Stages, Essential conditions for globalization, Globalization strategies, Competitive advantage of Nations, Factors affecting Globalization, Globalization of Indian business.

UNIT-V: CORPORATE GOVERNANCE: THE INDIAN SCENARIO (09 Periods)
Emergence of corporate governance in India- Landmarks, Models, Codes and status in India, Role and Responsibilities of Regulators, The Board of Directors; Corporate Governance- Specific issues in India, Family owned Business, Corporate Governance and the Indian ethos.

Total periods: 45

TEXT BOOKS:

1. Francis Cherunilam, *Strategic Management*, Himalaya Publishing House, 3rd edition, 2002.
2. C.S.G.Krishnamacharyulu and Lalitha Ramakrishnan, *Management of Technology*, Himalaya Publishing House, 2nd edition, 2012.

REFERENCE BOOKS:

1. White and Bruton, *The Management of Technology and Innovation: A Strategic Approach*, Cengage Learning, 1st edition, 2007.
2. S.K.Mandak, *Ethics in Business and Corporate Governance*, TMH, 2nd edition, 2012.

IV B.Tech - I Semester

(16BT60309) **INTELLECTUAL PROPERTY RIGHTS AND MANAGEMENT**

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: —

COURSE DESCRIPTION:

Protection of ideas; innovation and artistic endeavors; Acts and procedure related to patents, trademarks, copy right, design registration, trade secrets and cyber laws; Infringement; Commercialization of intellectual property rights; Case studies in each.

COURSE OUTCOMES:

On successful completion of the course, students will be able to

CO1. demonstrate knowledge on intellectual property rights, patents, trademarks, copyrights, trade secrets and commercialization of intellectual property.

CO2. analyse the commercial significance of discoveries and developments and to assist in bringing these into public use.

CO3. investigate and ensure smooth transition from concept to final product by following National & International Laws of Intellectual Property.

CO4. utilize the various policies and procedures related to patents, trademarks and copyrights relating to IPR.

CO5. safeguard, review and manage the intellectual property so that it may receive adequate and appropriate legal protection against unauthorized use.

CO6. follow ethical standards in capacity building and work as a platform for development, promotion, protection, compliance, and enforcement of intellectual property and knowledge.

CO7. prepare documents and fill applications needed for filing a patent, design, copyright and trade mark.

DETAILED SYLLABUS:

UNIT-I: OVERVIEW OF INTELLECTUALPROPERTY RIGHTS (09 Periods)

Introduction, Intellectual Property vs. Conventional Property, and importance of intellectual property rights (IPRs), types of intellectual property, International Treaties for protection of IPR-Paris Convention, World Intellectual Property Organization (WIPO), World Trade Organization (WTO), Trade Related Aspects of Intellectual Property Rights (TRIP) Agreement, General Agreement on Tariffs and Trade(GATT).

UNIT-II: TRADEMARKS (09 Periods)

Introduction, Functions and kinds of trademarks, Trade Mark Registration Process, Post registration procedures, Trade Mark maintenance, Transfer of rights, Inter parties Proceedings, Infringement and Dilution of Ownership of Trade Mark, Trade Mark claims, International Trade Mark Law.

UNIT-III: PATENTS (09 Periods)

Introduction, Rights under Patent Law, Patent Application Process, Terms and Maintenance of Patents Requirements, Patent Ownership and Transfer, Licensing of Patent Rights, Sole and Joint Inventors, Disputes over Inventorship, Patent Infringement, International Patent Law, Patent Cooperation Treaty (PCT), Patent Law Treaty (PLT), Substantive Patent Law Treaty (SPLT).

UNIT-IV: COPY RIGHTS, TRADE SECRETS, CYBER LAWS (09 Periods)

Copy Rights: Introduction, nature and scope, subject matter, Rights afforded by copyright law, Copyrights ownership, transfers and duration, Copyright registration process.

Trade Secrets: Introduction, Determination of Trade Secret Status, Employer-Employee Relationships, Protection of submissions.

Cyber laws: E-commerce and cyber laws, cybercrime and legislation- need, objective and scope; IT Act 2000, Information Technology and Information Security.

UNIT-V: INDUSTRIAL DESIGN AND COMMERCIALIZATION OF INTELLECTUAL PROPERTY RIGHTS (09 Periods)

Industrial Design: Introduction, Indian Law related to registration of Industrial Designs, Essential requirements for registration of a design in India, International Agreements – Hague System; Conflicts related to registration of design.

Commercialization of Intellectual Property Rights: Competition and Confidentiality Issues, Antitrust Laws, Assignment of Intellectual Property Rights, Technology, Transfer Agreements, Intellectual Property Issues in the Sale of Business, Legal Auditing of Intellectual Property, Due Diligence of Intellectual Property Rights in a Corporate Transaction. **Total Periods: 45**

TEXT BOOKS:

1. Deborah E. Bouchoux, *Intellectual Property: The Law of Trademarks, Copyrights, Patents and Trade Secrets*, Cengage Learning, 4th edition, 2016.
2. KompalBansal and ParikshitBansal, *Fundamentals of Intellectual Property for Engineers*, BS Publications, 1st edition, 2013.

REFERENCE BOOKS:

1. PrabuddhaGanguli, *Intellectual Property Rights-Unleashing the Knowledge Economy*, McGraw Hill Education, 6th reprint, 2015.
2. P. Narayanan, *Intellectual Property Law*, Eastern Book Company, 3rd edition, 2013.

3. R.Radha Krishnan, S. Balasubramanian, *Intellectual Property Rights: Text and Cases*, Excel Books, 1st edition, 2008.

IV B.Tech. - I Semester

(16BT60310) MANAGING INNOVATION AND ENTREPRENEURSHIP

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:—

COURSE DESCRIPTION:

Evolution of entrepreneurship from economic theory Managerial and entrepreneurial competencies; Concepts of Shifting Composition of the Economy Purposeful Innovation & Sources of Innovative Opportunity; The Innovation Process; Innovative Strategies; Entrepreneurial Motivation; Entrepreneurs versus inventors; Ethics and International Entrepreneurship; Strategic Issues in International Entrepreneurship; Problem solving Innovation and Diversification.

COURSE OUTCOMES: On successful completion of the course, students will be able to

CO1. demonstrate the principles of business innovation and entrepreneurship for establishing industrial ventures.

CO2. analyze business plans for potential investors and stakeholders and effectively answer probabilistic questions on the substance of plan.

CO3. develop a comprehensive and well planned business structure for a new venture.

CO4. conduct investigation on complex problems, towards the development of Project.

CO5. apply modern statistical and mathematical tools to design projects and subsequent work procedures.

CO6. apply ethics in constructive innovation framework.

CO7. exhibit professionalism by employing modern project management and financial tools.

DETAILED SYLLABUS:

UNIT-I: CREATIVITY AND INNOVATION (07 Periods)

Introduction, Levels of innovation, Purposeful innovation and the sources of innovative opportunity, The innovation process, Innovative strategies, Strategies that aim at introducing and innovation, Dynamics of ideation and creativity – Inbound, Outbound; Context and process of new product development, Theories of outsourcing.

UNIT-II: PARADIGMS OF INNOVATION (11Periods)

Systems approach to innovation, Innovation in the context of developed economies and Emerging economies, Examining reverse innovation and its application, Performance gap, Infrastructure gap, Sustainability gap, Regulatory gap, Preference gap, organizational factors effecting innovation at firm level.

UNIT-III: SOURCES OF FINANCE AND VENTURE CAPITAL (07 Periods)

Importance of finance, Comparison of venture capital with conventional development capital, Strategies of venture funding, Investment phases, Investment process, Advantages and disadvantages of venture capital, Venture capital developments in India.

UNIT-IV: INTELLECTUAL PROPERTY INNOVATION AND ENTREPRENEURSHIP (11 Periods)

Introduction to Entrepreneurship, Evolution of entrepreneurship from economic theory, Managerial and entrepreneurial competencies, Entrepreneurial growth and development, Concepts, Ethics and Nature of International Entrepreneurship, Intellectual property – forms of IP, Patents, Trademarks, Design registration, Copy rights, Geographical indications, Patent process in India.

UNIT-V: OPEN INNOVATION FRAMEWORK AND PROBLEM SOLVING (09 Periods)

Concept of open innovation approach, Difference between open innovations and Cloud innovation approaches, Limitations and Opportunities of open innovation framework, Global context of strategic alliance, Role of strategic alliance, Problem Identification and Problem Solving, Innovation and Diversification.

Total Periods: 45

TEXT BOOKS:

1. Vinnie Jauhari, SudhanshuBhushan, *Innovation Management*, Oxford University Press, 1st edition, 2014.
2. Drucker, P. F., *Innovation and Entrepreneurship*, Taylor & Francis, 2nd edition, 2007.

REFERENCE BOOKS:

1. Robert D Hisrich, Claudine Kearney, *Managing Innovation and Entrepreneurship,* Sage Publications, 1st edition, 2014.

2. V.K.Narayanan, *Managing Technology and Innovation for Competitive Advantage*, Pearson India, 1st edition, 2002.

IV B.Tech. - I Semester
(16BT60311) MATERIALS SCIENCE
(Open Elective)
(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES:—

COURSE DESCRIPTION:
Structure and Bonding in metals; Steels, Cast Irons and Non Ferrous alloys; Material Selection for conductors, Insulators and semiconductors; Strengthening mechanisms of metals; Plastics and Ceramics as Insulators; AC and DC properties of Insulators; Semiconductors and Magnetic materials; Composite materials in Electrical and Electronics engineering; Material Selection and manufacturing of Optical fibers.

COURSE OUTCOMES: On successful completion of the course, students will be able to

- CO1. demonstrate the knowledge on concepts of fundamental science and engineering principles relevant to materials.
- CO2. analyze the structures of various types of Ferrous, Non-ferrous alloys influencing various engineering applications.
- CO3. conduct investigations to select suitable materials with desired properties for engineering applications.
- CO4. use phase diagrams to interpret the data regarding microstructure of materials.
- CO5. consider health and safety issues while providing materials to real time applications.
- CO6. use composite materials that reduce material waste in design and manufacturing for sustainability.

DETAILED SYLLABUS:

UNIT-I: INTRODUCTION TO MATERIAL SCIENCE (07 Periods)

Structure of metals: Bonds in Solids, Crystallization of metals, Grain and grain boundaries, Effect of grain boundaries on the properties of metals / alloys, Determination of grain size measurement.

Constitution of alloys: Necessity of alloying, Types of solid solutions, Hume rothery rules, Intermediate alloy phases.

UNIT-II: CAST IRONS, STEELS AND NON-FERROUS METALS (12 Periods)

Structure and properties of Grey cast iron, Spheroidal cast iron, White Cast iron, Malleable Cast iron, Alloy cast irons, Classification of steels, structure and properties of plain carbon steels, Structure and properties of Copper and its alloys, Aluminum and its alloys.

UNIT-III: ELECTRIC CONDUCTORS AND INSULATORS (12 Periods)

Type of materials selected for conductors, Insulators and semiconductors, Introduction to ceramics - Bonding and microstructure, DC properties of ceramic materials, AC properties of ceramic materials, mechanical properties, Ceramics as Conductors, Insulators and capacitors; Introduction to Plastics - DC properties, AC properties, Mechanical properties.

UNIT-IV: SEMICONDUCTORS AND MAGNETIC MATERIALS (09 Periods)

Fabrication of Semiconductors, Producing a silicon wafer-Lithography and Deposition packaging of semiconductors materials; Types of magnetic materials, Measuring magnetic properties, Application of soft magnetic materials in Electromagnets and relays, AC transformers, Generators and motors.

UNIT-V: ADVANCED MATERIALS AND APPLICATIONS (05 Periods)

Composites - Fiber reinforced metal matrix, Ceramic matrix, Polymer matrix, Properties and applications of composites; Ceramics - Alumina, Zirconia, Silicon Carbide, SiAlONs, Reaction Bonded Silicon Nitride (RBSN); Glasses- properties and applications, manufacturing of optical fibers.

Total Periods: 45

TEXT BOOKS:

1. Kodgire V D, *Material Science and Metallurgy*, Everest Publishing House, Pune, 31st edition, 2011.
2. Ian. P.Jones, *Material Science for Electrical and Electronic Engineers*, Oxford University Press, 1st edition, 2000.

REFERENCE BOOKS:

1. V. Raghavan, *Physical Metallurgy: Principles and Practices*, PHI, New Delhi, 2nd edition, 2006.
2. William. D. Callister, *Materials Science & Engineering-An Introduction*, John Wiley and Sons, New Delhi, 6th edition, 2002.

IV B.Tech. - I Semester

(16BT70412) **GREEN TECHNOLOGIES**

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
30	70	100	3	1	-	3

PREREQUISITES: –

COURSE DESCRIPTION:
Principles of green engineering; Green communications; Green energy; Green computing; Green construction; Green manufacturing.

COURSE OUTCOMES: On successful completion of the course, students will be able to
CO1. deploy conceptual knowledge in green technologies pertaining toengineering practice.
CO2. analyze various green technologies for engineering practice.
CO3. provide green solutions to engineering problems.
CO4. apply various green techniques in the engineering practice.
CO5. consider health and safety issues while providing green solutions to the society.
CO6. understand issues related to environment sustainability.
CO7. apply ethical standards for environmental sustainability in the engineering practice.

DETAILED SYLLABUS:

UNIT-I: PRINCIPLES OF GREEN ENGINEERING AND GREEN COMMUNICATIONS (11 Periods)

Principles of Green Engineering:
Introduction, Definition of green engineering, Principles of green engineering.

Green Communications:
Introduction, Origin of Green Communications, Energy Efficiency in Telecommunication systems, Telecommunication system model and energy Efficiency, Energy saving concepts, Quantifying energy efficiency in ICT, Energy efficiency metrics of green wireless networks, Embodied energy of communication devices- Introduction, The extended energy model, Embodied/Operating Energy of a BS in Cellular network- A Case study; Energy efficient standards for wireline communications.

UNIT-II: GREEN ENERGY (09 Periods)
Introduction, adverse impacts of carbon emission, control of carbon emission– methods, greenhouse gas reduction – methods, Energy sources and their availability, Green energy for sustainable development. Green energy sources – Solar energy, Wind energy, Fuel cells, Biofuels, Wave and Geothermal energy (Principle of generation only).

UNIT-III: GREEN IT (09 Periods)
The importance of Green Information technologies, Strategizing Green Initiatives, Implementation of Green IT, Information Assurance, Communication and Social Media, Regulating Green IT- Laws, Standards and Protocols; RoHS, REACh, WEEE, Legislating for GHG Emissions and Energy Use of IT Equipment, Non-regulatory Government Initiatives, Industry Associations and Standard Bodies, Green Building Standards, Green Data Centres, Social Movements and Greenpeace, Conclusions.

UNIT-IV: GREEN CONSTRUCTION (09 Periods)
Green Building: Definition, Typical features, Benefits, Requisites for green building construction, Sustainability, Concept of REDUCE, REUSE, RECYCLE, RETHINK, REPLENISH AND REFUSE (6 R's), Sustainable construction focus point – Site selection, Planning, Water, Energy, Material, Indoor air quality, Construction procedures.
Indian Green Building Council: Introduction to IGBC green homes, Benefits of IGBC, IGBC green home rating system, Introduction to USGBC, LEED rating system, Procedure to get IGBC certification, GRIHA Rating.

UNIT-V: GREEN MANUFACTURING (09 Periods)
Introduction, background, definition, motivation and barriers to green manufacturing, Impact of manufacturing in environmental ecology, Need for green manufacturing, Advantages and Limitations, green manufacturing strategies, Green manufacturing and sustainability, Sustainability tools; Waste stream mapping and application, Green manufacturing through clean energy supply, green lean manufacturing, green packaging and supply chain. **Total Periods: 47**

TEXT BOOKS:
1. Konstantinos Samdanis, Peter Rost, Andreas Maeder, MichelaMeo, Christos Verikoukis, *Green Communications: Principles, Concepts and Practice,* John Wiley & Sons, 2015.
2. Soli J. Arceivala, *Green Technologies for a better future,* McGraw Hill Education (India) Pvt. Ltd, 2014.
3. San Murugesan, G.R. Gangadharan, *Harnessing Green IT – Principles and Practices,* John Wiley & Sons Ltd., 2008.
4. Tom Woolley, Sam Kimmins, Paul Harrison and Rob Harrison, *Green Building Handbook*, *Volume 1*, E & FN Spon, an imprint of Thomson Science & Professional.
5. *IGBC Green Homes Rating System Version 1.0* – A bridged reference guide.
6. J Paulo Davim, Green Manufacturing: Processes and Systems, Springer, 2012.
7. David A Dornfeld, Green Manufacturing: Fundamentals and Applications, Springer, 2013.

REFERENCE BOOKS:

1. Athanasios V Alavanidis, ThomaisVlachogianni, *Green Chemistry and Green Engineering*, SynchronaThemata, 2012.
2. G.D. Rai, *Non-conventional Energy Sources*, Khanna Publishers, Delhi, 5th edition,2011.
3. Marty Poniatowski, *Foundation of Green Information Technology, Prentice Hall, 2009.*
4. R. K. Gautham, *Green Homes*, BS publications, 2009.

IV B.Tech. - I Semester

(16BT70413) **INTRODUCTION TO NANOSCIENCE AND NANOTECHNOLOGY**

(Open Elective)

(Common to EEE, ECE & EIE)

Int. Marks	Ext. Marks	Total Marks	L	T	P	C
