# Courses having focus on

# Employability/ Entrepreneurship/ skill Development

**Program: M.Tech.- Electrical Power Systems**

**Regulations : SVEC-14**

The Courses (with course outcomes) under SVEC-14 Regulations which focus on *employability/ entrepreneurship/ skill development* are highlighted with the following colours.

| Skill |
|:---:|

| Employability |
|:---:|

| Entrepreneurship |
|:---:|

# M. Tech. (EPS) I-Semester
## (14MT10701) POWER SYSTEM SECURITY AND STATE ESTIMATION

| Int. Marks | Ext. Marks | Total Marks | | L | T | P | C |
|:---:|:---:|:---:|---|:---:|:---:|:---:|:---:|
| 40 | 60 | 100 | | 4 | -- | -- | 4 |

**PRE-REQUISITES:**
Power system Analysis at UG level

**COURSE DESCRIPTION:**
Power system network matrices; AC and DC Load flow studies; Balanced and unbalanced Short circuit analysis; Power system security; Methods of Power System State estimation

**COURSE OBJECTIVES:**
- To introduce conceptual knowledge on power system security and state estimation.
- Develop skills to carry out the Contingency analysis for various power system networks.
- To analyze security of power system network for different operational scenarios.

**COURSE OUTCOMES:** On successful completion of the course, the student would be able to
1. gain knowledge on:
    - formation of network matrices.
    - developing load flow solutions and fault analysis for different operating conditions.
    - state estimation and security analysis of power systems.
2. develop analytical skills to analyze power system state and security for operational contingencies.
3. apply the concepts of state estimation in designing operational strategy for secured operation of power system.

**DETAILED SYLLABUS:**
**UNIT-I: POWER SYSTEM NETWORK MATRICES**
Formation of bus admittance matrices by direct inspection method - Algorithm for formation of Bus impedance matrix: addition of a branch and addition of a link, removal element in Bus impedance matrix – Simple problems. Π-representation of off-nominal tap transformers.
**UNIT-II: POWER FLOW STUDIES**
Introduction to load flow analysis. Classification of buses, Load flow solution methods – Gauss-Seidal method, Newton Raphson method, Decoupled and fast decoupled load flow, Comparison of load flow methods, DC power flow method – Simple problems.

## UNIT-III: FAULT ANALYSIS

Short circuit studies – introduction, short circuit calculations using $Z_{bus}$, $Z_f^{abc}$, $Y_f^{abc}$, $Z_f^{012}$ and $Y_f^{012}$ matrices for various faults. Analysis of balanced and unbalanced three phase faults – Simple problems.

## UNIT-IV: POWER SYSTEM SECURITY

Introduction to power system security, Factors influencing power system security, Contingency analysis: Detection of Network problems, linear sensitivity factors, AC power flow methods, Contingency selection, concentric relaxation, bounding – simple problems.

## UNIT-V: STATE ESTIMATION IN POWER SYSTEM

Power system state estimation, Methods of state estimation – method of least squares, orthogonal decomposition, Treatment of bad data – applications to power system state estimation – simple problems.

## TEXT BOOKS:

1. Allen J.Wood and Wollenberg B.F., *Power Generation Operation and control*, John Wiley & Sons, 2$^{nd}$Edition, 2006.
2. Nagrath I.J. and *Kothari D.P., Modern Power System Analysis,* TMH, New Delhi, 2004.

## REFERENCES:

1. Grainger J.J. and Stevenson W.D*., Power System Analysis*, Tata McGraw Hill, New Delhi, 2003.
2. Stagg and El Abiad*: Computer methods in power systems analysis*, McGraw Hill ISE, 1986.

# M. Tech. (EPS)I-Semester
# (14MT10702) STATIC AND DIGITAL PROTECTION OF POWER SYSTEMS

| Int. Marks | Ext. Marks | Total Marks | | L | T | P | C |
|------------|------------|-------------|---|---|---|---|---|
| 40 | 60 | 100 | | 4 | -- | -- | 4 |

**PRE-REQUISITES:**
1. Switchgear and Protection at UG level
2. Microcontrollers and Applications at PG level

**COURSE DESCRIPTION:**
Fundamentals of static and digital relays; Amplitude and Phase Comparators; characteristics of Static over current and differential relays; Static Distance relays; Numerical relays

**COURSE OBJECTIVES:**
- To introduce advanced knowledge in static and digital relays for power system protection.
- To develop skills in selection of Static and Digital relays for power system protection.
- To apply Numerical relays for power system protection.

**COURSE OUTCOMES**: After successful completion of the course, students will be able to
1. gain advanced knowledge in
   - digital and numerical relays.
   - Operation of static and microprocessor based relays.
2. implement advanced skills in protection of power system components.
3. design and develop different power system protection schemes.
4. select and apply different relays in real time power system protection.

**DETAILED SYLLABUS**
**UNIT-I**: **INTRODUCTION TO STATIC AND DIGITAL RELAYS**
Static Relays - basic construction and advantages. Level detectors, Replica impedance, Mixing circuits, Phase and Amplitude Comparators – General equation for two input phase and amplitude comparators, Duality between Phase and Amplitude Comparators
**Numerical Relays**: Block diagram of typical Numerical Relay – Advantages and Disadvantages.
**UNIT-II**: **COMPARATORS**
**Amplitude comparators:** Circulating current type, opposed voltage type rectifier bridge comparators – Direct and Instantaneous comparators.
**Phase comparators:** Coincidence circuit type - block spike phase comparator, techniques to measure the period of coincidence – Integrating type – Rectifier and vector product type phase comparators.
**Multi–Input comparators:** Conic section characteristics – Three input amplitude comparator – Hybrid comparator.

## UNIT-III: STATIC OVER CURRENTAND DIFFERENTIAL RELAYS

**Static over current relays:** Introduction, Instantaneous over current relay – Time over current relays. Basic principles – Definite time, Inverse Definite time and Directional over current relays.

**Static Differential Relays:** Analysis of Static differential relays – static relay schemes – Duo bias transformer differential protection – Harmonic restraint relay.

## UNIT-IV: STATIC DISTANCE RELAYS

Static impedance, Reactance, MHO and angle impedance relays – sampling comparator – realization of reactance and MHO relays using a sampling comparator.

**Power Swings:** Effect of power swings on the performance of distance relays, Power swing analysis, Principle of out-of-step tripping and blocking relays, effect of line length and source impedance on distance relays.

## UNIT-V: MICROPROCESSOR BASED PROTECTIVE RELAYS

Microprocessor based over current relays, Impedance relay, Directional relay, Reactance relay. Generalized mathematical expression for distance relays, measurement of resistance and reactance, MHO and offset-MHO relays – Realization of MHO characteristics, realization of offset MHO characteristics – Microprocessor Implementation of Digital Distance Relaying Algorithms.

**TEXT BOOKS:**
1. T.S. Madhava Rao, *Power system Protection static relay*, 2$^{nd}$ Edition, Tata McGraw Hill Publishing Company limited, 2004.
2. Badri Ram and D.N. Vishwakarma, *Power system Protection and Switchgear*, 2$^{nd}$ Edition, Tata McGraw Hill Publication Company limited, 2013.

**REFERENCE BOOKS:**
1. Bhuvanesh A Oza, Nirmal Kumar C Nair et., al., *Power system protection and switchgear*, Tata McGraw Hill Publication Company Limited.

# M. Tech. (EPS)I-Semester
# (14MT10703) ADVANCED POWER SYSTEM STABILITY ANALYSIS

| Int. Marks | Ext. Marks | Total Marks | | L | T | P | C |
|------------|------------|-------------|---|---|---|---|---|
| 40 | 60 | 100 | | 4 | -- | -- | 4 |

**PRE-REQUISITES:**
Power System operation and control, Power system Analysis at UG level
Control systems at UG level

**COURSE DESCRIPTION:**
Introduction to the synchronous machine classical model; state space models of synchronous machine; Methods of Excitation systems and modelling; Effect of excitation on stability; Analysis of Voltage stability

**COURSE OBJECTIVES:**
- To introduce various power system stability, control and reactive power management concepts.
- To develop skills to carry out the stability studies for large scale multi-area power systems.
- To apply, analyze and implement algorithms for power system stability enhancement.

**COURSE OUTCOMES:** On successful completion of the course, the student would be able to
1. gain knowledge on:
   - ➢ transient and dynamic stability studies for large power systems.
   - ➢ modeling of SMIB, multi-machine systems and excitation systems.
   - ➢ voltage control and reactive power management concepts.
2. ability to assess various control schemes for better performance of the interconnected power system with economic considerations.
3. design and develop efficient control techniques for enhancement of voltage stability, rotor-angle stability and reactive power control in large interconnected power systems.

**DETAILED SYLLABUS:**
**UNIT-I: THE ELEMENTARY MATHEMATICAL MODEL**
A Classical model of single machine connected to infinite bus – Problems. System Response to small Disturbances: Block diagram of unregulated and regulated synchronous machine, methods of studies – Effect of small changes of speed. Regulated synchronous machine – voltage regulator with one time lag – Governor with one time lag.
Classical model of multi-machine system – modes of oscillation of unregulated Multi-machine system – Problems.

**UNIT-II: THE SYNCHRONOUS MACHINE MODEL**

Introduction – Clarkes's and Park's Transformation – flux linkage equations, self and mutual inductances of stator and rotor, transformation of inductances – formulations of state space model of one machine system connected to infinite bus, voltage, current equations – effect of excitation on Dynamic stability – examination of dynamic stability by Routh's criterion.

**UNIT-III EXCITATION SYSTEMS**

Simplified view of excitation control – Control configuration – Excitation system response – Non-continuously regulated systems – continuously regulated systems – Excitation system compensation – state space description of the excitation system - simplified linear model.

Types of Excitation systems: Type-2 system: rotating rectifier system, Type-3 system: Static with terminal potential and current supplies, Type-4 system: non–continuous acting - Block diagram representation – state space representation.

**UNIT-IV: EFFECT OF EXCITATION ON STABILITY**

Introduction – effect of excitation on generator power limits – Effect of the excitation system on Transient stability. Approximate model of the complete exciter – generator system – Supplementary stabilizing signals – Block diagram of the linear system – Lead compensation – Stability aspect using Eigen value approach.

**UNIT-V: VOLTAGE STABILITY ANALYSIS**

Voltage stability – factors affecting voltage instability and collapse – Comparison of angle and voltage stability – Analysis of voltage instability collapse – Control of voltage instability.

Review of Lyapunov's stability theorems of non-linear systems using energy concept – Method based on first concept – Method based on first integrals – Quadratic forms – Variable gradient method – Zubov's method – Popov's method, Lyapunov function for single machine connected to infinite bus.

**TEXT BOOKS:**
1. P.M. Anderson, A.A. Fouad, *Power System Control and Stability*, 2$^{nd}$edition, IEEE Press, 2003.
2. K.R. Padiyar, *Power System Dynamics (Stability & Control)*, 2$^{nd}$edition, B.S. Publications, Hyderabad, India, 2008.

**REFERENCES:**
1. Prabha Kundur, Neal J.Balu, Mark G.Lauby, *Power System Stability and Control*, 2$^{nd}$edition, McGraw-Hill, 1994.

# M. Tech. (EPS)I-Semester
# (14MT10704) POWER ELECTRONIC CONVERTERS

| | Int.<br>Marks | Ext.<br>Marks | Total<br>Marks | | L | T | P | C |
|---|---|---|---|---|---|---|---|---|
| | 40 | 60 | 100 | | 4 | -- | -- | 4 |

**PRE-REQUISITES:** Power Electronics at UG level.

**COURSE DESCRIPTION:**
Power Semiconductor Devices; Controlled Rectifiers; AC Voltage Controllers, operation and analysis of Cycloconverters; Analysis of DC-DC and Resonant Converters; Multi Level Inverters and PWM techniques

**COURSE OBJECTIVES:**
- To introduce the knowledge of advanced power devices and concepts of Power electronic converters.
- To develop analytical and design skills for various power converters.
- To apply various converters in industrial drives and power system applications.

**COURSE OUTCOMES**: After successful completion of course, the student will be able to
1. acquire in-depth knowledge in advanced Power devices and converters.
2. acquire analytical and design skills in power converter modules for various applications in power industry.
3. extend the concepts of power electronic converters for HVDC and FACTS.

**DETAILED SYLLABUS**
**UNIT-I: MODERN POWER SEMICONDUCTOR DEVICES**
Power Diode - Reverse recovery characteristics, types. Steady state characteristics and switching characteristics of Power transistors (power MOSFET, IGBT) and Thyristors(GTO, IGCT). Gate drive circuits for SCR, MOSFET, IGBT and Base drive circuit for Power BJT. Comparison of power devices.
**UNIT-II: MULTI-PULSE CONTROLLEDRECTIFIERS**
Six pulse SCR rectifiers – semi and full converters, operation with different firing angles-Effect of line inductance - power factor and THD. Power factor improvement – extinction angle control, symmetric angle control, PWM control – single and three phase control. Three phase dual converters. Single phase series converters. Twelve pulse SCR rectifiers – idealized 12 pulse rectifier operation, effect of line and leakage inductance, power factor and THD. 18 and *24 pulse SCR rectifiers, operation.*
***UNIT-III: AC VOLTAGE CONTROLLERS AND CYCLOCONVERTERS***
Single phase AC voltage controllers with R, RL and RLE loads. AC voltage controllers with PWM Control. Effect of source and load inductances. Synchronous tap changers – Applications. Three Phase AC Voltage Controllers – Analysis of controllers with star and delta Connection, applications, numerical problems. Single phase and three phase cycloconverters – analysis with Mid-

point and bridge configurations – Limitations – Advantages – Applications – numerical problems

## UNIT-IV: ANALYSIS OF DC-DC AND RESONANT CONVERTERS

Voltage commutated chopper. Current commutated chopper. Switch mode regulators – buck, boost, buck-boost and cuk regulators – condition for continuous inductor current and capacitor voltage - design of LC filter – comparison of regulators. Multi-output boost converters – advantages, applications, Numerical problems Resonant Converters – Concept of ZVS and ZCS, principle of operation, analysis of M-type and L-type Converters

## UNIT-V: PWM AND MULTI LEVEL INVERTERS

Voltage control of single phase inverters – single, multiple, sinusoidal, modified sinusoidal pulse width modulation, phase displacement control Advanced PWM techniques – trapezoidal, staircase, stepped, harmonic injection, delta modulations Voltage control of three phase inverter - sinusoidal PWM, 60 degree PWM, third harmonic PWM, space vector modulation. Harmonic reduction Multilevel inverters – Types – diode clamped, flying capacitor, cascaded – operation, features, applications.

**TEXT BOOKS:**

1. Rashid M.H., *Power Electronics Circuits, Devices and Applications*, 3rd edition, Prentice Hall publications, 2009.
2. Ned Mohan, Undeland and Robbin, *Power Electronics: Converters, Application and Design*, John Wiley and sons Inc., Newyork, 1995.

**REFERENCE BOOKS:**

1. Bin Wu, *High power converters and AC Drives,* John Wiley and Sons, 2006.
2. P.C Sen, *Modern Power Electronics*, 1st edition, Wheeler publishing Company, 1998.

# M. Tech. EPS-I Semester
# (14MT10705) ADVANCED CONTROL SYSTEMS

| Int. Marks | Ext. Marks | Total Marks | | L | T | P | C |
|---|---|---|---|---|---|---|---|
| 40 | 60 | 100 | | 4 | -- | -- | 4 |

**PRE-REQUISITES:** Control Systems at UG level

**COURSE DESCRIPTION:**
Advanced concepts of controllability, observability; Analysis of non-linear systems; Lyapunov stability and design of controllers and observers; optimal control concepts

**COURSE OBJECTIVES:**
- To introduce advanced concepts of linear and nonlinear systems.
- To develop skills in evaluation of stability and formulation of optimal control.
- To design applications in modal and optimal control systems.

**COURSE OUTCOMES**: On successful completion of the course, the students will be able to
1. gain advanced knowledge in state space analysis, controllability, observability, stability of linear and non-linear control systems.
2. apply describing function, Phase-Plane methods and Lyapunov's stability criterion for non-linear system stability analysis.
3. design of controllers and observers using state feedback techniques.

**DETAILED SYLLABUS**
**UNIT – I: CONTROLLABILITY AND OBSERVABILITY**
Review of state variable techniques – Concept of controllability and observability, Tests for Controllability and Observability for Continuous Time Systems – Principle of Duality, Controllability and Observability of State Models in Jordan Canonical Form and Other Canonical Forms – Effect of State Feedback on Controllability and Observability.

**UNIT – II: ANALYSIS OF NON-LINEAR SYSTEMS**
Introduction to Nonlinear Systems, Types of physical Non-linearities, Characteristics of non-linearities, properties of nonlinear systems. Describing Functions, Derivation of Describing Functions for: Dead Zone, Saturation, Backlash, Relay with Dead Zone and Hysteresis. Stability analysis of non-linear systems through describing functions. Phase-Plane Analysis, Singular Points, Isocline method, Delta method.

**UNIT - III: STABILITY ANALYSIS**
Stability in the Sense of Lyapunov, Lyapunov stability theorems, Definiteness, Sylvester principle, stability analysis by Lyapunov second method, Lyapunov functions, Krasovskii's Method, Variable gradient method

**UNIT – IV: CONTROLLERS AND OBSERVERS DESIGN**
Design of State Feedback Controller through Pole Placement - Full Order Observer and Reduced Order Observer, state regulator problem

## UNIT – V: OPTIMAL CONTROL

Introduction to Optimal Control - Formulation of Optimal Control Problems - Calculus of Variations, Minimization of functional of Single Function, Euler Lagrange Equation, Constrained Minimization, Minimum Principle, Control Variable Inequality Constraints.

## TEXT BOOKS:

1. M. Gopal, *Modern Control System Theory*, 2$^{nd}$ edition, New Age International Publishers, 1996.
2. K. Ogata, *Modern Control Engineering,* 3$^{rd}$edition, Prentice Hall of India, 1998.

## REFERENCE BOOKS:

1. I.J. Nagrath and M.Gopal, *Control Systems Engineering*, New Age International (P) Ltd. 2007.
2. M. Gopal, *Digital Control and State Variable Methods,* Tata Mc Graw-Hill Companies, 1997.

# (14MT10706) MICROCONTROLLERS AND APPLICATIONS
## (Elective - I)

| Int.<br>Marks | Ext.<br>Marks | Total<br>Marks | | L | T | P | C |
|---|---|---|---|---|---|---|---|
| 40 | 60 | 100 | | 4 | -- | -- | 4 |

**PRE-REQUISITES:** Digital logic, Microprocessors and Microcontrollers at UG level

**COURSE DESCRIPTION:**
8051 Microcontroller: Architecture, Programming and Interfacing; PIC Microcontrollers: Architecture, features, programming and Interfacing

**COURSE OBJECTIVES:**
- To introduce concepts of Microcontrollers.
- To design and develop suitable interfaces and programs for control applications in the field of Electrical Engineering.
- To apply various Microcontrollers for real time applications.

**COURSE OUTCOMES:** On successful completion of the course, the student would be able to
1. gain knowledge on
   - architecture of 8051 and PIC microcontroller
   - variants of 8051 and PIC
2. critically analyze and develop a suitable interface with an appropriate Microcontroller for the control operations.
3. develop programs for stand-alone systems.

**DETAILED SYLLABUS**
**UNIT–I: 8051 Microcontroller**
Overview of 8051 microcontrollers. 8051/8052 – architecture and features. Memory – internal / external Program, Data memory and their interfacing. Data memory – Register Bank, Bit addressable space, scratch pad area. Special Function Registers (SFRs). Instruction set – Data transfer, Arithmetic, logical, branch control instructions. Addressing modes. Timers – Mode - 0, 1, 2 and 3 operations, TMOD, TCON. Timer applications – wave generation, Device control operations.
**UNIT-II: Interfacing**
Basics of serial communication – RS232, MAX232, Baud rate. Serial port programming - SCON, SMOD, SBUF, PCON. Interrupts – IE, TCON, IP. Applications using interrupts of 8051/8052 – wave generation, Device control operations. Interfacing – ADC, DAC, DC motor and PWM
**UNNIT-III: PIC Microcontrollers**
CISC Vs RISC. Harvard Vs Von Neumann architectures. PIC16F87XA architecture and features. PIC16 Memory organization – program memory, data memory. PIC Register file – General purpose registers and SFRs.

Introduction to PIC Assembly Programming, PIC Data Format and Directives. PIC programming tools. Instruction set – data transfer, arithmetic, logical, bit manipulation, branch Instructions. I/O Port Programming. Addressing modes – Immediate, Direct, Register Indirect Addressing Modes. Macros and Modules.

**UNIT–IV: Serial, Interrupt, I/O Ports and Timer programming**

I/O ports – Port A, TRISA, Port B, TRISB, Port C TRISC. Timer - 0, 1, 2 modules. Compare mode, capture mode. PIC Serial Port programming, PIC Interrupts, Programming Timer Interrupts, Programming the Serial Communication Interrupts, Port-B - Change Interrupt, Interrupt Priority in the PIC.

**UNIT–V: PIC Interfacing**

ADC Characteristics, ADC Programming in the PIC, DAC Interfacing, Sensor Interfacing and Signal Conditioning, Standard and Enhanced CCP Modules, Compare Mode Programming, Capture Mode Programming, PWM Programming, ECCP Programming, Relays and Opto-isolators, Stepper Motor Interfacing, DC Motor Interfacing and PWM, PWM Motor Control with CCP, DC Motor Control with ECCP.

**TEXT BOOKS:**

1. Muhammad Ali Mazidi, Jancie Gillispie Mazidi, Rolin McKinlay, *The 8051 Microcontroller and Embedded Sytems using Assembly and C*, 2nd edition, Pearson Education.
2. John B. Peatman, *Design with PIC Microcontrollers*, Pearson Education, 2007.

**REFERENCE BOOKS:**

1. PIC16F87XA manual.
2. Muhammad Ali Mazidi, Rolin D. McKinlay, Danny Causey, *PIC Microcontroller and Embedded Systems using assembly and C for PIC 18,* Pearson Education, 1999.
3. John B. Peatman, *Embedded design with the PIC18F452 Microcontroller*, Printice Hall, 2003.

# M.Tech (EPS)I-Semester
# (14MT10707)REACTIVE POWER COMPENSATION AND MANAGEMENT
## (Elective - I)

| Int.<br>Marks | Ext.<br>Marks | Total<br>Marks |
|:---:|:---:|:---:|
| 40 | 60 | 100 |

| L | T | P | C |
|:---:|:---:|:---:|:---:|
| 4 | -- | -- | 4 |

**PRE-REQUISITES:** Power Systems at UG level

**COURSE DESCRIPTION:**
Reactive Power Compensation: Line and Load compensation; compensating devices; Reactive power coordination: Power Quality; Reactive power management in Domestic and Industrial Sectors

**COURSE OBJECTIVES:**
- To introduce advanced concepts in reactive power compensation and management.
- To develop computational skills in reactive power coordination.
- To apply different compensation methods for enhancement of voltage stability.

**COURSE OUTCOMES:** After successful completion of the course, the students will be able to
1. gain advanced knowledge on:
   a. different methods of reactive power compensation.
   b. types of load patterns and loss reduction methods in distribution lines.
   c. quality of power supply and reactive power coordination
2. analyze different types of compensations.
3. develop skills in designing a compensator for an industrial application.

**DETAILED SYLLABUS**
**UNIT-I: Reactive Power Compensation**
Need for Reactive Power compensation – reactive power characteristics. Ideal compensator, Practical compensation – power factor correction and voltage regulation. Load compensator as a voltage regulator, phase balancing and power factor correction of unsymmetrical loads– examples.
**UNIT-II: Reactive power compensation in transmission systems**
Steady state Reactive power compensation – Uncompensated line. Types of compensation, Passive shunt, series and dynamic shunt compensation – examples.
Transient state Reactive power compensation – Characteristic time periods. Passive shunt compensation. Static compensations – series capacitor compensation, compensation using synchronous condensers - examples.
**UNIT-III: Reactive power coordination**
Reactive power coordination: Objective, Mathematical modeling, Operation planning, transmission benefits. Basic concepts of quality of power supply:

Disturbances, steady – state variations, effects of under voltages, frequency, Harmonics, radio frequency and electromagnetic interferences.

## UNIT-IV: Reactive power Management

Demand side management: Load patterns, basic methods of load shaping, power tariffs, KVAR based tariffs penalties for voltage flickers and Harmonic voltage levels.

Distribution side Management: System losses, loss reduction methods, examples, Reactive power planning: Objectives, Economic Planning, capacitor placement and retrofitting of capacitor banks.

## UNIT-V: Reactive power management in Domestic and Industrial Sectors

KVAR requirements for domestic appliances: Purpose of using capacitors, selection of capacitors, deciding factors. Types of available capacitor – characteristics and Limitations. Typical layout of traction systems–reactive power control requirements. Distribution transformers, Electric arc furnaces, textile and plastic industries, furnace transformer, filter requirements, remedial measures, and power factor of an arc furnace.

**TEXT BOOKS:**

1. T.J.E.Miller, *Reactive power control in Electric power systems*, John Wiley and Sons, 1982
2. D.M. Tagare, *Reactive power Management*, Tata McGraw-Hill Publishing Company Ltd., New Delhi, 2004.

# M.Tech. (EPS) I-Semester
# (14MT10708) SOLAR AND WIND ENERGY CONVERSION SYSTEMS
## (Elective - I)

| Int. Marks | Ext. Marks | Total Marks | | L | T | P | C |
|---|---|---|---|---|---|---|---|
| 40 | 60 | 100 | | 4 | -- | -- | 4 |

**PREREQUISITES:**
>Power Electronics in UG
>Non-Conventional Energy Resources in UG

**COURSE DESCRIPTION:**
Non-Conventional energy resources; Wind and Solar energy systems: design and operation; Power Conditioning Schemes for Solar and Wind Energy systems; Impact of power quality problems

**COURSE OBJECTIVES:**
- To introduce concepts of power electronics for renewable energy.
- To develop skills in interconnection of renewable energy systems to the grid.
- To apply line commutated converters for synchronized operation with grid.

**COURSE OUTCOMES:** After successful completion of the course, the students will be able to
1. gain advanced knowledge on role of power electronics for renewable energy.
2. analyze the power conditioning schemes for grid connected systems.
3. develop skills in designing wind, solar systems and their integration.

**DETAILED SYLLABUS**
**UNIT I: Introduction to Renewable Energy Systems**
Renewable Energy systems, Environmental aspects of electric energy conversion: impacts of renewable energy generation on environment - Qualitative study of different renewable energy resources: Solar, wind, ocean, Biomass and Fuel cell.
**UNIT II: Design and operation of Wind Power System**
Wind Power System: Components, Turbine Rating, Electrical Load Matching, Variable-Speed operation, system design features, Maximum Power Operation, System Control Requirements, Speed Control, Rate Control and Environmental Aspects. Wind Energy Conversion Systems and their Classification.
**UNIT III: Design and Operation of PV system**
Solar Photovoltaic Power System:  The PV Cell, Module and Array, Equivalent Electrical Circuit, Open Circuit Voltage and Short Circuit Current, I-V and P-V Curves, Array Design, Peak Power Point Operation, PV System Components.

Solar Thermal System: Energy Collection, Synchronous Generator, Equivalent Electrical circuit, Excitation Methods, Electrical Power Output, Transient Stability Limit, Commercial Power Plants.

**UNIT IV: Power Conditioning Schemes for Solar and Wind Energy systems**

Switching devices for solar energy conversion: DC power conditioning converters, maximum power point tracking algorithms, AC Power conditioners, Line commutated inverters, synchronized operation with grid supply, Harmonic reduction.

Wind energy Conversion system (WECS): Performance of Induction generators for WECS, Self excited induction generator (SEIG) for isolated power generators. Controllable DC power from SEIGs, system performance, Grid related problems, generator control, AC voltage controllers, Harmonic reduction and Power factor improvement.

**UNIT V: Power Quality Issues in Integration of Renewable Energy Resources**

Stand alone and Grid connected systems, Power Quality issues, Impact of power quality problems on DG, Mitigation of power quality problems, Role of custom power devices in Distributed Generation.

**TEXT BOOKS:**

1. Mukund. R. Patel, *Wind and Solar Power Systems*, CRC Press, 1999.
2. G.D. Rai, *Non - Conventional Energy Resources*, Khanna Publishers, 2002.

# M. Tech. EPS I-Semester
## (14MT10709) OPTIMIZATION TECHNIQUES
### (Elective - I)

| Int. Marks | Ext. Marks | Total Marks | | L | T | P | C |
|---|---|---|---|---|---|---|---|
| 40 | 60 | 100 | | 4 | -- | -- | 4 |

**PRE-REQUISITES:**
Probability and Statistics, Mathematical Methods

**COURSE DESCRIPTION:**
Linear and Nonlinear programming; one dimensional and multi-dimensional search methods; Dynamic programming

**COURSE OBJECTIVES:**
- To gain knowledge on various optimization techniques
- To develop skills to use optimization techniques to improve ease of operation and efficiency
- To apply skills in multi stage decision problems

**COURSE OUTCOMES**: After successful completion of the course, the students will be able to
1. gain knowledge on:
   - Linear programming.
   - Non-linear programming
   - Dynamic Programming Assessment.
   - Univariate Estimation.
2. acquire skills to analyze problems on queuing models and develop convincing solutions.
3. apply problem solving skills in dynamic and static system.

**DETAILED SYLLABUS**
**UNIT-I**: **Linear Programming**
Formulation of LPP, Graphical Method, Basic Definitions, Simplex method, Duality theory, Fundamental theorem, Dual Simplex Method, Primal Dual method, Sensitivity analysis. Transportation and Assignment problems: Shortest path problem, Max-flow problem and Mini - cost Flow Problem.
**UNIT-II: Non-linear programming**
Convex sets and functions, constrained optimization methods: Introduction, Kuhn-Tucker conditions, convex optimization, Lagrange multipliers, One-dimensional minimization method, search method, unconstrained and constrained optimization.
**UNIT- III: One dimensional Search Methods**
Unimodal functions, simultaneous uniform search method, Sequential search method, Fibonacci search method, Golden section search method.
**UNIT-IV: Multi-dimensional Search Methods**
**Multi-dimensional Search Methods:** Univariate search method, Method of steepest descent, Conjugate gradient method, Fletcher Reeves method,

**Constrained Multi-dimensional Search Methods:** Rosen's Gradient projection method, Penalty function method.

**UNIT V: Dynamic programming**

Dynamic programming: Multistage decision problems, computation procedure and case studies. Fundamentals of queuing system, Poisson process, the birth and death process, special queuing methods.

**TEXT BOOKS:**

1. S.S Rao, *Optimization: Theory and Practices*, New Age Int. (P) Ltd. Publishers, New Delhi.
2. S. D. Sharma., *Operations Research*, S Chand Publications, New Delhi, 2008.

**REFERENCE BOOKS:**

2. Pant J.C., *Introduction to Optimization techniques (Operations Research)*, 6th edition, Jain Brothers, New Delhi, 2005.
3. S. Hira and P.K.Gupta., *Problems in Operations Research*, S Chand Publications, New Delhi, 2007.

# M. Tech. – I Semester
# (14MT10310) RESEARCH METHODOLOGY
# (Common to all M. Tech. Programmes)

| Int.<br>Marks | Ext.<br>Marks | Total<br>Marks | | L | T | P | C |
|:---:|:---:|:---:|---|:---:|:---:|:---:|:---:|
| 40 | 60 | 100 | | 3 | -- | -- | 3 |

**PRE-REQUISITES: --**

**COURSE DESCRIPTION:**
Fundamentals of research work - research problem and design; Data collection, Analysis and hypothesis; Statistics in Research; Interpretation and Report Writing.

**COURSE OBJECTIVES:**
- To impart knowledge on literature collection, problem identification, data collection and testing of hypothesis.
- To familiarize with the skills for preparing the technical report.
- To apply statistical techniques for effective research results.

**COURSE OUTCOMES:** On successful completion of course, the student will be able to
1. gain knowledge on research approaches, research process and data collection.
2. identify and analyze research problem.
3. solve the research problems using statistical methods.
4. carryout literature survey and apply good research methodologies for the development of scientific/technological knowledge in one or more domains of engineering.
5. learn, select and apply modern engineering tools to complex engineering activities.
6. write effective research reports.

**DETAILED SYLLABUS:**
**UNIT-I: INTRODUCTION TO RESEARCH METHODOLOGY**
Objectives and Motivation of Research, Types of Research, Research Approaches, Research Process, Criteria of good Research.
**UNIT-II: RESEARCH PROBLEM AND DESIGN**
Defining and Formulating the Research Problem, Problem Selection, Necessity of Defining the Problem, Techniques involved in Defining a Problem. Features of Good Design, Research Design Concepts, Different Research Designs.
**UNIT-III: DATA COLLECTION, ANALYSIS AND HYPOTHESIS**
Different Methods of Data Collection, Processing Operations, Types of Analysis, Basic Concepts of Testing of Hypothesis, Hypothesis Testing Procedure.
**UNIT-IV: STATISTICS IN RESEARCH**
Review of Statistical Techniques - Mean, Median, Mode, Geometric and Harmonic Mean, Standard Deviation, Measure of Asymmetry. Normal Distribution, Chi-Square Test as a Test of Goodness of Fit.

## UNIT-V: INTERPRETATION AND REPORT WRITING

Interpretation – Techniques and Precautions. Report Writing – Significance, Stages, Layout. Types of reports, Precautions in Writing Reports.

## TEXT BOOK:

1. C.R. Kothari, *Research Methodology: Methods and Techniques*, New Age International Publishers, New Delhi, 2nd Revised Edition, 2004.

## (14MT10721)POWER SYSTEMS AND RELAYS LAB

| | | | | L | T | P | C |
|---|---|---|---|---|---|---|---|
| Int. Marks | Ext. Marks | Total Marks | | | | | |
| 25 | 50 | 75 | | -- | -- | 4 | 2 |

**PRE-REQUISITES:** Electrical Machines and Power Systems at UG Level

**COURSE DESCRIPTION:**
Relay testing, fault analysis, determination of sequence reactances of power system components, dielectric strength of transformer oil and synchronous machine power angle characteristic

**COURSE OBJECTIVES:**
- To impart practical knowledge in Electrical Power Systems and relays.
- To develop problem solving and design skills in the field of Electrical Power System protection and maintenance.
- To apply the concepts and techniques to provide solutions for the real time problems in Electrical Power Systems.

**COURSE OUTCOMES:** At the end of the course, students will be able to
1. acquire in-depth knowledge in power system protection and testing of relays.
2. analyze and apply protective schemes and testing methods in the field of power systems.
3. gain skills in identifying, selecting and developing suitable protection schemes for reliable operation of power system.
4. execute real time projects in the field of power system operation and control.

**List of experiments:**
*Conduct any Twelve experiments from the following:*
1. Determination of Sub-transient reactances of Salient Pole Synchronous Machine.
2. Determination of Sequence Impedances of Cylindrical Rotor Synchronous Machine.
3. Fault Analysis
   i)  LG and LL Faults
   ii) LLG and LLLG Faults
4. Measurement of Dielectric Strength of Transformer Oil Using Variable Electrodes.
5. Reactive power compensation using Tap changing transformer.

6. Power Angle Characteristic of Three-Phase Salient Pole Synchronous Machine.

7. Long Transmission line analysis.

8. Determination of Sequence Components of Salient Pole Synchronous Machine.

9. Scott Connection of Transformers.

10. Characteristics of Over Current Relay.

11. Characteristics of Over Voltage Relay.

12. Characteristics of Percentage Biased Differential Relay.

13. Testing of Frequency Relay.

14. Testing of Reverse Power Relay.

# (14MT20701) OPERATION AND CONTROL OF POWER SYSTEMS

| Int.<br>Marks | Ext.<br>Marks | Total<br>Marks | | L | T | P | C |
|---|---|---|---|---|---|---|---|
| 40 | 60 | 100 | | 4 | -- | -- | 3 |

**PRE-REQUISITES:**
Power Systems operation and control, Control Systems at UG level
Power System security and state estimation at PG level

**COURSE DESCRIPTION:**
Economic dispatch problem with and without Transmission losses; Optimal power flow problem; Unit commitment; Hydro-thermal scheduling; Automatic generation control in an interconnected power systems.

**COURSE OBJECTIVES:**
- To impart advanced knowledge in Electrical power system operation and control.
- To develop analytical, design and problem solving skills in power plants scheduling and coordination for optimal operation.
- To apply the concepts of optimization techniques for economic operation of power system.

**COURSE OUTCOMES**: After successful completion of the course, student will be able to
1. gain knowledge on:
   - economic operations of various power plants and their scheduling methods.
   - coordination of hydro thermal power plant for optimal and secured operation.
   - automatic generation control importance and their control strategies for reliable operation of interconnected power systems.
2. develop analytical skills to envisage and solve problems to obtain optimal solution in power system operation and control for the needs of industry and society.
3. apply various optimization algorithms for:
   - optimal generation scheduling of thermal power plants.
   - scheduling and coordination of hydro thermal power plants.
   - regulation of  load frequency control problems.

**DETAILED SYLLABUS:**
**UNIT I: ECONOMIC DISPATCH OF GENERATING PLANTS**
Economic operation importance – generator unit characteristics – Economic dispatch problem without transmission losses. Solution methods of economic dispatch: Gradient method, Reduced Gradient method, Newton's method, Base point and participation factor method – simple problems.

## UNIT II: TRANSMISSION SYSTEM EFFECTS AND OPTIMAL POWER FLOW PROBLEM

Economic dispatch problem with transmission losses. Expression for transmission loss - Simple problems. Optimal power flow problem – Optimal power flow with inequality constraints – problem formulation, steepest descent method. Optimal power flow with equality constraints on control variables and dependent variables.

## UNIT III: UNIT COMMITMENT

Characteristics of thermal units – Input-Output characteristics, Heat Rate and Incremental Heat Rate characteristics, Fuel cost and Incremental Fuel cost characteristics, Incremental production cost, start-up and shut-down costs. Unit commitment – unit commitment Vs economic dispatch, constraints in unit commitment. Unit commitment solution methods: Priority-List method, Dynamic Programming method – simple problems.

## UNIT IV: HYDROTHERMAL CO-ORDINATION

Long-term and short-term hydro-scheduling problem. Short-term hydrothermal scheduling – condition for optimal operation and maximum efficiency, gradient approach. Hydro units in series. Pumped-storage hydro-scheduling – λ-γ iteration method, gradient method–hydrothermal scheduling using dynamic programming and linear programming. Security constrained unit commitment.

## UNIT V: AUTOMATIC GENERATION CONTROL IN INTERCONNECTED POWER SYSTEMS

Load frequency control Vs Economic dispatch control. Review of single area load frequency control. Two area LFC – Flat frequency regulation, Parallel frequency regulation, Flat tie-line loading control, Tie-line load bias control. AGC features – AGC Implementation– static response of uncontrolled and controlled two-area system – Optimal LFC control for two area AGC. Power exchange in interconnected utilities: utility energy evaluation – Power pools – Transmission effects and Issues: Limitations –Wheeling.

# (14MT20702) FLEXIBLE AC TRANSMISSION SYSTEM

| Int. Marks | Ext. Marks | Total Marks | | L | T | P | C |
|------------|------------|-------------|---|---|---|---|---|
| 40 | 60 | 100 | | 4 | -- | -- | 4 |

**PRE-REQUISITES:**
Power Electronics and Power Systems at UG level
Power Electronic Converters and Microcontrollers and Applications at I-Sem. of M.Tech. EPS

**COURSE DESCRIPTION:**
Need for Flexible AC transmission systems; objectives of shunt and series compensation, phase angle regulators; FACTS controllers: shunt, series and combined; Coordination of various FACTS controllers.

**COURSE OBJECTIVES:**
- To introduce concepts of Flexible AC transmission.
- To analyze and design suitable FACTS devices for the control of appropriate parameters of power flow of transmission system.
- To apply different types of FACTS devices for reactive power compensation and power flow control.

**COURSE OUTCOMES**: After completion of the course, student will be able to
1. gain knowledge on:
    - compensation schemes for real and reactive power control.
    - Static Shunt, Series and Shunt-Series compensation.
    - FACTS devices
2. critically analyze and adopt a suitable FACTS device for the appropriate control operation.
3. develop skills in coordination of multiple FACTS controllers in an interconnected power systems.

**DETAILED SYLLABUS**
**UNIT-I: INTRODUCTION TO AC TRANSMISSION SYSTEMS**
Overview of interconnected power system. Power flow in AC systems – Expression for real and reactive power flow between two nodes of a power system, controllable parameters. Power flow in parallel and meshed system. Overview of uncompensated transmission lines – open circuit, short circuit. Overview of compensated transmission lines – shunt and series compensation. Conventional controllers for real and reactive power flows – merits and demerits. FACTS – benefits, types of FACTS controllers.
**UNIT-II: STATIC SHUNT COMPENSATION**
Objectives of shunt compensation, Expression for real and reactive power flow with mid-point voltage regulation. Variable impedance type static VAR generators - V-I characteristics and control schemes of TCR, TSR, TSC. $Q_D$-$Q_O$ characteristic and control scheme of TSC-TCR. Switching converter type VAR

generators – V-I characteristics and control schemes of STATCOM. Hybrid VAR generators – V-I characteristics of SVC and STATCOM. Regulation slope of SVC and STATCOM through V-I characteristics. Applications of static shunt compensators – Voltage regulation, improvement in transient stability, prevention of voltage instability, power oscillation damping. Comparison of static shunt compensators.

## UNIT-III: STATIC SERIES COMPENSATION

Objectives of series compensation, Expression for real and reactive power flow with series line compensation. Variable impedance type series compensators: V-I characteristics and control schemes of GCSC, TSSC, TCSC - modes of operation. Sub-synchronous resonance. Switching converter type series compensator – V-I characteristics, internal and external control schemes of SSSC. Applications of static series compensators – improvement in transient stability, power oscillation damping. Comparison of static series compensators.

## UNIT-IV: STATIC PHASE ANGLE REGULATORS AND COMBINED COMPENSATOR

Power flow control by phase angle regulators - Concept of voltage and phase angle regulation. Operation and control of TCVR and TCPAR. Switching converter type phase angle regulators. Objectives of TCPAR - improvement of transient stability, power oscillation damping. UPFC – Principle, expression for real and reactive power between two nodes of UPFC, independent real and reactive power flow control using UPFC, control schemes of UPFC - operating principle and characteristics of IPFC.

## UNIT-V: CO-ORDINATION OF FACTS CONTROLLERS

FACTS controller interactions – interaction between multiple SVC's – interaction between multiple TCSC's – SVC-TCSC interaction – coordination of multiple controllers using linear control techniques. Comparative evaluation of different FACTS controllers: performance comparison and cost comparison

**TEXT BOOKS:**

## (14MT20703) POWER QUALITY

| Int. Marks | Ext. Marks | Total Marks | | L | T | P | C |
|---|---|---|---|---|---|---|---|
| 40 | 60 | 100 | | 4 | -- | -- | 3 |

**PRE-REQUISITES:** Distribution of Electric Power
Power Electronics at UG level

## COURSE DESCRIPTION:
Power Quality concepts; harmonics and voltage regulation using conventional methods; power quality enhancement using custom power devices; power quality issues in distributed generation

## COURSE OBJECTIVES:
- To introduce Power Quality concepts, problems and their mitigation techniques.
- To develop skills in design and analysis of custom power devices.
- To apply custom Power devices for mitigating Power Quality problems.

## COURSE OUTCOMES: On successful completion of the course the students will be able to
1. gain knowledge on:
   - various power quality issues and mitigation.
   - power quality issues and operating conflicts in distributed generation.
2. analyze the harmonic distortion due to commercial and industrial loads.
3. develop skills in design of various custom power devices.
4. apply the principles of interfacing distributed generation with utilities.

## DETAILED SYLLABUS
### UNIT-I: FUNDAMENTALS OF POWER QUALITY
Definition of Power Quality, Classification of Power Quality Issues, Power Quality Standards, Categories and Characteristics of Electromagnetic Phenomena in Power Systems: Impulsive and Oscillatory Transients, Interruption, Sag, Swell, Sustained Interruption, Under Voltage, Over Voltage and Outage. Sources and causes of different Power Quality Disturbances.
### UNIT-II: HARMONICS AND APPLIED HARMONICS
Harmonic Distortion, Voltage Vs Current Distortion, Harmonics Vs Transients, Power System Qualities under Non-Sinusoidal Conditions, Harmonic Indices, Harmonic Sources from Commercial Loads, Harmonic Sources from Industrial Loads.
Applied Harmonics**:** Effects of Harmonics, harmonic distortion evaluations, principles of controlling harmonics and devices for controlling harmonic distortion.
### UNIT-III:  VOLTAGE REGULATION USING CONVENTIONAL METHODS
Principles of regulating the voltage, Devices for voltage regulation: utility step-voltage regulators, ferro-resonant transformers, magnetic synthesizers, on-line

UPS systems, motor-generator sets, static VAR compensators, shunt capacitors and series capacitors.

**UNIT-IV: POWER QUALITY ENHANCEMENT USING CUSTOM POWER DEVICES** Introduction to Custom Power Devices - Network Reconfiguring Type: Solid State Current Limiter (SSCL) - Solid State Breaker (SSB) - Solid State Transfer Switch (SSTS).

Compensating Type: Dynamic Voltage Restorer, Distribution STATCOM and Unified Power Quality Conditioner – operation, realization and control of DVR, DSTATCOM and UPQC – load compensation. Power quality monitoring - Power quality monitoring standards.

**UNIT V: POWER QUALITYISSUES IN DISTRIBUTED GENERATION**

DG Technologies, Perspectives on DG benefits - Interface to the Utility System - power quality issues affected by DG - Operating Conflicts: Utility fault-clearing, Reclosing, Interference with relaying, Voltage regulation issues, Islanding - siting DG.

**TEXT BOOKS:**

## (14MT20704) SMART GRID TECHNOLOGY

| Int. Marks | Ext. Marks | Total Marks | | L | T | P | C |
|:---:|:---:|:---:|---|:---:|:---:|:---:|:---:|
| 40 | 60 | 100 | | 4 | -- | -- | 4 |

**PRE-REQUISITES:** Power systems at UG level

**COURSE DESCRIPTION:**
Concept of smart grid; various information and communication technologies for Smart Grid; Smart metering; Demand side integration; Energy management systems

**COURSE OBJECTIVES:**
- Gain knowledge in advanced information and communication technologies for smart grid.
- To develop skills in fault calculation, state estimation and use of communication technology.
- To apply smart grid concepts for improved energy efficiency with the integration of renewable energy sources.

**COURSE OUTCOMES**: After completion of the course, student will be able to
1. gain knowledge in:
   - Smart grid initiatives and technologies
   - Information and communication technologies for the smart grid.
   - Sensing, measurement, control and automation.
2. develop skills in fault calculation and state estimation.
3. apply various information security tools in the smart grid technology.

**DETAILED SYLLABUS**
**UNIT – I: SMART GRID**
Introduction, Ageing assets and lack of circuit capacity, thermal constraints, operational constraints, security of supply, national initiatives, early smart grid initiatives, active distribution networks, virtual power plant, other initiatives and demonstrations, overview of the technologies required for the smart grid.

**UNIT – II: COMMUNICATION TECHNOLOGIES FOR THE SMART GRID**
**Data Communications:** Introduction, Dedicated and Shared Communication Channels, Switching Techniques, Circuit Switching, Message Switching, Packet Switching, Communication Channels, Wired Communication, Optical Fiber, Radio Communication, Cellular Mobile Communication, Layered Architecture and Protocols, the ISO/OSI Model, TCP/IP

**Communication Technologies:** IEEE 802 Series, Mobile Communications, Multi Protocol Label Switching, Power line Communication, Standards for Information Exchange, Standards For Smart Metering, Modbus, DNP3, IEC61850

**UNIT – III: INFORMATION SECURITY FOR THE SMART GRID**

Introduction, Encryption and Decryption, Symmetric Key Encryption, Public Key Encryption, Authentication, Authentication Based on Shared Secret Key, Authentication Based on Key Distribution Center, Digital Signatures, Secret Key Signature, Public Key Signature, Message Digest, Cyber Security Standards, IEEE 1686: IEEE Standard for Substation Intelligent Electronic Devices(IEDs) Cyber Security Capabilities, IEC 62351: Power Systems Management and Association Information Exchange – Data and Communication Security.

**UNIT – IV: SMART METERING AND DEMAND SIDE INTEGRATION**

Introduction, smart metering – evolution of electricity metering, key components of smart metering, smart meters: an overview of the hardware used – signal acquisition, signal conditioning, analogue to digital conversion, computation, input/output and communication.

Communication infrastructure and protocols for smart metering - Home area network, Neighborhood Area Network, Data Concentrator, meter data management system, Protocols for communication. Demand Side Integration- Services Provided by DSI, Implementation of DSI, Hardware Support, Flexibility Delivered by Prosumers from the Demand Side, System Support from DSI.

**UNIT – V: TRANSMISSION AND DISTRIBUTION MANAGEMENT SYSTEMS**

Data Sources, Energy Management System, Wide Area Applications, Visualization Techniques, Data Sources and Associated External Systems, SCADA, Customer Information System, Modelling and Analysis Tools, Distribution System Modelling, Topology Analysis, Load Forecasting, Power Flow Analysis, Fault Calculations, State Estimation, Applications, System Monitoring, Operation, Management, Outage Management System, Energy Storage Technologies, Batteries, Flow Battery, Fuel Cell and Hydrogen Electrolyser, Flywheels, Super conducting Magnetic Energy Storage Systems, Super capacitors.

**TEXT BOOKS:**

1. Janaka Ekanayake, Liyanage, Wu, Akihiko Yokoyama, Jenkins, *Smart Grid*, Wiley Publications, 2012.
2. James Momoh, *Smart Grid: Fundamentals of Design and Analysis*, Wiley, IEEE Press, 2012.

**REFERENCE BOOKS:**

## (14MT20705) INTELLIGENT CONTROL

| Int.<br>Marks | Ext.<br>Marks | Total<br>Marks | L | T | P | C |
|---|---|---|---|---|---|---|
| 40 | 60 | 100 | 4 | -- | -- | 4 |

**PRE-REQUISITES:**
Engineering Mathematics, Power Systems, Power Electronic Drives and Electrical machines at UG level

**COURSE DESCRIPTION:**
Neural Networks; Fuzzy Logic Systems; Genetic Algorithms; Hybrid Intelligent Systems; Applications

**COURSE OBJECTIVES**:
- To impart advanced knowledge on computational intelligence for Electric drives and power systems.
- To apply skills in design and development of intelligent control systems.
- To apply the concepts of neural networks, Fuzzy logic and genetic algorithms in engineering.

**COURSE OUTCOMES:** After completion of the course, student will be able to
1. acquire in depth knowledge to identify and describe soft computing techniques and their roles in building intelligent systems.
2. design and analyze intelligent control systems for electrical engineering problems.
3. develop skills to identify and apply suitable soft computing techniques for engineering problems.

**DETAILED SYLLABUS**
**UNIT I: NEURAL NETWORKS**
Neural network Architectures, Perceptron model, Learning strategies – Supervised Learning – Radial basis function network, Back propagation Network–Unsupervised Learning – Kohonen's SOM, Full counter propagation Network – Reinforced learning.
**UNIT II: FUZZY LOGIC SYSTEMS**
Fuzzy sets– Relations & Operations, Membership functions, Fuzzification, Rule base, Inference Mechanism, Defuzzification and design of Fuzzy control system.
**UNIT III:  GENETIC ALGORITHMS**
Introduction to evolutionary computation, History of genetics, Genetic algorithms(GA) – main components of GA – selection, crossover, mutation, survival of the fittest, population size, Evaluation of the fitness function and benefits of genetic algorithms.
**UNIT IV:  HYBRID INTELLIGENT SYSTEMS**
Introduction to hybrid intelligent systems – Adaptive Neuro-Fuzzy Inference Systems – Architecture and Learning. Fuzzy GA systems – rules generation. ANN Learning Using GA – Optimization of weights.

## UNIT V: APPLICATIONS

Speed control of separately excited DC motor using neural networks and fuzzy logic, Load forecasting problem using GA and Neuro-fuzzy approach, Load frequency control using fuzzy logic.

## TEXT BOOKS:

1. Fakhreddine O. karray, Clarence De Silva, *Soft computing & intelligent systems design, Theory, tools and applications,* Pearson Education Limited, 2009.
2. S.N.Sivanandam, S.N.Deepa, *Principles of soft computing*, Wiley–India Edition, 2008

## REFERENCE BOOKS:

# (14MT20706) High Voltage DC TRANSMISSION
## (Elective-II)

| Int. Marks | Ext. Marks | Total Marks | | L | T | P | C |
|---|---|---|---|---|---|---|---|
| 40 | 60 | 100 | | 4 | -- | -- | 4 |

**PRE-REQUISITES:**
Power Electronics and Power Systems at UG level
Power Electronic converters at PG level

**COURSE DESCRIPTION:**
HVDC Transmission: capabilities, applications, planning, faults and Protection; Analysis and Control of Power Converter; Harmonics and Filters; Types of Multi-Terminal DC systems and control

**COURSE OBJECTIVE:**
- To impart advanced knowledge in HVDC Transmission.
- To develop skills in HVDC Converters, Harmonics, filters and their characteristics.
- To apply concepts of static converter control strategies in power system faults & protection and to develop research competence in HVDC Transmission.

**COURSE OUTCOMES**: After successful completion of the course, the students will be able to
1. gain advanced knowledge on:
    a. HVDC transmission systems.
    b. operation of static converters and analysis.
    c. different types of faults and protection schemes in HVDC systems.
2. analyze various static converters in HVDC systems, filters and MTDC systems.
3. develop skills in design, control and analysis of HVDC systems.

**DETAILED SYLLABUS**
**UNIT-I: Introduction to HVDC Transmission**
H.V.D.C Transmission – Comparison of HVAC and HVDC transmission, Power Handling Capabilities of HVDC lines, Applications of HVDC Transmission, Planning for HVDC Transmission, Modern trends in DC Transmission.
**UNIT-II: Static Power Converter Analysis and Control**
Static Power Converters – 6 pulse & 12 pulse converters, converter station and terminal equipment. Converter Bridge characteristics, equivalent circuit for converter
Control of HVDC converter: Principle of DC link control – constant current, constant extinction angle and constant ignition angle control. Individual phase control and equidistant firing angle control.

## UNIT-III: Harmonics and Filters

Generation of Harmonics in HVDC systems, methods of harmonics elimination, harmonic instability problems, Causes for instability, remedies for instability problems. Design of AC & DC filters

## UNIT-IV: Multi-Terminal DC link and systems

Introduction – Potential applications of MTDC systems – Types of MTDC systems – series, parallel and series-parallel systems, their principle of operation and control - Protection of MTDC systems.

## UNIT-V: Faults and Protection

Over voltages due to disturbance on DC side, over voltages due to DC and AC side line faults – Converter faults, over current protection – Valve group and DC line protection. Over voltage protection of converters – surge arresters.

## TEXT BOOKS:

## (14MT20707) RESTRUCTURED POWER SYSTEM
## (Elective-II)

| Int. Marks | Ext. Marks | Total Marks | | L | T | P | C |
|------------|------------|-------------|---|---|---|---|---|
| 40 | 60 | 100 | | 4 | -- | -- | 4 |

**PRE-REQUISITES:**
Power Systems at UG level

**COURSE DESCRIPTION:**
Features of Restructured Power systems; Market models; Information and transmission services; Electricity pricing and forecasting; Ancillary services management

**COURSE OBJECTIVES:**
- To introduce advanced knowledge in power system restructuring.
- To analyze and design various market models for reliable operation of the restructured power system.
- To apply the concepts of forecasting and pricing techniques in deregulated power system for procuring ancillary services.

**COURSE OUTCOMES**: After completion of the course, student will be able to
1. gain advanced knowledge on:
   - Operation of deregulated electricity market systems.
   - Key issues of electricity market models and their functionalities in different scenarios.
   - Electricity pricing methods and ancillary service management in competitive market.
2. develop analytical skills to envisage market models to provide power exchange among various entities of deregulated power system.
3. implement forecasting methods for minimizing energy price and regulate congestion in interconnected deregulated power system.

**DETAILED SYLLABUS:**
**UNIT I: OVERVIEW OF KEY ISSUES IN ELECTRIC UTILITIES**
Introduction – Deregulation, need for deregulation, Advantages of deregulation in power system. Restructuring Models: POOLCo Model, Bilateral Model, Hybrid Model – independent system operator (ISO) – Role of ISO – power exchange – market operations – market power – standard cost – transmission pricing – congestion pricing – management of congestion.

**UNIT II: MARKET MODELS IN RESTRUCTURED POWER SYSTEMS**
Introduction - Market models based on contractual arrangements: Monopoly model, Single buyer model, Whole sale competition model, Retail competition model. Comparison of various market models. Market architecture: Day-ahead and Hour-Ahead Markets, Block forwards Market, Transmission Congestion Contracts (TCCs), Ancillary service market.

**UNIT III: OASIS: OPEN ACCESS SAME-TIME INFORMATION SYSTEM**

Structure of OASIS: Functionality and Architecture of OASIS – Information requirement of OASIS - Transfer Capability on OASIS: Definitions, Transfer Capability Issues, ATC Calculation, TTC Calculation, TRM Calculation, CBM Calculation – Transmission Services – Methodologies to Calculate ATC.

**UNIT IV: ELECTRICITY PRICING - VOLATILITY, RISK AND FORECASTING**

Electricity pricing – introduction – electricity price volatility, electricity price indexes – Challenges to Electricity Pricing: Pricing Models, Reliable Forward Curves – Construction of Forward Price Curves: Time frame for Price Curves, Types of Forward Price Curves – Short-term Price Forecasting: Factors Impacting Electricity Price, Forecasting Methods, Analyzing Forecasting Errors.

**UNIT V: ANCILLARY SERVICES MANAGEMENT**

Introduction – Types of ancillary services, Classification of ancillary services– Load - generation balancing related services: Frequency regulation, Load following, Spinning reserve services – Voltage control and reactive power support services: Generators, Synchronous condensers, Capacitors and inductors, SVCs, STATCOMs – Black start capability service

**TEXT BOOKS:**

# (14MT20708) POWER SYSTEM RELIABILITY
# (ELECTIVE-II)

| Int. Marks | Ext. Marks | Total Marks | | L | T | P | C |
|---|---|---|---|---|---|---|---|
| 40 | 60 | 100 | | 4 | -- | -- | 4 |

**PRE-REQUISITES:**
Probability and Statistics at UG level

**COURSE DESCRIPTION:**
Fundamentals of Reliability Engineering; Evaluation of Power system operating capacity reserve; Evaluation of Frequency and Duration Techniques; Reliability Analysis of Interconnected Systems; Power Distribution System Reliability Analysis

**COURSE OBJECTIVES:**
- To impart various probability concepts in power system reliability.
- To develop analytical skills for analyzing various failures and system risks.
- To develop skills on implementation of
  - various power system reliability evaluation techniques for better planning and operation of power system.
  - reliability engineering algorithms for assessment of overall power system.

**COURSE OUTCOMES**: after completion of the course, student will be able to
1. gain knowledge on
    i. conceptual algorithms for planning and operation of secured power system
    ii. system risks during normal and adverse weather conditions.
2. evaluate complex network configurations using reliability indices.
3. design and develop efficient algorithms for analyzing power system network reliability in real time.

**DETAILED SYLLABUS**
**UNIT–I**: **FUNDAMENTALS OF RELIABILITY ENGINEERING**
Probability Concept, Random variables, Probability Density and Distribution functions– Probability Distributions: time dependent and independent, mean, SD, Variance. Reliability function, hazard rate, types of failures, bath tub curve and reliability cost and worth.
**Network and Markov Modeling:** redundant and non-redundant configuration – complex systems – conditional probability approach, Decomposition Method, cut-set, tie-set approaches – Standby redundant systems – Event trees. Markov chain – Markov Process, STPM, LSP – one, two and three component repairable models

**UNIT–II**: **EVALUATION OF GENERATING CAPACITY RESERVE**

Introduction – Generation system model – determination of capacity outage probability table – identical units, non-identical units – Determination of transitional rates – deterministic and probabilistic criteria – Sequential addition method– Recursive relation for unit addition, unit removal - LOLP, LOLE and EIR.

**UNIT–III: EVALUATION OF FREQUENCY AND DURATION TECHNIQUES**

Frequency and duration concepts – Two component repairable model (with & without identical components) – Evaluation of cumulative probability and cumulative frequency by using recursive relation – Equivalent transition rates – non-equivalent transition rates.

System risk indices: Daily load model – Two level representation of daily load modeling– evaluation of probabilities, transitional rates.

**UNIT–IV: RELIABILITY ANALYSIS OF INTERCONNECTED SYSTEMS**

Introduction – probability array method in two interconnected systems – evaluation techniques – equivalent assisting approach – factors affecting interconnections, effect of tie capacities, tie lines.

Weather effects on transmission lines – common mode failures – circuit breaker model – Preventive maintenance

**UNIT–V: DISTRIBUTION SYSTEM RELIABILITY ANALYSIS**

Distribution system reliability analysis – Basic indices – Customer oriented indices – Load and energy indices – active and passive failures – open circuit & short circuit failures – simple problems on above indices.

Managerial Economics and Financial Analysis and Generation of Electric Power at UG level

**COURSE DESCRIPTION:**
Energy Audit; Energy Management; Energy Efficient Motors and Lighting; Energy Instruments; Computation of Economic Aspects and Analysis

**COURSE OBJECTIVES:**
- To introduce concepts of energy audit, conservation and management.
- To develop different computational techniques in economic aspects.
- To carry out energy audit and conservation for industry and buildings.

**COURSE OUTCOMES**: After completion of the course, student will be able to
1. gain knowledge on:
   - Energy management, Energy conservation management.
   - Computation of economic aspects and analysis.
   - Energy efficient motors and lighting system.
   - Energy audit instruments.
2. analyze life cycle estimation and cost analysis methods for various components.
3. acquire skills in design of energy efficient motors and lighting schemes.
4. apply Energy instruments in analysis of economic aspects.

**DETAILED SYLLABUS**
**UNIT-I: BASIC PRINCIPLES OF ENERGY AUDIT**
Energy audit – definitions, concept, types of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes – Energy audit of industries – energy saving potential, energy audit of process industry, thermal power station, building energy audit.
**UNIT-II: ENERGY MANAGEMENT**
Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting. Energy manger, Qualities and functions, language, Questionnaire – check list for top management.
**UNIT-III: ENERGY EFFICIENT MOTORS AND LIGHTING**
Energy efficient motors, factors affecting efficiency, loss distribution, constructional details, characteristics – variable speed, variable duty cycle systems, RMS hp- voltage variation– voltage unbalance – over motoring –

motor energy audit. Good lighting system design and practice, lighting control, lighting energy audit

## UNIT-IV: ENERGY INSTRUMENTS

Energy Instruments: watt meter, data loggers, thermocouples, pyrometers, lux meters, tongue testers, application of PLC's.

## UNIT-V: COMPUTATION OF ECONOMIC ASPECTS AND ANALYSIS

Economic Analysis – Depreciation Methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis - Energy efficient motors, calculation of simple payback method, net present worth method - Power factor correction, lighting - Applications of life cycle costing analysis, return on investment.

**TEXT BOOKS:**

1. W.R. Murphy & G. Mckay Butterworth, *Energy Management*, Heinemann publications.

2. Paul o' Callaghan, *Energy Management*, 1$^{st}$edition, McGraw Hill Book company.

**REFERENCE BOOKS:**

1. John C. Andreas, *Energy Efficient Electric Motors*, 2$^{nd}$ edition, Marcel Dekker Inc. Ltd.,
2. W.C. Turner, *Energy management Hand Book*, John Wiley and sons.

## (14MT20721) POWER SYSTEMS SIMULATION LABORATORY

| Int. Marks | Ext. Marks | Total Marks | | L | T | P | C |
|---|---|---|---|---|---|---|---|
| 25 | 50 | 75 | | -- | -- | 4 | 2 |

**PRE-REQUISITES:**
Power system, Power electronics, Control Systems and Electrical Machines at UG level
Economic operation and control of power system at PG level

**COURSE DESCRIPTION:**
Modelling, simulation and analysis of multi area power system, load flows, load frequency control, power system stability, power quality problems and power electronic converters

**COURSE OBJECTIVES:**
- To introduce programming and simulation concepts for the modeling and analysis of Power System operation.
- To develop computational skills using advanced software packages in the field of Electrical Power System engineering.
- To apply various tools for realizing the power system behavior in real time.

**COURSE OUTCOMES**: After completion of the course, student will be able to
1. acquire knowledge in analyzing the power system behavior using simulation / programming tools.
2. design and perform experiments, as well as analyze and interpret results for better understanding of power system operation.
3. develop skills in designing various power system networks through programming and simulation for better functionality.
4. select and apply modern software tools for solving real time problems in the existing power system.

**DETAILED SYLLABUS**
*Conduct any Twelve experiments from the following:*
1. Formation of bus admittance matrix with and without off-nominal ratios of transformer of a power system network using MATLAB

2. Formation of Bus Impedance matrix with and without mutual coupling of a power system network using MATLAB

3. Load flow studies using

    (a) Gauss Seidal Method

    (b) Newton Rahpason Method

    (c) Fast Decoupled Method

4. Transient stability analysis

5. Economic Dispatch using MATLAB

6. Modeling of standard test system with generator excitation and governor action using SIMULINK

7. Modeling and analysis of automatic load frequency control of multi-area power system using SIMULINK

8. Simulation of power quality problems (like Sag/Swell, interruption, transients, harmonics, flickers etc.) using SIMULINK

9. Single phase half-controlled converter using R- and RL- loads using MATLAB/ SIMULINK.

10. Single phase full-controlled converter using R- and RL- loads using MATLAB/ SIMULINK

11. Analysis of Transmission line parameters using PSCAD

12. Simulation of Capacitor switching transient using PSCAD

13. Transformer inrush currents measurement using PSCAD

14. Analysis of Short circuit studies with and with fault impedance using PSCAD

15. Simulation of FACTS controllers using PSCAD

## (14MT20722) SEMINAR

| Int. Marks | Ext. Marks | Total Marks | | L | T | P | C |
|:---:|:---:|:---:|---|:---:|:---:|:---:|:---:|
| -- | 50 | 50 | | -- | -- | -- | 2 |

**PRE-REQUISITES: --**

**COURSE DESCRIPTION:**
Identification of seminar topic; Literature survey; Preparation of technical report and Presentation.

**COURSE OBJECTIVES:**
- To impart knowledge on an advanced topic in the Programme domain and interdisciplinary area through literature survey.
- To facilitate students to explore and develop the following skills:
    i. Analysis
    ii. Problem solving
    iii. Research methodologies, tools and techniques and
    iv. Management and costing.
- To acquire knowledge and skills required for undertaking project work.
- To provide opportunity to work with a strong sense of professionalism in a specific area.

**COURSE OUTCOMES:** At the end of the course, the student will be able to
1. Acquire in-depth knowledge in core and allied areas of interest.
2. Analyze and synthesize information related to the areas.
3. Conceptualize and construct research problems.
4. Extract information pertinent to a specific area through literature survey to conduct research.
5. Identify the applicability of modern software and tools.
6. Contribute positively to multidisciplinary groups in emerging areas with objectivity and rational analysis.
7. Plan, organize, prepare and present effective written and oral technical reports.
8. Engage in lifelong learning to improve competence.
9. Acquire awareness on professional code of conduct in the chosen area.
10. Develop independent and reflective learning.

# M. Tech. (EPS) – III & IV Semesters
## (14MT30721 & 14MT40721) PROJECT WORK

| Int. Marks | Ext. Marks | Total Marks | | L | T | P | C |
|------------|------------|-------------|---|----|----|----|----|
| 80 | 120 | 200 | | -- | -- | -- | 16 |

**PRE-REQUISITES:** --

**COURSE DESCRIPTION:**
Identification of topic for the project work; Literature survey; Collection of preliminary data; Identification of implementation tools and methodologies; Performing critical study and analysis of the topic identified; Time and cost analysis; Implementation of the project work; Writing of thesis and presentation.

**COURSE OBJECTIVES:**
- To impart access to advanced knowledge on a chosen topic in the Programme domain and interdisciplinary areas through literature survey.
- To develop analytical, problem solving, programming, design and development skills for effective project implementation.
- To apply knowledge and skills to develop research competence in core and interdisciplinary areas.
- To provide opportunity to work with a strong sense of professionalism in a specific area.

**COURSE OUTCOMES:** On completion of project work the student will be able to

1. Acquire in-depth knowledge in the areas of interest.
2. Analyze critically chosen project topic for conducting research.
3. Apply knowledge gained through Programme, self learning and experience for solution of a given problem efficiently.
4. Undertake research confidently in the project domain.
5. Use the techniques, skills and modern engineering tools necessary for project work.
6. Perform harmonically in multi-disciplinary, multi-cultural groups, and develop a high level of interpersonal skills.
7. Manage projects in respective disciplines and multidisciplinary environments with due consideration to cost and time efficiency.
8. Develop communication skills, both oral and written for preparing and presenting reports.
9. Engage in lifelong learning to improve knowledge and competence continuously.
10. Understand professional and ethical responsibility for sustainable development of society.
11. Develop independent and reflective learning.
