Internally Funded (Seed Money) Project - Details

Project Title : A Dynamic Object Detection for Visually Impaired

Department : Information Technology

Name of the PI : Dr. K. Ramani

Name of the Co-PI (if any) : --NA--

Affiliation of PI & Co-PI : Professor & Head, Dept. of IT, SVEC

Year of Funding (Financial year) : 2020-21

Project Duration : 2 Years (Extended by 8 months)

Amount Sanctioned (in Rs.) : 1,50,000/-

Abstract/Brief Summary of the project :

Objectives of the project:

- To design and develop a novel camera-based approach to automatically detect and recognize objects of surrounding environment.
- To develop a text to audio translation system.
- To develop an approach to find the distance between object and human and intimating the same through audio.
- To develop a Mobile App for object recognition with above features.
- To develop approaches for navigation and way finding and to enable independent access unfamiliar indoor and outdoor environments and avoid dangers.

Work Done till date :

- Presented a paper titled Multi-Object Detection System for Visually-Impaired, International Conference on Smart Computing and

Control of Systems (ICSCCS-2019) organized by Sree Vidyanikethan Engineering College, Tirupati during 17-19 October, 2019

- Presented a Paper Titled "Virtual Tourist Guide APP" in 3rd International Conference on New Scientific creations in Engineering and Technology on 19.03.2021

Expected Outcomes :

1. Optimized algorithms for object recognition
2. A voice based navigation system for visually impaired people.
3. Interior and exterior object identification with distance.
4. Historical places description through AR and VR techniques

Respected Sir,

Sub: Request for release of fund-Implementation of Internal Funded project **A Dynamic Object Recognition System for Visually Impaired** under seed money scheme-
Reg.

Ref: No. SVET/Approval/SEED DST Funds/SVEC/0237/2018, Dt. 29.11.2018

For the Internal Funded project under seed money scheme titled "**A Dynamic Object Recognition System for Visually Impaired**" implementation hardware and cloud computing services are required. Hence, I request you, to release fund **Rs. 1,50,000/- (One Lakh and fifty Thousands)** into the account M/s DYNAMIC OBJECT RECOGNITION bearing No: **154010100123186**, SVEC(Extn.) Counter, Andhra Bank, A. Rangampet, as early as possible.

Thanking you sir,

Yours faithfully,

(K. Ramani)

Respected Sir,

Sub: Request for release of fund-purchase of items- Internal Funded project under seed money scheme- Reg.

Ref: No. SVET/Approval/SEED DST Funds/SVEC/0237/2018, Dt. 29.11.2018

I inform you that the following items for the Internal Funded project under seed money scheme titled "A Dynamic Object Recognition System for Visually Impaired" implementation are required (The costs are obtained from e-commerce website Amazon). Hence, I request you, to provide the same as early as possible.

S. No	Item Description	No. of Units	Cost (Rs.)
1.	Raspberry PI 4, 8 GB RAM Combo kit	01 No.	9,000/-
2.	PI camera	02 No.	800/- (@400/- per unit)
3.	Ultrasonic Sensors	06 No.	900/- (@150/- per unit)
4.	Soil Moisture and LDR Sensors	01 No.	200/-
5.	Switch	01 No.	500/-
6.	Soldering Kit	01 No.	400/-
7.	Re-chargable Battery (Ambrane 27000mAh Li Polymer)	01 No.	2,000/-
8.	Speakers (USB based Zebronics)	01 No.	700/-
Total			14,500/-

Thanking you sir,

Sir,

Sub: Financial Sanction for Internal Projects

Kindly refer our discussions on the above at different occasions.

On the basis of the proposals submitted and subsequent presentations by the Investigators, a committee consisting of Research Advisor, Director (Q&D) and Director have selected the following projects for funding by our Institute (List attached).

Kindly issue financial sanction order for these projects at the earliest.

With Regards,

Yours sincerely

Internally Funded (Seed Money) Project - Details

Project Title : Real time monitoring and fault identification in multilevel inverter fed induction motor drive

Department : EEE

Name of the PI : Dr. E. Parimalasundar

Name of the Co-PI (if any) : Dr. Suresh Babu Daram

Affiliation of PI & Co-PI : Sree Vidyanikethan Engineering College (Autonomous), EEE Department

Year of Funding (Financial year) : 2019-2020 (01-07-2019)

Project Duration : 2 Years

Amount Sanctioned (in Rs.) : Rs. 50,000

Abstract/Brief Summary of the project :

Cascaded H-Bridge multilevel inverters are mostly preferred for adjustable speed electric drives used in industries and hybrid electric vehicles because of their advantages such as low harmonics, flexibility to use a set of batteries or fuel cells or any renewable energy sources in any intermediate stage of inverter and ability to reach desired high voltages. Since multilevel inverters are used in high power and expensive industrial applications, considering the investment cost and safety aspects, it is necessary to develop an accurate fault diagnostic system for carrying out preventive maintenance works. The most common faults occurring in the case of multilevel inverter drive systems are open-circuit or short-circuit in inverter power electronic switches

such as Insulated Gate Bipolar Transistor (IGBT) and Metal Oxide Semiconductor Field Effect Transistor (MOSFET). These open-circuit or short-circuit faults of power electronic switches lead to the system shutdown and high repairing cost. Hence once a fault in the switch occurs, it should be detected at the earliest in order to avoid the operation of drive and motor under abnormal conditions, which may lead to the failure of motor or drive and to major economic losses.

Fault diagnosis of multilevel inverter is a hot research topic and has created lot of interest among many researchers in the development of better fault diagnostic techniques and protection systems. Several techniques have been proposed to identify the faulty switches of inverters based on current measurement and analysis. Since the output current of inverter is dependent on nature of load, accurate fault detection is difficult under low current values. Many researchers developed the fault diagnostic system from the inverter output voltage measurement, because it is independent of load variations. However, only little information is available on the development of real time high performance fault diagnostic system of cascaded H-bridge multilevel inverter.

Inverters are given high priority in many large industrial drive applications. However, the reliability of multilevel inverters is mainly affected by the failure of power electronic switches. In this project, open-switch and short-switch failure of multilevel inverters and its identification using a high performance diagnostic system. In the proposed fault diagnostic system, It is possible to precisely identify the individual faulty switch (may be due to open-switch (or) short switch failure) of inverters which is useful for reliability of system. The main intend of this project is to recognize faulty switch of Five level cascaded H - Bridge Multilevel Inverter within a fraction of millisecond through hardware implementation along with advanced diagnostic techniques. For designing a proper multilevel inverter, it requires many number of

power electronic switches. If any fault occurs in that system, it is difficult to discover faulty power electronic switch.

By implementing these diagnostic techniques, it may give following advantages:

- Switching Losses are minimized.
- High power quality and output waveforms are obtained from inverter.
- Harmonic distortions and ripples are minimized by finding faulty switch.
- The quality of output voltage signal has to be improved from multilevel inverter and reliability of overall drive system is maintained.

Work done till date :

- In the absence of faults, Matlab/simulink is used to simulate the testing of a five-level cascaded multilevel inverter.
- During simulation analysis, faulty output voltage output patterns are inspected for open and short circuits.
- A simulation analysis is used to provide a quote for hardware components.
- Components are bought in order to put the prototype model into action.

Expected Outcomes :

- The faulty power electronic switch has to be identified and changed effectively which is supportive for electric power generation and transmission systems.
- In automotive industries, productivity cannot be affected due to the failure of power converter.
- There is a need for improved fault detection and isolation in power electronic converters for maximizing the reliability of renewable energy sources.

- This system offers a major change in terms of isolating faulty components and reconfiguring the converter in a manner that minimizes power outages.
- The CHB inverter provides a balanced output with low harmonic distortion owing to redundant switching states.
- This proposal will enrich for interfacing of renewable energy resources, industrial motor drives, electric vehicle drives and power grids.

Internally Funded (Seed Money) Project - Details

Project Title	:A Comparative Study on Wire Electrical Discharge Machining of Aerospace Materials
Department	: Mechanical Engineering
Name of the PI	:Dr. N. MANIKANDAN
Name of the Co-PI (if any)	:Dr. J. S. BINOJ
Affiliation of PI & Co-PI	:Associate Professor, M.E, SVEC.
Year of Funding (Financial year)	:2019-2020(Extended due to COVID)
Project Duration	:12 months
Amount Sanctioned (in Rs.)	:1,00,000

Abstract/Brief Summary of the project :

Superalloys are exceptional category of materials that possess excellent properties for various high temperature applications. Superalloys are also known as high performance alloys and extensively predominant that plays a major role in various manufacturing applications. The properties of strength at high temperature, degradation resistance in oxidation and corrosive environments makes the superalloys for prevalent uses in various engineering applications. Due to the favourable properties of superalloys, it has the ability to perform at high temperature applications such as aerospace components, steam turbine power plants, exhaust valves of turbocharger, equipment for heat treatment and petrochemical industries (Pollack and Tin, 2006). High hardness and hot strength, high strain hardening, high shear strength and low thermal conductivity are the properties which makes the nickel based super alloys hard to machine materials.

Work Done till date :

- **Material Purchased,**
- **Machining completed,**
- **Conference Presentations and publications done,**
- **Microstructural studies under progress,**
- **Paper writing to peer reviewed jnls in progress and**
- **Report writing under progress**

Expected Outcomes :

During the course of research, a good interaction will be made with R & D laboratories working in this field. Machinability analysis and optimization parameters for the selected hard materials will be performed and identified. The encouraging results will be shared with scientific community through conferences and special lectures. Reasonable number of publications will be done in peer-reviewed journals. The encouraging results and new invention will be patented with the help of DST and pilot level work will be planned with industrial sectors either government or private.

Name of the Co-PI (if any) : -

Affiliation of PI & Co-PI : Assistant Professor,
Department of ECE,
SreeVidyanikethan Engineering
College, A. Rangampet, Tirupati

Year of Funding (Financial year) : 2019-20

Project Duration : One Year

Amount Sanctioned (in Rs.) : Rs. 1,50,000/-

Abstract/Brief Summary of the project :

The investigation of clinical reports suggested that more than ten percent patients with diabetes have a high risk of eye issues. In the recent years, there has been a dramatic increase in the number of diabetic patients suffering from diabetic retinopathy (DR). Diabetic Retinopathy (DR) is an eye ailment which influences eighty to eighty-five percent of the patients who have diabetes for more than ten years. The retinal fundus images with disease detected may undergo either shrinkage or enlargement when transmitted in a communication channel. This affects the decision of doctors with wrong diagnosis like the patient may be considered for treatment only with tablets or may be operated with laser treatment even when it is not necessary. To overcome this challenge error detection and correction methods are proposed and applied to the transmitted images for originality.

Work Done till date:

New error detection and correction algorithms are developed, modeled in Verilog HDL and verified.

New error detection and correction algorithms are developed, modeled in Verilog HDL and verified.

The image processing is done for gray scale images and the error detection and correction algorithms are applied. The results ensured accuracy in gray scale images.

Still the work is to be completed and ensured for color image processing.

Expected Outcomes:

- Development of new Error Detection and Correction Codes.
- Application of these codes to image processing.
- Development of codes to read and write images using Verilog HDL.
- Establishing or using the link between MATLAB and Xilinx Vivado Tools for image processing.
- Implementation of Image Processing algorithms on FPGA.

Internally Funded (Seed Money) Project - Details

Project Title	: Study on the use of Methyl Ester of Water Hyacinth as alternate fuel in a Diesel engine
Department	: Mechanical Engineering
Name of the PI	: Dr.B.SACHUTHANANTHAN
Name of the Co-PI (if any)	: DR.KESAVULU
Affiliation of PI & Co-PI	: Sree Vidyanikethan Engineering College
Year of Funding (Financial year)	: 2019-20
Project Duration	: 2 Years
Amount Sanctioned (in Rs.)	: Rs 1,00,000/-(Rupees One lakh only)

Abstract/Brief Summary of the project : Due to the increasing awareness of the depletion of fossil fuel resources and environmental issues, biodiesel became more and more attractive in the recent years. Diesel engines are widely used in light, medium and heavy-duty vehicles like load carriers, tractors, and power generation devices. Any country's development is strongly dependent on the availability of fuels for transportation, agriculture and power generation sectors. For many developing countries like India, meeting the high demand for oil is a major challenge. In this connection there is need to search alternative fuels in place of petrol diesel products. Several alternative fuels are being considered for use in diesel engines. The potential alternative fuels are liquid fuels, like vegetable oils. Biodiesel is one of the alternatives to diesel and petrol fuels. The properties of biodiesels are nearer to diesel fuel, it can be directly used in diesel engines without any modification of

the engine. The objective of the present work is to Extract Biodiesel from Water Hyacinth plants and use it as an alternative fuel for Diesel engine. This Experimental work investigates the performance, combustion and emission characteristics of Diesel engine with water Hyacinth Biodiesel blended with mixtures of Zinc Oxide (ZnO) and Magnesium Oxide (MgO) Nano particles. Owing to the higher surface area/volume ratio characteristics of nanoparticles, the degree of mixing and chemical reactivity are enhanced during the combustion, attaining better performance, combustion and emission attributes of the diesel engine.

Also the higher NO_x emission arised due to the use of Biodiesel shall be controlled with the use of SCR(Selective Catalytic Reduction Technique) at the exhaust to control the major toxic gases.

Work Done till date :

Installed a 25 liters Biodiesel Manufacturing plant in Our Thermal Engineering Laboratory

Did Experiment on Diesel engine using Methyl Ester of Water Hyacinth Biodiesel as fuel

Did Experiment on Diesel engine using Methyl Ester of Water Hyacinth Biodiesel as fuel with Selective Catalytic Reduction Technique as after treatment technique

Submitted two article for an International conference

77.0

Expected Outcomes :

Determining the suitability of Water Hyacinth plants as a source for Biofuel extraction.

Determining the use of oil extracted from Water Hyacinth as a suitable fuel to run Diesel Engines.

: Dr. B. SACHUTHANANTHAN
(Principal Investigator Name)

Dr. Sachin Manan

Internally Funded (Seed Money) Project- Details

Project Title	:	Capability investigation of wire electric discharge machine for generating thin sheets
Department	:	Mechanical Engineering
Name of the PI	:	Dr M Baburaj
Name of the Co-PI (if any)	:	Dr S Ragu Nathan
Affiliation of PI & Co-PI	:	Associate Professor, Dept. of Mechanical Engineering, Sree Vidyanikethan Engineering College.
Year of Funding (Financial year)	:	2019-20
Project Duration	:	18 Months
Amount Sanctioned (in Rs.)	:	Rs.1,60,000.00 (One Lakh Sixty thousand)
<p>Abstract/Brief Summary of the project: Conventional machining process are now being replaced by non-traditional machining processes due to increasing demands of complex shape geometries with high surface finish. Wire EDM is one such kind of non-traditional machining processes which has wide applications. The growth of the developing countries is majorly depending on contribution of small-scale industries. The cost of the higher end machines is not affordable to them. Most of the small-scale industries are not using higher end machines for producing the products. This project is an attempt to improvise the quality of the product which can be manufactured using lower end wire-EDM machines by modifying the machining strategies and developing new dielectric supply system. This will help to improve the productivity of lower end machines with minimal cost. The modified strategy has to be implemented verified by creating thin stripes from difficult to machine materials. The machined thin strip can be used for making various biomedical implants and devices.</p>		
Work Done till date	:	<ul style="list-style-type: none"> Material procurement, experimentation and data analysis have completed. Two international conferences (Presented and published in conference proceedings) One peer reviewed Journal (Accepted)
Expected Outcomes	:	<ul style="list-style-type: none"> Two peer reviewed Journals Preliminary results for writing proposal for funding agency.

Sub: Submission of bills for project activity-reg.

Ref. No: SVET/Advance/SVEC - CSSE/0043/2018

This is with respect to completion of project titled "SMART CLASS TIME MANAGEMENT SYSTEM" funded by SVEC management. Initially a sum of Rs.10,000(Ten Thousand Rupees) was released by management of SVEC to the department. In this regard, this is to bring to your notice that the work has been completed and is in deployment stage in the department. In this regard, we are submitting bills for the expenditure. The expenses incurred for the work was 8,272(Eight Thousand Four Hundred and Twenty Two). The remaining amount Rs. 1,728 is returned back along with this letter and bills are also submitted.

Thanking You

Yours Faithfully,

D. N. Kartheek.
