Report
on
Open House on
"Ever Wonder What Efftronics Does?"

Efftronics Systems Pvt. Ltd., was established in the year 1985 in Vijayawada, Andhra Pradesh. It has 30+ years of product expertise by harnessing latest technologies. It indigenously develops products catering Indian Railways, Smart Buildings and LED lighting, Smart City Solutions, IoT Solutions and Services.

Efftronics Systems Pvt. Ltd., organized open house demonstrating their products in the name of **Ever Wonder What Efftronics Does?** on 18th December, 2016. The open house is conducted as follows:

Demos were arranged showcasing their indigenously developed product of Efftronics systems in the areas of Human Recourses, Signaling for Railways, LED lighting, Smart City solutions, IoT solutions and Services, Smart Buildings etc.,.

Name of the Academic Program

: Open House on "Ever Wonder What Efftronics Does?"

Name & Address of Host Institution

: Efftronics Systems Ltd., Vijayawada

Duration of the program(Dates)

: 18th December, 2016

Outcomes

:

- Gained knowledge on various products (Hardware and Software) of Efftronics Systems
- Tie-up with Efftronics Systems for Curriculum Design

This college is an autonomous institution established by the Government of Andhra Pradesh in the year 1984. It is one of the premier engineering colleges in the state. The college has a long and illustrious history of providing quality education to the students. It is a member of the All India Council of Technical Education (AICTE) and the Society for Quality Improvement in Engineering Education (SQIIEE). The college is also a member of the Association of Engineering Colleges (AEC) and the Association of Universities and Colleges of Engineering and Technology (AUCET). The college has a wide range of undergraduate and postgraduate programs in various engineering disciplines. It has a strong emphasis on research and innovation. The college has a well-equipped library and a state-of-the-art infrastructure. It is a member of the Association of Universities and Colleges of Engineering and Technology (AUCET).

Dear Madam,

The following members would like to visit your place on 03-10-2016.

- 1.Dr.C.Subhas-Dean,Academics
- 2.Dr.S.Hemachandra-Head,Industry relations
- 3.Dr.P.V.Ramana-Head,ECE
- 4.Dr.K.Ramani-Head,IT
- 5.Dr.B.Narendra Kumar Rao-Head,CSSE
- 6.Dr.K.Suneetha,Head,MCA

As per our discussion we shall visit the departments and interact with the engineers first, followed by a meeting with the MD of your organization.

Kindly let me know if there is any change in the schedule.

Dear Madam,

Greetings from Sree Vidyanikethan Engineering College.

On behalf of Sree Vidyanikethan, let me express my sincere thanks for the hospitality extended to us during our visit to Efftronics. It was exciting and interesting to know more about your organization. Each member of the visiting group feels the visit was quiet valuable. I hope we didn't impose too much on your busy schedule. We are fortunate to have such wonderful and thoughtful industry friends. You are so considerate by helping us make the best use of our limited time to see your organization and learn more of the future technologies.

I would especially like to thank Mr.D.Anvesh, Executive Manager for spending his valuable time to enlighten us on the current and future technologies. He is a gem of a person hardly found in this competitive world. We also express our thanks to CEO for his time and we value his insights and opinions regarding the current education system. We always try to bridge the gap between theory and practice to make the students industry ready.

Once again we cordially invite the CEO and Executive manager of your esteemed organization to visit our campus and interact with the students and faculty.

Again thank you for making our visit a memorable one.

Regards,

Dr.S.Hemachandra

Report on Visit to M/s Efftronics Systems Pvt Ltd, Vijayawada on 03-10-2016

The following members visited facilities of M/s Efftronics Systems Pvt Ltd, Vijayawada on 03.10.2016.

1. Dr. C. Subhas, Dean (Academics)
2. Dr. P. V. Ramana, HoD (ECE)
3. Dr. S. Hemachandra, Convener (III Cell)
4. Dr. K. Ramani, HoD (IT)
5. Dr. M. S. Sujatha, Professor of EEE.

This visit is organized to have sustained and enhanced industry interaction which helps to bridge the gap between industry and institute.

The brief profile of the company is as follows:

- *Established in 1985 in Vijayawada, Andhra Pradesh*
- *30 Years of Product Expertise by harnessing latest technologies*
- *Head office @ Vijayawada (Andhra Pradesh CAPITAL REGION)*
- *100+ Engineers in Research & Development,*
- *R&D recognized by DSIR (Govt. of India)*
- *Indigenous development of various products catering to Railways, Smart Buildings & LED lighting, Smart City Solutions, IoT Solutions & Services*
- *Partnered with Indian Railways for Various Product Developments*
- *Pan India Service Network with 111 Service Centers, 200+ Skilled Service Engineers*
- *In house Manufacturing facility with 100+ Staff & Facility of 50,000 SQFT for various activities*
- *Effe LED lighting Experience Centers @ Vijayawada , Hyderabad*
- *Gartner Client for understanding the Technology trends and Market Trends in ICT*

Ms. Shabnaz Mahammad, Manager, HR welcomed the team and introduced all the senior executives of the company. Mr. Dasari Anvesh, Executive Manager accompanied the team for the visit of following facilities in M/s Efftronics Systems Pvt Ltd.

1. Smart railway signaling: *Intelligent & adaptive train operations to improve Safety , Punctuality & Productivity by monitoring the existing signaling systems*

2. IoT network for railways

3. Remote condition monitoring

4. Battery health monitoring

5. System integrity tester

6. Smart buildings

7. Smart lighting

8. IoT solutions and services

9. Digitization of health monitoring system

10. Smart city solutions such as intelligent transportation systems

11. Automatic weather station

After visiting the facilities a meeting is convened with Mr. Dasari Ramakrishna, MD & CEO, Mr. Dasari Anvesh, Executive Manager and other senior management of M/s Efftronics Systems Pvt Ltd. The following points were discussed in the meeting.

1. Making the students industry ready

2. Making the students and faculty aware of current and future technologies

3. Need of sustained industry interaction

Mr. Dasari Ramakrishna has agreed to assist the institute in the following activities.

1. Student internships and placements

2. Faculty training in industry for minimum of a month

3. Laboratory development

4. Curriculum development

5. Research

Members with MD&CEO and Executive Manager, Efftronics

The members invited Mr. Dasari Ramakrishna and Mr. Dasari Anvesh to visit Sree Vidyanikethan Engineering College to interact with the students and faculty. The meeting is concluded with thanks to CEO.

During post lunch session, the members met Mr. N. Mallikarjun, Project Manager to discuss the possibilities of starting joint degree programs. He has presented the proven model which is being implemented with Krishna University, Machilipatnam. M/s Efftronics Systems Pvt Ltd is running a program called M. Sc (Electronics and Instrumentation) for Krishna University. The members also requested to organize a joint degree/diploma program either in IoT or Embedded systems for the students of Sree Vidyanikethan Engineering College.

Members with Student Interns from Sree Vidyanikethan Engineering College

After the meeting the members met the student interns from Sree Vidyanikethan Engineering College and discussed the theme of their internship. The visit is concluded at 04:30 PM.

1. Dr. C. Subhas, Dean (Academics):
2. Dr. P. V. Ramana, HoD (ECE):
3. Dr. S. Hemachandra, Convener (III Cell):
4. Dr. K. Ramani, HoD (IT):
5. Dr. M. S. Sujatha, Professor of EEE:

K. Ramani

M. S. Sujatha

(Dr. S. Hemachandra).

No.SVET/TEQIP-II/FDP/SVEC- CSE/ 0176/2016

Date: 18.12.2016

To

The Principal,
Sree Vidyanikethan Engineering College,
Sree Sainath Nagar,
Tirupati.

Sir,

Sub: Accord of approval to release the amount from TEQIP-II Fund to the Faculty Members towards Registration Fee for their enrollment to Faculty Development Programme on "Machine Learning" to Conference/FDP/Workshop/- Reg.

Ref: Letter No.SVEC/TEQIP-II/FDP/FC-Approval/0171/2016, dated 17.12.2016 of the Co-ordinator, TEQIP-II, SVEC.

With reference to the letter cited above, approval has been accorded to release the funds under **TEQIP-II** to the following Faculty of Sree Vidyanikethan Engineering College as noted against each towards **Registration Fee** for their enrollment to Faculty Development Programme on "Machine Learning" as detailed below:

SL. No	Name of the Faculty With Designation & Department	Venue	Schedule of the Program	Nature of the Faculty Development Program	Amount Sanctioned Rs.
1	Mr. K. Mahammad Assistant Professor Dept. of CSE	Sree Vidyanikethan Engineering College, A.Rangampet,	19 th to 24 th December, 2016	Faculty Development Programme on "Machine Learning"	2,000/-
2	Mr. A. Senguttuvan Professor Dept. of CSE				2,000/-
3	Ms. M. Bhargavi Assistant Professor Dept. of CSE				2,000/-
4	Mr. D. Ganesh Assistant Professor Dept. of CSE				2,000/-

You are therefore requested to release the above amounts to the concerned **Department** from the **TEQIP-II Fund**.

Thanking you,

Yours faithfully,

(B. RAVI SEKHAR)

No.SVET/TEQIP-II/FDP/SVEC- ECE & ME 0069/2016

Date: 13.06.2016

To

The Principal,
Sree Vidyanikethan Engineering College,
Sree Sainath Nagar,
Tirupati.

Sir,

Sub: Accord of approval to release the amount from TEQIP-II Fund to the Faculty Members for attending Conference/FDP/Workshop/- Reg.

Ref: Letter No.SVEC/TEQIP-II/FDP/FC-Approval/0065/2016, dated 08.06.2016 of the Co-ordinator, TEQIP-II, SVEC.

With reference to the letter cited above, approval has been accorded to release the funds under **TEQIP-II** to the following Faculty of Sree Vidyanikethan Engineering College as noted against each to meet their expenditure for attending the Programmes as detailed below:

SL. No	Name of the Faculty With Designation & Department	Venue	Schedule of the Program	Nature of the Faculty Development Program	Amount Sanctioned Rs.
1	Dr. V. R. Anitha Professor Dept. of ECE	Satish Dhawan Space Centre SHAR, Sriharikota	24th & 25 th June, 2016	National Conference on "Large Scale Multi- disciplinary Systems of National Significance - Trends & Challenges - LAMSYS - 2016"	7,600/-
✓2	Mr. M. Yugandhar Assistant Professor Dept. of ME	VNIT Nagpur, Maharashtra	27 th June to 01 st July, 2016	Workshop on "Manufacturing of Advanced Materials A Research Perspective (MAM-2016)"	15,000/-

You are therefore requested to release the above amounts to the concerned **Departments** from the **TEQIP-II Fund**.

Thanking you,

Yours faithfully,

(B. RAVI SEKHAR)

Director
Finance & Administration

No. SVEC/TEQIP-II/ 0086/2016

Date: 08.06.2016

PROCEEDINGS

Sub: SVEC - TEQIP-II - Faculty Development Programs - Mr. M. Yugandhar - Workshop - Request for attending - Accord of permission - Reg.

Ref: Proceedings No. SVEC/TEQIP/0083/2016, dated: 07-06-2016 of the TEQIP-II Project Administrative Center, SVEC.

Based on the recommendations of the **Scrutinizing Committee**, the proposal of **Mr. M. Yugandhar**, Assistant Professor, Department of ME, Sree Vidyanikethan Engineering College, is accepted and **Mr. M. Yugandhar**, is permitted to attend **Workshop on "Manufacturing of Advanced Materials A Research Perspective (MAM-2016)"** at **VNIT Nagpur, Maharashtra** during 27th June to 01st July, 2016.

The Registration Fee, TA and DA will be paid to him as per rules. A brief report on his participation on the above is required to be submitted to the parent Department and he has to give Seminar/Presentation to the faculty and students after attending the Workshop. The period of his absence in this regard shall be treated as '**On-Duty**'.

Abstract—Aluminium Hybrid Metal Matrix Composites (AHMMCs) have evoked a keen interest in recent times for potential applications in aerospace and automotive industries owing to their superior strength to weight ratio and high temperature resistance. In the past few years the global need for low cost, high performance and good quality materials has caused a shift in research from monolithic to composite materials. Reinforcements like particulate alumina, silicon carbide, graphite, fly ash, rice husk ash (RHA) etc can easily be incorporated in the melt using cheap and widely available stir casting method. The present review deals with the characterization of aluminium based hybrid composites developed by stir casting for advanced applications. The potential of a wide range of secondary reinforcements has been explored for the development of Aluminium Hybrid Metal Matrix Composites (AHMMCs) and the application area of these composites has been proposed. The focus is on the optimization of parameters for various properties of composites. Further, the influence of reinforcement's type and contents on the material properties has also been reviewed and discussed.

Index Terms— Aluminium Hybrid Metal Matrix Composites (AHMMCs), stir casting.

I. INTRODUCTION

The different reinforcing materials used in the development of AHMMCs can be classified into three broad groups, which are synthetic ceramic particulates, industrial wastes and agro waste derivatives. The final properties of the hybrid reinforcement depend on individual properties of the reinforcement selected and the matrix alloy [1-4]. Moreover, the processing route adopted for synthesizing AHMMCs depends on the nature of the matrix alloy and reinforcing materials which also influence the final properties of AHMMCs. This is because most of the parameters put into consideration during the design of AHMMCs are linked with the reinforcing materials. A few of such parameters are reinforcement type, size, shape, modulus of elasticity, hardness, distribution in the matrix among others [1,5]. Based on the published articles studied, the discussion on the combinations of reinforcement used in the synthesis of AHMMCs is divided into three broad groups. These are AHMMCs with two synthetic ceramic materials; an agro waste derivative combined with synthetic ceramic materials; and industrial waste combined with synthetic reinforcement [6-8].

The present study deals with the characterization of aluminium based hybrid composites developed by stir casting for advanced applications. The potential of a wide range of secondary reinforcements [6, 9-12] has been explored for the development of AHMMCs and the application area of these composites has been proposed. The focus is on the optimization of parameters for various properties of composites. Further, the influence of reinforcement's type and contents on the material properties has also been reviewed and discussed.

II. Manufacturing And Characterization

Boopathi et al. [2] have studied the microstructures of aluminium alloy (Al 2024) reinforced with different compositions of fly ash, SiC and their mixtures. It has been observed that the particles were not uniformly distributed in single reinforced composites and segregation of particles was clearly visible. This was attributed to the gravity-regulated segregation of the particles in the melt. But, the micrographs of Al/SiC/flyash hybrid composites indicate uniform distribution of particles at various concentrations Figure. 1(a) and (b).

Figure 1. Optical micrograph of Al 2024/ (10%SiC + 10% fly ash) (a) before etching and (b) after etching (Boopathi et al. [2])

According to Rajmohan et al. [3], the hybrid reinforcements SiC and mica particles were uniformly distributed in Al356 alloy Figure 2(a). The aluminum, carbon, silicon and oxygen particles were clearly visible in the energy dispersive X-ray spectroscopy (EDS) profile Figure. 2(b). The scanning electron micrograph (SEM) images of composites are the evidence of successful incorporation of hybrid reinforcements in the Al-matrix. The clustering of SiC particles in matrix was attributed to their lower thermal conductivity and heat diffusivity than the alloy melt. The hotter SiC particles heat up the surrounding melt and delay the solidification process. Generally, the SiC particles are accumulated in the interdendritic regions and geometrical trapping by dendrites is not observed in the micrographs. This suggests that SiC particles are always pushed by dendrite fronts during solidification process.

Figure 2. (a) SEM image of Al/10SiC-3mica composite (b) EDS spectrum of Al/10SiC-3mica composites (Rajmohan et al. [3])

Prasad and Shobha[4] observed the microstructural characteristics of hybrid composites reinforced by SiC and rice husk ash (RHA) particles. The uniform distribution of reinforcing particles was revealed during the examination. The presence of RHA and SiC particles was also confirmed in the micrographs of hybrid composites (Figure. 3). The results of above studies indicate that it is possible to obtain nearly uniform distribution of particles in the hybrid composites. But, various parameters need to be controlled and optimized during fabrication process. However, the successful incorporation of reinforcing particles shows that it is possible to obtain the hybrid composites with isotropic set of properties.

Figure 3. Scanning electron micrograph of hybrid composite. (Prasad and Shobha[4])

Deravaju et al. [5] studied the influence of SiC/Gr and SiC/Al₂O₃ on the wear properties of friction stir processed Al 6061-T6 hybrid composites. The authors reported uniform distribution of the reinforcing materials in the nugget zone of the AHMMCs as shown in Figure. 4(a) and (b).

Figure 4. Microstructure of surface hybrid composites (a) Al-SiC/Gr; (b) Al-SiC/Al₂O₃ (Deravaju et al. [5])

Suryakumari et al. [11] studied Al7075 hybrid metal matrix composites (Al7075+ SiC + Al₂O₃) was produced via stir casting techniques. Al7075 is a matrix material and SiC, Al₂O₃ are the reinforcing elements. The Al7075 aluminium alloy with 2.5, 5 and 7.5 W% of SiC and 2.5, 5 and 7.5 W% of Al₂O₃ was produced via stir casting.

III. MECHANICAL PROPERTIES

The mechanical properties of a composite depend on many factors such type of reinforcement, quantity of reinforcement, shape, size etc. The proper understanding of the mechanical behaviour is thus essential as they are employed in different areas.

A. Hardness

Boopathi et al. [2] have reported an increasing trend in the hardness Figure 5(a) of composite with increase in weight fraction of reinforcements. They observed maximum hardness for Al/10 wt.%SiC/10 wt.%fly ash hybrid composites. This shows that incorporation of fly ash particles significantly improves hardness of the Al-matrix. In another study, Rajmohan et al. [3] have evaluated the hardness of the hybrid composites

reinforced with different mass fractions of mica particles (for fixed 10 wt.% SiC). The result shows that the hardness value Figure.6(a) of Al/10 wt.%SiC/6wt.%mica composite is less as compared to Al/10 wt.%SiC/3 wt.%mica composite. Low values of hardness and strength are favourable for improving machinability of composites. The results show that hardness of the AHMMCs increased more or less linearly with the fraction of mica particles. Prasad and Shoba [4] have observed that the hardness of the hybrid composites (A356.2/x%RHA/x%SiC) was higher than the pure A356.2 alloy. The hardness of the alloy increases with addition of hybrid reinforcements and the increase in hardness may be due to presence of relatively hard ceramic particles in the composite. It has also been reported that the addition of reinforcement (up to 8 wt. %) increases the hardness value by more than 50%.

(a)

(b)

Figure 5. Graph showing variation in (a) hardness and (b) tensile strengths with different composition (A = Al, B = Al +5% SiC, C = Al +10% SiC, D = Al +5% fly ash, E = Al +10% fly ash, F = Al +5% SiC +5% fly ash, G = Al +5% SiC +10% fly ash, H = Al +10% SiC +5% fly ash, I = Al +10% SiC +10% fly ash) of hybrid MMCs (Boopathi et al. [2])

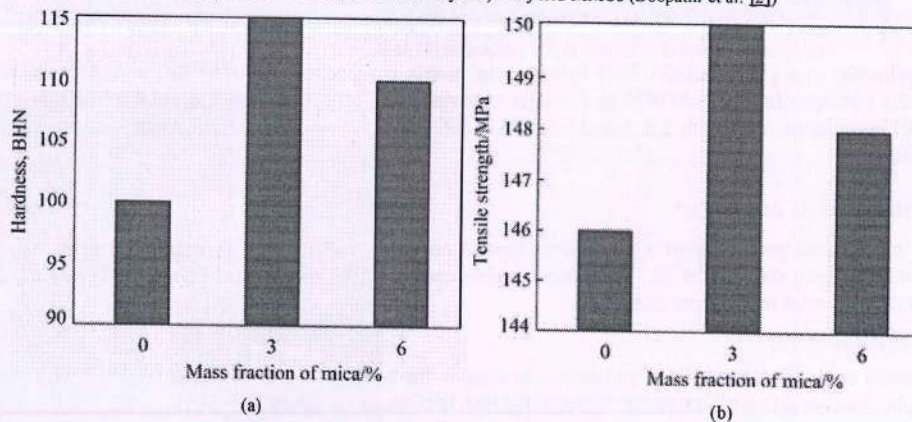

Figure 6. (a) Hardness (b) tensile strength of composite with different percentage of mica (Rajmohan et al. [3])

Suryakumari et.al [11] have performed Brinell hardness on the cast Al 7075 hybrid metal matrix composites with four trials. The effects on the hardness of Al 7075 hybrid metal matrix composites with the addition of SiC and Al₂O₃ achieved from hardness tests are shown in Figure 7. The increases in the hardness of the hybrid metal matrix composites were observed by addition of SiC and Al₂O₃ initially and the maximum hardness was achieved at 2.5%W Al₂O₃ and 5%W of SiC. The more addition of reinforcement of SiC and Al₂O₃ leads to decreases in the hardness. Up to certain limit the addition of hard ceramic particles results in significant increase in the hardness of aluminium alloy. The hardness decreases with high weight percentage of SiC and Al₂O₃ in the hybrid metal matrix because of formation of more clustering of particles and settling down.

Figure 7. Brinell hardness test for Al 7075 hybrid metal matrix composites (Suryakumari et.al [11])

B. Tensile strength

Boopathi et al. Have reported the graph of the experimental tensile strength of the composites according to the SiC, fly ash and their mixtures is shown in Figure. 5(b). Results show that the tensile strength of composites is higher than that obtained for the unreinforced Al. Tensile strength of unreinforced Al is 236 N/mm² and this value increases to 265 N/mm² for Al/(10%SiC), 263 N/mm² for Al/(10%fly ash) and 293 N/mm² for Al/(10%SiC+10%fly ash) composite, which is about 57% improvement over that of the unreinforced Al matrix.

Rajmohan et al.[3] observed the tensile tests of mica reinforced composites are shown in Figure. 6.(b). The Figure indicates that the composites reinforced with 10% SiC and 3% mica particle have the highest tensile strength of 150 N/mm². At the same time, the tensile strength of composite with 10% SiC and 6% mica particle is found to be 148 N/mm². The results indicate that with the increase in mass fraction of mica, the tensile strength of the composites increases up to certain value and then reduce. In the present investigation, addition of 3% mica shows better tensile strength than the 6% mica addition.

IV. CONCLUSIONS

This paper reviews the different combination of reinforcements used in the synthesis of AHMMCs and how it influences its performance. The double synthetic ceramics reinforced AHMMCs despite showing good mechanical and tribological properties over the unreinforced alloys still need to be subjected to test under different corrosion media to ascertain its corrosion behaviour. Furthermore, comparison should be made between the hybrid composites with the single reinforced grades in order to determine how much improvement is obtained when hybrid reinforcement is used. More agro waste should be investigated and further studies should be concentrated on how to optimize the production process to determine the optimum processing parameters.

The stir casting method is found to be suitable to fabricate the aluminium hybrid metal matrix composites. Mica reinforced composites exhibits less wear loss and higher density compared with the ceramic reinforced composites. The addition of SiC and Al₂O₃ on the hardness of AHMMCs results in increases initially and decreases with more addition of weight fraction of Al₂O₃ and SiC. The high hardness value obtained with the addition of 2.5 % W of Al₂O₃ and 5% W of SiC.

Modelling and Analysis of Crankshaft for passenger car using ANSYS

P.Thejasree^a, Dileep Kumar^b

^{a,b}Sree Vidyanikethan Engineering College, A.Rangampeta, Tirupati and 517102, India

Crank Shaft is one of the important components of an IC Engine. As the mechanical property of the crankshaft directly influence the reliability and longevity of the engine, the rigidity of the crankshaft acted upon by the alternative loads must be guaranteed in design. So it is necessary to simplify the model in the stress analysis of crankshaft using ANSYS software. In this paper, first the 3D model of the engine parts are built in the software 'CATIA V5' and are then transferred to 'ANSYS'. The analysis of crank throw deformation and stress provides a theoretical basis to optimize the design by weigh reduction.

Keywords: Crank Shaft; Stress Analysis; ANSYS; weight reduction.

ME-79

Multi-Objective Optimization of Photochemical Machining by Using GRA

G.R. Rathod^a, S.U. Sapkal^b, R.M. Chanmanwar^c

^{a,b,c} Department of Mechanical Engineering, WCE, Sangli- 416 415, India

Photochemical machining (PCM) is one of the emerging nonconventional machining processes. It is used for the fabrication of burr free flat plate complex parts. In this paper, output parameters are undercut (UC) and surface roughness (Ra). Analysis of Variance (ANOVA) technique and grey-based Taguchi method for optimization of the process parameters in copper etching of PCM process were used for the prediction of and undercut (Uc) and surface roughness (Ra). The data used for analysis is obtained by conducting experiments as per principles of Design of Experiments (DOE) method. The input factors considered in the experiments were time, temperature, and concentration of etching process where copper was used as substrate. By comparing both techniques it was found that the optimal PCM process parameters for ANOVA are Temperature 45°C, Concentration 500gm/liter, and Time 4 minute and for gray rational are temperature 45oc, time 5 minute and concentration 500 gm/liter. The optimum undercut was 0.002 mm and 0.006 mm in ANOVA and grey rational respectively.

Keywords: PCM, Grey Rational Analysis, Taguchi, Undercut, Surface Roughness, DoE.

ABSTRACT

Now a days the growing technology in all fields of engineering demands improved material properties. One of the alternative materials found is composite materials, combining two or more than two materials on macroscopic scale results a material having superior mechanical properties. Sheet moulding compound (SMC) is one type of the composite material. The panels made by SMC provide low light transmittance thus low light intensity on the inner surface of the panel thus it prevents the growth of the algae, thus hygienic quality is maintained. In this work the panels of different configurations have been modeled by using PRO-E software as per the geometrical details and analyzed by using FEA software package ANSYS at a specified pressure. During the analysis the bottom panel is subjected to uniform pressure and side panel is subjected varying pressure. A comparison is made between panels of different configurations for normal displacement, Von misses stress, and Von misses strain. Based on the results, the best panel configuration is recommended for the water tank.

Key words: *Composite plate, SMC panels, Composite Design, Finite element method, Fibre length.*

1. INTRODUCTION

1.1 SMC Composites:

Advanced composite materials, particularly continuous fibre-reinforced composites are currently being used in a wide variety of structural applications. These materials have now emerged as engineering materials, due to a number of attributes like low weight, high stiffens, large ultimate strength, excellent fatigue and corrosion resistance, ease in fabrication and so on. Sheet moulding compound (SMC) is a fibre composite material which contains 30% of organic ingredients and 70% of inorganic ingredients which cures by curing process by cross linking reaction. Sheet moulding compound is the most commonly used composite material for manufacturing of water tanks. It is fibre reinforced material which primarily consists of inorganic ingredients.

1.2 Manufacturing of SMC materials:

SMC is usually manufactured by a highly automated continuous flow process by compression molding process. Continuous fibre glass is chopped into length of 20 to 50 mm length and deposited on a layer of resin filler paste which is travelling on a polyethylene film. Another layer of resin filler paste is deposited over the layer to form a continuous sandwich of fibre glass and resin filler. The sandwich with top and bottom covers of polyethylene is compacted and rolled in to a package sized rolls. The rolled up SMC is stored and then SMC rolls are moved to near the press and cut in to the proper charge pattern for the specific part and placed in a matched metal mold which is hot. Under the pressure of the press the system will flow to fill the complete mould. In parallel the cutting process is started and after a short time the curved part will be remolded. This process is atomized and can be used for mass production i.e automotive industry. For series production the molds are metal dies which are heated with steam to temperature around 120 °C to reduce the curing time.

2.1 Modeled views

3. FINITE ELEMENT METHOD

The Finite Element Method has become a powerful tool for the numerical solution of a wide range of engineering problems. With the advance in computer technology and CAD system, complex problems can be modeled with relative ease. Several alternative configurations can be tried out on a computer before the first prototype is built. All of this suggests that we need to keep pace with these developments by understanding the basic theory, modeling technique and computational aspects of the Finite Element Method. In this method of analysis, a complex region defining a continuum is discretized into simple geometric shapes called finite Elements. The material properties and the governing relationships are considered over these elements and expressed in terms of unknown values at element corners. An assembly process, duly considering the loading and constraints, results in a set of equations.

3.1 Shell theory

Thin shell theories are based on Love-Kirchoff assumption that as the shell deforms and the mid-surface stretches and bends the fibers of the shell initially straight and normal to the mid surface remain straight and normal to the mid-surface. Also it is usually assumed that the normal stress is zero. These assumptions permit to define the displacement of every point in terms of the displacement of the mid-surface of the shell. This in effect represent the reduction of a problem from a three dimensional to a two dimensional case. A shell may thus be thought of as the material form taken by enclose of a volume bounded by curved surfaces. To analyze the internal forces, a small shell element is considered whose thickness is small in comparison with the other dimension of the shell and with its radii of curvature.

3.2 Overview of ANSYS

The ANSYS computer program is a large scale multipurpose finite element program which may be used for solving several classes of engineering analyses? The analysis capabilities of ANSYS include the ability to solve static and dynamic structural analyses, steady state and transient heat transfer

problems, mode frequency and buckling, Eigen value problems, static or time varying magnetic analyses and various types of field and coupled field applications. The program contains main special futures which allow nonlinearities or secondary effects to be include in the solution such as plasticity large strain, hyper-elasticity, creep, swelling, large deflections, contact, stress stiffening, temperature dependency, material anisotropy and radiation. ANSYS has been developed. Other capabilities ,sub structuring, sub modeling, random vibration, kineto stastics, kineto dynamics, free convection, fluid analysis, acoustics, magnetic, piezoelectric, coupled field analysis and design analysis and, design optimization have been added to the program. These capabilities contribute further to making ANSYS a multipurpose analysis tool for varied engineering disciplines. The ANSYS program has been in commercial use since 1970, and has been used extensively in the aerospace, automotive, construction, electronic, energy services, manufacturing, nuclear, plastics, oil, and steel industries.

4. FINITE ELEMENT ANALYSIS OF SMC PANELS OF DIFFERENT CONFIGURATIONS

Sheet Molding Compound (SMC) panels of different configurations for a water tank have been analyzed by FEA software package ANSYS 10.0 at a specified pressure of 0.04905 N/mm². The finite element idealization of the panel 1 is as shown in the figure. The side panel is subjected to simulated variable pressure and the bottom panel is subjected to simulated uniform pressure. The clamped edge conditions are simulated at the bolt hole locations. The material properties used are as follows

- Young's modulus - 10e3 N/mm²
- Poisson's ration - 0.499
- Density - 1.9e-9 kg/mm³
- Element edge length - 50 mm
- Added mass per unit area - 10-3kg/mm²
- Average shell thickness - 9 mm

5. RESULTS AND DISCUSSION

A SMC material flat panel 1000 mm square, 76.82 mm height and uniform thickness of 9 mm over the entire panel when subjected to uniform pressure of 0.04905N/mm^2 yields to a central deflection of 66.815 mm at the midpoint of the panel, and stress of 138.219N/mm^2 and when subjected to varying pressure from 0.01635N/mm^2 to 0.04905N/mm^2 yields to a deflection of 42.797 mm and stress of 91.429N/mm^2 using FEA solution package ANSYS 10.0. Next SMC material concave panel 1000mm square, 76.82 mm height including concave dome shape with a thickness varying from 4 mm at the centre to 9 mm thickness at the edge of concave profile when subjected to uniform pressure of 0.04905N/mm^2 yields to a deflection of 13.947 mm and stress of 106.623N/mm^2 and when subjected to varying pressure from 0.01635N/mm^2 to 0.04905N/mm^2 yields to a deflection of 5.888 mm and stress of 45.41N/mm^2 using FEA solution package ANSYS 10.0

Results Type of the panel	Normal displacement(mm)	Von misses stress(N/mm^2)	Von misses strain
Flat bottom panel	66.815	138.219	0.013822
Flat side panel	42.797	91.429	0.009143
Concave bottom panel	13.947	106.623	0.0010662
Concave side panel	5.888	45.41	0.004541
Convex bottom panel	9.358	75.507	0.007551
Convex side panel	4.309	70.963	0.007092

Another SMC material convex panel 1000 mm square, 150 mm height including convex dome shape with a thickness varying from 4mm at the centre to 9 mm thickness at the edge of convex profile when subjected to uniform pressure of 0.04905N/mm^2 yields to a deflection of 9.358 mm and stress of 75.507N/mm^2 and when subjected to varying pressure from 0.01635N/mm^2 to 0.04905N/mm^2 yields to a deflection of 4.309 mm and stress of 70.963N/mm^2 using FEA solution package ANSYS 10.0

The thickness of flat panel is 9 mm. But the deflection of flat panel at factor of safety 5 is 66.815 mm and 42.797 mm. At factor of safety 1 its value will be 13.33 mm and 8.4 mm. so that flat panel is not recommendable. The thickness of the concave panel at the centre is 4 mm. But the deflection of concave panel at factor of safety 5 is 13.947 mm and 5.888 mm. At factor of safety 1 it will be 2.79mm and 1.18mm which is less than 4mm thickness at the centre and the maximum stress value is 106.623
