

Research Centre for Applied Sciences

The Research centre for applied sciences was established in the year 2017 to execute interdisciplinary research and collaborative works in applied sciences. The faculty were provided with the opportunities to carryout research in Organic chemistry, Nano-Material, Polymers and Enviro-analytical techniques. Further , a good number of research papers were published by faculty National and international journals of good repute. Also , Four UGC-minor research projects were completed in the centre successfully and two internally funded research projects are in progress. One industrial research project was allotted by DSIR , Govt. of India to execute work in the centre.

Physical adsorption of activated carbon

Synthesis of nano-composites
